The cult of Fāṭima today. Popular sympathy for Fāṭima among the Shī'a has caused several feasts to be dedicated to her: that of the *mubāhala* (21, 24 or 25 Dhu 'l-Ḥidjdja) is the only canonical one; others, held in private, celebrate her birth (20 Ramaḍān) or her death (3 Djumādā II and 2 Ramaḍān) or an episode of her life: the marriage to which she was invited and for which, she having no suitable garments, Djibrīl clad her in a sumptuous robe and put on her two ear-rings, the one green, foreshowing the poisoning of al-Ḥasan, the other red, a symbol of the martyrdom of al-Ḥusayn; on seeing her so beautiful the bride died of jealousy, but was at once restored to life by Fāṭima (on these feasts see Massignon, *La notion*, 107-11; on prayers to her, *ibid.*, 102-6). In his book *The wild rue*, Donaldson has introduced some popular tales which do not differ substantially from the accounts preserved in the Arabic and Persian texts. Only that on page 77 seems to offer some new details: after the Resurrection the earth will become a desert; Muḥammad, Fāṭima and the *Imāms* will appear, and Fāṭima will tell the women that all those who have wept for al-Ḥusayn and preserved their tears, thus acquiring great merit, will go to Paradise. Fāṭima will be clad in a garment with a magnificent fringe, the women will cling to it and pass over the Bridge with her in the twinkling of an eye. One further belief may be noted: the Shī'a believe that the "Five" are present at difficult moments of their lives and hear their prayers.

Fāṭima in the beliefs of the Ismā'īlīs. The study of the development of the Fāṭima legend among the Ismā'īlīs and the deviant sects of Islam is more difficult than among the Imāmīs because of their esotericism and because they are split up into numerous groups, each holding varying beliefs; and what is known of these beliefs has not yet been systematically assembled in any one study embracing all the material. Some information on Fāṭima can be drawn from the works of Massignon, and some more

from the writings of Ivanow and of Corbin. Here some general observations may be made: Among the Imāmīs the Fāṭima of legend preserves almost always links with the Fāṭima of history, even in the more fantastic accounts (whose texts, furthermore, contain an admixture of *ḥadīth*s having nothing of the fantastic about them, whether they are from Sunnī or from other collections). In the more extravagant exaltation accorded to Fāṭima by the Ismāʿīlīs these links are often preserved; but in their systems of cosmogony she becomes a secondary element among a host of other gnostic or semi-gnostic elements, and she is then to some extent overshadowed by these and all links with her historical self are generally lost. Among the Ismāʿīlīs and the deviant sects there appear other beliefs, of which we have found no trace in the Imāmī sources, *e.g.*, the identification of Fāṭima with al-Masdjid al-Aḳṣā in Jerusalem, with the Cave of the Seven Sleepers, with the rock of Moses which gushed forth miraculous water (the ancestral motif of Water), and the idea that she conceived through the ear and gave birth through the navel, etc. Among the Ismāʿīlīs and the deviant sects there has been a more extensive assimilation of the themes of the Christian devotion to Mary, the Mother of God. There is also, according to Massignon (*La notion* ..., 113 f.), a tendency to identify the figures of Mary and Fāṭima in the style of depicting them in icons (Fāṭima enthroned in heaven, with a diadem, a sword, and ear-pendants).

Although the *Umm al-kitāb*, the curious holy book of groups of Ismāʿīlīs of Central Asia (published and analysed by Ivanow, *REI*, 1932, 419-82; *Isl.*, xxiii (1936), 1-132), is of limited importance—it is almost unknown to the other Ismāʿīlīs—we may summarize here its account of the Creation, noting that it bears a certain resemblance to that of Ḥusayn b. ʿAbd al-Wahhāb summarized above. God, a being of light (*shakhṣ nūrānī*) before the Creation, with five limbs: hearing, sight, the senses of smell and taste, and speech (which on earth were to become Muḥammad, ʿAlī, Fāṭima, al-Ḥasan and al-Ḥusayn), manifested Himself when the world began in ʿAlī, and then in successive theophanies; that of Fāṭima took place in Paradise after the creation of primordial men as a figure adorned with thousands of colours and seated on a throne with a crown on her head (Muḥammad), two ear-rings in her ears (al-Ḥasan and al-Ḥusayn), and a sword carried in a shoulder-belt (ʿAlī); all the garden of Paradise shone upon the appearance of this radiant figure.

Conclusion. In preparing this article we have taken note of the gaps left unfilled, and therefore indicate here the course that should be followed by future students of the legend of Fāṭima. It would be advisable to collect all the references to the daughter of the Prophet in the Shīʿī *ḥadīth*-collections (*e.g.*, that of al-Kulaynī) and in the *akhbār Fāṭima*, which Āghā Buzurg has listed in his *Dharīʿa* (i, 243 f., 331) and, if they no longer survive, to reconstruct them, at least in part, from the numerous quotations from them in later texts; it will be necessary to establish, from al-Madjlisī, the beliefs accepted by the Ṣafawids, to collect together the ideas of the Ismāʿīlīs, and finally, with the help of al-Ḳāḍī al-Nuʿmān or other authors, to establish the esoteric beliefs of the Fāṭimids. Use should be made of the Persian lithographs (excluded from this study as being confused and difficult to consult) as a source for other legendary themes, for it is very probable that the themes developed as time went on. Parallels in Ṣūfī anecdotes should also be studied. Finally, the investigator will have also to interpret the themes, and to trace what connexion they have either with beliefs which existed long before Islam, of which they could be a recrudescence, or with ideas which, although incompatible with Islam, survived in the countries conquered by the Muslims, or with details preserved in *ḥadīth*s and with genuinely Islamic ideas. In our view the last is likely in most cases to prove to be the real connexion, even when the themes have expanded into stories which are completely fantastic.

FĀṬIMIDS, dynasty which reigned in North Africa, and later in Egypt, from 297/909 until 567/1171.

ʿUbayd Allāh (al-Mahdī), 297-322/909-34.
Al-Ḳāʾim, 322-34/934-46.
Al-Manṣūr, 334-41/946-53.
Al-Muʿizz, 341-65/953-75.
Al-ʿAzīz, 365-86/975-96.
Al-Ḥākim, 386-411/996-1021.
Al-Ẓāhir, 411-27/1021-36.
Al-Mustanṣir, 427-87/1036-94.
Al-Mustaʿlī, 487-95/1094-1101.
Al-Āmir, 495-525/1101-30.
Al-Ḥāfiz, 525-44/1130-49.
Al-Ẓāfir, 544-9/1149-54.
Al-Fāʾiz, 549-55/1154-60.
Al-ʿĀḍid, 555-67/1160-71.

The dynasty takes its name from Fāṭima, for the Fāṭimid caliphs traced their origin to ʿAlī and Fāṭima. It is also possible that another Fāṭima, the daughter of Ḥusayn, who transmitted some *ḥadīth*s of her grandmother and had foreknowledge of the Mahdī, played a part in the attribution of this name (see L. Massignon, *Fāṭima bint al-Ḥusayn et l'origine du nom dynastique "Fāṭimites"*, in *Akten des XXIV. intern. Orientalisten-Kongresses*, Munich 1957, 368). It should also be mentioned that the mother of ʿAlī was a Hāshimite called Fāṭima bint Asad (Ibn Ḥadjar, *Iṣāba*, Cairo 1328, iv, 380) and that among the Ahl-i Ḥaḳḳ she is connected with the legend of Salmān (see al-Mokri, *Le "secret indicible..."*, in *JA*, ccl (1962), 375), who plays an important part in Fāṭimid tradition.

According to W. Ivanow (*Ismaili traditions concerning the rise of the Fatimids*, Bombay 1942, Isl. Res. Ass. Series, no. 10, 80), the name Fāṭimiyyūn, which, according to al-Ṭabarī (iii, 2219, *sub anno* 289), had been adopted by the Bedouin Banu 'l-Aṣbagh of the Syrian desert whose leader was the Ḳarmaṭo-Ismāʿīlī Yaḥyā b. Zikrawayh, was the first name of the Ismāʿīlīs. But Massignon (*op. cit.*) reminds us that the name is already found in Bashshār b. Burd, used in a pejorative sense. The origin of the Fāṭimid movement, which in North Africa brought the Fāṭimids to power in the person of ʿUbayd Allāh al-Mahdī, must be sought in Ismāʿīlism [see ismāʿīliyya], a Shīʿī doctrine which was at the same time political and religious, philosophical and social, and whose adherents expected the appearance of a Mahdī descended from the Prophet through ʿAlī and Fāṭima, in the line of Ismāʿīl, son of Djaʿfar al-Ṣādiḳ.

Genealogy of the Fāṭimids

The Fāṭimids trace their origin to Ismāʿīl, but as they did not announce their genealogy publicly and officially for some time, and as, during the period of the Hidden Imāms, the *satr* [*q.v.*], the names of the imāms between Muḥammad b. Ismāʿīl and ʿUbayd Allāh al-Mahdī were intentionally left in the dark, several different genealogies became current; with the result that, even today, the origin of the Fāṭimids is still wrapped in obscurity. The enemies of the Fāṭimids denied their descent from ʿAlī and declared that they were impostors. Following the ancient Arab habit of giving a Jewish origin to people they hate (Goldziher, *Muh. St.*, i, 204), ʿUbayd Allāh has even been presented as the son of a Jew.

According to the traditional Fāṭimid genealogy, ʿUbayd Allāh was the son of Ḥusayn b. Aḥmad b. ʿAbd Allāh b. Muḥammad b. Ismāʿīl b. Djaʿfar al-Ṣādiḳ. The general anti-Fāṭimid tradition has it that he was the son of Ḥusayn b. Aḥmad b. Muḥammad b. ʿAbd Allāh b. Maymūn al-Ḳaddāḥ, that he was really called Saʿīd, and that it was only in North Africa that he took the name of ʿUbayd Allāh (or ʿAbd Allāh) and claimed to be of ʿAlid descent and to be the Mahdī (on Maymūn al-Ḳaddāḥ and his son ʿAbd Allāh and their relations with Djaʿfar al-Ṣādiḳ and his grandson Muḥammad b. Ismāʿīl, see ʿabd allāh b. maymūn).

On the genealogy of the Fāṭimids, the different forms, both anti-Fāṭimid and Ismāʿīlī, in which it has been presented, and the complex problems which it raises and which seem to defy a satisfactory solution, information is to be found in various works: S. de Sacy, *Exposé de la religion des Druzes*, Paris 1838; Wüstenfeld, *Gesch. der Fatimiden-Chalifen*, Göttingen 1881; C. H. Becker, *Beiträge zur Geschichte Ägyptens*, Strasbourg 1902-3; De Goeje, *Mémoire sur les Carmathes*, Leiden 1886; P. H. Mamour, *Polemics on the origin of the Fatimi Caliphs*, London 1924. The question has been studied afresh in more recent works: W. Ivanow, *Ismaili traditions concerning the rise of the Fatimids*, 1942, 154 f., 223 f.; idem, *Ismailis and Qarmatians*, in *JBRAS*, 1940, 70 f.; idem, *The alleged founder of Ismailism*, Bombay 1946, 169 f. (Ism. Soc. Series, no. 1); B. Lewis, *The origins of Ismāʿīlism*, Cambridge 1940 (Arabic translation, Baghdad 1947). Still more recently have appeared: Husayn F. al-Hamdani, *On the genealogy of Fatimid Caliphs*, Cairo 1958, and W. Madelung,

Das Imamat in der frühen ismailitischen Lehre, in *Isl.*, xxxvii (1961), an article which is a continuation of *Fatimiden und Bahrainqarmaten*, in *Isl.*, xxxiv (1959).

We can do no more here than glance at the questions which are discussed in these works and the difficulties which are encountered in studying the origin of the Fāṭimids, considering the many divergences which are found in the sources and the very different standpoints taken by the authors who concern themselves with these questions—even by the Ismāʿīlī writers, in considering whose works we must take into account the very different treatment they give to a question according to whether the work is exoteric or esoteric.

Here are a few of the difficulties which arise: In the Ismāʿīlī sources the series of imāms preceding ʿUbayd Allāh is not everywhere the same and the names do not always agree (see Ivanow, *Rise*, 46 f.). Even the name of the father of ʿUbayd Allāh varies; there is one tradition which presents him as the son not of Ḥusayn but of one Aḥmad. ʿUbayd Allāh appears sometimes as ʿAlī b. al-Ḥusayn, but on the other hand an ʿAli b. al-Ḥusayn is considered as a fourth Hidden Imām, not found in the list given above. Was Ḥusayn, the father of ʿUbayd Allāh, the regular imām or was the imām not rather Muḥammad b. Aḥmad, uncle of ʿUbayd Allāh? In that case the uncle would not have been able to hand down the imāmate to ʿUbayd Allāh, since the doctrine decrees that, apart from the case of Ḥasan and Ḥusayn, it is transmitted only from father to son. This Muḥammad b. Aḥmad bears also the name of Abū ʿAlī al-Ḥākim with the *kunya* Abu ʾl-S̲h̲alaʿlaʿ (or S̲h̲alag̲h̲lag̲h̲) and the surname Saʿīd al-K̲h̲ayr. He is also presented as the father of ʿUbayd Allāh. As ʿUbayd Allāh is also Saʿīd, it can be seen what a source of confusion these different names must have been (see *Rise*, 31, Madelung, *Imamat*, 56, 71, 75, and similarly S. de Sacy and De Goeje).

ʿUbayd Allāh himself gave other versions of his origin than that of the Fāṭimid tradition mentioned above. In a letter to the Ismāʿīlī community of the Yemen (see Madelung, 70), he claims to be descended not from Ismāʿīl b. D̲j̲aʿfar, but from another son of D̲j̲aʿfar, ʿAbd Allāh. In the interview which he had with ʿAbdān, the emissary of Ḥamdān Ḳarmaṭ, as it is reported by Ak̲h̲ū Muḥsin (admittedly a strongly anti-Fāṭimid s̲h̲arīf), ʿUbayd Allāh claimed a Ḳaddāḥī descent (Madelung, 60).

A further uncertainty lies in the relationship between ʿUbayd Allāh and the second Fāṭimid caliph, Muḥammad Abu ʾl-Ḳāsim al-Ḳāʾim bi-amr Allāh. The latter bears the name attributed by tradition to the expected Mahdī who must have the same name as the Prophet; the Ḳāʾim is strictly the Mahdī (the two names are used interchangeably). ʿUbayd Allāh took the title of al-Mahdī, but did he really in his heart consider himself as the expected Mahdī, given that he did not have the necessary characteristics? Al-Ḳāʾim may not have been the son of ʿUbayd Allāh, although the latter always considered him officially as his son. According to the *G̲h̲āyat al-mawālīd* of al-K̲h̲aṭṭāb b. al-Ḥasan (6th/12th century), he was the son of that fourth Hidden Imām ʿAlī mentioned above (see Ivanow, *Rise*, texts, 37, and Madelung, 77). ʿUbayd Allāh's attitude to Abu ʾl-Ḳāsim al-Ḳāʾim in conferring on him when he entered Raḳḳāda a rank apparently superior to his own (see the facts in Madelung, 66, and see also 72) seems to imply that he considered Abu ʾl-Ḳāsim as the awaited Mahdī. Similar doubts are raised by various other details concerning al-Ḳāʾim (see Ivanow, *Rise*, 50, 204 and the *Sīrat D̲j̲aʿfar al-Ḥād̲j̲ib*, 304, tr. in *Hespéris*, 1952, 120). However it is difficult to be definite on this subject.

Another difficulty is that arising from the contradiction between the official genealogy and that which links the Fāṭimids with Maymūn al-Ḳaddāḥ. Even in the reign of al-Muʿizz, the fourth Fāṭimid caliph, an attempt was made in certain heterodox Ismāʿīlī circles to reconcile the two genealogies by identifying ʿAbd Allāh b. Maymūn al-Ḳaddāḥ with the ʿAbd Allāh b. Muḥammad b. Ismāʿīl b. D̲j̲aʿfar of the Fāṭimid genealogy and thus introducing a non-ʿAlid into the family (see Ivanow, *Rise*, 140; S. M. Stern, *Heterodox Ismāʿīlism at the time of al-Muʿizz*, in *BSOAS*, xvii/i (1955), 12 f.). B. Lewis resolves the contradiction by showing, on the evidence of Ismāʿīlī and Druze works, how it was possible to consider the Ḳaddāḥīs as Fāṭimid imāms, as the result of a spiritual adoption. Among the Ismāʿīlīs spiritual paternity holds an important place beside physical paternity. (It may be recalled that in his letter to the community of the Yemen, ʿUbayd Allāh, who included in the list of the imāms his uncle Muḥammad b. Aḥmad, stated that he himself was called ʿAbd Allāh b. Muḥammad because he was *fiʾl-bāṭin* the son of this Muḥammad b. Aḥmad, who transmitted the imāmate to him: see Husayn F. Hamdani, in Madelung, 71-2).

Apart from the real, true imāms, descended from ʿAlī and Fāṭima, and called *mustaḳarr* (literally 'permanent'), there were, says B. Lewis, imāms called *mustawdaʿ*, trustees or guardians of the imāmate (on these two terms see Stern, *op. cit.*, 16), whose function was to "veil" the true imām in order to protect him, and who acted by right of an assignment (*tafwīḍ*) which so to speak allowed them to enter the family of the true imāms. Maymūn al-Ḳaddāḥ, who had received from D̲j̲aʿfar al-Ṣādiḳ the charge of his grandson Muḥammad b. Ismāʿīl, said that his own son ʿAbd Allāh was the spiritual son of Muḥammad b. Ismāʿīl and his heir, and it is by virtue of this that he proclaimed him imām. Thus a series of Ḳaddāḥī imāms is found side by side with a series of ʿAlid imāms. The last Ḳaddāḥī of the series was ʿUbayd Allāh Saʿīd, the *mustawdaʿ* imām of al-Ḳāʾim, the ʿAlid and *mustaḳarr* imām. Thus, in the person of al-Ḳāʾim, the imāmate returned to the ʿAlid family.

For all the questions which arise and which cannot be dealt with here, reference should be made to the very detailed and fully documented article of Madelung on the imāmate in early Ismāʿīlī doctrine, to which we shall return when discussing the religious policy of the Fāṭimids.

From the historical point of view, that which concerns us directly in this question of the genealogy is the attitude of the ʿAbbāsids, who naturally contested the ʿAlid origin of their rivals the Fāṭimids, to whom it gave great prestige. ʿArīb (*sub anno* 302, 51 f.), following al-Ṣūlī, reveals that at Bag̲h̲dād at this time it was said that the master of the Mag̲h̲rib was descended from a freedman of Ziyād b. Abīhi's [*q.v.*] chief of police. All the same, it was not until later that official documents appeared, signed by jurists and ʿAlids, one of 402/1011 and the other of 444/1052, which denied that they were of ʿAlid origin (see Ibn al-D̲j̲awzi, *Muntaẓam*, vii, 255; Ibn al-At̲h̲īr, *sub annis* 402, 444; Ibn K̲h̲aldūn, *Proleg.*, tr. de Slane, i, 39, tr. Rosenthal, i, 45, and *Hist. des Berbères*, tr. ii, 55; al-Maḳrīzī, *Ittiʿāẓ*, Cairo ed., 58 f.; Abu ʾl-Maḥāsin, Cairo ed., iv, 229, v, 53; cf. Goldziher,

Die Streitschrift des Ġazâlî gegen die Bâṭinijja-Sekte, Leiden 1915, 15).

The Sunnī historians are in general not well disposed towards the Fāṭimids. Hardly any of them except al-Maḳrīzī and Ibn Khaldūn pronounce their ʿAlid descent to be authentic. Moreover, the argument advanced by these two writers that ʿUbayd Allāh would not have been persecuted by the ʿAbbāsids if they had not been convinced of the ʿAlid descent of the Fāṭimids is not very convincing, for, ʿAlid or not, he represented ideas which were dangerous to those in power and it was natural that the authorities should harry him. While the supporters of the Fāṭimids refer to their dynasty as ʿAlid (*al-dawla al-ʿalawiyya*: see e.g. al-Muʾayyad fi 'l-Dīn, *Sīra*, passim), several Sunnī historians speak of them only as ʿUbaydids and as the ʿUbaydid dynasty. Ibn Ḥamādo (Ḥammād [*q.v.*]) calls them *mulūk Banī ʿUbayd*. Similarly Abu 'l-Maḥāsin speaks of al-Muʿizz al-ʿUbaydī, al-ʿAzīz al-ʿUbaydī.

Foundation of the Dynasty

Whoever ʿUbayd Allāh-Saʿīd may have been, he laid the foundations of the dynasty in North Africa. He lived at Salamiyya in Syria, a centre of Ismāʿīlī propaganda. The way had been prepared for him by the *dāʿīs* [*q.v.*], the Ismāʿīlī missionaries. Ibn Ḥawshab Manṣūr al-Yaman, the *dāʿī* of the Yemen, where he was firmly established, had sent missionaries into North Africa, the last and most important of whom was Abū ʿAbd Allāh al-Shīʿī [*q.v.*]. When ʿUbayd Allāh decided to leave Salamiyya, either to escape ʿAbbāsid investigations, or as the result of the obscure affair of a conspiracy against him within the Ismāʿīlī movement (that of the "three Ḳarmaṭī brothers" as Ivanow puts it in *Rise*, 75 f.), he could have gone either to the Yemen, or to North Africa, where the missionary Abū ʿAbd Allāh al-Shīʿī had been working successfully among the Kutāma Berbers since 280/893. He went first to Ramla in Palestine, thence to Egypt, probably in 291/903; then when he was harassed by the ʿAbbāsid governor, and when his followers expected him to set off for the Yemen, he decided to go to North Africa where Abū ʿAbd Allāh al-Shīʿī was occupied in undermining the Aghlabī domination. Being unable to join the missionary at once, he went to Sidjilmāsa where he was put under house arrest, if not actually imprisoned, by the *amīr* of the country. It was there that Abū ʿAbd Allāh, after having made himself master of the Aghlabī capital Raḳḳāda and expelling Ziyādat Allāh in Radjab 296/March 909, came to seek him to lead him in triumph, on 29 Rabīʿ II 297/15 January 910, to Raḳḳāda where he publicly took the titles of Mahdī and of Amīr al-Muʾminīn (on all this, see, besides the historians, the *Sīrat Djaʿfar al-Ḥādjib*, one of the faithful companions of ʿUbayd Allāh, mentioned above).

The African period of the Fāṭimid Caliphate

The first four Fāṭimid caliphs, ʿUbayd Allāh al-Mahdī, al-Ḳāʾim, al-Manṣūr and al-Muʿizz, lived in North Africa, the last until, in 362/973, he left for Egypt, which had been conquered by his general Djawhar [*q.v.*].

During the African period, the Fāṭimid caliphs encountered many difficulties. In North Africa, split between Sunnism, mainly in its Mālikī form, and Kharidjism, in its Ibāḍī and Ṣufrī forms, the new doctrine could not fail to bring trouble. The existence in the Maghrib of two rival Berber groups, the Zenāta in the west and the Ṣanhādja (who included the Kutāma) in the east, was a further disrupting factor. Settled in the centre and the west of the country were two dynasties of eastern origin, the Khāridjī Rustamids of Tāhert and the (ʿAlid) Idrīsids of Fez, which the new dynasty could not allow to remain independent. The Umayyads of Spain were in possession of a part of the Maghribī territory lying nearest to the Iberian peninsula. Finally, if we consider that, from the very beginning, the new masters of Ifrīḳiya had considered it only as a base from which to move on, that they intended one day to move to the East, to supplant the ʿAbbāsids there, that in order to do this they had to keep up a powerful and expensive army and a navy of some consequence, and that apart from this they were to come into a troubled inheritance in Sicily, the full scope of the difficulties with which they were faced becomes clear. To solve all the problems which the situation presented to them, Fāṭimid caliphs could rely only on a fairly restricted number of supporters, apart from the Kutāma, who were not always tractable, and on their own political skill and their energy. It is a wonder that they succeeded.

Within his own party, ʿUbayd Allāh was not long in coming into conflict with the *dāʿī* Abū ʿAbd Allāh, either because the latter had doubts of his really being the Mahdī, or because his master had limited his power. ʿUbayd Allāh had Abū ʿAbd Allāh and his brother assassinated, and this provoked a revolt of the Kutāma, who proclaimed a new Mahdī, a child. The revolt was suppressed with much bloodshed. Later, in the reigns of al-Manṣūr and al-Muʿizz, there were discords within the Fāṭimid family itself, hints of which are revealed in the *Sīrat al-ustādh Djawhar* (see the translation of this work by M. Canard, 19, 91 f., 147, 150, 174, 181); the revocation of the investiture of Tamīm, the son of al-Muʿizz, as *walī al-ʿahd* is compatible with this (*op. cit.*, 213 and n., 339 and 467). In addition, it was necessary to combat extremist opinions within the sect (see below).

In the religious and politico-religious field, the Fāṭimids had to struggle in North Africa against both Sunnī and Khāridjī opposition. The Mālikī Sunnī opposition has been well explained by G. Marçais in his work *La Berbérie musulmane et l'Orient au Moyen Age*, Paris 1946, in the chapter *Les causes du divorce*, 136 f., which, although based on prejudiced Sunnī sources, gives a striking picture of the manifestations of this opposition, which was sometimes sternly quelled and at other times extinguished by bribery. In M. Bencheneb, *Classes des savants de l'Ifrikiya*, 288-304, is to be found the curious story of a doctrinal controversy between some jurists and the brother of the Dāʿī. This opposition, however, seriously troubled those in power only when Ḳayrawān, although very orthodox, made a temporary alliance with the Khāridjī Abū Yazīd [*q.v.*]. Indeed, on the Khāridjī side, the opposition took a very dangerous form with the revolt of this curious personality, who took possession of several important towns, laid siege for a year to Mahdiyya, and was not defeated until 336/947. The revolt, which began in 332/943-4, exhausted al-Ḳāʾim, who succumbed to the fatigues of war at Sūs, and it did not end until the reign of al-Manṣūr. Abū Yazīd, supported by the Umayyad ruler of Cordova, brought the Fāṭimid dynasty to the brink of ruin.

The Zenāta of the west were another source of difficulty. The Khāridjī Rustamids of Tāhert had been expelled in 296/909 by Abū ʿAbd Allāh al-Shīʿī, but a revolt broke out and the place had to be re-

taken in 299/911 by Maṭāla b. Ḥabūs who next, subjugating the Idrīsid, took possession of Fez in 308/920, then of Sidjilmāsa in 309/921. After the death of Maṣāla, his lieutenant and successor, Mūsā b. Abi 'l ʿĀfiya, effectively subdued the Maghrib, taking Fez from the Idrīsids, but he ended by defecting to the Umayyad ruler in 320/932. Also al-Ḳāʾim, who had already conducted campaigns in the Maghrib during his father's lifetime and founded the fortress town of Masīla (Muḥammadiyya) in the Zāb, was obliged, after his accession, to send an expedition to reconquer Fez and all the western Maghrib from Ibn al-ʿĀfiya, as well as Tāhert. He re-established the Idrīsids in their domains, but under Fāṭimid authority. It was only al-Muʿizz who, through his wise and prudent behaviour and the military skill of his general Djawhar, subdued all the west and re-established peace there, as the result of a great campaign by Djawhar, extending as far as the Atlantic. The same caliph had also pacified the Aurès and defeated the maritime offensive of the Umayyad ʿAbd al-Raḥmān III in 344/955.

In order to have a window open onto the East, ʿUbayd Allāh founded on the eastern coast of Ifrīḳiya the town of al-Mahdiyya, which he made his capital in 308/920. A few years after his accession he tried to establish himself in Egypt. But the two expeditions which his son al-Ḳāʾim made in 301-2/913-5 and 307-9/919-21 were unsuccessful and, after initial successes which led him at one time as far as the gates of al-Fusṭāṭ and at another time to Fayyūm, they ended in heavy defeats. In the second expedition, the Fāṭimid fleet was destroyed. Barḳa, however, remained in Fāṭimid hands. After his accession, al-Ḳāʾim tried a third time in 323/925 to conquer Egypt, but again without success.

In none of these operations does the Fāṭimid ruler seem to have been helped by any campaign undertaken on their side by the Ḳarmaṭīs of Bahrain; this is contrary to the opinion advanced by De Goeje (on this subject see W. Madelung, *Fatimiden und Bahrainqarmaten*, in *Isl.*, xxxiv (1959), 46 f., who denies that there was a collaboration between Fāṭimids and Ḳarmaṭīs and maintains that the letter of ʿUbayd Allāh to Abū Ṭāhir after the taking of the Black Stone—for which see the historians *sub anno* 317—is no proof of an alliance between Fāṭimids and Ḳarmaṭīs).

The new power, as successor of the Aghlabids, could not be indifferent to Sicily. But two successive governors sent to Sicily had to withdraw, and the inhabitants elected a governor of their own, Ibn Ḳurhub. He declared for the ʿAbbāsid caliph and twice sent a fleet against Ifrīḳiya, but the second time the fleet suffered a serious defeat; finally the Sicilians rid themselves of Ibn Ḳurhub by giving him up to ʿUbayd Allāh, who had him put to death in 304/916. It was only after this that a new Fāṭimid governor was able to take possession of the island. But Sicily was later to suffer disturbances. In 336/948 al-Manṣūr sent as governor al-Ḥasan b. ʿAlī b. al-Kalbī, and from then on it was from this family that the governors of Sicily were taken, tending more and more towards autonomy.

The Fāṭimid caliphs of North Africa were naturally driven to fight against the Byzantines who were settled in Sicily and to exchange embassies with them. Several times armies and fleets were sent from Ifrīḳiya against the Byzantines in Italy and in Sicily. During the time of ʿUbayd Allāh, at a date which is uncertain (between 914 and 918) the Byzantine emperor concluded a treaty with the governor of Sicily, by which he undertook to pay annually a tribute of 22,000 gold pieces; some years later the caliph reduced this to 11,000, to thank the emperor Romanus Lecapenus for having freed the African ambassadors whose ship had been captured when they were travelling to the court of the king of the Bulgars, in the company of Bulgar emissaries who had come to Africa to propose to the Fāṭimid ruler an alliance against Byzantium. Because of this the projected alliance between Fāṭimids and Bulgars fell through. At about the same time an expedition was sent from Africa against Genoa, Corsica and Sardinia. In the time of al-Ḳāʾim, during the revolt of Girgenti (see DJIRDJENT and Amari, *Storia*, ii, 218 f.; Vasiliev, *Byz. et les Arabes*, ii, 261), the Emperor tried to support the rebels. Al-Manṣūr, at the height of his struggle against Abū Yazīd, received in 335/946 a Byzantine embassy, which had come to apprise itself of the situation. In the time of al-Muʿizz, during the hostilities with the Umayyads, the Umayyad caliph having in 344/955-6 asked and obtained from the Emperor help against the Fāṭimid caliph, the Emperor proposed to al-Muʿizz that he would withdraw his troops if he was willing to grant him a long-term truce. Al-Muʿizz refused, and sent in 345/956-7 a fleet under the command of ʿAmmār (of the Kalbī family) and Djawhar, which gained a great success over the Byzantines and disembarked troops in Italy, but was scattered by a storm on the return voyage. It was after this that in 346/957-8 a Byzantine ambassador came to bring tribute and obtained a truce of five years. This truce was broken by al-Muʿizz when the Cretans appealed to him for help against Byzantium. Al-Muʿizz's help to the Cretans, if it was sent, was of no use (see M. Canard, *Les sources arabes de l'histoire byzantine*, in *Revue des Études Byzantines*, xix (1961), 284 f., and on the embassy of 346 and related events, S. M. Stern, *An embassy of the Byzantine Emperor to the Fatimid Caliph al-Muʿizz*, in *Byzantion*, xx (1950), 239-58; on other Byzantine embassies, see Amari, *Storia*, ii, 314-22).

Some years later, in the time of Nicephorus Phocas, who had refused to continue to pay the tribute and had resumed hostilities in Sicily, the Fāṭimid army and fleet inflicted two defeats on the Byzantines (Battle of Rametta and Battle of the Straits) at the beginning of 965. The resulting negotiations ended in a peace treaty in 356/967, and this treaty was concluded all the more easily as al-Muʿizz was engaged at the time in preparing his Egyptian expedition.

The Conquest of Egypt

The success of al-Muʿizz in North Africa had allowed him to devote himself to the pursuit of an eastern policy, and to undertake the conquest of Egypt in which ʿUbayd Allāh and al-Ḳāʾim had failed. The conquest, carefully planned in its practical aspects, and psychologically by skilful political propaganda (see G. Wiet, *L'Égypte arabe*, vol. iv of *Hist. de la Nat. Égypt.*, 147 f., and M. Canard, *L'impérialisme des Fāṭimides et leur propagande*, in *AIEO-Alger*, vi, 167 f.) in a country which was in a state of internal chaos and ravaged by famine, was achieved without much difficulty by Djawhar, who entered al-Fusṭāṭ on 12 Shaʿbān 358/1st July 969. Egypt then became for two centuries a Shīʿī country, at least superficially. Djawhar had the name of the ʿAbbāsid caliph suppressed in the *khuṭba*, but introduced Shīʿī formulae only very gradually. He concentrated at first on taking measures against

the famine and on restoring order, and acted with considerable generosity. To house his troops he built a new town—Cairo—and laid the first stone of the al-Azhar mosque on 24 Djumādā I 359/4 April 970.

The Fāṭimids in Egypt

1. Territorial expansion: its vicissitudes. Djawhar made great efforts to extend Fāṭimid domination beyond the frontiers of Egypt over the countries which were dependencies of the Ikhshīdid emirate. The two holy cities of Mecca and Medina, where the gold liberally distributed by al-Muʿizz had achieved its propagandist purpose, surrendered readily in 359/970-1, and remained under Fāṭimid suzerainty, apart from a few interruptions over questions of money, until the reign of al-Mustanṣir. It was more difficult to establish a foothold in Syria, for there the Ikhshīdid governor had made a pact with the Ḳarmaṭīs of Baḥrayn, who in turn had the support of the Buwayhid ruler of Baghdād. Djawhar's lieutenant, Djaʿfar al-Falāḥ, was able to seize Damascus, but he was killed in a battle against the leader of the Ḳarmaṭīs, al-Ḥasan al-Aʿṣam, at the end of 360/August 971 (on the attitude of the Ḳarmaṭīs to the Fāṭimids see al-Maḳrīzī, *Ittiʿāẓ*, 248 f.; De Goeje, *op. cit.*, 183 f.; Ḥasan Ibrāhīm Ḥasan and Ṭaha Sharaf, *al-Muʿizz*, 115 f.; Madelung, *Fat. und Bahrainqarm.*, 62 f. and AL-ḤASAN AL-AʿṢAM). The Ḳarmaṭī intended to proceed without delay as far as Egypt, but he encountered a successful defence by Djawhar (end of 361/December 971) and fled. All the same Djawhar was able to re-occupy only a part of Palestine. Al-Ḥasan al-Aʿṣam returned to attack Cairo in 363/ beginning of 974, while al-Muʿizz, who had left Ifrīḳiya on 21 Shawwāl 361/5 August 972, entrusting the government of the Maghrib to the Ṣanhādjī Berber chief Bulukkīn, was already in Cairo, which he had entered on 7 Ramaḍān 362/11 June 973. But the Bedouin auxiliaries of al-Ḥasan al-Aʿṣam, won over by Fāṭimid gold, abandoned him and he was routed. Following this the Fāṭimid army was able to reoccupy Damascus, but shortly afterwards Damascus fell into the hands of a Turkish adventurer, Alptekīn, against whom al-Muʿizz, on the eve of his death in 365/975, was proposing to march.

The new caliph al-ʿAzīz succeeded in re-taking Damascus in 368/978, but in order to procure the withdrawal of the Ḳarmaṭīs, who supported Alptekīn, he was obliged to pay them tribute. Possession of Palestine and Syria was necessary to al-ʿAzīz, whose ultimate plans also required the seizure of Aleppo, but there was continued trouble in Palestine and Syria, fomented either by rebels like the powerful Ṭayyī family of Palestine, the Djarrāḥids [*q.v.*], or by dissident governors or generals. The attempts of al-ʿAzīz failed in 373/983, 382/992-3 and 384/994-5, and his power barely extended as far as Tripoli. Nevertheless it was then that Fāṭimid sovereignty was recognized from the Atlantic to the Red Sea, in the Ḥidjāz, in the Yemen (by the Yaʿfurid ʿAbd Allāh b. Ḳaḥṭān in 377/987 [see ṢANʿĀʾ]), in Syria and even for a time as far as Mosul, in the time of the ʿUḳaylid Abu 'l-Dawādh b. al-Musayyib. But they were unable to reach any understanding with the Buwayhid of Baghdād, although he was a Shīʿī.

The troubles in Syria continued, and it is possible to say that this country was never a solidly Fāṭimid possession. In the time of al-Ḥākim the amirate of Aleppo fell under Fāṭimid rule in 406/1015, and in 408/1017 received a Fāṭimid governor; but he was sometimes in revolt. In Palestine the Djarrāḥid Mufarridj b. Daghfal was able to have an anti-caliph proclaimed in the person of a *sharīf* of Mecca, and it was only by buying Mufarridj off that al-Ḥākim could rid himself of the danger which he had stirred up. Under al-Ẓāhir, Fāṭimid domination in Syria was endangered by the alliance between the Djarrāḥids, the Kalbīs of central Syria and the Kilābīs of northern Syria. Aleppo fell into the hands of the Kilābī Ṣāliḥ b. Mirdās [*q.v.*] in 415/1025. The fact that the Kalbīs changed sides allowed the Fāṭimid general Anushtekīn al-Duzbarī to win the battle of al-Uḳḥuwāna in Palestine, to re-occupy Damascus and to re-take Aleppo from the Mirdāsids in 429/1038 (in the reign of al-Mustanṣir). Thanks to Anushtekīn, Fāṭimid domination extended as far as Ḥarrān, Sarūdj and Raḳḳa, but he fell a victim to the intrigues of the vizier al-Djardjarāʾī; his successor was a descendant of the Ḥamdānids, Nāṣir al-Dawla [*q.v.*], and Aleppo fell again to a Mirdāsid in 433/1041. In spite of two attempts to re-take it in 440/1048 and 441/1049 and its surrender to the Fāṭimids in 449/1057-450/1058, it returned into Mirdāsid hands in 452 and was then irrevocably lost to the Fāṭimids, for it surrendered to the caliph of Baghdād and to the Saldjūḳ sultan Alp Arslān in 462/1069-70, and had a Saldjūḳ governor from 479/1086-7.

Nor did Syria and Palestine remain for long under Fāṭimid domination in the 5th/11th century. There was continual unrest there. The Armenian general Badr al-Djamālī [*q.v.*] tried vainly in 455/1063-456/1064 and again in 458/1066-460/1068 to maintain Fāṭimid sovereignty in Damascus. In 461/1069, in the course of fighting between Maghribī and Eastern elements of the army, the Umayyad mosque was burned. In 468/1076 Damascus was occupied by a former Fāṭimid officer, the Turcoman Atsïz, who threatened even Cairo in 469/1077, and Damascus had a Saldjūḳ *amīr* from 471/1079. In 463/1071 Atsïz had taken Jerusalem, which later passed into the hands of Suḳmān b. Artuḳ. In Palestine there remained in Fāṭimid hands only ʿAsḳalān, which was to be occupied by the Crusaders in 548/1153, and a few coastal towns—Beirut, Tyre, Sidon and Acre. None of the attempts of Badr al-Djamālī to recover Syria and Damascus was successful.

2. Relations with North Africa and Sicily. Already in the reign of al-ʿAzīz North Africa began to loosen its links with the Fāṭimid caliphate under the governorship of Manṣūr b. Bulukkīn (373/984-386/996). In the time of al-Ḥākim difficulties arose over Barḳa and Tripoli. With Muʿizz b. Bādīs (406/1016-454/1062), after he had taken several measures which were hostile to the Fāṭimid caliphate, there came about a complete rupture in 443/1051; the Ṣanhādjī *amīr* threw off Fāṭimid suzerainty and obtained investiture from the caliph of Baghdād. The invasion of Ifrīḳiya by the Banū Hilāl is attributed to the desire of the Fāṭimid vizier al-Yāzūrī for reprisals. Tamīm b. al-Muʿizz (454/1062-501/1108) returned temporarily to Fāṭimid allegiance in the first years of his reign. Similarly in 517/1123 we find the *amīr* Ḥasan b. ʿAlī (515/1121-543/1148) paying homage to the Fāṭimid caliph al-Āmir and asking him to intervene with Roger II of Sicily to stop him from attacking Ifrīḳiya. But it can be said that in fact the rupture lasted for more that half a century.

Sicily also became virtually independent of the Fāṭimid caliphate. The Kalbid governors limited themselves to accepting retrospective investiture from Cairo. They had far more contacts with the Zīrids of Ifrīḳiya, whose suzerainty the Sicilians recognized in about 427/1036 (see Amari, *Storia*,

ii, 435), than with Cairo. All the same, until the time of al-Ẓāhir and even under his successor, their coins still bore the name of the caliph (Amari, ii, 276-7). It is not impossible that the attacks which the Sicilians launched on the Byzantine coasts were supported by Cairo, for, in his negotiations with the Fāṭimid al-Ẓāhir in 1032, the emperor Romanus Argyrus expressly demanded that the Fāṭimid government should not aid *Ṣāḥib Ṣiḳilliyya* in his campaigns against the Byzantines, and promised for his part to observe the same neutrality. In practice, Cairo had no longer any power over Sicily and seems to have lost interest in it. The Norman conquest was tacitly accepted, and contacts with Roger II were frequent and friendly (see above for the caliph al-Āmir). Al-Ḥāfiẓ also maintained excellent relations with him: there was correspondence in 531/1137 (see M. Canard, *Une lettre du caliphe fāṭimite al-Ḥāfiẓ .... à Roger II*, in *Atti del Convegno Intern. di Studi Ruggeriani*, Palermo 1955, 125-46); in 537/1142 he sent an embassy to Roger, and in about 537/1143 he concluded a commercial treaty with him. But later, in 1153, 1155, 1169 and 1174, there were Norman attacks by sea against Tinnīs, Damietta and Alexandria (see Amari, index).

3. Relations with the Byzantine Empire. In their propaganda already in their African period the Fāṭimids proclaimed aloud that universal sovereignty was given to them by divine decree and that they were called to displace the Umayyads of Spain as well as the ʿAbbāsids of Baghdād and the Byzantine emperors (see M. Canard, *L'impérialisme ...., passim*). We have seen above what their relations with Byzantium had been during the African period. Al-Muʿizz received several Byzantine embassies. In Egypt, in the very year of his death in 365/975, he received an embassy from John Tzimisces. Al-ʿAzīz, in this attempt to take Aleppo, clashed with the Greeks as protectors of the Ḥamdānid amīrate of Aleppo, who each time prevented him from achieving his object. Although al-ʿAzīz did not succeed in his attempts, he nevertheless obtained in 377/987-8 from the emperor Basil II, who was threatened by the renewal of the revolt of Bardas Skleros, an advantageous treaty stipulating that the Byzantine commercial prohibitions should be lifted and that the prayer should be said in his name in the mosque of Constantinople (Abu 'l-Maḥāsin, Cairo ed., iv, 151-2). Immediately before his death, this caliph was preparing a great expedition against Byzantine territory, and he died while setting off on this campaign.

Hostilities continued in northern Syria during the reign of al-Ḥākim, for his aim, like his predecessor's, was to seize Aleppo, and rebels in Syria against Fāṭimid authority often appealed to the Emperor. The Byzantines helped al-ʿAllāḳa at Tyre, whereas in 387/997 they had refused to help the Fāṭimid general Mangūtekīn. They were defeated at sea off Tyre and again in the same year when they were besieging Apamea, a Fāṭimid enclave in northern Syria (388/998), and the emperor Basil then made proposals for peace. But it was not until 391/1001 that a ten-year truce was signed, and in the interval Basil had conducted a victorious campaign in northern Syria, though he had failed to take Tripoli. The destruction of the Church of the Holy Sepulchre on the orders of al-Ḥākim was probably one of the causes of the breaking off of commercial relations ordered by Basil in 406/1015-6. Attempts at reconciliation were made in 412/1021, just before the death of al-Ḥākim.

At the beginning of the reign of al-Ẓāhir, in 414/1023, the regent Sitt al-Mulk ([*q.v.*], d. 415/1024-5) had re-opened negotiations but without success. They were not resumed until 423/1032, and were soon broken off because of the caliph's refusal to accept the return of Ḥassān b. al-Mufarridj [see DJARRĀḤIDS], when agreement had been reached on the rebuilding of the Church of the Holy Sepulchre. It was not until 429/1038 that a peace of thirty years could be signed, at the beginning of the reign of al-Mustanṣir: the Byzantines obtained permission to rebuild the church, and sent architects and money for this purpose.

From this time on begins a period of friendly relations between Fāṭimids and Byzantines. Although Byzantium had agreed to support a rebel Sicilian *amīr* and had given him the title of *magister* in 1035-6 (Amari, ii, 434), yet when in 443/1051-2 the Zīrid Muʿizz b. Bādīs had recognized ʿAbbāsid suzerainty, his ambassador returning from Baghdād was arrested in Byzantine territory and sent to al-Mustanṣir. In 439/1048 the treaty of 1038 had been renewed.

Constantine Monomachus (1042-54) maintained excellent relations with al-Mustanṣir, who asked him to supply Egypt with wheat after the famine of 446/1054. But the death of the Emperor and the demands of his successor, the empress Zoë, who wanted in return a treaty of military aid (against the Saldjūḳs), led to a cooling of relations and even a resumption of hostilities. The rupture was aggravated when a Fāṭimid ambassador, al-Ḳuḍāʿī, noticed at Constantinople that the prayer was said in the mosque no longer in the name of the Fāṭimid, but for the Saldjūḳ sultan Toghrïl Beg, for the Emperor had entered into relations with the latter in 441/1049 in gratitude for his having freed the king of the Abkhāz, and it seems, to judge from the *Sīra* of the Fāṭimid missionary al-Muʾayyad fi 'l-Dīn (p. 95), that there had been a project for an alliance between the two against the Fāṭimid ruler. Relations were resumed however and the Byzantine writer Psellus states that they were excellent in the reign of Constantine Monomachus (ed. Renault, ii, 64) and were still so between 1057 and 1059, during the reign of Isaac Comnenus (*op. cit.*, ii, 122).

The exchange of embassies continued, the more so because the same danger, the Saldjūḳs, was threatening both Egypt and Byzantium. There was for example a Fāṭimid embassy during the reign of Romanus Diogenes in 461/1069, a letter from Alexis Comnenus to the vizier al-Afḍal in about 1098, after Antioch had been taken by the Crusaders, and an embassy from the same emperor to al-Afḍal in 1105 to negotiate the ransom of Frankish prisoners. Manuel Comnenus also maintained good relations with Egypt and in 553/1158 requested the help of a Fāṭimid fleet against Sicily. In the same year, the vizier Ṭalāʾiʿ b. Ruzzīk sent to Manuel the brother of the Count of Cyprus whom he had taken prisoner. Some years later however, in 1168, Manuel concluded a pact with king Amalric of Jerusalem for an attack against Egypt, which took place the following year, but failed.

4. Relations with the ʿAbbāsid East. Ibn Hāniʾ al-Andalusī, the eulogist of al-Muʿizz, tempts his master with the prospect of a Fāṭimid entry into Baghdād, and shows him, wide open, the old imperial Persian highway, the road to Khurāsān. One tradition has it that al-Muʿizz declared to a Byzantine ambassador in Cairo that on his next visit he would find him in Baghdād. Al-ʿAzīz set himself to achieve this goal, but by means of negotiations, trying to

get himself recognized by the Buwayhid ʿAḍud al-Dawla. An exchange of embassies took place in 369/979-80, but without result. Like the ʿAbbāsid caliph later, the Buwayhid contested the authenticity of the ʿAlid genealogy of the Fāṭimids. Al-Ḥākim was no more successful with the Ghaznawid ruler in 403/1012-3, nor was al-Ẓāhir in 415/1024. The *khilaʿ* sent were despatched to Baghdād and burnt. Al-Ẓahir did not give up, and in 425/1034 sent missionaries to the ʿAbbāsid capital to take advantage of the disturbances caused by the Turkish soldiery during the reign of the Buwayhid Djalāl al-Dawla [*q.v.*], and they made vigorous propaganda there. Al-Mustanṣir [*q.v.*] cemented relations with several governments in the East. The activities of his missionaries spread as far as Sind (see S. M. Stern, *Ismāʿīlī propaganda and Fāṭimid rule in Sind*, in *IC*, xxiii (1949), 298-307; B. Lewis, *The Fatimids and the route to India*, in *Rev. de la Fac. des Sc. économ. de l'Univ. d'Istanbul*, 1953). For a time al-Mustanṣir could believe that the Fāṭimid dream was about to become reality. In ʿIrāḳ the Turkish *amīr* al-Basāsīrī [*q.v.*] caused the sovereignty of the Fāṭimid ruler to be recognized in various places, at Mosul in 448/1057, then in Baghdād for a year in 451/1059. This extension of Fāṭimid sovereignty had been prepared in particular by the propaganda of the missionary al-Muʾayyad fi 'l-Dīn [*q.v.*], who had even converted the Buwayhid Abū Kālīdjār [*q.v.*] at Shīrāz to Ismāʿīlism. The Saldjūḳs, as Sunnīs, naturally had no sympathy for the Fāṭimids. In 447/1055, Toghrīl Beg had announced his intention of marching on Syria and Egypt and of putting an end to the reign of al-Mustanṣir. The affair of al-Basāsīrī strengthened the determination of the Saldjūḳs to direct their policy towards Syria and the Mediterranean, especially as the vizier al-Yāzūrī [*q.v.*], who decided to abandon his support of al-Basāsīrī, had entered into correspondence with Toghrīl Beg (so at least certain sources allege). The fact remains that from then on the Saldjūḳs did nothing but gain territory from the Fāṭimids: at Mecca the name of the Fāṭimid ruler was omitted from the *khuṭba*, temporarily in 462/1069-70 and finally in 473/1088. In his rebellion against al-Mustanṣir, the *amīr* Nāṣir al-Dawla appealed for help, in 462/1069-70, to the Saldjūḳ sultan Alp Arslān, asking him to send an army to help him to re-establish the ʿAbbāsid *khuṭba*. The Saldjūḳ sultan got as far as Aleppo the following year, and the Mirdāsid ruler abandoned the Fāṭimid *khuṭba*. Alp Arslān was unable to proceed further, because of the invasion of Armenia by the Byzantine emperor. Apart from this, we have already noticed the Saldjūḳ penetration into Syria and Palestine.

In the Yemen, the Fāṭimids found fervent supporters in the dynasty of the Ṣulayḥids of Ṣanʿāʾ, which ruled from 429/1038 to 534/1139. The founder was a *dāʿī* who established Fāṭimid domination in the Yemen. This dynasty included a remarkable ruler in the person of Sayyida Ḥurra, and maintained uninterrupted relations with Cairo: the letters from the chancery of al-Mustanṣir to the Ṣulayḥids have survived (*Al-Sidjillāt al-Mustanṣiriyya*, ed. A. M. Magued, Cairo 1954).

5. The Fāṭimids and the Crusades. At the time when the Crusaders arrived in northern Syria the Fāṭimids no longer held any territory in Syria, and in Palestine they retained only ʿAsḳalān and a few coastal towns. They were less interested in the struggle against the Franks than were the Turkish *amīrs* of Syria. Ibn al-Athīr, *sub anno* 491/1097-8, relates a tradition according to which the Fāṭimids, being uneasy over the plans of the Saldjūḳs and their intentions against Egypt (for the *amīr* Atsīz had already, in 469/1077, launched an unsuccessful attack against Cairo), requested the intervention of the Franks in the East. This does not seem very likely. Be that as it may, the Franks received a Fāṭimid embassy outside Antioch at the beginning of 1098 and sent delegates to Cairo, who set off with the Egyptian ambassadors. But the project for an alliance against the Turks, giving Syria to the Franks and Palestine to the Fāṭimids, did not come to anything, although the Fāṭimids were better disposed towards the Franks than towards the Turks, and in spite of the good intentions of the Franks, who were able to learn through Alexis Comnenus what was the Fāṭimid attitude to the Turks. In these circumstances the vizier al-Afḍal decided to take Jerusalem from Suḳmān, succeeded in 491/August 1098 after a siege of forty days, and continued his advance to beyond Beirut. It is difficult in these circumstances to see why—for presumably he re-took Jerusalem in order to hold it—he did nothing to prevent the Crusaders from seizing it on 15 July 1099, and allowed himself to be surprised and beaten in August outside ʿAsḳalān in a battle which had been preceded by the capture of several places, including Yāfā (Jaffa).

Following this, in 494/1100-1, the Crusaders took in Palestine Ḥayfa, Arsūf and Caesarea, and then Acre (ʿAkkā) in 497/1104. The Egyptians took part in the struggle against the Crusaders but were unable to prevent the fall of Tripoli, which had called on them for help at the end of 503/1109, nor the fall of Beirut and Sidon (Ṣaydā) in 504/1110, nor the fall of Tyre in 518/1124: it is true that the Fāṭimid governor of Tyre had signed an agreement with the *amīr* of Damascus. The Franks were even able, at the end of 517/1118, to advance as far as Faramā. Yet it was not until much later that they turned their attention to Egypt and actively prepared to attack ʿAskalān [*q.v.*]. The Egyptian vizier, Ibn al-Sallār, entered into negotiations with Nūr al-Dīn [*q.v.*], master of Aleppo, in 545/1150, and the Egyptian fleet launched a great offensive against the Frankish ports. In 548/1153, the Franks seized ʿAskalān after bloody fighting.

Next the vizier Ṭalāʾiʿ b. Ruzzīk carried out some operations against the Crusaders and gained a victory near Ghazza, then at Hebron (al-Khalīl) in 553/1158; but this had little result because Nūr al-Dīn, master of Damascus since 549/1154, when he was approached again, was still not willing to become involved because of the internal unrest in Cairo.

Ṭalāʾiʿ was assassinated at the instigation of the caliph al-ʿĀḍid in 556/1161; his son succeeded him and met the same fate in 558/1163. From then on, the relations of Fāṭimid Egypt with the Crusaders on the one hand and with Nūr al-Dīn on the other were influenced by the rivalry between Shāwar, who succeeded Ṭalāʾiʿ's son, Ruzzīk, and Ḍirghām [*qq.v.*], and by the versatile and personal policy of Shāwar. The latter, when expelled by Ḍirghām, had taken refuge with Nūr al-Dīn and persuaded him to intervene in Egypt, particularly as the king of Jerusalem, Amalric I, had made a first incursion into Egypt in 1161 and exacted a payment of tribute from Ṭalāʾiʿ, had returned in 1162, but had had to retreat before the deliberate flooding of the Nile Delta. Nūr al-Dīn sent an army with Shīrkūh [*q.v.*] and his nephew, Saladin (Ṣalāḥ al-Dīn). Ḍirghām was killed in Ramaḍān 559/August 1164, and

Shāwar resumed the vizierate. There is no room here to trace in detail the events which ensued, and the confused tangle of the successive interventions by Shīrkūh and Amalric. The main details will be found in the articles SHĀWAR and SHĪRKŪH. The result was that Shīrkūh, finally answering a joint appeal by the caliph and Shāwar, procured the evacuation of the country by the Franks in 564/1169, rid himself of Shāwar by assassination, and was granted the post of vizier to the Fāṭimid caliph. He died soon after; Saladin succeeded, and put an end to the Fāṭimid caliphate in 567/1171, re-establishing Sunnism and ʿAbbāsid sovereignty in Egypt.

Internal Policy of the Fāṭimids

1. Caliphs and viziers. In the Sunnī system, the appointment of the caliph is the result of an election or of a nomination by the predecessor ratified by a pseudo-election. In the Ismāʿīlī system, the caliph is the successor of him who, by virtue of a Divine decree and nomination, has been chosen to be the heir (*waṣī*) of the Prophet, namely ʿAlī, and the imāmate is transmitted from father to son (with the exception of the case of Ḥasan and Ḥusayn) within the family of ʿAlī. In these circumstances there could be no question of an election, nor of the conditions demanded by Sunnism for holding the office of imām. The imām is chosen by the personal nomination of his predecessor, by the *naṣṣ* [*q.v.*], a manifestation of the Divine will (on this subject see al-Nuʿmān, *Daʿāʾim al-Islam*, i, 48 f.; the *Tādj al-ʿaḳāʾid* of ʿAlī b. Muḥammad b. al-Walīd, d. 612/1215, in Ivanow, *A creed of the Fatimids*, Bombay 1936, paras. 30-32).

The succession of the imāms was thus governed by the *naṣṣ*. This nomination could be hidden from the people and known only to certain trusted persons and revealed only when desired (see examples in the *Sīrat al-ustādh Djawdhar*). It was possible for the elder son not to be chosen. Already Djaʿfar al-Ṣādiḳ had nominated Ismāʿīl, who was not the eldest of his sons. Similarly ʿAbd Allāh was preferred to Tamīm, the eldest son of al-Muʿizz, mainly for moral reasons (see the same *Sīra*). When ʿAbd Allāh died in 364/974-5, the successor nominated was his brother Nizār (al-ʿAzīz). So far everything had been quite regular. But, after the disappearance of al-Ḥākim, the nominated heir, the caliph's nephew ʿAbd al-Raḥmān b. Ilyās, was arrested and imprisoned on the orders of Sitt al-Mulk, who had the young son of al-Ḥākim, ʿAlī, proclaimed imām under the name of al-Ẓāhir. He was only 16, but there was no stipulation regarding age: al-Ḥākim himself had mounted the throne at 11 years of age. The throne often fell to a child, as in the cases of al-Mustanṣir, aged 7, of al-Mustaʿlī, who was only 8, al-Āmir, who was 5, al-Ẓāfir, who was 17, al-Fāʾiz, who was 5, and al-ʿĀḍid, who was 9 years of age. The result was that power was often in the hands of a regent (or a female regent like Sitt al-Mulk, or of a queen-mother, like the mother of al-Mustanṣir), and that on various occasions it was generals or viziers who held the real authority, even after the new caliph had reached maturity, and that the caliphs were often powerless against their viziers and their generals.

The succession proceeded regularly without any serious objections until al-Mustaʿlī, the first caliph whose nomination was violently contested and gave rise to disturbances. The vizier al-Afḍal had caused the elder son of al-Mustanṣir, Nizār, who had been nominated in the regular manner, to be passed over in favour of the younger son, al-Mustaʿlī. As a result Nizār led a revolt, which ended in his death and produced a schism which still exists today in the Ismāʿīlī community [see NIZĀR]. After the death of al-Āmir, the victim of a Nizārī plot in 524/1130, the succession was assured by completely irregular means. No nomination had been made, and al-Ḥāfiẓ [*q.v.*], the cousin of al-Āmir, was at first only regent before he proclaimed himself caliph, following the precedent of ʿAlī, who was the cousin of the Prophet. With his reign began a tremendous crisis, with bloody periods of revolution and treachery, and with struggles of rival factions in the midst of military and civil disturbances in the capital and in the provinces.

The weakness of the caliphs showed itself as early as the reign of al-Mustanṣir, who was reduced to penury and forced to sell his treasures to satisfy the demands of Nāṣir al-Dawla and of the Turkish guard which he commanded, and who only once showed a spark of energy. From the time of al-Mustaʿlī, the real masters were the "Viziers of the Sword". It could happen that the caliph was thrust aside by the vizier, and avenged himself by having the vizier assassinated when opportunity arose: it was thus that al-Āmir had al-Afḍal assassinated.

After a certain period, even the idea of the legitimacy of the Fāṭimids was less generally accepted. Already during the reign of al-Mustanṣir there had been an attempt to restore ʿAbbāsid suzerainty. In 462/1070, Nāṣir al-Dawla, at Alexandria, had the *khuṭba* said in the name of the ʿAbbāsid caliph, and in 464/1072, when he was temporarily master of Cairo, he entered into relations with him. Al-Ḥāfiẓ had a vizier, Kutayfāt, who was openly Imāmī; then followed a Sunnī vizier, Ibn al-Sallār. We cannot give in detail here all the vicissitudes through which the Fāṭimid caliphate passed, but refer the reader to the articles on the individual caliphs. The Fāṭimid caliphate, beset by troubles, declined rapidly to its end, which was finally hastened by its inability to resist the Crusaders, and not only by internal disorder.

The evolution of the vizierate. In the history of the Fāṭimid dynasty, the viziers occupied a place of gradually increasing importance. During the North African period there had been no ministers bearing the title of vizier. In Egypt, the first to receive this title, from the caliph al-ʿAzīz, was Yaʿḳūb b. Killis [*q.v.*], the organizer of the administration and the finances for the first two Egyptian caliphs. Thereafter the caliphs sometimes governed without the help of a vizier; sometimes they had a minister to whom they gave neither the title nor the office of vizier, but only the duty of acting as intermediary between them and their officials and subjects (*safāra*, *wasāṭa*, the one who fulfilled this function bearing the title of *wāsiṭa*); sometimes they had a minister who did in fact bear the title of vizier. Up to a certain time these viziers, whatever their power and their influence over the caliphs may have been, were considered as agents for the execution of the sovereign's will (called by al-Māwardī *wazīr al-tanfīdh*), but from the second period of the reign of al-Mustanṣir, when, in order to restore order and remedy a catastrophic situation, he appealed for help to the commander of the troops of Syria, Badr al-Djamālī, the latter obtained from him full powers: that is to say he was the equivalent of what al-Māwardī calls *wazīr al-tafwīḍ*, vizier with delegated powers; and as he was of military status he was called "Vizier of the Pen and of the Sword", or simply "Vizier of the Sword". From this time on all the viziers who followed, whether they were nom-

inated by the caliph or whether they had seized the position for themselves by force, had full powers and were Viziers of the Sword. The Vizier of the Sword was not only head of the armies, with the title of ***amīr al-djuyūsh***, but the head of all the civil, the judicial and even the religious administration, for among his titles were those of chief *ḳāḍī* and of chief missionary. We have seen that the vizier often left no power to the caliph and even thrust him aside; from the time of Riḍwān, the vizier of al-Ḥāfiẓ in 531/1171, it was made still clearer that the vizier had full powers by his taking the title of al-Malik, accompanied by a varying epithet, analogous to that which the last Buwayhid *amīr* of Baghdād had adopted in 440/1048. The importance of this event is that the title passed via Shīrkūh, who assumed the vizierate in 564/1169, to his nephew Saladin and hence to all the members of the Ayyūbid dynasty.

One remarkable fact concerning the Fāṭimid vizierate is that several viziers, whether they possessed the title or not, were Christians. An example is ʿĪsā b. Nasṭūrus, vizier of al-ʿAzīz, and similarly Zurʿa b. ʿĪsā b. Nasṭūrus, who succeeded yet another Christian, Manṣūr b. ʿAbdūn. We do not know whether the Armenian Yānis, who was for some months in 562/1132 the vizier of al-Ḥāfiẓ and who was a freedman of al-Afḍal, had remained Christian. But there is the very curious case of another vizier of al-Ḥāfiẓ, an Armenian who remained Christian, and nevertheless was Vizier of the Sword with full powers and surnamed Sayf al-Islām [see BAHRĀM]. On the other hand, it does not seem that Jews, although they often held important posts, ever became viziers without embracing Islam. Ibn Killis, the vizier of al-ʿAzīz, was a convert, as was Ḥasan b. Ibrāhīm b. Sahl al-Tustarī, vizier for a short time of al-Mustanṣir, and also Ibn al-Fallāḥī.

The career of a vizier in the Fāṭimid period was a dangerous one, as in fact was that of officials of every rank. Disgrace, confiscation of goods, imprisonment and the punishment of the bastinado were events of frequent occurrence. The execution or the assassination of a vizier on the orders of the caliph or by a rival became more and more common. As early as 390/1000 the *wāsiṭa* Bardjawān [*q.v.*] was assassinated by order of al-Ḥākim, and six of his successors suffered the same fate; al-Yāzūrī was executed in 450/1058 during the reign of al-Mustanṣir; then al-Afḍal was assassinated in 515/1121 by order of the caliph al-Āmir. The same caliph, in 519/1125, imprisoned al-Maʾmūn al-Baṭāʾiḥī, who was hanged three years later. Al-Ḥāfiẓ in 526/1131 had Kutayfāt put to death, and then in the next year Yānis. Ṭalāʾiʿ b. Ruzzīk was assassinated in 556/1161 on the orders of one of the aunts of the young caliph al-ʿĀḍid.

Broadly speaking, the main characteristic of the vizierate of the Fāṭimids is the insecurity of the viziers. While al-ʿAzīz had eight viziers in a reign of twenty years, and al-Ḥākim eight in nineteen years, under al-Mustanṣir there were five viziers between 452/1060 and 454/1062, and between 454/1062 and 466/1074 there was a continual coming and going of viziers. Ibn Muyassar reckons that this caliph had twenty-four viziers, some of whom held office three times.

2. Disturbances, rebellions and revolutions. Given the progressive decline of the caliphs from power to impotence, the insecurity of the viziers, and the prevailing anarchy, it is not surprising that the Fāṭimid caliphate went through periods of serious disturbances, resulting from various causes—political, military, religious, economic and social.

Under al-Ḥākim there was the revolt of Abū Rakwa, who claimed to be related to the Umayyads of Spain and whose aim was to re-establish the Umayyad dynasty. At the beginning of the reign of al-Mustanṣir, an impostor, al-Sikkīn, claiming to be al-Ḥākim, gathered supporters and marched with them as far as the gates of the palace: they were all captured, brought to the gallows and riddled with arrows (434/1043). The revolt of Nizār, the heir nominated by al-Mustanṣir and ousted from the succession by the all-powerful vizier al-Afḍal in favour of al-Mustaʿlī, had tremendous consequences, for the famous Ḥasan-i Ṣabbāḥ [*q.v.*] had taken his side and started a movement which led to the foundation of the sect of the Assassins [see ḤASHĪSHIYYA, NIZĀRĪS]. In 524/1130, the caliph al-Āmir, assassinated by a follower of Nizār, died without male issue. But some declared that he had a son, al-Ṭayyib, and a new schism occurred (see Ivanow, *Rise*, 20, and S. M. Stern, *The succession of the Fāṭimid imām al-Āmir, the claims of the later Fāṭimids to the imāmate and the rise of Ṭayyibī Ismāʿīlism*, in *Oriens*, 1951, 193 ff.). In 543/1148 yet another rebellion was stirred up, by one who claimed to be the son of Nizār.

There were numerous military disturbances, especially when the dynasty was declining, when factions of the army made and unmade ministers and fought continually among themselves. But long before this the very composition of the army provoked disturbances which sometimes took the form of racial rivalry. Berbers (*Maghāriba*), Turks (who had been enrolled since the reign of al-ʿAzīz), Daylamīs (*Mashāriḳa*), and also black Sudanese slaves bought for the army (*ʿabīd al-shirāʾ*) and numerous since the regency of the mother of al-Mustanṣir, herself a former black slave—all were jealous of and hated one another. These corps were generally undisciplined and they or their leaders either stirred up rebellions themselves or readily allowed themselves to become involved in them. Thus in the struggle between the Kutāmī Ibn ʿAmmār and Bardjawān at the beginning of the reign of al-Ḥākim, there were the Berbers on one side and on the other the Turks, the Daylamīs and the black slaves. The hatred between the Turks and the black slaves, stirred up by al-Mustanṣir's mother, provoked murderous battles in 454/1062 and 459/1067, in which the Berbers sided with the Turks. Nāṣir al-Dawla, the commander of the Turks and victor over the black slaves, wrested all power from the caliph al-Mustanṣir, who had to sell his treasures in order to pay the Turks with their ever-increasing demands. The disturbances provoked by the tyranny of Nāṣir al-Dawla and aggravated by the famine (see below) lasted until the dictatorship of Badr al-Djamālī. From the reign of al-Ḥāfiẓ onwards, the various corps of the army distributed their loyalties among the various claimants to the vizierate, some of whom, to forward their cause, raised special corps (e.g. the Barḳiyya of Ṭalāʾiʿ b. Ruzzīk) or recruited Bedouins (as did Ibn Maṣāl and Shāwar [*qq.v.*]).

Disturbances of religious origin arose when a certain group of missionaries wanted to have the divinity of al-Ḥākim recognized: in 411/1020 the mob massacred the missionaries, and this resulted in uproar and the burning of al-Fusṭāṭ on the caliph's orders. In 531/1137, Riḍwān had no difficulty in rousing the Muslim mob against the vizier Bahrām, an Armenian Christian.

But it was the economic crises and famines (which Egypt has always suffered periodically when the Nile rises insufficiently) which in the Fāṭimid period

caused most disorders: shortage of food, looting, crimes, acts of cannibalism, and horrors of every description. In 414/1024-415/1025, under al-Ẓāhir, there was a famine which obliged the populace to eat all the domestic animals, so that the caliph had to forbid the slaughter of plough-oxen. This famine was accompanied by looting by the black troops, who carried off the dishes set out for the banquet of the Feast of Sacrifices in 415 (12 February 1025). But the worst crisis of all was the great famine in the reign of al-Mustanṣir. In 446/1054-5 the caliph was obliged to ask Constantine Monomachus to supply food for Egypt (see above). The dearth, followed by disease, was worse in the following year. For seven years from 457/1065 to 464/1072 there persisted a famine so terrible that people were reduced to eating dogs and cats, and even human flesh (see al-Maḳrīzī, *Khiṭaṭ*, i, 337). Looting, and the kidnapping of men and women in order to kill and eat them, led to a general breakdown of order which was aggravated by the struggles between the Turkish and the Negro regiments of the army. The economic situation improved in the vizierate of Badr al-Djamālī and his son al-Afḍal.

3. Religious policy. The religious policy of the Fāṭimids, so far as it is concerned with Ismāʿīlī doctrine and its evolution, cannot be treated here in detail. For this subject the reader is referred to the article ISMĀʿĪLIYYA and to W. Madelung's work (cited above), in which are studied the 'reforms' introduced into the doctrine by ʿUbayd Allāh, and then al-Muʿizz, the theories of the Persian Ismāʿīlīs, the schism under al-Ḥākim, and the doctrine in the time of al-Mustanṣir. The first Fāṭimid caliphs had to justify themselves to the different Ismāʿīlī communities with their different emphases, and to combat heterodox or extremist opinions which might constitute a danger to them. They were confronted with the fact that the hopes which the Ismāʿīlī community has placed in the appearance of the Mahdī had not been realized: the law of Muḥammad had not been abrogated, the hidden meaning of the religious duties and of the Ḳurʾān had not been revealed, a more perfect law, in which there was no longer any distinction between the *bāṭin* and the *ẓāhir*, had not been promulgated, Fāṭimid rule had not spread throughout the world, but had, on the contrary, encountered unsurmountable obstacles. Policy and reason of state had obliged them to retain the fundamental duties of Islam, and the *ẓāhir* continued to exist beside the *bāṭin*. It had to be admitted that the complete reversal of positions and the victory over the Infidels which the Mahdī was expected to bring about had been postponed to the end of time, that the Mahdī had done no more than to restore fully the rights of the family of the Prophet, and that the mission would be continued by his successors until God should fulfil this promise through the Ḳāʾim. The system elaborated by the great Fāṭimī jurist al-Nuʿmān in his *Daʿāʾim al-islām* did not differ fundamentally, on numerous points, from Sunnism, and in his esoteric treatises he too postponed the awaited changes to the end of time. In general, the Fāṭimid caliphate showed itself opportunist and moderate, and it could not be otherwise in seeking to establish a state religion.

But this religion was not universally accepted, and it was necessary to embark on a struggle with the Sunnism to which a large part of the population of Egypt and Syria remained loyal. The observance of the Sunna continued, as is testified by ʿAbd al-Ḳāhir al-Baghdādī, *al-Farḳ bayn al-firaḳ* (275; cf. Goldziher, *Streitschrift des Ġazālī* . . . , 7), and there were numerous reactions against Shīʿī practices (*Khiṭaṭ*, ii, 340; Kindī-Guest, 594). Propaganda [see DĀʿĪ and DAʿWA] and the teaching of Fāṭimī *fiḳh* were organized. The *ḳāḍī* al-Nuʿmān, later his sons, and also the vizier Ibn Killis exerted all their efforts to implant the new doctrine (see *Khiṭaṭ*, ii, 341, 363; Yaḥyā b. Saʿīd, *P.O.*, xxiii/3, 434). The *Dār al-ḥikma* [*q.v.*] of al-Ḥākim was also a centre of religious and legal teaching. At first Sunnī *shaykhs* were admitted, but al-Ḥākim soon had them executed (Abu 'l-Maḥāsin, iv, 178, 222-3). The establishment was closed in the time of al-Afḍal because it was attended by people holding heretical opinions and it was feared that it would become a centre of Nizārī propaganda. After al-Afḍal's death, it was re-opened by the vizier al-Maʾmūn al-Baṭāʾiḥī, but at some distance from the palace and under the supervision of the *Dāʿī*.

Policy towards the Sunnīs fluctuated. Sunnī practices were in general forbidden, but there were some periods of tolerance and some of strictness. In 307/919-20, a *muʾadhdhin* of Ḳayrawān was executed for not having pronounced in the call to prayer "Come to the best of works" (on the differences between the Ismāʿīlī system and Sunnism, see the *Tādj al-ʿaḳāʾid* of ʿAlī b. Muḥammad b. al-Walīd in Ivanow, *A creed of the Fatimids*, Bombay 1936; al-Nuʿmān, *Daʿāʾim al-islām*; al-Muḳaddasī, 237-8; cf. R. Brunschvig, *Fiqh fatimide et histoire de l' Ifriqiya*, in *Mélanges d'hist. et d'arch. de l'Occident musulman*, Algiers 1957, ii, 13-20). The *tarāwīḥ* [*q.v.*] prayer in Ramaḍān had been forbidden in North Africa, as it was in Egypt in 372/982-3 by al-ʿAzīz, but it was allowed again in 399/1009 by al-Ḥākim (see al-Maḳrīzī's chapter, *Khiṭaṭ*, ii, 341 f., on the *Madhāhib ahl Miṣr*). Al-ʿAzīz was very strict towards the Mālikīs; al-Ḥākim sometimes tolerated them, sometimes persecuted them. Al-Ẓāhir expelled the Mālikī *faḳīhs* from Egypt in 416/1025-6. In 525/1131, on the other hand, the vizier Kutayfāt, an Imāmī, showed great tolerance: there were, besides an Ismāʿīlī and an Imāmī ḳāḍī, also a Mālikī ḳāḍī and a Shāfiʿī. Al-Ḳalḳashandī could say (*Ṣubḥ*, iii, 524) that the Fāṭimids were tolerant to the Sunnīs, with the exception of Ḥanafīs.

As for the Christians and the Jews, they held a relatively favourable position throughout the Fāṭimid period. We have noticed that several caliphs had Christian viziers: al-ʿAzīz, al-Ḥākim, who had three (Fahd b. Ibrāhīm, Manṣūr b. ʿAbdūn and Zurʿa b. Nasṭūrus), al-Ḥāfiẓ, with Bahrām. In spite of the discontent, sometimes openly expressed, of the Muslim population, Christians could always hold the highest offices. Throughout the period of the dynasty, non-Muslims continued to occupy numerous posts in the administration, especially in the finance departments. In the time of al-ʿAzīz the Jews rose to hold important offices and were sometimes very powerful, as they were at the court of al-Mustanṣir during the regency of his mother. Tolerance to Christians and Jews is one of the characteristics of the dynasty. The Armenian Abū Ṣāliḥ testifies to the tolerance of the Fāṭimid caliphs in the matter of the building of churches and their benevolence towards Christian establishments (see *The Churches and monasteries of Egypt*, ed. and tr. Evetts, Oxford 1895). For the Jews, see J. Mann, *The Jews under the Fatimid Caliphs*, Oxford 1920-2; R. J. H. Gottheil, *A decree in favour of the Karaites of Cairo dated 1024*, in *Festschrift A. Harkavy*, St. Petersburg 1908, 115 ff.; S. D. Goitein, *A Caliph's decree in favour of the*

Rabbinite Jews of Palestine, in *Journ. of Jew. stud.*, 1954; id., *The Muslim government, as seen by its non-Muslim subjects*, in *J. Pak. Hist. Soc.*, 1964; id., *Evidence on the Muslim poll tax from non-Muslim sources*, in *JESHO*, 1964; see further Cl. Cahen, *Histoires coptes d'un cadi médieval*, in *BIFAO*, lix (1960), 133 ff.

4. Organization of the State. The Fāṭimid state in North Africa, although it already surrounded itself by some ceremonial, was not yet a complex organization. But from the very beginning of the Egyptian period the caliphs al-Muʿizz and al-ʿAzīz laid the solid foundations of the power of the dynasty. The strict organization which they introduced in the administration and the finances, and which Djawhar had prepared together with Ibn Killis and Uslūdj, was the basis for a complex system of institutions which progressively developed, became modified, or were transformed, and whose functions have been studied in various works: Ibn al-Ṣayrafī, *Ḳānūn dīwān al-rasāʾil*, ed. Ali Bahgat, Cairo 1905, tr. Massé, in *BIFAO*, xi (1914); al-Maḳrīzī, *Khiṭaṭ*, i; al-Ḳalḳashandī, *Ṣubḥ*, iii (reproduced in *Les Institutions des Fatimides en Egypte*, Bibl. de l'Inst. d'Ét. Supér. Isl. d'Alger, xii (1957)); trans. by Wüstenfeld, *Calcaschandi's Geographie und Verwaltung von Aegypten*, *AKGWG*, xxv, Göttingen 1879. Some modern works also have been devoted to these questions: Dr. ʿAbd al-Munʿim Mādjid (Magued), *Institutions et cérémonial des Fatimides en Egypte*, 2 vols., Cairo 1953-5; Dr. ʿAtiya Muṣṭafā Musharrafa, *Nuẓum al-ḥukm bi-Miṣr fī ʿaṣr al-Fāṭimiyyīn*, Cairo, 2nd ed., no date. Again, one special chapter (ix) deals with the organs of the administration and another (xii) with ceremonial in Ḥasan Ibrāhīm Ḥasan's *Taʾrīkh al-dawla al-fāṭimiyya*, Cairo 1958 (revised version of *Al-Fāṭimiyyūn fī Miṣr*, 1932), 264-325, 628-73.

Fāṭimid administration was a strongly centralized system, having at its head the caliph and the vizier, either with executive or with delegated powers (from Badr al-Djamālī onwards, the vizier is a Vizier of the Sword). Everything was under the control of the central administration, the provincial organs of government having no real autonomy although some governors, such as the govenor of Ḳūṣ for example, were able at time to attain great power. Administration was carried on through the *dīwāns* (offices or ministries), which were assembled sometimes at the palace of the vizier (as for example under Ibn Killis and al-Afḍal), sometimes at the palace of the caliph [see DIWĀN ii].

Officials, both civil and military (*arbāb al-aḳlām* and *arbāb al-suyūf*), both in the personal service of the caliph (*khawāṣṣ al-khalīfa*) and in the public service (military, administrative, financial, judicial, religious), were strictly organized in a hierarchy, the degrees of which were marked not only by differences of pay but also by the insignia peculiar to each rank and the places occupied in receptions held at the palace and in public processions. Some of the military officers belonged to the public service, like the Vizier of the Sword, the Grand Chamberlain, the *Isfahsalār*, the Bearer of the Umbrella, the Sword-bearer, the Grooms, etc., others belonged to the private service: these were eunuchs, those most exalted in dignity being the *muḥannak* eunuchs, distinguished by a special style of turban, among whom were the Master of the Audience-chamber, the Message-Bearer, the Major-Domo, the eunuch responsible for arranging the caliph's headgear (*shādd al-tādj*) etc. The officers of the pen included the Vizier of the Pen (when there was no Vizier of the Sword), the heads of the chancellery and the various *dīwāns*, the Administrator of the Public Treasury, some religious officials like the Chief *Ḳāḍī*, the Chief Missionnary, the *Muḥtasib*, the Ḳurʾān-reciters and other court-officials, like the palace physicians and poets. All these officials resided in the capital, this list not including those of the provinces. See the article MIṢR, and for more details the descriptions of al-Maḳrīzī, al-Ḳalḳashandī, and the works cited above; also M. Canard, *Le cérémonial fâtimite et le cérémonial byzantin: essai de comparaison*, in *Byzantion*, xxi (1951) fasc. 2, 355-420. For Fāṭimid ceremonial, see TASHRĪFĀT; for the processions, see MAWĀKIB; for the insignia and emblems of sovereignty, see MARĀSIM.

5. Economic activity during the Fāṭimid period. ʿUbayd Allāh al-Mahdī had found North Africa in a flourishing condition, thanks to the development of town life. This prosperity permitted the first Fāṭimids to dispose of valuable resources and to set about the establishment of a powerful fleet and army.

In spite of disturbances, rebellions and disorders, Fāṭimid Egypt in general enjoyed great prosperity, thanks to the stability of its administrative and financial apparatus, its rich revenues arising from taxes and dues, the income from state-owned shops, trade and custom-dues, and the influx of gold from he mines of Nubia. The annual rise of the Nile enriched its soil and sustained its agriculture, so that numerous different crops were produced, and, except when the river failed to rise high enough or when the dams and canals were neglected, agricultural productivity was sufficient. The crops are listed in Ḥasan Ibrāhīm Ḥasan, *op. cit.*, 576 f.: wheat, barley, various vegetables, sugar-cane, dye-plants, animal-fodder; yet wheat had to be imported. The chief industrial crops were flax, sugar-cane, and, to a lesser degree, cotton. Production of wood—and that only soft-wood (sycamore, acacia)—was inadequate. For this subject see the geographers, ʿAbd al-Laṭīf al-Baghdādī, *Al-Ifāda wa 'l-iʿtibār bi-mā fī Miṣr min al-āthār*, tr. S. de Sacy, *Relation de l'Egypte par Abd al-Latîf*; D. Müller-Wodarg, *Die Landwirtschaft Aegyptens in der frühen Abbasidenzeit*, in *Isl.*, xxxii (1955); Ali Bahgat, *Les forêts en Egypte et leur administration au Moyen Age*, in *Bull. de l'Inst. d'Egypte*, 4e série, i (1901), 141-58.

Industry flourished. The first place was occupied by weaving, encouraged by the cultivation of flax and carried on in the region of Tinnis, Damietta, Dabīḳ [*q.v.*]. At Cairo also were manufactured silk-stuffs, with various names: it was into a '*ḳurḳubī tustarī*' silk, blue in colour, that al-Muʿizz had had the map of the various regions woven (*Khiṭaṭ*, i, 417). For the textile industry in Egypt see Serjeant, *Islamic Textiles*, in *Ars Islamica*, xiii-xiv (1948), 110 ff.; Ali Bahgat, *Les manufactures d'étoffes en Egypte au Moyen Age*, in *Mém. de l'Inst. Egyptien*, 1903; Ḥ. Zayyāt, *Thiyāb al-sharb*, in *Machriq*, xli/1, 137-41. Among the other industries, should be noted the wood-industry (for ship-building: on the arsenals see *Khiṭaṭ*, i, 193 f.), glass and crystal at al-Fusṭāṭ and Alexandria, pottery, ceramics, mosaic; metalwork (iron and copper: making of knives and scissors at Tinnīs), work in ivory and leather, paper-making, sugar, oil. For further details see Ḥ. Ibrāhīm Ḥasan's chapter *al-Ṣināʿa*.

In general, industry benefited from the luxury and pomp of the court, the liberal distribution of gifts and garments by the caliphs, and by the extravagance of viziers like al-Yāzūrī and al-Afḍal.

Trade, both internal and external, thrived, and Egypt carried on commercial relations with many countries. An important role in trade was played by the Jews, for the Fāṭimids do not seem to have imposed discriminatory customs tariffs, varying according to whether the traders were Jewish, Christian or Muslim. Trade with India was carried on through Ḳūṣ and Aydhāb on the Red Sea, from whence the merchant-ships embarked. Cairo was in commercial relations with Abyssinia, Nubia, Constantinople (reached in twenty days' sailing), Italy—Amalfi, trade with which was particularly brisk (see Yaḥyā b. Saʿīd, *PO*, xxiii, 447; Rosen, *The Emperor Basil Bulgaroctonus* (in Russian), 293-6; Gay, *L'Italie méridionale* ..., 585-6; Heyd, *Commerce du Levant*, i, 99, 104-6), Pisa, Genoa, Venice (which sent wood for ship-building, to the profound displeasure of the Byzantine Emperor)—, Sicily (twenty days' sailing), North Africa, Spain, and Europe, particularly via Sicily. These countries bought spices, clothes, etc., and sent in return the commodities which Egypt lacked or could not produce in sufficient quantities: wheat, iron, wood, silk (Fayyūm produced only a little), wool, and cheese (which the Jews consumed in large quantities).

Details on trade will be found in al-Idrīsī, in Nāṣir-i Khusraw, in the articles by B. Lewis and S. M. Stern noted above for India, and in S. M. Stern, *An original document from the Fatimid Chancery concerning Italian merchants*, in *Mél. Levi Della Vida*, ii, Rome 1956, 529-38. The studies of S. D. Goitein are particularly important in this connexion: *Records from the Cairo Geniza*, in *Exhibition Amer. Or. Society*, April 1961; *From the Mediterranean to India: Documents on the trade to India, South Arabia and East Africa from the eleventh and twelfth centuries*, in *Speculum*, xxix; *The Jewish India merchants of the Middle Ages*, in *India and Israel*, 1953; *New light on the beginnings of the Karimi merchants*, in *JESHO*, i (1958); *The main industries of the Mediterranean area as reflected in the records of the Cairo Geniza*, *ibid.*, iv/2 (1961); *The Cairo Geniza as a source for the history of Moslem civilisation*, in *Studia Islamica*, iii (1955), 75-91; *The Documents of the Cairo Geniza as a source for Mediterranean social history*, in *JAOS*, lxxx/2 (1960), 91-100; *Petitions to Fatimid Caliphs from the Cairo Geniza*, in *Jew. Quart. Rev.*, xi (1954), 30 ff.; *L'état actuel de la recherche sur les documents de la Geniza du Caire*, in *REJ*, 3e série, 1959-60, i; *La Tunisie du XIe siècle à la lumière des documents de la Geniza du Caire*, in *Études d'Orientalisme dédiées à la mémoire de Lévi-Provençal*, ii, 1962, 559 ff. This author has promised a comprehensive work on the whole question. See also his *Jews and Arabs, their contact through the ages*, New York 1955 (French edition, *Juifs et Arabes*, Paris 1957). For Fāṭimid trade see also Ḥ. Ibr. Ḥasan, *op. cit.*, 595 ff.; Rashīd Muḥ. al-Barrāwī, *Ḥālat Miṣr al-iḳtiṣādiyya fi ʿahd al-Fāṭimiyyīn*, Cairo 1948; G. Wiet, *Hist. de la Nat. égypt.*, *L'Égypte arabe*, 303-8; idem, *Les communications en Égypte au Moyen Age*, in *Rev. de la Soc. Royale d'Economie politique, de statistique et de législation*, xxiv, Cairo 1933; R. Idris, *Commerce maritime et ḳirāḍ en Berbérie orientale*, in *JESHO*, 1961, 226-39.

Contemporary sources of the Fāṭimid period give a picture of the economic activity of Cairo and al-Fusṭāṭ, for example the Persian traveller, Nāṣir-i Khusraw in his *Safar-nāma* (on whom see, besides Schefer, who edited and translated the work, Yahya el-Khachab, *Nâṣir e Ḥosraw*, Cairo 1940). Similarly it is after contemporary sources that al-Maḳrīzī described the extraordinary wealth of the treasuries (*khazāʾin*) of the caliphs, and thus indicates how flourishing were luxury industries (*Khiṭaṭ*, i, 408 f.; cf. al-Ḳalḳashandī, *Ṣubḥ*, iii, 475 f.); following the *K. al-Dhakhāʾir wa 'l-tuḥaf* of the Ḳāḍī al-Rashīd b. al-Zubayr, he lists all the contents of al-Mustanṣir's treasury of garments and his treasury of jewels, perfumes and valuables (see the edition by M. Ḥamīdullāh, Kuwait 1959, 249 f. These treasuries, described also in Magued, *op. cit.*, ii, had earlier been studied by Quatremère, *Mém. géogr. et hist. sur l'Egypte*, ii, 366 ff., by Inostrantsev, *Toržestvenniy vezd fatimidskikh Khalifov*, St. Petersburg 1905, 92 ff. and by Kahle, *Die Schätze der Fâṭimiden*, in *ZDMG*, xiv (1935), 329 ff. with trans. of *Khiṭaṭ*, i, 414-6. The inventory of the treasures of the palace of al-Afḍal (Ibn Muyassar, 57 f.), which it took al-Āmir and his secretaries forty days to make, also testifies to the same luxury and economic prosperity.

6. Cultural activity in the Fāṭimid period. In the Fāṭimid period an intense intellectual, literary and artistic activity developed.

In North Africa court-poets flourished, one of whom, Ibn Hāniʾ [*q.v.*], was a fervent Ismāʿīlī. On al-Iyādī and other poets, see H. H. ʿAbdal-Wahhāb, *Al-muntakhab al-madrasī min al-adab al-tūnisī*, Tunis 1944. The caliphs themselves composed verses (see the *Sīrat Djawdhar*). The *dīwān* of Tamīm, the son of al-Muʿizz, has been published. Verses by him, and by various Fāṭimid caliphs, will be found in Muḥammad Ḥasan al-Aʿẓamī, *ʿAbḳariyyat al-Fāṭimiyyīn*, Cairo 1960, 133 f., 235 f. In North Africa too the *ḳāḍī* Abū Ḥanīfa al-Nuʿmān [*q.v.*] composed his historical, juridical and esoteric works, as did Djaʿfar b. Manṣūr al-Yaman [*q.v.*], who left the Yemen for North Africa after the death of his father. The caliphs al-Manṣūr and al-Muʿizz took part in these activities: some works of al-Nuʿmān, it is known, owe much to the collaboration of al-Muʿizz.

ʿUbayd Allāh was responsible for the foundation of the town of al-Mahdiyya, with its mosque, palace, and various public buildings; al-Manṣūr founded Ṣabra (al-Manṣūriyya) with its sumptuous palaces. On this subject see G. Marçais, *L'architecture musulmane d'Occident*, Paris 1954, 65-6, 69-70, 78-81, 89-92, 93-118; S. M. Zbiss, *Mahdia et Sabra-Mansoûriya, nouveaux documents d'art fâtimite d'Occident*, in *JA*, ccxliv (1956), 79-93; Ḥ. Ibr. Ḥasan, *op. cit.*, 524-6. On these two towns see also the *Sīrat Djawdhar* (index).

In Egypt, cultural activity was still more vigorous. Poetry was cultivated by the caliphs themselves, and their court welcomed even non-Ismāʿīlī poets, such as ʿUmāra al-Yamanī [*q.v.*]. There was vigorous encouragement of works on religion, on the exposition of Ismāʿīlī doctrines, on the allegorical commentary of the Ḳurʾān, on philosophy, and on the popularization of scientific learning. The Fāṭimid period is characterized by a burst of intellectual curiosity analogous to that of the 18th century in Europe. See Ḥ. Ibr. Ḥasan, ch. xi; Muḥammad Kāmil Ḥusayn, *Fī adab Miṣr al-fāṭimiyya*, Cairo 1950; Brockelmann, S I, 323 f., 714 f.; Ivanow, *Rise*; and the articles on the philosophers Abū Ḥātim al-Rāzī, Ḥamīd al-Dīn al-Kirmānī, Aḥmad b. Ibrāhīm al-Nīsābūrī, al-Muʾayyad fi 'l-Dīn al-Shīrāzī, Ḥātim b. Ibrāhīm al-Ḥāmidī, etc., and on the Encyclopaedia of the Ikhwān al-Ṣafāʾ.

The Fāṭimid period was also distinguished by men of learning: the mathematician Ibn Haytham al-Baṣrī, invited to Egypt by al-Ḥākim; the astronomer

ʿAlī b. Yūnus al-Ṣadafī, author of *al-Zīdj al-Ḥākimī*; the physicians Ibn Saʿīd al-Tamīmī, in the entourage of Ibn Killis, Mūsā b. Alʿazār al-Isrāʾīlī and his sons Isḥāḳ and Ismāʿīl, in the reigns of al-Muʿizz and al-ʿAzīz, the famous Ibn Riḍwān, whose dispute with Ibn Buṭlān has been studied by J. Schacht and M. Meyerhof, *The medical controversy between Ibn Buṭlān of Baghdad and Ibn Riḍwān of Cairo* (publication no. 13 of the Faculty of Arts of the Egyptian University), Cairo 1937 (cf. J. Schacht, *Ueber den Hellenismus in Baghdad und Cairo*, in *ZDMG*, xc/xv (1936), 526 ff.), Manṣūr b. Sahlān b. Muḳashshir, al-Ḥākim's Christian physician (cf. Yaḥyā b. Saʿīd, *PO*, xxiii, 464).

The Fāṭimid period was also rich in authors on various subjects; the historians Ibn Zūlāḳ, al-Musabbiḥī, al-Kuḍāʿī, the author of *K. al-Diyārāt*, al-Shābushtī, the librarian of al-ʿAzīz, al-Muhallabī, the author of a geographical work composed for al-ʿAzīz, Ibn al-Maʾmūn al-Baṭāʾihī, son of the vizier, an important source of al-Maḳrīzī, the *ḳāḍī* al-Rashīd b. al-Zubayr, author of the *K. al-Dhakhāʾir wa 'l-tuḥaf*, Ibn al-Ṣayrafī, al-Ḳurṭī, who composed his history in the reign of the last Fāṭimid caliph, etc. [*qq.v.*].

The Fāṭimid period, as G. Wiet has also said, is "une des plus passionantes de l'histoire de l'Egypte musulmane". The dynasty, born of an original ideological movement within Shīʿism which developed to a degree hitherto unknown and aroused extraordinary devotion for the triumph of the cause, established itself by force of arms in North Africa and formed a powerful empire in Egypt. To them were turned the eyes and aspirations of the Ismāʿīlīs throughout the Muslim world and their sympathizers. The history of this dynasty dominates the history of the Mediterranean Near East for two centuries. Having suffered from the prejudices and hostility of the Sunnīs, it has not always been described by Sunnī writers with understanding; but for some years now it had enjoyed a renewal of interest.

The Fāṭimid dynasty had periods of greatness, thanks to its administrative and financial organization, its economic development, the flourishing intellectual and artistic activity, the pomp of court and palace, which was, as William of Tyre testifies, maintained up to the end, the ceremonial and ostentatious feasts, which immediately provoke comparison with Constantinople and far surpass what had previously been known at Baghdād. But it suffered also periods of misery and famine, bloody struggles between military factions, and a disastrous end, among the intrigues of rival viziers appealing for the intervention of foreign powers. Its history is full of contrasts. Both its greatness and its decadence offer attractive material to the historian and confer upon the dynasty a niche of its own in history.

Bibliography: To the Arab historians who are listed by M. ʿAbd Allāh ʿInān in his *Miṣr al-islāmiyya*, Cairo 1931, 34 ff. and by Ḥasan Ibrāhīm Ḥasan add: Ibn Ẓāfir, Ms. Br. Mus. Or. 3685, ff. 41 f.; Ibn al-Dawādārī, *Die Chronik des Ibn ad-Dawādārī, Sechster Teil: Der Bericht über die Fatimiden*, ed. Ṣalāḥ ad-Dīn al-Munaǧǧid, Cairo 1961 (Deutsches Arch. Inst. Kairo, Quellen zur Gesch. des isl. Aegyptens 1 f.), reviewed by B. Lewis in *BSOAS*, xxvi (1963), 429-31. For Sibṭ Ibn al-Djawzī, add MS Paris 5866, year 358/969 onwards. Several sources are discussed in the preface to Wüstenfeld, *Gesch. der Fatimiden-Chalifen* and in C. H. Becker, *Beiträge zur Gesch. Aegyptens unter dem Islam*, with, in particular, a study on a fragment of al-Musabbiḥī. Cl. Cahen, *Quelques chroniques anciennes relatives aux derniers Fatimides*, in *Bull. de l'IFAO*, xxxvii (1937), has examined a certain number of sources used by Ibn al-Furāt and drawn attention to the value as a source of the Shīʿī Ibn Abī Ṭayyiʾ. For North Africa, the chronicle of Abū Zakariyyāʾ is now accessible in a new French translation by R. Le Tourneau and R. Idris, in *Revue Africaine*, 1960-2. On Fāṭimid coins, besides the standard coin catalogues and numismatic handbooks, see: H. Sauvaire, *Matériaux pour servir à l'hist. de la numismatique* ..., in *JA*, xv (1880), xix (1882); J. Farrugia de Candia, *Monnaies fatimites du Musée du Bardo*, in *RT*, xxvii-xxviii (1936) and xxix (1937); M. Troussel, *Les monnaies d'or musulmanes du Cabinet des Médailles du Musée de Constantine*, in *Rec. des Not. et Mém. de la Soc. Arch. de Constantine*, lxv (1942); G. C. Miles, *Fatimid coins in the collection of the Univ. Museum Philadelphia and the American Numismatic Society*, New York, Amer. Num. Soc., lii (1951); A. S. Ehrenkreutz, *Studies in the Monetary history of the Near East in the Middle Ages*, in *JESHO*, 1959, 1963, 1964; id., *Contribution to the monetary history of Egypt in the Middle Ages*, in *BSOAS*, xvi (1954).—To works mentioned in the course of the article add Hodgson, *The Order of Assassins*, The Hague 1955; S. M. Stern, *Three petitions of the Fatimid period*, in *Oriens*, 1962, 172-209 and *A Fatimid decree of the year 524/1130*, in *BSOAS*, 1960, 439 ff.; A. Grohmann and P. Labīb, *Ein Fatimidenerlass vom Jahre 415 AH (1024 AD)*, in *RSO*, 1957, 641 ff.; G. Levi Della Vida, *A marriage contract on parchment from Fatimite Egypt*, in *Eretz-Israel*, xii (1963).—For a general survey of the history of the Fāṭimids, besides the works of S. Lane-Poole, *A history of Egypt in the Middle Ages*², London 1914, and *The Mohammedan dynasties*, London 1894, of Wüstenfeld, and of De Lacy O'Leary, *A short history of the Fatimid Khalifate*, London 1923, see G. Wiet, *Précis de l'histoire de l'Egypte* and *Histoire de la Nation égyptienne*, *L'Egypte arabe*, cited above.

(M. Canard)

FĀṬIMID ART. The political history of the Fāṭimids forms an indispensable background to an understanding of the development of their art. It allows us to distinguish two successive periods in it: one Ifrīḳiyan period, which extends from 308/908, the date of the installation of the Mahdī in Ḳayrawān and of the foundation of al-Mahdiyya, until 362/973, which saw the departure of al-Muʿizz and the establishment of Cairo as the city of the Caliphs; then an Egyptian period, which lasts from 362/973 up to the collapse of the Caliphate in 567/1171. To this division in time a geographical division must be added. The art which the Fāṭimids transplanted into Egypt continued to flourish in eastern 'Barbary', thanks to the Zīrids and the Ḥammādids, vassals of Cairo, and it extended its influence over both Muslim and Norman Sicily.

Al-Mahdiyya, the city of the Mahdī on the Tunisian coast, preserves, apart from the ruins of its Fāṭimid fortifications, a mosque and traces of the palace of al-Ḳaʾim. The mosque, very much altered, has a porch projecting in front whose central bay is framed on either side by two storeys of niches. This motif, which reminds us of Roman triumphal arches, was to pass into the Fāṭimid style of Egypt. The palace of al-Ḳāʾim (322-34/934-46) which stood opposite the palace of the Mahdī,

his father, still keeps its beautifully constructed walls, with an entrance jutting out from the façade, and a hall of state whose floor is covered with a stone mosaic, the last North African use of this kind of pavement. A palace of Ṣabra Manṣūriyya at the gates of Ḳayrawān seems to date from the time of the Fāṭimid Caliph al-Manṣūr (334-41/946-53). Here we see a large hall, a kind of ante-room from which, side by side, open three deep rooms, the central one of which, having no front wall, appears in the shape of an *īwān*. A similar arrangement relates this palace of Ṣabra, which is presumed Fāṭimid, to the Ṭūlūnid houses of Fusṭāṭ. It reveals connexions between Egypt and Ifrīḳiya prior to the departure of the Caliph al-Muʿizz.

Even before this departure took place, the Fāṭimid general, al-Dj̲awhar, had undertaken the construction in Cairo of the mosque of al-Azhar, which was to be considerably enlarged later on and to become the Muslim university which we know to-day. The original sanctuary shows by its plan and decorations the survival of the Ṭūlūnid tradition; but the influence of Ifrīḳiya, whence the new masters of the country came, is also to be found. The five transversal aisles which make up the hall of prayer, as in the mosque of Ibn Ṭūlūn, are interrupted in the middle by a perpendicular aisle which is wider, bordered with columns joined in pairs and having a cupola at each end, probably influenced by the Great Mosque of Ḳayrawān.

The mosque of al-Ḥākim (384-94/990-1003) combines in the same way elements imported from Ifrīḳiya and elements preserved from Ṭūlūnid architecture. The porch, projecting from the front of the building and covered by a vault giving entrance to the vast court-yard, seems Ifrīḳiyan, inspired by the mosque of Mahdiyya. The influence of the mosque of Ibn Ṭūlūn shows itself in the hall of prayer with its five transversal aisles, whose *arcs brisés* rest on brick pillars cantoned with small false columns. The two minarets which rise at the front angles of the mosque have a cylindrical core enveloped in a solid mass of square design. Like that of the porch, the ornamentation of these towers in very low relief employing geometrical and vegetal designs marks a decisive step in the elaboration of Muslim decorative art. One hundred and twenty-two years later than the mosque of al-Ḥākim, the little al-Aḳmar mosque (519/1125) is worth notice also for the ornamentation on its façade. The entrance in the projecting forepart of the building is ornamented with a great high-relief flanked by two storeys of niches.

The mosque of al-Ṣāliḥ Ṭalāʾiʿ is the latest in date of the Fāṭimid mosques (555/1160). Built above shops, its façade is made up of two projecting foreparts joined by a portico. The sanctuary has three transversal aisles, the central passage which leads up to the *miḥrāb* being distinguished only by a wider separation of the pillars.

Apart from these mosques, the Fāṭimid period saw the construction of a great number of mausoleums such as those of al-Dj̲aʿfarī, Sayyida ʿĀtika, al-Ḥaṣawātī and S̲h̲ayk̲h̲ Yūnus. They consist traditionally of a square chamber with a cupola. This cupola is supported by squinches at the four corners. In the 6th/12th century these squinches multiplied and were superimposed upon each other, producing corbels of *muḳarnas* (= stalactites), whose original model seems likely to have come from Persia.

A tomb constitutes at any rate the essential element of the *mas̲h̲had* of al-Dj̲uyūs̲h̲ī, built in 478/1085 on the Muḳaṭṭam Hill by the *wazīr* Badr al-Dj̲amālī to hold his sepulchre. This building consists of four parts: a front portion, surmounted by the minaret, where the door is situated; a middle portion with a court flanked by two chambers with wagons-vaulted roofs; at the back there is a sanctuary of three aisles covered with herring-bone vaulting and a great cupola in front of the *miḥrāb*; finally there is the chamber of the tomb itself which is joined laterally to the sanctuary. Certain peculiarities may be observed in this monument which were to perpetuate themselves in Egyptian art: the minaret formed of three towers one on top of the other, two square in design and one octagonal which surmounts a cornice of *muḳarnas* and is capped by a dome, a possible prototype of the future minarets of Cairo. Equally worth noticing is the importance given to the cupola in the sanctuary, the sharp-angled profile of this cupola, and the outline analogous with the so-called "Persian" arches whose two vertical sides are bent to form a right-angle at the summit.

Between 480/1087 and 484/1091, the same all-powerful *wazīr*, Badr al-Dj̲amālī, gave Cairo a new city wall. Armenian by birth and surrounding himself with Armenian troops, he brought from his country architects to whom the Fāṭimid capital owes three of its most beautiful buildings, the three gates called Bāb Zuwayla, Bāb al-Naṣr and Bāb al-Futūḥ. Construction and ornamentation, the magnificence of the walls, the outline of the vaults and semi-circular arches, everything in these majestic entrances to the city springs from Hellenistic tradition.

Whereas the palaces known from manuscripts to have been built by Fāṭimid Caliphs in the centre of Cairo have disappeared, those of the Ḳalʿa of the Banū Ḥammād preserve, perhaps, the record of their civil foundations. This Berber capital was built among the mountains of eastern Algeria at the beginning of the 5th/11th century, but it profited greatly by the ruin of Ḳayrawān, victim of the invasion of the Banū Hilāl, and at the end of this same century knew a brief period of splendour. A mosque whose minaret dominates the vast field of ruins, traces of palaces of which two, the keep of Ḳaṣr al-Manār (the Castle of the Lighthouse) and the Dār al-Baḥr (the Palace of the Lake), were excavated in 1908 and a third is now being excavated, give us knowledge of this North African architecture nourished by oriental influences, inspired not only by Egypt but also by ʿIrāḳ and Persia. It suffices to remember the long niches which decorate the front of the minaret and those of the palaces, a theme deeply imprinted in the architecture of the Sāsānids, the mirror of water in the court-yard of Dār al-Baḥr, the inlaid ceramic work paving and lining the great halls where faïence with metallic reflections is used, and finally the *muḳarnas* (stalactites), proved to be an Iranian invention, whose first use in the Islamic west is to be found at the Ḳalʿa.

The excavations of the Ḳalʿa have filled an important gap in our knowledge. Bougie, to which the Banū Ḥammād moved at the beginning of the 6th/12th century, does not provide a similar store of riches. Only some parts of the city wall and the great stone arch, which formed the entry to the harbour and its boats, have survived out of the buildings of the second Ḥammādid capital.

Nevertheless we are inclined to regard Bougie as an important step on the road taken by Fāṭimid art in its penetration of Sicily; many indications authorize this belief. It was from Bougie undoubtedly as well as from al-Mahdiyya, refuge of the last

Zīrids, or from the Tunis of the Banū Khurāsān, rather than from Cairo, that Palermo received the ground-plan of the pavilions on its outskirts. The Ḥammādid palaces help us to understand better the Ziza and Cuba of the Norman kings.

Within the Maghrib and as far as Andalusia, there is no place that has not to some extent been influenced by Fāṭimid art. To this distant influence can be attributed the adoption by the Islamic west of *muḳarnas* (stalactites) and inlays of enamelled clay in the Almohad period.

The propagation of these art forms can be explained by the journeys of artisans (the ruin of the cities of eastern 'Barbary' following on the invasion of the nomad Arabs must have provoked numerous departures among them) and also by the export of *objets d'art* from one place to another.

Fāṭimid Egypt produced indeed a remarkable amount of activity in the decorative arts and an amazing development of luxury. The opulence of the Caliphs and the high functionaries is vouched for by Arab authors such as al-Maḳrīzī who describes the treasure of the Caliph al-Mustanṣir, or Ibn Muyassar enumerating the riches of the *wazīr* al-Afḍal, son of Badr al-Djamālī. The artistic creations of the Fāṭimid epoch above all in Egypt but sometimes also in Spain (the kinship between the works of the two countries leaves us sometimes in doubt of their origin) are the glory of European museums and church treasures.

In the 11th and 12th centuries techniques concerned with bronze, faïence, glass and cut crystal, jewels and textiles were the most flourishing and show an extremely refined artistic taste. The same decorative elements were used as in monumental sculpture: lettering, interlacing, either star-shaped and geometrical or based on plant and occasionally animal motifs. Indeed, notwithstanding strict orthodoxy, there were many representations of living creatures both human and animal. Such in the Cairo Museum are the friezes in carved wood from a Fāṭimid palace displaying musicians, dancers and hunters, or the ewers and fountain motifs in bronze of which the most celebrated is the griffin in the Campo Santo at Pisa, or the gilded faïences with representations of persons, or the brocades decorated with animals confronting each other. The freedom of the Shīʿī masters with regard to the *sunna* undoubtedly explains the attitude of the artisans in the matter of iconography, but certainly another factor was the personality of these artisans and the traditions which they continued. Fāṭimid art is a cross-roads of influences, as will have been made clear by what has been said so far. To architectural elements from Ifrīḳiya, to the Ṭūlūnid and Mesopotamian heritage, to the Syrian contribution which shows itself in military construction, is added, above all in ornamentation and the decorative arts, the legacy of Persia which the common faith united with the masters of Egypt, and, no less important, the Hellenistic legacy handed down by the Copts. It is impossible to exaggerate the part played by the Christians of Egypt in the formation of the Fāṭimid style and of that which we designate by the rather vague but traditional name of arabesque.

FAṬĪN, pseudonym of **DĀWŪD**, (1229-83/1814-67), Turkish biographer and poet, the last of the Ottoman *tedhkire*-writers. He was born in Drama, in Western Thrace, the son of the local notable Ḥādjdjī Khālid Bey. After spending several years in Egypt, wheie his uncle lived, he returned to Istanbul and occupied various minor posts in government offices.

His *dīwān*, published posthumously by his son, shows him as a mediocre poet. His main work, the *Khātimat al-ashʿār*, is the continuation of the *tedhkire* of Ṣafāʾī (completed in 1132/1720) and that of Sālim (completed 1134/1721) and contains the biographies of poets from 1135/1722 to his own day.

Completed in 1269/1852 and printed lithographically in Istanbul in 1271/1855, Faṭīn's *Tedhkire* is of particular use for the biographies of his own contemporaries.

Bibliography: Faṭīn, *Dīwān*, Istanbul 1288 (with an introduction on Faṭīn's life); Babinger, 359; Ibnülemin Mahmud Kemal Inal, *Son asır türk şairleri*, Istanbul 1930, i, 8; ii, 367; Orhan F. Köprülü, in *IA*, s.v. An incomplete revised edition of the *Khātimat al-ashʿār*, made by Shināsī, has now been found by Ö. F. Akün: see *Türk Dili ve Edebiyatı Dergisi*, xi (1961), 66-98.

(Fahir İz)

FATRA (Ar.), which in general means a relaxing, and then an interval of time (*e.g.*, the modern *fatrat al-intiḳāl* "period of transition"), is applied more particularly to the period separating two prophets or two successive messengers (*rasūl*); al-Djāḥiẓ (*Rasāʾil*, ed. Sandūbī, Cairo 1352/1933, 133-4), in his exposition of prophetic history, uses the term *fatra* for the end of the period separating two prophets, making it clear that the "slackening" (of observance of the earlier prophet's teachings) is not a "break" (*ḳaṭʿa*). Al-Masʿūdī (*Murūdj*, iii, 85) for example uses this term to denote the lapse of time that intervened between Hūd [*q.v.*] and Ṣāliḥ [*q.v.*], but in its more current usage (see *LA*, s.v.) it is applied to the period without prophets from the time of Jesus Christ to Muḥammad. It seems that the Muslims who had heard of a considerable number of pre-Christian prophets did not take long to remark the gap of six centuries which was revealed between Jesus and Muḥammad; and so they attempted, if not to fill this gap, at least to discover personages who had rejected the worship of idols without necessarily adopting Judaism or Christianity, lived a more or less ascetic life and, in some instances, had announced the coming of the Prophet. Ibn Ḳutayba, probably on the basis of sources of the 2nd/8th century, is the first, it seems, to enumerate (*Maʿārif*, ed. ʿUkāsha, Cairo 1960, 58) "the men who had a religion before the mission of the Prophet"; in this way he names Riʾāb al-Shannī, Waraḳa b. Nawfal, Zayd b. ʿAmr b. Nufayl, Umayya b. Abi 'l-Ṣalt, Asʿad Abū Karib, Ḳuss b. Sāʿida, Ṣirma b. Abī Anas, Khālid b. Sinān. But he does not use the word *fatra*, whilst in the following century al-Masʿūdī, who clearly relies on the *Maʿārif*, describes as *ahl al-fatra* (*Murūdj*, i, 124-48) the personages named by Ibn Ḳutayba, to whom he adds some others who, he states, "have believed in a single God and in the resurrection". He even asserts that two of them, Ḥanẓala b. Ṣafwān [*q.v.*] and Khālid b. Sinān, are regarded as prophets by part of the Muslim community.

In later times the term *fatra* was also applied, by analogy, to periods of political interregnum, as for example in Spain after the collapse of the Caliphate and in the Ottoman Empire after the capture and death of Bāyazīd I. (Ch. Pellat)

FATTĀḤĪ, Persian poet of the Tīmūrid period, born at Nīshāpūr at an unspecified date, died in 852 or 853/1448-9. His name was in fact Muḥammad Yaḥyā b. Sībak, and the *takhalluṣ* "Fattāḥī" is simply derived from the anagram of the Arabic translation of his Persian name Sībak ("little apple", Ar. *tuffāḥ* "apple"). His most famous work is the *mathnawī* of about 5,000 distichs in *hazadj* metre (⏑– – –/⏑– – –/⏑– – –), entitled *Dastūr-i ʿushshāḳ* (The rule of lovers) and known also by the title *Ḥusn u-Dil* (Beauty and Heart), from the names of its two allegorical protagonists. It was completed in 840/1436-7; as, towards the end, the author mentions the plague of 838/1434-5, its composition must have been spread over several years. It is impossible in a few lines to summarize the contents of this poem in which all the "concepts" of the unique but varied "drama of love" of the classical Persian *ghazal* appear in the form of persons: Heart (*dil*), son of King Intellect (*ʿaḳl*), Beauty (*ḥusn*), daughter of King Love (*ʿishḳ*), Glance (*naẓar*), Mouth (*dahān*), Eyelash (*muzha*), Body (*badan*), Tresses (*zulf*), Rival (*raḳīb*), etc., so much so that the poem has justly been called an "Index der Bildersprache der orientalischen Erotik". The style is overloaded with rhetorical embellishments (particularly in the letters exchanged between the two lovers), and, despite its undoubted interest from the point of view of knowledge of the metaphorical language of Persian lyrics, the general effect of the poem finally becomes somewhat tedious as a result of the perpetual use of allegory. However, it is not accurate to speak of "decadence", as certain contemporary Persian critics have done. It was a question of searching for new ways to excape from the "perfect" world of Ḥāfiẓian symbolism. The living symbol is here replaced by allegory by means of the personification of abstract concepts, a device also used by other poets of the period (*e.g.*, Kātibī), which became one of the basic elements of what is called the "Indian style". Another element of this style which was already in existence at that period and even occurs in Fattāḥī is the marked tendency to use hyperbole (in the description of a perfectly smooth castle wall, he writes "the stones of its wall were so limpid that they reflected a hair several *farsang*s away"); moreover, the sophistication of the psychological study of the characters (a matter in which Niẓāmī excelled, but here carried to extremes), the use of bookish terms in metaphors (the letters of the alphabet, for example) or of words denoting objects in current use, are all elements which appeared in the "Indian style", though functioning in a new way. More readable (and an excellent example of Persian prose intermingled with verse), but perhaps less interesting from the point of view of style, is the summary in prose of the same poem which Fattāḥī made under the title *Ḥusn u-dil*. In addition, the poet also wrote a *Shabistān-i khayāl* (Bedroom of Fantasy), again in verse and prose (completed in 843/1439-40), a short poem entitled *Taʿbīr-nāma* (Book of interpretation of dreams), a *Kitāb-i Asrārī wa-khumārī* (unpublished, and of which only very few mss. exist; perhaps a discussion between a wine drinker and a hashish smoker, with *taḍmīn* (insertion of lines from famous poets). The titles alone suffice to show the new orientations for widening the content of poetry in this period which, far from being decadent, lays the foundations for possible new stylistic developments. But these developments continued along these lines perhaps more in "outer Iran" (meaning India, Central Asia and Ottoman Turkey) than in Iran proper. In fact, if it is true that Fattāḥī's secluded life as a dervish left him comparatively little known in Iran, the success of his narrative, in which personified concepts took a dramatic part (this seems to be an invention and he himself was aware of its originality, as he was to state in his own poem) was very great: he was imitated in verse and prose in various Islamic literatures. For India, besides the *Sab-ras* of Wadjhī (1044/1635), in Deccan Urdu prose, we should mention Khwādja Muḥammad Bīdil who, in 1094/1683, attempted an adaptation of it into elaborate Persian prose, while an unpublished *mathnawī*, also in Persian, is the work of a certain Dāwūd Elči (1054/1644) and is preserved in the Bombay University Library. In addition, Dhawḳī (1108/1697),

Mudjrimī (1086/1675), Sayyid Muḥammad Walī Allāh Ḳādirī (about 1180/1766) imitated him in Deccan Urdu, and Khwādja (1264/1848) wrote on the same subject in northern Urdu. In Ottoman Turkish he was imitated by Lāmiʿī (d. 937/1531), Āhī (d. 923/1517) and Walī Ṣidḳī.

Bibliography: Dawlat Shāh, *Tadhkirat al-shuʿarāʾ*, 417-8; ʿAlī Shīr Nawāʾī, *Madjālis al-nafāʾis*, 13, 135; Khwāndamīr, *Ḥabīb al-siyar*, iii/3, 108, 133; Yār-i Shāṭir, *Shiʿr-i fārsī dar ʿahd-i Shāhrūkh*, Tehran 1334 ff., 180-4 and *passim*; J. Rypka, *Iranische Literaturgeschichte*, Leipzig 1959, 275; A. Bausani, *Storia delle letterature del Pakistan*, Milan 1958, 111-7 (with a detailed résumé of the poem). The *Ḥusn u-dil* in prose has been translated into English (A. Browne, Dublin 1801; W. Price, 1828) and German (Dvořák, Vienna 1889, with the Persian text, an introduction and important notes). The *Dastūr-i ʿushshāḳ* has been published by Greenshields (Berlin 1926). Part of the *Shabistān-i khayāl* (ch. I) has been translated by Ethé (Leipzig 1865, 1868).

(A. Bausani)

FATWĀ, opinion on a point of law, the term "law" applying, in Islam, to all civil or religious matters. The act of giving a *fatwā* is a *futyā* or *iftāʾ*; —the same term is used to denote the profession of the adviser;—the person who gives a *fatwā*, or is engaged in that profession, is a *muftī*;—the person who asks for a *fatwā* is a *mustaftī*.

The institution of the *futyā* corresponds with the Roman institution of *jus respondendi* and is comparable with it in many respects.

The need for legal advice was soon felt in Islam. The ever-increasing number of the adherents of the new religion, which governed, through its totalitarian character, the temporal as well as the spiritual aspects of daily life, and the survival of the laws and customs of the conquered territories, which had to be harmonized, in some way or another, with novel precepts and integrated within the nascent Muslim *corpus juris*, necessitated a continual recourse to the opinions of competent persons.

Furthermore, the *muftīs*, like the *prudentes* of Roman law, played a considerable part in building up the structure of Islamic law. Compilations of "responsa" by *muftīs* of repute count among the most important legal manuals.

The conditions required by the classical doctrine for the exercise of the profession, or even for the delivery of a *fatwā*, are: Islam, integrity or *ʿadāla* [see ʿAdl], legal knowledge (*idjtihād*), or the ability to reach, by personal reasoning, the solution of a problem. Accordingly, authors observe that, in those times when there exist no jurists having this ability but only those who report the opinion of their predecessors, their opinions do not constitute *fatwās* properly so-called but simple 'reports of opinion'.

As opposed to a judge, a *muftī* can be a woman, a slave, a blind or dumb person (except in the case of a *muftī* who is a public official).

The afore-mentioned conditions are equally required whether it is a case of an individual and isolated *fatwā* being given or of *futyā* being exercised in a professional capacity.

Fatwās may be given to private individuals, to magistrates in the exercise of their profession, and to any other authorities. The law, indeed, particularly urges magistrates to seek opinions; and in those countries, like Muslim Spain, where the institution of the *shūrā* [*q.v.*] developed, permanent *muftīs* were attached to the courts of magistrates as advisers (*mushāwir*).

In principle *futyā* was an independent profession, but became associated with public authority in a variety of ways. The State controlled the exercise of the profession, such control normally being one of the functions of the magistrate, who could, in necessary cases, subject a *muftī* to "interdiction". From the 1st/7th century, the State itself undertook the designation of jurists qualified to act as *muftīs* in order to influence the choice made by private individuals. Later, official posts of *futyā* were created, and it thus became a public office, ranking, like the judicial magistracy, in the category of religious functions. Holders of these posts, however, remained at the service of private individuals; but they were more directly attached to the public service. Thus in the Mamlūk State, these *muftīs* formed part of the Council of Justice (*madjlis al-maẓālim*) of the Sultan and the provincial governors.

At certain periods and in certain areas, as in the Ottoman Empire, the function of *muftī* could be combined with that of magistrate; the holder of the office was merely forbidden to give *fatwās* in relation to a legal action which was brought in his court.

The public function of *futyā* is without prejudice to the private exercise of the profession. However, with the introduction of codes and their provisions borrowed from European systems in almost all the branches of law, the profession has fallen into disuse; even in those matters which, like personal status and *waḳfs*, are still generally governed by the principles of Islamic law, the practice of *fatwās* seems to be becoming obsolescent.

It remains only as a public office, rather in the manner of a historical survival, stamped with the Islamic character of the State. Furthermore, Islamic states with a modern political structure no longer have recourse to the holders of this office in order to establish the legitimacy of their legislative activities. In States where the Islamic community forms only a part of the total population—Lebanon, for example—the function of *futyā* has undergone a remarkable transformation: the "Mufti of the Republic" has become "the religious leader of the community and its representative, in this respect, with the authorities"; he is the head of all the officials of the Muslim cult and the service of *waḳfs*; he is elected for life by a college composed of qualified members of the community (Legislative Decree 18, of 13 January 1955). There remain, however, *muftīs* in the traditional sense, under the authority of the "Mufti of the Republic".

ii.—Ottoman Empire

Among the early Ottomans the function of *iftāʾ* appears to have been of the same casual nature it had hitherto exhibited in all other regions of Islamic domination: anyone prominent for his learning and piety could be asked to act as a mutually acceptable arbiter in a dispute involving a point of law and his opinion was allowed to be decisive. However, as the orderly administration of the rapidly expanding empire was seen to demand a more unified system of legal practice, such authority was gradually con-

fined to a few individuals of public position (the *ḳāḍi 'l-ʿasker*s, the preceptors of the Sultans, the *ḳāḍī*s of great cities like Bursa and Edirne, etc.) to whom appeal could be made against the decisions of lesser *müftī*s. But this, too, was unsatisfactory as it seemed to secularize the divine law and make it an instrument of the ruler's will; sometime, therefore, in the reign of Murād II (824-55/1421-51) the right to issue *fetwā*s was vested exclusively in an individual known as the *s̲h̲ayk̲h̲ al-islām* [*q.v.*], who, although appointed by the Sultan, had no part in the councils of the state, received no fees for the decisions he delivered, and was held to be above worldly considerations. He had no contact with the litigants or their advocates; every matter to be put before him was drafted in hypothetical terms by a clerk of the *fetwā odasī* known as the *müsweddedji* and examined as to correctness of presentation by another clerk of the same office, the *mümeyyiz*, so that ultimately it was only a pure question of law on which he had to decide. These decisions were recorded and preserved by the *fetwā emīni* in a special records office (*fetwāk̲h̲āne*) where they could be referred to did the occasion arise. It was these three individuals who shared the fee charged for a *fetwā*, which in the middle of the 17th century was eight *akče* (Paul Rycaut, *The Present State of the Ottoman Empire*, London 1670, 109). Although in the course of time the office of the *s̲h̲ayk̲h̲ al-islām* expanded greatly to include numerous other departments and officials (cf. its organization under Muṣṭafā K̲h̲ayrī Ef. in 1914-6 as given in the *ʿIlmiyye sālnāmesi*, Istanbul 1334, 140 ff.), the section concerned with the *fetwā* remained substantially as described. Selections from the *fetwā*s of certain distinguished *s̲h̲ayk̲h̲*s were occasionally collected into book form, but neither these nor any of the decisions preserved in the *fetwāk̲h̲āne* were of value as legal precedents; case-law as such is unknown.

Individuals with the title of *müftī* are to be found acting along with the *ḳāḍī*s throughout all the provinces but they have no connexion with *fetwā* other than in etymology. While in theory the *müftī* should be a man deeply versed in the canonical works of his *mad̲h̲hab* and of an unimpeachable character, in practice it was only the latter quality that was demanded in these provincials. For as the *ḳāḍī* was usually a transient and a stranger to the district to which he was appointed, and was felt, moreover, to be the agent and the voice of the secular power, his judgments only achieved the authority of religion when they had the implicit sanction of some elderly person locally respected for his piety and somewhat above the very low average level of education. Occasionally a *ḳāḍī* who had retired from office might serve in this capacity in his place of residence, as might a member of one of the local learned families in the larger cities, but otherwise the *müftī*s were not of the *ʿulemā* class and their presence in the provinces was only necessary to satisfy the legalistic distinction between *ḳaḍāʾ*, "case judgment", and *iftāʾ*, "interpretative judgment" (cf. Ö. N. Bilmen, *Hukukı Islâmiyye ve ıstılahatı fıkhiyye kamusu*, Istanbul 1948-52, i, 258; vi, 487) and to avoid the expense and delay of constantly having to refer to Istanbul for rulings from the *s̲h̲ayk̲h̲ al-islām*. Though these *müftī*s would hold a document of appointment from the latter, they were in no sense part of a centralized organization and their only income from the office was a share in the *ḳāḍī*'s fee for cases in which they participated. Such was the position in the "homelands" of the Ottoman Empire (Rūmili and Anatolia) where the Ḥanafī *mad̲h̲hab* was followed exclusively. However, in the Arab provinces (Egypt, Syria, North Africa) where *ḳāḍī*s were appointed from Istanbul only to a few prominent cities (Cairo, Damascus, Aleppo, Jerusalem, Mecca, Medina)—and these merely as sinecures on the road to higher office—earlier traditions and practices were allowed to remain in force; here the *müftī*s of the various other *mad̲h̲hab*s were frequently the chief religious and judicial dignitaries and were recognized as such by the *s̲h̲ayk̲h̲ al-islām* who (for a price) issued their patents of office and by the civil authority who enforced their judgments.

The *fetwā* document was of a conventional form and varied little over the centuries. It was headed by a pious invocation in Arabic, often written in a very involved and stylized manner and varying from period to period according to the preferences of the drafting clerk; after the middle of the 12th/18th century, however, the formula *al-tawfīḳ minhu*, "guidance is from Him", became invariable. The remainder of the document was in Turkish and was introduced by the words: *bu mesʾele* (or *k̲h̲uṣūṣ*) *beyānında eʾimme-i ḥanefiyyeden djewāb ne wedjhledir ki . . .*, "in what way is this problem answered by the Ḥanafī imāms . . .", and there followed an exposition of the matter in dispute couched in hypothetical terms with the identity of the parties involved concealed behind aliases (Zayd, ʿAmr; Hind, Zaynab). The exposition concluded, the single point at issue was presented as a direct interrogative, and this was followed by some variation of the formula of petition: *beyān buyurulup met̲h̲āb ve meʾdjūr oluna*, "may this be explained, and may it (the explanation) be rewarded in the Hereafter", which later was always abbreviated to *beyān buyurula*. The decision was written on the same page in the *s̲h̲ayk̲h̲*'s own hand; introduced by the word *al-djawāb*, "answer", the characters of which were extended so as to mark a division between what preceded and what followed, the fallibility of all human judgement is immediately acknowledged by the phrase *Allāhu aʿlam*, "God knows best", written on the same line. The answer is always very brief, frequently a mere "yes" or "no" (*olur*, *olmaz*), never supported by reasons or citations from authority, and the document concludes with the signature of the *s̲h̲ayk̲h̲* (the use of a seal was prohibited unless his physical condition made writing impossible).

The office of S̲h̲ayk̲h̲ al-Islam was abolished in 1924, at the same time as the Ottoman Caliphate. It was replaced by a department for religious affairs, attached to the office of the Prime Minister, with a head appointed by him.

(J. R. WALSH)

FĀʾW (ḲARYAT AL-, WĀDĪ AL-)—At approximately 45° 10′ E and 19° 15′ N, some 70 km. south of the Wādī al-Dawāsir gap, the bed of Wādī al-Fāʾw cuts across the prominent Central Arabian escarpment of Djabal Ṭuwayḳ. At the widest point the banks of the gap are about 18 km. apart. The wādī is generally dry, and in the rare floods drains north-eastward to join Wādī al-Dawāsir. Near the southern edge of the Wādī al-Fāʾw gap, approximately two km. from the scarp itself, are three wells and the extensive remains of the ancient settlement of Ḳaryat al-Fāʾw. The wells are still being used, but permanent habitation ceased a number of centuries ago. The ruins of the large settlement consist of remains of a number of houses, tombs, and a few mounds of undetermined

nature. Construction is of brick and stone masonry with lavish use of the locally available gypsum. Present indications, based on pottery, are that this settlement was in existence during the 2nd century B.C., and from other surface remains as well as from inscriptions in the vicinity it seems likely that it was once a Sabaean outpost. Surface finds also indicate that the settlement was, at least during a part of its existence, contemporaneous with that of al-Ukhdūd in Wādī Nadjrān.

FAWDJ [see ḤARB, vii—India].

FAWDJDĀR, as described by Abu' l-Faḍl (cf. *Āʾīn-i Akbarī*, Eng. transl. by Jarrett, Calcutta 1949, 41-2) was both an executive and military officer, the administrative head of a *sarkār* (district) under the Mughals. However, during the Sultanate period the *kōtwāls* [*q.v.*], who were stationed in newly-built fortresses at strategic points to police the roads, came later to be called *fawdjdārs*; but the *kōtwāls* also continued to exist and perform the duties of modern prefects of city police. While the responsibility for the general administration and civil affairs rested with the *shiḳḳdārs*, the *fawdjdārs* were charged with the maintenance of law and order within their respective jurisdictions. Baranī [*q.v.*] speaks of both *shiḳḳdārs* and *fawdjdārs* during the reign of Fīrūz Shāh Tughluḳ (752-90/1351-88). He speaks of their being jointly detailed to quell agrarian disturbances in the Doāb (cf. *Taʾrīkh-i Fīrūzshāhī*, Calcutta 1862, 479). The *fawdjdārs* in the pre-Mughal period were akin to the modern zone-commanders under Martial Law, collaborating with the civil authorities but having different areas under their control. The *fawdjdārs* under Shēr Shāh Sūr (945-52/1538-45) performed two kinds of functions: they acted both as regular heads of the *sarkārs* and in cases of emergency or for military purposes acted as *ḳalʿadārs* (commandants) of frontier forts or outposts. The back-bone of the central administration, they could be deputed to perform any kinds of duties throughout the empire. Normally one *fawdjdār* was appointed in every *sarkār* but two could also be appointed when necessary.

The *shiḳḳdārs* of the Sultanate were replaced by *fawdjdārs* under the Mughals. They combined in themselves the dual functions of both the executive and the military head of the district administration corresponding to the District Magistrate-*cum*-Superintendent of Police (but not the Collector) of British India. In importance and status the *fawdjdārs* ranked next to the *ṣūbadārs* (provincial governors). Their main function, apart from police duties, was to assist the *ʿamalguzār* (revenue-collector) or the *amīn* (revenue assessor) in the collection of land-revenue. It was the primary duty of a *fawdjdār* to ensure that the local *zamīndārs* paid the revenue regularly. The *fawdjdār* was required to guard the roads and should any merchant or traveller be robbed in daylight he was obliged to pay compensation to the victim. It was also his duty to protect the ryots, and to assist and provide armed escort to the *gumāshtas* (agents) of the *djāgīrdārs* and the assignees of Crown-lands in the collection of land-revenue. His other duties included the prevention of unauthorized arms manufacture, cutting of jungles, suppression of agrarian unrest and minor uprisings, forcible dispersal of robber-gangs and bandits, and taking cognizance of major crimes committed within his jurisdiction.

Although subordinate to the provincial governor, the *fawdjdār* was a very important official. In all probability he was appointed directly by the emperor through a *farmān-i thabatī*; the border (*nāḥiya*) *fawdjdār* or the commandant of a frontier outpost, consisting of several *thānās*, had direct dealings with the central government, and could call for help on the provincial government in cases of emergency. The duties of a border-*fawdjdār* were to keep watch over the frontiers falling within his jurisdiction, suppress turbulent and rebellious chiefs, punish aggressors, collect tribute from the local *rādjās* and when possible to conquer or subjugate enemy territory. A class of border *fawdjdārs* was known as *ghāṭwāls*; but their posts were semi-military in character. They existed as late as the later part of the 12th/18th century when they were replaced by the new police force organized by Lord Cornwallis, the Governor-General of Fort William, Calcutta (1786-93). Although the district *fawdjdār* was a central official, yet the provincial governor had powers to appoint the *fawdjdār-i gird* (*i.e.*, the *fawdjdār* of the environs) for the protection of the suburbs of the city. This officer in his turn appointed the *fawdjdārs* of the *nākās* and the *thānā-dārs*. An echo of their official designation is heard in the former province of Sind in Pakistan where the city police-station is still known as the *fawdjdārī*.

Apart from his police and administrative duties the *fawdjdār* also exercized judicial powers under the Sultans. He could try petty offences and take "security" proceedings, *i.e.*, the binding over of potential or suspected criminals. In the early Mughal period he was frequently transferred from one place to another and was, like the modern Martial Law Administrators, sometimes deputed to conduct purely military operations (cf. Khāfī Khān, *Muntakhab al-Lubāb*, i, 505). His judicial powers in criminal cases were enhanced by the later Mughals, who empowered him to try non-capital offences (cf. M. B. Ahmad, *The Administration of justice in medieval India*, Aligarh 1941, 165). The criminal courts in Pakistan and India are still known as *ʿAdālathā-yi Fawdjdārī* and criminal cases as *fawdjdārī muḳaddimāt*. Sometimes *fawdjdārs* were also appointed in certain *parganas*, as a purely temporary measure, and they enjoyed the same powers as the *fawdjdār-i sarkār*. In a few districts (*sarkārs*) there were no separate *fawdjdārs*; the same person performed the duties of the *amīn* (controller of expenses and revenue assessor) as well as of the *fawdjdār* in addition to his own duties (cf. Shāhnawāz Khān, *Maʾāthir al-umarāʾ* (Bibl. Ind.), ii, 37, which mentions Diyānat Khān being appointed both as the *amīn* and the *fawdjdār* of Sirhind on the reversion of Ray Kāshī Dās); while in certain cases the duties of the *fawdjdār* were performed either by the local *shiḳḳdār* or the *kōtwāl*.

(A. S. Bazmee Ansari)

FAWRĪ (Fevrī), Aḥmad b. ʿAbd Allāh, a 16th century Ottoman poet and scholar, was born a Christian. After his conversion to Islam he was called, in accordance with contemporary custom, ʿAbd Allāh-oghlu in the *tadhkiras* (v. Lāṭifī, Istanbul 1314, 269; Ḥasan Čelebī, Istanbul University Library, T.Y. 304, 253b).

Fawrī was deeply influenced by Naḳḳāsh ʿAlī Bey, the father of his master Lāmiʿī, and also by the *müderris* Dursun Efendi. Fawrī's profound knowledge of theology and of Arabic, a language in which he wrote poetry (*Mashāʿir al-shuʿarā*ʾ, Ist. Univ. Lib., T.Y. 2406, 253 et seq.; *Ḥadāʾiḳ al-ḥaḳāʾiḳ*, Istanbul 1268, 142 et seq.), are mentioned by his friends ʿĀshiḳ Čelebī and Newʿī-zāde ʿAṭāʾī.

A *müderris* himself, Fawrī Aḥmad Efendi was both a notable scholar and a teacher. He visited Mecca and later, in 960/1553, he took part in the expedition against Nakhčiwān under Sultan Süleymān, whose patronage he secured by means of numerous panegyrics. Fawrī died in Damascus where he had filled the post of Muftī, in Dhu 'l-Ḳaʿda 978/April 1571.

He is the author of the following works: *Dīwān*, which is preceded by the *Terdjeme-i Ḥadīth-i Arbaʿīn* (v. Abdülkadir Karahan, *Islâm-Türk edebiyatında Kırk Hadis*, Istanbul 1954, 320-1; MSS. Ist. Univ. Lib., T.Y. 2873; Topkapı-Revan 763, Murad Molla Lala Ismail, 473); a marginal commentary on the *Durar wa Ghurar*, a *risāla* on calligraphy, a Persian dictionary in Turkish and, finally, the *Akhlāḳ-i Süleymānī*.

Fawrī is the editor of the poems of Sultan Süleymān (1520-1566). According to Riyāḍī, Fawrī was the first Ottoman poet to compose *takhmīs* and *tasdīs* (*Riyāḍ al-shuʿarā*ʾ, Ist. Univ. Lib , T.Y. 761, 108).

(Abdülkadir Karahan)

FAWZĪ al-MAʿLŪF [see maʿlūf].

FAYʾ, in pre-Islamic times used for chattels taken as booty, like *ghanīma* [*q.v.*], to be divided between victors, either in fifths (*e.g.*, *Mufaḍḍaliyyāt*, ed. Lyall, 599, 1) or in fourths (*Ḥamāsa*, ed. Freytag, 458, 18, Cairo 1335, i, 428; G. Jacob, *Altarabisches Beduinenleben*, Berlin 1897, 215), the leader being entitled to one of the parts. This custom was upheld by the Prophet after the battle of Badr, and Sūra VIII, 42 mentions five employments for the Prophet's one fifth (*khums*), to figure in future budgets. The old use of the word *fay*ʾ never became completely obliterated. But when territorial conquests began and political responsibility grew on the Prophet's mind, procedure had to be changed. So the conquests of the Banu 'l-Naḍīr, Khaybar, and Fadak led to a new precedent. The Banu 'l-Naḍīr surrendered after a siege, and Sūra LIX, 7-10 maintains that this result was not due to the assailants' having prevailed, but to God's interposition in favour of His Apostle, so that it was *fay*ʾ to him exclusively to the ultimate benefit of Muslim society. In fact the same incumbents are mentioned as for the *khums*, but those actually held in view were the destitute *muhādjirūn* (Ibn Hishām, Cairo ed. 1937, iii, 193 ult.). Traditions about Khaybar and Fadak are at variance, but it is certain that Muḥammad also on these occasions followed his own equity (al-Balādhurī, *Futūḥ*, 23-33).

The theocratic explanation based on the meaning of *afāʾa*, "to bring back", as by right belonging to God and consequently to Muslim society (al-Bayḍāwī *ad* Sūra LIX, 7) cannot be supported by another Ḳurʾānic passage, Sūra XXXIII, 49. Ḳudāma derives the word in the same way, but understands it to connote annual return, namely of revenue. Otherwise, too, theorists found it difficult to define the content of *fay*ʾ. The longevity of bedouin custom left the possibility that the four-fifths could be divided among the conquering troops instead of being kept as state land. Another opinion was that the revenue (*fay*ʾ) of such lands should be subjected to the *khums* for the canonical purposes, while the rest went to state expenses for the army and to public services of different kinds (*maṣāliḥ*). It seems, however, that already ʿUmar I had made it one budget, and that *fay*ʾ early began to be classed with *waḳf* or *ḥubs* (mortmain) for the benefit of all Muslims. Support for this is the identical employment of both categories mentioned in the Ḳurʾān. This cancelling of the freer disposal of the *khums* of the leader in fact made for centralized power.

According to theory *fay*ʾ lands arise from unconditional surrender (conquests made *ʿanwat*^{an}, *ḳasr*^{an}, or *ḳahr*^{an}), even if this does not wholly square with the Prophet's precedent, as negotiations had taken place then. The theoretical alternatives are division among Muslims, in which case it would become *ʿushr* land [*q.v.*], while its inhabitants became serfs, or that it should be left *in statu quo* for the exploitation of the Muslim community, the inhabitants remaining free, but liable to *kharādj* on the land, in which case the *kharādj* is regarded as a sort of tenure to the state. Thus it would seem that the *fay*ʾ notion is intended to support the right of the state to heavy taxation, the inhabitants holding the usufruct, *manfaʿa*, while their ownership is held precarious. This, however, does not exclude the right of inheritance. On the other hand *ṣulḥ* lands, originally paying a stipulated tribute, *shay*ʾ *musammā*, or other more favourable dues, increasingly came to pay *kharādj*, so, apart from the actual ownership, it became difficult in theory to uphold a strict division between the two, as the economic result tended to become identical. On the problems of *kharādj* lands, see kharādj.

From of old the leader of a foray had a right to reserve for himself—apart from the fifth—any special object of the booty which attracted him, the *ṣafiyya* (pl. *ṣafāyā*). Likely enough this right was very limited, or it could have been used by the Prophet

in the Banu 'l-Naḍīr case. The term, however, stuck to state domains as *ṣawāfī* [*q.v.*].

FAYḌ [see Supplement].

AL-**FAYḌ** B. **ABĪ ṢĀLIḤ** Shīrawayh, Abū Dja'far, vizier (?) of the 'Abbāsid caliph al-Mahdī. Born at Nīshāpūr of a Christian father, al-Fayḍ seems to have been one of the *ghilmān* of Ibn al-Muḳaffa' [*q.v.*]; he attracted attention by his talent and culture and, according to al-Djahshiyārī (*Wuzarā'*, 164-6), followed by Ibn Khallikān (vi, 25; tr. de Slane, iv, 358) and *al-Fakhrī* (ed. Derenbourg, 255-7; tr. Fagnan, 314-8; tr. C. E. J. Whitting, 183), he was appointed *wazīr* by al-Mahdī after the dismissal of Ya'ḳūb b. Dāwūd [*q.v.*] in 166/782; he remained in office until the caliphate of al-Hādī (169/785), but was then removed from the administration. However, al-Ṭabarī mentions him (ii, 841) only in the list of secretaries of al-Mahdī, and al-Ya'ḳūbī (ii, 483) makes Muḥammad b. al-Layth the successor of Ya'ḳūb. Al-Fayḍ appears again under al-Rashīd, where he acted as agent (*wakīl*) in a matter concerning some land and where the poet Abu 'l-Asad Nubāta praises his exceptional generosity. He was also famous for his pride and his arrogance. He died in 173/789-90.

FAYḌĀBĀD, (Fyzabad), a town in the district of the same name in India, situated in 26° 47′ N. and 82° 10′ E., 4 miles from the ancient town of Ayōdhyā, which gave its name to the province of Awadh (Oudh) and the Shī'ī kingdom founded by Sa'ādat Khān Burhān al-Mulk [*q.v.*]. The town grew up around a wooden lodge (*bangla*), surrounded by a large and expansive compound, which Burhān al-Mulk had built for himself on his appointment in 1132/1719-20 as the *Nā'ib Nāẓim* of Awadh. Other buildings, mostly of mud, for the *ḥarem* and barracks for the troops sprang up all around converting the humble habitation into a respectable settlement. Even after his assumption of power as the Nawwāb-Wazīr, Burhān al-Mulk continued to stay in the same wooden lodge. On the accession of his nephew Abu 'l-Manṣūr Ṣafdar Djang [*q.v.*] to the *masnad* in 1152/1739 more buildings were added to the growing township which was given the name of Fayḍābād. (To the people of Awadh Fayḍābād is still known by its earlier name *Bangla*). Gardens were laid out and *bāzārs* sprang up all around, resulting in the decline of Ayōdhyā which suffered both in population and prosperity. Shudjā' al-Dawla, the third Nawwāb (1170-88/1756-75), stayed chiefly at Lucknow but after his defeat by the British at Buxar in 1764 he moved to Fayḍābād and made it his head-quarters. He added many new buildings, and in order to strengthen the defences of the town dug a moat around the citadel and also built two mud-forts. Before the end of 1189/1775 Āṣaf al-Dawla, the fourth Nawwāb, abandoned Fayḍābād and moved permanently to Lucknow, which thenceforward became the seat of government of the Nawwābs of Awadh. However, both the mother and the widow (Bahū Bēgum) of Shudjā' al-Dawla continued to live at Fayḍābād which soon declined in importance. It was his alleged maltreatment of these two Bēgums which led to the impeachment of Warren Hastings. After the death of Bahū Bēgum in 1232/1816 Fayḍābād lost further in importance and glory. It continued to decay till the British annexation of Awadh in 1847 when an era of development opened and the general deterioration was arrested. The Urdū poet Mīr Ḥasan in his *mathnawī*, *Gulzār-i Iram* praises Fayḍābād for its well-kept streets and wide roads.

Shudjā' al-Dawla was responsible for constructing many of the historic brick buildings and monuments of the city. He lies buried in a beautiful tall mausoleum, which he himself erected during his life-time in the centre of a charming rosegarden, the *Gulāb-bāṛī*, laid out by Ṣafdar Djang. The tomb of Bahū Bēgum, mother of Āṣaf al-Dawla, on the south of the town is a fine domed building which cost Rs. 300,000 to build. The entire amount was paid out of the queen mother's personal property. The fortress constructed by Shudjā' al-Dawla is now in ruins, and so are the palaces built by the Nawwābs and the nobles. The town was badly disturbed during the military uprising (Mutiny) of 1857 when Mawlawī Aḥmad Allāh gained prominence for the deeds of valour performed by him. He came to be known and dreaded as the 'Mawlawī of Fayḍābād'.

FAYḌĪ (later Fayyāḍī), Abu 'l-Fayḍ b. Shaykh Mubārak al-Mahdawī, Persian poet, commentator of the Ḳur'ān, one of the nine jewels (*naw ratan*) of the court of Akbar, younger brother of the historian Abu 'l-Faḍl 'Allāmī [*q.v.*], was of Yamanī extraction; one of his ancestors Shaykh Mūsā had migrated to Sind and settled at Rēl, a small place near Sīwastān (modern Sehwān). His grandfather Shaykh Khiḍr came down to Nāgor [*q.v.*], where Fayḍī's father Mubārak was born. In 950/1543-4 Shaykh Mubārak migrated to Āgra, where he married and his first child Fayḍī was born in 954/1547. He soon aroused the hostility of the *'ulamā'* on account of his unorthodox ideas and heretical beliefs as a Mahdawī (see A. S. Bazmee Ansari, *Sayyid Muḥammad Jawnpūrī and his movement*, in *Islamic Studies*, ii/1 (1963), 68,

73, and AL-DJAWNPŪRĪ). The Shaykh along with his grown-up sons, Fayḍī and Abu 'l-Faḍl, had a very hard time for several years. Unable to bear any longer the rigours of an outlaw's life Fayḍī persuaded his father to surrender himself to the emperor. In 974/1566 Shaykh Mubārak was granted an audience at Āgra and Fayḍī, welcoming the opportunity, greatly impressed the emperor with his extraordinary ability and achievements (cf. Fayḍī's *Ḳaṣīda* in *Āʾīn-i Akbarī*, Eng. transl. by Blochmann, 620 ff.). This marked the beginning of a long and brilliant career as a court-poet, statesman and a *manṣabdār*, which brought him several honours and distinctions. In 984/1576 he was created *Malik al-Shuʿarāʾ* by Akbar. In order to vindicate his claim to this high-sounding title he planned to compose a *khamsa* in 987/1579, after the famous *khamsa* of Niẓāmī [*q.v.*]. The five poems to be included were: (i) *Markaz-i Adwār*, mostly composed in Fatḥpūr Sīkrī; (ii) *Sulaymān u Bilḳīs*, commenced in Lahore but never completed; (iii) *Nal-Daman*, his best known poem (ed. Calcutta 1831); (iv) *Haft kishwar* and (v) *Akbar-nāma* on the lines of the *Sikandar-nāma*. Of these only (i) and (iii) were completed several years later at the persistent urging of Akbar while the remaining three, in spite of Abu 'l-Faḍl's assertion to the contrary (cf. *Akbar-nāma, sub anno* 39 regnal) remained incomplete.

An accomplished scholar, physician, and poet, he was appointed in 987/1579 tutor to prince Dāniyāl; he also claims to have instructed Djahāngīr, and Murād (cf. *Akbar-nāma*, Bibl. Ind., ii, 311). Of these Dāniyāl was also a poet in Bradj-bhākā, suggesting that his tutor was a master of that dialect as well as of classical Arabic and Persian. In 993/1585 he was sent on an expedition against the Yūsufzaʾīs of Pēshāwar. Treated as a close companion, he was included in the royal *entourage* during Akbar's visit to Kashmīr in 997/1588. In 999/1590-1 he was sent as an envoy to the courts of Rādjā ʿAlī Khān, ruler of Khāndesh, and Burhān Niẓām Shāh, the king of Aḥmadnagar. After the completion of his mission he returned to Fatḥpūr Sīkrī, the capital, in 1001/1592.

Generous and hospitable by nature, he even helped his enemies. When his worst critic al-Badāʾūnī [*q.v.*] fell from imperial favour in 1000/1591, Fayḍī, who was then on a mission to Gudjarāt, wrote a letter to Akbar strongly pleading the case of the disgraced historian (see al-Badāʾūnī, iii, 303-5). Yet he received very harsh treatment at the hands of Badāʾūnī, who attributes to him every possible vice and depravity and even accuses him of open enmity towards the Muslims and making fun of Islam; he also holds him responsible for Akbar's anti-Islamic activities and practices. But most of these charges are ill-founded and seem to be the result of some personal grudge, as there are in Fayḍī's *dīwān* poems in praise of the Prophet and his Companions. He died of asthma at Āgra on 10 Ṣafar 1044/5 October 1595. He was buried at Āgra alongside his father, who had died in Lahore in 1001/1592. Al-Badāʾūnī quotes several uncomplimentary chronograms of his death composed by orthodox poets. On his own showing he had accepted the "Divine Faith", instituted by Akbar (cf. *Akbar-nāma*, Bibl. Ind., ii, 311), which was denounced by the *ʿulamāʾ* as an unwarranted innovation.

A great lover of books, he had in his library more than 4,600 volumes on such varied subjects as medicine, astrology, music, philosophy, *taṣawwuf*, trigonometry, arithmetic, exegesis, *ḥadīth*, *fiḳh* etc. On his death many of these books, mostly autographs or copied during the lifetimes of their authors, were transferred to the imperial library by order of Akbar, in all probability under the law of escheat.

He is said to be the author of 101 books (apparently an exaggeration), of which very few are now extant. In addition to the incomplete *khamsa*, he compiled a *dīwān* of poems in Persian (ed. Dihlī, 1261/1845). There are, however, conflicting opinions about his poetical achievements, on which his fame chiefly rests. Shiblī Nuʿmānī [*q.v.*] regards him as one of those non-Iranian poets "whose verse would pass as the work of a genuine Persian". E. J. W. Gibb believes that after Djāmī [*q.v.*], ʿUrfī and Fayḍī were the chief Persian poets to influence Turkish poetry (*Ottoman Poetry*, i, 5, 127, 129). Al-Badāʾūnī, on the other hand, says that he was not so popular in his day as were his contemporaries ʿUrfī and Thanāʾī [*q.v.*]. A master of the Arabic language, he composed two books in the *ṣanʿat ihmāl, i.e.*, employing no dotted letter, simply to display his lexicographical abilities. One of these, the *Mawārid al-kilam* on ethics (ed. Calcutta 1241/1825), which contains pithy and laconic sentences defining terms like *Islām*, *ʿilm al-Kalām*, *Ādam*, *Kalām Allāh*, *ahl Allāh* was intended to be a preliminary to the writing of the *Sawāṭiʿ al-ilhām*, a voluminous commentary on the Ḳurʾān without any dotted letter, characterised by critics to be almost a "useless piece of Arabic writing", finished in 1002/1593 (ed. Lucknow 1306/1889). Al-Badāʾūnī bitingly remarks that he composed this book in a state of drunkenness and ritual impurity (*al-djanāba*). In view of this the claim of the Mudjaddidīs that Aḥmad Sirhindī [*q.v.*] collaborated in the composition of a part of this work seems wholly untenable (see Bibliography).

He also translated Līlāvatī, a Sanskrit work on arithmetic (ed. Calcutta 1826), and some portions of the epic poem *Mahābhārata* into Persian at the express command of Akbar, in collaboration with al-Badāʾūnī and Mullā Shīrī. *Laṭīfa-i Fayḍī*, a posthumous collection of his letters, was compiled by his nephew Nūr al-Dīn Muḥammad ʿAbd Allāh b. ʿAyn al-Mulk (MSS, Rieu 792, 984). According to Shiblī these are couched in a simple unornate language, in contradistinction to the high-flown bombastic style then in vogue in Persian letter-writing (*inshāʾ*), of which his younger brother, the celebrated Abu 'l-Faḍl was a great master (cf. his letters to Fayḍī in the second *daftar* of his *Inshāʾ*).

FAYDJ [see fuyūdj].

FAYLASŪF, philosopher: he who studies falsafa [*q.v.*], thence frequently used as an epithet for deep thinkers. The Arab philologists know the literal meaning of this word as *muḥibb al-ḥikma* (lover of wisdom). Al-Ḳindī [*q.v.*] was known for preference as the *faylasūf al-ʿArab* (philosopher of the Arabs), presumably because he was a philosopher of genuine Arab origin in contrast to most Muslim philosophers who belonged to non-Arab nations (cf. the correct explanation of this name given to al-Kindī by T. J. de Boer in the *Archiv für Gesch. der Philos.*, 1899, xiii, 154 ff.).

In popular language *faylasūf* is applied in an uncomplimentary sense to freethinkers or unbelievers. Even the Jewish king Jeroboam is called *faylasūf* in this sense (*Revue des Études Juives*, xxx, 23 ult.). An idea of contempt is associated with the forms *faylafūs*, *fulfūs* (also *falafsūn*, Syr.), plur. *falāfis*, current in the popular language; this is applied to frivolous, imprudent people, good-for-nothings and charlatans (examples in *ZDMG*, xxxviii, 681); Vollers, (*ibid.* li, 300, 4) gives *fulfūs*. The verbal form *yufalfis* (*Bāsim le forgeron*, ed. Landberg, 38, 5) is also connected with this: "he could not wriggle out". See falāsifa and falsafa. (I. Goldziher)

FAYṢAL [see saʿūd, āl].

FAYṢAL I, of ʿIrāḳ, was born at Ṭā'if in 1301/1883, third son of the Sharīf (later king) Ḥusayn b. ʿAlī. After a boyhood of desert and oasis life, he accompanied his father to Istanbul in 1309/1891, there to pass 18 years. He married his cousin, Ḥazīma, in 1323/1905. Returning to Mecca with Sharīf Ḥusayn in 1327/1909, he took part in expeditions against the Idrīsī of ʿAsīr in 1331-2/1912-3, and was elected to the Turkish parliament. Resentful of Turkish severity against Arab dissidents in Syria in 1915, and admitted to knowledge of the Arab political secret societies, Fayṣal in 1916 joined, and was for two years to command with distinction, the armies of the Mecca-based Sharīfian "Arab Revolt". His two-year effort thereafter to consolidate an Arab monarchy in Syria (1337-9/1918-20) failed in the face of French opposition; he was expelled from Damascus in July 1339/1920. But British favour and ʿIrāḳī election secured him a throne in Baghdād (August 1340/1921), and he could for the twelve years following play a conspicuous, indeed indispensable, part in the foundation, consolidation and ultimate liberation from the British Mandate of the young and aspiring kingdom. Fayṣal, holding a balance between British requirements and local patriotism, showed admirable qualities of patient leadership. ʿIrāḳ was admitted to the League of Nations in 1351/1932. Fayṣal died suddenly in Switzerland in September 1352/1933, succeeded by his son, Ghāzī.

Bibliography: The Arabic and European literature of the 1914-8 war, the Mandates, and Arab and ʿIrāḳī affairs between 1914 and 1933 is very extensive. For British and Arab views of Fayṣal see T. E. Lawrence, *The seven pillars of wisdom*, London 1935; Amīn Rīḥānī, *Fayṣal al-Awwal*, Beirut 1353/1934; Sāṭiʿ al-Ḥuṣrī, *Yawm Maysalūn*, Beirut 1945. For German and Turkish views of his war-time role see Liman von Sanders, *Fünf Jahre Türkei*, Berlin 1920 (Eng. tr. *Five years in Turkey*, Annapolis 1927; Fr. tr. *Cinq ans de Turquie*, Paris 1923) and Ali Fuad Erden, *Birinci Dünya Harbinde Suriye Hatıraları*, i, Istanbul 1954. For French views, see L. Jovelet, *L'évolution sociale et politique des «pays arabes»*, in *REI*, vii (1933), 473-81; R. de Gontaut-Biron, *Comment la France s'est installée en Syrie*, Paris 1922, 232 sqq.; M. Pernot, *L'inquiétude de l'Orient: II, En Asie musulmane*, Paris 1927, 147. In general, see S. H. Longrigg, *Syria and Lebanon under French Mandate*, Oxford 1958; idem, *ʿIraq 1900 to 1950*, Oxford 1953. (S. H. Longrigg)

FAYṢAL II, of ʿIrāḳ, son of King Ghāzī and grandson of Fayṣal I [*q.v.*], was born in Baghdād May 1354/1935, and, aged four, became King under the Regency of his uncle the Amīr ʿAbd al-Ilāh on the accidental death of his father in 1358/1939. Educated by an English governess and at Harrow, he passed an uneventful childhood, suffering intermittently from asthma. He assumed his royal functions in May 1953, and during his five-year effective reign showed excellent intentions, accepting guidance from his veteran statesman Nūrī al-Saʿīd [*q.v.*] and from his uncle. He appeared generally popular and travelled widely. Recently engaged to be married to a Turkish-Egyptian princess, Fayṣal was, with his uncle and most of his immediate family, shot by insurgent troops during the revolutionary *coup* of 14 July 1958. (S. H. Longrigg)

al-**FAYYŪM**, a geographical region of Egypt, which today, as usually in the past, forms an administrative province. The Fayyūm, which derives its name from the Coptic, *Phiom* ("the Sea"), is a roughly triangular depression, about 35 miles from north to south, and about 49 miles from east to west. It is in Middle Egypt, lying in the Libyan Desert, east of the Nile valley. The cliffs separating it from the river valley are breached at one point, thereby admitting a stream which branches off from the Nile near Asyūṭ. Now known as Baḥr Yūsuf, this stream was called by medieval writers Khalīdj al-Manhā. Its entry into the depression of the Fayyūm has been controlled since Pharaonic times by sluices at Illahūn. On entering the Fayyūm, the waters are canalized for irrigation, the surplus escaping to

form a permanent lake, now known as Birkat Ḳārūn. The principal town and provincial capital is Madīnat al-Fayyūm. The Fayyūm plays an important part in the Judaeo-Islamic legend of Joseph, who is said to have constructed the canal of al-Manhā (hence the modern name), the sluices of Illahūn, and the canals which drained the great marsh (*al-dj̲awba*) formerly covering the region. Two variants of this legend are given by Ibn ʿAbd al-Ḥakam, and it also appears in al-Maḳrīzī's *K̲h̲iṭaṭ* and other sources. With it is connected a folk-etymology of the name, al-Fayyūm: the Egyptian king, on seeing Joseph's achievements, said, "This is the work of a thousand days [*alf yawm*]". Abū Ṣāliḥ derives the name also from an eponym. The intimate association of the Fayyūm with the Joseph legend is perhaps due to the presence there of an ancient Jewish settlement, of which documentary evidence exists as early as the 3rd century B.C. Jewish influence may perhaps also be traced in the assertion, recorded by ʿAlī Mubārak, that S̲h̲ayk̲h̲ al-Rūbī, the *walī* of Madīnat al-Fayyūm, was a descendant of Reuben; a possible indication of an islamized Jewish shrine. During the Arab invasion of Egypt, the Fayyūm was occupied without difficulty, although it lay off the main routes of the conquerors: Ibn ʿAbd al-Ḥakam gives three variant traditions of its discovery and capture. It continued for some centuries to be an important centre of Coptic Christianity: Abū Ṣāliḥ, writing in the opening years of the 7th/13th century, says that there were (by implication, before his time) 35 monasteries, and he devotes some space to those still surviving. At the opening of the Muslim period, the Fayyūm seems to have been a fertile and prosperous region, as is indicated by the legend of its 360 villages, each of which could provision the whole of Egypt for one day. Rice and flax were among its chief products. It suffered a gradual decline in the succeeding centuries. Its remoteness, and the difficulty of access to it during the Nile flood, laid it open to the raids of Arab and Berber tribes. The associated phenomenon of the sedentarization of nomads in the Fayyūm has been recurrent down to modern times. Like other parts of Egypt, the Fayyūm was affected by the administrative reorganization and economic development which took place under Muḥammad ʿAlī Pas̲h̲a and his successors of the Albanian dynasty. The establishment of a railway link with the Nile valley (1874) ended the isolation of the province, while the area under cultivation was extended, cotton being developed as a cash-crop.

(P. M. HOLT)

FAZĀRA, a North Arabian tribe, reckoned part of D̲h̲ubyān, which was itself included in G̲h̲aṭafān [*q.v.*]. Its main pasture-grounds were in Wādi 'l-Rumma in Nadj̲d, and the names of many localities associated with it have been preserved (cf. Yāḳūt, index, s.v. Fazāra). In the Dj̲āhiliyya the famous war of Dāḥis between Abs and D̲h̲ubyān arose out of a wager between Ḳays b. Zuhayr, chief of Abs, and Ḥud̲h̲ayfa b. Badr of Fazāra about their respective horses Dāḥis and G̲h̲abrā. The latter won because of underhand acts by some men of Fazāra, and this led to the killing of a brother of Ḥud̲h̲ayfa. In the long war which followed D̲h̲ubyān was led by Ḥud̲h̲ayfa, and then by his son Ḥiṣn (A. P. Caussin de Perceval, *Essai sur l'histoire des Arabes avant l'Islamisme*, Paris 1847, ii, 424-43, etc.). After peace was made with Abs, Fazāra became involved in fighting with ʿĀmir b. Ṣaʿṣaʿa, Dj̲us̲h̲am and other tribes, the command being latterly in the hands of ʿUyayna b. Ḥiṣn b. Ḥud̲h̲ayfa. In Muḥammad's period at Medina ʿUyayna was the leader of Fazāra and joined in the siege of Medina (affair of the K̲h̲andaḳ) in 5/627 with 1000 men. Some months later part of Fazāra ambushed a Muslim trading expedition led by Zayd b. Ḥārit̲h̲a, and in 6/628 Zayd made severe reprisals on Fazāra. At the siege of Medina, Muḥammad had tried to bribe ʿUyayna to abandon his allies, and made similar offers during the expedition to K̲h̲aybar in 7/628, where ʿUyayna with a large force of G̲h̲aṭafān was supporting the Jews. Though furious at the eventual failure of these intrigues ʿUyayna came to terms with Muḥammad, joined the expeditions to Mecca and Ḥunayn (in 8/630), and received a hundred camels at al-Dj̲iʿrāna along with "those whose hearts are to be reconciled"; this seems to have been the share of the leader of a non-Muslim contingent, though ʿUyayna is not said to have had any following. Shortly afterwards he led a Muslim expedition against Tamīm, but he was not a member of the deputation (*wafd*) from Fazāra. After Muḥammad's death most of Fazāra joined the *ridda* under Ṭulayḥa, but eventually had to submit (cf. W. Hoenerbach, in *Abhandlungen der Akademie der Wissenschaften und der Literatur*, Geistes- und sozialwissenschaftliche Klasse, no. 4, 1951, 242-6. They are later heard of in North Africa (al-Ḳalḳashandī, *Nihāyat al-arab*, Cairo 1959, 392 f.).

MONTGOMERY WATT)

FĀZĀZ, name borne in mediaeval times by the north-western extremity of the Moroccan Middle Atlas. This territory lay to the south of Fez and Meknès. It was bounded to the east by the upper course of the Wādī Subū (=Wādī Gīgū); westwards, it extended as far as the upper course of the Wādī Umm-Rabīʿ (=Wādī Wānsīfan); its southern boundary was the so-called Tīg̲h̲ānīmīn pass, where the Malwiyya rises. It coincided with the territory now occupied by the Berber-speaking tribes called in Arabic: Bnī Mṭīr, Bnī Mgīld, Gerwān, Zemmūr and Ẓāyān. It is a high plateau, with an average altitude of 1500 m./5000 ft., from which some mountains rise. Geologically, it is of the 'causse' type (karst, limestone plateau), here and there volcanic, and cut by numerous canyons; it is covered by forests of oaks, thujas (arbor vitae) and cedars, where are found monkeys and panthers (and, as late as the end of the 19th century, lions).

Northwards and westwards this high plateau shades off into lower foothills (peneplains). The abundant rain and snow give rise to many copious springs: here rise the three most important rivers of Morocco, the Malwiyya, the Subū and the Umm Rabīʿ, and many left tributaries of the last two.

As in the rest of central Morocco, the oldest known population consisted of Ṣanhādj̲a [*q.v.*], or, more strictly, Ẓanāga, the Arabic adaptation of the Berber plural *Iẓnāgen*, sing. *Āẓnāg*. Some Arabic authors

call them also 'Banū Fāzāz', as though the second element were the name of an eponymous ancestor; but this name must arise from a careless translation of the Berber 'Ayt Fāzāz' = A. *ahl Fāzāz*, 'the people of the Fāzāz'.

The geographers describe them as pastoral mountain-folk, raising cattle, sheep, and also very sturdy horses. They practised transhumance: they spent the summers on the high plateaus, but the snows of winter obliged them to move to the valleys of the Lower Atlas: to the north, those of Tāgrāgrā (the *Guraigura* of Leo Africanus, modern Tīgrīgra) and Āsāis (between Fez and Meknès), to the west, that of Ādekhsān, on the upper Umm Rabīʿ.

In 173/789, Idrīs I took possession of the Fāzāz and applied himself to converting the population to Islam, for they had, for the most part, remained loyal to Judaism or Christianity. From the reign of his successor Idrīs II (188-213/804-28) there survive numerous *dirhams*, struck at Wazakkūr. This mint must have been located on the present Bū-Uzekkūr, a small tributary of the Umm Rabīʿ, some 3 km/2 miles south of Khnīfra. When in 213/828 the domains of Idrīs II were shared out between his sons, the Fāzāz was divided: the northern part was annexed to the principality of Fez whose *amīr*, the eldest son Muḥammad, struck *dirhams* at Tāgrāgrā; the southern part fell to ʿĪsā, whose principality included also the northern Tāmasnā with the city of Shālla. Shortly afterwards ʿĪsā rose in revolt against his elder brother Muḥammad, who entrusted to another brother, ʿUmar, the task of subduing the rebel. ʿĪsā was defeated and left the Fāzāz; he died in the Tādlā, where his tomb is still venerated among the Ayt ʿItāb as that of Mūlāy ʿĪsā ben Drīs.

During the second half of the 4th/10th century, the Zenāta of the central Maghrib were pushed westwards by the Ṣanhādja of Buluggīn, who was governing Ifrīḳiya in the name of the Fāṭimids of Cairo; it is at this period that the Maghrāwa and the Banū Yafran settled in Morocco. The latter carved out for themselves a principality whose boundaries corresponded to those of the principality of ʿĪsā b. Idrīs, with its capital at Shālla. One clan, the Banū Yadjfash, occupied the Fāzāz; their chief, Tawālā, built there a *ḳalʿa*—the famous Ḳalʿat Mahdī b. Tawālā—which was inherited by his son Mahdī.

In 452/1060 the Almoravid *amīr* Abū Bakr b. ʿUmar conquered the mountain district of the Fāzāz, except for the Ḳalʿa, which his successor Yūsuf b. Tāshufīn was able to occupy, on terms, only after a nine-year investment (456-65/1063-72). For some months the luckless al-Muʿtamid [*q.v.*] was held prisoner in the Ḳalʿa before being finally interned at Aghmāt.

Thereafter the Fāzāz was conquered in turn by the Almohads and the Marīnids. This district controlled the most direct route from Fez to Marrākush, that passing through the Tādlā; it had also two silver-mines, at ʿAwwām and Wārknās.

From the 9th/15th century onwards the name Fāzāz seems to have fallen out of use. Leo Africanus, who crossed the district in 1515, does not mention it. Indeed in the course of the 10th/16th century the land was overrun by new waves of Berbers (also belonging to the Ṣanhādja group) who had come from the upper valley of the Malwiyya, following in the wake of the Arab tribes, the Banū Ḥasan (= Bnī Ḥsen) and the Zuʿayr (= Zʿēr) as they migrated towards the north-west of Morocco.

Thenceforward the history of the Fāzāz is the history of the marabouts of the *zāwiya* of al-Dilāʾ and their Berber fellow-tribesmen the Ayt Īdrāsen (to the north) and the Ayt Ūmālū (to the west), and their struggles against the ʿAlawī sultans (especially al-Rashīd, Ismāʿīl and Sulaymān) and later against the troops of the French Protectorate.

Two Idrīsid mints in the Fāzāz, Wazakkūr and Tāgrāgrā, are (as has been noted) easily identified, but this is not true of the two other famous place-names of the district. As regards the silver-mine called Maʿdin ʿAwwām, there exists nowadays a Djabal ʿAwwām, some 10 km/6 miles west of Mrīrt, and thus 120 km/75 miles south-west of Fez, where there is a mine of silver-bearing lead; but Leo Africanus, who passed that way, speaks of an iron-mine on the Bū Ragrāg. Still more difficult is the case of the famous Ḳalʿa. Al-Bakrī does not mention it: indeed his route from Aghmāt to Fez via the Tādlā passed some way to the west of the Fāzāz; while al-Idrīsī locates it, on the same route, between Ṣufrūy [*q.v.*] and the town of Tādlā, two stages (some 100 km/60 miles) from each, on a very high mountain. The anonymous author of the *Kitāb al-Istibṣār* notes that when Al-Muʿtamid was a prisoner there it was built of wood and the majority of its population consisted of Jewish merchants. But Leo Africanus, who saw it when it was ruined and calls it *Mahdiyya*, says that it was built almost on the plain. He might be referring to a township built below a mountain-fortress, but he locates it 'ten miles' (15 km) from ʿAyn al-Aṣnām (the present Anoceur), i.e. 35 km/22 miles (barely one stage) from Ṣufrūy. It seems that the site of the Ḳalʿa of Mahdī b. Tawālā is to be sought for in the area between Timahdit and Mrīrt, perhaps at Timahdit itself.

The Fāzāz has produced few famous men apart from the founder of the Ḳalʿa, but the following may be mentioned: (1) the secretary of state and religious poet ʿAbd al-Raḥmān b. Yakhlaftan al-Fāzāzī, who died in 627/1230 (see Brockelmann, I, 273, where he is called in error *al-Fazārī*; S I, 482); (2) the great historian al-Ẓayānī, who died in 1230/1815 (see Lévi-Provençal, *Les historiens des Chorfa*, 142).

FĀZIL ḤUSAYN BEY [see FĀḌIL BEY].

FAZL [see FAḌL].

FAZLĪ [see FAḌLĪ].

FAZLULLĀH [see FAḌL ALLĀH].

FĀZŪGHLĪ, a region of the upper Blue Nile, within the modern Republic of the Sudan, and near to the Ethiopian border. Its historical importance is solely due to the presence of alluvial gold. The ruler (*makk*) of Fāzūghlī was a vassal of the Fundj [*q.v.*] sultan of Sinnār, and wore the horned cap (*ṭaḳiyya umm ḳarnayn*) as his insignia of office. This usage long survived the downfall of the Fundj sultanate (see A. W. M. Disney, *The coronation of the Fung king of Fazoghli*, in *Sudan Notes and Records*, xxvi/1, Khartoum 1945, 37-42, describing the investiture of a *makk* in 1944). In 1237/1821-22 Fāzūghlī was conquered by Ismāʿīl Kāmil Pasha, *serʿasker* of Muḥammad ʿAlī Pasha's invading forces, and a levy of gold was laid on its merchants. Muḥammad ʿAlī endeavoured, with the aid of European technicians, to exploit the gold of Fāzūghlī, but had little success. Under ʿAbbās I Fāzūghlī became a place of banishment. Thereafter it lost all importance.

(P. M. HOLT)

FAZZĀN (FEZZĀN), one of the three provinces, with Tripolitania and Cyrenaica, of the United Kingdom of Libya which dates from 1951. An entirely desert region of 551,000 sq. km., it extends as far as 600 km. to the south of the Mediterranean, between latitudes 24° and 28°, at the longitude of Tripolitania and Chad. The most direct routes from the Sudan to the Mediterranean lie across Fezzan. The climate is very arid, and localities there have an average rainfall of only 5 to 12 mm.; frost is rare; the summers are very hot, but not among the most torrid.

Fezzan consists of a number of depressions enclosed by plateaux of an altitude of from 400 to 600 m., the surface of which is rocky (*ḥamāda*) or covered with gravel (*serīr*): calcareous and sandstone plateaux, cretaceous and tertiary, in the north and east (*Ḥamāda al-Ḥamrā'*, Gargāf and Ḥarūdj), sometimes covered with black basalt deposits (Djabal al-Sōda, Ḥarūdj al-Aswad); tertiary sandstone plateaux in the south, rising to the Djabal Ben Guenēma and the vast primary and volcanic massif of Tibesti. West of the primary sandstones lie the slopes of the Messak and Tadrart (1,000 to 1,200 m.), on the edge of the Tassili.

The two Fezzanese depressions, separated by the Ḥamāda of Murzuḳ and the Serīr al-Gaṭṭūsa, are made up of two *ramla*s (erg or edeien) encircled by depressions of 300 to 450 m. in depth, where underground water is present near the surface and which are inhabited: the *ramla* of Ubāri with the oases of Shāṭi, al-Bwānis and Wādi 'l-Adjal, the *ramla* of Murzuḳ, al-Ḥofra, al-Shergiyya and, in the south-east, Gatrun (Ghaṭrūm). The sparse rainwater which soaks through into the sandstone, limestone and sand supplies the underground water-table in the depressions, and sometimes the deeper artesian water-channels.

The word Fezzān which goes back to antiquity (*Phasania*) is applied to the oases as a whole, excluding those in the Ghāt and Ghadāmes regions. The Fezzanese (*Fazāzna*, sing. *Fazzānī*) are the cultivators of these oases. They have often been menaced and robbed by the nomadic shepherds of the neighbourhood, "Arabs" from the Gibla (plateaux in south Tripolitania), connected with Shāṭi, the Touareg Ajjer whose home is in Ghāt and south of Ghadāmes but who also live as nomads in west Fezzan, and the Tebou, who are few in number, in the south-east. The Fezzanese, who are strongly interbred with negroes, are, like the nomads in the north who have remained much whiter, all Arabic speakers: their dialects "are related to the general type of Maghribī Arabic. But with them the Maghribī type is already assuming an oriental tinge" (W. Marçais), as regards both the sedentary inhabitants and also the nomads whose dialects "differ phonetically, and often grammatically as well". The Touareg Ajjer, who are tall but often of mixed breeding, are Berber-speaking (but many are bilingual); the Tebou, who are few in number and also partly of mixed breeding, are somewhat tall and slender, black but of a non-negroid type, and speak a Sudanic dialect. All the inhabitants of Fezzan, both the settled population and the herdsmen, are Sunnī Muslims of the Mālikī rite; there are no Jews.

Fezzan has been inhabited, even in what are now the most desert regions such as the *ḥamāda*s, since the old palaeolithic age. Worked stones from the mid-palaeolithic age, which are much more numerous, are already concentrated in the depressions; this is even more the case with the plentiful and fine stone relics of the age of polished stone. Fezzan shared in the great Saharan civilization of the neolithic age, to which we must certainly attribute a notable part of the rock paintings, those of the "pre-camel" period which represent, in a naturalistic style, elephants, giraffes, rhinoceroses, bovines, and men armed with bows. The most recent and diagrammatic of the rock paintings, which depict camels (dromedaries), horses, various domestic animals and men armed with shields and lances, are thought to date from the end of the neolithic period and prehistory, perhaps even from the beginning of our own era. The Garamantes who are mentioned by Herodotus and with whom the Romans were in contact, were already a mixed race composed of white Berbers like the Touareg today, half-castes and negroes, as is shown in the great number of tombs that have been excavated, particularly by Italian scholars, and whose funerary furnishings include Roman ceramics and glassware from the 2nd to the 6th centuries A.D.

The Garamantes, living over 500 km. south of the Tripolitanian *limes* but often allied with the turbulent Getuli, had to endure several "punitive" expeditions by the Romans under Cornelius Balbus in 20-19 B.C. and Valerius Festus in 69-70. However, they collaborated with Roman troops in two expeditions against the "Ethiopians", their southern neighbours, and carried produce from their country and from Sudan to the Tripolitanian ports (Leptis Magna, Oea and Sabratha). Draught oxen, donkeys, horses, and carts drawn by two horses were the forerunners of camels, the use of which spread only slowly, over the desert tracks. But only dromedaries had the ability to carry to the coast sufficient quantities of dates, precious stones, ostrich feathers, ivory and, no doubt, some black slaves from the Sahara and Sudan. From the end of the 3rd century the Garamantes came on several occasions to plunder Tripolitania. The only Roman monument in Fezzan is a mausoleum at Djerma (Garama), surrounded by cremation tombs (probably of Roman or Romanized merchants). It is likely that the technique of *foggāra*s (underground conduits for collecting water), possibly of Iranian origin, spread towards the end of the Roman period.

Being independent and ignored by the Vandal and Byzantine Maghrib, Fezzan long remained outside the sphere of Arab expansion, though conquered by ʿUḳba b. Nāfiʿ in 46/666-7. We know only that the town of Zawīla was founded in 306/918 in the Shergiyya by a Berber, Ibn Khaṭṭāb al-Hawwārī; it was a flourishing caravan centre, particularly for the slave trade, a small open city with a mosque and baths, and from it the Banū Khaṭṭāb ruled Fezzan. The country was then prosperous, irrigated by wells and numerous *foggāra*s; Djerma (Garama), Sebha, Tsāwa, and Tmessa were the principal centres. But as early as the 12th century "the Arabs spread through the countryside, doing as much damage as possible" (al-Idrīsī, trans. 158); Zawīla was surrounded by walls which are now falling into ruin. In 1190 the dynasty of the Banū Khaṭṭāb fell before the attacks of Ḳarāḳush al-Ghuzzī, a Turcoman adventurer from Armenia who had the support of the Arab tribes of Sulaym and was already master of Tripolitania.

Fezzan then passed under the domination of the

negro kings of Kanem (13th-15th centuries); they were represented by a governor (*mai*) who lived in the new capital, Trāghen (70 km. east of Zawīla); as a result there followed a widespread immigration of negroes (not slaves) and, no doubt, closer connexions with the Sudan; but the abandonment of the *foggāras* appears to date from this period.

The negro domination finally declined at the beginning of the 16th century as a result of the wars of Kanem against the Bornu and the long struggles with the Awlād Muḥammad dynasty, the founders of Murzuḳ and of Moroccan and Sharīfian origin. The Awlād Muḥammad, when finally they became masters of Fezzan, certainly contributed to its Islamization and Arabization; Murzuḳ was made the capital of the country, remaining so until the 20th century, while it was also a busy caravan centre and a stopping-place for pilgrims from the west on their way to Mecca.

The Turks, who occupied Tripoli in 1551, attempted to establish their authority in Fezzan only in 1577-8. At times they had governors there, several of whom were assassinated; they sent punitive expeditions such as that of 1679 during which Murzuḳ was completely sacked. But for the most part they were compelled to recognize Fezzan's *de facto* independence, in return for payment of tribute in gold and negro slaves by the Awlād Muḥammad.

The Ḳaramanlī dynasty which ruled over Tripoli from 1710 until 1835 was unable to keep control over Fezzan, in spite of armed intervention in 1716, 1718, 1731-2 and 1811. In the second half of the 18th century the country was, however, reasonably peaceful, under what was in practice a ruling family that paid tribute. But in 1831 Fezzan fell into the hands of the dreaded nomads, the Awlād Slēmān, under their chief ʿAbd al-Djalīl Sīf al-Naṣr.

The Turks, returning to Tripoli in 1835, made themselves masters of Fezzan in 1842, after killing Sīf al-Naṣr and driving back the Awlād Slēmān into Kanem. They remained there until 1911. The country became a *sandjaḳ* subordinate to the *wilāyet* of Tripoli and was divided into districts (*ḳaḍā*) and sub-districts (*nāḥiya*) with Ghāt in Touareg country. The Ottoman Government found Fezzan a convenient place of exile for the Young Turks, both civilians and military, whom it was anxious to keep at a distance; the tombs of several of them can be seen at Murzuḳ.

The principal halting place for trans-Saharan trade was Zawīla, Trāghen and then Murzuḳ. But the story was only known in detail long after, from the correspondence of the French Consuls in Tripoli and explorations at the end of the 18th and in the 19th centuries. On their way from Sudan to Tripoli came caravans, their chief merchandise being black slaves numbering from 500 to 2,000 a year, and also gold (either dust or in ingots); less important were ivory, ostrich feathers, copper (from Bornu) and hides. Fezzan exported only dates and natron (carbonate of soda). In the opposite direction the caravans carried various manufactured articles from Europe or the East; Venetian glassware, brocades and brass, coarse cloth from Naples and Marseilles, cottons from England and silks from Lyons (19th century), arms, ironmongery and pharmaceuticals from Italy and France, oriental fabrics, carpets and spices. The Fezzanese had some share in this traffic, which was mainly financed by the merchants from the oases in the north, in Tripoli and Ghadāmes, the Tebou of Bilma and the Bornu negroes; and the government of Murzuḳ levied duties on camel-loads and slaves. The suppression of slavery, progressively observed, and the occupation of the Guinea Coast by the European Powers brought about first the decline and then the almost total disappearance of trans-Saharan trade. In addition, the Fezzan suffered greatly from the banditry of nomads during the ten years of the Awlād Slēmān's domination and, much more recently, between the two Italian conquests.

The Italians actually disembarked in Tripoli on 5 October 1911—taking over from the Turks in Libya as a result of the Treaty of Ouchy (19 October 1912)—but were able to occupy Fezzan only between January and August 1914. The Miani force, coming from Syrte through Sokna, and outflanking Gibla which was occupied by hostile nomads, took Brak, Sebḥa, Murzuḳ, Ubāri and Ghāt in succession. But owing to the opposition of the nomads who were spurred on by the propaganda of the Sanūsiyya fraternity, and also to the outbreak of the first world war, into which Italy was to make her entry, the Italian troops were withdrawn, though not without difficulty, in December 1914 and January 1915, leaving the country unprotected against the brigandage of the nomads for fifteen years. In fact, the Italians only returned in December 1929; in a combined advance of three columns, under the command of General Graziani, they passed through Derdj, al-Gueriat and Hūn (Djofra) and had no great difficulty in reoccupying Fezzan, including Ghāt and the Gatrūn region (February 1930).

It was a ruined country which had to be organized and equipped. Fezzan became a military command dependent on the Governor General of Libya; later (1936) it was transferred to the South Libya Command, set up at Hūn. The Italians started to link up the different parts of the Fezzan and Ghāt with Tripoli and Miṣrāta by motor roads; they set up a number of schools and hospitals, and regularized and controlled the traditional administration of the *mudīrs*. Fezzan enjoyed a period of peace that was sorely needed.

The peaceful atmosphere was scarcely disturbed by the arrival of the Free French troops under the command of General Leclerc who, coming from the south in December 1942, easily occupied Murzuḳ on 7 January 1943, and then Sebḥa and the rest of the country before linking up with the British 8th Army in the advance on Tunisia. As a result of the Franco-British Agreement of January 1943, Fezzan and Ghadāmes formed a territory placed under the direct authority of the Direction des Territoires du Sud de l'Algérie, while Ghāt was annexed to the territory of Djanet (Fort-Charley). The French divided Fezzan into 3 subdivisions (Shāṭi, Sebḥa-Ubāri, Murzuḳ), maintained the administration by *mudīrs* and continued the educational, medical and economic work undertaken by the Italians; in addition, they dug several artesian wells.

Since 24 December 1951, the date of the creation of the United Kingdom of Libya under the sovereignty of Muḥammad Idrīsi al-Sanūsī, Fezzan has been one of the three autonomous provinces of this now independent country. The French forces provisionally maintained in Fezzan evacuated it, together with Ghāt and Ghadāmes, by the terms of the Franco-Libyan Treaty of 10 August 1955; Ghadāmes has subsequently been added to Tripolitania. The *wālī*, the governor who represents the king at Sebḥa, the chief town of Fezzan, is assisted by an executive council composed of minor ministers (*nāẓir*) and a legislative council, three-quarters of

whose members are elected and whose chairman shares authority with the *wālī*.

The census of 1954 recorded 54,400 inhabitants in Fezzan province, three-quarters of whom are sedentary. Agriculture is in fact the main source of livelihood, in particular the cultivation of date-palms of which there are between eight and nine hundred thousand. To be accurate, the date-palms are, for the most part, neither cultivated nor even irrigated, but merely fertilized. The underground water-table is sufficiently close to the surface for the palmtrees' roots to reach the level of moisture; but the annual production of dates is hardly more than 4 to 6 kg. per tree, whilst with irrigation it reaches from 30 to 50 kg., particularly in Shāṭi. Another characteristic: outside the palm-groves cultivation is for the most part practised by means of a balance-well (*kheṭṭāra*), especially in the south, and in particular by means of a well operated by an animal [see BI'R] in which the goatskin water-container (*dalw*) is drawn up by a donkey helped by a man. Cereals—wheat and barley in winter, millet (*gṣob*) and sorghum (*gāfūli*) in summer—are almost the only form of cultivation: they are grown in succession on the same piece of land which is then left fallow; the rotation of crops near the wells is thus carried out in from 2 to 5 successive crops. The cultivated strips are protected by temporary hedges of palm leaves. Trees (pomegranates, vines) are very rare and are always planted at the side of the wells (or springs). Fertilization of the date-palms, drawing of water and irrigation are undertaken by the proprietors themselves or by hired labourers, serfs by origin, former negro slaves or tribes of very mixed antecedents, the *Shwāshna* (sing. *Shūshāni*): these are the *Ḥarātin* of other parts of the Sahara. The sedentary inhabitants possess only a few sheep and goats; donkeys and dromedaries are used for wells and for transport. The workers are very poor. Emigration, both temporary and permanent, is by tradition made mainly to Tripolitania, but also to Tunisia.

The villages are generally of wretched appearance. The huddled buildings, partly or wholly in ruins, testify to a state of insecurity either formerly or recently. The houses, built of dry stone or baked bricks, with flat roofs and opening onto a court which is also sometimes covered (*kawdi*), are built close together in barely two-thirds of the villages. It is only in the chief centres like Brāk (Shāṭi), Murzuḳ or the oases of Sebḥa and al-Bwānis that they assume a somewhat more comfortable and urban aspect. There are numerous hamlets. In the poorest regions habitations are merely huts of palm leaves (*zarība*), and are widely spaced for fear of fire. The placing of houses, either adjoining one another or at a distance, is the result of the degree of social cohesion of the villagers and of the types of dwellings, not of economic differences. Stockbreeding is almost the sole activity of the more or less nomadic shepherds in the outlying regions of the Fezzan. The Tebou in the south-east wander in small scattered groups, from the Tibesti to the Djabal Ben Guenēma and the neighbourhood of Gatrūn; they have temporary oblong huts made of the ribs of palmleaves and matting (*būshi*). The Touareg Ajjer (Imanghassaten and Urāghen), from the neighbourhood of Ghadāmes and the Messāk, drive their flocks as far as the approaches to Shāṭi, on the edge of the Wādi 'l-Adjal, and the Murzuḳ region. They live in tents of hides or in little round temporary huts made of matting. The shepherds from the north, the "Arabs", are far more numerous. The Gdādfa, the Urfella, the Awlād Busīf and the Zintān from Gibla, and also part of the Megārha, come to Shāṭi at the end of the summer at the time of the date harvest. But most of the Megārha and the Ḥasāwna own date-palms and land which they have cultivated by the Shwāshna: they are semi-nomadic, living alternately in houses and tents: the Ḥotmān, Zwayd and Gwāyda, formerly semi-nomadic, are today almost completely settled in western Shāṭi. All the Arabs' tents are of the "black tent" type which is to be found from Afghanistan to the Atlantic.

Fezzan sells part of its dates to all the neighbouring shepherds, and part of its cereals to the Tebou and Touareg. The nomads in the north, who grow cereals in the Gibla depressions, are the largest purchasers of dates, consuming a good part of them themselves, while by tradition they take the rest to markets in Tripolitania, to be exchanged for manufactured goods landed at Tripoli; some caravans go to south Tunisia.

But the dates and cereals, and also the natron taken by the Dawāda from the small lakes south of the *ramla* of Ubāri, are now almost always carried by lorry along the roads linking Misrata and Tripoli. It is also by lorry that the manufactured goods that are increasingly needed are brought from Tripoli. New roads lead to the oil-drilling centres recently opened in west and north-west Fezzan; but they are on the fringe of the country. Sebḥa, the capital of Fezzan, which includes a certain number of administrative and modern business buildings, has on the other hand become an important aerodrome.

FEDALA [see FAḌĀLA].

FEDJR-I ĀTĪ, the coming dawn, a Turkish literary group active in the period following the Young Turk Revolution of 1908, and associated with the review *Therwet-i Fünūn* [*q.v.*], where its initial manifesto was published. See further TURKS,

literature, and the articles on the individual authors. (Ed.)

FEHĪM, SÜLEYMĀN (1203-62/1789-1846), a minor Ottoman poet who wrote in the first half of the 19th century, during the declining decades of the classical school. A government official in Istanbul and in the Balkans, he soon retired and devoted his life to study and writing, teaching Persian occasionally.

His little *dīwān* (Istanbul 1262) contains poems inspired by the "Indian style" of Persian poetry. He is also the author of *Sefīnet al-shuʿarāʾ* (Istanbul 1259), an expanded translation of Dawlatshāh's *Tadhkirat al-shuʿarāʾ*.

Bibliography: Djewdet, *Taʾrīkh*², xii, 184; Fatīn, *Tedhkire*, 336; İbnülemin Mahmud Kemal, *Son asır Türk şairleri*, 379-81; A. C. Yöntem, in *IA*, s.v. (Fahir İz)

FEHĪM, UNDJUZĀDE MUṢṬAFĀ known as Fehīm-i Ḳadīm (? -1058/1648), Turkish poet, one of the most appreciated of the minor poets of the 17th century. According to scattered information found in various *tedhkire*s and in Ewliyā Čelebi, he was born in Istanbul, the son of an Egyptian pastrycook. Without a regular education or settled position, stricken by poverty he left Istanbul, joining the suite of Eyyūb Pasha, governor of Egypt. Because of a colleague's intrigue, he lost the favour of the Pasha and decided to leave Egypt, where he does not seem to have been very happy or prosperous. Thanks to the mediation of Newālī Bey, the commander of the Janissaries in Egypt, he was allowed to join the caravan conveying the yearly tribute from Egypt to the Capital, but he died on the way at Ilghīn in 1058/1648, apparently in his early twenties.

His *dīwān*, his only work, which according to *tedhkire*s he completed at the age of eighteen, shows that he was an unconventional poet of great promise and although fascinated by the work of the Persian poet ʿUrfī, in his lyrics he did not always follow the latter's precious and bombastic style, but succeeded in developing, at that early age, a personality of his own. Especially in his *ghazal*s, in the middle of hackneyed clichés, characteristic of the school, it is not rare to come across sincere personal notes and glimpses of his *ambiance*. During the attempt at a classical revival in the second half of the 19th century, many latter-day *dīwān* poets, headed by Leskofdjalī Ghālib, started a vogue of Fehīm and wrote many *naẓīra*s to his poems. Even the modernist Nāmıḳ Kemāl joined this admiration of Fehīm and rebuked Ziya (Ḍiyā) Pasha (*Takhrīb-i kharābāt*, Istanbul 1291, 76) for not having included him in the *Kharābāt*, his classical anthology of *dīwān* verse.

Bibliography: The *tedhkire*s of Ṣafāʾī, Riḍā and Sheykhī's *Waḳāʾiʿ al-fuḍalā*, s.v.; Ewliyā Čelebi, *Seyāḥatnāme*, iii, 17; Gibb, iii, 290; Sadettin Nüzhet Ergun, *Fehim Divanı*, Istanbul 1934 (not a critical edition as he uses only a few of nearly 30 MSS); Ali Canib Yöntem in *İA*, s.v. (Fahir İz)

FEHĪM PASHA, chief of the secret police under the Ottoman sultan ʿAbd al-Ḥamīd II. He was born in Istanbul in 1873 (?). Being the eldest son of the *ethwābdjībashi* ʿIṣmet Bey, foster-brother of the sultan, he was educated in the special class of the *Mekteb-i Ḥarbiyye* from where he was gazetted captain in 1894. Two years later he became *yāver-i shehriyārī* and received the title of *pasha* in 1898. Fehīm Pasha was appointed director of the secret police of the sultan, a post he held for many years. He maintained the trust of ʿAbd al-Ḥamīd II by enlarging the network of *khafiye* (secret agents) throughout the capital. He was feared by the people, especially by the native and foreign merchants whom he taxed unlawfully. He was dismissed from his position and sent to Bursa on 17 February 1907; his banishment was due to the intervention of the German ambassador von Bieberstein, supporting the claims of a German merchant against Fehīm. He was lynched at Yenishehir, near Bursa, after the revolution of 1908.

FEHMĪ, Sheykh, Naḳshbandī-Khālidī Sheykh of Erzindjān. Muṣṭafā Fehmī succeeded Pīr Meḥmed Wehbī Khayyāṭ after the latter's death in 1264/1848 (see Ismāʿīl Pasha, *Hadiyyat al-ʿārifīn*, i, 643) as Sheykh of the Khālidī order in Erzindjān; Pīr Wehbī had introduced the order in Erzindjān after making there the acquaintance of ʿAbd Allah Efendī, the pupil of Mewlānā Khālid in Damascus. Fehmī died on his third pilgrimage on 21 Muḥarram 1299/14 December 1881, in Mecca, and was buried at the foot of Khadīdja's grave.

His position as head of the order does not seem to have been always unopposed; close beside him was ʿAbd al-Ḥamīd Efendi, the son-in-law of Pīr Wehbī, whom in the early days he often consulted when taking decisions, and who after a quarrel made it impossible for him to remain in his own convent for a considerable time. In spite of this, Fehmī was greatly esteemed. When he made his first two pilgrimages (winter 1276/1859-60 to 1277/1861, and Shawwāl 1282/February 1866 to Dhu 'l-Ḥidjdja 1283/April 1867) the population of Erzindjān took a lively interest, saw him off, and gave him a musical welcome on his return with the band of the local garrison. Not only did he have connexions with the merchants and officials of the area, but he was on terms of particular trust with members of the military aristocracy, such as Čerkes Ismāʿīl Pasha (1805-61), the Turkish general in the wars with Croatia and Russia (see Ibrahim Alâettin Gövsa, *Türk meşhurları ansiklopedisi*, 1945, 193) and Derwīsh Pasha (1812-96, see *IA*, s.v.). The latter looked after him in his illness, and received "spiritual support" from him for the war against Russia (1877-8); in Djumādā II 1282/October-November 1865, he took him with him to Istanbul, where Fehmī made a speech before the General Assembly (*medjlis-i ʿumūmī*) of the Sublime Porte. The building of the Dergāh in Erzindjān (opened 12 Rabīʿ I 1284/14 July 1867, having taken two years to build) was financed by contributions from numerous important persons.

In his demeanour, Fehmī combined outward modesty with extreme self-confidence. He avoided ostentatious piety and asceticism; though never wearing European dress, he did not criticize its use by others; in his house the daily *dhikr* was combined with the forbidden playing of the flute. At the same time, he kept jealous watch over the loyalty of his followers and interfered in their private lives, and was not averse to being considered the *Sulṭān-i ʿulamāʾ bi'llāh*, that "spiritual *Khalīfa*" who manifests himself once in every generation, now in one *ṭarīḳa*,

now in another, and who was then believed to be appearing in the Naḳs̲h̲bandiyya. His piety contains national elements, especially the belief in the *erenler*, the "men of God" (*mardān-i K̲h̲udā*; for meaning and etymology see Schaeder in *OLZ*, xxxi (1928), 734, n.); the "superstructure" of his thought is strongly influenced by Ibn ʿArabī.

Bibliography: The most important source for his life and thought is the three volume autobiography of As̲h̲čī Dede Ibrāhīm K̲h̲alīl b. Meḥmed ʿAlī (preserved in the Istanbul manuscripts, Üniversite Kütüphanesi T 3222 and T 78-80) who was his pupil from 1273/1856 onwards; see also M. L. Bremer, *Die Memoiren des türkischen Derwischs Aşçı Dede Ibrāhīm*, Waldorf-Hessen 1959 (*Beiträge z. Sprach- u. Kulturgesch. des Or.*, Heft 12). (M. L. van Ess-Bremer)

FEMALE CIRCUMCISION [see k̲h̲ifāḍ].

FENĀRĪ-ZĀDE, prominent family of Ottoman scholars and jurists, the founder of which, S̲h̲ems al-Dīn Meḥemmed Fenārī, is regarded in native tradition as the first supreme *muftī* (*s̲h̲ayk̲h̲ al-islām*) of the Empire. He was born in Bursa in 751/1350-1, the son of a certain S̲h̲ayk̲h̲ Ḥamza who, despite the impossibility of the dating, is said to have been a pupil of the famous *ṣūfī* scholar Ṣadr al-Dīn Ḳōnewī (d. 672/1273-4; Brockelmann, I, 449). Having studied under some of the most distinguished scholars of his age in Anatolia and Egypt, in 770/1368-9 he was appointed teacher at the Manāstir *medrese* in Bursa and the following year made *ḳāḍī* of this capital city. What the political influence was which could manoeuvre a youth of twenty into such an important position remains unknown, but that there was a special connexion with the dynasty is to be inferred from the great wealth he was able to amass, the distinction he was accorded among the statesmen and the special privileges granted to his children and his grandchildren by Murād II and Meḥemmed II. The sources give no specific date for his appointment as *muftī*, but it would seem that he retained this office even after relinquishing the *ḳāḍī*-ship of Bursa to Mollā Yegān in 822/1419-20 in order to go on the pilgrimage, for we hear of no other individual with this title until after his death in Rad̲j̲ab 834/15 March-13 April 1431), when Fak̲h̲r al-Dīn ʿAd̲j̲emī was appointed. He was buried in the courtyard of the mosque which he built in Bursa. The most famous of his numerous works is the *Fuṣūl al-badāʾiʿ*, a compilation on the *uṣūl al-fiḳh* (Brockelmann, II, 233, to whose biographical sources should be added Ismāʿīl Belīg̲h̲, *Güldeste-i riyāḍ-i ʿirfān*, Bursa 1302, 239-44; Muṣṭafā ʿĀlī, *Künh al-ak̲h̲bār*, 4th *rükn*, Istanbul 1285, 108-10; Ṭas̲h̲köprüzāde, *S̲h̲aḳāʾiḳ al-nuʿmāniyya* (trans. Med̲j̲dī), Istanbul 1269, 47-53; *ʿOt̲h̲mānlī müʾellifleri*, i, 390; İ. H. Uzunçarşılı, *Osmanlı tarihi*, ii, Ankara 1949, 644; *ʿIlmiyye sālnāmesi*, Istanbul 1334, 322-6; Müstaḳīm-zāde Süleymān Efendi, *Dawḥat al-mas̲h̲āʾik̲h̲*, litho., Istanbul n.d., 3).

Although Nis̲h̲ānd̲j̲ī Meḥemmed Pas̲h̲a (*Taʾrīk̲h̲-i Nis̲h̲ānd̲j̲ī*, Istanbul 1290, 123) is probably in error in saying that he was also a *wazīr*, one of his sons, Aḥmed Čelebi (later Pas̲h̲a), did follow a secular career, and after having been *defterdār* for a period and served in the campaign of 878/1473 against Uzun Ḥasan Aḳḳoyunlu (in which he was taken captive), in 884/1479 he was appointed *lālā* (mentor) to Prince Bāyezīd (later Bāyezīd II) in his governorship of Amasya; afterwards, he held the appointment of *nis̲h̲ānd̲j̲ī* on two occasions (885/1480-81 and 887/1482-83; for a discussion of these dates, cf. İsmail Hami Danişmend, *İzahlı Osmanlı tarihi kronolojisi*, i, Istanbul 1947, 462-3). On being dismissed from office in 890/1485-6, he retired to Bursa where he died in 893/1487-8 (cf. Nis̲h̲ānd̲j̲ī Meḥemmed Pas̲h̲a, 163).

The next member of the family to achieve high office was S̲h̲ems al-Dīn's grandson, ʿAlāʾ al-Dīn ʿAlī b. Yūsuf Bālī, who, after having been *ḳāḍī* of Bursa from 872/1467-8 to 877/1472-3, was appointed *ḳāḍī 'l-ʿasker* the following year, in which post he remained until 881/1476-7. Towards the end of the reign of Meḥemmed II this office was divided into two, and in 894/1488-9 he was appointed *ḳāḍī 'l-ʿasker* of Rūmili, holding this charge until 900/1494-5, when he was made chief *ḳāḍī* of Anatolia. He died in 903/1497-8 and was buried in his grandfather's mosque in Bursa (Ṭas̲h̲köprüzāde, 199; Belīg̲h̲, 245). His son, [Muḥyi 'l-Dīn] S̲h̲āh Meḥemmed, also had a distinguished career. From the time of his birth (ca. 883/1478-9) he was the recipient of a stipend from the Sultan, and after having been *ḳāḍī* of Bursa (919/1513-4), Istanbul and Edirne (the dates in the sources are confused), in 925/1519 he was appointed *ḳāḍī 'l-ʿasker* of Anatolia and in 926/1519-20 of Rūmili. He died in 929/1522-3 at the age of forty-six while in this latter office, and was buried in the family graveyard in Bursa (Ṭas̲h̲köprüzāde, 386; Belīg̲h̲, 248; Sehī, *Hes̲h̲t Bihis̲h̲t*, Istanbul 1325, 28).

His younger brother (and not his son, as stated in Ṭas̲h̲köprüzāde, 387, and the sources which derive therefrom), Muḥyi 'l-Dīn Meḥemmed, attained even greater dignity. Having been *ḳāḍī* of Edirne (925/1519) and Istanbul, in 929/1522-3 he was made *ḳāḍī 'l-ʿasker* of Anatolia and, in the following year, of Rūmili. Having held this post for fourteen or fifteen years, he was retired on pension in 944/1537-8, but in 949/1542-3 was recalled to office by appointment as *s̲h̲ayk̲h̲ al-islām* in succession to ʿAbd al-Ḳādir Efendi. Retiring at his own request in 952/1545, he died on 24 D̲h̲u 'l-Ḳaʿda 954/5 January 1548 and was buried in Eyyūb. He is mentioned (as Muḥyī) among the poets of his age, and is said to have built a mosque in the Topk̲h̲āne quarter of Galata. (The sources often confuse him with his brother and should be used with caution: Müstaḳīm-zāde, 22; *ʿIlm. sāl.*, 361; Danişmend, ii, 432; Sehī, 29; Laṭīfī, *Ted̲h̲kere-i s̲h̲uʿarā*, Istanbul 1314, 307; Ḥuseyn Ayvānsarāyī, *Ḥadīḳat al-d̲j̲ewāmiʿ*, Istanbul 1281, ii, 66, 131). Although descendants of this line appear as teachers and *ḳāḍīs* down to the 12th/18th century, none achieved outstanding prominence. (Cf. for example, Ṭas̲h̲köprüzāde, 400 (Zeyn al-Dīn Meḥemmed), 486 (Pīr Meḥmed); ʿAṭāʾī, *D̲h̲eyl-i S̲h̲aḳāʾiḳ*, Istanbul 1268, 13 (Ḥasan b. Zeyn al-Dīn), 35 (ʿAbd al-Bāḳī Efendi and Yūsuf Efendi), 418 (Maḥmūd Efendi)). (J. R. Walsh)

FENER, the name of a quarter of Istanbul which, according to tradition, was allotted to the Greeks by Meḥemmed II after the conquest in 857/1453; for the topography, monuments, etc. see istanbul. After the conquest the seat of the Greek Patriarch was transferred from St. Sophia to the Church of the Holy Apostles, and three years later to the nearby Church of the Pammakaristos. In 994/1586, when this church was converted into a mosque (Fetḥiye D̲j̲āmiʿi), the Patriarch moved down into the Fener quarter, to establish himself finally in 1011/1603 at the Church of St. George

(re-built in 1720), still the seat of the Orthodox Patriarchate. At quite an early period there settled in the neighbourhood, in addition to the ecclesiastical and secular officials of the Patriarchate, the few old Byzantine families that had remained in Istanbul and other distinguished and wealthy members of the community; in the school of the Patriarchate, conducted by the clergy, the ancient classical studies were cultivated. The prominent Greek families resident around the Patriarchate were known collectively as the 'Phanariots' (T. *Fenerliler*). Thanks to their links with and knowledge of the Christian world (many of them were educated in Italy), the Porte, particularly in the 12th/18th and early 13th/19th centuries, drew on them to fill various influential employments. Members of these families acted as dragomans of the Porte and of the Arsenal [see TARDJUMĀN], and as contractors for the supply of furs and meat to the Saray, etc.. Since they were regarded as more reliable than the native princes, for some of whom they had earlier acted as 'agents at the Porte' (*kapî ketkhüdāsî*), it was from the Phanariots that were appointed, for over a century, the *voyvodas* (hospodars) of Moldavia (from 1123/1711, see BOGHDĀN) and Wallachia (from 1128/1716, see EFLĀḲ). The best-known names were Kantakouzenos, Skarlatos, Maurokordatos, Gkikas, Karatzas, Soutsos, Khantzeres (Handjeri), Maurogenes, Hypsilantes, Mourouzes, Kallimakhes, Mousouros, Aristarkhes, etc. In the second half of the 12th/18th century the Phanariot families began to move from Fener to the more salubrious villages along the Bosphorus—Ḳuručeshme, Arnawutköy, Tarabya; after the Greek War of Independence many of them migrated to Greece. Descendants of Phanariot families are still found in modern Rumania.

(J. H. MORDTMANN*)

FERDĪ, *makhlaṣ* (nom-de-plume) of some minor Ottoman poets, one of whom died young early in the reign of Süleymān I (Laṭīfī, 263; the *tedhkires* [in MS] of ʿĀshiḳ Čelebi and Ḥasan Čelebi; ʿĀlī, *Kunh al-akhbār*, Ankara Un. DTCF Lib. MS, f. 210a); another, Arayîdjîzāde Ḥüseyn, died in 1121/1709 (Sālim, 525; for MSS of his works see F. E. Karatay, *Topkapı Sarayı* . . . *türkçe yazmalar kataloğu*, Istanbul 1961, nos. 2449, 2697); a third, 'Derwīsh' Ferdī, died in 1125/1713 (Sālim, 527); a 'Kātib' Ferdī is also known (Babinger, 83, n.).

A detailed history in Turkish of the reign of Süleymān I from his accession in 926/1520 to 949/1542 was long attributed to a 'Ferdī' (Hammer-Purgstall, iii, intr. v, 710; Flügel, *Die* . . . *Handschriften der Kais.-kön. Hofbibl. zu Wien*, ii, 222 f.; J. Thury, *Török történetírók*, ii, Budapest 1896, 39; cf. Babinger, 83), while von Karabacek, taking the name of the copyist of the Vienna MS, 'Muṣṭafā āl-i ʿOthmān' as that also of the author, attributed the work to Süleymān's son Prince Muṣṭafā (see J. von Karabacek, *Geschichte Suleimans des Grossen, verfasst und eigenhändig geschrieben von seinem Sohne Mustafa*, *Zur orientalischen Altertumskunde*, vii, Vienna 1917). These attributions are without foundation. The word '*ferdī*', appearing in a Persian poem in the work, is not a proper name but bears its ordinary lexicographical meaning, 'one person'; the author's *makhlaṣ* in fact appears, in a poem at the end of the work, as 'Būstān', and hence reveals him to be Muṣṭafā Būstān b. Meḥemmed, 'Būstān Efendi', a *ḳāḍīʿasker* under Süleymān I, b. 904/1498, d. 977/1570 [see BOSTĀNZĀDE].

(HÜSEYIN G. YURDAYDIN)

FERHĀD PASHA (? — 1004/1595), Ottoman Grand Vizier. One Venetian *relazione* of 1585 gives his then age as about 50 years, while other Venetian *relazioni* of 1590-4 describe him as a man of about 65 or 70 years. Ferhād Pasha was of Albanian origin (some of the Venetian accounts refer to him as "di nazion schiavone", "di nazione schiava") and, according to Lazaro Soranzo, a native of "Andronici Castello dell'Albania". After he had gone out from the *enderūn-i humāyūn* towards the end of the reign of Sultan Süleymān Ḳānūnī (d. 974/1566), his career embraced the offices of Mīr Akhor-i Kebīr, *i.e.* Grand Master of the Imperial Horse (while holding this appointment he was sent in 986/1578 to Budin (Buda) with orders to execute the Beglerbeg of Budin, Muṣṭafā Pasha, the nephew of the then Grand Vizier Meḥemmed Ṣoḳollu) and also of Yeñičeri Aghasî, *i.e.*, Agha of the Janissaries (an office that he lost in 990/1582). Ferhād Pasha became Beglerbeg of Rūmili late in 990/1582 and not long thereafter was raised, with the rank of vizier, to the eminence of *serdār*, *i.e.*, commander-in-chief, of the Ottoman forces engaged in the war which had broken out against Persia in 986/1578. During the campaigns of 991/1583-992/1584 he relieved with new supplies and reinforcements the Ottoman garrison at Tiflis in Georgia and in addition fortified Eriwān, together with a number of strong positions on the routes leading into Georgia. The supreme command on the eastern front was assigned, for the year 1585, to the famous ʿOthmān Pasha, then at the height of his renown as a soldier in view of the brilliant campaigns that he had waged in the Caucasus during the earlier phases of the war. After the death of ʿOthmān Pasha in Dhu 'l-Ḳaʿda 993/October 1585 the appointment as *serdār* was given once more to Ferhād Pasha, who now retained it until the end of the long conflict with Persia in 998/1590. His solid achievement as a soldier was crowned in 996/1588, when he conquered Gandja and the region of Ḳarabāgh in Persian Adharbaydjān. Ferhād Pasha became Grand Vizier in Shawwāl 999/August 1591, but a revolt amongst the Janissaries brought about his dismissal from office in Djumādā II 1000/March-April 1592. As second vizier, and during the first years of the long war of 1001/1593-1015/1606 between the Ottoman Empire and Austria, he was *ḳāʾim-maḳām* at Istanbul in the absence of the Grand Vizier Ḳodja Sinān Pasha on the Hungarian front. Soon after the accession to the throne of Sultan Meḥemmed III in 1003/1595 Ferhād Pasha became Grand Vizier for the second time (Djumādā II 1003/February 1595). His renewed tenure of the office was destined, however, to be brief—as he was preparing for a campaign against Wallachia (at that time aligned on the side of Austria), the intrigues of his bitter rival Ḳodja Sinān led to his dismissal in Shawwāl

1003/July 1595 and not long afterwards to his execution, on the order of the Sultan, in Ṣafer 1004/ October 1595. Some of the sources describe Ferhād Pasha ("detto Charailam, cioe, nero serpente" (= Ḳara Yïlan), in the words of Lazaro Soranzo) as a rough and ignorant man, overbearing and avaricious in his conduct. None the less, on the evidence of a career not devoid of notable achievements, above all in the war against Persia, he has some claim to be regarded as one of the most able viziers of his time.

FERHĀD U-SHĪRĪN [see farhād wa-shīrīn].

FERĪDŪN BEG (d. 991/1583), private secretary of Meḥemmed Pasha Sokollu [*q.v.*], head of the Ottoman chancery and compiler of the *Munsha'āt al-salāṭīn*. Nothing is known of his origins; his personal name was Aḥmed, and his *waḳfiye* (see Bibl.) refers to him as 'ibn ʿAbd al-Ḳadīr'. Educated in the household of the *defterdār* Čiwi-zāde ʿAbdī Čelebi, in the year of the latter's death (960/1553) he entered the service of Meḥemmed Pasha Sokollu, then *beglerbegi* of Rūmeli, as secretary. As Sokollu rose to supreme power, so Ferīdūn played an increasingly important part in state affairs, notably in the negotiations for the extradition of the fugitive prince Bāyezīd from Persia and in the crisis of Süleymān's death at Szigetvar (974/1566); his personal bravery during this siege was rewarded with a *ziʿāmet* and promotion to *mutafarriḳa*. On 8 Muḥarram 978/12 June 1570 he was appointed *Re'īs al-küttāb* (for his *berāt* see *Munsha'āt*[2], ii, 572) and on 3 Ramaḍān 981/27 December 1573 promoted to *nishāndjī*. When, on the death of Selīm II, Murād III was hastening from Maʿnīsa to Istanbul, he had a stormy crossing from Mudanya in a small boat belonging to Ferīdūn which happened to be available (*Munsha'āt*[2], i, 17, cf. Pečewī, i, 26-7). A month later, on 9 Shawwāl 982/ 22 January 1575, Ferīdūn presented his *Munsha'āt al-salāṭīn* to the new Sultan, but received scant thanks for it (Selānīkī, 137): as the protégé of Sokollu he was regarded coldly by Murād III, and his dismissal from the post of *nishāndjī* and banishment from the capital on 11 Muḥarram 984/10 April 1576 (S. Gerlach, *Tagebuch*, 175-6) was the first of several measures aimed at weakening Sokollu's position (Pečewī, i, 26; ii, 7). In Djumādā II 985/ August 1577 he was appointed *sandjaḳ-begi* of Semendre (Smederevo), arriving at Belgrade, the chef-lieu of the *sandjaḳ*, four months later (Gerlach, 375; S. Schweigger, *Reyssbeschreibung*, 39); before long (by 988/1580, see Hammer-Purgstall, iv, 82, note *e*) he was transferred to Köstendil. In Muḥarram 989/February 1581 (a year after Sokollu's assassination) he was recalled to Istanbul and re-appointed *nishāndjī*; and on 12 Rabīʿ I 990/6 April 1582 he was given in marriage ʿĀyshe Sulṭān, the daughter of Rüstem Pasha [*q.v.*] and Süleymān's daughter Mihrimāh (Selānīkī, 162-3; the tradition that he was married to Sokollu's widow is baseless, see Hammer-Purgstall, iv, 104, note *b*). He died in office, of a haemorrhage, on Wednesday 21 Ṣafar 991/16 March 1583 (Selānīkī, 172), and is buried in a *türbe* at Eyyūb (Ewliyā, i, 405; cf. *ʿOM*, ii, 363-4).

Ferīdūn's *Munsha'āt al-salāṭīn* (chronogram for 982, the year of its completion) is a collection of state-papers—imperial letters, *fermāns*, *fetḥnāmes*, *berāts*, treaties, with some campaign-diaries. According to Selānīkī (137), the presentation volume, of over 250 gatherings (*djuz'*) and divided into eleven sections for the eleven Ottoman sultans to Selīm II, contained 1880 documents, but no known MS approaches this length. The work has been printed twice (1) Istanbul 1264-5/1848-9, containing 735 documents, of which 41 relate to the early period of Islam; and (2) Istanbul 1274-5/1858 (the standard edition), containing 840 documents, many of which, however, are later than the date of presentation. From the examination of MSS in European libraries (the Istanbul MSS remain to be investigated) K. Holter concludes that *Munsha'āt*[2] i and ii, 1-100 (528 documents) and perhaps also ii, 536-74 (30 docs.) belong to Ferīdūn's original collection, while ii, 100-536 (282 docs. of the late 16th and the 17th centuries) reproduce a single separate collection, similar in scope to that represented in MS Göttingen Univ.-bibl. turc. 29. Mükrimīn Khalīl's demonstration that several of the documents purporting to belong to the reigns of ʿOthmān Ghāzī and Orkhān are spurious, being modelled on documents in a collection of correspondence of the Khwārizm-shāhs entitled *al-Tawassul ila 'l-tarassul* (Ḥādjdjī Khalīfa, ed. Flügel, no. 3730), prompted grave doubts on the authenticity of the whole collection (see J. H. Mordtmann in *Isl.*, xiv (1925), 362n.); but recent studies suggest that these were exaggerated: it is for the most part a highly reliable source.

The *Munsha'āt* is introduced (i, 24-8) by a short treatise on ethics, *Miftāḥ al-Djannat* (chronogram for 982/1574) and followed (ii, 574-600) by an essay, written early in the reign of Murād III, on the measures needed to restore order in Egypt. Ferīdūn composed also *Nuzhat al-akhbār dar safar-i Sigetwār*, a history of the Szigetvar campaign (974/1566) and the events of the two years following; MSS: Leiden, Univ.-bibl. Warn. 277; Istanbul, Millet-Ali Emiri 330; Istanbul, Hazine 1339 (this, dated 976 and containing 20 miniatures [Karatay, no. 692], is presumably the presentation-copy). In 980/1572, as *re'īs al-küttāb*, he caused to be translated, from French, a history of France down to the year 1563; MS: Dresden (H. O. Fleischer, *Catalogus*, no. 120).

Bibliography: Ferīdūn's introduction to his work, *Munsha'āt*[2], i, 14-23; ʿAṭā'ī, *Ḥadā'iḳ al-ḥaḳā'iḳ*, 336-7; J. H. Mordtmann, s.v., in *EI*[1] (= *IA*, s.v.), followed by Babinger, 106-8 (with further references); Mükrimīn Khalīl [Yınanç],

Ferīdūn Beg Münshe'ātī, in *TOEM*, no. 77, pp. 161-8, no. 78, pp. 37-46, no. 79, pp. 95-104, no. 81, pp. 216-26; J. Rypka, *Briefwechsel der Hohen Pforte mit den Krimchanen* ..., in *Festschrift Georg Jacob*, Leipzig 1932, 241-69; K. Holter, *Studien zu Aḥmed Ferīdûn's Münše'ât es-selâṭîn*, in *Mitt. d. Österreichischen Inst. f. Geschichtsforschung*, Erg.-Bd. xiv, Innsbruck 1939, 429-51 (with further references). Two copies of his *waḳfiye* (providing for the support of a mosque in Istanbul, etc.) are recorded in *Ist. küt. tarih-coğrafya yazmaları katalogları*, i/11, Istanbul 1962, 846 f. (J. H. Mordtmann-[V. L. Ménage])

FIDĀ' [(1) see hadjdj; (2) see harb—i].

FIDĀ'Ī (or, more often, *fidāwī*), one who offers up his life for another, a name used of special devotees in several religious and political groups. Among the Nizārī Ismāʿīlīs it was used of those members who risked their lives to assassinate the enemies of the sect. They acted also on behalf of political allies of the Nizārīs, sometimes at a price. At Alamūt they may have become, in later years, a special corps; but normally tasks of assassination seem to have been assigned to anyone who was fit. The mediaeval Western tradition developed an elaborate account of them as highly trained specialists, evidently based partly on Muslim tales, partly on imaginative deduction. Mediaeval Muslim legends gave rise later to the idea that *ḥashīsh* was used in motivating the *fidā'īs*, but there is no evidence for this (see M. G. S. Hodgson, *The Order of Assassins*, The Hague 1955).

In Algeria, *fidāwī* means a narrator of heroic deeds, and *fidāwiyya* a tale or song of heroic deeds. During the Persian revolution *fidāwī* was applied in the first place to the adherents of the republican party, later to the defenders of liberal ideas and the constitution.

Fidā'ī was also the pen-name of Shaykhzāda Lāhīdjī, who was sent by the Ṣafawī Shāh Ismāʿīl as ambassador to Muḥammad Khān Shaybānī and afterwards retired to Shīrāz where he died (Riḍā Ḳulī Khān, *Madjmaʿ al-fuṣaḥa'*, ii, 27). It was also the pen-name of Sayyid Mīrzā Saʿīd of Ardistān, who lived at Iṣfahān and was the favourite poet of Muḥammad Shāh Ḳādjār (Riḍā Ḳulī Khān, ii, 383).

(Cl. Huart-[M. G. S. Hodgson])

FIDĀ'IYYĀN-I ISLĀM, a small politico-religious terrorist group based in Tehrān which during its twelve years of activity (1943-55) became notorious for its responsibility for numerous political murders. The Fidā'iyyān were organized secretly, but held open rallies and announced their aims publicly. Their goals included strict enforcement of the *sharīʿa* and the ending of irreligiousness. They combined fundamentalism with violent xenophobia, and considered attacks on foreigners and politicians with foreign connexions a defence of the *Dār al-Islām*. The Fidā'iyyān proclaimed the government of "xenophiles" illegitimate, and called such men enemy spies whose blood must be shed. They demanded the revocation of all laws which they considered inconsistent with Shīʿī law, and tried to re-establish the veiling of women and other traditional Islamic practices.

The notoriety of the Fidā'iyyān began with the abortive attempt by their young founder, Sayyid Mudjtabā Mīrlawḥī, later called Nawāb-i Ṣafawī, on the life of the famous scholar and religious reformer, Aḥmad Kasrawī [see kasrawī], in March 1945. In February 1946 the Fidā'iyyān assassinated Kasrawī during open court proceedings in the Palace of Justice in Tehrān. Ṣafawī and a few associates were arrested, but none of those who had been present would testify against them and they were acquitted. Āyat Allāh Kāshānī's protection of the Fidā'iyyān and their influence in the Tehrān *bāzār* played a part in the acquittal, as did the fear of reprisals, which now grew. In October 1949 the Fidā'iyyān assassinated the Minister of Court, ʿAbd al-Ḥusayn Hazhīr, whom they accused of having foreign connexions and of interfering in elections to the Madjlis. This murder was a factor in the annulment of the Tehrān elections to the 16th session of the Madjlis, and in the new elections the National Front led by Dr. Muḥammad Muṣaddiḳ made gains. The hostility of the Prime Minister, Gen. Ḥādjdjī ʿAlī Razmārā, to the National Front's proposal to nationalize oil brought about his assassination in March 1951 by a fanatical Fidā'ī, Khalīl Ṭahmāsbī. Threats from the Fidā'iyyān soon led to the resignation of the next prime minister, Ḥusayn ʿAlā, after which Muṣaddiḳ became prime minister. Nawāb-i Ṣafawī was arrested in June 1951 and Muṣaddiḳ and his government faced threats to their lives from the Fidā'iyyān unless Ṭahmāsbī and Ṣafawī were released. Ḥusayn Fāṭimī, a member of the government, was shot and wounded by a Fidā'ī in February 1952. Influenced by fear and by the claim of Kāshānī and his followers that Razmārā's assassin was a hero, the Madjlis voted to pardon Ṭahmāsbī in August 1952. As threats from the Fidā'iyyān continued, however, the Muṣaddiḳ government moved against them and banished some of their members to Bandar ʿAbbās, an insalubrious port on the Persian Gulf.

After the overthrow of Muṣaddiḳ the activity of the Fidā'iyyān decreased, and for a time they restricted themselves to issuing occasional harsh statements against the new government. Then an abortive attempt on the life of the prime minister Ḥusayn ʿAlā in October 1955 gave the government a basis for prosecuting them. The arrested Fidā'iyyān, among whom were Nawāb-i Ṣafawī, Wāḥidī and Ṭahmāsbī, were executed and no more was heard from the group.

The Fidā'iyyān had ties with the Ikhwān al-Muslimīn [*q.v.*] in ʿIrāḳ and Egypt, and like the Ikhwān as well as many politico-religious groups of the past they called each other "brethren". In the Arab-Israeli dispute they gave vocal support to the Arab cause. Their members appear to have been primarily very young men with a limited and traditional education. They drew on traditional ideas of the sacredness of self-sacrifice and of using force in combating irreligion. Their programme was chimerical, but in appealing to real resentments and frustrations they had an influence beyond their small numbers, while the fear they instilled influenced the acts even of their opponents, particularly in the years 1951-3. Although defended and protected by

Kās̲h̲ānī, they were not directly led by him and at least once differed with him publicly.

Bibliography: The Fidāʾiyyān issued their programme in a booklet, *al-Islām yaʿlū wa lā yuʿlā ʿalayh*, Tehran, 1951. There is as yet (1963) no published study of the group in either Persian or a Western language. Their activities are covered in newspapers like the *New York Times*, which carried an interview with Nawāb-i Ṣafawī on May 6, 1951. See also the remarks in Leonard Binder, *Iran*, California 1962, and D. N. Wilber, *Contemporary Iran*, New York 1963. More can be found in Persian newspapers and periodicals, including *Taraḳḳī*, *Dunyā*, *Waẓīfa*, and *Parčam-i Islām*, in the years 1949-55. Particularly interesting is a series of articles which appeared in *K̲h̲ʷāndanīhā*, vols. 16-7, which was discontinued because of the arrest and execution of their author. See also *OM*, *COC*, etc.

(N. R. Keddie and A. H. Zarrinkub)

FIḌḌA, silver, because of the variety of its application was in great demand in Muslim society. Its abusive accumulation, however, was to be avoided, since, according to the Ḳurʾān, "those who treasure up gold and silver and do not expend them in the way of Allāh" would meet with a painful punishment (*Sūra* ix, 34). Functionally the significance of silver resembled that of gold (see D̲H̲AHAB). Its economic importance arose from the fact that silver, along with gold, constituted the basis for the official Muslim coinage (see DIRHAM). Under normal economic circumstances the value of silver, as against gold, was established at 10 : 1, which ratio underlay the legal principle of the exchange rate between the silver and gold coinage (cf. C. Cahen, *Problèmes économiques de l'Iraq Buyide*, in *AIEO*, x (1952), 338). During the mediaeval period the needs of Near Eastern markets were adequately met by silver supplies of local provenance. Although mediaeval sources refer to many mining areas, the argentiferous districts of K̲h̲urāsān and Transoxania were particularly famous for an intensive exploitation of silver ore (cf. D. M. Dunlop, *Sources of gold and silver in Islam according to al-Hamdani, 10th Century A.D.*, in *Stud. Isl.*, viii (1957), 29-49; S. Bolin, *Mohammed, Charlemagne and Ruric*, in *Scandinavian Economic History Review*, i/1 (1953), 19-23). Near Eastern silver resources seem to have been rich enough to afford an export of this metal to Europe. This was particularly true in the course of the 4th/10th century, when large quantities of Near Eastern silver in the shape of Muslim dirhams were absorbed by trading regions of Eastern and Northern Europe. (For different viewpoints on the significance of the circulation of Near Eastern silver in the Middle Ages, see S. Bolin, *op. cit.*; R. P. Blake, *The circulation of silver in the Moslem East down to the Mongol epoch*, in *Harvard Journal of Asiatic Studies*, ii (1937), 291-328; F. J. Himly, *Y a-t-il emprise musulmane sur l'économie des états européens du VIII^e au X^e siècle?*, in *Schweizerische Zeitschrift für Geschichte*, v/3 (1955), 31-81).

As in the pre-Islamic period, silver was used in jewellery, metalwork and decorative incrustation (R. Harari, *Metalwork after the early Islamic period*, in *Survey of Persian Art*, iii, 2476-529). Luxurious silver vessels were also in demand, particularly during the Buwayhid régime (cf. E. Kühnel, *Die Kunst Persiens unter den Buyiden*, *ZDMG*, cvi, 1 (N. F. xxxi) (1956), 83 ff.), although their use for eating purposes was condemned by Muslim tradition.

Silver attracted the attention of Muslim alchemists who referred to it by a number of different names, *e.g.*, the moon, mother, servant (cf. E. Wiedemann, *Beiträge zur Geschichte der Naturwissenschaften*, xxiv, 82; A. Siggel, *Decknamen in der arabischen alchemistischen Literatur*, Berlin 1951). Albeit accepting the theory of transmutation of metals (cf. G. Sarton, *Introduction to the history of science*, ii, 2, 1045) Muslim alchemists were well acquainted with various chemical processes aiming at the extraction and refining of silver (E. J. Holmyard, *The makers of chemistry*, Oxford 1931, 77; D. M. Dunlop, *op. cit.*, 46-8; A. S. Ehrenkreutz, *Extracts from the technical manual on the Ayyubid mint in Cairo*, in *BSOAS*, xv (1953), 429).

Finally, silver was used in Muslim medicine. It was applied in the form of filings which, when mixed with drugs, were effective against melancholy, palpitation of the heart, and similar afflictions (cf. Ibn al-Bayṭār, ed. Leclerc, *Notices et extraits*, iii, 36). See also DĀR AL-ḌARB; METALWORK; SIKKA.

(A. S. Ehrenkreutz)

FID̲J̲ĀR "sacrilege"; *ḥarb al-fid̲j̲ār* "the sacrilegious war" is the name of a war waged towards the end of the 6th century A.D. during the holy months between the Ḳurays̲h̲ and Kināna on the one side and the Ḳays-ʿAylān (without the G̲h̲aṭafān) on the other. Our sources mention eight days on which fighting took place. The first tbree of them—usually put together as the first war but sometimes counted as the first three wars—were mere brawls. Of real importance was only the second (or, according to the second reckoning, fourth) war which lasted four years. It started when during the holy season ʿUrwa al-Raḥḥāl of the Banū ʿĀmir b. Ṣaʿṣaʿa, whilst escorting a caravan of al-Nuʿmān III (reigned 580-602 A.D.) from al-Ḥīra to the fair of ʿUkāẓ, was treacherously murdered by al-Barrāḍ b. Ḳays al-Ḍamrī al-Kinānī. The patron of al-Barrāḍ, Ḥarb b. Umayya, was at that time together with other chieftains of the Ḳurays̲h̲ at ʿUkāẓ. As soon as they heard of this misdeed, the Ḳurays̲h̲ and Kināna started for Mecca; they were overtaken by the pursuing Hawāzin and attacked at Nak̲h̲la, but the night enabled them to reach the sacred territory. This *yawm Nak̲h̲la* is generally counted as the first battle-day of the second Fid̲j̲ār war, but sometimes added as the fourth day to the first war. A year later both parties—but without the Banū Kaʿb and Kilāb of the ʿĀmir b. Ṣaʿṣaʿa—met again at S̲h̲amṭa (v.l. S̲h̲amẓa) near ʿUkāẓ and the Hawāzin were victorious (*yawm S̲h̲amṭa*). The same happened next year at ʿUkāẓ (*yawm al-ʿAblāʾ*). It was only in the following year that the Ḳurays̲h̲ and Kināna carried the day (*yawm ʿUkāẓ* or *yawm S̲h̲arab*). A fifth engagement on the Ḥarra near ʿUkāẓ (*yawm al-Ḥurayra*) resulted again in the victory of the Hawāzin. After this there were only some skirmishes and then peace was restored. Of the many poems which according to Wāḳidī (*apud* Ibn Saʿd i/1, 82, 1) were composed about this war only a few verses have come down to us.

Whilst it is admitted that the Prophet was present at the Fid̲j̲ār war, there is much controversy about the particulars. Some say that he took part in the fighting, and that at S̲h̲amṭa, where the Ḳurays̲h̲ were defeated, he was praised for his courage (*Ag̲h̲ānī*, xix, 78, 2). Others maintained that he only supplied his uncles with arrows (*e.g.*, Ibn His̲h̲ām, 117 pu; 119,1); but experts on the *ayyām al-ʿArab* knew that none of his uncles except al-Zubayr took part (*Ag̲h̲ānī*, xix, 81 f.). In support of these conflicting views alleged sayings of the Prophet are

adduced. Also the years given for his age range from 14 to 28 (*Aghānī*, xix, 75, 1-3).

The Fidjār war was waged for four years in the holy season, when in normal times trade was flourishing unhampered by tribal feuds; it involved two great confederations including townsfolk of Mecca and al-Ṭāʾif, and it even gave its name to an era. The real aim of it was the control of the trade routes in the Nadjd and consequently the benefit of the great gains which this trade offered. In this great contest the Ḳuraysh were leading; they procured the weapons for their confederates and defrayed all expenses. Amongst their opponents the Thaḳīf together with the Banū Naṣr b. Muʿāwiya offered the hardest resistance but had finally to give in and, worn out by years of war, left the victory to the Ḳuraysh.

Fück)

FIDYA, (which becomes, according to the area concerned, *fedu*, *fadu*, *fadwa* and even *fdīya*) is a general designation among Syro-Palestinians for a blood sacrifice made for purposes of atonement. From this point of view, its meaning is close to that of *ḍaḥiyya*. Indeed, in the Negeb and other parts of former Palestine, these two terms are sometimes used to designate one and the same thing. In fact, however, while the *ḍaḥiyya* is essentially an offering to the dead made on the occasion of *ʿīd al-aḍḥā*, the *fidya*, on the other hand, is practised in the interests of the living, without any limitation of time. It is offered up before Allāh for the delivery of a man, his family, his cattle and his goods, from some imminent misfortune, such as an epidemic. See also ḤADJDJ.

FIEF [see DJĀGĪR, IḲṬĀʿ, TĪMĀR].

FIGHĀNĪ (BĀBĀ), pseudonym of a celebrated Persian poet whose patronymic, like his first name, is unknown. He was a native of Shīrāz where he started by helping his brother, a cutler by trade, and it was on that account that he first took the pseudonym Sakkākī when he began to write poetry. In his youth, which was spent at Shīrāz, he lived a life of debauchery, and then made a journey to Herāt where he became acquainted with the great poet Djāmī, but his poetry was not appreciated by the poets of Khurāsān. From there he went to Ādharbaydjān, to the court of sultan Yaʿḳūb (884-96/1479-91), of the Aḳ-Ḳoyunlu dynasty, one of the greatest patrons of the age. At this prince's court in Tabrīz he received every favour, and his protector called him *Bābā-yi shuʿarā* (father of poets). There he continued with his life of debauchery, recklessly spending everything that he earned. While he was accompanying his patron on one of his campaigns, the manuscript of his *dīwān* together with his baggage was looted. He wrote to his brother and asked him for a copy of the poems which he had left in his native town, and made a new selection. On sultan Yaʿḳūb's death he left Tabrīz, after spending more than seventeen years there; he went to Shīrāz and then to Khurāsān, living in the towns of Nasā and Abīward and following the same life. At the end of his life he repented and went to live in Mashhad, where he took to a life of devotion and died in 925/1519. Fighānī is one of the best lyric poets of his time and his *ghazal*s were highly esteemed by poets, who continued to imitate him until the 17th century. His *dīwān* includes in particular some *ghazal*s and certain *ḳaṣīda*s specially dedicated to the Shīʿī *imām*s. Ten of his *ghazal*s have been published by Bland in his "Century" (34-37). The Iranian scholar Ḥusayn Āzād published a French translation of some of his poems under the title *Les perles de la couronne, choix de poésies de Baba Féghani, traduites pour la première fois du persan avec une introduction et des notes par Hocéyne-Azad*, Paris 1903. There are two editions of the Persian text of his *ghazal*s: (1) *Dīwān-i Fighānī* with an introduction in Urdū by Manmōhan Lāl Māthur of Dihlī, Lahore n.d.; (2) *Dīwān-i Bābā Fighānī-yi Shīrāzī* with emendations by Suhaylī Khunsārī, Tehran 1316 s.

FIGHĀNĪ, pseudonym of **RAMAḌĀN** (?-938/1532), Ottoman poet. Very little is known of his early life, except that he was a native of Trabzon and that after a summary education he became a minor clerk in government offices in Istanbul, where together with his fellow-poets and boon-companions he frequented taverns and places of amusement, leading an irregular and dissolute life. He seems to have lived in near poverty and without proper patronage, in spite of the poems which he dedicated to the great. We are told of his extraordinary memory where he stored enormous amounts of Arabic and Persian verse and all his own compositions. At the start of a very promising poetic career he met a sudden and tragic end: a Persian epigram which he wrote (or which was attributed to him) subtly attacked the Grand Vizier Ibrāhīm Pasha for the statues which he had brought from Budin and had erected in front of his palace in the Hippodrome: "Two Ibrāhīms came to this world: one destroyed idols (meaning the patriarch Abraham), and the other erected them", and the unfortunate poet was hanged after an ignominious parade.

His *ghazel*s and *ḳaṣīde*s are scattered in various *medjmūʿa*s and unmistakably show a great talent that was liberating itself from the influence of Persian models and his Ottoman predecessors. Most *tedhkire*-writers agree that his *ḳaṣīde*s in particular are outstanding.

FIGUIG (Ar. FADJĪDJ), a group of seven *ḳṣūr* isolated in the south-east of Morocco and surrounded on three sides by the Algerian frontier. It is situated to the east of the *djabal* Grūz at the meeting point of the Sahara Atlas and the Sahara plateau, in a broad hollow 850-900 metres in altitude (long. 1° 15′ W., lat. 32° 5′). The seven *ḳṣūr* fall into three groups: al-Ūdāghīr, al-ʿAbīd, Awlād Slīmān and al-Maïzz to the north-west, the two Ḥammām (Fūḳānī and Taḥtānī) to the north-east, and Zenāga, the most important, two kilometres to the south. Zenāga, which has 7,000 inhabitants out of a total population of 15,000, is situated at the foot of the high sinter plateau of al-Djorf, on which the other *ḳṣūr* stand; the new administrative centre is situated on the plateau half-way between these and Zenāga. The houses of the *ḳṣūr*, made of unfired brick (*ṭūb*) on a sub-foundation of dry stone, are almost always two or three storeys high and give a distinctly urban impression; at al-Maïzz, the rooms which give on to the terraces are open on the south side. The streets, partly covered, are relatively broad at al-Ūdāghīr and Zenāga. Each *ḳṣar* is surrounded by walls. Al-Ūdāghīr and Zenāga have a small *mellāḥ* inhabited by a few Jewish families, and Zenāga has many *ḥarāṭīn* among its population. The whole of the population, which is of very varied origin, is Berber-speaking, but the men know Arabic as well; the few families of Shorfa and the Marabouts, Awlād Sīdī Shaykh, are Arabic-speaking.

The *ḳṣūr* to the north and their gardens are supplied with water from thermal springs (31.5° C.) situated along a fault in the Jurassic limestone, and Zenāga gets its water from *foggāras*. The 200,000 palm-trees cultivated here suffer from the altitude and attacks of *bayūḍ* (a cryptogamic disease); other crops (apricots, peaches, pears, turnips, onions, red peppers or pimentos) are of secondary importance. The amount of time allowed for irrigation is measured by means of a floating copper container pierced with a small hole, which sinks when it is full. Some of the palm trees belong to the nomads who camp around them and deposit their stores there: Beni Guil, ʿAmūr of the west and Awlād Sīdī Shaykh Ghrāba. The artisan class (burnous, carpets, painted and embroidered leather goods, jewellery made by the Jews) is declining in number. A great many men emigrate to Algeria and other parts of Morocco as labourers or masons; smuggling is rife.

Although the region has certainly been inhabited for a long time, as is proved by the rock engravings, the name Fadjīdj appears only in the 8th/14th century. Ibn Khaldūn (*Hist.*, i, 240) speaks of its being active and ruled by the Banū Sīd al-Mulūk, a family of the Maṭghāra of the group of Banū Fāten: these used to form the greater part of the population of Sidjilmāsa, a caravaneers' market and capital of Tafilālet, then already waning in importance, and to whose position as a meeting-point of caravan tracks Figuig perhaps succeeded. In the 16th century, Leo Africanus (435) praises the fineness of the woollen stuffs woven by its women, the intelligence, commercial vigour and culture of its men; in the seventeenth century, al-ʿAyyāshī draws attention to the flourishing condition and richness of its libraries (*Voyage*, tr. Berbrugger, 159). Figuig seems always to have been an independent territory, thanks to its isolated position. The expedition which Mawlāy Sulaymān undertook in 1807, like that of the powerful Mawlāy Ismāʿīl at the end of the seventeenth century, was never followed up. Nevertheless, when the French began the conquest of Algeria, the Convention of Lālla-Maghnya (18 March 1845) left Figuig to Morocco. It was the refuge of the Awlād Sīdī Shaykh who rose against France from 1864 on, of the adventurer, Bū ʿAmāna, and the pillaging Zegdu. In 1883, the Sultan, Mawlāy Ḥasan, installed a representative there, who had, however, no authority. Even after the Franco-Moroccan agreement of 1902 the Sultan was unable to command obedience in this region, and a column of French soldiers accompanying Jonnart, the governor-general of Algeria, to Beni-Ounif was attacked on 30 May 1903; a military counter-action forced the *djemāʿa* of Zenāga to surrender the criminals and hostages. There were no more outbreaks and Figuig came with Morocco under the French Protectorate and was incorporated into the administration of the Makhzen.

The disappearance of the slave-trade aud of commerce across the Sahara and the arrival of the railway between Oran and Colomb-Béchar, which had reached Beni-Ounif by 1903, contributed to the economic decline of Figuig. Moreover the region was often weakened by internal quarrels, especially those which set the two principal *ḳṣūr*, al-Ūdāghīr and Zenāga, against each other over the possession of ʿAyn Thaddert, and also those which divided the two Ḥāmmām. The walls of the *ḳṣūr* were for protection against neighbours as much as nomads, and watch-towers still overlook the gardens. The Marabout families have continually done their utmost to keep or restore the peace.

Although so isolated and cut up into *ḳṣūr*, Figuig does not ever appear to have enjoyed political unity. Each *ḳṣar* has traditionally its *djemāʿa*s of administrative subdivisions which bring together the heads of families, and also its own *djemāʿa* made up of elected notables which judges according to its *ḳānūn*s (not very differently from one *ḳṣar* to another). In matters of civil law, the *ḳāḍī* judged according to the *sharʿ* and also the *ʿurf*. Since Figuig has been re-united with Morocco, the meetings of the *djemāʿa* of the *ḳṣar* are presided over by the representative of the king of Morocco and the *ḳāḍī* is nominated by the Makhzen. The people are at the same time pious and superstitious and are fervent adepts of brotherhoods (Ṭayyibiyya, Kerzāziyya, Zayyāniyya, Nāṣiriyya, etc.). Habous (*waḳf*) properties are numerous but their purpose is above all to deprive women of the right of succession. Sīdī ʿAbd al-Ḳādir Muḥammad, patron saint of Figuig, has his *ḳubba* to the north-east of al-Ḥammām.

FIḤL [see FAḤL].

AL-**FIHRĪ**, ABŪ ISḤĀḲ IBRĀHĪM B. ABI 'L-ḤASAN ʿALĪ B. AḤMAD, composed in 632/1234 an anthology of the works of Spanish stylists and poets of the 5th/11th and 6th/12th centuries entitled *Kanz al-*

kuttāb wa-muntakhab al-ādāb (see H. Krafft, *Die ar., pers. und türk. Hdss. der k. k. orient. Akademie zu Wien*, Vienna 1824, no. 147). (C. BROCKELMANN)

FIHRIST [see BIBLIOGRAPHY, FAHRASA, IBN AL-NADĪM, ṬŪSĪ].

FIḲH (A.), originally "understanding, knowledge, intelligence", and applied to any branch of knowledge (as in *fiḳh al-lugha*, the science of lexicography), has become the technical term for jurisprudence, the science of religious law in Islam. It is, like the *iurisprudentia* of the Romans, *rerum divinarum atque humanarum notitia* and in its widest sense covers all aspects of religious, political and civil life. In addition to the laws regulating ritual and religious observances (*ʿibādāt*), containing orders and prohibitions, it includes the whole field of family law, the law of inheritance, of property and of contracts and obligations, in a word provisions for all the legal questions that arise in social life (*muʿāmalāt*); it also includes criminal law and procedure, and finally constitutional law and laws regulating the administration of the state and the conduct of war.

All aspects of public and private life and business should be regulated by laws based on religion; the science of these laws is *fiḳh*.

In older theological language the word did not have this comprehensive meaning; it was rather used in opposition to *ʿilm*. While the latter denotes, beside the Ḳurʾān and its interpretation, the accurate knowledge of the legal decisions handed down from the Prophet and his Companions (Ibn Saʿd, ii/2, 127, [16]: *al-riwāyāt wa ʾl-ʿilm*, as synonyms), the term *fiḳh* is applied to the independent exercise of the intelligence, the decision of legal points by one's own judgment in the absence or ignorance of a traditional ruling bearing on the case in question. The result of such independent consideration is *raʾy* (opinion, *opinio prudentium*), with which it is also sometimes used synonymously. In this sense *ʿilm* and *fiḳh* are regarded as distinct qualities of the theologian (Nawawī, *Tahdhīb*, ed. Wüstenfeld, 703, [2]); also *fiḳh wa-riwāya* (Ibn Saʿd, v, 327, [10]). The sum total of all wisdom is defined by Mudjāhid (in explanation of Sūra ii, 269: *man yuʾta ʾl-ḥikma*) as composed of the following elements: *al-Ḳurʾān wa ʾl-ʿilm wa ʾl-fiḳh* (Ṭabarī, *Tafsīr*, iii, 56, [2]), and, similarly, the Jewish Karaitic expositor of the Bible, Jepheth b. ʿAlī (910-80 A.D.), translates *tiftāyē* in Daniel, iii, 2 (ed. D. S. Margoliouth, *Anecdota Oxoniensa*, 1889, 33, [7]) by *ahl al-ʿilm wa ʾl-fiḳh*. Hārūn al-Rashīd instructs his governor Harthama to consult the *uli ʾl-fiḳh fī dīn Allāh* and the *uli ʾl-ʿilm bi-kitāb Allāh* in doubtful cases (Ṭabarī, iii, 717, [10]). Further passages are quoted in Goldziher, *Muh. Stud.*, ii, 176, n. 6.

In this sense, *ʿālim* (plur. *ʿulamāʾ*) is distinguished from *faḳīh* (plur. *fuḳahāʾ*), or the combination of both sciences in one individual is expressed by the combination of these two ephitets or their synonyms. Ibn ʿUmar was *djayyid al-ḥadīth* but not *djayyid al-fiḳh* (Ibn Saʿd, ii/2, 125, [5]); on the other hand Ibn ʿAbbās was *aʿlam* with reference to decisions handed down by Tradition and at the same time *afḳah* (or *athḳafu raʾyⁱⁿ*) in new cases that arose, for which no precedent could be found in Tradition and in which it was necessary to use one's own judgment (*ibid.*, 122, 124); the same is true of Zayd b. Thābit (*ibid.*, 116); cf. *faḳīh fi ʾl-dīn ʿālim fi ʾl-sunna* (*ibid.*, iii/1, 110). Saʿīd b. al-Muṣayyib is *faḳīh al-fuḳahāʾ* on the one hand and *ʿālim al-ʿulamāʾ* (*ibid.*, ii/2, 129, 130; v, 90) on the other. Among the *tābiʿūn* there were *fuḳahāʾ wa-ʿulamāʾ*, *i.e.*, those who were authorities on the transmission of *ḥadīth* and *āthār* as well as those who were authorities on *fiḳh* and competent to give (independent) decisions, *fatwā* (*ibid.*, ii/2, 128). Abū Thawr was *aḥad aʾimmat al-dunyā fiḳhᵃⁿ wa-ʿilmᵃⁿ* (Dhahabī, *Ṭabaḳāt al-ḥuffāẓ*, viii, 106).

In the earliest period of the development of Islam the authorities entrusted with the administration of justice and the control of religious life had in most cases to fall back on the exercise of their own *raʾy* owing to the scarcity of legislative material in the Ḳurʾān and the dearth of ancient precedents. This was regarded as a matter of course by everyone, although they were naturally very pleased if the verdict could as far as possible be based on *ʿilm*. When ʿAṭāʾ b. Abī Rabāḥ (d. 114/732) was giving a judgment, he was asked: "Is this *ʿilm* or *raʾy*?" If it was founded on a precedent (*athar*), he said it was *ʿilm* (Ibn Saʿd, v, 345). The *raʾy* was not, however, thereby discredited. It was considered an equally legitimate factor in the decision of a point of law and its results were destined in the near future to be regarded as the decisions of old authorities and in later times to be actually considered an element of *ʿilm*. From the very beginning one could have recourse to it as soon as *ʿilm* failed. According to an old story which certainly reflects the conditions of the Umayyad period, although it does not actually date from the time in which its scene is laid, Muʿāwiya finally applied to Zayd b. Thābit on a legal question, on which neither he nor other Companions to whom he propounded it could quote any ancient evidence (*falam yūdjad ʿindahū*—or *ʿindahum—fīhā ʿilm*); the latter gave a verdict based on this own independent *raʾy* (Ṭabarī, *Tafsīr*, ii, 250 *ult.*, on Sūra II, 228). The *ḳāḍī* of Egypt asked the advice of the Caliph ʿUmar II on a point not provided for in Tradition; the latter wrote to him: Nothing has reached me on this matter, therefore I leave the verdict to you to be given according to your opinion (*bi-raʾyik*) (Kindī, *Governors and Judges of Egypt*, ed. Guest, 334; ed. Gottheil, 29) [cf. IDJTIHĀD].

This recognition of *raʾy* [*q.v.*] as an approved source of law found expression in the instructions attributed to the Prophet and the early Caliphs, which they gave to the officials sent to administer justice in the conquered provinces, and in their alleged approval of the principles of their decisions which the judges whom they had sent out submitted to them (Goldziher, *Ẓâhiriten*, 8 ff.; cf. Ibn al-Athīr, *Usd al-ghāba*, i, 314; Mubarrad, *Kāmil*, 9 ff.; Ibn Ḳutayba, *ʿUyūn al-akhbār*, 87). In the more elaborate versions of these reports which were developed from their original, rudimentary forms we find already mentioned explicitly the principle of deduction from decisions of similar cases (*ashbāh, naẓāʾir*; cf. *ʿUyūn al-akhbār*, 72), *i.e.*, the use of analogy (*ḳiyās*, [*q.v.*]) as a methodological regulator of *raʾy*. In the investigation of the *ʿillat al-sharʿ*, the motive of law (*ratio legis*), and the resulting reduction of doubtful cases to a rational point of view, we find this principle given systematic validity. At the same time—there is evidence of it at a very early period—a kind of popular element entered the number of constitutive sources for the deduction of laws: the conception of the general usage of the community (*sunna*, [*q.v.*]) which had been established by general agreement or consensus (*idjmāʿ*, [*q.v.*]) in wider circles of believers, independent of written (*i.e.*, Ḳurʾānic), traditional, or inferred law.

This usage contained an appreciable amount of foreign elements. It was only natural that the

legal, commercial, and administrative practices which prevailed in the conquered provinces should have survived under Islam, just as ancient Arab legal and commercial practices had survived, and should have been adopted by the Muslims as far as they were compatible with the demands of the new religious ideas. That the retention of pre-Islamic legal institutions was the normal procedure is shown by a passage in Balā<u>dh</u>urī: "Abū Yūsuf held that if there exists in a country an ancient, non-Arab *sunna* which Islam has neither changed nor abolished, and people complain to the Caliph that it causes them hardship, he is not entitled to change it; but Mālik and <u>Sh</u>āfiʿī held that he may change it even if it be ancient, because he ought to prohibit (in similar circumstances) any valid *sunna* which has been introduced by a Muslim, let alone those introduced by unbelievers" (*Futūḥ*, 448). In this way, elements from Roman Byzantine (including Roman provincial) law, Talmudic law, the canon law of the Eastern churches, and Persian Sāsānian law entered Islamic law during its formative period. The influence of Talmudic law manifested itself above all in matters of ritual and worship. Influences of Persian Sāsānian law (and of the canon law of the Eastern churches) have been established in a few individual cases, but their full extent remains to be investigated. In the case of Roman and of Talmudic law, these influences extended not only to rules and institutions of positive law, but to legal concepts and maxims, to methods of reasoning (*ḳiyās*, and conclusions *a maiore ad minus* and *a minore ad maius*), and even to fundamental ideas of legal science; for instance, the highly organized concept of the consensus of the scholars as formulated by the ancient schools of Islamic law (see below), seems to have been modelled on the concept of the *opinio prudentium* of Roman law (cf. *Digest*, i, 3, 38: *In ambiguitatibus quae ex legibus proficiscunter, consuetudinem aut rerum perpetuo similiter iudicatarum auctoritatem vim legis obtinere debere*; *Institutes*, i, 2, 9: *Nam diuturni mores consensu utentium comprobati legem imitantur*). Goldziher has repeatedly drawn attention to this and to the fact that parallels between Roman and Islamic law in the field of legal science are usually doubled by parallels in Talmudic law. (Goldziher has even suggested that the terms *fiḳh* and *fuḳahāʾ*, in their special technical reference to the sacred law and its practitioners, as well as the corresponding Jewish terms *ḥo<u>kh</u>mā* and *ḥ^a<u>kh</u>āmīm*, may have been influenced by the Latin terms (*iuris*)*prudentia* and (*iuris*)*prudentes*; in *Die Kultur der Gegenwart*[2, 3], I/iii/1, 103). Some of the borrowings from Roman law may, in fact, have been made through the medium of the Jews, as was first suggested by von Kremer (*Culturgeschichte des Orients*, i, 535). This adoption of Roman (and other) legal concepts and maxims occurred not through direct influence of one legal system on another at the technical level, but through the medium of the cultured non-Arab converts to Islam, whose education in Hellenistic rhetoric had made them acquainted with the rudiments of law and who brought their familiar ideas with them into their new religion. When Islamic legal science came into being towards the end of the first century of Islam (early 8th century A.D.), the door of Islamic civilization had been opened wide to these potential transmitters. That the early jurists of Islam should consciously have adopted any principle of foreign law is out of the question. The subject remains, in the words of Goldziher, "one of the most attractive problems of this branch of Islamic studies".

With the gradual recognition of Ḳurʾān, *sunna*, *i<u>dj</u>māʿ* and *ḳiyās* as the four official "roots" or sources of legal knowledge, methodological principles from which legal rules might be legitimately derived [see UṢŪL], the terms *fiḳh* and *fuḳahāʾ* gradually lost their original limitation to deductions not based on tradition. *Fiḳh* came to mean the science which co-ordinated and included all the branches of knowledge derived from the four roots; similarly those who were masters of this science were called *fuḳahāʾ*, *i.e.*, jurists. Or *fiḳh* was used for the result of deduction from the sources of positive law, the sum total of the deductions derived from them, *e.g.*, *wa-fi hā<u>dh</u>a 'l-ḥadī<u>th</u> ḍurūb min al-fiḳh* (Mubarrad, *Kāmil*, 529, cf. *WZKM*, iii, 84). The Arabic sources contain numerous reports about scholars who arranged the *ʿilm* or *sunan* in chapters and thence deduced the *fiḳh* inferences (*Muh. Stud.*, ii, 211). Of ʿAbd Allāh b. al-Mubārak it is said: *dawwan al-ʿilm fi 'l-abwāb wa 'l-fiḳh* (<u>Dh</u>ahabī, *Ta<u>dh</u>kirat al-ḥuffāẓ*, i, 250); of Abū <u>Th</u>awr: *ṣannaf al-kutub wa-farraʿ ʿala 'l-sunan* (*ibid.*, ii, 95). Little value can be attached to the statement ascribed to Hi<u>sh</u>ām b. ʿUrwa that many *kutub fiḳh* of his father's perished in the flames on the day of the battle of the Ḥarra (*Biographien*, ed. Fischer, 41). At that ancient period (ʿUrwa died in 94/712, the so-called "year of the *fuḳahāʾ*", when many *fuḳahāʾ* died; Ibn Saʿd, vi, 135) there could be no real *kutub* in existence; the report can therefore refer, at the utmost, to rough notes only. We might also mention the statement that Zuhrī's *fatwās* were collected in three, Ḥasan al-Baṣrī's in seven books (*asfār*) arranged in the order of the *abwāb al-fiḳh* (Ibn Ḳayyim al-<u>Dj</u>awziyya, *Iʿlām*, i, 26).

In a still wider meaning, *fiḳh* was used for religious science in general (*al-Ḳurʾān wa 'l-fiḳh* in opposition to the study of poetry: *A<u>gh</u>ānī*, vii, 55, [23]; *laysa bihim ra<u>gh</u>ba fi 'l-dīn wa-lā ra<u>gh</u>ba fi 'l-fiḳh*: *Musnad* of Aḥmad b. Ḥanbal, i, 155; cf. also the titles *al-Fiḳh al-Akbar* and *al-Fiḳh al-Absaṭ* and the text of these treatises, on which see ABŪ ḤANĪFA). *Fuḳahāʾ* was correspondingly applied to students of religion, theologians (not only students of law) *e.g.*, Ṭabarī, *Tafsīr*, xii, 73, [13]; *fuḳahāʾunā wa-ma<u>sh</u>āʾi<u>kh</u>unā*; *ibid.*, 112, [8], where Abū ʿUbayd al-Ḳāsim b. Sallām says with reference to an explanation by Abū ʿUbayda Maʿmar of a word in the Ḳurʾān contrary to the traditional explanation: *al-fuḳahāʾ aʿlam bi 'l-taʾwīl minhu*, "the *fuḳahāʾ* are more conversant with exegesis than he" (who is not a theologian but only a philologist); cf. also *Ẓāhiriten*, 19. (I. GOLDZIHER-[J. SCHACHT])

The traditional opinion of the Muslim scholars projects the origins of Islamic jurisprudence back into the generation of the Companions of the Prophet. According to it, the Caliphs of Medina and a few specialists in religious law among the Companions started to draw conclusions from the Ḳurʾān and the words and acts of the Prophet as they remembered them or as they had been reported to them, by independent reasoning; their conclusions were approved, explicitly or silently, by the other Companions and became thereby binding on the community; their Successors continued this activity and the generation following the Successors saw the foundation of the schools of religious law.

Recent historical research, however, has shown that Islamic jurisprudence came into being towards the end of the first century of the hi<u>dj</u>ra (early 8th century A.D.). During the greater part of the 1st/7th century, Islamic law, in the technical meaning of the term, and therefore Islamic juris-

prudence, did not as yet exist. As had been the case in the time of the Prophet, law as such fell outside the sphere of religion, and so far as there were no religious or moral objections to specific transactions or modes of behaviour, the technical aspects of law were a matter of indifference to the Muslims. Not only did Arab customary law, as modified and completed by the Ḳur'ān, survive to a considerable extent, but the Muslims did not hesitate to adopt the legal, commercial and administrative institutions and practices of the conquered territories, and even legal concepts and maxims, as far as they were compatible with the demands of the new religious ideas (see above). As supreme rulers and administrators, the Caliphs of Medina acted to a great extent as the lawgivers of the community, and they were followed in this by the Umayyad Caliphs and their governors; during the whole of the first century of Islam, the administrative and legislative activities of the Islamic government cannot be separated. The Umayyad governors also appointed the first *ḳāḍī*s who by their decisions laid the foundations of what was to become Islamic law. They gave judgment according to their own discretion or "sound opinion" (*ra'y*), basing themselves on customary practice and on administrative regulations, and taking the letter and the spirit of the Ḳur'ān and other recognized Islamic religious norms into account. Subsequent developments brought it about that the part played by the earliest *ḳāḍī*s in laying the foundations of Islamic law was not recognized by Islamic jurisprudence.

Towards the end of the first century of the hidjra (early 8th century A.D.) only we encounter the first specialists in religious law whose activity can be regarded as historical, such as Ibrāhīm al-Nakhaʿī in Kūfa, and Saʿīd b. al-Musayyib and his contemporaries in Medina. They were pious persons whose interest in religion caused them to survey, either individually or in discussion with like-minded friends, all fields of contemporary activities, including the field of law, from an Islamic angle, to impregnate the sphere of law with religious and ethical ideas, and to elaborate, by individual reasoning (*ra'y*, *istiḥsān*, *idjtihād* [*qq.v.*]), an Islamic way of life. Their reasoning represents the beginnings of an Islamic jurisprudence. Islamic jurisprudence did not grow out of an existing Islamic law; it created Islamic law by endorsing, modifying or rejecting the popular and administrative practice of the Umayyad period. Members of this group, such as Radjā' and Abū Ḳilāba, were among the familiars of the Umayyad Caliphs from the last decades of the 1st/7th century onwards, and the *ḳāḍī*s came increasingly to be recruited from them.

As the groups of pious specialists grew in numbers and in cohesion, they developed, in the first few decades of the 2nd/8th century, into the "ancient schools of law" of which those of Kūfa, of Medina and of Syria are known to us in some detail. The differences between them were caused in the first place by geographical factors, such as local variations in social conditions, customary law and practice, but they were not based on any noticeable disagreement on principles or methods. The great centre of nascent Islamic jurisprudence at the end of the 1st/7th and during the 2nd/8th century was ʿIrāḳ; influences of the doctrine of one school on that of another almost invariably proceeded from ʿIrāḳ to Ḥidjāz, and the doctrinal development of the school of Madīna often lagged behind that of the school of Kūfa. The ancient schools shared not only a considerable body of common doctrine but the essentials of a legal theory the central idea of which was that of the "living tradition of the school". This idea dominated the development of Islamic jurisprudence during the whole of the 2nd/8th century. Retrospectively, it appears as *sunna* or "practice" (*ʿamal*), *i.e.*, the ideal practice, the practice as it ought to be, or "well-established precedent" (*sunna māḍiya*) or "ancient practice" (*amr ḳadīm*). Synchronously, it is represented by the consensus (*idjmāʿ*, *al-amr al-mudjtamaʿ ʿalayh*), the common doctrine of the majority of the representative religious scholars of each centre (cf. above). Originally, the living tradition of the ancient schools was anonymous; it was the average opinion of their representatives that counted, and not the individual doctrines of the most prominent scholars. From the first decades of the 2nd/8th century onwards, however, it began to be projected backwards and to be ascribed to some of the great figures of the past. The earliest specialists, such as Ibrāhīm al-Nakhaʿī, had not done more than give opinions on questions of ritual and perhaps on kindred problems of directly religious concern, cases of conscience concerning alms-tax, marriage, divorce, and the like, and technical points of law appeared only at the stage of doctrine represented by the teaching of Ḥammād b. Abī Sulaymān (d. 120/738). By a literary convention which found particular favour in ʿIrāḳ, scholars used to put their own doctrines under the aegis of their masters. In this way, the main contents of the *Kitāb al-Āthār* of Abū Yūsuf and of the *Kitāb al-Āthār* of Shaybānī represent themselves as having been derived from Abū Ḥanīfa, "from" (*ʿan*) Ḥammād, "from" Ibrāhīm. The Medinese followed suit and projected their own teaching back to a number of ancient authorities who had died in the last years of the first or in the very first years of the second century, seven of whom were later singled out to form the group of the so-called "seven lawyers of Medina" (*fuḳahā' al-Madīna al-sabʿa*: Saʿīd b. al-Musayyib, ʿUrwa b. al-Zubayr, Abū Bakr b. ʿAbd al-Raḥmān, ʿUbayd Allāh b. ʿAbd Allāh b. ʿUtba, Khāridja b. Zayd b. Thābit, Sulaymān b. Yasār, and al-Ḳāsim b. Muḥammad b. Abī Bakr). The transmission of legal doctrine in Ḥidjāz becomes ascertainable at about the same time as in ʿIrāḳ, with Zuhrī ([*q.v.*]; d. 124/742) and his younger contemporary Rabīʿa b. Abī ʿAbd al-Raḥmān for Medina, and with ʿAṭā' b. Abī Rabāḥ for Mecca. At the same time at which the doctrine of the school of Kūfa was retrospectively attributed to Ibrāhīm al-Nakhaʿī, a similar body of doctrine was directly connected with the very beginnings of Islam in Kūfa by being attributed to Ibn Masʿūd [*q.v.*], a Companion of the Prophet who had come to live in that city, and Ibrāhīm al-Nakhaʿī became the main transmitter of that body of doctrine, too. In the same way, another Companion of the Prophet, Ibn ʿAbbās [*q.v.*], became the eponym of the school of Mecca, and the school of Medina claimed as its main authorities among the Companions of the Prophet the caliph ʿUmar [*q.v.*] and his son, ʿAbd Allāh b. ʿUmar. One further step in the search for a solid theoretical foundation of the doctrine of the ancient schools was taken in ʿIrāḳ, very early in the second century of Islam, by transferring the term "*sunna* of the Prophet" from its political and theological into a legal context and identifying it with the *sunna*, the ideal practice of the local community and the corresponding doctrine of its scholars. This term, which was taken over by the school of Syria,

expressed the axiom that the practice of the Muslims continued the practice of the Prophet, but did not yet imply the existence of positive information in the form of "traditions" (*ḥadīth*) that the Prophet by his words or acts had in fact originated or approved that practice.

It was not long before there arose movements of opposition to the opinions held by the majorities in the ancient schools. In Kūfa, where Ibn Masʿūd had become the eponym of the school, the doctrines which were put forward in opposition to it and which do not embody the coherent teaching of any one group were regularly attributed to the caliph ʿAlī [*q.v.*], who had made Kūfa his headquarters, not indeed on account of any Shīʿī bias, which is absent from them, but because the name of ʿAlī represented an authority equal to and possibly even higher than that of Ibn Masʿūd. These opinions generally did not prevail in the school of Kūfa, but in Medina the corresponding doctrines succeeded in gaining recognition to a considerable extent. In contrast with the opposition in Kūfa, the opposition in Medina already reflected the activity of the Traditionists. The movement of the Traditionists (*ahl al-ḥadīth*, [*q.v.*]) is the most important single event in the history of Islamic jurisprudence in the second century of the hidjra; it opposed to the "living tradition" of the ancient schools, which was to a great extent based on *raʾy*, the authority of individual traditions (*ḥadīth*, [*q.v.*]) from the Prophet which its adherents put into circulation in ever increasing numbers. According to the traditionists, *fiḳh* had to be based exclusively on traditions from the Prophet, whom they reported as having said: "Luck to the man who hears my words, remembers them, guards them and hands them on; many a transmitter of *fiḳh* is no *faḳīh* himself, and many a one transmits *fiḳh* to a person who is a better *faḳīh* than he is" (Shāfiʿī, *Risāla*, 55, 65). Traditionists existed in all great centres of Islam, where they formed groups in opposition to, but nevertheless in contact with, the local schools of law, and the polemics between them and the ancient schools occupied most of the second century. But the ancient schools had no real defence against the rising tide of traditions; they had to express their own doctrines in traditions which allegedly went back to the Prophet and to take increasing notice of the traditions produced by their opponents, and finally the outlines and many details of Islamic jurisprudence were cast into the form of traditions from the Prophet. Later Muslim scholars, who in the nature of things were unable to acknowledge such a fundamental change in the bases of Islamic legal thought, represented this struggle as a struggle between the *ahl al-ḥadīth* and the imaginary group of the *aṣḥāb al-raʾy* [*q.v.*]. The Traditionists of the 3rd/9th century attacked the ʿIrāḳians and the school of Abū Ḥanīfa with particular venom, and castigated their use of the formula *araʾayta* "what do you think of . . ., supposing . . ." as typical of the casuistry of the *aṣḥāb al-raʾy*.

The literary productions of Islamic jurisprudence begin soon after the middle of the 2nd/8th century (the *Madjmūʿ al-fiḳh* attributed to the Shīʿī pretender Zayd b. ʿAlī [*q.v.*], who died in 122/740, though of an early date, is not authentic; cf. Bergsträsser, in *OLZ*, 1922, 114-24; Strothmann, in *Isl.*, xiii (1923), 27-40, 49), and from then onwards its development can be followed step by step from scholar to scholar. For ʿIrāḳ, and Kūfa in particular, successive stages are represented, after Ḥammād (d. 120/738; see above), by the doctrines of Ibn Abī Laylā ([*q.v.*] d. 148/765), of Abū Ḥanīfa ([*q.v.*]; d. 150/767), of Abū Yūsuf ([*q.v.*]; d. 182/798), and of Shaybānī ([*q.v.*]; d. 189/805) respectively. Outside the line of doctrine represented by the *isnād* Abū Ḥanīfa—Ḥammād—Ibrāhīm stands another scholar of Kūfa, Sufyān al-Thawrī ([*q.v.*]; d. 161/778); his doctrines are known to us through the *Kitāb Ikhtilāf al-fuḳahāʾ* of Ṭabarī ([*q.v.*]; d. 310/923), which also contains information on other early lawyers. The Syrian Awzāʿī ([*q.v.*]; d. 157/774) represents an archaic type of doctrine, which takes us very near to the beginnings of Islamic jurisprudence. Mālik b. Anas ([*q.v.*]; d. 179/795) in his *Muwaṭṭaʾ* aimed at expounding the average doctrine of the school of Medina in his time. Much information on the opinions of Mālik himself, of his disciple Ibn al-Ḳāsim ([*q.v.*]; d. 191/806), and of the older authorities of Medina is contained in the *Mudawwana* of Saḥnūn ([*q.v.*]; d. 240/854).

Shāfiʿī ([*q.v.*]; d. 204/820) belonged originally to the school of Medina, but he accepted the thesis of the Traditionists on the overriding authority of the traditions from the Prophet, identifying their contents with the *sunna*, defended it in vigorous polemics with the followers of the ancient schools, elaborated on its basis a new body of doctrine by which he cut himself off from the continuity of doctrine in the ancient schools, and composed in his *Risāla* the first treatise on the method of legal reasoning, becoming thereby the founder of the science of *uṣūl al-fiḳh* [see UṢŪL]. (In contrast with the *uṣūl*, the "roots" or sources of legal knowledge, the body of positive rules derived from them is called *furūʿ*, plural of *farʿ*, "branches"; the earliest existing work of pure *furūʿ*, presented in a didactic manner, is Shaybānī's *Kitāb al-Aṣl*.) Shāfiʿī's writings, which to a great extent are cast in the form of dialogues with unnamed opponents and most of which were brought together by his disciples in a collection which received the name of *Kitāb al-Umm*, are an important source for the history of Islamic jurisprudence in the second century. Shāfiʿī was not a mere Traditionist; on the contrary, he deplored their faulty reasoning, and himself accompanied his reliance on traditions from the Prophet by systematic legal thought (*ʿaḳl, maʿḳūl*) of exceptionally high quality, excluding *raʾy* and *istiḥsān* and insisting on strict *ḳiyās*. It happened, however, that some of his disciples, and in particular Aḥmad b. Ḥanbal ([*q.v.*]; d. 241/855), emphasized the traditionist element in his doctrine and derived their legal teaching exclusively from traditions, avoiding human reasoning as far as possible. This avoidance of drawing conclusions was erected into a principle by Dāwūd b. Khalaf ([*q.v.*]; d. 270/884), called al-Ẓāhirī because he relied exclusively on the literal meaning (*ẓāhir*) of Ḳurʾān and *ḥadīth* and rejected not only *raʾy* and *istiḥsān* but reasoning by *ḳiyās* as well.

About the middle of the 2nd/8th century, groups or circles within the ancient schools of law began to form themselves round individual masters, such as the "followers of Abū Ḥanīfa" within the school of Kūfa, and the "followers of Mālik" within the school of Medina. Several factors favoured this process, and by the middle of the 3rd/9th century the ancient schools of law had transformed themselves into "personal" schools, which perpetuated not the living tradition of a city but the doctrine of a master and of his disciples. In this way, the bulk of the ancient school of Kūfa transformed itself

into the school of the Ḥanafīs, another group of scholars into the school of Sufyān al-Thawrī, the ancient school of Medina into the school of the Mālikīs, and the ancient school of Syria into that of Awzāʿī. Although Shāfiʿī had disclaimed any intention of founding a school, his disciples, being neither mere Traditionists nor members of another school, became his personal followers, and the doctrinal movement started by him has always been known as the Shāfiʿī school. The school of legal thought originated by Aḥmad b. Ḥanbal, too, became known as the school of the Ḥanbalīs; this school never absorbed its parent movement, that of the Traditionists, as completely as the Ḥanafī and Mālikī schools absorbed theirs. The followers of Dāwūd b. Khalaf al-Ẓāhirī formed the only school of law whose name, Ẓāhiriyya [*q.v.*], is derived from a principle of legal theory. These and some other later schools of law (such as a short-lived one founded by Ṭabarī) are called *madhāhib* (pl. of *madhhab*, "way of thinking, persuasion"). Since about 700/1300 four of them only have survived in orthodox Islam, the Ḥanafī, Mālikī, Shāfiʿī and Ḥanbali schools (cf. ḤANĀBILA, ḤANAFIYYA, MĀLIKIYYA, SHĀFIʿIYYA); they are regarded, and regard one another, as alternative and equally valid interpretations of the religious law of Islam. Notwithstanding their divergent doctrinal roots, the orthodox schools of law share a common legal theory (cf. UṢŪL) which asserted itself in the 3rd/9th century, and which accepted Shāfiʿī's (and the Traditionists') principle of the overriding authority of the traditions from the Prophet as the only evidence of *sunna* but subordinated its practical application to the consensus of the scholars. The theory of the *uṣūl al-fiḳh* is therefore of little direct importance for the positive doctrines of the schools of law. From the middle of the 3rd/9th century, too, the idea began to gain ground that only the great scholars of the past had the right to independent reasoning in law (*idjtihād* [*q.v.*]), and in the 4th/10th century a consensus gradually established itself in orthodox Islam to the effect that all future activity would have to be confined to the explanation, application, and, at the most, interpretation of the doctrine as it had been laid down once and for all (*taḳlīd* [*q.v.*]). This implied the obligation to join one of the existing schools. Even under the rule of *taḳlīd*, Islamic jurisprudence did not lack manifestations of original thought in which the several schools competed with and influenced one another. But this original thought could express itself freely in nothing more than abstract systematic constructions which affected neither the established doctrine of positive law nor the theory of the *uṣūl al-fiḳh*. New sets of facts, too, constantly arose in life, and they had to be decided by the specialists with the traditional tools of legal science; such a decision is called *fatwā* [*q.v.*], and the scholar who gives a *fatwā* is called *muftī*. Once-recognized as correct by the common opinion of the scholars, the decisions of the *muftīs* became part of the doctrine of each school. The activity of the *muftīs* is essentially of the same kind, though carried out against a different background, as that of the first specialists in religious law.

The legal doctrines of the Khāridjīs [*q.v.*] and of the Shīʿa [*q.v.*], which split from the orthodox or Sunnī majority on political grounds about the middle of the first century of Islam (ca. 660 A.D.), differ from those of the Sunnīs on the question of the leadership of the community [see IMĀM] and consequential questions of *uṣūl*, but on other questions they do not differ from those of the orthodox schools of law more widely than these last differ from one another. From this, it must not be concluded that the features common to Khāridjī, Shīʿa, and Sunnī law are older than the schisms which split the Islamic community within its first century. For a considerable period, and during the 2nd/8th and 3rd/9th centuries in particular, these ancient sects remained in a sufficiently close contact with the Sunnīs for them to adopt the doctrines which were being developed in the orthodox schools of law, introducing only such superficial modifications as were required by their particular political and dogmatic tenets. Certain doctrines which in themselves were not necessarily either Shīʿī or Sunnī became adventitiously distinctive for Shīʿa as against Sunnī law.

When the Umayyads were overthrown by the ʿAbbāsids in 132/750, Islamic jurisprudence, though still in its formative period, had acquired its essential features. For reasons of dynastic policy, and in order to differentiate themselves from their predecessors, the ʿAbbāsids posed as the protagonists of Islam, recognized Islamic law as it was being taught by the pious specialists as the only legitimate norm in Islam, and set out to translate their doctrines into practice. They regularly attracted specialists in religious law to their court and made a point of consulting them on problems that might come within their competence. At the request of the Caliph Hārūn al-Rashīd, Abū Yūsuf wrote his *Kitāb al-Kharādj*, a long treatise on public finance, taxation, criminal justice, and connected subjects. The *ḳāḍīs*, who under the Umayyads had been appointed by the governors, were now appointed by the caliph, they had to be specialists in religious law, and they had to apply nothing but the sacred Law, without interference from the government [see ḲĀḌĪ]. But this effort to translate into practice the ideal doctrine which was being elaborated by the specialists, was short-lived. The early specialists who had formulated their doctrine not on the basis of but in a certain opposition to Umayyad popular and administrative practice had been ahead of realities, and now the early ʿAbbāsids and their religious advisers were unable to carry the whole of society with them. The *ḳāḍīs*, theoretically independent though they were, had to rely on the political authorities for the execution of their judgments, and, being bound by the formal rules of the Islamic law of evidence, their inability to deal with criminal cases became apparent, so that the administration of the greater part of criminal justice was taken over by the police (*shurṭa* [*q.v.*]). The administrative "investigation of complaints" [see MAẒĀLIM] very soon led to formal Courts of Complaints being set up, which by their very existence show the breakdown of a considerable part of the administration of civil justice by the *ḳāḍīs* as well. [See also SIYĀSA]. In this way, a double administration of justice came into being, and it has prevailed in most Islamic countries, the competence of the *ḳāḍīs*' tribunals being restricted to matters of family law, inheritance, and *waḳf*. [See MAḤKAMA].

This is one aspect of the tension between theory and practice (*ʿāda*, *ʿurf* [*qq.v.*]), between jurisprudence and customary law, which existed in Islamic law from its very beginnings. The most remarkable and, for a time, the most successful effort on the part of a state of high material civilization to bridge this gulf, was made in the Ottoman Empire [see ABU 'L-SUʿŪD, ḲĀNŪN-NĀME, SHAYKH AL-ISLĀM]. Islamic

jurisprudence, too, took notice of the practice which it could not overcome, and tried at least to control and regulate it in the works on *ʿamal*, on *ḥiyal*, and on *shurūṭ* [*qq.v.*], which form an important branch of its literary productions.

Until the early ʿAbbāsid period, Islamic jurisprudence had been adaptable and growing, but from then onwards it became increasingly rigid and set in its final mould. This essential rigidity helped it to maintain its stability over the centuries which saw the decay of the political institutions of Islam. Taken as a whole, it reflects and fits the social and economic conditions of the early ʿAbbāsid period. If it grew more and more out of touch with later developments of state and society, in the long run it gained more in power over the minds than it lost in control over the bodies of the Muslims. The *fiḳh* is, in the words of Snouck Hurgronje, a "doctrine of duties", the interpretation of a religious ideal not by legislators but by scholars, and the recognized handbooks of the several schools are not "codes" in the Western meaning of the term. Islamic law is a "jurists' law" par excellence: Islamic jurisprudence did not grow out of an existing law, it itself created it. [See also SHARĪʿA].

In British India and in French Algeria, Islamic jurisprudence, being fused with Western legal thought and affected by Western legislation, gave birth, respectively, to Anglo-Muhammadan law [see HIND] and to the *droit musulman algérien* [see AL-DJAZĀʾIR] both of which became independent legal systems. Only in the 20th century, Islamic Modernism, whilst accepting the postulate that Islam as a religion ought to regulate the sphere of law as well, has denied the validity of traditional Islamic jurisprudence. Under the influence of modern constitutional and social ideas, many institutions of Islamic law have been reshaped, and sometimes changed out of recognition, by secular legislation in a number of Islamic countries. Once again, jurists prepared, provoked, and guided a new legislation. On the other hand, the programme was formulated of deriving a new, modern law from the general formal principles which were elaborated by the early Islamic jurists. Both tendencies are inspired by the desire to put a new Islamic jurisprudence in the place of the old one. [See ḲĀNŪN].

FIKR, pl. *afkār*, thought, reflection. The Ḳurʾān employs the 2nd and 5th forms of the root *fkr*, to urge men "to reflect". In the vocabulary of *falsafa* and *ʿilm al-kalām*, the *maṣdar fikr* denotes the intellectual faculty in the act of thought, reflecting upon an object of intellection. It is distinguished from *idrāk*, the intellectual faculty of grasping, of perception. The result of the operation of *fikr* is expressed by the noun of unity *fikra*.

In *taṣawwuf*, *fikr* is used habitually in contrast to *dhikr* [*q.v.*], recollection. *Fikr* can thus be translated by reflection or meditation. In the performance of *fikr* the Ṣūfī, concentrating upon a religious subject, meditates according to a certain progression of ideas or a series of evocations which he assimilates and experiences; in *dhikr*, concentrating on the object recollected—generally a Divine Name—, he allows his field of consciousness to lose itself in this object: hence the importance granted to the technique of repetition, at first verbal, later unspoken. The "meditations" of al-Ḥallādj on the "night-journey" and "ascension" (*miʿrādj*) of the Prophet, or on the meeting of Moses and Iblīs, can be taken as examples of *fikr*. Another instance of it will be found in the "scrutiny of conscience" (*ḥisāb*) advocated by al-Muḥāsibī.

The problem of the respective merits of *fikr* and *dhikr* confronted the Ṣūfīs of the first centuries. Al-Ḥasan al-Baṣrī insisted upon *fikr*. It is, he said, "the mirror which makes you see what good there is in you, and what evil". The Muʿtazila, the Karrāmiyya and the Imāmiyya taught that reflection must precede recourse to *samʿ*, scriptural or traditional authority; hence, in their view, the superiority of *fikr* to *dhikr*. Al-Ḥallādj, notes L. Massignon, "does not make a decision": he considers both methods to be legitimate, since both must lead to the Goal, but only on the condition that the "initiate" (*ʿārif*) should not cling to his approach as an end in itself. In a celebrated passage of his meditation on the *miʿrādj*, he speaks of the "garden of *dhikr*" which Muḥammad visited "without deviating", and of the "process of *fikr*" which he followed without "passing beyond".

However, al-Ḥallādj also seems to have given his preference to *fikr* rather than *dhikr*. Some of his texts follow this trend. But it is evident that in these texts *fikr* must not be rendered solely by "discursive meditation", the effort of the spirit following the human method of procedure, as distinct from the "passive" state of recollection in prayer. *Fikr* is clearly distinguished from *ḥads*, just as reflection is distinguished from an intellectual flash of illumination or intuition. But in the reply of Iblīs to Moses, the *Kitāb al-Ṭawāsīn* contrasts *al-fikra* ("pure thought", following Massignon's translation) with *dhikr*: "O Moses, pure thought (*fikra*) has no need of recollection (*dhikr*)". The fact is, al-Kalābādhī explains in commenting on a phrase of Ḥallādj, the fruits of *dhikr* are refreshment for the soul, while meditations (*afkār*) guide the initiate towards the single divine majesty, the reverential

fear of God, His favours and His gifts. *Dhikr* appeals to the organs of the senses (the tongue, the physical heart), *fikr* purely to intellectual concentration. By means of *dhikr* and its rhythmical use of oral prayers the Ṣūfī is almost certain to succeed in attaining subjective spiritual "states" (*aḥwāl*); *fikr* tends to put him within the possibility of experiencing transcendant truths.

But in the event, it was the superiority of *dhikr* to *fikr* which was to be most generally affirmed. There was distrust of the illusions which the practice of *fikr* could engender: as early as the 3rd/9th century, Khashīsh Nisaʾī said that, "some, by force of "meditation", claim to enjoy in this world the spiritual life of God, the angels and the prophets, and to feast with the ḥūris" (quoted and trans. Massignon); whilst *dhikr*, though appealing as it does to the organs of the senses, at least has the merit of depriving the spirit of everything other than the object recollected. Monographs were written on *dhikr*, its techniques and achievements, but not on *fikr* and its methods.

There remains the fact that the gnostic soarings of those who profess *waḥdat al-wudjūd* ("Unity of Being") can be regarded as deriving from a *fikr* in which the use of typified symbols replaced the "process" of discursive reasoning.

FIKRET, TEVFIK [see TEWFĪK FIKRET].

FIKRĪ, ʿAbd Allāh Pasha, an Egyptian statesman, poet and prose-writer, regarded as one of the authors who have helped to give a simpler, more modern character to Arabic literary style. Born in 1250/1834 in Mecca where his father, an Egyptian officer, was serving, and later brought up in Cairo, he studied at al-Azhar and consorted with the Ṣūfīs. From 1267/1851 he was an administrative official and attracted the attention of Khedive Ismāʿīl who, in 1284/1866, chose him to teach Arabic, Turkish and Persian to his sons Tawfīḳ, Ḥasan and Ḥusayn. His biographers reveal him as a man of integrity, with sincere religious beliefs, and distinguished by his family's piety (his paternal grandfather ʿAbd Allāh taught at al-Azhar). He often visited Istanbul on official missions. In 1870 he took part in founding the Khedivial library, as the subordinate of ʿAli Pasha Mubārak [*q.v.*] with whom subsequently he often worked. In 1878 he was *wakīl* of the Minister of Public Instruction, at that time ʿAli Pasha Mubārak. In 1882, for four months, he was himself Minister of Public Instruction in the ministry of al-Bārūdī, a follower of the movement of ʿUrābī Pasha [*q.v.*]. Imprisoned for that reason and then released, he remained thenceforth in obscurity. He made the pilgrimage to Mecca in 1302/1885, and attended the Stockholm Congress of Orientalists in 1889 as an official Egyptian delegate. He died on 11 Dhu 'l-Ḥidjdja 1307/27 July 1890.

After his death, his son Amīn Pasha Fikrī published a collection of his father's poems, letters, etc. under the title *al-Āthār al-Fikriyya*, Cairo 1315, and a description of his father's travels under the title *Irshād al-alibbāʾ ilā maḥāsin Urubbā*, Cairo 1892. The list of his other writings is given in Brockelmann, II, 474 ff. and *Suppl.*, and also in his biographies.

Bibliography: ʿAlī Pasha Mubārak, *Khiṭaṭ djadīda*, ii, 46 ff.; Muḥammad ʿAbd al-Ghanī Ḥasan, *ʿAbd Allāh Fikrī, ʿaṣruhu, ḥayātuhu, adabuhu*, Cairo 1946; Sayyid ʿInānī, *ʿAbd Allāh Bāshā Fikrī, ḥayātuhu wa-āthāruhu wa-makānatuhu 'l-adabiyya*, Cairo 1946; Ziriklī, *al-Aʿlām, ḳāmūs tarādjim* ..., iv, 252-3, giving additional bibliographical information.

(J. Jomier)

FĪL (Ar.; from Persian *pīl*), elephant. The word appears in the title and first verse of *Sūra* CV, which alludes to the expedition of Abraha [*q.v.*], but the Arabs were barely acquainted with this animal which is a native of India and Africa; consequently when, towards the end of the 2nd/beginning of the 8th century, a troop of elephants arrived in Baṣra, it was a matter of curiosity for the population (see al-Nawawī, *Tahdhīb*, 738). The subject had already come up in the *Kalīla wa-Dimna* (trans. A. Miquel, Paris 1957, 53), but the first Arab author truly to concern himself and to undertake a personal investigation was al-Djāḥiẓ (*Ḥayawān*, in particular vii, *passim*) who, on the basis also of the poems of a certain Hārūn b. Mūsā who had lived in Mūltān, collected together most of the known facts and beliefs relating to this huge and curious creature, for which the name *zandabīl* was also used, although it was not really known whether that term denoted the male or the female.

The outcome of a metamorphosis, it is the father of the pig which has a vague resemblance to it. The points that attract most attention, apart from its size, are its trunk, which serves as both nose and hand and is used for work and as a weapon, and its tusks which, some say, are hollow at the base and attain a weight of from 2 to 300 *mann*s. Equally striking are its ugliness and its over-short neck, its huge ears and small eyes. The tongue is reversed, that is to say the tip points inwards, and were it not for this fault it would be able to learn to speak. In spite of its massive body it has a feeble cry; it runs swiftly and can move with agility and dexterity. As its only joints are in the shoulder and thigh, it is unable to lie down and has to sleep standing up, against a tree or wall; if it falls down on its side, its companions haul it up again by means of their trunks. It can swim, keeping its trunk above water in order to breathe. The thick secretion from its forehead is sweeter then musk, and is collected with the utmost care; the dung is a remedy to prevent conception, and various parts of the body are used in medicine.

Elephants do not breed in ʿIrāḳ, and the birth of an elephant calf at the court of a king of Persia is referred to as a curiosity. In its fifth year the animal, whose testicles are inside the body, near the kidneys, is capable of reproduction. In the rutting season the male is endowed with extraordinary strength and reverts to a state of savagery, while the female becomes intractable and bad-tempered; once she is pregnant she is no longer touched by the males; she calves every seven years, and to find the calf it is necessary to search in the jungle, near to a river, where the mother deposits it to save it from a dangerous fall. The elephant calf, which is born with teeth, is entrusted to the care of a *fayyāl* responsible for its training. In captivity, the elephant lives from 80 to 100 years, but in the wild state its longevity is much greater, and certain individuals live to the age of 400.

The elephant is very intelligent, patient and docile; it is able to recognize its master and understands orders given by its *fayyāl* who, seated on its back, touches its forehead with a curved stick and

talks to it in an Indian language. It possesses a curious gift for imitation and becomes very friendly; normally of a playful disposition, and in fact addicted to jokes, it is terribly vindictive and has the ability to choose the best moment to wreak its vengeance. It takes to flight at the approach of the rhinoceros, which is thought to be able to lift it up with its horn; similarly, the lion utterly terrifies it, and the cat profits from its resemblance to the king of beasts, so much so that one way of effectively dealing with a force containing war-elephants is, on their approach, to release a quantity of cats which have been kept in readiness in sacks. Its worst enemy is, however, a small creature called the *zabraḳ*, which kills it by spraying it with its urine.

The Arab authors are aware that the elephant lives in Africa also, but in the wild state, and al-Masʿūdī (*Murūdj*, iii, 5-7) relates how the Zandj set about killing it and taking its tusks. Al-Dimashḳī, for his part, gives details of the way in which a wild elephant is captured by trapping it in a pit; men wearing brightly coloured clothes maltreat it and strike it, but a trainer, dressed in white, drives them away and starts to tame the animal by giving it food; after a certain time the hunters return, and the same manoeuvre is repeated until the elephant has enough trust in the *fayyāl* to allow itself to be ridden away.

To judge by the tales of travellers, geographers and historians, the various Indian sovereigns used by tradition to keep a varying but very large number of elephants for ceremonial use and for war. With the body shielded by bands of iron and cork, and the trunk protected by a curved sabre (*ḳarṭal*), each war-elephant was accompanied by 500 men who in turn preceded 5,000 horsemen. Ibn Baṭṭūṭa says that he had seen some trained for executions.

The existence of certain elephants in ʿIrāḳ is attested by the texts; thus, it was on a grey elephant offered by an Indian king to al-Maʾmūn that al-Muʿtaṣim in 223/838 had his prisoner Bābak [*q.v.*] carried to Sāmarrā, before handing him over to the executioner; similarly, at about the same period, al-Djāḥiẓ was able to see some for himself and to take part in conversations in which the respective merits of the camel and the elephant were debated. In general, however, this animal remained purely an object of curiosity throughout the Muslim world west of India, with the possible exception of East and West Africa. On the other hand, ivory was well known and was used in the making of various articles [see ʿĀDJ].

When seen in a dream, the elephant generally presages some important business, but it is capable of more varied and subtle interpretations.

(J. RUSKA-[CH. PELLAT])

As beasts of war. The use in western Asia of elephants for war stems from India. They were used in the warfare described in the *Mahābhārata* and their tactical use is discussed in Kauṭilya's *Arthaśāstra*. From this treatise we learn certain facts which remain valid in the Indo-Persian world of the Islamic period: that elephants were regarded as a royal monopoly and private possession of them was forbidden, and that they might be provided with armour plating and have mounted on their backs archers, swordsmen and mace-bearers (cf. B. P. Sinha, *The art of war in ancient India 600 B.C.-300 A.D.*, in *Cahiers d'Histoire Mondiale*, iv, 1957, 132-6, and S. H. Hodivala, *Studies in Indo-Muslim history*, Bombay 1939, 139-40). From India, their use passed to Achaemenid Persia. Alexander the Great first met Persian elephants when he defeated Darius III at Arbela in 331 B.C.; the Greek rulers in Bactria used them; Seleucus I introduced them to Syria, and the later Seleucids used them against Rome.

The Sāsānids regularly used war elephants (Masʿūdī, *Murūdj*, ii, 230; Christensen, *L'Iran sous les Sassanides*[2], 208). At Ḳādisiyya in 14/635, the Persian general Rustum deployed thirty of them in his centre and on his wings, and their appearance spread terror amongst the Bedouins; the Arabs finally stopped them by cutting their girths and dislodging the troop-laden howdahs, and also by attacking vulnerable parts like the eyes and trunks (Sir W. Muir, *The Caliphate, its rise, decline and fall*[4], Edinburgh 1915, 102 ff.). Despite new contacts with the Persian world, the military use of elephants did not spread during the Umayyad and early ʿAbbāsid periods. They were imported into the Caliphal lands from the fringes of the Indian world, *scil.* Kābul, Makrān and Sind (cf. Ṭabarī, i, 2708, and Ibn al-Athīr, vii, 89), but they were mainly used as stately mounts on ceremonial occasions; the Caliph al-Manṣūr is said to have favoured them for this (*Murūdj*, iii, 18-20). The Buwayhid ʿAḍud al-Dawla had a number of war elephants, *fuyūl muḳātila*, which he used in battle, but it is not recorded that they played any significant part in the fighting (Miskawayh, *Eclipse of the ʿAbbasid Caliphate*, ii, 368, tr. v, 402).

It was the Ghaznavids, the first Islamic dynasty whose empire spanned both the Persian and northern Indian worlds, who first used elephants in large numbers for military purposes and who first assigned them a definite place in their tactical theory. The next two centuries, the 5th/11th and the 6th/12th, were the heyday of the elephant as a military weapon in the Islamic world. Sebüktigīn and Maḥmūd of Ghazna captured elephants in hundreds from the Indian princes. These beasts fell within the Sultan's fifth of plunder. Their use was jealously guarded by the Sultans and by their successors in northern India, the Ghūrids and the Slave Kings of Delhi, and only as an exceptional mark of favour were they bestowed on great men of state. Armour plating was often placed over their heads and faces. In battle, they were usually placed in the front line; their metal accoutrements and ornaments were jangled to make a terrifying din, and they were then stampeded towards the enemy. This tactic was used with demoralizing effect on the Ḳarakhānids in 398/1008 and 416/1025 (cf. C. E. Bosworth, *Ghaznevid military organisation*, in *Der Islam*, xxxvi (1960), 61-4, and M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 139).

Influenced by Ghaznavid practice, the sporadic use of elephants is recorded in the empire of the Great Saldjūḳs from the time of Berk-yāruḳ onwards, especially in Khurāsān and the east. At the battle outside Ghazna in 510/1116-17, Sandjar's Saldjūḳ troops were initially thrown into confusion at the sight of the fifty elephants of the Ghaznavid Arslān Shāh, but they dealt with the beasts by ripping open the soft under-belly of the leading elephant and

stampeding it back into its own camp (Bosworth, *op. cit.*, 64). When Sandjar defeated his nephew Maḥmūd b. Muḥammad at Sāwa in 513/1119, he had in his forces forty elephants with troops mounted on them (Ibn al-Djawzī, *al-Muntaẓam*, ix, 205; Ibn al-Athīr, x, 387). The Ghūrids used elephants in their warfare with the Khwārizm Shāhs, and beasts captured from the Ghūrids were used by ʿAlāʾ al-Dīn Muḥammad for the defence of Samarḳand against the Mongols in 617/1220 (Djuwaynī, tr. Boyle, i, 117, 322-3). Although the Ḳara Khiṭāy used elephants captured from the Khwārizm Shāh for their assault on Balāṣāghūn, the use in war of these slow-moving and cumbersome beasts did not commend itself to the swift-moving Mongol cavalrymen. After he had taken Samarḳand, Čingiz Khān refused to allot fodder for the elephants captured there, and they were turned out in the steppe to die of hunger (Djuwaynī, tr. Boyle, i, 120, 360).

Outside Muslim India, elephants never thereafter regained their popularity as tactical weapons of war, although they were still used in the Persian world for ceremonial occasions.

Iconography. The earliest known representation of an elephant in Islamic art is the so-called Elephant Silk, perhaps from Khurāsān, which was originally in the church at St. Josse-sur-Mer, Pas-de-Calais, and is now in the Louvre. In company with other decorative motifs, it shows elephants in yellow confronting each other which have been reproduced in terms of inlay. The colours are a deep purple for the ground, with clear blue and tan which may have once been red. Each elephant bears elaborate trappings and a saddle-cloth. Although the colours are sumptuous enough, the design of this piece of silk is rather crude. The Kufic inscription in yellow below the two elephants mentions the name of Abu 'l-Manṣūr Bakht-tegīn, an Amīr of Khurāsān whose death took place in 349/960. Part of a similar elephant pattern is found on a fragment of silk at Siegburg which is of uncertain date. The treatment is again very stylised, the elephant having an excessively thin trunk and jointed legs. Mez (*Renaissance*, 437; English trans., 465) mentions that elephant designs were used in the decoration of carpets made at Ḥīra. In this connexion some fragments of a carpet bearing an elephant's head are now in the Musée des Arts Décoratifs at Paris.

Elephants appear only very rarely in Islamic metal work. Some bronze incense-burners, supported by small figures of elephants, are known. In the Pennsylvania Museum of Art is a panel from Rayy showing a king seated on a throne which rests on the backs of elephants. This may possibly represent Ṭoghrīl II (d. 590/1193-4).

Several early examples are known of the elephant in its role as one of the pieces in the game of chess. These ivory chessmen can be paralleled by a small black Sāsānid elephant which may have formed part of a set. According to Kühnel, one of these, in the Bargello Museum at Florence, is Mesopotamian work of the 3rd/9th century. Another, in which the elephant is shown picking up a smaller animal with its trunk, was in the possession of Dr. F. R. Martin, who states that it is Tīmūrid. Two ivory caskets from Cordova are in the Victoria and Albert Museum. A panel on one of these represents a person of rank travelling in state upon an elephant. This bears the date 359/969-70. Another, which is probably early 5th/11th century, has a number of circular panels each bearing a pair of different animals facing each other. One panel contains elephants with bushy tails upon the backs of which peacocks are resting.

In contrast to most of the elephants mentioned above, those depicted on Islamic pottery are more faithfully drawn. Examples are fairly numerous, the majority showing a king with two or more attendants riding in an elaborate howdah. This may represent Bahrām Gūr's return from Sind. One plate in the Possession Moussa is dated 616/1219-20. Others, with the same scene, are in the Freer Gallery at Washington, the Possession Rabenou and the Collection Allan Balch. These are mostly *mīnāʾī* ware from Rayy, belonging to the first half of the 7th/13th century. A spotted elephant with rich caparison appears on a star-shaped basin in a Kāshān lustre ware. Other ceramic objects of artistic merit with elephants are a basin from Āmul with some Chinese characteristics now in the Art Institute of Chicago, a bowl and a pitcher in the Louvre, and a plate in the Kelekian Collection which was formerly on exhibition at the Victoria and Albert Museum.

Copies of the *Manāfiʿ al-ḥayawān* of Ibn Bukhtīshūʿ with their wealth of animal paintings provide us with several pictures of elephants in which an attempt has been made to show every detail. The older copies were made and illustrated in the 7th/13th century. A bluish elephant with gilded saddle and a trunk composed of a series of loops (Pl. xx) appears in a British Museum manuscript of this work (OR. 2784, f. 136r°). Another, better known, is the famous Elefantenpaar in a manuscript illustrated towards the end of the 7th/13th century for Ghāzān Khān at Marāgha which is now in the Morgan Library at New York. The two elephants, each adorned with gold circlets bearing bells around foreheads and ankles, are embracing each other with their trunks against a background of foliage. The smaller elephant is blue with darker stripes; the larger is grey-brown with lighter stripes. Elephants' heads in gold occasionally appear among the very varied marginal decorations of some 9th/15th century manuscripts, notably the pocket encyclopaedia in the British Museum (ADD. 27261) which is dated 814/1410-11, an anthology of approximately the same date, and a *Shāh-nāma* in the Gulbenkian Foundation at Lisbon (Nos. 117 and 121 in *Arte do Oriente Islâmico*, Lisbon, 1963). These are very finely drawn and, for the first time, an accurate representation of an elephant is encountered.

The best sources of elephant miniatures are illustrated copies of the *Shāh-nāma* of Firdawsī. Scenes like Rustam killing the White Elephant or lassoing the Khāḳān of Čīn, the death of Ṭalḥand (Pl.xxii), and Iskandar's battle with Fūr have all provided much scope for the portrayal of elephants, ranging from exact drawings to figures of somewhat bizarre appearance, like those in mediaeval bestiaries (*e.g.* B.M. MS. Harl. 3244 f. 39r°). In some *Shāh-nāma* illustrations the heroes bear the device of an elephant on their banners. Other literary themes in which elephants appear—but rather less frequently—are the story in the *Mathnawī* of Rūmī of the elephant who trampled to death the travellers who had eaten her calf (Pl. xxi), the *ʿAdjāʾib al-makhlūḳāt* of Ḳazwīnī, and the Court of Solomon (Sulaymān) where an elephant sometimes appears among the animals grouped around the throne with angels and *djinn*.

The earliest appearance of an elephant in the Islamic art of India is probably an ivory chessman bearing an Arabic inscription on its base in the Cabinet des Médailles of the Bibliothèque Nationale. This piece was reputed to have been sent by Hārūn al-Rashīd to Charlemagne, and certainly formed part of the Treasure of St. Denis as early as 1505. The elephant is shown in battle, unhorsing an enemy rider. On its back a king sits in a howdah, the exterior of which is fashioned in the form of a wall, guarded by soldiers with swords and round bucklers. Although some authorities have dated it much earlier, the latest study suggests that it was made in Gudjarāt in the 8th/14th or 9th/15th century. Two stone elephants which were discovered in the Red Fort of Dihlī now flank one of the doorways. It is thought that they were made in the reign of Akbar.

With the flowering of Mughal painting which began during this period, elephants appear with increasing frequency. Several of the finest examples from the artistic point of view are in the *Akbar-nāma* at the Victoria and Albert Museum. One shows Akbar crossing a river mounted on an elephant. A painting of the reign of Djahāngīr depicts elephants fighting and is in the Metropolitan Museum, New York.

Even though elephant heads are found in one of the Fātiḥ Albums at Istanbul, these have been proved by Ettinghausen to be Tīmūrid work of the 9th/15th century. One example is known of a very life-like elephant's head as a gold marginal ornament in a British Museum manuscript (OR. 2708) which was apparently painted during the third quarter of the 10th/16th century. Otherwise most of the relatively few Ottoman drawings of elephants resemble more or less that upon which Sitt Khātūn, the wife of Meḥemmed (Muḥammad) II, is seated in a Byzantine miniature now in the Bibliotheca Marciana at Venice. This elephant is closely akin to those depicted in mediaeval Western manuscripts. A very similar elephant is to be seen in the *Hümāyūn-nāme* of ʿAlī Čelebi (B.M. ADD. 15153, f. 388r°, dated 997/1589) illustrating the story of King Hilār of India.

In the field of sculpture, there is a stone slab at Ḳonya showing an elephant being pursued by a griffin. This was built into the wall of the Saldjūḳid citadel, dating from the early part of the 7th/13th century.

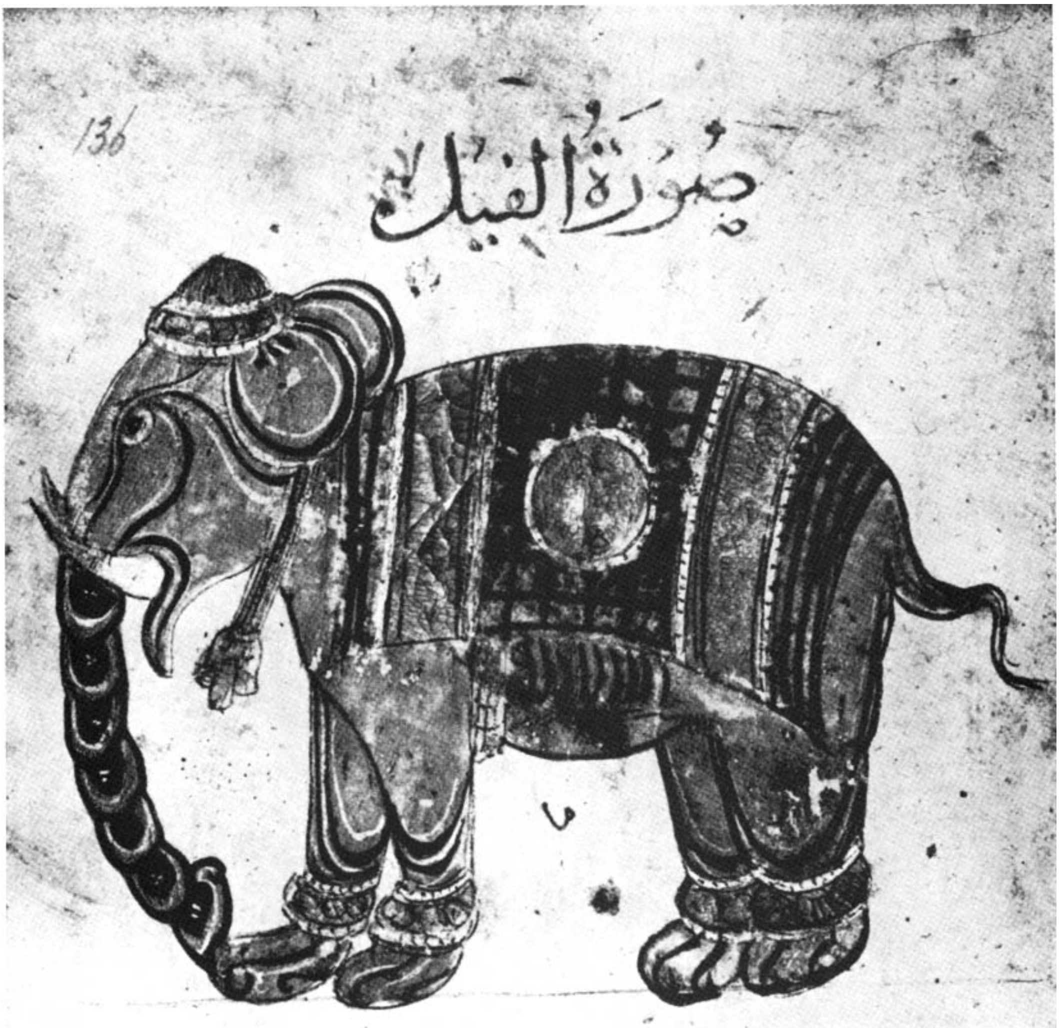
(G. M. Meredith-Owens)



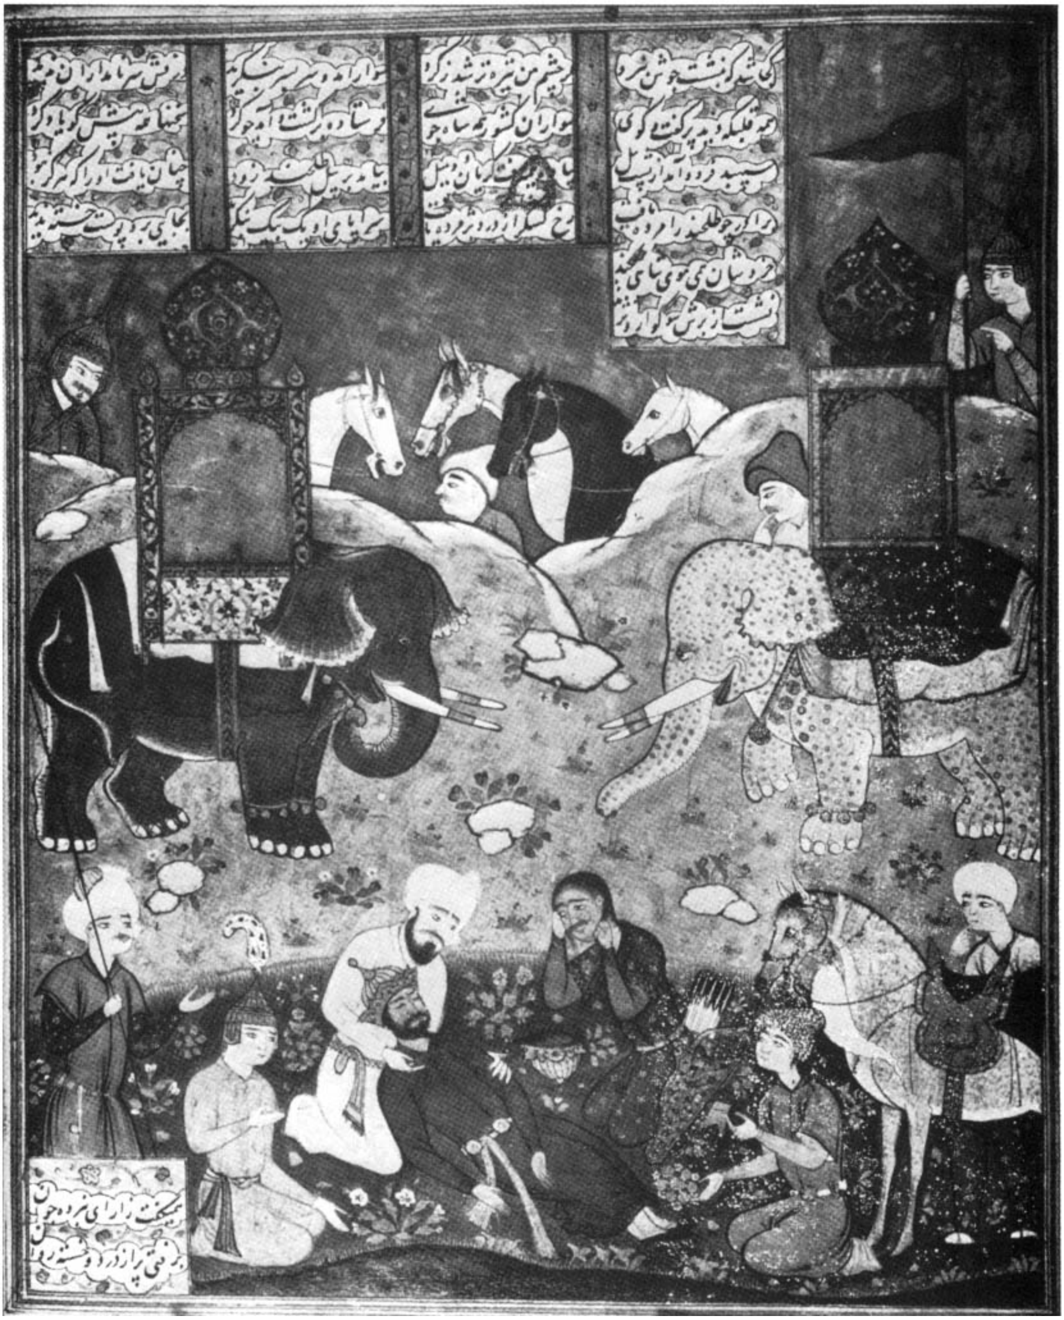
al-FĪL, is the title of the early Meccan Sūra cv which deals with God's judgment on the "men of the Elephant". This is an allusion to a story which must have been very familiar to the Meccan contemporaries of the Prophet; the background of the allusion is explained by the commentators and historians as follows. The Yemenite king Abraha [*q.v.*], bent on a policy of destroying the power of the Meccan sanctuary, led an expedition against Mecca, hoping to destroy the Kaʿba, and the expeditionary troops were supported by an elephant (some versions say, more than one). But on arriving at the frontier of Meccan territory, the elephant kneeled down and refused to advance further towards Mecca, although when his head was turned in any other direction he moved. Flights of birds then came and dropped stones on the invading troops, who all died. The authority of ʿIkrima [*q.v.*] is given for the rationalizing explanation that they were in fact smitten by an epidemic of smallpox. Abraha himself is said to have been afflicted with a loathsome disease and carried back to Yemen to die. For the student of Islam, the main relevance of the episode is that the birth of the Prophet is said to have taken place at this time, in the "year of the Elephant". And according to the commonly accepted chronology of the Prophet's life, this event would have to be dated in or around 570 A.D.

Not unnaturally, the South Arabian inscriptions contain no direct reference to this disaster. The possibilities involved are, however, illustrated by an earlier occasion described in the Murayghān inscription, Ryckmans 506. This records that while Abraha was campaigning in central Arabia against Maʿadd, who were subject to the suzerainty of the kingdom of Ḥīra, another part of the South Arabian army was operating in the Ḥidjāz and inflicted a defeat on a tribal confederation of the ʿĀmir b. Ṣaʿṣaʿa [*q.v.*] at the oasis of Turaba (approximately 100 km. due east of Ṭāʾif). This is dated in 662 of the Sabaean era, *i.e.*, the late forties or early fifties of the sixth century A.D.; in any case it cannot be later than 554 A.D., since it mentions al-Mundhir (who was assassinated in that year) as king of Ḥīra. How much later than this we can reasonably date the "year of the Elephant" is problematical. But the fairly substantial cluster of texts from the decade or so preceding the Murayghān inscription, coupled with the complete cessation of South Arabian records from shortly thereafter (our latest being a private text of 665 of the Sabaean era), tend to suggest that it is somewhat unlikely that Abraha and his kingdom continued so to flourish as to be able to stage a full scale attack on Mecca, until so late as 570 A.D.

A striking proposal advanced by C. Conti Rossini (*JA*, xi sér., xviii, 30-2) deserves a passing mention, although it has not been endorsed by general approval. This is that the story as we know it is a contamination of two records of South Arabian attacks on Mecca: that by Abraha, and a much earlier one led by the Aksumite king Afilas, whom numismatic evidence assigns to around 300 A.D. It was at or shortly after this time that the kingdom of Aksūm did in fact exercise a short-lived hegemony over South Arabia, and a military enterprise further north is not impossible. Conti Rossini appeals to this event in order to suggest that a conflated story of this nature was the one known to the Prophet's contemporaries, and that *al-fīl* in this context is a later corruption of the name Afilas.

Bibliography: See the bibliography cited under ABRAHA. (A. F. L. Beeston)

FIʿL, "action", is regarded as a noun derived from the verb *faʿala yafʿal* inf. *faʿl*, "to do" (Lane, vi, 2420a, b). This noun is the technical term in Arabic grammar for denoting the verb. Where traditional English grammar distinguishes between eight "parts of speech", the grammar of the Arabs established only three principal divisions: *ism*, *fiʿl*, *ḥarf*. This tripartite division into *noun*, *verb* and *particle* came to the Arabs from Aristotelian *logic* and not from the *grammar* of the Greeks; this fact seems



Elephant, 7th/13th century. British Museum, OR. 2784, fol. 136r°.

The elephant killing the travellers who had eaten her calf. Miniature in the *Mathnawī* of Djalāl al-Dīn Rūmī, written c. 937/1530.

British Museum, ADD. 27262, fol. 134r°.

Gav being shown the body of Ṭalḥand. Miniature in a manuscript of Firdawsī's *Shāh-nāma*, dated 994/1586.
British Museum, ADD. 27302, fol. 519v°.

Bābur hunting rhinoceros. Miniature from the Persian translation of the *Bābur-nāma* by ʿAbd Al-Raḥīm Khān, written about the close of the 10th/16th century. British Museum, OR. 3714, fol. 352.

sufficiently established (see *Arabica*, iv, 14-5 and *Traité*, 23-4). Acquaintance with the latter would have given Arabic grammar a different organization, something like the parts of speech referred to above, which in essence derive precisely from this Greek grammar through the intermediary of the Latin grammarians. Besides, a division which establishes the *noun* and the *verb* as the principal categories finds its justification in general linguistics (see *Traité*, § 53).

The *Kitāb* of Sībawayh (i, ch. I) starts with the enunciation of this main division: *ism, fiʿl, ḥarf*. Its definition of the verb (*a*) on the one hand stresses the origin of the personal forms of the verb: *amma 'l-fiʿl fa-amthilat ukhidhat min lafẓ aḥdāth al-asmāʾ*: these are the 'forms taken from the word expressing the "happenings" of nouns' [the infinitives]; this is already the Baṣrī theory of the *infinitive-maṣdar*, that is, the 'origin' of the verb; *ḥadath*, pl. *aḥdāth* (inf. of *ḥadatha* (*u*) "to happen, take place") can be well translated by "happening", a meaning very close to the idea of "process", used in modern general linguistics to define the verb; (*b*) on the other hand expresses the temporal value of the verb: *buniyat* (they have been constructed) *li-mā maḍā* (past), *wa-li-mā yakūn wa-lam yaḳaʿ* (future), *wa-mā huwa kāʾin lam yanḳaṭiʿ* (present).

Thus, from the very start, so far as can be traced, a temporal value is attributed to the verb as something self-evident, requiring no justification. We have here the indication that this was an accepted doctrine, accepted as something established, and not the fruit of the personal investigations of the Arab grammarian; for the latter, always so ready to explain or legitimize everything, would have advanced reasons or reasonings in support of any basic definition which he had drawn up. The same holds good for the tripartite division, simply stated. Like the latter, in fact, the temporal values of the verb came to the Arabs from Aristotelian logic (as has been said above), but this fact does in no way impair the originality of their construction of grammar (see *Arabica*, iv, 16 and *Traité*, 25).

The theory of the *infinitive-maṣdar* has been challenged by grammarians of the Kūfa tradition (Ibn al-Anbārī, *K. al-Inṣāf*, disputed question no. 28, ed. Weil). But the whole grammatical tradition teaches the temporal value of the verb, regarding this as the feature that distinguishes it from the noun (*ism*) (likewise Ibn Yaʿīsh, according to 26, l. 10-1, in spite of what is said later).

The definition given by the *Mufaṣṣal* of al-Zamakhsharī is clear: *al-fiʿl mā dalla ʿala 'ḳtirān ḥadath bi-zamān* [*muḥaṣṣal*] (§ 402) "the verb is that which indicates the connexion of an event with a [determined] time": for the noun (*ism*), the contrary (§ 2).

Ibn Yaʿīsh blames the vagueness of *mā*: for a strict definition by closest genus and specific difference, he requires a more precise word, *kalima* or *lafẓa* (912, l. 2). As for *muḥaṣṣal*, put by us in brackets as a reminder of the insistence of certain writers (according to 911, l. 6), on the need to distinguish the infinitive from the personal forms of the verb, Ibn Yaʿīsh states that this is needless: the *maṣdar* is clearly enough distinguished in itself; it too is verb but it expresses time in another way (*min khāridj, min lawāzimih*); see 911, l. 8-13.

He also finds fault, in the definition, with the predominance allowed to the connexion with time in regard to *ḥadath*. The verb in itself indicates both things, the *ḥadath* and the time of its existence (911, l. 9), but the verb was not established to indicate this very connexion: it indicates a *ḥadath* in connexion, the latter comes secondarily, *wa 'l-iḳtirān wudjida tabaʿan* (912, l. 5-6). However, Ibn al-Ḥādjib (*Kāfiya*, in the *Sharḥ al-Kāfiya*, ii, 207, l. 23) had said: *al-fiʿl mā dalla ʿalā maʿnā fī nafsih muḳtarin bi-aḥad al-azmina al-thalātha*, without mentioning *ḥadath*; and al-Astarābādhī repeats: *kull ism fa-huwa ghayr muḳtarin, kull fiʿl fa-huwa muḳtarin* (*ibid.*, l. 26 and 30), "a noun of any kind has no connexion [with time]"; "a verb of any kind connotes the connexion [with time]". *Remark*: al-Sīrāfī, in his *Sharḥ* of the *Kitāb* (ms. Cairo², II, 134) professes, for the definition of the verb, the doctrine of the *ḥadath muḳtarin bi-zamān muḥaṣṣal* (Part 1, p. 8).

As to the definition of the *Kitāb*, related in the beginning of this article, al-Sīrāfī explains *amthila* and *aḥdāth al-asmāʾ* as follows: *amthila*: *arāda abniya* because the *abniyat al-afʿāl* are various (*mukhtalifa*), *i.e. faʿala, faʿila faʿula*, etc. (p. 8 at the end). The *aḥdāth* are *al-maṣādir allatī tuḥdithuha 'l-asmāʾ* and the *asmāʾ* are the *aṣḥāb al-asmāʾ wa-hum al-fāʿilūn* (p. 9, lines 3-4). Afterwards he expresses the Baṣrī theory of the *maṣdar* origin of the verb, contained in *amthila ukhidhat min lafẓ aḥdāth al-asmāʾ*.

This shows clearly enough how essential the Arabs considered the temporal value to be, in the definition of the verb. They ignored the *aspect*. In ancient Greek, an important part devolved upon aspect in verbal value; at the same time the Greeks did not recognize it as such (it is an acquisition of modern linguistics). The Arabs' notions of grammatical tenses being derived from Aristotelian logic, they were led along a false trail, under conditions most unfavourable for considering their aspect-governed verb from the point of view of time: immediately came the difficulty of differentiating three tenses, past, present and future, under a system which only contrasts two forms. They called the one *māḍī*. Ibn al-Ḳūṭiyya (d. 367) said *mustaḳbal* "future" for the other (*K. al-Afʿāl*, 1 l. 18, 2 l. 18, 3 l. 3, etc., ed. Ign. Guidi). He was logically contrasting two terms of the same order, but the present was left aside. Grammatical tradition habitually uses *muḍāriʿ* "resembling (the agent noun)", but formally the term is no longer opposed to *māḍī*; it enters into the grammatical speculations on the system of *ḳiyās* (*Traité*, 6).

For better or worse, the Arab grammarians were only able to systematize the value of the verb in respect of time by incorporating with the verb certain external elements: *sa-*, *sawfa*, *ḳad*, which they call its *khaṣāʾiṣ* "its properties" (*Muf.*, § 402). Now it is important to understand the true position: aspect characterizes the verb in classical Arabic; the latter makes a contrast between an *accomplished* (conjugated by suffixes), and an unaccomplished form (conjugated by prefixes and suffixes), which are thus designated by an important but not exclusive nuance of aspect. *The tense emerges from the phrase*, without any established system (for the past, see below).

With an unaccomplished form, the future requires a mark : the verbal indicators *sa-*, *sawfa*, for example: *kallā sa-yaʿlamūna thumma kallā sa-yaʿlamūna* (Ḳurʾān, LXXVIII, 4-5), "No! they will know [it]. No! No! they will know [it]!", or else a temporal adverb, a temporal adverbial complement, etc., or simply the situation. The present results spontaneously from the absence of this mark, *e.g.*: *li-ma tabkī* "Why are you weeping?"

For the past, a distinction must be made: the accomplished gives the tense of the narrative for historical accounts; the verb then expresses the past tense, corresponding to the French *passé simple.* But this *māḍī* is also the accomplished form, and the language possesses only this *one single form* for historic narrative and conversation, according to the distinction formulated by E. Benveniste (*Les relations de temps dans le verbe français*, in *BSL*, liv/1 (1959), 69-82). It often indicates something resulting, it may be merely a resultative or a simple accomplished form without any temporal value. It therefore cannot be called purely and simply a tense, a *māḍī* (see *Esquisse*, 85-8; *Études*, 3: *Temps et aspect*, 170-7). The examples quoted can be examined in the light of the above distinction (published only in 1959), and the part played by the phrase and the verbal indicators will be noted.

As to the division of the verb, Arab grammarians teach: *maʿlūm/madjhūl = known/unknown*; this referring to the agent. In fact, the Arabic verb falls into two divisions: the verb with agent (the subject being considered as the agent) and the verb of quality (the subject being simply the thing qualified). The verb with agent is subdivided:

a) agent pure and simple: *faʿala yafʿi/ulu*, like *ḍaraba* (*i*) "to strike", *ṭalaba* (*u*) "to ask".

b) agent with an interest: *faʿila yafʿalu*, like *rabiḥa* (*a*) "to gain", *sakira* (*a*) "to get drunk". This category includes part of *faʿila*.

c) agent unknown: *fuʿila yufʿalu*, like *ḍuriba*, *rubiḥa*.

Agentive is a good term for the first two as opposed to the third: the *madjhūl*, to turn to the Arabic designation for lack of an appropriate English term. When wishing to denote the second specifically, one can use the term "verb with interested agent".

The verb of quality (or qualitative verb) includes the whole form of *faʿula yafʿulu* (with two exceptions), *e.g.*: *karuma* (*u*) "to become generous" and the other part of *faʿila yafʿalu*, which is thus divided into two: the verb with interested agent, described above, and the verb of quality, *e.g.*: *kabira* (*a*) "to become old".

The verb of quality is not static. It signifies: "to acquire a quality", or "to become such and such" (according to the quality in question), *karuma* "to become *karīm* (generous)"; or else as a consequence of the acquisition: "to have a quality", or "to be such and such", it is a resultative, *karuma* "to be *karīm* (generous)".

The *madjhūl* is the verb whose agent is not known or, if known, remains unexpressed and *cannot be expressed*: it is the *fiʿl mā lam yusamma fāʿiluh*, according to the expression of *Muf.* (116, l. 5). If it is used with a person as the subject, *e.g.*, *ḍuriba Zayd*, from the fact that Zayd is the subject of the verb, attention is concentrated on him, the idea of enduring takes shape to some extent, it may predominate and in that case we are led to translate by a passive: "Zayd was beaten", instead of "One has beaten Zayd", which would have revealed that the agent was unknown. This is to be judged according to the context. But none the less the Arabic verb remains the *madjhūl*. It cannot be coupled with "a complement of a passive verb", contrarily to its morphological character. One sees how deceptive it is to call *fuʿila* "passive".

The impersonal verb exists in classical Arabic, although the Arab grammarians have not spoken of it; it exists, it can be constructed on any transitive indirect verb with agent (this being very widely interpreted, see the examples, *Esquisse*, 160), giving it the form of *madjhūl* which remains invariable in the 3rd person singular. This is the impersonal *madjhūl*, which provides the perfect example of the "verb whose agent is unknown". With the personal verb we can say: *kharadjtu min al-dār* "I left the house", *nazaltu ʿalā ʿAmr* "I went down to ʿAmr's"; in the impersonal, *khuridja min al-dār* , *nuzila ʿalā ʿAmr*: "they went out of the house", "they went down to ʿAmr". These verbs are often difficult to translate exactly, because for each of them we need to find the corresponding impersonal expression; in its absence "they" is used, as in the preceding examples.

Some verbs have come to the point of acquiring an impersonal usage without taking the form of the *madjhūl*: *kafā*, *badā*, *rāʿa*, *ḥabba* (see Brockelmann, *Grundriss*, ii, 124-5; A. Spitaler, mā rāʿa-hū illā bi-*und verwandtes*, in *Serta Monacensia*, Leiden 1952, 171-83); an example: *wa-kafā bi 'llāhi shahīdan* (Ḳurʾān, IV, 81/79), "it suffices with Allāh as witness".

Arab grammarians have recognized a *djāmid* or *ghayr mutaṣarrif* verb, like *ʿasā*, *niʿma*, *laysa*, as opposed to the *mutaṣarrif* verb which possesses all its verbal forms: *māḍī*, etc. or nomino-verbal forms: n. ag., etc. (*Dict. of T. T.*, 1143, l. 7-9). But they have not recognized the impersonal verb. They judged the impersonal *madjhūl* (*e.g.*: *nuzila ʿalā ʿAmr*), as if it were the *madjhūl* of a direct transitive, acting on the meaning of *mafʿūl bih* (see *Études*, 167-8; on their kind of conception of *al-fiʿl al-mutaʿaddī*, the transitive verb, *Muf.* §§ 432-3, Ibn Yaʿīsh 966-71, especially 970 l. 11-8). This lacuna is the logical consequence of their ignorance of the idea of subject and its rôle in grammar, for the impersonal verb is based throughout on this notion of the subject. The impersonal verb must, however, find a place in any accurate account of the morphology of the classical Arabic verb.

The Arabic verb presents contrasts: on the one side, great simplicity, on the other side complexity. Simplicity: in personal moods only two verbal forms, one acomplished, one unaccomplished, which are sufficient to give an opposition of aspect, and one imperative (2nd person); one conjugation, "the common conjugation" (*Esquisse*, 80-5), which employs *the same* prefixes or suffixes for verbs of all kinds, triliteral and derived forms, quadriliteral and derived forms, variations resulting from phonetic accidents arising from the combination of these prefixes or suffixes with the verbal root. The simplicity of the internal flexion of vowels which, by an interplay of contrasts between the three vowels *a*, *i*, *u*, characterizes the verb in its divisions *agentive/madjhūl*, not only in the simple triliteral or quadriliteral verb but in all derived forms for every agent verb; moreover, the simplicity of the *external* flexion of vowels which determines the moods: *yafʿul-u* (indicative), *yafʿul-a* (subjunctive), *yafʿul* (jussive). Complexity: the multitude of derived forms: 14 for the triliteral verb, 3 for the quadriliteral verb; the multitude of forms of the infinitive or noun of action for the simple triliteral verb: Wright (*Ar. Gr.*[3], 110-2) lists 44 of them, either rare or common.

But these numerous derived forms have one advantage: they allow one to express synthetically notions which, in French, must be enunciated separately in accordance with its analytical character, *e.g.*: *farasa* (*i*) "to devour" (a prey, wild beast), *farrasa* "*to cause* to be devoured" (a prey), *afrasa* "*to allow* his flock to be devoured" (shepherd), *taḍārabū* "they fought *each other*", etc. They con-

tribute considerably to the synthetic character of the Arabic language.

Affective language expresses itself through the Arabic verb. Briefly, we may mention the 2nd *faʿʿala* intensive form and the 5th *tafaʿʿala* which is correlative to it; the so-called "rare" forms, with gemination (14th form) or repetition (12th and 13th forms), a procedure that was abandoned; quadriliteral formations, especially by repetition of a biliteral element (type 1212) (*Esquisse*, 102-3). In addition, the *energetic*.

The energetic forms a part of the "common conjugation". It is formed by the suffix *-anna* or *-nna*, most often used, added to the unaccomplished in its jussive (or apocopated) form and to the imperative. It gives a vigorous expression to a personal feeling: *conviction* in an affirmation or negation, *astonishment* or *impatience* in interrogation. It is used especially to emphasize an expression of an act of will: an order, prohibition, threat, promise, wish. After an oath the energetic always occurs (if one uses the unaccomplished form), and in addition the corroborative *lam* (examples, Wright, ii, 42A).

(H. Fleisch)

FIʿL, pl. *afʿāl*, actuation, act, and sometimes the result of an act, that is to say effectuation, effect. From its current usage in Arabic, this word very quickly became a technical term (*iṣṭilāḥ*), not only in grammar but also in *falsafa* and in *ʿilm al-kalām*. If *ʿamal* [*q.v.*] designates the realms of 'doing' and 'acting' (whence 'work', human acts, and moral action), and thus has at least in its last meaning an ethical connotation, *fiʿl* refers above all to noetic and ontological values: the fact of actuating, of passing (or causing to pass) to the performance of an act. Hence the translation by R. Blachère of *Ḳurʾān*, xxi, 73: 'et Nous leur révélâmes la réalisation des bonnes œuvres' (*fiʿl al-khayrāt*). It should be noted that the distinction between *ʿamal* and *fiʿl* often becomes less marked: *akhlāḳ wa-afʿāl*, '(human) mores and actions', says Ibn Sīnā, for instance, (*Aḳsām*, 107), in order to define ethics.

Falsafa.

Fiʿl belongs to the language of logic and noetics. (a) In logic it is one of the ten categories, *actio* opposed to *passio*, *infiʿāl*. It is worth mentioning here that the suppleness of its verbal forms allows Arabic to emphasize the connexion, at the same time opposed and complementary, of the *muḳābal* pair, *actio* and *passio*, by using the same root, *fʿl*, in the first form active and in the seventh passive. In consequence, the active element is *al-fāʿil* and the passive element, *al-munfaʿil*. This use of *fʿl* and its derivations may be found over and over again in all treatises on logic, both in the philosophical introductions of the *ʿilm al-kalām* and also in *falsafa*.

(b). In noetics and metaphysics, the complementary opposition is no longer *fiʿl-infiʿāl*, but *fiʿl-ḳuwwa*, act-potentiality (faculty, *in posse*). Potentiality, in so far as it is the principle of change and becoming, may be in its turn either 'active' (*fiʿliyya*) if it resides in the agent (*fāʿil*), or passive (*infiʿāliyya*) if it resides in the passive element (*munfaʿil*). The expression *bi 'l-fiʿl*, 'actually', which is used for every faculty of the human spirit, is of especially wide and well-known usage in noetics, where it is used to designate one of the states of the intellect, *al-ʿaḳl bi 'l-fiʿl*, the intellect in action or the active intellect, as distinguished from *al-ʿaḳl bi 'l-ḳuwwa*, the intellect *in posse*, or potential intellect. Moreover, *al-ʿaḳl bi 'l-fiʿl* must be distinguished from *al-ʿaḳl al-faʿʿāl*, the acting intelligence, *i.e.*, continually in action, which is the last of the separate Intelligences and the same for all men. The *ʿaḳl bi 'l-fiʿl*, in becoming more and more actual, receives the illumination of the *ʿaḳl faʿʿāl* and becomes similar to it. The hierarchy of the intellects according to al-Kindī, al-Fārābī, Ibn Sīnā and Ibn Rushd, and the differences of meanings applied to these terms by the several authors, are well-known. For the *ʿaḳl bi 'l-fiʿl* according to al-Fārābī and Ibn Sīnā, see ʿAḳl; contrary to what is suggested by the Latin translations referred to by F. Rahman in this last article, it does not seem necessary to translate differently the meaning of *al-ʿaḳl bi'l-fiʿl* according to al-Fārābī (*in effectu*) and Ibn Sīnā (*in actu*). The real differences of thought between the two philosophers can perhaps best be expressed, whether in translation or in Arabic, by the use of an identical terminology. The ancient Latin translations, in fact, often prefer *effectus* for *fiʿl*, while the modern ones (such as that of Mgr. N. Carame) are more in favour of *actus*. The difference which can be noted between act (or action) and effect diminishes when we go back to the more specifically appropriate technical terms 'actuation' and 'effectuation'.

ʿIlm al-Kalām

The *mutakallimūn* use *fiʿl* and *bi 'l-fiʿl* in the same sense as the *falāsifa* when they in their turn speak of the subjects of logic, noetics and metaphysics. But the term, above all in its plural form, *afʿāl*, comes up frequently when they discuss 'questions concerning God' (*ilāhiyyāt*). *Fiʿl* then designates the action of God *ad extra*, 'what it is possible (not necessary) for God to do'. Thus al-Ashʿarī writes in his *Kitāb al-Lumaʿ*: 'the fact that God wills a thing, signifies that He does it' *faʿalahu*; ed. McCarthy, Beirut 1953, 15-6; cf. English translation, 21).

Later on, the subject of the treatise concerning the effects of Divine Omnipotence *ad extra* is thus called *afʿāluhu taʿālā*, 'the Acts of God, the Most High'. It is essentially the problem of secondary causes (*asbāb*), the relations of God with mankind, the divine pre-determining decree (*ḳadar* and *ḳaḍāʾ*), and human free-will (*ikhtiyār*). For the details of the problems dealt with, and the solutions of the various schools, see Allāh, 412 ff.

The treatise on *afʿāluhu taʿālā* is preceded by a treatise on the divine attributes, *ṣifāt Allāh*. One of the subdivisions of this last is concerned with the *ṣifāt al-afʿāl*, which may be translated as the 'attributes of action' and which refer to what God

may or may not do: visibility, creation, commandment, decree (*loc. cit.*, 411).

These discussions of the 'actions of God' do not supersede the normal usage of *fiʿl* and *afʿāl* to designate the act or acts of man, sometimes almost as synonyms of *ʿamal* and *aʿmāl*, more often with the psychological and legal background meaning 'an act which must be performed', leaving to *ʿamal* the wider background meaning of 'human behaviour in general'. Thus *fiʿl* is distinguished from *tark*, lack of action, action to be avoided. It is thus also that at the beginning of the *Iḥyāʾ ʿulūm al-dīn* (Cairo 1352/1933, i, 13-5), al-Ghazzālī teaches that man under Law is, in order to guide his conduct (*ʿamal*), under the obligation of knowing: the creed of the faith (*iʿtiḳād*), the act (*al-fiʿl*) which must be performed at a given moment (*e.g.*, the times of prayer), and what it is obligatory not to perform (*tark*). These terms, moreover, are reminiscent of the vocabulary of *ḥadīth*, since the text of a *ḥadīth* relates a saying or an action or the absence of an action on the part of the Prophet.

Bibliography: apart from the references given in this article, reference should be made to the well-known treatises and chapters of the great philosophers (a) on the categories, (b) on *ʿaḳl*; also the various treatises of *ʿilm al-kalām* (*e.g.*, Fakhr al-Dīn al-Rāzī, *Muḥaṣṣal*, Djurdjānī, *Sharḥ al-Mawāḳif*, etc.), in the chapters *Ṣifāt Allāh* and *Afʿāluhu taʿālā*. (L. Gardet)

FILĀḤA, agriculture.

Falḥ, the act of cleaving and cutting, when applied to the soil has the meaning of "to break up in order to cultivate", or "to plough". *Fallāḥ* "ploughman", *filāḥa* "ploughing". But from pre-Islamic times the word *filāḥa* has assumed a wider meaning to denote the occupation of husbandry, agriculture. In this sense it is synonymous with *zirāʿa*, to which the ancients preferred *filāḥa* (all the earlier writers called their works on agriculture *Kitāb al-Filāḥa*). At the present time this latter word is very widely used in North Africa, both in official language and in everyday speech. Thus, in Morocco, the Ministry of Agriculture is called *wizārat al-filāḥa*, whilst in Egypt, Syria, Lebanon, Jordan and ʿIrāḳ it is called *wizārat al-zirāʿa*. It is only since the last century that the word *zirāʿa* has taken precedence in official and literary circles in the Arab East; but the word *filāḥa* is still very widely used in the language of agricultural workers. The following articles will deal primarily with agricultural methods and techniques. [See further, for settlement and sedentarization, ISKĀN; for irrigation, ḲANĀT, MĀʾ; for land-tenure, IḲṬĀʿ, TENURE OF LAND, and the articles listed under ARḌ].

i. — Middle East

1. — Technical and historical survey. — Agriculture in the Arab countries is under the influence of two different types of climate: in the south of the Arabian peninsula (Yemen, Ḥaḍramawt and ʿUmān), and also in the Sudan, the Indian monsoon brings abundant rainfall in summer which enables various tropical plants to be cultivated (coffee, datepalms, custard-apples, mangoes, pawpaws, bananas, *catha edulis*, tamarinds etc.). Throughout the rest of the Arab world the mediterranean climate prevails. This climate is characterized by a cold wet winter season, followed by a long summer period which is hot and without rain. The further one goes from the Mediterranean coast the more the rainfall diminishes, until it ceases entirely in certain hot deserts in Arabia and the African Sahara. This basic climatic system divides the zones of Arab countries into two distinct categories; in the first, the extent and distribution of the rainfall favour the economic cultivation of various crops. In the second category the winter rains, though not sufficient to allow of economic cultivation, nevertheless permit the natural growth of certain grasses and various succulent, bulbous and halophytic plants which constitute the pasturages of the desert steppes. In order to make use both of their agricultural land and of the steppes, the Arabs have at all times led two sorts of lives— as a rural or urban sedentary population, and as pastoral nomads.

Nomadism is a necessity in the desert steppes where the winter rainfall varies in extent between 50 and 150 mm., but the Bedouin tribes are not opposed to a sedentary existence. It is in this way that the Yemeni tribes, long before Islam, founded their civilization on irrigation and intensive cultivation of the land. After the Islamic conquests, the Arab tribes soon intermingled with Aramaeans from Syria and ʿIrāḳ, Copts from Egypt and Berbers from north Africa, and with the Ibero-Latins of the Spanish peninsula, in order to exploit together the vast territories of the present Arab countries and of former Muslim Andalusia.

The mediterranean climatic system being everywhere the same, we find throughout these territories three agricultural climates. Firstly, in most of the coastal plains (the coasts of Syria, Lebanon, Palestine, Tunisia, Algeria and Morocco), thanks to a mild winter temperature and an annual rainfall of from 500 to 1,000 mm., it is possible without irrigation to cultivate cereals, annual leguminous plants, various vegetables, tobacco, olives in particular, and even cotton. With the help of irrigation, a vast number of annual or perennial agricultural crops can be successfully grown—citrus fruits, bananas, pomegranates, loquats, early vegetables, aromatic or ornamental plants, etc.

Secondly, in the plains, hills and inland plateaus of Syria, Upper Mesopotamia and North Africa, where the density of rainfall varies between 250 and 500 mm., dry-farming is the dominant system of cultivation for vast areas of non-irrigated land. Of the chief annual plants cultivated in these regions we may mention wheat, barley, sorghum, lentils, chick-peas, vetch, gherkins, melons, watermelons and sesame, while the principal fruiting trees and shrubs are olives, vines, figs, hazelnuts and pistachios.

In these regions, irrigation is indispensable for the cultivation of most fruit trees, ornamental trees, vegetables, leguminous and industrial plants—apples, pears, apricots, peaches, eggplant, tomatoes, gumbo, artichokes, potatoes, lucerne, clover, cotton, hemp, groundnuts, poppies, roses, jasmine, etc.

Thirdly, in regions with a desert climate (Lower Mesopotamia, central Arabia, Egypt, inland regions of Libya and North Africa) where rain is rare and the average annual temperature reaches or exceeds 21° C. it is only by means of irrigation that such plants as date-palms, mangoes, orange trees, cotton, rice, sugar-cane and others can be successfully cultivated.

During the Middle Ages, the Arabs were familiar with and cultivated most of the agricultural plants now known to the Arab world. It was they who introduced Seville oranges and lemons from India to ʿUmān, and thence to Baṣra, Egypt and the coast of Syria and Palestine (cf. al-Masʿūdī, *Murūdj*, ii, 438, viii, 336). From Andalusia and Sicily they disseminated throughout the Mediterranean basin

the cultivation of cotton, sugar-cane, apricots, peaches, rice, carobs, water melons, eggplant, etc. (cf. De Candolle, *L'Origine des plantes cultivées*[5], Paris 1912). Moreover, the European names of many cultivated plants are of Arabic origin, that is to say borrowed directly or indirectly from words either purely Arabic or long Arabicized.

2. — Works on agriculture. — The oldest Arabic work on agriculture which we know is *al-Filāḥa al-nabaṭiyya* (Nabataean agriculture) of Ibn Waḥshiyya [*q.v.*], written (or translated from the Nabataean!) in 291/904. A little later there appeared a work entitled *al-Filāḥa al-rūmiyya* (Greek or Byzantine agriculture). This book, published in Cairo in 1293/1876, bears the names of Ḳusṭūs al-Rūmī as author and of Sardjīs b. Hilyā al-Rūmī as translator from Greek into Arabic. According to Ḥādjdjī Khalīfa (*Kashf al-ẓunūn*, ii, 1447), the author's full name was Ḳusṭūs b. Askūrāskīna, and we think that this is the name of Cassianus Bassus to whom agronomic works collected from Greek and Latin authors are attributed. Ḥādjdjī Khalīfa names three other translators of this book, one of them being said to be Ḳusṭā b. Lūḳā [*q.v.*]. From another source we know that the agronomic work of Anatolius of Berytos (4th century A.D.) had been translated into Syriac by Sardjīs Rāsaʿnī (d. 536 A.D.), and there is reason to believe that this text was also translated subsequently into Arabic and that no manuscripts of it have survived (cf. *BIE*, xiii, 47). In any case, in the two Arabic works that we know (*al-Filāḥa al-nabaṭiyya* and *al-Filāḥa al-rūmiyya*), we find a reasonable knowledge of agricultural practice, side by side with superstitious advice.

In Egypt, the best presentation of agricultural questions at the time of the Ayyūbids is to be found in a work of Ibn Mammātī (d. 606/1209), entitled *Ḳawānīn al-dawāwīn*, published in Cairo in 1943 by the Royal Agricultural Society (cf. *MMIA*, xxxiii, 556). In the following century Djamāl al-Dīn al-Waṭwāṭ (d. 718/1318) wrote in Cairo the (unpublished) book entitled *Mabāhidj al-fikar wa-manāhidj al-ʿibar*, the fourth volume of which is devoted to plants and agriculture. In the 10th/16th century, a Damascene author named Riyaḍ al-Dīn al-Ghazzī al-ʿĀmirī (935/1529) wrote a large book on agriculture which has not survived; but later ʿAbd al-Ghanī al-Nābulusī (d. 1143/1731) gave a summary of it in a work entitled *ʿAlam al-milāḥa fī ʿilm al-filāḥa* published in Damascus in 1299/1882.

In general, the writers of ancient Arabic works on agriculture dealt with the following subjects: types of agricultural land and choice of land; manure and other fertilizers; tools and work of cultivation; wells, springs, and irrigation channels; plants and nurseries; planting, prunung and grafting of fruit trees; cultivation of cereals, legumes, vegetables, flowers, bulbs and tubers, and plants for perfume; noxious plants and animals; preserving of fruit; and sometimes zootechny.

It may be noted that the writers of these works used several non-classical agricultural terms (*muwallad*; cf. *MMIA*, ii, 193 and xxxiii, 560), and made a distinction between plants which fertilize (legumes) and those which exhaust the soil (cereals and others).

The chief principles of dry-farming were not unknown to them, and similarly the principles of variation and rotation of crops. Certain Arab agronomists in Andalusia had at their disposal botanical gardens and trial grounds where they experimented with native and exotic plants, practised methods of grafting and tried to create new varieties of fruit and flowers. We should also note that several ancient Arabic dictionaries, encyclopaedic works and Arabic treatises on agriculture and botany contain the names of numerous varieties of fruit, cereals, flowers and other cultivated plants. Thus al-Badrī (9th/15th century) in his *Nuzhat al-anām fī maḥāsin al-Shām* gives the names, in Syria, of 21 varieties of apricots, 50 varieties of grapes, 6 varieties of roses, etc.

All the early Arabic (or other) works on agriculture, being based on observation alone, are only of historical and terminological value. It was only in the 19th century that, in Egypt, there appeared the first Arabic agricultural work based on modern science; it was produced by Aḥmad Nadā who, after being sent to France on an educational mission, wrote the two-volume *Ḥusn al-ṣināʿa fī ʿilm al-zirāʿa*, published in Cairo in 1291/1874. At the present time, text books in the Arabic language exist in all branches of agriculture, written by the teachers of the faculties and practical schools of agriculture.

3. — Terminology and literature. — For the Arabic terminology of agronomic science there exists a dictionary compiled by the writer of this article (*Dictionnaire français-arabe des termes agricoles*, Damascus 1943, Cairo 1957), containing about ten thousand terms concisely defined in Arabic.

The Arabic language is rich in agricultural terms, particularly in relation to date-palms, vines, cereals and desert plants (cf. the *Mukhaṣṣaṣ* of Ibn Sīda), and the imagination of the poets of antiquity has endowed it with a vast and original literature on the nature of plants and their connexions with human beings. Not only flowers (roses, narcissi, jasmine, violets, pinks, irises, anemones, etc.) and fruit (dates, apricots, apples, pears, pomegranates, jububes, Neapolitan medlars, quinces, Seville oranges, lemons, etc.) but also a great quantity of cereals, legumes, vegetables and wild plants of the fields , pasturages and prairies are mentioned or described in verse.

4. — Legislation relating to land. — The code on landed property (*Ḳānūn al-arāḍī*) and the civil code (*al-Madjalla*), which were in force in the Arab countries that were separated from the Ottoman Empire after the 1914-8 war, are based on Muslim law (*sharīʿa*) and Muslim jurisprudence (*fiḳh*). The *Madjalla* divides land into five categories: *arḍ mamlūka*, land to which there is a right of ownership; *arḍ amiriyya*, land to which the original title (*raḳaba*) belongs to the State, while its exploitation (*taṣarruf*) can be conceded to individuals (this is the case with most agricultural land); *arḍ mawḳūfa*, land set aside for the benefit of a religious endowment; *arḍ matrūka*, land placed at the disposal of corporate bodies; and lastly *arḍ mawāt*, waste land, defined as free land, situated away from inhabited areas and out of ear-shot of houses. For details see TENURE OF LAND.

The *Madjalla* also defines and codifies questions relating to metayage (*muzāraʿa*), leases for orchard-planting (*musāḳāt*), the repair and clearing of communal watercourses used for irrigation, reclamation of waste land (*iḥyāʾ al-mawāt*), the enclosure (*ḥarīm*) of wells and subterranean watercourses (*ḳanawāt*), etc.

At the present time, the land laws of most of the Arab States, while incorporating substantial improvements, still uphold the principles respecting either the distinction between categories (and sub-categories) of land, or else their legal status and the rights based on them.

According to Muslim jurisprudence, it is the duty

of the State to construct and maintain dams, and also to excavate and clear the main irrigation channels. In former times, this work was carried out either directly by the governors of provinces or by holders of fiefs. The history of the Umayyads and the first ʿAbbāsid caliphs provides examples of the execution of several large-scale irrigation schemes, and also of the repairing of several ancient dams on the Tigris, Euphrates, K͟hābūr, Orontes and Baradā.

(MUSTAFA AL-SHIHABI)

ii. — MUSLIM WEST

So far as we know at present, it was exclusively in the Iberian peninsula, the home of the celebrated Latin agronomist Junius Columella of Gades/Cádiz, that an agricultural literature in the Arabic language was created and developed, particularly during the 5th/11th and 6th/12th centuries , in the brilliant period of the satraps (*mulūk al-ṭawāʾif*) and the Almoravid governors who followed.

The principal centres of this literature were Cordova, Toledo, Seville, Granada and, to a lesser extent, Almeria. In Cordova the great doctor Abu 'l-Ḳāsim al-Zahrāwī, who died in 404/1010, known as Albucasis in the Middle Ages, is reputed to be the author of a Compendium on agronomy (*Muk͟htaṣar kitāb al-filāḥa*) which Professor H. Pérès has recently discovered and intends to publish.

In Toledo, at the court of the renowned al-Maʾmūn [*q.v.*], the great "garden lover", lived the celebrated doctor Ibn Wāfid (d. 467/1075) known as Abenguefith in the Middle Ages. He was appointed by al-Maʾmūn to create his royal botanical garden (*D̲j̲annat al-sulṭān*). Among other works, he wrote a treatise (*mad̲j̲mūʿ*) on agronomy which was translated into Castilian in the Middle Ages. Another inhabitant of Toledo, Muḥammad b. Ibrāhīm Ibn Baṣṣāl, devoted himself exclusively to agronomy. He performed the regular pilgrimage, travelling via Sicily and Egypt, and brought back many botanical and agronomic notes from the East. He also was in the service of al-Maʾmūn, for whom he wrote a lengthy treatise on agronomy (*dīwān al-filāḥa*); this work was subsequently abridged into one volume with sixteen chapters (*bāb*), with the title *Kitāb al-Ḳasd wa 'l-bayān* "Concision and clarity". This work, which was translated into Castilian in the Middle Ages, was published in 1955 with a modern Castilian introduction. The treatise by Ibn Baṣṣāl is singular in that it contains no reference to earlier agronomists; it appears to be based exclusively on the personal experiences of the author, who is revealed as the most original and objective of all the Hispano-Arabic specialists.

The name of this writer's father has not been established conclusively. Writers who quote from him give the name with or without the definite article; the initial *bāʾ* is sometimes replaced by *fāʾ* (subpunctuated in Mag͟hribī orthography), or the *ṣād* by *ṭāʾ*. Nevertheless the form Baṣāl/Baṣṣāl seems to be the most probable, but it is not certain that it is a name with any etymological connection with *baṣal* "onions". It might be a Romance diminutive in *-él* of the adjective *bāṣo/bāṣṣo* (Castilian *bazo*), "brown", a name borne by several Muslims in Spain; and *Baṣ(ṣ)él* would then be synonymous with the well-attested name of *Maurél*.

After the capture of Toledo by Alfonso VI of Castile (478/1085), Ibn Baṣṣāl withdrew to Seville, to the court of al-Muʿtamid [*q.v.*] for whom he created a new royal garden.

In Seville Ibn Baṣṣāl again met ʿAlī Ibn al-Lūnḳuh of Toledo, a doctor and disciple of Ibn Wāfid, and like him interested in botany and agronomy. He had left his native town shortly before its capture and settled in Seville in 487/1094. He died at Cordova in 499/1105.

He also encountered Abū ʿUmar Aḥmad b. Muḥammad b. Ḥad̲j̲d̲j̲ād̲j̲ al-Is̲h̲bīlī, the author of several works on agronomy, among them *al-Muḳniʿ*, written in 466/1073. This writer is distinguished from others by his scorn for "the inadmissible tales of stupid yokels" (*ahl al-g̲h̲abāwa min ahl al-barārī wa-aḳwāluhum al-sāḳiṭa*) and his almost exclusive use of ancient agronomists, especially Yūniyūs. However, he also recounts his personal experiences in al-S̲h̲araf. There he became acquainted with the agronomist Abu 'l-K̲h̲ayr al-Is̲h̲bīlī [*q.v.*] whose work, with title unknown, is often quoted by Ibn al-ʿAwwām. All that we know about him is that in 494/1100 he was studying with the Seville doctor Abu 'l-Ḥasan S̲h̲ihāb al-Muʿayṭī.

In Seville, Ibn Baṣṣāl and Ibn al-Lūnḳuh were the masters of the mysterious "anonymous botanist of Seville", the author of the *ʿUmdat al-ṭabīb fī maʿrifat al-nabāt li-kull labīb*, a botanical dictionary of considerable merit and far superior to that by Ibn al-Bayṭār. He seems to have been a certain Ibn ʿAbdūn, to be distinguished from the doctor (Al-D̲j̲abalī) and the literary writer (al-Yāburī). The only fact about him in our possession is that he was a member of the diplomatic mission which went to the Almohad court of Marrāku̲s̲h̲ in 542/1147 and that he wrote his *ʿUmda* after that date.

In Granada, the principal agricultural writer was Muḥammad b. Mālik al-Ṭig̲h̲narī (from the name of a village now known as Tignar, a few kilometres north of Granada). He worked in succession in the service of the Ṣanhād̲j̲ī princeling ʿAbd Allāh b. Buluggīn (466/83/1073-90) and then of the Almoravid prince Tamīm, son of Yūsuf b. Tās̲h̲fīn, at the time when that prince was governor of the province of Granada (501-12/1107-18). It was for the latter that he wrote a treatise on agronomy in twelve books (*maḳāla*) entitled *Zuhrat al-bustān wa-nuzhat al-ad̲h̲hān*. Al-Ṭig̲h̲narī also went on pilgrimage to the East. Probably while staying in Seville he came into contact with Ibn Baṣṣāl and was able to profit from his experiences. It is probably with al-Ṭig̲h̲narī that we should identify the anonymous agronomist whom Ibn al-ʿAwwām frequently quotes under the name al-Ḥād̲j̲d̲j̲ al-G̲h̲arnāṭī. It should be noted that several manuscripts of the *Zuhrat al-bustān* are attributed to a certain Ḥamdūn al-Is̲h̲bīlī, who is otherwise unknown.

Towards the end of the 6th/12th century or in the first half of the 7th/13th century (the capture of Seville by the Christians took place in 646/1248),

Abū Zakariyyā Yaḥyā b. Muḥammad Ibn al-ʿAwwām of Seville wrote a lengthy *Kitab al-Filāḥa* in 35 books (*bāb*). We know nothing of his life. To orientalists, however, he is celebrated since he was the first to be published and also translated, into Spanish by J. A. Banqueri, Madrid 1802, then into French by Clément-Mullet, Paris 1864-7, and finally into Urdū. He is also the only agronomist whom Ibn K͟haldūn (second half of the 8th/14th century) thought worthy of quoting in his *Muḳaddima* (tr. de Slane, iii, 166; he regards the *K. al-Filāḥa* as an abridged version of *al-Filāḥa al-nabaṭiyya* [see IBN WAḤS͟HIYYA]. He is, however, far from being the most important of the Arabo-Hispanic agronomists. His work is essentially an extensive and useful compilation of quotations from ancient writers and from his Hispanic predecessors, Ibn Baṣṣāl, Ibn Ḥad͟jd͟jād͟j, Abu 'l-K͟hayr and al-Ḥād͟jd͟j al-G͟harnāṭī. It is only occasionally at the end of a chapter that he records his own personal observations (introduced by the word *Lī* "this is my own"), made in the neighbourhood of Seville, especially in the district of al-S͟haraf. For Ibn al-ʿAwwām, see C.C. Moncada in *Actes du 8e Congrès des Orient.*, Stockholm 1889, ii, 215-57; E. Meyer, *Gesch. der Botanik*, iii, 260-6; Brockelmann, S I, 903).

Finally, towards the middle of the 8th/14th century, a scholar of Almeria, Abū ʿUt͟hmān Saʿd b. Abū D͟jaʿfar Aḥmad Ibn Luyūn al-Tud͟jībī (d. 750/1349) wrote his *Kitāb Ibdā' al-malāḥa wa-inhā' al-rad͟jāḥa fī uṣūl ṣināʿat al-filāḥa*. The work of an amateur, it is an abridgement in verse (*urd͟jūza*), based essentially on Ibn Baṣṣāl and al-Ṭig͟hnarī; but it also contains certain valuable information which the author recorded in the words of local practitioners (*mimmā s͟hāfahahu bih ahl al-tad͟jriba wa 'l-imtiḥān*).

These treatises on *filāḥa* contain far more than their titles would indicate; in fact, they are true encyclopaedias of rural economy, based on a plan closely in line with that followed by Columella in his *De re rustica*. Naturally, the essential feature is of course agronomy (*filāḥat al-araḍīn*): the study of types of soil, water, manure; field cultivation of cereals and legumes; but arboriculture is also dealt with at length (particularly vines, olives and figs), with additional matter on pruning, layering and grafting; and also horticulture and floriculture. Zootechny (*filāḥat al-ḥayawānāt*) also takes a leading place: the rearing of livestock, beasts of burden, fowls and bees; veterinary practice (*bayṭara*). All these fundamental questions are completed by chapters on domestic economy: farm management, the choice of agricultural workers, storage of produce after harvest, etc. Some writers also provide information on measurement of land (*taksīr*) and the seasonal agricultural calendar.

We may imagine that specialists of many sorts were led to contribute to such encyclopaedic works. To start with, there were practitioners and professional workers: farmers (*fallāḥūn*), fruit-growers (*s͟had͟jd͟jārūn*), horticulturists (*d͟jannānūn*); but there were also "scientific workers"—herbalists (*ʿas͟hs͟hābūn*), botanists (*nabātiyyūn*), doctors interested in medicinal plants (*mufradāt*) and dietetics; and there were also pure theoreticians (*ḥukamā'*, *mutakallimūn*).

On the other hand, Hispano-Arab treatises on *filāḥa* were often the work of many-sided writers (*mus͟hārikūn, mutafanninūn*). Beside Ibn Baṣṣāl who was essentially an agronomist, Ibn Wāfid was primarily a doctor. Ibn Ḥad͟jd͟jād͟j was described by Ibn al-ʿAwwām as *imām* and *k͟haṭīb*. Al-Ṭig͟hnarī and Ibn Luyūn are well-known poets. Finally, the enigmatical Seville botanist Ibn ʿAbdūn could well be the same as his contemporary Ibn ʿAbdūn of Seville, the author of a treatise on *ḥisba* [*q.v.*], published and later translated by E. Lévi-Provençal.

In this connexion one is reminded of Aristotle, both philosopher and naturalist and creator of a botanical garden, and Virgil, author of the *Georgics*.

The Hispano-Arab agronomists were familiar with and made wide use of ancient writers. A list of them (in which the names are often inaccurate) will be found at the beginning of the translation edition of Ibn al-ʿAwwām by Banqueri. Among the Arab sources, they made use of *Kitāb al-Nabāt* of the polygraph al-Dīnawarī [*q.v.*] and, in particular, the *Filāḥa nabaṭiyya* of Ibn Waḥs͟hīyya [*q.v.*], though for the most part leaving out his farrago of magic recipes. However, in this branch of instruction they have not confined themselves to repeating their precursors' writings. They made their own personal observations and experiments, in order to adapt their works to the realities of the Spanish soil and climate. They also introduced original chapters on the cultivation of new plants—rice, sugar-cane, date palms, citrus fruits, cotton, flax, madder, apricots, peaches, pears, watermelons, eggplant, pistachios, saffron, etc.

As we have seen, two Arabo-Hispanic treatises on agronomy were translated into Castilian. In this way, Ibn Wāfid's work was widely used by the Spanish agronomist Alonso de Herrera in his famous *Agricultura General* (1513).

Finally we should note that it was in Muslim Spain, during the 5th/11th century, in Toledo and later in Seville, that the first "royal botanical gardens" of Europe made their appearance, both pleasure gardens and also trial grounds for the acclimatization of plants brought back from the Near and Middle East. In the Christian world we have to wait until the middle of the 16th century to see the establishment of gardens of this sort, in the university towns of Italy.

Bibliography: The essentials will be found in the introduction to *Kitāb al-Filāḥa* of Ibn Baṣṣāl, edited with Spanish translation by Millás Vallicrosa and ʿAzīmān (Tetuán 1955). Allouche, Rabat 1936 (no. 1352 = biography of Ibn Luyūn); Ibn K͟haldūn, *Muḳaddima*, *faṣl* vi, no. 20 = trans. de Slane, iii, 165 = tr. Rosenthal, iii, 151; S. M. Imamuddin, Al-Filāḥah (*Farming*) *in Muslim Spain*, in *Islamic Studies*, i/4 (1962), 51-89.

(G. S. COLIN)

iii.—PERSIA

Agriculture in Persia was from earliest times regarded as the fundamental basis of the prosperity of the country. From early times also there has been a dichotomy between the agricultural and the pastoral elements of the population. The Avesta was unequivocal in its approval of the settled life of the peasant and of the practice of agriculture. Agricultural prosperity, which was also in Islamic times traditionally regarded as the basis upon which stable government rested, was closely connected with irrigation [see MĀ'], security, and taxation.

Rulers were urged by mediaeval Islamic theorists to foster agriculture in order to ensure a full treasury and thus prevent the decay of the kingdom. To this end irrigation works were to be carried out, security established, and extortion against the peasantry prevented. The philosophers and encyclopaedists similarly regarded agriculture as the basic industry, upon which the good order of the world and the perpetuation of the human race depended (cf. Maḥmūd Āmulī, *Nafāʾis al-funūn*, Tehrān, ii, 159).

Invasion and dynastic struggles have been the cause of frequent interruption in, not to say decay of, agriculture. For example in Khūzistān, where there had been considerable development under the Sāsānians, the agricultural economy failed to return quickly to its previous level after the Arab invasion in the first half of the seventh century A.D. and there was until modern times a cumulative, though not uninterrupted, decline (R. A. Adams, *Agriculture and urban life in early south-western Iran*, in *Science*, vol. 136, no. 3511, 13 April 1962). The quartering of soldiers on the population in Būyid times appears to have materially contributed to agricultural decline (cf. Ibn Miskawayh, *Eclipse*, ii, 96, and Ibn al-Athīr *Taʾrīkh*, viii, 342). It has always been the practice of government officials, civil and military, to live upon the country, a custom highly detrimental to agriculture. At no time, perhaps, did the evils of the system reach greater heights than under the Īlkhāns (cf. Rashīd al-Dīn, *Gesch. Gāzān Ḫān's*, ed. K. Jahn, *passim*). In the Ḳādjār period the evil was also widespread. In times of war, continuous or intermittent, it was sometimes the practice deliberately to lay waste frontier areas. Thus the Turco-Persian frontier area in Ṣafawid times was reduced to a desert (*A chronicle of the Carmelites in Persia*, London 1939, i, 140). Many examples at different periods of Persian history could be cited of local officials imposing such severe contributions on the cultivators of the soil as to cause their dispersal and thus lead to the ruin of their land.

Tribal warfare and raiding was another major cause of agricultural decay. Such raiding was common whenever the central government weakened; further, when the tribal population and its flocks rose above the level which could be maintained by the limited pasture available, either because of a period of drought or because of natural increase, there would be a movement, violent or otherwise, into the settled areas. The balance between the settled and semi-settled elements of the population was extremely precarious, and inevitably adversely affected agriculture on the borders of the tribal regions. Various tribal groups, notably in Fārs, during the course of the late nineteenth and early twentieth centuries became settled and practised agriculture. Riḍā Shāh made an abortive attempt to settle the nomadic population of the country, notably in Fārs, the Bakhtiyārī, and parts of Kurdistān. Since about 1956 there has been a movement by Turkomans and others to reclaim the Gurgān steppe.

Another factor militating against agricultural development has been insecurity of tenure both as regards the peasant and the landowner [see TENURE OF LAND].

Agriculture is also subject to interruption by the capricious nature of the climate. Drought, due to insufficient spring or winter rain, causing partial or complete crop failures, and floods, with the accompanying destruction of irrigation channels and *ḳanāts*, are of common occurrence. Earthquakes have also been a contributory factor causing local and temporary dislocation. Ravages by pests, notably the *sunn* pest and locusts, not infrequently cause heavy losses. High winds in many areas and violent hailstorms are other detrimental factors. Deterioration of the soil because of a change in the water table due to over-lavish irrigation or inadequate drainage, or both, is a major problem in some parts of the country, especially Khūzistān and Sīstān; and in some places on the central plateau the soil is salty and the water too saline to be used for irrigation. On the south and south-east borders of the central desert there is a marked tendency for the desert to encroach upon the surrounding area (cf. Ḥamd Allāh Mustawfī, *Nuzhat*, 142, *Taʾrīkh-i Sīstān*, ed. Bahār, Tehrān 1936-8, 21). Soil erosion is widespread, notably in Ādharbāydjān. Its primary causes are climatic and geological, but uncontrolled grazing by goats and the destruction of forests for fuel have steadily increased the tendency towards erosion. Little attention has been given to its control or reduction by modifying existing practices of arable and animal husbandry, or by contour ploughing, which is made difficult by the relatively small size of the holdings. Terracing in mountain valleys, however, is often carried out with considerable skill.

Irrigated and dry farming are both practised, the latter in large areas of Ādharbāydjān and Kurdistān, and to a lesser extent in Khurāsān and Fārs, and on the Caspian littoral for crops other than rice. Everywhere with the exception of the Caspian littoral rainfall is the main limiting factor on agriculture. Gīlān and Māzandarān have a relatively heavy rainfall, well distributed throughout the year with a maximum in early autumn, varying from 50-60 inches in the west to 20 inches in the east and rising to over 100 inches on the northern slopes of the Elburz. The natural vegetation is thick deciduous forest, found up to a height of 7,000-8,000 ft.; where this is cleared fruit, rice, cotton, and other crops thrive. The eastern end of the Persian Gulf littoral comes under the influence of the south-west monsoon. The average rainfall in the coastal district of Persian Balūčistān is 3-4 inches; Bushire has an average rainfall of about 10 inches; and Khūzistān 12-15 inches, with a maximum in December. The plateau, the average elevation of which varies between 3,000-5,000 ft., is ringed by mountain ranges, the general trend of which is from north-west to south-east. The seasons on the plateau are regular but considerable variations of climate are found. Within the mountains the plateau lies in the rain shadow. In general the 10 inch rainfall line follows the inner foothills of the Zagros-Elburz-Kopet Dagh ring of mountains and marks the boundary between areas where cereals can be cultivated extensively without irrigation and areas dependent upon irrigation. The summer grazing of the nomadic tribes also lies in or near the 10 inch line. Rain begins in November and continues intermittently to the end of March and, in the south and north-east, to the end of April. Heavy snowfalls are common in winter. Vegetation is limited but some forest is found in Kurdistān and Luristān; and a narrow belt of oak forest in Fārs. Considerable areas, notably in Ādharbāydjān, Kurdistān, and northern Fārs consist of mountain pasture. South-east of Tehrān are two great salt deserts, the Dasht-i Kavīr and the Dasht-i Lūṭ, which together with Sīstān have a relatively low elevation. The climate of Sīstān is one of extremes and the average annual rainfall only 2½ inches. It is estimated that only 10-14 per cent of the total area of the whole country is under cultivation. Some 30

to 35 per cent is desert and waste. The remainder is grazing-land and forest.

Grain crops. Wheat and barley are the staple crops and are grown as irrigated (*ābī*) and unirrigated (*daymī*) crops up to an elevation of about 10,000 ft. Maize and millet have also been widely grown throughout the country since early times (cf. B. Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 387). Wheat is mainly grown as a winter crop; but in the high valleys of the Zagros and Elburz it is also grown as a spring crop. The regions with the greatest production of wheat are the neighbourhood of Mas͟hhad in K͟hurāsān, western Ād͟harbāyd͟jān, Hamadān, Kirmāns͟hāh, and Iṣfahān. In south Persia wheat and barley are sown between the first week in November and the first week in January, and in central Persia between the end of October and the end of November; and spring wheat between the end of February and the end of April. Wheat is harvested in the south about the end of April or the beginning of May; in the upland areas of Fārs about a month later, and on the plateau some two to two and a half months later. Barley is harvested about three to four weeks earlier than wheat (cf. Mīrzā Ḥusayn K͟hān, *D͟jug͟hrāfiyā-yi Iṣfahān*, ed. M. Sutūdeh, Tehrān 1953-4,55 ff.). The yield on wheat varies greatly in different parts of the country. In general it is low. The peasant normally saves part of his crop for the following year's seed.

Rice. The main rice-growing area is in the Caspian provinces. Some rice is also grown in the Lind͟jān and Alind͟jān districts of Iṣfahān (*D͟jug͟hrāfiyā-yi Iṣfahān*, 55 ff.) and, on a small scale, in Fārs, K͟hūzistān, Kurdistān and other districts (Spuler, *op. cit.*, 387, Ḥamd Allāh Mustawfī, *Nuzhat*, 162, 163, Sanīʿ al-Dawla, *Maʾāt͟hir al-āt͟hār*, Tehrān, lith. 1888-9, 115). According to tradition rice was originally imported from India (*Kitāb-i ʿIlm-i filāḥat wa zirāʿat dar ʿahd-i G͟hāzān K͟hān*, ed. ʿAbd al-G͟haffār Nad͟jm al-Dawla, Tehrān 1905-6, 86). In some areas rice is sown broadcast, but in the main rice-growing areas such as Māzandarān and Iṣfahān it is sown in nurseries (*k͟hazāna*) and transplantation (*nis͟hāʾ*) takes place after a month. In Māzandarān the land is ploughed in April, flooded and then ploughed twice more. A fortnight after transplanting weeding (*vid͟jīn*) begins, the weeds being trampled into the mud. The rice fields are kept permanently under water for two to three months. Rice is reaped in September. The main varieties are known as *ṣadrī*, *girda*, *dum-i siyāh* and *ʿambarbū* (see also J. B. Fraser, *Travels and adventures in the Persian provinces*, London 1826, 119-20).

Sugar cane. This was mainly grown in K͟hūzistān in early Islamic times and in the middle ages (cf. Spuler, *op. cit.*, 388, *Kitāb-i ʿIlm-i filāḥat wa zirāʿat*, 102); and to a minor extent in Māzandarān. In the later middle ages its cultivation in K͟hūzistān died out. An attempt was made in Ḳād͟jār times to revive it (*Waḳāyiʿ-i ittifāḳiyya*, Tehrān,no. 55), and also to cultivate sugar cane in Gīlān (*Maʾāt͟hir al-āt͟hār*, 118) and Iṣfahān (*D͟jug͟hrāfiyā-yi Iṣfahān*, 58). In recent years the cultivation of sugar cane in K͟hūzistān has begun on a more extensive scale as a result of new irrigation developments. Planting takes place in March or April and the cane is cut in November.

Sugar beet. An abortive attempt was made to introduce sugar beet by a Belgian company at Kahrīzak near Tehrān in 1886-7. Under Riḍā S͟hāh the cultivation of sugar beet was encouraged and it is widely cultivated at the present day especially in the Tehrān, Tabrīz, Kirmāns͟hāh, S͟hīrāz, Kirmān, and Mas͟hhad areas.

Cotton. This appears to have been widely grown on the plateau in early Islamic times (Spuler, *op. cit.*, 389; Ḥamd Allāh Mustawfī, *Nuzhat*, 52, and *passim*). American sea island cotton was first introduced into the Urūmiyya region about the year 1852 from whence its cultivation spread (*Letters from Persia written by Charles and Edward Burgess 1828-1855*, ed. B. Schwarz, New York 1942, 117). During the reign of Riḍā S͟hāh a long stapled variety was introduced and came to be known locally as *filistānī* (from the village where it was first cultivated). This variety is grown in Ād͟harbāyd͟jān, Kirmāns͟hāh, Fārs, and K͟hūzistān. A shorter stapled American variety is grown in the Caspian provinces, including Gurgān, and a native short stapled variety of inferior quality but hardy growth is grown in marginal areas. Cotton is grown as an irrigated crop up to an elevation of about 5,000 ft. It is sown in April or May and reaped in the autumn. The land is normally watered once before sowing and the crop is irrigated several times during the period of vegetation. Cotton is the main cash crop of Persia. It is also grown extensively for its seed, which yields an edible oil (cf. *D͟jug͟hrāfiyā-yi Iṣfahān*, 56).

Tobacco. This is grown in many districts for local use and especially in the north-west and south-east Zagros and in the Caspian provinces. It appears to have been first cultivated in Persia in the 11th/17th century, having been introduced by the Portuguese in the early part of that century. It began to be cultivated in Gīlān in 1875-6 (Taḳī Bahrāmī, *Taʾrīk͟h-i kis͟hāvarzī-i Īrān*, Tehrān 1951-2).

Opium. It is difficult to establish when the opium poppy was first cultivated in Persia. Muḥammad b. Zakariyā (Rhazes) refers to the wild and cultivated poppy. By the end of the 11th/17th century opium cultivation was well established (cf. Kaempfer, *Amoenitas Exoticae*). It spread in the nineteenth century as an alternative to the declining silk industry. It was first introduced into Fārs in 1868-9 (Mīrzā Ḥasan Fasāʾī, *Fārs nāma-i Nāṣirī*, Tehrān 1894-6, ii, 3). The main opium-growing areas, until the prohibition of the cultivation of the opium poppy, which was first made in 1953 and became effective in 1956, were Iṣfahān, Fārs, and K͟hurāsān; it was also grown in Hamadān and Kirmānshāh. The best opium came from Ābāda, Kirmān, Yazd, Burūd͟jird, and Varāmīn. The seed is sown from October to December, or more rarely in spring. The crop is weeded and thinned in spring; and irrigated during May and June. The collection of the sap begins in May, or a month earlier in the hotter districts of the south, and continues until August. A vertical or diagonal incision is made in the seed capsule in the evening; the sap oozes from the incisions during the night, partially dries, and is scraped off with a blunt knife the next morning. This operation is performed twice or, if the crop is exceptionally good, three times at an interval of several days (A. R. Neligan, *The opium question with special reference to Persia*, London 1927).

Tea. An abortive attempt was made by Ṣanīʿ al-Dawla to introduce the cultivation of tea into Māzandarān in the late nineteenth century. Subsequently there was some cultivation on a small scale; in 1928-9 seed was imported from the Far East, since when there has been a great expansion in tea cultivation in western Māzandarān.

Silk. This is a traditional product of Persia. In the 7th/13th century the silk trade was important; the high water mark in the production of silk was reached in the 11th/17th century. In the nineteenth

century production declined because of a disease among the silk worms, which began in 1864. New strains were subsequently introduced (Taḳī Bahrāmī, *op. cit.*, 99 ff.). Mulberry trees, on the leaves of which the silk worms feed, are widespread throughout the country, especially in the north. In northern Persia a curious custom exists for the hatching of the eggs of the silk worm. These are attached to a piece of paper and exposed to the warmth of the human body by being worn next to the skin (Hanway, *An historical account of the British trade over the Caspian Sea*, London 1762, i, 189 ff.; Curzon, *Persia*, i, 369; see also ḤARĪR).

Minor crops. Pulses and oil seeds are widely cultivated; and some fodder crops, such as lucerne and clover. A great variety of vegetables is grown especially near urban centres. Potatoes were introduced into Persia by Sir John Malcolm during the reign of Fatḥ ʿAlī S̲h̲āh (*Maʾāthir al-āthār*, 112; Kaye, *Life and correspondence of Major-General Sir John Malcolm*, ii, 47-8). Dye-plants, mainly in the central Zagros region and Kirmān, and other plants used in industry such as saffron, hemp, flax and, in the Dizful and S̲h̲ustar areas, indigo (which was introduced by the Būyid, ʿAḍud al-Dawla, see Ibn al-At̲h̲īr, *Taʾrīk̲h̲*, viii, 513), madder, and, round Yazd and Kirmān, henna, and, in Māzandarān, jute, have been cultivated since early times (cf. Spuler, *op. cit.*, 389). Vegetable gums, including gum tragacanth and asafoetida, are cropped mainly for export. The latter was known in early Islamic times (cf. *Ḥudūd al-ʿālam*, 108-10). Oak-gall is produced mainly in Kurdistān. A variety of flowers and a kind of willow were cultivated for scent (Spuler, *op. cit.*, 389-90); the former also contributed to bee-keeping.

Fruit. Persia has been famous for fruit-growing since early times (cf. Spuler, *op. cit.*, 388). Many varieties of vine are cultivated and found up to an altitude of 4,500 ft. Vine cultivation is mainly by irrigation, except in some areas of Kurdistān. On the plateau the vines are covered with earth in the winter. Apricots, peaches, nectarines, figs, melons, pomegranates, plums, cherries, pears, and apples are widely grown. Citrus fruits are important in the Caspian provinces and south Persia, especially in K̲h̲ūzistān and southern Fārs. Recently citrus cultivation has been extended to Bam. Dates are widely cultivated in south Persia and on the coastal plains bordering the Persian Gulf. The female plant is impregnated by the male in March or April, some two males going to a plantation of fifty (cf. Naṣīr al-Dīn Ṭūsī, who was aware of this peculiarity of the date palm, *Ak̲h̲lāḳ-i Nāṣirī*, Tehrān n.d., 25-6). Nut trees, especially almonds and pistachios, are of importance. Olives were cultivated in early Islamic times in Nīs̲h̲āpūr, Gurgān, Daylam, and Fārs (Spuler, *op. cit.*, 387). The main area of cultivation at the present day is Rūdbār in Māzandarān, where cultivation increased after the decline of silk production in the middle of the nineteenth century (T. E. Gordon, *Persia revisited*, London 1896, 163; Curzon, *Persia*, i, 368). The grafting of vines and other fruit trees has long been practised (cf. Fak̲h̲r al-Dīn Rāzī, *D̲j̲āmiʿ al-ʿulūm*, B.M., OR. 2972, ff. 132a-133b and *Čahārdah risāla*, ed. Sayyid Muḥammad Bāḳir Sabzawārī, Tehrān 1962, 146-51). At the present day in Kirmān and Fārs almonds and pistachios are grafted on to the wild almond tree (*bāna*).

Although large landownership has been the dominant form of land tenure, large-scale farming was not (and is not) practised, except exceptionally. The agricultural unit was the ploughland (*d̲j̲uft*, *k̲h̲īs̲h̲*, *zawd̲j̲*) and agriculture was carried on mainly as subsistence agriculture; this is still predominantly the case. Broadly the ploughland consists of an area which a pair of oxen can cultivate annually; but it varies in size according to the nature of the soil, the type of agriculture practised (dry or irrigated), practices with regard to fallow, the kind of crops grown, the draught animals used, and the pressure or otherwise on the land. The average ploughland ranges from some 60 to 20 acres; but in some areas holdings are much smaller, as for example in Mārbīn, one of the districts of Iṣfahān, where cultivation is mainly carried on by spade. The relation between the peasant and the landowner was formerly usually regulated, and to some extent still is, by a crop-sharing agreement (*muzāraʿa* [*q.v.*]). The ploughland or peasant-holding is usually run as a family concern by the peasant and his sons or other members of the family; extra labour may be required at harvest time and at certain other seasons of the year. In some areas three or four ploughlands are run together as a unit (*buna*). Periodical redistribution of the ploughlands among the peasants of a village used to take place, usually by lot, in some districts.

The main draught animal used on the plateau is the ox. Donkeys and, especially in K̲h̲ūzistān, mules, and in the Persian Gulf littoral, Miyāndoāb (in Ād̲h̲arbāyd̲j̲ān), and Mahābād (in Kurdistān), buffaloes, and in Persian Balūčistān, the camel, are also used. In some areas, notably Sīstān, oxen are hired for ploughing to the cultivators by graziers. Where the soil is stiff more than one pair of draught animals may be required (cf. Morier, *Second journey through Persia, Armenia and Asia Minor to Constantinople in the year 1810 and 1816*, London 1818, 304). Donkeys and camels are the main pack-animals. Small bullock carts are found in western Ād̲h̲arbāyd̲j̲ān and some of the Armenian villages in Firaydan.

The plough (*k̲h̲īs̲h̲*) used is of the hook type having a large or small steel share. The plough beam is linked to the yoke by means of a rope sling. There is no mould board and the soil is ripped open leaving an open, coarse, cloddy tilth. There are slight differences between the plough used in (i) Fārs, Kirmān, and Sīstān, (ii) Iṣfahān, Hamadān, Tehrān, and Ād̲h̲arbāyd̲j̲ān, and (iii) Gīlān and Māzandarān. Seed is sown broadcast.

In addition to the plough, a kind of harrow (*māla*) is used; it differs slightly in shape in south and central Persia on the one hand and north-west Persia on the other. Two kinds of levelling board are in use, a relatively large board drawn by a draught animal, and a smaller board (known in central Persia as *katar*), which is used for the preparation of irrigation check banks, and operated by two men, one pulling and the other pushing. Three types of spade are used, one in Fārs, which has a wooden cross bar, the second in central Persia, which has a turned footrest, and the third in Ād̲h̲arbāyd̲j̲ān, which has a rolled edge.

Grain is cut with a sickle (*dās*) which has a plain cutting edge; scythes are used in northern Ād̲h̲arbāyd̲j̲ān, where they were introduced from Russia at the end of the nineteenth century. A small toothed sickle is used for cutting grass and lucerne, etc. Corn is tied into sheaves and left to dry or carried straight to the threshing floor (*k̲h̲armangāh*). Pod crops, such as peas, beans, linseed, and carraway seed, are mainly threshed by beating with rods; and in those parts of the country where draught animals are scarce, corn is also threshed in this way. A threshing board, the bottom surface of which is studded with sharp

pieces of flint stone held in position by wooden wedges, is used to thresh grain. It is attached by a rope to a yoke and drawn, while a man stands on it, in a circle by an ox or oxen or other animal over the threshing floor. A threshing wheel or wain (*čūn*, ?*čān*) is used, especially in north-eastern, central and south Persia. This is a sledge-like carriage, usually drawn by two oxen with two sets of rollers, which turn round as the sledge beams slide over the sheaves. The rollers carry sharp-edged steel discs, sometimes with fine saw teeth, or have steel knives or prongs with sharp edges, one roller having the edges parallel to the axis, and the other having them at right angles. In some parts of Ā̲dh̲arbāyd̲j̲ān the wain has wooden spokes. The third method of threshing is for the grain to be trodden out by strings of oxen, donkeys, or horses driven round the threshing floor. Winnowing is done by wooden forks, the grain being thrown six or seven feet into the air. The grain drops straight down while the chaff is carried by the wind and settles on a separate heap. A second winnowing done by wooden shovels is sometimes necessary. Finally the grain is sifted to separate it from the stones and earth with which it may have become mixed during threshing and winnowing. Two men can winnow and sift 20-25 cwt. of corn a day. Donkeys and other pack animals take the grain in sacks to the granaries. The chaff is removed in nets and used as fodder for horses, donkeys and oxen (H. E. Wulff, *Agricultural implements in Persia*, in *Power farming and better farming digest*, Sidney, Oct. 1958).

Sheep and goats are commonly grazed on stubble fields, which thus receive a slight benefit from their manure. For the most part, however, animal dung is used as fuel. In some dry farming areas there is insufficient rainfall to rot the manure even if it were used. Household sewage mixed with earth is used as fertilizer in some areas, especially round urban centres. Earth from old walls and ruined buildings is also broken down and spread on the fields (cf. J. B. Fraser, *Winter's journey*, London 1838, ii, 65). Gardens tend to be manured more regularly than fields and to be cultivated annually. Pigeon lime, collected in pigeon towers, is used in the Iṣfahān district for the cultivation of melons and pear trees (cf. Chardin, *Voyages*, Amsterdam 1711, ii, 75). Fak̲h̲r al-Dīn Rāzī mentions the use of bird lime and weed-killers (*D̲j̲āmiʿ al-ʿulūm*, f. 132a). Fish manure is used in Kirmān for pistachio trees. Chemical fertilizers have been introduced in recent years but their use is comparatively rare.

Practices in fallow, during which the land may or may not be ploughed, and crop rotation vary very widely. Unirrigated land tends to be left fallow for long periods. Irrigation is usually by inundation. In vineyards, melon land, and market gardens the water is let into the land by irrigation trenches. In land watered by *ḳanāt*s the tendency is to cultivate more intensively the land nearest the mouth of the *ḳanāt* to avoid water loss while that at the end of the *ḳanāt* is less frequently cultivated.

In many parts of Persia the crops have to be guarded, especially at night, to prevent depredations by wild pig and other animals. Scarecrows (*matarsak*) are erected in some districts (cf. C. E. Yate, *Khurasan and Sistan*, London 1900, 168, 283).

In recent years there has been some development in mechanization. An increasing number of tractors and combine harvesters have been in use especially since 1952, but the numbers are still relatively small except in Das̲h̲t-i Gurgān, where cultivation in the grain-growing areas has been wholly, and in the cotton-growing areas, partially mechanized.

The state did not interest itself in the conduct of agriculture except so far as crown lands (*k̲h̲āliṣa*) were concerned; though it was interested in the prosperity or otherwise of agriculture from the point of view of taxation. A Ministry of Agriculture, Commerce and Public Welfare, was first founded in 1879; at the same time an Agricultural Council was set up. In 1891-2 the department of agriculture and commerce was transferred to the Ministry of National Economy and Roads. The following year departments general of agriculture, commerce, and industry were set up. In 1893-4 agriculture and industry were once more united in one department, but were subsequently again divided. In 1897-8 the Ministry of Crown Lands (*wizārat-i k̲h̲āliṣad̲j̲āt wa raḳabāt-i dār al-k̲h̲ilāfa*) became the Ministry of Crown Lands and Agriculture. Subsequently crown lands (*k̲h̲āliṣa*) were transferred to the Ministry of Finance. During the constitutional period agriculture suffered various vicissitudes administratively. The first agricultural magazine to be published was a fortnightly journal of agriculture and commerce issued in 1880 by the Ministry of Agriculture and Commerce.

The first agricultural school in Persia was the Madrasa-i Muẓaffarī at Tehrān which was opened in 1901-2. It closed after six years. The next attempt to open an agricultural school was at Karad̲j̲ near Tehrān in 1919. This became a high school in 1933-4 and a college in 1943-4. In 1948-9 it was transferred from the Ministry of Agriculture to Tehran University and in 1952-3 separated into two colleges, the college of agriculture and the college of veterinary science, which were fully incorporated into the university. Experimental work is done in government agricultural stations, notably at Karad̲j̲.

iv. — Ottoman Empire

During the period between the 8th/14th and 11th/17th centuries, when the *tīmār* [*q.v.*] system prevailed in the Ottoman Empire, the *raḳabe*, *i.e.*, the freehold

ownership of agricultural lands was regarded as vested in the State. The tenure of lands held as *waḳf* and *mülk* in the pre-Ottoman Muslim states of Anatolia was in part confirmed, but Meḥemmed II converted some of them to *mīrī*-land (see *IA*, s.v. Mehmed II, 533), as he did the land belonging to Christian monasteries in the territories of Trebizond (Başvekâlet Arşivi, Maliye defter no. 828): generally speaking the central authority, when it was powerful, attempted to increase the extent of *mīrī*-land.

According to the typical *ʿörfī ḳānūns* promulgated in these centuries [see ḲĀNŪN], land was granted on lease to farmers in parcels usually termed *čift* or *čiftlik* [*q.v.*]. The peasant could not transfer these *raʿiyyetlik* lands as *mülk* or as *waḳf* or as a gift. If he wished to sell them or give them up he was obliged to obtain the permission of the *sipāhī* and pay a fixed charge, the *ḥaḳḳ-i ḳarār* (in the 11th/17th century, 3% of the selling price). Thus the peasant possessed merely the right of usufruct (*istighlāl*); and this right could pass directly only to his sons (for the later recognized rights of daughters and other relatives, see Ö. L. Barkan, *Türk toprak hukuku . . .*, in *Tanzimat*, i, Istanbul 1940, 358-421). The *čift* unit of land could not be divided: if more than one son inherited they enjoyed the usufruct jointly. In principle, the peasant could not leave this land: if he did, he was obliged to pay the *čift bozan resmi* (50 *aḳče* [*q.v.*] in the 9th/15th, 75 *aḳče* in the 10th/16th century; as the number of peasants leaving the land increased so the *čift bozan resmi* was increased, with the fall in the value of the *aḳče*, to 300 *aḳče*s). If the peasant left the land unworked for more than three years, the timariot could grant it to another. The use to which the land was put could not be changed: agricultural land, for example, could not be converted to pasture, vegetable-growing or fruit-growing. Agricultural land turned over to vine- or vegetable-growing without the *sipāhī*'s permission could, if less than ten years had passed, be restored to its former use. The State expected the peasant to sow a definite quantity of seed on land of a given area. Vineyards and vegetable-gardens near towns or around houses were exempt from these regulations, being subject to the *sharʿī* rules of ownership. The status of the land and the farmer was confirmed by the *taḥrīr* [*q.v.*] carried out at fixed intervals.

The problem in the Ottoman Empire was not shortage of land but shortage of labour; and it is probably for this reason that the peasant was bound to the soil. On the *tīmār*s there were several areas of untenanted land, known as *mezraʿa* and *ekinlik*. The State was concerned above all to prevent the peasants abandoning the land and moving away: the *sipāhī* who provoked this was severely punished, while those who could persuade farmers to settle on vacant land were rewarded. The *taḥrīr* registers of the time of Süleymān I, however, show that new land, referred to as *ifrâzât*, had then been brought under cultivation, for at this period the population had increased considerably and the State encouraged the cultivation of *mawāt* lands, heretofore left unused; such lands were exempt from *tapu resmi* until the next *taḥrīr* was carried out.

A further degree in State control of the land and of agriculture is found in the active participation by the State, exemplified particularly in rice-growing. Under this system, applied with the object of ensuring supplies for the army, rice-growing was carried out under the supervision of *emīn*s, responsible for the administrative and financial organization, and of *čeltik reʾisleri*, responsible for the actual cultivation. Every *čeltikdji* was obliged to sow a definite amount of seed on a definite area, both prescribed by the State. The irrigation-canals were kept in repair under the supervision of the *reʾis*. From the harvested rice, after seed had been set aside, the State took one-half (in some areas two-thirds). As compensation for this, the *čeltikdjiler* so organized were exempt from certain taxes (mainly the *resm-i čift*, *resm-i ghanem*, *ʿawāriḍ*; for the *čeltikdjiler* see Barkan, *Kanunlar*, 54, 202-3, 205; for a *čeltik ḳānūnu* see Ankara Un., DTCF library, Ismail Saip collection MS 5120, 130-9). The cultivation of rice was introduced into Rūmeli by the Ottomans, and extensive rice-fields under State control appeared in the valleys of the Merič (Maritsa), Karasu, Vardar and Salambria (see M. T. Gökbilgin, *Edirne ve Paşa Livâsı*, Istanbul 1952, 125-50). A similar system of State participation prevailed in the villages which, in order to ensure the food-supply of Istanbul, were created in the vicinity of the city by the settlement of prisoners of war, '*ortaḳdjī ḳullar*' (see Barkan, *Kanunlar*, 86-109, and idem, *XV ve XVI. asırlarda Osmanlı imperatorluğunda toprak işçiliğinin organizasyonu şekilleri*, in *Iktisat Fak. Mecm.*, i (1939), 29-74, 198-245, 397-447. On the food supply of the capital see further W. Hahn, *Die verpflegung Konstantinopels durch staatliche Zwangswirtschaft*, Stuttgart 1926; R. Mantran, *Istanbul dans la seconde moitié du XVII*ᵉ *siècle*, Paris 1962, 179-213).

Thus the principal characteristic of the classical Ottoman land-system was direct State control of the peasant and the soil, a system which had grown up to meet the military and financial needs of an absolutist administration, and in which the state's main concern was to ensure the revenues of the *tīmār*s. This *tīmār* organization and the Ottoman land-system broke up in the period of anarchy which began at the end of the 10th/16th century (see Ḳočī Beg, *Risāle*, ed. A. K. Aksüt, Istanbul 1939, 24-56). Lack of settled conditions and heavy taxes caused the peasantry to abandon the soil in droves: in the first half of the 11th/17th century this movement from the land reached disastrous proportions and was called 'the great flight', '*büyük ḳačḳun*' (see M. Akdağ, *Türkiyenin iktisadî vaziyeti*, in *Belleten*, xiii/51 (1949), 537-64, xiv/55 (1950), 319-405). In many districts local dignitaries and Janissaries turned the abandoned agricultural land into pastures for their flocks of sheep (M. Akdağ, *Belleten*, xiv, 374, 394). The new *ḳānūn*s concerning the use of land and the *raʿāyā* which were promulgated in the early 11th/17th century (they are found together in *MTM*, i (1331), 49-112, 305-48) are the result of efforts to solve this problem.

In the 11th/17th and 12th/18th centuries the most important change in agricultural conditions was brought about by the spread of the systems of *muḳāṭaʿa* and *iltizām* [*qq.v.*]. There arose a new class of *agha*s, *aʿyān* and derebeys [*qq.v.*] in Rūmeli and Anatolia who, holding possession of the land for life, became in practice great land-owners (for Western Anatolia see Ç. Uluçay, *18.ve 19. yüzyıllarda Saruhan'da eşkiyalık ve halk hareketleri*, Istanbul 1955; see further A. F. Miller, *Mustafa Pasha Bayraktar*, Moscow 1947). Although Maḥmūd II succeeded, after 1227/1812, in putting down the great *aʿyān*s and derebeys, the village *agha*s and the lesser *aʿyān* maintained themselves as the ruling class in the social sphere. In many areas the peasant had now sunk to the position of tenant or share-cropper on the lands held as *muḳāṭaʿa* by the *agha*s: in this state of affairs is to be found the basic reason for the

peasant risings in the Balkans in the 19th century (see H. İnalcık, *Tanzimat nedir?*, in *Tarih araştırmaları*, Ankara 1941, 237-63).

Difficulties of communication meant that agricultural products were in general disposed of in local markets. Cereals were distributed further afield only in areas near the coasts or in the vicinity of cities or along the great military routes. In the 8th/14th and 9th/15th centuries Venice bought large quantities of cereals from Western Anatolia, Thrace and Thessaly (see F. Thiriet, *Régestes des délibérations du Senat de Venise concernant la Romanie*, i-iii, Paris 1958-60). In the same period cotton and dried fruits were exported from Western Anatolia to countries in the north (this appears particularly from the customs-registers of Akkerman and Kili, Başvekâlet Arşivi, Maliye no. 6). From the 9th/16th century onwards increased trade with Western Europe led to an increase in the export of the cotton and cotton goods of Western Anatolia (P. Masson, *Hist. du commerce français dans le Levant*, Paris 1896-1911, appendix VIII; E. Arup, *Studier i Engelsk og Tysk Handelshistorie*, Copenhagen 1907, 109 ff., 191 ff.). In the the 19th century, as was observed by P. de Tchichatchef (*Asie Mineure*, 3 vols., Paris 1867), G. Perrot (*Souvenirs d'un voyage en Asie Mincure*, Paris 1867) and A. Ubicini (*Lettres sur la Turquie*, Paris 1851, 244-65), the agricultural methods of the peasantry were dictated entirely by tradition. In this field ethnographical observations (e.g. Hâmit Z. Koşay, *Türkiye halkının maddî kültürüne dair araştırmalar*, in *Türk Etnografya Dergisi*, i (1956), 7-55; *Contribution à l'étude de la culture matérielle des Bulgares*, in *Bulletin du Musée Nat. d'Ethnographie à Sofia*, viii, 55-109, x-xi, 130-65, xii, 62-85) can be supplemented from the *ḳānūns* for sandjaḳs and notes in the registers concerning agriculture and irrigation (see, *e.g.*, Barkan, *Kanunlar*, and *Monumenta Turcica*, i, Sarajevo 1957). The *mufaṣṣal defterler* [see DAFTAR-I KHĀḲĀNĪ] contain much material—as yet unstudied—on the crops grown in various areas and their productivity; the various agricultural implements are to be found listed in the *ḳāḍīs*' registers of effects (*metrūkāt*). The Anatolian peasant divided his land into three or two sections, and followed the principle of leaving each fallow for two years or one year (*nadas*, see Barkan, *Kanunlar*, s.v.). Important details on the irrigation methods employed in the Ilkhānid period in Anatolia are found in the letters of Rashīd al-Dīn (see Z. V. Togan, *Reşideddin'in mektûplarında Andadolu'nun iktisadî ve medenî hayatına ait kayıtlar*, in *Ist. Ün. Iktisat Fak. Mecm.*, xv (1953-4), 33-50; Khwādja Rashīd al-Dīn Faḍl Allāh, *Kitāb-i Mukātabāt-i Rashīdī*, ed. M. Shafi, Lahore 1363/1935, 220-30, 234-6). In the Ottoman period, in arid districts like Central Anatolia and Diyārbakr there was a special régime for irrigation (for this *mīrāblīḳ* see Barkan, *Kanunlar*, 42, 46; *Ḳānūnnāme* of Süleymān, *TOEM* Supplement, 65-6).

The Ottomans were naturally acquainted with Muslim works on *ʿilm al-filāḥa*. The *K. al-Filāḥa* of Shaykh Abū Zakariyyāʾ Yaḥyā b. al-ʿAwwām was translated into Turkish in 998/1599 by Muṣṭafā b. Luṭf Allāh (MSS: Bayezid Lib., Veliyeddin 2534, Bursa müzesi E 32; Ist. Univ. Lib.). Two works by Ottoman authors were well-known: *Rawnaḳ-i būstān* by al-Ḥādjdj Ibrāhīm b. Meḥemmed (MS: Süleymaniye, Esad Ef. 1019; editions: Istanbul 1260; Konya 1285; and ed. Hadiye Tunçer [in modern script, unsatisfactory], Ankara 1961), and *Gharsnāme* by Kemānī, composed in 1047/1637 (see *Türk ziraat tarihine bir bakış* [I. Köy ve Ziraat Kalkınma Kongresi yayını], Istanbul 1938, 43). Both these works are concerned with the growing of fruit trees, and contain chapters on the soil, planting, pruning, grafting, the diseases of trees and their treatment. The author of the *Rawnaḳ-i būstān* discussed in a final section the gathering and keeping of fruit; he had himself, he says, made an orchard near Edirne and added to the data of books on *filāḥa* what he had learned from experience.

In the history of horticulture, the Ottomans hold an especial position as cultivators of flowers, particularly tulips, in the 12th/18th century (see Djewād Rüshdī, in *Edebiyyāt-i ʿUmūmiyye Medjmūʿasī*, nos. 29, 35, 36). At the Palace, there was a separate corps of flower-gardeners controlled by the *shükūfe-bashī* (*čičekči-bashī*) (see Ferīdūn, *Munshaʾāt al-salāṭīn*², ii, 224-5). There was overt competition among great men to raise new varieties, a successful grower receiving the title *ṣāḥib-i tukhm*. In that century the Ottomans are said to have produced 839 types of tulip (A. Refīḳ, *Lāle devri*, 46-7). Ottoman authors wrote many works on flower-growing (the best-known being Meḥemmed Remzī's *Lālezār-i bāgh-i ḳadīm*, ʿAlī Čelebi's *Shükūfe-nāme*, Fetḥī Čelebi's *Tuḥfat al-ikhwān*, Lālezārī Meḥemmed's *Mīzān al-azhār*, ʿOthmān Efendi's *K. al-Nabāt*, ʿAbd Allāh Efendi's *Shükūfe-nāme*, Ḥādjdjī Aḥmed's *Natāʾidj al-azhār*, etc., see Djewād Rüshdī, *op. cit.*). The biographies of prominent growers were also collected in such works as ʿAbd Allāh Efendi's and Rüshdī-zāde Remzī's *Tedhkire-i shükūfedjiyān* (MSS: Halis Ef. and Ali Emiri collections).

In the period of the Tanẓīmāt [*q.v.*] attempts were made, under European influence, to improve agricultural methods. The issue of the *Taḳwīm al-waḳāʾiʿ* of 14 Rabīʿ II 1254/7 July 1838 reports the setting-up of a *Zirāʿat ve Ṣanāʾiʿ Medjlisi*; and in 1259/1843 a *Medjlis-i Zirāʿat* was founded, attached to the Ministry of Finance. Directors of Agriculture were sent to the provinces (13 Radjab 1260/29 July 1844) and on 23 Rabīʿ II 1261/1 May 1845 an Agricultural Congress of delegates from the provinces was held in Istanbul. The chief matters raised by the participants were the need to reduce the taxes on agriculture, to provide agricultural credits, to control rivers and to build roads (A. Ubicini, *Letters sur la Turquie*, 244-65, dwells on the same points). Finally in Ṣafar 1262/February 1846 there was constituted a Ministry of Agriculture, which was later united with the Ministry of Commerce, and in 1310/1892 reconstituted as the Ministry of Forests, Mines and Agriculture (*Orman, Maʿādin ve Zirāʿat Neẓāreti*). The first School of Agriculture and model farm was founded on the Aya-Mama estate near Istanbul, but did not last long. The promotion of scientific agriculture in Turkey is the work of the Halkalı College of Agriculture and Veterinary Science, founded in 1308/1890.

Various attempts were made in the Tanẓīmāt period to improve the lot of the peasant. In some regions proposals were made—but not put into effect—to transfer *muḳāṭaʿa*-land from the *agha*s to the peasants (see H. İnalcık, *Tanzimat ve Bulgar meselesi*, Ankara 1943). Measures taken to promote the ownership of land with the right of inheritance were inadequate (see Ö. L. Barkan, *Türk toprak hukuku*, in *Tanzimat*, i, 399-341), and favoured rather the holders of large estates. The land law of 1274/1858 contains some new European ideas, but is basically merely a codification of the old Ottoman land-regulations. To protect the peasant from money-

lenders, the maximum interest was fixed by law at 15% (Başvekâlet Arşivi, Mühimme def. no. 253, 8-10), and the sum of 20 million ḳuru̲sh̲ per annum was set aside to provide credits to peasants. The measures taken to improve agriculture in the Dobrud̲j̲a [*q.v.*] deserve particular mention. A French expert was called in to survey the agricultural situation and make recommendations (see A. Gaudry, *Recherches scientifiques en Orient*, Paris 1860). The distribution of good varieties of seed to the peasants, tax-exemption granted to promote the culture of olives and mulberries, encouragement to use modern implements—all these sprang from the adoption of the new outlook, whose effects are best exemplified in the activities of Midḥat Pas̲h̲a [*q.v.*] in the Danube province (northern Bulgaria): he was the first to import from Europe reaping- and threshing-machines, he founded a model farm, and set up '*Menāfiʿ sandiḳlarī*' to supply credit on easy terms to farmers (see ʿAlī Ḥaydar Midḥat, *Midḥat Pas̲h̲a, ḥayāt-i siyāsiyyesi...*, Istanbul 1325/1909, 29). In this period the export of agricultural products to Europe, especially to Great Britain, increased greatly (see F. E. Bailey, *British policy and the Turkish reform movement*, Cambridge, Mass. 1942, 76, and tables 8-14). Cotton-growing expanded considerably, with British encouragement, during the American Civil War (see *Türk ziraat tarihine bir bakış*, 127-36).

Bibliography: in the article. (H. İnalcık)

v. — India

This section offers a survey of agriculture in India during the mediaeval period, *i.e.*, from the time of the arrival of the Muslims to the British conquest.

1. Agriculture. The natural setting of agriculture in India, despite various important variations, displays a surprising degree of uniformity. The larger part of the country consists of plains: the great Indus and Gangetic Plains of the north and the broad river valleys of the south. Except for the extreme tip of the southern peninsula, where there is a significant winter monsoon as well, the rainfall received is mainly from the summer monsoons. These are so bountiful that nearly half of the area of the Union of India has an average annual rainfall of over 100 cm. Some mediaeval writers could, therefore, be excused for their exaggeration when they said, as Abu 'l-Faḍl (*Āʾīn-i Akbarī*, Bibl. Ind., ii, 5-6), that the whole of the land of India was cultivable or, as Bābur (*Bāburnāma*, tr. A. S. Beveridge, ii, 488), that its crops needed no artificial irrigation. Nature has also made possible another phenomenon, regarded in mediaeval times as the special characteristic of Indian agriculture, *viz.*, the sowing and reaping of two harvests in the year—one (*k̲h̲arīf*) collected after the end of the rains, and the other (*rabīʿ*) at the end of the winter.

A comparison of 11th/17th century area statistics (preserved in the *Āʾīn-i Akbarī*, c. 1595, and in certain documents from Awrangzeb's reign) with modern returns suggests that the cultivated area during the 11th/17th century was about half of the area cultivated at the beginning of this century in such large regions as Bihār, eastern and central Uttar Pradesh, Berār and Western Pākistān. In western Uttar Pradesh, eastern Pand̲j̲āb and Gud̲j̲arāt, the area cultivated was smaller by one-third to one-fifth. (See Irfan Habib, *Agrarian system of Mughal India*, 1-22; Moreland, *India at the death of Akbar*, 20-2, offers a still lower estimate of the extent of cultivation under Akbar). The great extent of forest in mediaeval times is also indicated by the information we possess about particular localities. We know, for example, from the chroniclers' accounts of campaigns in Kaṭehr (now Rohilkhand) that extensive forests existed in this region in the 13th and 14th centuries. While these were largely cleared during the following three or four centuries, the Tarāʾī forest still covered, further to the east, most of north-eastern Uttar Pradesh (now a densely populated area), down to the end of the 18th century (cf. Rennell's *Atlas of Bengal*, 1781, Map X).

All descriptions of mediaeval agricultural practice apply equally well to the traditional practice in Indian villages today. There existed the same combination of simple and crude tools with certain ingenious methods and devices. While the fitting of the "iron point" to the wooden plough is referred to in a work as old as the *Manusmriti* (x, 84), Fryer (1672-81) found that in fact the "coulters" of Indian ploughs were "unarmed mostly, Iron being scarce", and that hard wood was being used instead. Yet on the other hand, Amān Allāh Ḥusaynī (early 17th century) notices the use of dibbling in sowing cotton, and Thévenot in Gud̲j̲arāt observed the use of fish manure in planting sugar-cane.

Rainfall was generally supplemented by artificial irrigation, from wells, tanks and canals. Bābur has described for us the two most common methods of lifting water out of wells. One involves lifting water in a leathern bucket (*čaras*) pulled out of the well by yoked oxen drawing a rope passed over a wooden wheel, "a laborious and filthy method". The other (the *rahaṭ* or *arhaṭ*), which deeply interested Bābur, is called in English the Persian wheel (*Bāburnāma*, tr. Beveridge, i, 388; ii, 486). The *ḍhenklī*, based on the use of weights, has been described by Fryer. Large tanks for irrigation purposes were usually constructed by damming streams and rivulets. Fīrūz S̲h̲āh (752-90/1351-88) is said to have built several tanks by means of such dams (*band*s) (ʿAfīf, *Taʾrīk̲h̲-i Fīrūz-s̲h̲āhī*, Bibl. Ind., 330). The Udaypūr lake, created by a massive dam in the 16th century, was originally about 40 miles in circumference (*Āʾīn*, i, 509). Abandoned channels of rivers, which became active during the inundations, served as natural canals and were important sources of irrigation in the Indus basin. Human effort was often needed to keep them in use by clearing silted sections. In addition there were some big man-made canals. The best known of these was Fīrūz S̲h̲āh's West Jamunā Canal, re-excavated and re-aligned by S̲h̲āhd̲j̲ahān. Among other important mediaeval works were the East Jamunā Canal (early 18th century), a long canal drawn from the Sutled̲j̲ by Fīrūz S̲h̲āh, a network of Mug̲h̲al canals drawn from the Rāvī near its entry into the plains, the Sidhnai (which the Rāvī took as its main bed in or before the 16th century), the Begārīwah in upper Sind (17th or 18th century) and the K̲h̲ānwah in the Indus delta (early 16th century).

Most of the major crops raised today were also raised in mediaeval times. A few new crops were introduced during the mediaeval period itself. Tobacco cultivation became well established throughout the country during the earlier part of the 17th century. Coffee cultivation had its beginnings late in the same century, while the cultivation of capsicum spread rapidly in the earlier part of the next. Among the purely modern crops may be counted maize, potatoes, tea and groundnuts.

The geographical distribution of the crops in the 17th century (and so presumably earlier) was different in some important respects from that

prevailing today. There was the same broad division into rice and wheat zones marked by the 40- or 50-inch isohyets. But the cultivation of cash crops, notably cotton and sugar-cane, was far more widespread in mediaeval times, the conditions of transport prohibiting concentration. Indigo claimed a large area, in mediaeval times as well as till late in the 19th century; but its cultivation has now practically disappeared. Similarly, opium and hemp were more widely cultivated than now. On the other hand, jute, though known to have been cultivated in certain localities in Bengal, was far from being an important cash crop during mediaeval times. Sericulture, which has undergone a great decline since, flourished mainly in Bengāl and Kas͟hmīr.

Among fruits the most prominent were the mango and the coco-nut. The pine-apple was introduced during the 16th century through the agency of the Portuguese, and was rapidly acclimatized. The practice of grafting seems to have been widely applied in Mug͟hal times. D̲j̲ahāngīr describes its application to cherries and apricots in Kas͟hmīr (*Tuzuk*, ed. Sayyid Aḥmad, 299). Amān Allāh notices its use in planting mangoes, and a history of Shāhd̲j̲ahān's reign declares that great improvement in citrus fruits resulted from grafting (British Museum MS, Or. 174, f. 102a). The Emperors and their nobles were generally fond of laying out orchards. Fīrūz S͟hāh is said to have planted 1200 orchards around Delhi (ʿAfīf, 295). The Mug͟hals have given their name to a particular type of garden, laid out in squares and criss-crossed by channels of flowing water obtained by various devices (see BUSTĀN II).

2. Mediaeval Works on Agriculture. Very few works seem to have been written on agriculture in mediaeval India, to judge from their extreme paucity in modern collections. There exists in some MSS, *e.g.*, India Office Library I.O. 4702, Aligarh Lytton Fārsiya ʿUlūm 51, and Brit. Mus. Or. 1741, ff. 25a-48a, a tract on agriculture which is really Chapter XI of an encyclopaedic work, the *Gand̲j̲-i Bād-āward*, of Amān Allāh Ḥusaynī, K͟hān Zamān, d. 1046/1637. This tract embodies, with acknowledgment, the whole of the *Kitāb S͟had̲j̲arat al-nihāl*, a work mainly concerned with horticulture and written in Persia or Central Asia in the 15th century (Brit. Mus. Add. 1771, ff. 157b-269b, etc.). But Amān Allāh has introduced considerable additions, including detailed descriptions of the cultivation of Indian fruits and notices of various crops grown in India. Yet, despite certain interesting statements, Amān Allah's work is much too superficial, and he follows the *Kitāb S͟had̲j̲arat al-nihāl* in recommending a number of quack-practices. Abu'l-Faḍl in his famous work on Akbar's administration, the *Āʾīn-i Akbarī* (ed. Blochmann, Bibl. Ind., Calcutta, 1867-77), gives much information relating to agriculture. In its detailed accounts of the provinces of Akbar's Empire, the book contains lists of prices of agricultural products, tables of revenue-rates on the various crops, and area statistics and sundry information on cultivation and irrigation.

Bibliography: Modern works only. Moreland's *India at the death of Akbar*, London 1920, also contains a description of the system of agriculture. On Mug͟hal gardens there is a charming book by C. M. Villiers Stuart, *Gardens of the Great Mughals*, London 1913. Irfan Habib's *Agrarian system of Mughal India*, Bombay 1963, may be consulted for a fuller treatment of several points touched upon in this article.

Watt's *Dictionary of economic products of India*, 6 vols., is a monumental work of reference, giving detailed historical, technical and other information on almost everything produced in India. For an examination of Indian agricultural practice see J. A. Voelcker, *Report on the improvement of Indian agriculture*, London 1893; see also the Royal Commission on Indian Agriculture, *Report*, London 1928. Modern agricultural statistics, given by districts, are available in the volumes of *The agricultural statistics of India*, issued by the Department of Revenue, etc., Government of India, at irregular intervals since 1884-5.

(IRFAN HABIB)

FILĀLĪ [see TAFILALT].

FILASṬĪN, colloquially also Falasṭīn, an Arabic adaptation of the classical Palestine (Greek Παλαιστίνη, Latin Palaestina), the land of the Philistines. The name was used by Herodotus (i, 105; ii, 106; iii, 91; iv, 39) and other Greek and Latin authors to designate the Philistine coastlands and sometimes also the territory east of it as far as the Arabian desert. After the suppression of the Jewish revolts in 70 and 132-5 A.D. and the consequent reduction in the Jewish population the name Syria Palaestina, later Palaestina, was adopted by the Romans in place of Judaea. The Roman province of Palestine was later extended by the annexation to it of other, adjoining territories. By the 5th century there were three provinces of Palestine, Palaestina Prima, with its capital at Caesarea, including Judaea, Idumaea, Samaria, and part of Peraea, Palaestina Secunda, with its capital at Scythopolis (Baysān), including the valley of Esdraelon, Galilee, and parts of the Decapolis and of Gaulanitis, and Palaestina Tertia or Salutaris, with its capital at Petra, including the Negev, Nabataea and part of the Sinai peninsula.

(ED.)

1.—PALESTINE UNDER ISLAMIC RULE.

The name of Filasṭīn was applied first to the administrative and military district (*d̲j̲und* [*q.v.*]) established by the Arab conquerors on the territory of the ancient Byzantine province known as *Palaestina prima*. The latter comprised roughly Samaria and Judaea with the coastal area stretching from Mt. Carmel in the north to G͟hazza in the south. This corresponded with a fairly varied region from the geographical point of view, the largest part of which was made up of a mountainous chain of medium height, with summits rarely exceeding 1,000 metres (mountains of Samaria in the north, with Mt. Gerizim, the mountains of Judaea in the centre, and the mountain of Hebron in the south), extending to the west in a series of hills bordering the coastal plain and to the east in expanses of steppe, of which the most important was the desert of Judah.

It is difficult to reconstruct with accuracy the story of the conquest of Palestine by the Arabs. The expedition sent out by Abū Bakr and commanded by ʿAmr b. al-ʿĀṣ invaded the region of G͟hazza in D͟hu'l-Ḥid̲j̲d̲j̲a 12 or Muḥarram 13/February or March 634. After the fall of G͟hazza, ʿAmr marched on Ḳaysariyya (Caesarea by the sea) and began to besiege it in D̲j̲umādā I 13/July 634, but he was forced to retreat on the approach of a new Byzantine army, which he was ready to confront only after uniting his troops with those brought by K͟hālid from Syria. After the victory over the Byzantines of Ad̲j̲nādayn [*q.v.*] in D̲j̲umādā I or II/July-August 634, ʿAmr occupied most of the towns of Palestine: Sabasṭiya (Samaria), Nābulus, Ludd (Lydda), Yubnā,

ʿAmwās (Emmaus), Bayt Djibrīn and Yāfā (Jaffa). It was only after the battle of the Yarmūk [*q.v.*] that he was able to pursue the siege of Īliyā (Jerusalem, see AL-ḲUDS), whose inhabitants are said to have refused to submit to anyone but the Khalīfa himself. ʿUmar b. al-Khaṭṭāb then visited Syria for this purpose (16/637). As for the town of Ḳaysariyya, ʿAmr took up the siege again, but left it shortly afterwards to go to Egypt, leaving as his successor Yazīd b. Abī Sufyān, who, soon dying, was succeeded by his brother Muʿāwiya. It was Muʿāwiya who obtained possession of the town by betrayal in 19 or 20/640 or 641 and completed the conquest of Palestine by occupying ʿAsḳalān (Ashkelon).

The Arab conquerors permitted the previous administrative organization to continue, transforming the former *Palaestina prima* into *djund Filasṭīn*; they set up the capital first at Ludd, and then at al-Ramla, a new town which was founded by Sulayman b. ʿAbd al-Malik when he was governor of Palestine and in which he continued to reside after he had become caliph in 96/715. The *djund Filasṭīn*, still mentioned as such by Ibn Shaddād, survived until the Mongol invasion as an administrative district, but its territory appears to have been extended from the 4th/10th century onwards, both towards the east, and to the south and south-east. The geographer al-Muḳaddasī in fact counts Arīḥa (Jericho) and ʿAmmān (the ancient Philadelphia) among the towns of this district, and is followed in this by Yāḳūt. Al-Iṣṭakhrī and Ibn Ḥawḳal, for their part, join to Palestine the south of the Ghawr [*q.v.*], al-Djibāl [*q.v.*] and al-Sharāt [*q.v.*], that is to say, on the one hand the lands situated to the north of the Dead Sea, and on the other those to the south of it on the other side of the rift-valley which extends as far as the gulf of al-ʿAḳaba. Further, the vast area called al-Tīh, covering the present day Negev and Mt. Sinai, was also in practice attached to Palestine. Under the Mamlūk sultans, Palestine received a new administrative organization. It was attached more or less directly to the *niyāba* of Damascus, and comprised six districts, those of Ghazza, Ludd and Ḳāḳūn on the one hand (these three districts being sometimes considered as forming a separate *mamlaka*) and those of al-Ḳuds (Jerusalem), al-Khalīl (Hebron) and Nābulus on the other.

Palestine was particularly honoured in the Umayyad period. Muʿāwiya is reported to have had himself proclaimed caliph at Jerusalem and it was under one of his successors that the ancient court of the Temple, called the *ḥaram*, received its two principal monuments, *Ḳubbat al-Ṣakhra* and *al-Masdjid al-Aḳṣā*, both built by ʿAbd al-Malik (65-86/684-705). This caliph had the interior of the Dome of the Rock decorated with mosaics evoking the superiority of Islam over Christianity and the domination of the world by the Muslim rulers. In the ʿAbbāsid period Palestine reverted, with Syria, to the rank of a mere province; its official capital continued to be al-Ramla, but the monuments of Jerusalem maintained sufficient renown for the caliph al-Maʾmūn, inspired by hostility for the Umayyads' memory, to feel the need to substitute his own name for that of ʿAbd al-Malik in all the inscriptions commemorating the latter's foundations.

Palestine was occupied by the Fāṭimids immediately after Egypt (359/969) and thus broke free for some time from the authority of the caliphs of Baghdād, which had already become nominal under the Ṭūlūnids [*q.v.*] and then under the Ikhshīdids [*q.v.*]. But Fāṭimid rule was never firmly established there, and brief revolts ensued, of which the most spectacular was the one which led to the installation of a new ʿAlid caliph at al-Ramla by a Bedouin *amīr* of the Banu ʾl-Djarrāḥ [see DJARRĀḤIDS]. Jerusalem, on the other hand, was the victim of the violent measures adopted against the Christians by al-Ḥākim, and at his command the Holy Sepulchre was destroyed. In the late 5th/11th century, Palestine was briefly occupied by the Turcoman chief Atsïz b. Uvak [*q.v.*]; shortly afterwards a minor Turkish dynasty, founded by Artuḳ [see ARTUḲIDS], occupied Jerusalem, but it was soon expelled by a Fāṭimid counter-attack (479-90/1086-98). This Fāṭimid success was nullified by the arrival of the First Crusade, which achieved the foundation of the Latin Kingdom of Jerusalem and led to the Crusaders' occupation of the Holy Places for nearly a century (492-587/1099-1187).

The Arab geographers provide some scattered information on conditions in Palestine during the period between the Arab conquest and the arrival of the Crusaders. In the 3rd/9th century Palestine was occupied by a numerous population of Arab origin (belonging to various tribes). There was, however, also a certain proportion of non-Muslims, Christians, Jews and Samaritans, the size of which we naturally cannot estimate; al-Yaʿḳūbi refers to the presence of "non-Arabs" in the town of al-Ramla. At this period the region was crossed by the pilgrimage route from Damascus; at Ayla, near the gulf of al-ʿAḳaba, this met the route followed by pilgrims from Egypt and the Maghrib; it was also a trade-route used long since for traffic with Egypt or Arabia. There was also a route connecting Jerusalem with ʿAmmān via Jericho. In the 4th/10th century Palestine was one of the most fertile regions of the province of al-Shām, since it was well watered with rain and, in the Nābulus region, boasted abundant streams. Al-Muḳaddasī informs us of its principal products, among which agricultural produce was particularly copious and prized: fruit of every kind (olives, figs, grapes, quinces, plums, apples, dates, walnuts, almonds, jujubes and bananas), some of which were exported, and crops for processing (sugar-cane, indigo and sumac). But the mineral resources were equally important: chalk earth (*al-ḥawwāra*), marble from Bayt Djibrīn, and sulphur mined in the Ghawr, not to mention the salt and bitumen of the Dead Sea. Stone, which was common in the country, was the most generally used building-material for towns of any importance. Al-Muḳaddasī also gives us brief indications of the main Muslim religious trends; there were some Shīʿīs at Nābulus, no Muʿtazilīs openly confessing their beliefs, and some well organized Karrāmīs at Jerusalem; at the end of the 4th/10th century the juridical schools followed were the Shāfiʿī and the Fāṭimī. The mediaeval geographers also notice briefly the places of pilgrimage, which were especially numerous in Jerusalem and Hebron (the town of Abraham *al-Khalīl*).

During the period of the Crusades, Palestine was the scene of battles and ambushes, periodically interrupted by the truces which were from time to time established by treaties; such a treaty is that of 626/1229 by which the Ayyūbid al-Kāmil restored the demilitarized city of Jerusalem to the Franks of Acre for ten years. This situation, which in any case became more settled after the recapture of Jerusalem by Ṣalāḥ al-Dīn, did not, however, prevent the continuation of economic interchange between Egypt and Syria; the caravans were merely subject to "transit tolls" imposed by the Franks or, in certain

circumstances, were the victims of hostile raids. Nor did it prevent the establishment of fruitful commerce, particularly under the successors of Ṣalaḥ al-Dīn, between the European merchants (Italian, French or English), living mainly at Acre, and the Muslim towns of the interior. It was also at this time that Palestine was celebrated by certain Muslim writers as the especial land of Prophets, and the places of pilgrimage experienced their greatest popularity; whether at Jerusalem or at Nābulus or Hebron relics of the Biblical prophets venerated by the Muslims were not scarce, and to these were added the monument at ʿAsḳalān, reputed to contain the head of al-Ḥusayn b. ʿAlī [*q.v.*], and the tomb at Ghazza of Hāshim, grandfather of the Prophet.

At the end of the 7th/13th century (690/1291), the Franks, from whom the Mamlūk sultan Baybars had already taken the stronghold of ʿAsḳalān in 668/1270, were expelled by al-Ashraf Khalīl from their last possessions, Caesarea and Acre; thus all Palestine and the neighbouring provinces were again under Muslim rule. The territories west of the Jordan continued thus during the Mamlūk period to play an important part as a trunk route, followed as much by the merchants as by the official couriers who linked Cairo with Damascus and Aleppo along a post-road adopted and improved to permit greater despatch.

In 922/1516, after the battle of Dābiḳ, the region fell under Ottoman rule, which was to last almost without interruption until 1917-18. During the 16th century Palestine consisted of the sandjaḳs of Ghazza, Jerusalem, Nābulus, Ladjdjūn and Ṣafad, all forming part of the *eyālet* of Damascus. The sandjaḳ of Ladjdjūn was not under an Ottoman governor but was held by the local Bedouin clan of Ṭurābāy, who revolted on more than one occasion. From the late 16th century there is a noticeable decline, due to falling standards in the administration, frequent changes of governors, attempts by local chieftains to gain independence, and the campaigns carried out on the soil of Palestine originating in neighbouring regions. As early as the end of the 10th/16th century, indeed, the little Druze state of Fakhr al-Dīn [*q.v.*], which controlled the districts stretching from Beirut to Mt. Carmel, attempted, between 1595 and 1634, to make itself independent of the Sublime Porte; following this episode, in about 1660 a new province distinct from that of Shām was created, named Ṣaydā and including the *liwās* of Ṣafad and al-Ladjdjūn. This measure did not prevent the continued activities of local chieftains the most notable of whom, Ẓāhir Āl ʿUmar [*q.v.*], a chief of bedouin origin, established himself round ʿAkkā between 1750 and 1775. Shortly thereafter it was the turn of Aḥmad al-Djazzār to attempt to emancipate himself from Ottoman tutelage in the same region, though not without vigorously resisting the attacks of Napoleon Bonaparte who, although he had captured Yāfā in 1213/1799, was unable to make himself master of ʿAkkā. In the 19th century, the son of Muḥammad ʿAlī, Ibrāhīm Pāshā [*q.v.*], was another who desired to take Palestine and Syria from the Ottomans and thus assure his mastery over the lands of the Arabs. He captured ʿAkkā and Damascus in 1832, but in 1840 Palestine was returned to the sultan ʿAbd al-Madjīd in consequence of the intervention of Britain and Austria.

During the later Ottoman period Palestine became a subject of increasing interest to the Great Powers of Europe, on economic as much as religious grounds. The custody of the Holy Places there had been acknowledged as in the hands of the Orthodox Patriarchate of Jerusalem in the 16th century and was reaffirmed at the request of Russia by firmans of 1853; the Latin clergy there also had, since the 16th century, been under the protection of France. This situation was the occasion for frequent intervention by the European States in the affairs of the Ottoman Empire. But Palestine also had European commercial factories, mainly French, such as those of Acre and Ramla, and here, as well as at Jerusalem, there resided Consuls charged with protecting their nationals by virtue of the agreements known as Capitulations [see IMTIYĀZĀT].

From the 18th century onwards, European economic penetration increased in Palestine as elsewhere in the Arab East. European products were sold there either by European merchants themselves or by Christians or Jews native to the area who sometimes, by taking a European nationality, succeeded in enjoying the advantages conferred by the Capitulations, avoiding part of the '*avanias*' to which those merchants who were Ottoman subjects were exposed and thus obtaining practically a monopoly of important trade [see BERATLĪ]. In the 19th century, Christian missions, both Catholic and Protestant, contributed in Palestine as in the Lebanon to the raising of the general level of education, while with European help modern technology began to spread; thus a French company completed the building of the first railway line, that connecting Jaffa with Jerusalem, in 1892.

Palestine had some Jewish inhabitants throughout the period of Islamic rule, though their numbers were much reduced during the Crusades. They were from time to time reinforced by immigration from other countries, notably in the 16th century. A new type of immigration began in the late 19th century, with the establishment of the first Zionist agricultural settlements in the eighteen eighties. Despite attempts by the Ottoman government to restrain it, this movement gained force. It found its ideology in Zionism, whose official beginnings may be dated 1897, when the congress inspired by Th. Herzl was held at Basle; at the beginning of the 20th century it became ever more marked, so much so that the number of Jews resident in Palestine rose from 25,000 in 1880 to 80,000 in 1914.

2. — The British Mandate

Turkish rule in Palestine ended with the First World War, which led to the dismemberment of the Ottoman Empire, ratified in 1920 by the abortive Treaty of Sèvres, and again in the Treaty of Lausanne of 1923. Great Britain, who had occupied Palestine during the war (General Allenby entered Jerusalem on 9 December 1917), had asked the League of Nations as early as 1919 to entrust her with the administration of the territory under the form of an international Mandate. The British proposal, which was amended in 1920, was approved by the Council of the League in July 1922, and the Mandate entered into force in September 1923, after the conclusion (July 1923) but before the entry into force (August 1924) of the Treaty of Lausanne, which regulated the future of the territories split off from the Ottoman Empire. Although the Mandate covered the areas on both sides of the Jordan, direct British administration was established only in the region to the west of the river. That to the east formed the Amirate of Transjordan, with an autonomous government, whose powers were limited by a treaty with Britain.

The policy of the British mandatory government in Palestine was from the beginning influenced by the promises made by Britain to the Jews to establish a Jewish National Home in Palestine. In August 1897 the Basle Congress had defined Zionism in the following formula: "the object of Zionism is the establishment for the Jewish people of a home in Palestine secured by public law". The execution of this programme was undertaken by a "Zionist Organization", which committed itself to political action, with especial encouragement from Great Britain, and which achieved a great success in 1917, when the latter declared officially that "His Majesty's Government view with favour the establishment in Palestine of a National Home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine" (Balfour Declaration, 2 November 1917); France, Italy and the U.S.A. subsequently accepted the policy set out in the British declaration.

Parallel with the obligations Great Britain had assumed towards the Zionist Organization, she was bound by the promises of independence she had made to the Sherif Ḥusayn to encourage him to revolt against the Turks (Ḥusayn-McMahon correspondence, 1915). The British Government subsequently declared that Palestine was excluded from the territories promised to the Arabs for their independent State; in the Churchill Memorandum of June 1922, accepted by the Zionist Organization, it further stated that "the terms of the Declaration referred to do not contemplate that Palestine as a whole should be converted into a Jewish National Home, but that such a Home should be founded *in Palestine*", and gave the Arabs various assurances that an autonomous government would be established in Palestine. But the Arabs, disappointed in their hopes and disturbed by the massive immigration of Jews, who in 1939 already numbered 400,000, refused to cooperate with the Palestine administration and, under the inspiration of the Arab Higher Committee for Palestine, directed by al-Ḥād̲j̲d̲j̲ Amīn al-Ḥusaynī, *muftī* of Jerusalem, reacted with violence: in 1928, 1929, 1933, 1936 and 1939 bloody disturbances broke out in Jerusalem, Jaffa and Haifa.

In spite of the Arab reaction, the Zionists pursued their efforts with success; they consolidated their international position by the creation (Zurich Congress 1929) of the "Jewish Agency", which included also representatives of non-Zionist Jews. The situation in Palestine disturbed the League of Nations Permanent Mandates Commission, which in 1930 severely condemned the British administration for failing to meet and reconcile Arab and Jewish needs. The British Government gave assurances that no more land would be put at the disposal of Jewish immigrants; this measure was, however, mitigated by an assurance given to the Zionists that there was no question of an absolute prohibition but rather of the imposition of controls on land purchase. Nevertheless, faced with unshakeable opposition from the Arabs, and obliged continually to reinforce the garrison in order to put down the disturbances, Britain was forced to give an ever more restricted interpretation to the Balfour Declaration. After a fruitless attempt to bring Arab and Jewish delegates together to settle their differences (the Round Table Conference, London, February-March 1939), the British Government published a White Paper (May 1939) which restricted Jewish land purchases and immigration and envisaged the establishment after ten years of a Palestinian State in which Arabs and Jews would share the government. The solution proposed by the British Government excluded the establishment of the Jewish National Home, and the publication of the White Paper was followed by an outburst of Jewish violence. The situation grew steadily worse during the Second World War. The Jews surviving the holocausts gazed with hope towards Palestine; the British authorities began to force the immigrants back; and the Jewish secret organizations entered on a campaign of terror against the British, who in 1946 proclaimed martial law.

Great Britain's efforts at conciliation had failed and she therefore referred the question to the United Nations Organisation. The U.N. General Assembly appointed a ten-member Special Committee in 1947. Its report was then considered by the Palestine Committee of the whole Assembly, which produced a partition plan, adopted by the Assembly on 29 November 1947, and envisaging the creation of two independent States, Arab and Jewish, and of an international zone covering the Jerusalem area under U.N. control.

The plan was accepted by the Jews but rejected by the Arabs. Arab volunteers attacked the Jewish forces, who were making efforts to occupy the areas assigned to them by the partition plan. Fighting broke out in the Jerusalem area, in which the Jewish forces gained some success; Arab opinion was moved by this to call for the intervention of the Arab regular armies; but divergencies of opinion arose in the Arab League and between the Arab governments.

On giving up the Mandate on 15 May 1948, Britain withdrew her troops from Palestine. The day before, David Ben Gurion had proclaimed the birth of the State of Israel. The Arab armies advanced, but the Jews confronted them everywhere. The Security Council imposed a truce, accepted by both Arabs and Jews, but the United Nations' efforts at conciliation ended in failure. In December 1948, the battle re-commenced, but Egypt was the only Arab State fighting, for ʿIrāḳ, Syria and Transjordan withheld their troops from the operations. Despite their numerical superiority the Egyptian forces withdrew before the Jews, whom the ceasefire imposed by the Security Council halted 20 km. beyond their borders. The armistice between Israel and Egypt, signed at Rhodes on 24 February 1949, and those signed successively thereafter between Israel and Lebanon, Jordan, and Syria, put an end to the fighting between the Arabs and the Jews and established the partition of Palestine. (P. MINGANTI)

FILIBE, Ottoman name for the town of Plovdiv in Bulgaria, situated on and around six syenite hills in the Thracian plain along the Maritsa. Called Pulpudeva by the Thracians, Philippopolis by the Greeks, Trimontium by the Romans, and Pludin by the Slavs, it was an important fortress throughout antiquity and the Middle Ages, being held successively by Byzantines, Bulgarians and Latins between the 6th and 14th centuries A.D. At the time of the Ottoman invasion of the Balkans it was in the hands of the Bulgarians. The Ottoman chroniclers record the conquest of Filibe immediately after the fall of Edirne, i.e., in about 765/1363-4. According to Saʿd al-Dīn the governor of the town attempted to resist but, not risking an open battle, was obliged to retreat to the fortress; the besiegers made a fierce onslaught and the governor was compelled to cede the town to Lālā Shāhīn. According to Ewliyā Čelebi, Filibe was besieged at seven points, bridges having been built across the Maritsa, and was taken by assault after heavy fighting. There is no doubt that the town offered stubborn resistance, but it was probably taken on terms (cf. Chalcocondyles, Bonn ed., 32). It was made the chef-lieu of the *eyālet* of Rūm-ili, with Lālā Shāhīn as the first *beglerbegi*. In registers dating from the end of the 9th/15th century, Filibe is referred to as the chef-lieu of a *wilāyet* and a *nāḥiye*, while during the first half of the 10th/16th century it figures among the nine *ḳāḍīlīḳ*s (*nāḥiye*s) of the *pasha liwāsī*. In the early 10th/16th century the town belonged partly to the *khāṣṣ* of the Sultan and partly to the *khāṣṣ* of Ayās Pasha. The large revenues arising from the rice-fields (*čeltik*) in the surrounding region were farmed out as *muḳāṭaʿas*.

The colonization of Filibe and its district by Turks and Tatars was begun by Murād I. Bāyazīd I transported here nomads from Sarukhān, and Meḥemmed I Tatars from Anatolia; one of the sons of Isfendiyār was settled here by Meḥemmed II. According to de la Broquière, the population was predominantly Bulgarian in 1433. Turkish sources show that in the early 10th/16th century Filibe had 29 Muslim and 4 Christian *maḥalle*s, and a Jewish and a Gypsy community, while in the 11th/17th century it had 23 Muslim *maḥalle*s and 7 *maḥalle*s inhabited by Bulgarians, Serbians, Jews, Greeks, etc. The surrounding region was mainly inhabited by Bulgarians. The town was the seat of a Greek metropolitan.

Situated on a large river on the main road between Belgrade and Istanbul, Filibe became, during the 10th/16th and 11th/17th centuries, an important centre of trade and industry. Rice growing flourished in the district, and the town was famous for the fine wool of the neighbourhood and for the manufacture of fine woollen cloth (*aba*). The guild of clothmakers was active and influential: its code of regulations, of the 11th/17th century, has been preserved. Merchants from all over the Ottoman Empire came to the Filibe fair; hides were bought by the merchants of Ragusa (Dubrovnik), the cloth was sold as far away as Syria and Germany, and the raw wool was taken by Venice.

The appearance of Filibe changed greatly during the period of Ottoman domination. The old fortress on the Trimontium was used by the Turks until the beginning of the 9th/15th century, but thereafter fell into ruin. The centre of the town shifted towards the north-west. New mosques, public buildings and palaces were built, notably the Ulu Djāmiʿ, the ʿImāret Djāmiʿ (of 848/1444-5, founded by Shihāb al-Dīn Pasha), the Kurshun Khān, and an extensive bazaar (9th/15th century), and the Khunkār Ḥammāmī; a clock-tower was erected on one of the hills of the town (early 11th/17th century); a new wooden bridge spanned the Maritsa, and near the town extensive stabling was built for the Imperial camels. Besides Muslim buildings, Filibe possessed a number of old churches (St. Marina, St. Constantine, St. Demetrius) and a mansion for the Metropolitan. During the 18th and 19th centuries the town flourished and acquired its predominantly Bulgarian appearance.

FILORI, Ottoman name for the standard gold coins of Europe (see H. Sahillioğlu, *Bir mültezim zimem defterine göre XV. yüzyıl sonunda Osmanlı*

darphane mukataaları, in *Ist. Ün. Iktisat Fak. Mecm.*, xxiii (1962-3), 145-218); also a tax amounting to one *filori*, in which sense it is usually referred to as *resm-i filori*. The tax, paid especially by the Eflāḳ (i.e. the semi-nomadic Vlachs of the Balkans, and especially of Serbia), was, together with other supplementary imposts, also called *Eflāḳiyye ʿādeti*.

According to the oldest surviving Ottoman *Ḳānūn* for the Eflāḳ (see H. Inalcık, *Stefan Duşan'dan Osmanlı Imperatorluğuna*, in *Fuat Köprülü armağanı*, Istanbul 1953, 222), the Eflāḳ subject to the *resm-i filori* paid one *filori* per household or family per year. Each household also paid two sheep (one ram and one ewe). According to the same *Ḳānūn*, twenty households formed one *ḳatun* or *ḳatuna*, and each *ḳatuna* was obliged to supply annually one tent (*čerge*), one cheese, three ropes (*urg̲h̲an*), six halters (*yular*), one skin-bag of butter and one sheep; but according to the *taḥrīr*-register of 873/1468 for Bosna (Istanbul Belediye Library, Cevdet collection, O 76), one *ḳatun* consisted of 50 households, and each *ḳatun* paid one tent, or 100 *aḳče* as its equivalent, and two rams, or 60 *aḳče* (for other later changes see *Kanun i Kanun-name* (Mon. Turc. Hist. Slav. Merid. Illust., i), Sarajevo 1957, 12-7; *Sulṭān Süleymān Ḳānūn-nāmesi*, *TOEM*, *ʿilāve*, 64; Ö.L. Barkan, *Kanunlar*, i, Istanbul 1943, 324-5).

The *resm-i filori* was a local tax older than the Ottoman occupation. According to the code of Stefan Dushan, each household paid to the ruler one *hyperpyron* (*careva perpera*) (at Zeta one Venetian ducat; see G. Ostrogorskij, *Pour l'histoire de la féodalité byzantine*, trans. H. Gregoire and P. Lemerle, Brussels 1954, 200, 240, 255). The Ottomans continued this taxation-system for the Eflāḳ, who had from of old been subject to a special ordinance (*jus valachicum*); but as rulers of a Muslim state they interpreted the *resm-i filori* as being equivalent to the *d̲j̲izya* [*q.v.*] prescribed by the *s̲h̲arīʿa* and to the *ʿurfī raʿiyyet rüsūmu*, from both of which the Eflāḳ were consequently exempt.

Similarly the tax of one *filori* per household which the Ottomans exacted in Hungary was nothing but the continuance of a tax formerly paid to the kings of Hungary (see the *Ḳānūn* for Lipve, of 961/1554, in Barkan, 322); this tax too was regarded as the equivalent of the *d̲j̲izya* (ibid., 304, 316).

The *resm-i filori* was usually paid in *aḳče*s, so that the number of *aḳče*s which it represented increased with the increase in the relative value of gold (45 *aḳče*s in 873/1468, 50 under Süleymān I, 70 in 974/1566, 80 in 976/1568).

In view of the lightness of this tax the Ottomans imposed military service on the Eflāḳ (cf. in this connexion the Yürük [*q.v.*]), every five households supplying one *voynuḳ* (from Slavonic *voynik*, 'soldier').

The Ottomans imposed the *filori* tax, sometimes under the name of *Eflāḳ ʿādeti*, on other groups who rendered services to the state. Thus the *raʿāya* miners in the Rudnik district paid one *filori* per household instead of *k̲h̲arād̲j̲* (*i.e.*, *d̲j̲izya*) and *ispend̲j̲e* [*q.v.*] (*Kanun i Kanun-name*, 15-6; for the Eflāḳ employed as guardians of passes (*derbendd̲j̲i*), *ibid.*, 62); towards 936/1530 the Čingene in the sand̲j̲aḳ of Semendire (Smederevo) also paid 80 *aḳče* per household under the name of *resm-i filori* (Barkan, 250); but these groups may have some connexion with the Eflāḳ.

In general the *resm-i filori* was collected by an official called *filorid̲j̲i* (*Kanun i Kanun-name*, 78, 130, 147), to be paid direct into the treasury of the Sultan, although sometimes it was allocated to the *sand̲j̲aḳ-begi*. In the 11th/17th century those subject to the *filori* tax were called *filorid̲j̲i ṭāʾifesi*, or *filorid̲j̲iyān*; in *Ḳānūn*s of this period (*Ḳānūn-nāme*, Ankara Ün. DTC Fakültesi Library, I. Saip collection, MS 5120, 141) the *filorid̲j̲i* is defined as a person who is exempt from the *ʿös̲h̲ür* [see ʿUS̲H̲R] and the *raʿiyyet rüsūmu* [*q.v.*] and pays only a fixed sum annually. The *resm-i filori* was paid (in *aḳče*s) in two instalments, on the day of K̲h̲iḍr-Ilyās [*q.v.*] (23 April, O.S.) and on *Ḳāsım günü* [*q.v.*] (26 October, O.S.).

FINYĀNA, Sp. FIÑANA, a small town of some 5,000 inhabitants engaged in agriculture. It is situated in the province of Almería, about 30 km. from Guadix, in the *partido judicial* of Gérgal. It lies on the southern slope of the Sierra de Baza, which joins the Sierra Nevada on the west. It is overlooked by an ancient fortress of which only ruins remain. Within the town there was a mosque, now converted into a church where services are held. The Muslim inhabitants were *muladíes* of Hispano-Roman origin and had nobody of Arab descent among them. They lived peacefully occupied in agriculture, preferably the cultivation of mulberry trees and the rearing of silkworms. An industry grew up of which the products were highly esteemed: the manufacture of *ṭuruz*—handkerchiefs and shawls of silk and brocade. These were exported even to Christian territory and were much sought after in León, where they were known as *alfiniane* from their mark of origin. But already in the 14th century this industry and the culture on which it was based had disappeared and today no trace of it remains. During the rebellion of Ibn Ḥafṣūn the inhabitants of Finyāna showed a disposition to join him but ʿAbd al-Raḥmān III, when he occupied the *kūra* of Baza during his campaign of 300/913 against eastern Andalusia, made a diversion against Finyāna and there, on 4 S̲h̲awwāl 300/14 May 913, captured the emissaries whom Ibn Ḥafṣūn had sent to them. No more details of its mediaeval history until it was taken by the Catholic Monarchs when they won Baza are known.

Bibliography: Idrīsī, *Descr.*, text 201, tr. 246; Ḥimyarī, *al-Rawḍ al-miʿṭār*, ed. Lévi-Provençal, text 143-4, tr. 172; Lévi-Provençal, *Histoire de l'Espagne musulmane*, ii, 10; iii, 311; Sánchez Albornoz, *Estampas de la vida en León durante el siglo X*, 11-4. (A. HUICI MIRANDA)

FIRABR, early (*e.g.*, *Ḥudūd al-ʿālam*, 113) named also Firab (Farab), in Ḳudāma (BGA vi, 203) as well as Yāḳūt (iii, 867) also called Ḳaryat ʿAlī or Ribāṭ Ṭāhir ibn ʿAlī, is a town opposite Āmul [*q.v.*, 2]. It lay a parasang north of the Oxus (Āmū Daryā, [*q.v.*]) on the road to Buk̲h̲ārā and was the centre of a fertile region with many villages as well as the seat of an inspector for water-control (*Mīr-i rūd̲h̲*: *Ḥudūd*, see above). The city was protected by a fortress and possessed a Friday-mosque and an open space for public worship (*muṣallā*) with a hostel for travellers who were also boarded there (Muḳaddasi, 291; Ibn Faḍlān, ed. Z. V. Togan, 1939, 4, § 4: written *Āf.rb.r*; cf. trans. Canard, in *AEIO Alger*, xvi (1958), 54). According to a presumably legendary account by

Abu 'l-Ḥasan ʿAbd al-Raḥman ibn Muḥammad al-Naysābūrī (Nīs̲h̲āpūrī) in his *K̲h̲azāʾin al-ʿulūm* (continuator and editor of Nars̲h̲ak̲h̲ī's description of Buk̲h̲ārā, ed. Ch. Schefer, 6, also in his *Chrestomathie persane*, 13; tr. R. N. Frye, 1954, 8 and 119, note 97) the founding of Firabr followed the conquest of Paykand by the Kök Turks towards the end of the 6th century (conjectures regarding this report in J. Markwart, *Wehrot und Arang*, Leiden 1938, 145-8; and Franz Altheim-Ruth Stiehl, *Finanzgeschichte der Spätantike*, Frankfurt 1957, 257-62, who object to an interpretation of Naysābūrī, unconfirmed by sources, in S. P. Tolstow, *Auf den Spuren der altchoresmischen Kultur*, Berlin 1953, 235 f., and other works of Tolstow mentioned there).

Bibliography: Iṣṭak̲h̲rī, 314; Ibn Ḥawḳal, 2nd ed., 489; Ibn K̲h̲urradād̲h̲bih, 25, 173; Yāḳūt, Beirut 1957, iv, 245 ff. (with the index of the scholars of this town); Le Strange, 403 ff., 443.

(B. Spuler)

FIRĀSA, a technique of inductive divination which permits the foretelling of moral conditions and psychological behaviour from external indications and physical states: *al-istidlāl bi'l-k̲h̲alḳ al-ẓāhir ʿala'l-k̲h̲ulḳ al-bāṭin* (cf. al-Rāzī, *Firāsa*, ed. Mourad, 4; Ḥād̲j̲d̲j̲ī K̲h̲alīfa, ii, p. VIII; iv, 388 ff.; al-Ḳazwīnī, i, 318; cf. Ps.-D̲j̲āḥiẓ, *ʿIrāfa*, ed. Inostrants̲e̲v, 17 ff.). These indications are provided by colours, forms and limbs; they reveal to experts the secrets of characters and minds. "Peculiarities of character cannot be concealed even if a man does his utmost to keep silence about them and to hide them; for nature unveils them and lets them show through. Sooner or later, God reveals them through the actions, movements and gestures of the man. Indeed the Ḳurʾān (XLVII, 30) says: 'And if We wish it, We shall make thee see them (= the false Muslims); thou shalt recognize them by their physiognomy (*sīmā-hum*); thou shalt recognize them by their *lapsus linguae* (*laḥn al-ḳawl*)" (Ps.-D̲j̲āḥiẓ, *op. cit.* 17). ʿAlī is related to have said: "No-one considers something within his conscience without its being revealed by the slips of his tongue or the expression of his face" (al-Ibs̲h̲īhī, *Mustaṭraf*, tr. Rat, ii, 187). It has even been said that "the eyes of servants unveil the conscience of their masters" (al-D̲j̲ināʿī, *al-Darad̲j̲a al-ʿulyā fī tafsīr al-ruʾyā*, ms. ar. Strasbourg 4212, f° 97).

Firāsa is an Islamic science whose Arab ancestor is *ḳiyāfa* (sometimes confused with *ʿiyāfa* which is essentially concerned with portents drawn from the behaviour of birds).

The classification of the sciences which are included under the name of *firāsa* bears witness to the breadth of territory which this technique of divination covers. In fact, it includes (Ḥad̲j̲d̲j̲ī K̲h̲alīfa, i, 34; cf. al-Rāzī, *op. cit.* 10 ff.; al-D̲j̲āḥiẓ, *Ḥayawān*, v, 93; Ps.-D̲j̲āḥiẓ, *ʿIrāfa*, 16): birth-marks and beauty spots (*al-s̲h̲āmāt* and *al-k̲h̲ayalān*), palmistry (*ʿilm al-asārir* or *ʿilm al-kaff*), character as revealed from shoulder-blades (*ʿilm al-aktāf*), examination of foot-prints (*ʿilm ʿiyāfat al-at̲h̲ar*), examination of morphoscopic or genealogical lines (*ʿilm ḳiyāfat al-bas̲h̲ar*), finding one's bearings in deserts (*ʿilm al-ihtidāʾ fi 'l-barārī wa'l-ḳifār*), dowsing (*riyāfa*), detection of precious metals (*ʿilm istinbāṭ al-maʿādin*), signs foretelling rain (*ʿilm nuzūl al-g̲h̲ayt̲h̲*), the unravelling of secret analogies between present and future events (*ʿilm al-ʿirāfa*), divination by means of palm-trees (palmomancy) (*ʿilm al-ik̲h̲tilād̲j̲*).

To this divinatory meaning of *firāsa* regarded as a technique of observation of external signs betraying intentions, qualities, defects, courage, intelligence and thoughts (cf. Ps.-D̲j̲āḥiẓ, *loc. cit.*, 12-14; al-Nuwayrī, *Nihāya*, iii, 149 ff.; al-Ibs̲h̲īhī, *op. cit.*, 188 ff.), must be added a psychological meaning which gives it an intuitive and almost prophetic character. This meaning is peculiar to religious and mystical literature. It is derived from verses of the Ḳurʾān (XV, 75; XLVII, 30; XLVIII, 29) in which the term *sīmāʾ* is equivalent to *firāsa*. There appears already in these texts the idea of a divine influx which assists certain privileged persons to an intuitive understanding of the secrets of men's consciences. Tradition only enriches and develops this idea while applying it to *firāsa*. This last is then defined as "a light which God causes to penetrate the heart" or "a thing which God causes to penetrate their hearts and their tongues"; and the Prophet is made to say: "Fear the intuitive eye of the true believer, for he sees with the light of God." These definitions of *firāsa* derived from the collections of *ḥadīt̲h̲*s, are widely commented on and developed in mystical writings (cf. al-Ḳus̲h̲ayrī, *al-Risāla al-Ḳus̲h̲ayriyya*, ed. Būlāḳ 1284/1867, *Bāb al-firāsa*, 137-43). "If you converse with truthful persons," recommends Aḥmad b. ʿĀṣim al-Anṭākī, "speak the truth to them, for such persons are spies (*d̲j̲awāsīs*) of hearts; they penetrate into your heart and out again before you have realized it" (*ibid.*, 139). *Firāsa* becomes one of the distinguishing qualities (*k̲h̲awāṣṣ*) of faith, to which a close bond unites it: "He who has the deepest faith has also the most penetrating *firāsa*" (*ibid.*, 137).

Ḥadīt̲h̲ has another term even more expressive which regards *firāsa* as the fruit of inspiration (*ilhām*). The Prophet is made to say: "The nations which came before you had their inspired ones (*muḥaddat̲h̲ūn*); if there is one to be found in my nation it can only be ʿUmar (b. al-K̲h̲aṭṭāb)" (Tas̲h̲köprüzāde, *Miftāḥ al-saʿāda wa-miṣbāḥ al-siyāda*, i, 272; see also Ibn al-At̲h̲īr, *Nihāya*, i, 240; Ibn K̲h̲aldūn, *Muḳaddima*, i, 200, tr. de Slane, i, 228, tr. Rosenthal, i, 223; Ḥarīrī, *Maḳāmāt*, ed. de Sacy, 601).

Finally, *firāsa* preserves the main meaning of Arab *ḳiyāfa*, the recognition of signs of paternity. The *Ḳāʾif* was called in to settle genealogical disputes (al-Rāzī, *Firāsa*, 12 ff.; Ibn Ḳayyim al-D̲j̲awziyya, *al-Ṭuruḳ al-ḥukmiyya*, Cairo 1323, 195-213, 208; Goldziher, *Muh. St.*, i, 185). Speaking of physiognomy for the use of princes, Ibn Ḳayyim al-D̲j̲awziyya proves that the law is not based only on objective criteria but also on subjective impressions such as the deductions drawn from *firāsa* (on the controversy concerning the legal value of *firāsa*, cf. Mourad, *La physiognomie arabe*, 135 ff.).

The far-reaching development which separates *firāsa* from *ḳiyāfa* is due on the one hand to the psychological and religious elements introduced by Ḳurʾān and Tradition, and on the other hand to the translation of Greek treatises on physiognomy whose characteristics strongly influenced *firāsa*. The most important of these were the treatise of Pseudo-Aristotle called *Sirr al-asrār*, used by al-Rāzī and al-Dimas̲h̲ḳī (cf. M. Steinschneider, *Die arabischen Übersetzungen aus dem Griechischen*, Leipzig 1897, 79 ff.), that of Polemon (al-D̲j̲āḥiẓ, *Ḥayawān*, iii, 46, 83, 87 ff.; likewise Ḥād̲j̲d̲j̲ī K̲h̲alīfa, iv, 388 ff.; cf. Steinschneider, *op. cit.*, 107 ff.; a *Kitāb al-Firāsa* under the name of Filīmūn was edited at Aleppo in 1929; on this person and his work, see the excellent article by Willy Stegemann in Pauly-Wissowa, xxi, 2 (1952), col. 1320-57 (cf. col. 1345 ff.)) and that of Menas (Mīnas—Μήνας) al-Rūmī (?), *Kitāb al*

Khayalān and *Kitāb al-Shāmāt* (*Fihrist*, 314). In another connexion, Ps.-Djāḥiẓ (*ʿIrāfa*, 120) quotes Djawbar al-Hindī as the author of a treatise on *firāsa*.

Bibliography: A great number of treatises on physiognomy (in Arabic, Turkish and Persian) are to be found in the different catalogues of MSS. Among the best-known should be mentioned: *K. al-Firāsa* of Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Ibr. b. Abī Ṭālib al-Anṣārī al-Ṣūfī al-Dimashḳī (d. 727/1327) sometimes called *al-Siyāsa fī ʿilm al-firāsa* or *al-Firāsa li-adjl al-siyāsa* or again *Aḥkām al-firāsa* (cf. *ZDMG*, xxi, 384). Several copies of it are known, especially Bursa, Ḥusayn Čelebi 33, I (the second part of the manuscript contains the *Risāla fi'l-firāsa* of Yaʿḳūb b. Isḥāḳ al-Kindī; cf. O. Rescher, in *ZDMG*, lxviii (1914), 53), Aya Sofya 3782, Paris 2759, 5928, etc. The work was edited in Cairo in 1300/1882. No less famous is the treatise of Fakhr al-Dīn al-Rāzī (d. 606/1209), *Risāla fī ʿilm al-firāsa* or *Djumal aḥkām al-firāsa* (cf. MS. Aya Sofya 2457, 2, containing also the *K. al-Firāsa* of Filīmūn). The work was edited at Aleppo in 1929 by Muḥ. Rāghib al-Ṭabbākh, then re-edited, translated and annotated, with an introduction and a bibliography, by Yousef Mourad in his complementary thesis, *La Physiognomonie arabe et le 'Kitāb al-firāsa' de Fakhr al-Dīn al-Rāzī*, Paris 1939. Cf. also the treatise attributed to Djāḥiẓ called *Bāb al-ʿIrāfa wa'l-zadjr wa'l-firāsa ʿalā madhhab al-Furs*, edited, translated into Russian and annotated by K. Inostrantsev, *Materyalï iz arabskikh istočnikov dlya kul'turnoy istorii Sasanidskoy Persii*, in *Zapiski Vostočnago Ot'deleniya Imperatorskago Russkago Arkheologičeskago Obshčestva*, xviii (1907-8), 113-232.

(T. Fahd)

FIRʿAWN (pl. Faraʿina), Pharaoh. The Arabic form of the name may derive from the Syriac or the Ethiopic. Commentators on the Ḳur'ān (II, 46-49) explain the word as the permanent title (*laḳab*) of the Amalekite kings [see ʿAMĀLĪḲ], on the analogy of Kisrā, title of the sovereigns of Persia, and Ḳayṣar of the emperors of Byzantium. As the designation of the typical haughty and insolent tyrant, the name Firʿawn gave rise to a verb *tafarʿana* "to behave like a hardened tyrant".—If one disregards certain verses of Umayya which are probably not authentic, it was in fact the Ḳur'ān which, at the time of the first Meccan period, introduced the figure of Pharaoh (only that of Exodus) into Arabic literature. Broadly speaking, the narrative in the Ḳur'ān, so far as one can synthesize it artificially by the help of texts extending almost from the beginning of the revelation to the third year of the Medina period, covers the first fourteen chapters of the book of Exodus: the oppression of the children of Israel, the birth of Moses [see MŪSĀ], the mission of Moses and Aaron [see HĀRŪN], the hardening of Pharaoh's heart, Moses' miracles, the plagues, the Exodus, the crossing of the Red Sea and the drowning of Pharaoh; like all narrative elements of this sort in the Ḳur'ān, the history of Pharaoh is seen in relation to Muḥammad's own mission—the determined rejection of the divine message by the unbelievers who in the end are severely punished, while the believers among them are saved. In the fragmentary accounts given in the Ḳur'ān, certain non-biblical elements may be detected, the chief ones being the following. Firʿawn is given the name (LXXXIX, 9/10 and XXXVIII, 11/12) *dhu 'l-awtād* "master of the stakes (posts)" perhaps on account of his buildings (cf. XXVIII, 38), but this interpretation (J. Horovitz) is scarcely less uncertain than those which have been put forward by Muslim commentators. The place of Pharaoh's daughter is taken by his wife, to whom commentators give the name of Āsiya [*q.v.*]. As Pharaoh's counsellor there appears a certain Hāmān who is responsible in particular for building a tower which will enable Pharaoh to reach the God of Moses (XXVIII, 38 and XL, 38/36): the narrative in Exodus is thus modified in two respects, by misplaced recollections of both the book of Esther and the story of the tower of Babel (Genesis, xi) to which no other reference occurs in the Ḳur'ān. The unnamed believer in Pharaoh's entourage who pleaded for Mūsā (XL, 29/28 ff.) cannot be connected with any known Jewish or Christian legend, unless it be related to a vague recollection of the Aggada which makes Jethro one of Pharaoh's advisers.—The conversion of the magicians who were in consequence threatened with cruel punishments by their master is an innovation of the Ḳur'ān (cf. however Exodus, viii, 15 and x, 7), whilst Firʿawn's aspiration to divinity (XXVIII, 38) is Aggadic, as is also his conversion *in extremis*, which God rejects (X, 90-2).

Muslim tradition (both exegesis and historiography) does not confine itself to commenting on and amplifying the Ḳur'ānic version, particularly with the aid of Aggada elements. Its field of interest extends beyond that of the inspired book, and it deals with the kings of Egypt both before and after the *Firʿawn* of Mūsā, connecting them with the "Amalekites" and also, later, drawing on the stock of local legends. Thus the Firʿawn of Ibrāhīm [*q.v.*] and Yūsuf [*q.v.*] is discussed; he is given the name al-Rayyān b. al-Walīd (or al-Walīd or even Dārim b. al-Rayyān) and his successor Ḳābūs b. Muṣʿab (al-Masʿūdī, *Murūdj*, i, 92, but written al-Walīd b. Muṣʿab). Isolated traditions, regarded with utter disdain by the author of *al-Badʾ wa 'l-taʾrīkh*, attribute an Iranian origin to Firʿawn and Hāmān (al-Ṭabarī, *Tafsīr*, xx, 28: Firʿawn was a native of Iṣṭakhr; *Badʾ*, iii, 81 ff./84: Firʿawn a native of Balkh and Hāmān of Sarakhs).

The New Testament theme of the massacre of the innocents is introduced into the account of the birth of Moses, and the Midrashic legend of the proving of Moses by the crown and burning coals came into the account of the education of the future liberator of Israel who was brought up at Pharaoh's court.

Similarly, it was with the Jewish Aggada (*Abōth of Rabbi Nathan*, recension A, ch. XXVII and *Pirkey Rabbi Eliʿezer*, ch. XLII) and through it possibly to an ancient Egyptian related form that is connected the legend of the mare ridden by Gabriel which led Firʿawn's army into the abyss, the vanguard of the army being commanded by Hāmān. After the drowning of Firʿawn, whom Gabriel prevented from making his profession of faith until the very end by cramming his mouth with sea slime, Mūsā sent to Egypt a military expedition commanded by Joshua and Caleb. The *Badʾ wa 'l-taʾrīkh* (iv, 37/36) is aware that the Jews celebrate the feast of unleavened bread in memory of their delivery from the hands of Firʿawn (cf. also al-Bīrūnī, *Āthār*, ed. Sachau, 281, *Chronology*, 275), but certain traditions also exist which give the same motive for the celebration of the fast of *ʿAshūrā* by the Jews (texts quoted from G. Vajda, *Hebrew Union College Annual*, xii-xiii (1937-8), 374, but

whose authenticity is rejected by al-Bīrūnī, *ibid.*, 330 ff./327 ff.).

A later Firʿawn bears the name Aʿradj "the lame"; this, no doubt, is Necho (Nekō, II Chron. xxxv and xxxvi), whose name is thus interpreted by the Jewish Aggada (Targum, also Peshiṭṭa, *Leviticus-Rabba* xx/1, ed. M. Margulies, 442); al-Masʿūdī, *Murūdj*, ii, 410, however, calls him Bilūnah. —The theological problem of the "hardening of heart" of Firʿawn did not fail to occupy the attention of the Muʿtazila (see *Badʾ*, i, 106/97 ff.). The Mystics and in particular al-Ḥallādj meditated in their fashion on the revolt and the conversion *in extremis* of Firʿawn (see L. Massignon, *La Passion d'al-Hallāj*, 357, 416, n. 1, 615, 935-9 and H. Ritter, *Das Meer der Seele*, 74 and 272), but with them also he remains one of the prototypes of pride, concupiscence and refusal to renounce self (see, *e.g.*, al-Muḥāsibī, *Riʿāya*, 236 ff. and H. Ritter, *ibid.*, 51, 98 ff., 114, 577; a more favourable view, 320).

(A. J. Wensinck-[G. Vajda])

FIRDA [see furḍa].

FIRDAWS [see djanna].

FIRDAWSĪ (Ferdosi), Persian poet, one of the greatest writers of epic, author of the *Shāhnāma* (*Shāhnāmè*, the Book of Kings). His personal name and that of his father are variously reported (Manṣūr b. Ḥasan, according to al-Bundārī [*q.v.*]); it is agreed that his *kunya* [*q.v.*] and his pen-name were Abu 'l-Ḳāsim Firdawsī. According to Niẓāmī ʿArūḍī, the oldest source (*Čahār maḳāla*, tr. E. G. Browne, 54), he was born at Bāzh, a village in the Tabaran quarter of Ṭūs [*q.v.*]. The date of his birth (ca. 329-30/940-1) is reliably deduced from his statement that in the year of the accession of Sultan Maḥmūd (387/997) he was 58 years old (*Shāhnāma*, ed. Mohl, iv, 8). Sprung from a family of *dihḳāns* [*q.v.*], he was, according to Niẓāmī ʿArūḍī, a man of influence in his village, of independent means thanks to the revenues from his lands. Numerous passages of his work reveal his love for Iran. He was certainly acquainted with Arabic; and early in life had acquired a deep knowledge of the history and the legends concerning Iran, to which his family environment had predisposed him. Until he had exhausted his resources by devoting them to his work, he made no approach to the rulers of his day. The writing of the *Shāhnāma* was undertaken no doubt after the assassination of Daḳīḳī (ca. 370/980); before this he had tried out his talents in composing some epic passages and some lyric poems, of which a few have survived. At the beginning of his epic he speaks of how Daḳīḳī had begun to put into verse an ancient book, of how this work was prematurely interrupted by Daḳīḳī's death, and how a friend had procured the book for him (ed. Mohl, i, 16-20). For several episodes he had other sources, for the story of Bijen and Manīja, for example (for which he followed a manuscript which a woman-friend read to him, ed. Mohl, iii, 293-4), and for the death of the hero Rustam (following a redaction by Āzād Sarw, ed. Mohl, iv, 701). In spite of great political upheavals, recounted by the historians, his *Shāhnāma* was undertaken by 370-1/980-1 at the latest.

In the course of the 4th/10th century, the Iranians, reviving a pre-Islamic custom, had applied themselves to gathering the historical facts and the legends concerning their national history. Collections were made in imitation of the Pahlavi *Khʷatāy-nāmak* (Book of Rulers) composed towards the end of the Sāsānid period (Christensen, *L'Iran sous les Sassanides*, 54), which is lost, as are Arabic translations of it. Ancient tales were assembled in other collections. The oldest and most famous of the prose works of the 4th/10th century is the *Shāhnāma* of Abu 'l-Muʾayyad Balkhī, a collection of heroic traditions which is echoed here and there in Firdawsī's epic and in some historical works (notably a fragment in the *Taʾrīkh-i Sīstān*, Tehrān ed., 35). Another *Shāhnāma* is that of Abū ʿAlī Muḥammad b. Aḥmad al-Balkhī, praised by al-Bīrūnī (*al-Āthār al-bāḳiya*, Leipzig ed., 99), which derives particularly from written sources, translated from Pahlavi into Arabic, but lost. The third important *Shāhnāma* known to us is that to which Firdawsī refers in his introduction (ed. Mohl, i, 17-8): the *pahlavān* of whom he there speaks was probably Abū Manṣūr Muḥammad b. ʿAbd al-Razzāḳ, governor of Ṭūs in about 335/946; he gathered together men who knew the history and the ancient legends and ordered them to compose a *Shāhnāma* under the supervision of his vizier, Abū Manṣūr Muḥammad al-Maʿmarī (preface to Abū Manṣūr's *Shāhnāma*, dated 346/957, published by Muḥammad Ḳazwīnī in *Bīst maḳāla*, ii, Tehrān 1313/1935, 24-25); their work was used by Daḳīḳī (about a thousand of whose verses were incorporated by Firdawsī in his *Shāhnāma*), then by Firdawsī, then by al-Thaʿālibī (d. 429/1038). Besides these, there existed other documents and traditions which were treated by epic poets who came after Firdawsī (notably on the heroes Garshāsp, Bārzū, Sām [see ḥamāsa]).

At Ṭūs, various persons whom Firdawsī names had supported him in his work, but he was looking for a more powerful protector to whom to dedicate his work. Finally he chose the greatest monarch of the age, Sultan Maḥmūd of Ghazna; this was probably when he was about 65 years old (ed. Mohl, iv, 8), in 394/1004, when he found himself in straitened circumstances (ed. Mohl, *loc. cit.*, and vii, 500).

The Arabic translation of the *Shāhnāma* by al-Bundārī and the *Ghurar akhbār mulūk al-Furs* of al-Thaʿālibī (which uses sources identical with, or at least very close to, those of Firdawsī) omit several episodes found in Firdawsī's work; it may therefore be agreed that the final redaction of the *Shāhnāma* was preceded by a less complete redaction; furthermore, al-Bundārī's translation and some manuscripts

give on the last leaf the date 384/994, and not that of the final completion (400/1010).

Maḥmūd was a man of little erudition, but gathered at his court, even by force, men of learning and letters and particularly panegyrists. His attention was perhaps first drawn to Firdawsī by Abu 'l-ʿAbbās Faḍl b. Aḥmad al-Isfarāyinī, who was his first vizier (from 384/994 until 401/1010) and whose kindness is praised in the *Shāhnāma* (ed. Mohl, iv, 7-8). No doubt Firdawsī had composed various sections of his work, not in a systematic order but as inspiration came to him and inclination prompted; afterwards he linked them together by passages of transition; he then, as his fame spread, set about revising and polishing his epic. At the end of his poem (ed. Mohl, vii, 500) he states: "When I had passed the age of 65 years, the care of my sufferings increased; I was occupied always with the history of the kings"; great men were having copies of his epic made, "but I received in return only praise". (He adds that three noble inhabitants of Ṭūs provided him with material help and encouragement). In the course of this revision, followed by the making of a fair-copy by a copyist, he probably inserted or amplified the passages in which Maḥmūd is praised (one of these eulogies, for example, was inserted after the composition of the account of the death of Rustam, for the poet speaks in it of his old age and his infirmities: ed. Mohl, iv, 702). At this point his protector, the vizier Faḍl b. Aḥmad al-Isfarāyinī, was dismissed; the poet was left without a supporter and his work was ill-received when he presented it to the sultan. Various stories have been handed down concerning his journey to Ghazna and the presentation of the poem, but they are not reliable: all that is to be accepted is that the journey took place, and that it resulted in a disappointment, expressed by Firdawsī in the words: "Such a monarch, so generous, shining among the sovereigns, did not cast a glance at my poem: the fault lies with slanderers and with ill-fortune" (ed. Mohl, vii, 294). According to a tradition frequently repeated (it is given by Niẓāmī ʿArūḍī), Maḥmūd had promised one *dīnār* for each verse, but gave only a *dirham*. Firdawsī, offended at the contrast between this reward and those heaped on the panegyrists living at the court, divided the sum he received among three persons before abruptly leaving Ghazna. One of his biographers claims that he worked on his epic for some months at the court of Maḥmūd, who loaded him with honours; this report, like other similar ones, is not to be accepted: Firdawsī travelled to Ghazna simply to present his work. On reading the biographers, one is led to presume that the chief cause of Firdawsī's dissatisfaction was the inadequacy of his reward. But the causes of misunderstanding between the sultan and the poet were more serious. In the first place, Firdawsī was a Shīʿī and Maḥmūd a Sunnī—each enthusiastically; according to Niẓāmī ʿArūḍī, the poet was accused of being a *Muʿtazilī* and a *Rāfiḍī* (a 'rejecter' of Sunnism), and he quotes in support some verses of Firdawsī (*op. cit.*, 56); as for his Shīʿism, Firdawsī does not announce it directly but allows it to be inferred in the introduction of his poem (ed. Mohl, i, 14-6). Futhermore, he had in his poem praised a vizier who had fallen out of favour, thus laying himself open to misrepresentation by his detractors. Finally, and most important, the poet could not tolerate the sultan's lack of interest ("Such a monarch ... did not cast a glance at my poem"): Maḥmūd appreciated only lyric poems, and particularly those devoted to his praise—slight and frivolous works in comparison with a vast and powerful epic.

According to Niẓāmī ʿArūḍī (p. 57), Firdawsī, on leaving Ghazna, spent six months at Herāt, returned to Ṭūs, and then went to Ṭabaristān to the court of the prince Shahriyār. It is impossible to confirm the truth of this. Moreover a legend gradually grew up on the relations between Maḥmūd and Firdawsī, but it is impossible to give credence to its account of how the poet, loaded with honours, stayed for a long time at the court of Maḥmūd, and of the sultan's belated change of heart. This very romantic legend, given authority by the preface to the *Shāhnāma* written by the Tīmūrid prince Baysunghur (829/1426), was used by Macan and Mohl in the prefaces to their editions. Firdawsī is said to have written a satire against Maḥmūd (published in the editions and translated by Mohl, i, introd.); it is said that Shahriyār pacified him and advised him to leave intact the passages of the *Shāhnāma* composed in praise of Maḥmūd, and that of his satire there remain only six authentic verses, quoted by Niẓāmī ʿArūḍī; but the text of it as given in the manuscripts varies in length up to as many as a hundred verses, including some borrowed here and there from the *Shāhnāma*. These satirical verses, examined as a whole, show the same qualities of style and composition as the *Shāhnāma*, so that it would be rash to affirm that they are not authentic (cf. Nöldeke, *Gr. I. Ph.*, ii, 155 ff.).

The date when he finally completed his epic is recorded on its last page: "When I was 71 years of age the heavens paid homage to my poem; for 35 years, in this transient world, I composed my work in the hope of a reward; as my efforts were spent for nothing, these 35 years were without result; now I am nearly 80 and all my hope has gone with the wind. The last episode of my epic was completed on the day of *ard* of the month of *isfendarmadh*, five times 80 years of the Hidjra having elapsed" (therefore in 400/25 February 1010). In other words, he had completed his poem at the age of 71 (in 400 A.H.), and when he was nearly 80 he added to it a note of the date of completion. He spent his last years at Ṭūs. According to Dawlatshāh, he died in 411/1020. Perhaps, as Nöldeke assumes (*loc. cit.*), the satire against Maḥmūd was found among his papers and communicated to various people who spread copies of it around. According to Niẓāmī ʿArūḍī, he was refused burial in a Muslim cemetary because he was a *Rāfiḍī*; he was buried in a garden which belonged to him (on his grave and on his present mausoleum, see ṬŪS).

In a manuscript in the British Museum (text and tr. in Nāṣir-i Khusraw, *Safar-nāma*, ed. and tr. Ch. Schefer; text reproduced with emendations in Firdawsī, *Shāhnāma*, Tehrān 1935, vii, 3019), it is related that Firdawsī made in 384/994 a journey to Iṣfahān and Baghdād, and that he offered to the *amīr* of ʿIrāḳ his poem *Yūsuf u-Zalīkhā* [*q.v.*]: Nöldeke (*Gr. I. Ph.*, ii, 229 ff.) and S. H. Taḳīzāda (in the review *Kāveh*, 1921, no. 10) have praised this poem, whose attribution to Firdawsī is now questioned (Z. Safa, *Taʾrīkh*, ii, 477) for several reasons, notably the presence of many more Arabic words than are found in the *Shāhnāma*, apart from peculiarities of style. In any case this journey to ʿIrāḳ seems doubtful. The death of a son at the age of 37 (the poet being then 65) inspired some sublime verses (ed. Mohl, vii, 190). Niẓāmī ʿArūḍī says that he had a devoted daughter, of whom however he makes no mention. Such are the generally accepted facts and dates of the life of Firdawsī.

It is impossible to give more than a brief outline of the vast *Shāhnāma* (amounting in several manuscripts to some 60,000 verses). It begins with the creation of the universe; some time later the first kings of Iran were reigning, benefactors of humanity for which they established the various elements of social life, at the same time struggling against the demons which infest the world. For more than a thousand years these good and evil powers confronted each other in an unremitting duel full of dramatic episodes. At last one of these mythical kings established a general peace for half a century; but after his death his three sons, among whom he had shared out the civilized world, could not agree, and one of them, who ruled over Iran, was treacherously assassinated by his brothers. This murder begins an endless cycle of revenge: a merciless war is waged for several centuries between the settled Iranians and the nomadic Turanians of Central Asia. Whether he is describing pitched battles, skirmishes or single combats, the poet exhibits an unequalled skill in varying the situations, and in maintaining a note of the most ardent patriotism, which does not however lead him to belittle the bravery of the enemy: throughout the poem the adversaries are worthy of each other. This cycle of wars is divided into several "gestes", corresponding to the exploits of the heroes who dominate the action—heroes of superhuman proportions and strength, among whom the famous Rustam stands out. This epic, while dealing mainly with war, contains some splendid love-stories, by which Firdawsī, the incomparable creator of the national epic, became at the same time the founder of the romantic narrative poem which was to have such a brilliant future in Persia. His sensibility, as lively as it is deep, shows itself in a series of sentimental episodes where paroxysms of passion alternate with those of despair. While two-thirds of the poem are essentially heroic and legendary, the last part is more historical and recounts poetically the reigns of the Sāsānid kings; this part is the product of the poet's old age, whence the numerous moral reflexions and the digressions on politics and metaphysics. Firdawsī's ideas would demand a lengthy study. His view of the universe is entirely pessimistic; an implacable fate, the sister of that which dominates Greek tragedy, hangs over the principal actors of the epic until the final catastrophe in which ancient Iran perishes. Yet man must ceaselessly struggle against fate: Firdawsī's moral philosophy (which corresponds, though not deliberately, with that of the Avesta) vehemently preaches action and the love of good, which uphold in man reason—his unique privilege and his true claim to superiority over all other beings. Reason must always guide us: it teaches us to accept the (sometimes only apparent) injustice of fate and enables man to retain that feeling of tender sympathy which Firdawsī himself so often shows for luckless heroes and for suffering animals; for the character of this poet as a man is in harmony with his exceptional gifts as an artist—nobility and purity of heart, family affection, complete self-sacrifice for the sake of his work, love of glory, kindness to the weak and the defeated, ardent patriotism, religious tolerance and a profound sense of the Divine. In short, he combines harmoniously what he drew from his sources with what he owed to personal inspiration and he made magnificent use of the gifts which he possessed. As for his style, whether in the fantastic elements demanded by the epic of the supernatural or in the gracefulness of descriptions of the countryside or in heroic episodes, he excels at describing and explaining the facts and at expressing sentiments and ideas in a clear and simple language, firm but eloquent, and remarkable for the aptness of the terms used and the nobility of the thoughts. The level of expression is always equal to that of the ideas, which does not preclude the generous use of images; he varies his expressions according to the type and rank of the characters; he sometimes uses the different rhetorical figures common in the East, but not to excess, and his style remains sober even among the exaggerations proper to the epic genre. There are very few Arabic words in the poem: he wanted to revive the ancient Iran, but to do it in the Iranian tongue, remaining faithful to his sources; it is in the story of Alexander the Great that most Arabic words are to be found (for he was using a non-Iranian source, translated into Pahlavi [see ISKANDAR NĀMA]). His influence on Persian literature and indeed on the spirit of the people of Iran has been as profound as it has been lasting, and in itself would merit a serious study; in particular it led to the writing of numerous epics which, though not the equal of his own, are of real (and still insufficiently recognized) interest from the points of view both of literature and of folklore [see ḤAMĀSA].

Bibliography: A full bibliography would itself constitute a detailed study. Complete editions of the *Shāhnāma*: Turner Macan, *The Shah-Nama* ..., Calcutta 1829, 4 vols.; J. Mohl, *Le Livre des Rois* ..., text and French translation, Paris 1838-78, 7 vols., and translation alone, Paris 1876-8, 7 vols.; J. A. Vullers and Landauer, *Liber Regum* ..., Leyden 1877-84, 3 vols. (incomplete). These three editions were used for the Firdawsī Millenary edition (with notes and variants, Tehrān, Beroukhim, 1934-5, 9 vols.), which is now the most easily accessible (it gives the pagination of the Calcutta and Paris editions at the head of each page). Parts i and ii of a critical text prepared under the editorship of E. E. Bertels appeared in Moscow in 1960 and 1961. Besides Mohl's translation, it has been translated into Italian verse by Pizzi (Turin 1886-8), into German by F. Rückert (Berlin 1890-5), into Gudjarātī by J. J. Modi (Bombay 1897-1904), into English by A. G. and E. Warner (London 1905-12), into Danish (selections) by Arthur Christensen (Copenhagen 1931); many sections have been translated into various languages. An Arabic prose version was made by AL-BUNDĀRĪ [*q.v.*]. The essential study on the poet and his work (still of value although out of date on certain points) is Nöldeke, *Das Iranische Nationalepos*, in *Gr. I. Ph.*, ii, Persian translation, *Ḥamāsa-i millī-i Irān*, Tehrān 1327), to which is to be added Éthé, *Firdausi als Lyriker*, in *München. Sitzungsberichte*, 1872, 275-304, and 1873, 623-53. In Persian there are the notable works of Z. A. Safa, *Ḥamāsa-sarāyī dar Īrān* and *Taʾrīkh-i adabiyyāt dar Īrān*, ii. Finally, numerous articles and studies assembled in volumes or dispersed in periodicals, published in Iran and other countries. See further *IA* (Firdevsi, by H. Ritter), and Pearson 774-5. (CL. HUART-[H. MASSÉ])

There are three principal translations of the *Shāhnāma* in Ottoman Turkish: (1) a prose version, completed by an unidentified writer in 854/1450-1 (Flügel, *Die ... Handschriften des Kais.-kön. Hofbibl. zu Wien*, i, 495; F. E. Karatay, *Topkapı Sarayı ... türkçe yazmalar kataloğu*, Istanbul 1961, no. 2154; cf. Blochet, *Cat. des manuscrits turcs*, ii, 220); (2) a verse translation (in *hazadj* metre) made in Egypt

by a certain Sherīf or Sherīfī, a member of the entourage of Prince Djem, who spent ten years on the task before presenting his work to Sultan Ḳānṣūh Ghūrī (see Rieu, *CTM*, 152; W. D. Smirnow, *Manuscrits turcs* ..., St. Petersburg 1897, 78-82; the presentation-copy, completed in 916/1510, is in the Topkapı Sarayı at Istanbul, MS Hazine 1519, see Karatay, no. 2155); (3) another prose version made early in the 11th/17th century for ʿOthmān II by Derwīsh Ḥasan, Medhī [*q.v.*] (see Blochet, i, 314; Smirnow, 82-7). There is a translation into modern Turkish (in the series '*Dünya edebiyatından tercümeler*') by N. Lûgal and K. Akyüz, 3 vols., Istanbul 1945. There are at least two translations into Özbek Turkish (see Blochet, ii, 129; *Firdausī Celebration* ..., ed. D. E. Smith, New York 1936, 93 f.). For the influence of the *Shāhnāma* upon Turkish popular literature see Irène Mélikoff, *Abū Muslim* ..., Paris 1962, ch. 1.

To compose '*Shāhnāmes*' in praise of the Ottoman sultan became the vogue under Meḥemmed II, and in the second half of the 10th/16th century the official historiographer-panegyrists of the court were known as '*shehnāme-khʷān*' [see LOḲMĀN, SAYYID]. (V. L. MÉNAGE)

FIRDEWSĪ, called RŪMĪ also UZUN or ṬAWĪL (857/1453- ?). Turkish poet and polymath, author of the voluminous *Süleymānnāme* (the Book of Solomon). He was probably born in Aydīndjīk, where he spent his childhood, and educated at Bursa, where he had as master the poet Melīḥī, and lived for a while at Balīkesir. According to information in the introduction of a *Süleymānnāme* copy, seen by M. Fuad Köprülü (see Bibl.) but now unavailable, his ancestors were all illustrious men of arms who served the Empire from ʿOthmān I onwards, and his father Ḥādjdjī Genek Bey was given the fief of Aydīndjīk for his services at the conquest of Istanbul. He is the author and translator of many books of very diverse subjects of which only some have come down to us. But he is particularly known for his *Süleymānnāme*, an encyclopaedic work in verse and prose which includes all contemporary knowledge on history, genealogy, philosophy, geometry, medicine, etc., and all the tales and anecdotes, found in religious literature, concerning Solomon. In its 81st volume he himself tells how he came to write the book: in the year 876/1472 he translated a portion of Firdawsī's *Shāhnāma* into Turkish verse and presented it to Meḥemmed II through Maḥmūd Pasha, the Grand-Vizier. The Sultan, remarking that the *Shāhnāma* was widely known and that it was unnecessary to repeat it, encouraged the poet to write a book on Solomon. Firdewsī searched for sources in the Imperial Library and toured Anatolia. He based his first three volumes on the biblical David legend and the next three on a Persian book of Solomon which he had bought from an Arab at Niksar. He presented the first six volumes of his work to Meḥemmed II, who promised a reward when the work was completed. The Sultan however died while Firdewsī was writing the seventh volume. Eventually Bāyezīd II came to hear of this and asked for a copy. The first 82 volumes were submitted to the Imperial Library except for this 81st volume which somehow, owing to the copyist's error, was not. It was eventually submitted to Selīm I (*Süleymānnāme*, 81st volume, Millet Kütüphanesi, Tarih-Coğrafa Yazmaları no. 317, 3b-4a and 123a).

Firdewsī had planned his enormous work originally in 366 volumes divided into 1830 *medjlis*, as he states at the end of certain early volumes (see for instance Topkapı Sarayı, Hazine K. no. 1525, 287b), and asked God for health and long life to be able to complete the work. Upon completion each volume was duly presented to the Imperial Library. Uzun Firdewsī continued to write at Bāyezīd II's order (whom incidentally he refers to as *Ildirim*) and speaks of himself as an aged man (*pīr*). He says that he has devoted 40-50 years of his life to the compilation of the book, writing most of it at Balīkesir (Topkapı Sarayı, Koğuşlar K. 892, 83a). From these circumstances no doubt arises Laṭīfī's tradition, later repeated by most sources, that Bāyezīd II chose only 80 parts and had the rest destroyed.

At the end of the 79th volume Firdewsī reduces his plan to 99 volumes from the original 366 (Topkapı Sarayı, Hazine K., no. 1537, 387a). This revised plan is repeated at the end of volumes 80 and 81. There is also reference to intrigues and rivals. We have no indication whether he was able to write the remaining 17 volumes. No library possesses a complete set. The best set is at the Topkapı Sarayı Library. The style of the *Süleymānnāme* is very much like that of popular story books of the period though more repetitive and less vivid.

Bibliography: Laṭīfī, *Tedhkire* s.v.; Bursalī Ṭāhir, *ʿOthmanlī Müʾellifleri*, ii/2, 357; Babinger, *GOW*, 32; *Istanbul Kütüphaneleri Tarih-Coğrafya yazmaları Kataloğu*, Istanbul 1944, II, 147; M. Fuad Köprülü in *IA*, s.v. (with critical bibliography and list of works); Fehmi Edhem Karatay, *Topkapı Sarayı Müzesi Kütüphanesi Türkçe yazmalar kataloğu*, Istanbul 1961, ii, 290-2.

(FAHIR İZ)

FIRE [see NĀR], GREEK FIRE [see BĀRŪD and NAFṬ].

FIREWORKS [see SHENLIK].

FIRISHTA [see MALʾAK].

FIRISHTA, by-name of MUḤAMMAD ḲĀSIM HINDŪ SHĀH ASTARĀBĀDĪ, Indo-Muslim historian, writer on Indian medicine and servant of the Aḥmadnagar and Bīdjāpūrī sultanates. As Storey (whose account of Firishta's biography is followed here) states, the date and place of his birth remain conjectural but the context of *Gulshan-i Ibrāhīmī*, Bombay ed., ii, 288, suggests that Firishta was probably born a few years before 980/1572. His father was one Ghulām ʿAlī Hindū-Shāh. That Firishta was to be found among the *gharībān* and *gharib-zādahā* the 'foreigners' and their descendants who migrated for safety to Bīdjāpūr in 997/1589 (*Gulshan-i Ibrāhīmī*, ii, 295) suggests that his family was of recent domicile in Aḥmadnagar. He was a Shīʿī (*Gulshan*, i, 27). Entering the service of Murtaḍā Niẓām Shāh (972-96/1565-88) [*q.v.*] Firishta was employed as a member of the royal guard. Commissioned by Murtaḍā Niẓām Shāh to discover why an army, gathered by the *wakīl* and *peshwa* Mīrzā Khān ostensibly to resist invasion by Bīdjāpūr, had remained immobile, Firishta discovered a plot between Mīrzā Khān and the Bīdjāpūrī 'regent' Dilāwar Khān to depose Murtaḍā Niẓām Shāh in favour of his son Mīrān Ḥusayn. Firishta warned Murtaḍā but was unable to save him from assassination. Firishta himself only escaped death through Mīrān Ḥusayn recognizing his claims as a former school-fellow. A forced migration of *gharībān* from Aḥmadnagar to Bīdjāpūr in 997/1589 followed the murder of Mīrān Ḥusayn and on 19 Ṣafar 998/28 December 1589 Firishta was presented at the Bīdjāpūrī court and on 1 Rabīʿ I 998/8 January 1590 took service under Ibrāhīm ʿĀdil Shāh. Later that year Firishta acted as a go-between for Burhān

Niẓām Shāh who was seeking Bīdjāpūrī support for the deposition of his son Ismāʿīl. In the subsequent struggle between the forces of Bīdjāpūr and Aḥmadnagar, Firishta was wounded and captured, but escaped. In Radjab 998/May-June 1590 he accompanied Ibrāhīm ʿĀdil Shāh on his night excursion to remove the 'regent' Dilāwar Khān. In Ṣafar 1013/July 1604 Firishta accompanied Bēgam Sulṭān, daughter of Ibrāhīm ʿĀdil Shāh, upon her journey to marry Akbar's son Dāniyāl. At the beginning of Djahāngīr's reign, Firishta was sent upon some unspecified mission to Lahore. Unless the reference to the death of Bahādur Khān Fārūḳī at Āgra in 1033/1623-4 was inserted by a later hand, Firishta was still alive in that year.

Firishta's reputation rests upon his well-known history the *Gulshan-i Ibrāhīmī*, extant in two recensions, the first dated 1015/1606-7 and the second, with a new title, *Taʾrīkh-i Nawras-nāma*, dated 1018/1609-10. The *Gulshan-i Ibrāhīmī* sets out (i, 4) to narrate the annals of the *pādshāhān-i Islām* and the biographies of the *mashāʾikh* who have been connected with the ordering (*niẓām*) of the countries of Hindustān (*mamālik-i Hindūstān*) from Sebüktigīn of Ghazna onward. The annals (*wāḳiʿāt*) are prefaced by a *muḳaddima* giving an abstract of Hindū history and are followed with a *khātima* on the geography of Hindustān, on Hindū chronometry and on the great Hindū *rādjās* of Firishta's time who keep their territories, Firishta says (ii, 788), on payment of tribute.

The typical *genres* of Indo-Muslim historiography in Firishta's day were the general history of Muslim rulers from the time of the Prophet and the regional history of the significant behaviour of Muslim rulers and saints in Hindustān since the Ghaznavid invasions. 9th/15th century Persian models appear to have been important in the universal histories that were written under the Mughals and under the sultanate of Gudjarāt, with lines of influence running from the *Rawḍat al-ṣafā* through Khʷānd Amīr's *Khulāṣat al-akhbār* (905/1500) and *Ḥabīb al-siyar* (c. 930/1524) to the *Taʾrīkh-i alfī*, commissioned by Akbar in 993/1585, and from the *Rawḍat al-ṣafā* through ʿAbd al-Karīm b. Muḥammad al-Namīdīhī's (?) *al-Ṭabaḳāt al-Maḥmūd Shāhiyya* (c. 905/1490-1500) and Fayḍ Allāh Banbānī's *Taʾrīkh-i Ṣadr-i Djahān* (c. 907/1501-2) (both authors being in the service of Maḥmūd Shāh Bēgṛā). Akbar had stimulated the production of regional histories both by sponsoring the writing of those which might serve to link his rule psychologically with that of pre-Mughal Muslim sultans in India, *e.g.*, ʿAbbās Khān Sarwānī's *Tuḥfa-yi Akbar-Shāhī* (c. 987/1579) and Abu 'l-Faḍl's *Akbar-nāma*, and by re-creating a great regional empire which needed to be matched by a great regional history—*e.g.*, Niẓām al-Dīn Aḥmad's *Ṭabaḳāt-i Akbarī* (1001/1592-3). Firishta himself, acquainted with both al-Namīdīhī's and Banbānī's work, states (ii, 153-4) that Ibrāhīm ʿĀdil Shāh gave him a copy of *Rawḍat al-ṣafā* and encouraged him to write the annals of the countries of Hind and to include more data on the sultans of the Deccan than Niẓām al-Dīn Aḥmad had done in his *Ṭabaḳāt*.

The *Gulshan-i Ibrāhīmī* is an annalistic compilation from earlier histories, oral tradition and Firishta's own eyewitness, intended for the edification of Muslims. It is an adaptation and extension of the *Ṭabaḳāt-i Akbarī*, an imitation rather than a copy. Thus Firishta's abstract of pre-Muslim Hindū history and his account of early Arab movements towards Hindustān, of the origin of the Afghāns and of their deeds between Arab penetration of the Kābul valley and the reign of Sebüktigīn of Ghazna, supplement Niẓām al-Dīn. In his use of data, Firishta follows no consistent principle. Thus (i, 104) he corrupts the late tradition in *Taʾrīkh-i Alfī* and in *Ṭabaḳāt-i Akbarī* by calling the assassins of Muḥammad b. Sām of Ghor at Damyak in 602/1206 (Hindū) 'Ghakkars' and does not assess the statements in the near-contemporary *Tādj al-maʾāthir* and the rather later *Ṭabaḳāt-i Nāṣirī* (listed by Firishta as among his sources) that they were *mulāḥida*. (See H. G. Raverty, trans. *Ṭabaḳāt-i Nāṣirī*, i, London 1881, 485 n. 3). Firishta sometimes behaves as a mere copyist of the *Ṭabaḳāt-i Akbarī*; thus he copies (i, 122) Niẓām al-Dīn's misstatement, *Ṭabaḳāt-i Akbarī*, i, Calcutta 1927, 72, (probably derived from a faulty MS of the *Ṭabaḳāt-i Nāṣirī*) that in 642/4 Čingīz Khān invaded Lakhnawtī. (See Raverty, *op. cit.* 665 n. 8). In going behind Niẓām al-Dīn to their common sources Firishta is often arbitrary. He follows Yaḥyā b. Aḥmad Sirhindī's *Taʾrīkh-i Mubārak Shāhī*, Calcutta 1931, 92, in dating the accession of Ghiyāth al-Dīn Tughluḳ in 721/1321, in preference to Baranī's 720/1320 (*Taʾrīkh-i Fīrūz Shāhī*, Calcutta 1862, 425), the date followed by the *Ṭabaḳāt-i Akbarī* (92) and which is supported by the numismatic evidence. Firishta appears to have seen the sources of the *Ṭabaḳāt-i Akbarī* independently. His account (i, 183) of the dialogue between the *kotwāl* of Dihlī and Sultan ʿAlāʾ al-Dīn Khaldjī (i, 183) is textually closer to that of Baranī (264-5) than to that of the *Ṭabaḳāt* (145). Firishta glosses his sources without explanation. Thus he speaks (i, 240) of Muḥammad b. Tughluḳ's intention to conquer the *wilāyat-i Čīn* when Baranī (477), and following him Niẓām al-Dīn (102), refer to an expedition to conquer the mountain of Ḳarāčīl between India and China. Occasionally, in handling his data, Firishta shows independence of mind. He imputes (i, 238) Baranī's silence about a reported invasion of Muḥammad b. Tughluḳ's territories by Tarmashīrīn of Transoxania to his position in the reign of Muḥammad's successor, Fīrūz Shāh (an imputation which, in the light of Baranī's strong criticism of Muḥammad, seems invalid). He attempts (i, 235) to assess the truth behind the conflicting accounts of the death of Ghiyāth al-Dīn Tughluḳ in 725/1325, before concluding that the real truth is with God. To supplement his written data, Firishta draws upon oral tradition personally ascertained. His account (i, 230-1) of the origin of Ghiyāth al-Dīn Tughluḳ is based on personal inquiries at Lahore during his visit there at the beginning of Djahāngīr's reign.

Firishta evinces the same characteristics as an annalist of the Muslim sultanates of the Deccan. The story of the Ottoman origin of Yūsuf ʿĀdil Shāh of Bīdjāpūr is given as 'the best of tales' (ii, 1) but without a personal affirmation of its authenticity. [See BĪDJĀPUR]. His report (ii, 6) that Yūsuf ʿĀdil Shāh assumed the title of ʿĀdil Shāh and had the *khuṭba* read in his name in 895/1489 is not consistent with the evidence of Rafīʿ al-Dīn Shīrāzī, *Tadhkirat al-mulūk*, B.M. Add. 23,883, fols. 32a-33b, a work contemporary with *Gulshan-i Ibrāhīmī* or with such inscriptional evidence as is now extant (see *EIM*, 1939-40, 14-6). Firishta's evidence for the assumption of royal titles by Sulṭān Ḳulī Ḳuṭb al-Mulk of Golkonda has similarly been shown to be doubtful testimony (see *Journal of the Hyderabad Archaeological Society*, 1918, 89-94). As a historian of the Bahmanī sultanate, Firishta is no less suspect.

He states (I, 575) that the fifth Bahmanī sultan was Maḥmūd and not Muḥammad as the coinage (O. Codrington, *Coins of the Bahmani dynasty*, in *Numismatic Chronicle*, 3rd series, xviii (1898), 259-73), and ʿAlī b. ʿAzīz Allāh Ṭabāṭabā, *Burhān-i maʾāthir* (1003/1594), Ḥaydarābād 1355/1936, 36-8, and Shīrāzī's *Tadhkirat al-mulūk*, fol. 16a-b, suggest. On the discrepancies between the *Gulshan-i Ibrāhīmī* and the *Burhān-i maʾāthir* in other respects see Sir Wolseley Haig, *The history of the Nizām Shāhī kings of Aḥmadnagar*, in *Indian Antiquary*, xlix-lii, 1920-3. The differences between the accounts of Deccan and Gudjarāt history by Niẓām al-Dīn Aḥmad and Firishta have been exhaustively noticed in the translation of the *Ṭabaḳāt-i Akbarī* by Brajendranath De, iii/1, *Bibl. Ind.*, Calcutta 1939.

Criticism of Firishta as a historian, often by anachronistic criteria (*e.g.*, S. H. Hodivala, *Studies in Indo-Muslim history*, i, Bombay 1939, 594-5), has perhaps been the more severe by reason of the reputation and status of an 'authority' which he enjoyed among European writers on Indo-Muslim history from the middle of the 18th century. Alexander Dow, *The history of Hindostan*, 2 vols., London 1768, introduced the *Gulshan-i Ibrāhīmī*, (*maḳālas* i and ii only), to a European public in the form of an interpretation in which there is little to distinguish a very free translation from Dow's own glosses. As a general annalist of Muslim rule in Hindustān Firishta provided a basis for that general history of India before the attainment of political authority by the East India Company for which Dow hoped his countrymen were, by reason of their growing involvement in India, ready. A translation of the eleventh *maḳāla* on Malībār in the *Asiatick miscellany*, ii, Calcutta 1786, and of the third *maḳāla* by Jonathan Scott, *Ferishta's history of Dekkan*, 2 vols., Shrewsbury 1794, further established Firishta as an 'authority' and Thomas Maurice, *History of Hindostan*, 2 vols. and 2 parts, London 1802-10, David Price, *Chronological retrospect*, 3 vols., London 1811-21, and James Mill, *History of British India*, 3 vols., London 1817, drew more or less heavily upon him. In 1829, Lt. Col. John Briggs published a translation of all the *Gulshan-i Ibrāhīmī* except the part containing the biographies of the *mashāʾikh* and, in 1831-2, the Bombay two-volume edition of the entire Persian text. Both translation and text are based upon a collation of unspecified MSS but without an indication of variant readings or other critical apparatus. Later editions of the *Gulshan-i Ibrāhīmī* (see Storey, 448) cannot be said to have established a definitive text. Mountstuart Elphinstone in his *History of India*, 2 vols., London 1841, gave a powerful impetus to the process of change from treating the *Gulshan-i Ibrāhīmī* as an historical 'authority' to treating it as historical data, when he went behind Firishta to many of Firishta's own sources. Sir Henry Elliot and John Dowson took the process further with (Elliot's) *Bibliographical index to the historians of Muhammedan India*, Calcutta 1849, and *The history of India as told by its own historians*, 10 vols., London 1867-77. Now that subsequent publication of literary, numismatic, inscriptional and other material on Indo-Muslim history and subsequent development of a more critical technique have destroyed dependence on Firishta (and the concept of dependence upon 'authorities'), the time is ripe for a new assessment of his character and achievement as a historical writer.

Bibliography: In addition to references in the text; Storey, 442-50; Baini Prashad, Preface to vol. iii of Brajendranath De's translation of the *Ṭabaḳāt-i Akbarī*, Calcutta 1939, xxxii-xxxiii; S. H. Hodivala, *Studies in Indo-Muslim History*, 2 vols., Bombay 1939, 1957, in the course of his commentary on Elliot and Dowson's *History of India*, gives incidentally an indispensable critique of Firishta's work; Jagtar Singh Grewal, *British historical writing (from Alexander Dow to Mountstuart Elphinstone) on Muslim India*, unpublished doctoral thesis, University of London, 1963.

(P. Hardy)

FIRISHTE-OGHLU (Firishte-zāde, Ibn Firishte, also Ibn Malak), patronymic of two Turkish writers, brothers, who flourished in Anatolia in the 9th/15th century.

1. ʿAbd al-Laṭīf b. Firishte ʿIzz al-Dīn b. Amīn al-Dīn, known particularly as Ibn Malak, lived at Tire first in the period of the Aydln-oghullarl and later under Ottoman rule (so that he is listed in biographical works among the *ʿulamāʾ* of the reign of Bāyezīd I), and won enduring fame as the author of works in the fields of *fiḳh* and *ḥadīth*. The chronologically impossible statement in the *Shaḳāʾiḳ* that he was active in the reign of Meḥemmed b. Aydīn (d. 733/1333) arises from a confusion of him with his father, the *ḳāḍī* of Birgi whom Ibn Baṭṭūta met in that year (Ibn Baṭṭūta, ii, 296, 300=Eng. tr. H. A. R. Gibb, ii, 438, 440). According to Ewliyā Čelebi (*Seyāḥatnāme*, ix, 74) he was educated at Maghnīsā. He taught for many years in Tire at the *medrese* founded by Meḥemmed Beg (to which later his own name was attached), and lies buried beside it. The date of his death is differently reported: the gravestone dated 797/1394-5, which Bursalī Meḥmed Ṭāhir [see Bibl.] thought to be his, in fact commemorates someone else; the year 801/1398-9 is reported by Ismāʿīl Pasha, 820/1417 by Meḥmed Thüreyyā, and 821/1418 by Faik Tokluoğlu (*Tire*, n.p., 1957, 12); all these dates seem to be too early, since one of his works was composed in 824/1421.

Of his works (reported by Ewliyā to be 700 in number) the chief are (in Arabic): (1) *Mabāriḳ al-azhār fī sharḥ Mashāriḳ al-anwār*; (2) *Sharḥ Manār al-anwār* (autograph, dated 824, in Necip Paşa Kütüphanesi, Tire)—these two works, long regarded as classics, were printed in several editions in the 19th century; (3) *Sharḥ Madjmaʿ al-baḥrayn*; (4) *Sharḥ al-Wiḳāya*; (5) *Manāfiʿ al-Ḳurʾān*; (6) *al-Ashbāh wa 'l-naẓāʾir*; (7) *Munyat al-ṣayyādīn fī taʿlīm al-iṣṭiyād wa-aḥkāmih* (on hunting); (in Persian): (8) *K. al-Maẓāhir*. His best-known work is his rhyming Arabic-Turkish dictionary of certain words found in the Ḳurʾān known as *Firishte-oghlu lughatī*: this was the model for the later rhyming dictionaries of Ottoman literature. The *Badr al-wāʿiẓīn wa-ẓuhr al-ʿābidīn* and the *Sharḥ Tuḥfat al-mulūk*, sometimes attributed to him, are in fact by his son Meḥemmed, and the *Lughat-i Ḳānūn-i ilāhī* by another son ʿAbd al-Madjīd.

2. ʿAbd al-Madjīd b. Firishte ʿIzz al-Dīn b. Amīn al-Dīn, known usually simply as Firishte-oghlu, was one of the chief disciples of Faḍl Allāh [*q.v.*], founder of the Ḥurūfī sect [see ḤURŪFIYYA] in the line: Faḍl Allāh—Sayyid Shams al-Dīn—Mewlānā Bāyazīd—ʿAbd al-Madjīd. (Medjdī in his translation of the *Shaḳāʾiḳ* denies his connexion with the Ḥurūfiyya, from the desire to avoid compromising his honoured and orthodox brother). Little is known of his life; he is reported to have died in 864/1469. His *ʿIshḳ-nāme* remained for centuries, with Faḍl Allāh's *Djāwidān-nāme*, one of the principal books of the sect. Works (all in Turkish): (1) *ʿIshḳ-nāme* (lith., Istanbul 1288/1871 and n.d.), begun in 833/1430, is partly an abridged translation of Faḍl Allāh's *Djāwidān-i kabīr*, partly original; it formed the basis for Isḥāḳ Efendi's refutation of the Ḥurūfiyya (*Kāshif al-asrār*, 31 ff.); (2) *Hidāyet-nāme*, composed 833/1434; (3) *Khʷāb-nāme*, translation from Shaykh Abu 'l-Ḥasan Iṣfahānī; (4) *Ākhiret-nāme* (the last three are preserved in Ist. Un. Lib., MS T 9685). The dictionary to the Ḳurʾān sometimes attributed to him is the work of his nephew ʿAbd al-Madjīd,see above.

(ÖMER FARUK AKÜN)

FIRḲA [see ḤIZB (on political parties), AL-MILAL WAʾL-NIḤAL, ṬARĪḲA].

FIRMAN [see FARMĀN].

FIRRĪSH (Sp. Castillo del Hierro), in the province of Seville, north of the Guadalquivir valley between Cazalla de la Sierra and Hornachuelos, in the neighbourhood of Constantina. The *kūra* (or region) of Firrīsh, adjacent to that of Faḥṣ al-Ballūṭ [*q.v.*], lay two stages distant to the north-west of Cordova. There were and still are chestnuts and cork-oaks in its region, but its forests were composed then as now chiefly of evergreen oaks as in Faḥṣ al-Ballūṭ. Its principal wealth lay in the exploitation of its iron, which gave it its names of Castillo del Hierro and Constantina del Hierro, and which was used throughout al-Andalus on account of its excellent quality. The deposits, however, must soon have been exhausted for no trace of this industry now remains. According to the *Rawḍ al-miʿṭār* Constantina was a great Roman town, and indeed ruins of Roman origin have been found there in the Cerro del Almendro, as also ruins of a Muslim fortress. Remains of another fortification, which might be Almoravid, have been encountered in the Cerro del Castillo. There are also prehistoric remains as yet unexplored.

In the listing of the regions of al-Andalus all the geographers place Firrīsh adjacent to Faḥṣ al-Ballūṭ and in the levy of troops which Muḥammad I made in 249/863 for the expedition against Galicia Firrīsh appears with 342 horsemen alongside Faḥṣ al-Ballūṭ which provides 400. Both Firrīsh and Constantina lie to the west of Cordova, not the north-west as stated in the *Rawḍ al-miʿṭār*. Between them and the district of Los Pedroches lies the wide band of uninhabited and uncultivated land constituted by the Sierra Morena which must be crossed before the descent of the deep valley of the Guadiato with its castle of al-Baḳār. In 230/844 the Normans, temporarily masters of Seville, launched raids in all directions and thus reached not only Morón and Cordova but also Firrīsh, which at that time was working, besides its iron mine, a quarry of highly esteemed pure white marble.

(A. HUICI MIRANDA)

FĪRŪZ SHĀH KHALDJĪ [see DIHLĪ, SULTANATE OF].

FĪRŪZ SHĀH TUGHLUĶ (b. 707/1307-8) was the son of *Sipahsālār* Radjab, younger brother of Ghiyāth al-Dīn Tughluḳ Shāh, and Bībī Nāʾila, daughter of a Hindū *zamīndār* of the Bhattī tribe of southern Pandjāb. (No contemporary or later Persian source uses 'Tughluḳ' with Fīrūz Shāh's name. The addition of 'Tughluḳ' after his name is a modern innovation, convenient but inaccurate.) During the reign of Muḥammad b. Tughluḳ, Fīrūz occupied the high position of Nāʾib Amīr Ḥādjib and played an important part in the affairs of state. On the death of Muḥammad b. Tughluḳ near Ṭhaṭṭha in Sind in Muḥarram 752/March 1351, Fīrūz was elected to the throne by the nobles and notables (including several influential religious leaders) present in the imperial camp. He had no difficulty in overcoming the opposition of Khwādja Djahān Aḥmad Ayāz, the *wazīr* of the late Sultan, at Dehlī.

Despite his pacific temperament, Fīrūz Shāh was not without imperial ambitions. He had a keen desire to regain the provinces lost during the previous reign. The two successive campaigns he led to Bengāl (754-5/1353-4 and 760-2/1359-61) gained practically nothing. His prolonged and costly expedition against the Samma chiefs of Ṭhaṭṭha (767-8/1366-7) resulted only in the extension of his suzerainty to the distant province, as did his invasion of Kāngṛa (764/1363). As a general Fīrūz Shāh was thoroughly incompetent: his conduct of war suffered from his professed desire to avoid all bloodshed and his vacillating judgment. It was therefore fortunate that he did not go ahead with a projected invasion of the Deccan (prob. 764/1363) and that sometime later, on the advice of his *wazīr*, Khān Djahān, he resolved not to undertake any further expeditions.

Fīrūz Shāh ordered a new revenue survey of the empire. He followed a liberal agrarian policy, levying only one-fifth of the produce as revenue. He issued orders to his revenue staff to deal leniently with the peasants. He dug several canals and numerous irrigation wells. The resulting extension of cultivation, apart from benefiting the peasantry, contributed to a cheaper and more plentiful supply of food-grains in the urban areas. Fīrūz Shāh abolished twenty-nine taxes, most of which were urban cesses: the measure benefited the small shop-keeper, the artisan and the craftsman.

Fīrūz Shāh humanized the government and softened the code of punishment. But his benevolence often bordered upon weakness. He granted big *iḳṭāʿ*s to his nobles, leaving them practically free to manage these estates as they chose. The measure enriched the nobles and impoverished the state. Fīrūz Shāh failed to check corruption in the admini-

stration. Indeed, some of his own measures contributed to corruption and inefficiency. The Sultan's weakness was to some extent balanced by the wisdom and firmness of his *wazīr*, Khān Djahān Maḳbūl (a convert, from Telingānā in South India), whom he trusted implicitly and who served him with rare loyalty. Another buttress which Fīrūz Shāh built up to offset his weakness was the large body of personal slaves he acquired and maintained. These slaves, known as the *bandagān-i Fīrūz Shāhī*, though loyal to their master, created much trouble towards the end of the Sultan's reign and after his death.

In religious matters Fīrūz Shāh was strongly orthodox. He suppressed extremist sectarian manifestations and outbreaks of what he considered heretical movements in his kingdom. On the advice of the *ʿulamāʾ* (whom he frequently consulted), he extended *djizya* to the Brahmans, who had so far been exempt from the tax, though he allowed them to pay it at the lowest rate. Fīrūz Shāh was the last Sultan of Dehlī to receive investiture from the ʿAbbāsid caliph, himself by now a powerless pensionary in Cairo.

Fīrūz Shāh was a prolific builder. He founded several towns, including a new city of Dehlī named Fīrūzābād, and Djawnpūr, named after his late imperial cousin Djawnā Khān alias Muḥammad b. Tughluḳ. He built many mosques, *madrasas* and other royal and public edifices. Architecturally his buildings, though possessing a conspicuous style, were not of a high order. He also showed interest in preserving old monuments and repaired many of these, including the Ḳuṭb Mīnār. His transplanting of two Asokan pillars from their original sites to the city of Dehlī was a creditable feat of mediaeval engineering. The operation in all its phases—the uprooting of the pillars, transporting them across the river Djamunā and refixing them in the sites where they stand to this day—is described in elaborate detail in the *Sīrat-i Fīrūz Shāhī* (see *ASI Memoirs*, no. 52, cited in Bibl. below). The many gardens Fīrūz Shāh laid out around Dehlī substantially increased the supply of flowers and fruits to the city.

Fīrūz Shāh died in Ramaḍān 790/September 1388 and lies buried in a simple and dignified mausoleum at the Ḥawḍ Khāṣṣ outside Delhi. The ease and plenty of his reign, the widespread distribution of charity, the corruption in the civil as well as the military administration, and the very peace and tranquillity which made the people "forget the profession of arms" (ʿAfīf), sapped the vigour of the ruling community and thereby contributed to the rapid decline of the Sultanate after nim. The invasion of Tīmūr a decade after the Sultan's death only hastened the process of decay which had already begun.

Bibliography: Among the Persian sources, ʿAfīf's *Taʾrīkh-i Fīrūz Shāhī* gives the fullest account of the reign. Though professedly favourable to Fīrūz Shāh, ʿAfīf seldom slurs over his faults. Fīrūz Shāh's own brochure, the *Futūḥāt-i Fīrūz Shāhī* (inscribed in a dome, no longer extant, in the Masdjid-i Fīrūz Shāhī in Fīrūzābād) is a revealing document. See Elliot and Dowson, iii, 265-388, for translations of excerpts from Persian accounts. For modern writings, see articles by Riazul Islam, B. N. Roy, K. K. Basu and others listed in Pearson, *Index Islamicus*, pp. 631-2, *Supplement*, p. 203. The more important articles are given below.

(RIAZUL ISLAM)

FĪRŪZĀBĀD (formerly Pīrūzābād, 'the town of victory', and originally known as Gūr or Čūr) is situated in 28° 50′ N. Lat. and 52° 34′ E. Long. (Greenwich); it is 1356 m. above sea level. The present town, which had 4,340 inhabitants in 1951, is 3 km. to the south-east of the ancient site. Fīrūzābād, besides being one of the chief centres of the Ḳash-ḳaʾī tribe [*q.v.*], is the chief administrative centre of the district (*shahristān*) of the same name in the seventh *Ustān* (Fārs). The surrounding country is very fertile and well-watered and the climate is temperate.

The ancient town is said to have been built by Ardashīr on the site of his great victory over Artabanus V. It was circular in shape and had four gates, one at each cardinal point; these gates were called Mithra (the Sun), Bahrām (Mars), Hormuz (Jupiter) and Ardashīr. In the centre of the town was a lofty tower (now in ruins) on the top of which was a fire-altar; near-by was a large fire-temple. North of the town are the remains of the palace which Ardashīr built shortly before his successful revolt; it is thus the oldest Sāsānid building in existence (see F. Sarre and E. Herzfeld, *Iranische Felsreliefs*, Berlin 1910, 128). Gūr became the capital of the province of Ardashīr-khurra ("Glory of Ardashīr"). According to al-Balādhurī (315 and 389), Gūr and Iṣṭakhr were the last two towns in Fārs to surrender to the Muslim Arabs. In the 3rd/9th century Gūr was as large as Iṣṭakhr, but was smaller than Shīrāz (Iṣṭakhrī, 97). The district produced excellent rose-water which was exported far and wide; it was also celebrated for its fruit. The Buwayhid ruler ʿAḍud al-Dawla [*q.v.*] used to frequent Gūr; his courtiers, disliking the name (which means 'grave' in Persian), persuaded him to change it to Pīrūzābād 'the town of victory'. Ḥamd Allāh Mustawfī (*Nuzha*, 137) stated that the inhabitants were noted for their piety and honesty.

(L. Lockhart)

AL-FĪRŪZĀBĀDĪ, Abu 'l-Ṭāhir Muḥammad b. Yaʿḳūb b. Muḥammad b. Ibrāhīm Mad̲j̲d al-Dīn al-S͟hāfiʿī al-S͟hīrāzī, from his father's town Fīrūzābād, was born at Kāzarūn, a town near S͟hīrāz (Īrān) in Rabīʿ II or D̲j̲umādā II 729/February or April 1329. From the age of eight he was educated in S͟hīrāz, then in Wāsiṭ and, in 745/1344, in Bag͟hdād. In 750/1349 he was attending the classes of Taḳī al-Dīn al-Subkī in Damascus (Brockelmann, II, 106).

His long life can be divided into three main periods, spent in Jerusalem, Mecca and in the Yemen.

In the same year 750 he accompanied al-Subkī to Jerusalem where he stayed for ten years as a teacher and then, while still a young man, became a master. Subsequent travels took him to Cairo and Asia Minor.

The information to be found in his biographers in regard to his journeys varies very greatly (see Brockelmann, II, 232 n.). We have here followed, like Brockelmann, *ibid.*, the account given in the *K. al-Rawḍ al-ʿāṭir* of al-Nuʿmānī, which seems to be the most trustworthy. According to al-Sak͟hāwī's account (*Ḍaw*, x, 85 foot), a long biography of al-Fīrūzābādī is given in the *ʿUḳūd* of al-Maḳrīzī; this must be the *Durar al-ʿuḳūd al-farīda fī tarād̲j̲im al-aʿyān al-mufīda*; the MS Gotha 1771 cannot include it, but perhaps it is contained in MS Mawṣil 1264, no. 5 (Brockelmann, S II, 37), which should correctly be 264, no. 5. From al-Maḳrīzī interesting details might be expected. The ms. is at the present time in Bag͟hdād, in the possession of the al-D̲j̲alīlī family who do not allow it to be consulted.

In 770/1368 he went to live in Mecca, breaking his stay there to travel to India and spending five years in Dihlī; after that came more travelling.

In 794/1392 he went to Bag͟hdād at the invitation of Sultan Aḥmad b. Uways, and afterwards to Persia. Tīmūr Lang, after taking S͟hīrāz (795/1393), greeted him with the greatest respect. But his native land, ravaged by the Mongol invasion, could no longer keep him: from Hormuz he set sail for southern Arabia.

In Rabīʿ I 796/January 1394 he reached the Yemen and lived in Taʿizz for 14 months in the house of Sultan al-Malik al-As͟hraf Ismāʿīl b. ʿAbbās, who appointed him chief ḳāḍī of the Yemen on 6 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 797/22 September 1395 (with residence in Zabīd) and gave him his daughter in marriage. In 802/1400 he once again made the pilgrimage and in his house in Mecca set up a modest Mālikī *madrasa* with three teachers. He was in Medina in 803/1401 when he heard of the death of his father-in-law al-Malik al-As͟hraf. In Ramaḍān 805/April 1403 he made another journey to Mecca, but returned to Zabīd without delay. He died there on 20 S͟hawwāl 817/3 January 1415.

An active man with a thirst for knowledge, he is said when travelling to have taken with him quantities of books which he used to read at the halts. He bought many books, the necessary equipment for the work of compilation, as practised in his time. A spendthrift (but see *Ḍaw*, x, 81 l. 23), he used to sell during a famine and buy back when times of plenty returned. His works were concerned with *tafsīr*, *ḥadīt̲h̲* and history, but lexicography remained the branch in which he excelled.

He had certain pretensions: born near S͟hīrāz, he claimed to be a descendant of the celebrated S͟hāfiʿī Abū Isḥāḳ al-S͟hīrāzī (Brockelmann, I, 484) who had, however, died without issue. After achieving his brilliant position in the Yemen, he called himself and wrote by the name of Muḥammad al-Ṣiddīḳī, as though a descendant of the caliph Abū Bakr al-Ṣiddīḳ (*Ḍaw*, x, 85 l. 12-3; al-Nuʿmānī, *Rawḍ*, 218r.), no doubt the eccentricity of a man who enjoyed great renown. He had more serious ambitions: he wished to compile a dictionary in 60 (*Ḳāmūs*, Preface, 3 l. 13) or, it is even said, in 100 volumes: *al-Lāmiʿ al-muʿallam al-ʿud̲j̲āb al-d̲j̲āmiʿ bayn al-Muḥkam wa 'l-ʿUbāb*, which only reached the 5th volume (Ibn al-ʿImād, *S͟had̲h̲arāt*, vii, 128; *TA*, *Preface*, 14, l. 10). He made a summary of it, his *Ḳāmūs*, its full title being *al-Ḳāmūs al-muḥīṭ wa 'l-ḳābūs al-wasīṭ al-d̲j̲āmiʿ li-mā d̲h̲ahaba min al-ʿarab s͟hamaṭīṭ*. But then he set himself up as the rival, to use no stronger a term, of al-D̲j̲awharī in his *Ṣiḥāḥ*. The often unjustified criticism that he made of the latter (*e.g.*, *Ḳāmūs*, *Preface*, 3 l. 20-1, 4 l. 18-20) will come as no surprise.

Of his numerous works the following are printed: 1. the *Taḥbīr al-muwas͟hs͟hīn fī-mā yuḳāl bi 'l-sīn wa 'l-s͟hīn*, vocabulary of Arabic words written indiscriminately with either *s* or *s͟h*, Algiers 1909 (also published Beirut 1330/1912); 2. narratives derived from the life of the Prophet, *Sufar al-saʿāda* or else *al-Ṣirāṭ al-mustaḳīm*, written in Persian, translated into Arabic by Abu 'l-D̲j̲ūd Muḥ. b. Maḥmūd al-Mak͟h-zūmī in the margin of *al-Fawz al-kabīr maʿa fatḥ al-ḫabīr fī uṣūl al-tafsīr* of Walī Allāh b. ʿAbd al-Raḥīm (Cairo or Jerusalem 1307, 1346), and in the margin of *Kas͟hf al-g͟humma* (Cairo 1317, 1332) of al-S͟haʿrānī; see Brockelmann, S II, 235, no. 10; 3. the *Tanwīr al-miḳbās min* (*Tanwīr al-miḳyās fī*, Ḥād̲j̲d̲j̲ī K͟halīfa, *Kas͟hf al-ẓunūn*, no. 3706) *tafsīr Ibn ʿAbbās*, Cairo 1290, 1316 (in the margin of *al-Nāsik͟h wa 'l-mansūk͟h* of Ibn Ḥazm), 1345/1926. 18 works are extant in manuscript, see Brockelmann, II, 233-4 and S II, 235-6; of these, we may single out *al-Bulg͟ha fī taʾrīk͟h aʾimmat al-lug͟ha* (*Suppl. ibid.*, no. 7), perhaps the most important; and, a unique manuscript, *al-Mirḳāt al-wafiyya fī ṭabaḳāt al-Ḥanafiyya*, Medina, Library of S͟hayk͟h al-Islām ʿĀrif Ḥikmet Bey, register *Sulayman Nadwī*, no. 128, see O. Spies, in *ZDMG*, xc (1936), 99 and 117; cf. Ḥād̲j̲d̲j̲ī K͟halīfa, *op. cit.*, no. 7895, 11830; the work derives from the *Ṭabaḳāt* of ʿAbd al-Ḳādir al-Ḥanafī (*Ḍaw*, x, 82).

The *Preface* to the *TA* (i, 13-4) provides a biography of al-Fīrūzābādī and a list (incomplete) of 45 works; Brockelmann (S II, 236) must have referred to it, for the *Preface* to the *Ḳāmūs* does not include a comparable list. 49 works, according to *Ḍaw* (x, 81-3): *tafsīr* 6, *ḥadīt̲h̲* and history 27, lexicography *et alia* 16, but 61 in the *ʿUḳūd al-d̲j̲awhar* of D̲j̲amīl Bey al-ʿAẓm (i, 302-6), lists, however, that are open to criticism.

Al-Fīrūzābādī is "the author of the *Ḳāmūs*", his name remains connected with this famous book. The work is preeminently a compilation of the *Muḥkam* of Ibn Sīda and of the *ʿUbāb* of al-Ṣag͟hānī.

He venerated al-Sag͟hānī as a model (*Ḍaw*, x, 83). But from whom did he take the *ziyādāt*? It

would be helpful to discover if he is indebted for certain elements to the *Shams al-ʿulūm* of Nashwān al-Ḥimyarī (a first vol. published by K. V. Zetterstein, Leiden 1951). The *Ḳāmūs* was completed in Mecca in his house *ʿala 'l-ṣafā* (end of *Ḳ*., iv, 415) during the second main period described above (cf. *Ḍaw*, x, 83 and 85), before his stay in the Yemen. But it is hardly likely that such an expert lexicographer as he was would have been unacquainted with this dictionary which incidentally devotes so much space to matters concerning the Yemen.

Very brief definitions or explanations allowed him to present an extremely rich vocabulary in a volume of modest size. This brevity has given rise to innumerable misapprehensions (see Lane, *Lexicon, Preface*, XVII l. 14-6 and *ZDMG*, iii (1849), 95 ff.). It was the subject of numerous glosses and criticisms, and commentaries of every sort, both by admirers, in particular the *Tādj al-ʿarūs* of al-Sayyid Murtaḍā al-Zabīdī (d. 1205/1791), 10 vols., Būlāḳ 1306-7, who in this commentary incorporates the work of his master Abū ʿAbd Allāh al-Fāsī, the *Iḍā'at al-rāmūs*, and by detractors, defending the *Ṣiḥāḥ* of al-Djawharī; see I. Goldziher, *Beiträge zur Geschichte der Sprachgelehrsamkeit bei den Arabern*, Vienna 1872, ii, 602 ff. and the judgement of al-Suyūṭī, *Muzhir*[3], i, 101 and 103. In the last century we may also quote the criticisms of Aḥmad Fāris al-Shidyāḳ (d. 1305/1887), *al-Djāsūs ʿala 'l-Ḳāmūs*, Istanbul 1299 and, more recently, the *Taṣḥīḥ al-Ḳāmūs* (Cairo 1343/1925) of Aḥmad Taymur Pasha.

The *Ḳāmūs* was published for the first time in Calcutta (1230-2) and Üsküdār (1230), and on very many occasions subsequently. The 4th edition (Cairo 1357/1938) in 4 vols., of the Maṭbaʿat Dār al-Ma'mūn (cited in this article), is well presented typographically.

The *Ḳāmūs* has been translated into Persian (see Brockelmann, S II, 234), and also into Turkish by ʿĀṣim Efendi (d. 1235/1819 or 1248/1832): *al-Ūḳiyānūs al-basīṭ fī tardjamat al-Ḳāmūs al-muḥīṭ*, published in Būlāḳ 1250, Istanbul 1305, etc. This Turkish edition was favoured by nineteenth century orientalists and is often quoted, *e.g.*, by Fleischer and Goldziher.

In the West the *Thesaurus linguae Arabicae* of A. Giggeius (Milan 1632, 4 vols.) was based on the *Ḳāmūs*. For his *Lexicon* (Leiden 1653), J. Golius added to it the *Ṣiḥāḥ*. Freytag (Kazimirski) and Belot did the same. The two rivals were associated together to provide a dictionary for European orientalism; and Lane took as the basis of his great *Lexicon* the *Tādj al-ʿarūs*, the commentary on the *Ḳāmūs* referred to above.

(H. Fleisch)

FĪRŪZADJ, the turquoise, a well-known precious stone of a bright green or "mountain green" to sky-blue colour with a gloss like wax; in composition it is a hydrated clay phosphate with a small but essential proportion of copper and iron. The colour is not permanent in all stones, and is said to be particularly affected by perspiration. It is almost always cut as an ornament *en cabochon*, *i.e.*, with a convex upper surface; only stones with an inscription are given a flat upper surface. The provenance of serviceable stones is limited to a few places whose history may be traced back for thousands of years. Turquoise mines were worked by the kings of Egypt in the peninsula of Sinai. Major Macdonald discovered them again in 1845 in the Wādī Maghāra and its neighbourhood and worked them again for a number of years. No mention of the stone or the mines has survived from the Hellenistic period; on the other hand in addition to marvellous details of the method of procuring the pale green *callais* in Carmania (east of Persis), Pliny knows a good deal about its properties, and his description can only refer to our turquoise; for the statement that the *callais* loses its colour when affected by oil or ointment is found in al-Kindī on the *fīrūzadj* and in all later mineralogical works. It can hardly be doubted that the turquoise was obtained in the Sāsānid period and even earlier in the mines around Nīshāpūr. Al-Tīfāshī (d. 651/1253) says of the kings of Persia that they adorned their hands and necks with turquoises, because they averted danger of death by land or water; but we often meet with the assertion that the turquoise detracts from the majesty of kings. It was considered to contain copper and to be formed in the vicinity of copper mines. Different kinds are distinguished according to the different colours (sky-blue, milk-blue, green, spotted); the best kind is considered to be the *būsḥāḳī* (*i.e.*, *Abū Isḥāḳī*) and the finest variety of this is the sky-blue *azharī*. Large pieces are very rare and are correspondingly costly, small pieces on the other hand are very common. The best specimens retain their colour, apart from the influences detailed below; after 10-12 years many lose their colour entirely and the stone is then said to be dead. All stones, however, show a certain variation in colour. They are brilliant in a clear sky and dim when the sky is clouded; they alter their colour with the state of health of the wearer, and when affected by sweat, oil or musk; fat is believed to restore the colour again.

Taken internally it is a poison, but in collyrium it is useful for clearing the sight, also if it is stared at for some time. Gold takes away its beauty (unlike lapis lazuli), *i.e.*, probably, the greenish blue colour does not harmonize as well with the yellow of the gold as the dark blue of the lapis lazuli.

Ibn al-Akfānī (d. 749/1348) explains the name *fīrūzadj* as "stone of victory"; whence it is also called *ḥadjar al-ghalaba*. The word *fīrūzadj* is found in many corrupt forms in the Latin translations of the middle ages (*farasquin*, *febrognug*, *peruzegi* etc.), but none of these can be considered the original of

the word turquoise; for as early as the 13th century we find the form *turcoys*, *turquesa* and *turquesia*, and it may safely be assumed that this was a new name given to the stone from the land of its origin, the ancient home of the Turks.

The edition of al-Bīrūnī's *al-Djamāhir fī maʿrifat al-djawāhir* (1355/1937) has revealed that almost all particulars mentioned above are already to be found there and that the essential contents of his short article (169-71) were practically quoted in full.

The use of the turquoise for magical purposes is remarkably limited. Ibn al-Akfānī quotes on the authority of Hermes a talisman made of it. In the great magical work *Ghāyat al-ḥakīm* the turquoise appears in the list of stones among those belonging to Saturn; but only one single talisman engraved on turquoise is mentioned.

General Sir A. Houtum-Schindler who was governor of the mining area and director of operations at the mines in the "eighties" of last century has given a detailed account of the Persian turquoise mines at Mashhad in Khurāsān, which is quoted in Bauer's *Edelsteinkunde* (2nd ed., 490 *et seq.*).

(J. Ruska-[M. Plessner])

FĪRŪZĀNIDS, Banū Fīrūzān (Pērōzān), a Persian tribe which in the 4th/10th century had considerable influence in the district of Shukūr (Ṭabaristān). The only member of the tribe of real significance was Mākān b. Kālī (Kākī ?) who started as an officer in the service of the ʿAlids of Ṭabaristān, and later held various official positions; in 329/940 he died in battle (for details see mākān). After his death one of his relatives (his cousin, according to Ibn Miskawayh, ii, 3-7; his uncle, according to Zambaur), al-Ḥasan b. Fīrūzān, succeeded in gaining control of the neighbourhood of Ḳūmis for a short time. One of his daughters (name unknown) married the Būyid Rukn al-Dawla [*q.v.*]. The last member of the family to be mentioned was Ḥasan's grandson, Kanār b. Fīrūzān, in 388/998.

Bibliography: B. Spuler, *Iran*, 91-4 (with references to sources); Zambaur, 216 (with genealogical table). See also bibl. to mākān.

(B. Spuler)

FĪRŪZKŪH (Fērōzkōh). The name of several localities.

1. The capital of the Ghūrid [*q.v.*] kings, in the mountains east of Herat on the upper Harī-rūd *ca.* 64° 22′ E. Long. (Green.) and *ca.* 34° 23′ N. Lat. The site has been identified with the present Djām [*q.v.*] where a large minaret still exists.

The town of Fīrūzkūh was built by Ḳuṭb al-Dīn Muḥammad as the capital of the district of Warshāda in Ghūr which he ruled. When Ḳuṭb al-Dīn was poisoned in Ghazna, his brother Bahā al-Dīn moved from his appanage, Mandesh in the east, to Fīrūzkūh. Bahā al-Dīn became ruler of Ghūr in 544/1149 and thus founded the Ghūrid kingdom. For more than sixty years Fīrūzkūh was the capital of the Ghūrid state and to it were brought the spoils of the conquests of the Ghūrids. It was a cultural centre where writers and poets flourished. After the death of Ghiyāth al-Dīn in 599/1202 the empire fell to pieces and Fīrūzkūh lost its importance. Ghiyāth al-Dīn built the minaret which still stands.

The town was conquered by ʿAlā al-Dīn Khʷārizm Shāh in 607/1210, and it was finally destroyed by Ögödei son of Čingiz Khān in 619/1222. The Fīrūzkūh nomads probably derived their name from this site.

2. The name of a castle in Ṭabaristān near Mt. Damāwand in a district called Wīmah. We do not know when the castle or town of Fīrūzkūh was built and Casanova's attempt to identify it with Firīm, capital of a dynasty of Ispāhbads in the 4th/10th century, was refuted by Ḳazwīnī (Djuwaynī, iii, 381). Fīrūzkūh is mentioned as an important stronghold under the Khʷārīzmshāhs and especially under the Mongols. It was taken by the Mongols in 624/1227 (Djuwaynī, ii, 210). Afterwards the Ismāʿīlīs of Alamut obtained possession of it. It fell again to the Mongols under Hülegü in 654/1256. The area was a summer resort for the Il-Khāns, and the name appears in accounts of Tīmūr's conquests. The town is now linked to Tehrān by rail (202 km.); it has over 5,000 inhabitants and is the centre of a district of the same name.

(R. N. Frye)

FĪRŪZPŪR (Fērōzpūr). A district in the Pandjāb which takes its name from the principal town. It forms part of the Djalandhar division, lying between 29° 55″ and 31° 9′ N. and 73° 52′ and 75° 26′ E. Area 3202 sq. m. Until 1947, the principal Muslim tribes of the district were Rādjpūts, Arains, Dogars and Wattus, and also an ascetic tribe known as Bodla, believed to possess powers of incantation. The ancient site of Djanēr, supposed to be the Hadjnīr of Bayhaḳī, was the capital of the Punwar Rādjpūts. Soon after the Muslim invasion the Bhaṭṭi Rādjpūts adopted Islām and invaded the district from the south. The Gil, Dhālīwāl and other Djaṭ tribes entered it later. The Dogars, a wild and predatory tribe, were more recent immigrants. The town of Fīrūzpūr was reputedly founded in the time of Sultan Fīrūz Shāh III of Dihlī and named after him. In Akbar's time it was part of the Sūba of Multān and not of Sirhind, and probably lay on the right bank of the river Satladj, and not on the left as at present. The Sidhū Djaṭs appear towards the end of Akbar's reign and soon adopted the Sikh religion. It was in this tract that Guru Govind was defeated after a three days fight by Awrangzīb's army; the site was held sacred and the tank (Mukat-sar = Tank of Salvation) became a place

of pilgrimage, where a 3 days' festival was held in January. Round it the important town of Mukatsar has grown up. The Sikhs got possession of the country after the retirement of Aḥmad Shāh Durrānī: the Bhangī Misl under Gūdjar Singh took the principal part in the conquest. Randjīt Singh threatened this country with the minor Sikh states, and this move (1808) led to British intervention. Fīrūzpūr was occupied, and annexed in 1835, thus interposing between Randjīt Singh's kingdom and the minor states. The Muslim Nawwābs of Ḳaṣūr also found a refuge at their estate of Mamdot near Fīrūzpūr in 1807, and were recognized as ruling chiefs. Their territory was annexed in 1855, but was afterwards restored to the Nawwābs, who held it until 1947. It was a large and wealthy estate.

The first Sikh war between the British and the Khālsa army was fought in this tract. The Sikh army crossed the Satladj in December 1845. The battles of Mudkī and Phērū-shahr (often wrongly called Fīrūz-shahr or Fīrūz-shāh) were fought soon after. The Sikh army was repulsed but not crushed, and recrossed the Satladj, only to invade British territory again higher up the river near Ludhiāna. The decisive battle of Alīwāl was fought outside the district of Fīrūzpūr, but the desperate struggle of Subrāwāṅ (Sobraon) which ended the war, was fought within its limits.

In more recent times the district was enlarged by the addition of the Taḥsīl of Fazilka in the south from the former district of Sirsa (1884). The sandy tracts to the east and south of the district have been rendered fertile by irrigation from the Sirhind canal, and the inundation-canals constructed by Col. Grey in the riverain tract also added greatly to its productiveness. The Sikh Djaṫs are excellent farmers and take full advantage of these conditions. There is a large export of wheat from the Fīrūzpūr district. The Muslim population of the city, and of the district, emigrated to Pākistān during the Partition Riots of 1947.

FISCAL SYSTEMS [see bayt al-māl, ḍarība, etc.].

FISH [see samak].

FISHEK [see shenlik].

FISḲ [see fāsiḳ].

FĪTHĀGHŪRAS, or Fūthāghūras (rarely Būthāghūras or other individual transliterations), Pythagoras, the Greek philosopher of the sixth century B.C., as celebrated and as elusive a figure in Islam as in the West. The distinction between the man and the school, or schools, bearing his name was occasionally sensed but, of course, not really understood, and no true distinction was made between the two.

The partly historical and mostly legendary circumstances of his life were known in considerable detail through a lengthy summary of his biography from Porphyry's *Philosophos Historia*, preserved in al-Mubashshir 52 ff. and Ibn Abī Uṣaybiʿa, i, 38 ff. (cf. F. Rosenthal, in *Orientalia*, *N.S.* vi (1937), 43 ff.). His lifetime was assumed, on the basis of various synchronisms, to have spanned the reigns of Cyrus and Cambyses (Mubashshir, Ibn Abī Uṣaybiʿa), to have been fixed by his position as the second in a chain of five philosophers (between Empedocles [who, in fact, lived later than Pythagoras] and Socrates) (see anbaduḳlīs), or to have fallen in the reign of an Artaxerxes (Saʿīd [Eutychios], *Annals*, i, 77). The customary dating "in the time of Sulaymān" used for men and events of great antiquity is occasionally mentioned (Shahrastānī), as he was also supposed to have been in touch in Egypt with followers (*aṣḥāb*) of Sulaymān. His claim to being the founder of philosophy was recognized as disputed by other theories concerning the history of philosophy (*Fihrist*, 245; Sidjistānī, *Ṣiwān*, according to Ms. Murad Molla 1408, 2a), but, following *Flwṭrkhs* (Plutarch ?), it was constantly repeated that he had coined the word "philosophy", and, following the introductions to the Aristotelian Logic, that he had given his name to the philosophical school of the Pythagoreans. He was sometimes believed to have elaborated on the doctrines of Empedocles (Ṣāʿid al-Andalusī, trans. Blachère, 60; Ḳifṭī, 258 f.), or to have been a forerunner of the Platonic theory of ideas (*Picatrix*, trans. Ritter and Plessner, 154). In addition to his role in the history of philosophy, his main achievements were the invention of the science of music and the propagation among the Greeks of arithmetic and geometry (Yaʿḳūbī, i, 134; or the introduction of geometry, physics, and metaphysics from the East: Abu 'l-Ḥasan al-ʿĀmirī, *Amad*, Ms. Servili 179, 80b; Ṣāʿid; Ḳifṭī; Ibn Abī Uṣaybiʿa). The Ḥarrānian Ṣābians are said to have adopted him as one of their prophets (Bīrūnī, *Chronology*, 205; Ikhwān al-Ṣafāʾ, cf. P. Kraus, *Jābir*, Cairo 1942-3, ii, 223 n. 1), and his mystico-religious character was noted (Masʿūdī, *Murūdj*, iii, 348; Ibn Abī Uṣaybiʿa). In addition to his own contacts with the East, we hear about students of his who went east and influenced Zoroastrianism and Indian religious philosophy (from the doxographical work of Ammonios, Ms. Aya Sofya 2450, cited by Bīrūnī, *Chronology* [cf. H. S. Taqizadeh, in *BSOS*, viii (1935-7), 947 ff.], and Shahrastānī, 277 f. and 455 ff.).

Of the works ascribed to him, the *Golden Words* (*Chrysâ epê*) enjoyed extraordinary fame and a wide circulation in their Arabic translation, which, in the course of transmission, underwent slight but at times meaningful variations. They are usually referred to as *al-Risāla* (*al-Rasāʾil*) *al-dhahabiyya* or *Waṣāyā* (*Waṣiyya*); once they are also referred to as the "Golden Epistle and Exhortation for Diogenes" (*Ras. Ikhwān al-Ṣafāʾ*, Cairo 1347/1928, iv, 100 to be connected with i, 92 f.). The appellation "golden" is said to go back to Galen who read the poem daily and copied it with gold letters, a statement for which the Greek authority remains to be found. Separate editions by J. Elichmann, *Tabula Cebetis* (1640, from Miskawayh); L. Cheikho, *Traités inédits*, 2nd ed. (1911); M. Ullmann (Diss. Munich 1959, not yet published); cf. also F. Rosenthal, in *Orientalia*, *N.S.*, x (1941), 104 ff., and M. Plessner, in *Eshkōlōt*, iv (1962), 68. The Muslims knew of various commentaries on the work. One is ascribed to Proclus (*Fihrist*, 252; Ḳifṭī, 89) and listed as extant in a summary made by ʿAbd Allāh b. al-Ṭayyib (d. 435/1043) in Ms. Escurial 888 (8); its relationship, if any, to the commentary of Hierocles has not yet been investigated. A recension of Sidjistānī, *Ṣiwān* (Murad Molla 1408, 13a) introduces its (uncommented) quotation of the work as being "a summary of the book of Iamblichus in explanation of the 'Golden' Exhortations". A manuscript of this commentary appears to be preserved in Princeton (J. Kritzek, in *MIDEO*, iii (1956), 380). The existence of a commentary by Aḥmad b. al-Ṭayyib al-Sarakhsī (p. 55, Rosenthal) is poorly attested (a confusion with the

afore-mentioned ʿAbd Allāh b. al-Ṭayyib ?). ʿAlī b. Riḍwān's *Commentary on Pythagoras on Virtue* (Ibn Abī Uṣaybiʿa, ii, 104) may have dealt with the *Golden Words*.

The famous Pythagorean *symbola* were known and often cited (cf. B. R. Sanguinetti, in *JA*, v/8 (1856), 188; G. Levi Della Vida, in *RSO*, iii (1910), 595 ff.; *Picatrix*, trans. Ritter and Plessner, 422). A good deal of doxographical material was available in the translations of philosophical texts, *e.g.*, that of Ps.-Plutarch's *Placita Philosophorum*. Excerpts on the intellect and emanation ascribed to Pythagoras appear in al-Ṭabarī, *Firdaws*, 70 f., 72 f. Siddiqi, a passage on the connexion between the soul and physical perfection in al-Tawḥīdī, *Ris. al-Ḥayāt*, 68 f. (*Trois Épîtres*, ed. Keilani). A valuable exposition of Pythagorean cosmology has been preserved by al-Shahrastānī, 265 ff. (cf. D. Kövendi, in F. Altheim, *Gesch. der Hunnen*, v,32-71). A large number of wise sayings was ascribed to Pythagoras; Ḥunayn's chapter on Pythagoras in the *Nawādir* is restricted to the *Golden Words*, but extensive collections are found in the *Ṣiwān*, Ibn Hindū, Mubashshir, Ibn Abī Uṣaybiʿa, aud Anon. Ms. Aya Sofya 2469. Although of Greek origin, they can rarely be traced to sayings connected with the name of Pythagoras in Greek tradition (cf., *e.g.*, F. Rosenthal, in *Orientalia, N.S.* xxvii (1958), 29 ff.). We cannot, however, be certain in all cases as to whether their attribution to Pythagoras was effected in the Greek or, rather, the Oriental tradition.

Many other Pythagorean writings are mentioned by the sources. It was known that Plato had asked Dion to buy three books by Pythagoras (Ḳifṭī, 20, as in Iamblichus). According to another statement of Greek origin quoted in the name of Porphyry but not contained in Porphyry's Greek text (Ibn Abī Uṣaybiʿa, i, 42), Archytas collected eighty works by himself and 200 more from other members of the Pythagorean school; thus, there once existed 280 genuine works (Mubashshir, Ibn Abī Uṣaybiʿa), and, in addition, a number of works on a great variety of subjects, mentioned by title, that were not genuine. The Muslims knew three treatises with a commentary by Iamblichus (*On Spiritual Polity, To the Tyrant of Sicily*, and *To Sifan.s on the Discovery of Ideas*) (*Fihrist*). The general references to "works on arithmetic and music" do not seem to aim at any specific work, but Ibn Abī Uṣaybiʿa attributes to Pythagoras a *Book on Arithmetic* and five further titles. *A Treatise on the Natural Numbers* (*al-aʿdād al-ṭabīʿiyya*) is cited by a writer on alchemy (Kraus, *Jābir*, ii, 45 n. 5; *ibid.* ii, 289 n. 9, on the *Miftāḥ al-ḥikma known as Nuzhat al-nufūs*). Some surviving works may be described as Neo-Pythagorean products, such as the *Oikonomikos* of Bryson (ed. M. Plessner, Heidelberg 1928), the excerpts on domestic life by a certain female philosopher named Pythagoras (?) (Abu 'l-Ḥasan [al-ʿĀmirī], *al-Saʿāda wa 'l-isʿād*, 389 ff. Minovi), or a brief treatise on the *Education of the Young* ascribed to Plato (F. Rosenthal, in *Orientalia, N.S.* x (1941), 383 ff.).

Like other great names of Antiquity, that of Pythagoras served to give greater prestige to alchemical teachings, and the Djābir-Corpus contained a *Muṣaḥḥaḥāt F.* (Kraus, *Jābir*, i, 94; ii, 45 n. 5). There also existed a *Kitāb al-Ḳurʿa* on divination in his name (*Fihrist*, 314) (= P. Tannery, in *Notices et Extraits*, xxxi/2 (1886), 231 ff. ?).

An authority on *materia medica* named Badīghūras is cited numerous times in al-Rāzī's *Ḥāwī* and other authors on the subject. The form of the name is not easily reconciled with Pythagoras, and such an identification went probably unnoticed by al-Rāzī; it is not impossible, but other Greek names may be involved (such as Diagoras). The pre-Hippocratic physician Pythagoras (Būthāghūras), in the sketch of the ancient history of medicine going back to Yaḥyā al-Naḥwī, appears to be a figment of the imagination inspired by the figure of Pythagoras (*Ṣiwān*, 8b, where he is distinguished from the contemporary philosopher Fūthāghūras; Ibn Abī Uṣaybiʿa, i, 23).

The influence of Pythagoras and Pythagoreanism on Muslim civilization must be rated rather high. Greco-Arabic theories of music and numbers go back ultimately to them (Nicomachus of Gerasa, the author of the *Arithmêtikê Eisagôgê*, was even thought to have been identical with the father of Aristotle). The Ikhwān al-Ṣafāʾ may not have been entirely unaware of the organizational precedent of Pythagoreanism, and al-Rāzī, among others, is stated to have been inspired by the Pythagoreans and to have written in their defence (Masʿūdī, *Tanbīh*, 162; Ṣāʿid, trans. Blachère, 75). However, the name of Pythagoras must often be considered a mere label, as in his alleged appearance, together with Plato and Aristotle, in Ismāʿīlism (Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1270, i, 394).

FITNA, the primary meaning is "putting to the proof, discriminatory test", as gold, al-Djurdjānī says in his *Taʿrīfāt* (ed. Flügel, Leipzig 1845, 171), is tested by fire. Hence the idea of a temptation permitted or sent by God to test the believer's faith, which, for the man wedded to his desires, would have the appearance of an invitation to abandon the faith. "Your goods and children are *fitna*" (Ḳurʾān, VIII, 28; LXIV, 15). The term *fitna* occurs many times in the Ḳurʾān with the sense of temptation or trial of faith ("tentation d'abjurer", according to R. Blachère's translation); and most frequently as a test which is in itself a punishment inflicted by God upon the sinful, the unrighteous. "Taste your *fitna*" (LI, 14); this saying is addressed to those who are "tried by the Fire" (of Gehenna)". It is not a matter of an inner, secret temptation, but of external circumstances in which faith succumbs or may succumb. "O Lord, do not place us in *fitna* before those who are unfaithful!" (Ḳurʾān, LX, 5). The idea of scandal is associated with it (VII, 3), to such an extent that to take a part in this putting to the test is for man a very grave fault: "the *fitna* of believers is worse than murder" (*ibid.*, II, 191; cf. II, 217).

On the one hand, *fitna* will thus be employed in the sense of the "trial of the grave", or even the torments of hell; but on the other hand *fitna* will be essentially a state of rebellion against the divine Law in which the weak always run the risk of being trapped. The idea which is to become dominant is that of "revolt", "disturbances", "civil war", but a civil war that breeds schism and in which the believers' purity of faith is in grave danger. There are numerous *ḥadīths* which proclaim the troubles to come, which will destroy the Community and from which the believer must flee. For example: "after me there shall break forth such troubles (*fitna*) that the believer of one morning shall, by evening, be an infidel, while the believer of the evening shall, next day, be an infidel—save only for those whom God will strengthen through knowledge" (quoted in the "Profession of Faith" of Ibn Baṭṭa,

in H. Laoust's translation).—In view of the fusion of spiritual and temporal characteristic of Islam, the great struggles of the early period of Muslim history are *fitna* (pl. *fitan*), inasmuch as the questions contested regarding the legitimacy of the *Imāms* or caliphs and the armed conflicts that they aroused have a direct bearing on the values of faith.

The series of events which includes the murder of ʿUthmān, the designation of ʿAlī as *Imām*, the battle of Ṣiffīn and the development of both the *shīʿat ʿAlī* [*q.v.*] and the *khawāridj* [*q.v.*] schisms, and the seizing of power by Muʿāwiya, is often called "the first *fitna*", and also "the *fitna*" *par excellence* or "the great *fitna*". On account of the struggles that marked Muʿāwiya's advent, the term *fitna* was later applied to any period of disturbances inspired by schools or sects that broke away from the majority of believers (*al-djumla*). We read of the *fitna* of the Murdji'a, which Ibn al-Nakhaʿī apparently described as "graver" than that of the Azāriḳa Khāridjīs. And every "innovator", every man guilty of *bidʿa*, is potentially an instigator of *fitna*. Reversing the terms, al-Ḥasan al-Baṣrī gives this definition: "all those who foment disturbances (*fitna*) are innovators (*muḥdith*)". The "men of Tradition and the Community", *ahl al-sunna wa 'l-djamāʿa* have the strict duty to obey the legitimate sovereign so long as his orders do not run counter to the Ḳur'ān, and to shun all *fitna*. It is in this spirit that the first Sunnī professions of faith (*e.g.*, *Fiḳh Akbar*, i, 5) "rely upon God" in the dispute between ʿUthmān and ʿAlī, and regard the successive proclamation to the *Imāma* of both of them as equally valid.

Although the struggle between ʿAlī and Muʿawiya and its consequences institutes the era of *fitna* par excellence, during which schisms came into being which were never to be resolved, the term *fitna* was none the less applied, in the course of history, to other and more localized disturbances. It is in this way, for example, that some chronicles, denouncing the struggles and seditions which more than once pitted Ashʿarīs and Ḥanbalīs against each other, are apt to speak of *fitna*, as is the case at Baghdād, shortly after the death of al-Ashʿarī, when his gravestone was overturned, or at Damascus in 835/1432, when the majority of the *ʿulama'* anathematized Ibn Taymiyya.—On the other hand, to denote the persecution of the followers of the "righteous Ancients", which also affected Ibn Ḥanbal under al-Ma'mūn, at the time of the triumph of the Muʿtazila, the annalists are more inclined to speak of *miḥna* [*q.v.*]. The chroniclers concerned are those who came after al-Mutawakkil's reaction and were opposed to *muʿtazilī* tendencies; according to this point of view, there was no element of "rebellion" under al-Ma'mūn, since it was the central power which protected the *bidʿa*. The *ahl al-djamāʿa* thus underwent a "testing" (*miḥna*) for the sake of their faith, there was no *fitna* (that is to say armed revolt led by "innovators" and "agitators") whatsoever.

It is in the chapter on the *imāma* that the treatises of *ʿilm al-kalām* raise the question of *fitna*. It is taught that the nomination of an *imām* is "obligatory" (*wādjib*) for the Community, an obligation justified 'rationally" (*ʿaḳlan*) according to the Muʿtazilīs, "'legally" (*sharʿan*) or "traditionally" (*samʿan*) according to the Ashʿarīs. And one of the arguments most readily put forward is that only an *imām* can prevent the disturbances of *fitna*, or restore peace if they have already broken out. Indeed, certain schools with Khāridjī tendencies teach that it is obligatory to nominate an *imām* in the event of *fitna*, but not if peace is prevailing; others, on the contrary, hold that he should only be nominated in a period of peace, never in a time of unrest, for fear that the nomination should give rise to fresh revolts. The Ashʿarīs, for their part, require the *imām* to lead the Community during *fitna* and in times of peace alike, and consider as the authority in favour of their opinion the history of the early years of Islam.

All these discussions relate implicitly to a notion of *fitna* defined as disturbances, or even civil war, involving the adoption of doctrinal attitudes which endanger the purity of the Muslim faith; and every mention of *fitna* evokes "the great *fitna* of Islam" which culminated at Ṣiffīn. We may say in fact that somewhat later summaries of the question—or more accurately, the nomenclatures of the schools in which they result—are closer or more distant echoes of the attitudes and opinions which the "great *fitna*" had caused to be adopted. At that time (early 2nd/7th cent.), certain traditionists of Baṣra and the first Muʿtazilīs declared that "the era of the *fitna*" having opened, every *mudjtahid*, every man capable of "making an effort", was entitled to seek for the solution; the Karrāmiyya, for their part, upheld the concomitant legitimacy of the two *imāms* in dispute; the Shīʿa maintained the sole legitimacy of ʿAlī; while the majority of the Sunnīs maintained that it was better to obey the established power and refrain from taking sides, in order to have no part in civil war, and thereby to hasten the return to peace. It is on this last attitude that the Ashʿarīs and Māturīdīs were later to base their views. For the *fitna* in Muslim Spain, see AL-ANDALUS, vi, 5.

((L. GARDET)

FIṬNAT, pseudonym of ZÜBEYDE (?-1194/1780), a Turkish poetess. Little is known of her early life. She was the daughter of the Shaykh al-Islām Meḥmed Esʿad Efendi (d. 1166/1753) the well known scholar of the reign of Meḥemmed IV, whose father Abū Isḥāḳ Ismāʿīl had also been a Shaykh al-Islām. She was married to Derwīsh Meḥmed Efendi who became ḳāḍīʿasker of Rumeli under Selīm III.

Her short *dīwān* contains all the usual conventional poems written for various occasions and *ghazals* which do not vary in style or content from those of her contemporary male poets. She tends on the whole to follow the Nābī—Ḳodja Rāghib Pasha school of "wisdom-poetry", full of aphorisms and fatalistic statements. But occasionally she is inspired by the carefree and joyful style of Nedīm (see her *musaddas* in Gibb, vi, 395). She writes with great ease in a polished and fluent style.

FIṬR [see ʿĪD AL-FIṬR].

FIṬRA is a "noun of kind" (Wright, *Grammar*,[3] i, 123[d]) to the infinitive *faṭr* and means (an Ethiopic loan-meaning, see Schwally, in *ZDMG*, liii, 199 f.; Nöldeke, *Neue Beiträge*, 49), "a kind or way of creating or of being created". It occurs in Ḳur'ān, XXX, 29 (*khilḳa*, Bayḍāwī) and other forms of its verb in the same meaning occur 14 times. But though

Muḥammad uses derived forms freely, it was obscure to his hearers. Ibn ʿAbbās did not understand it until he heard a Bedouin use it of digging a well, and then the Bedouin probably meant the genuinely Arab sense of *shaḳḳ* (*Lisān*, vi, 362, l. 20). Its theologically important usage is in the saying of Muḥammad, "Every infant is born according to the *fiṭra* (*ʿala 'l-fiṭra*; *i.e.*, Allāh's kind or way of creating; "on God's plan", cf. Macdonald, *Religious attitude in Islam*, 243); then his parents make him a Jew or a Christian or a Magian". This is one of several contradictory traditions on the salvability of the infants of unbelievers. On the whole question the theologians were uncertain and in disagreement. This text evidently means that every child is born naturally a Muslim; but is perverted after birth by his environment. But in this interpretation—that of the Muʿtazilīs (cf. *Kashshāf*, ed. Lees, ii, 1094)—there were found serious theological and legal difficulties. (i.) It interferes with the sovereign will (*mashīʾa*) and guidance (*hidāya*) of Allāh. Orthodox Islam, therefore, holds that the parents could be only a secondary cause (*sabab*) and that the guiding aright and leading astray must come from Allāh himself. (ii.) This view, and indeed almost any view of the tradition, would involve that such an infant, if his parents died before he reached years of discretion, could not inherit from them, and that if he died before years of discretion, his parents could not inherit from him. For this presupposes that he is a Muslim up to years of discretion, and canon law lays down that a Muslim cannot inherit from a non-Muslim or vice versa (*Ḥāshiya* of al-Bād̲j̲ūrī on the *sharḥ* of Ibn Ḳāsim on the *matn* of Abū S̲h̲ud̲j̲āʿ, ed. Cairo 1307, ii, 74 f. and Sachau, *Muhammedanisches Recht*, 186, 204, 206 —a favourite subject for hair-splitting). Two attempts have been made to escape this. (i.) This statement of Muḥammad is to be regarded as a decision (*ḥukm*) and was abrogated by the later decision as to inheritance. But it is pointed out that it is not really a decision, but a narrative (*khabar*) and that narratives are not abrogated. (ii). The being made a Jew, Christian or Magian is to be regarded as not actual, but figurative, and takes place in this figurative sense from the point of birth; the legal religion of the infant is automatically that of his parents, although he comes actually to embrace that religion only with maturity of mind. Another view was that being created according to the *fiṭra* meant only being created in a healthy condition, like a sound animal, with a capacity of either belief or unbelief when the time should come. Another was that *fiṭra* meant only "beginning" (*badʾa*). Still another was that it referred to Allāh's creating man with a capacity of either belief or unbelief and then laying on them the covenant of the "Day of *Alastu*" (Ḳurʾān, VII, 171). Finally that it was that to which Allāh turns round the hearts of men.

(D. B. MACDONALD)

FIṬRAT (FIṬRA), ʿABD AL-RAʾŪF, inspirer and theorist of the reform movement in Turkestan. Very little is known of his life: born at the end of the 19th century into a family of small traders in Buk̲h̲ārā, he was at first a teacher, and then devoted all his time to his activities as a writer, poet and journalist. Fiṭrat was active from 1908-9 in the reform movement of Buk̲h̲ārā (the *D̲j̲adīds*, who were originally concerned with educational reform, but from 1917 were to form themselves into a political party, the 'Young Buk̲h̲ārians'), of which he soon became the ideological leader. From 1910 to 1914 he took part in the creation of a reformed system of teaching in Buk̲h̲ārā and in Turkestan, and actively promoted the sending of students to Turkey. In 1920, after the inauguration of the People's Republic, he held office in the government at first as Minister of Education, then as Minister of Foreign Affairs. After the suppression of the republic in 1924, he took no part in the government of the Uzbekistan Republic (unlike some of his comrades in arms, such as Fayḍ Allāh Hožaev [see KHOD̲J̲AEV]), and taught at the University of Samarḳand until his arrest in 1937. His fate after that is unknown.

Like D̲j̲amāl al-Dīn al-Afg̲h̲ānī, with whom he has much in common (though he himself does not claim it), ʿAbd al-Raʾūf Fiṭrat studies in all his works the causes of the spiritual and temporal decay of the Muslim world, examines the external signs of it, and seeks a means of salvation from it. Fiṭrat studied this crisis as seen in the example of Buk̲h̲ārā, which, perhaps more than any other Muslim country, showed the full extent of it: one of the chief centres of Islam delivered over to the Russian conqueror, the *madrasas* deserted, the formerly powerful state sunk into anarchy, the Muslim faith reduced on the one hand to a fossilized religion, fettered by all the weight of an obsolete legalism, on the other, to the superstition and the fetishism of the masses (*Munāẓara*).

Fiṭrat saw for it only one possible salvation: the return to a dynamic religion freed from a rigorism which was completely foreign to the fundamental rules of Islam, and freed first of all from servile respect for *taḳlīd*.

But although criticism forms a considerable part of Fiṭrat's work, it is not merely critical and destructive. He gave much thought to the means by which his country and all the Islamic community could overcome this crisis. In this search for its salvation, Fiṭrat seems to represent the two fundamental aspects of Muslim renewal. He was a reformer, an educator and a politician whose thought was mainly revolutionary. He considered that all reform must start with assiduous work among the people. True to his first vocation as an educator, he held that no regeneration of the Muslim community was possible without the preparation and education of individuals, and a consequent rebirth in each of an understanding and grasp of the meaning of Islam. Fiṭrat stressed continually the importance of the individual and the part which he must play, maintaining that personal reform was an absolute condition of the whole of Islam. He gives a considerable place in his works to the problem of reformed methods of teaching (*Munāẓara*, 26, 35-6, 43, 48, 52; *Bayānāt*, 29). Traditional education having proved incapable of developing, even of recognizing the necessity for change, he regarded the reformation of the *maktabs* as the only road to salvation. An important feature of Fiṭrat's thought is his pragmatic conception of knowledge. He considers that the only learning which is worthy of human effort is learning which is of value not only to man's ultimate salvation but also to his earthly existence; it is also a learning

which can be acquired within a reasonable period, leaving man time to put it to use for the good of humanity. Thus he opposed the preservation of scholasticism, which 'is of no help to man in the modern world' (*Munāẓara*, 28), and insisted that all knowledge should be submitted to the criticism of the intellect and not accepted blindly.

In this field Fiṭrat, while recognizing that 'one must seek knowledge where it is to be found', denied that Islam needed to borrow anything from the West or to seek inspiration from it or to imitate it, for, he maintained, everything that has contributed to the temporal greatness of the West derives from Islam (*Bayānāt*, 32-3). But Fiṭrat did not consider that the salvation of the Muslim community would come only from below, through a regeneration of all Muslims; he held that there was another task to be accomplished, the transformation of Muslim society from above, and it is here that we see in him the political thinker. No institution is spared in Fiṭrat's political programme; he insists throughout his works on the importance of the individual and of individual initiative, and on man's ability to dominate everything around him, from Nature to his own destiny. Analysing the economic and social bases of power, he clearly distinguishes spiritual demands from physical, considering that men's conduct is ruled primarily by natural conditions. Without arriving at any definite separation of the spiritual and the temporal, Fiṭrat indicated that the solutions to the problems of the adaption of Islam to the modern world were to be sought along these lines. Similarly, he considered that a complete revision of social relations, leading to a more equitable distribution of wealth, was indispensable and in no way contrary to the teaching of Islam. In his view, one of the causes of the decadence of Islam was that it had become the ideology of the wealthy classes, and thus its salvation lay in the destruction of this ideology. Another equally important course to be followed was the introduction of a new kind of relationship within society. *ʿĀʾile* ('The Family') is devoted to a study of the reform necessary in family relationships. And the reform enunciated by Fiṭrat was not a compromise between the structure of Islamic society and that of Western society, but a radical choice, a break with the past, the complete re-making of family relationships, in which Fiṭrat gave a very important place to the raising of the status of women. For Fiṭrat, the internal renewal of the Muslim community could be brought about only by a double process: a spiritual renewal, involving the education of each individual, and a political and social revolution which would leave remaining nothing of the ideas, the institutions and the human relations of the period of stagnation, and which would give birth to a modern society and a modern state. This internal regeneration was indispensable in order to achieve external liberation. The salvation of Islam would imply the end of foreign domination, which was a consequence of the degradation of Islam: and the struggle for liberty does not come after the work of internal regeneration, but is one of the aspects of it. Fiṭrat constantly reminds his readers that 'the *d̲j̲ihād* is an obligation for every Muslim'. For Fiṭrat, this internal regeneration and the resultant progress would contribute to the Holy War, and in a very direct fashion: 'Learn at the same time the traditional learning and the new learning, and thus you will be able to prepare the material means which are indispensable for the defence of Islam, the *d̲j̲ihād*, which is obligatory for all' (*Munāẓara*, 48). Thus Fiṭrat's thought develops into the ideas of the unity of Islam and of Pan-Islamism.

Like D̲j̲amāl al-Dīn al-Afg̲h̲ānī, Fiṭrat thought that the renaissance of Islam had to come from the Muslims themselves. The incitement to action, the rejection of passivity, of quietism and of reluctance to accept responsibility, which are such noticeable features of the works of D̲j̲amāl al-Dīn, are similarly prominent in those of Fiṭrat. Fiṭrat followed D̲j̲amāl al-Dīn along the path which he had opened up by stressing the temporal history of Islam, and it is probably for this reason that his works are more concerned with defining the means of achieving a new vitality than with re-defining the content, or more simply the methods, of the Faith. The originality of Fiṭrat's work lies in the fact that to reformism and Pan-Islamism there is added a call to social justice and to a revolt against the rich and those in power.

His principal works are (1) *Munāẓara*, first published in Istanbul in 1908, and re-published in Persian at Tashkent in 1913; Russian trans. by Col. Yagello, Tashkent 1911, under the title *Spor Buk̲h̲arskogo mudarrisa s evropeyts̲em v Indii o novometodnik̲h̲ s̲h̲kolak̲h̲*. (*Istinnïy resultat obmena mïsley*) pervoye izdanie sočineniy Buk̲h̲ara, Fiṭrat; (2) *Bayānāt-i sayyāḥ-i hindī*, first publ. at Istanbul (n.d.), then by Behbūdī in a Russian trans. at Tashkent in 1913 as: Abd ur Rauf, *Rasskazï indiyskogo putes̲h̲estvennika* (*Buk̲h̲ara kak ona 'est'*); (3) *Sāʾiḥa*, Istanbul 1910; (4) *Rahbar-i nad̲j̲āt*, n.p. 1915; (5) *ʿĀʾile*, n.p., n.d.

He published also various novels (notably *Ḳiyāmat*, Tashkent 1961) and poems in *Millî Edebiyat*, Berlin, i (1943).

FRAXINETUM was in the middle ages the name of the village now called La-Garde-Freinet, lying in a gap in the Mt. des Maures (département of Var, France). This locality only finds a place in this Encyclopaedia because it was occupied for 80 years by Muslim pirates who had come from Spain between 278-81/891-4. Having gained a footing in the gulf of Saint-Tropez, they occupied a natural fortress (Fraxinet, Freinet) near the modern village of La-Garde-Freinet; "soon reinforced by new groups from the Iberian peninsula, the invaders visited the county of Fréjus with fire and the sword,

and sacked the chief town". They then infiltrated westwards, ascended the Rhône, and extended their influence as far as the Alps and Piedmont. About 321/933 "light columns, very mobile, held—at least during the summer—all the country under a reign of terror, while the bulk of the Muslim forces was entrenched in the mountainous canton of Fraxinetum, in the immediate vicinity of the sea". The States concerned reacted slowly, and only in 361 or 362/972 or 973, after several unsuccessful attempts, did the vassals of Otto the Great "arrive to free Provence and the transalpine regions from the Muslim peril and to drive away for ever these pirates from their lair in the gulf of Saint-Tropez". Thus ended this "strange Islamic State encapsulated within a wholly Christian land" (J. Calmette, *L'effondrement d'un empire et la naissance d'une Europe*, 117).

Bibliography: No Arabic chronicle refers to these events, for which the *Antapodosis* of Liutprand, ed. Becker, Hanover-Leipzig 1915, is the principal source; J. T. Reinaud, *Invasions des Sarrazins en France*, Paris 1836 (Eng. tr., Lahore 1956), gives the history of these corsairs in detail, for which see also: R. Poupardin, *Le royaume de Provence sous les Carolingiens*, Paris 1901, 243-73; idem, *Le royaume de Bourgogne*, Paris 1907, 87-107; G. Pinet deManteyer, *La Provence du Ier au XIIe siècle*, Paris 1908, 238 ff.; E. Lévi-Provençal, *Hist. Esp. Mus.*, ii, 154-60 (which has been taken as the basis of this entry) supplies a more detailed bibliography.

FU'ĀD AL-AWWAL, king of Egypt. Aḥmad Fu'ād was born in the Gizeh palace on 26 March 1868, of a Circassian mother. In 1879 his father, the Khedive Ismāʿīl, who had been deposed by the Sublime Porte, took him with him into exile. He studied in Geneva and Turin, and in 1885 entered the Italian military academy. At Rome in 1887, as a second-lieutenant in the artillery, he frequently visited the Italian royal family. Having been Ottoman military attaché at Vienna, he finally returned (1892) to Egypt after a stay at Istanbul. As prince he accepted the first Rectorship of the Free University of Cairo (1908-13). On the death of his brother Ḥusayn (9 October 1917) he succeeded him as sultan of Egypt. The British considered him as not at all Anglophobe, though regretting that he enjoyed neither great popularity nor much influence among the Egyptians (Lord Lloyd). He assumed the title of king of Egypt from 15 March 1922, and d. 28 April 1936. He had a respect for decorum and tradition, and during his lifetime the queen and the princesses, excepting his own daughters, remained veiled.

The age in which he reigned is significant in the history of the Egyptian awakening. The nationalist movement, then embodied in the person of Saʿd Zaghlūl and the *Wafd*, launched the open struggle against the British occupation immediately after the armistice of 11 November 1918. A campaign of signed petitions, demonstrations in Cairo, and strikes (1919, again in 1921) forced Great Britain to recognize Egypt as a "sovereign and independent state" (1922). While profiting by the action of the *Wafd*, which helped him to counteract British influence, king Fu'ād dreamed of an authority too absolute for him not to fear the nationalist leaders. A constitution envisaging two chambers was promulgated on 19 April 1923. The 1924 elections were a triumph for the *Wafd*. But the assassination of the *Sirdār* (November 1924), the difficulties in the negotiations, several times broken off and then resumed, with the British with a view to drawing up a treaty, the intervention of the British in Egypt and their Sudanese policy, all added to the crises. Parliament was dissolved four times, and the elections always returned a Wafdist majority (1925, 1926, 1929), except that of 1931 which the *Wafd* boycotted. In spite of this, there were only three rather brief periods of Wafdist ministry (Saʿd Zaghlūl in 1924, Muṣṭafā al-Naḥḥās in 1928 and 1930). That is to say, the king did as he pleased with the constitution, which was abrogated in 1930, immediately superseded, then re-established in 1935. He relied on minority parties or on unattached politicians; he appealed to, among others, Aḥmad Ziwar (1924-6), Muḥammad Maḥmūd (1928-9), and Ismāʿīl Ṣidḳī (1930-3). At the end of his reign the Italian menace (Abyssinian war) demonstrated the urgency of an agreement with Britain. The treaty was signed in London on 26 August 1936, four months after his death.

From the economic point of view, the foundation of the Miṣr bank marked the first step in his reign towards economic independence. He had no share in it, nor did he deposit his private fortune there, which, however, he did not neglect. On the other hand, he took a lively interest in the intellectual development of the country. He founded schools, encouraged the new university at Gizeh (Fu'ād al-Awwal University, 1925) and the reform of al-Azhar [*q.v.*], an establishment on which his internal policies greatly relied. He promoted the creation and rejuvenation of numerous cultural institutions (Royal Society of Political Economy, of Geography, etc.). He insisted that Cairo should be the venue of great international congresses. He was however accused of mistrusting Egyptians and confiding in foreigners. He always patronized, without any fanaticism, all those who, outside politics, could contribute to the development of modern Egypt, especially in the cultural sphere. He was a true Maecenas, visiting schools and institutions. The personal prestige which he enjoyed abroad and the historical studies which he patronized enlarged the world reputation of Egypt.

Bibliography: G. Hanotaux, *Histoire de la nation égyptienne*, vii, specially pp. iii-xxxii (by Henri Dehérain); M. Colombe, *L'évolution de l'Égypte (1924-1950)*, Paris 1951, with detailed bibliography; Karīm Thābit, *al-Malik Fu'ād, malik al-Nahḍa*, Cairo 1944. (J. Jomier)

FU'ĀD PASHA, KEČEDJI-ZĀDE MEHMED, five times Ottoman Foreign Minister and twice Grand Vizier, was born in Istanbul in 1815, the son of the poet ʿIzzet Molla [*q.v.*]. Upon his father's exile to Sivas in 1829 Fu'ād switched from the usual theological curriculum to the new medical school, where he learned French, the key to his future career. From 1834-5 he spent three years as an army doctor in Tripoli in Africa; but since the Porte's diplomatic business was rapidly increasing, his French gained Fu'ād appointment to the Translation Bureau in November 1837. Like his life-long colleague Meḥmed Emīn ʿĀlī [see ʿALĪ PASHA MUḤAMMAD AMĪN] he became a protégé of Muṣṭafā Reshīd Pasha [*q.v.*].

During the next decade Fu'ād advanced rapidly as interpreter and diplomat through the ranks of the Ottoman bureaucracy and gained firsthand expe-

rience of Europe. In 1839 he became dragoman of the Porte; in 1840 he was dragoman, and from 1841 to 1844 first secretary, of the Ottoman embassy in London; in 1844 he went on special mission to Spain when Isabella II was declared of age to rule. In March 1845 Fuʾād was appointed member of an ad hoc commission on education whose report of August 1846 recommended a new state school system. He became dragoman of the imperial Dīwān in June-July 1845, and on 18 February 1847 *āmeddji* [*q.v.*]. Late in 1848 Fuʾād was sent to Bucharest to ensure smooth relations with the Russian forces which had entered the Principalities to suppress the revolution. When in 1849 Magyar and Polish refugees sought asylum in Ottoman territory Fuʾād was dispatched to St. Petersburg to uphold Reshīd's policy of no extraditions. Nicholas I received Fuʾād on 16 October. Fuʾād's mission was successful. In reward he was advanced to *ṣadāret müsteshārī*, in effect Minister of the Interior. After returning via Jassy and Bucharest to Istanbul on 11 April 1850 he sat on a special commission of the *medjlis-i wālā* to deal with Christian complaints from Vidin.

Fuʾād went to Bursa in mid-September 1850 to take baths for his rheumatism. There he wrote with Aḥmad Djewdet [*q.v.*] the first modern Ottoman grammar published in the empire, *Ḳawāʿid-i ʿOthmāniyye*, 1851. In that year, on the founding of the Endjümen-i Dānish [see ANDJUMAN], Fuʾād was appointed a member. In Bursa Fuʾād and Djewdet also drafted a proposal for the Bosporus ferry-boat company, which became the first joint-stock company in the empire. From April to July 1852 Fuʾād was in Egypt on a special mission to see to the application of Tanẓīmāt [*q.v.*] decrees and solve questions of railway building, inheritance, and the Egyptian tribute. That year Fuʾād advocated a European loan to help the finances of the empire, but Sultan ʿAbd al-Medjīd refused.

On 9 August 1852 Fuʾād was appointed Foreign Minister, three days after ʿĀlī succeeded Reshīd as Grand Vizier. This marks the first time Reshīd's two disciples had worked together in the highest offices, and the beginning of their involuntary estrangement from their master. This turbulent period brought the Leiningen mission with Austria's ultimatum on Montenegro. Fuʾād was also involved in the pro-Latin decision on the Holy Places. Prince Menshikov, Russia's special envoy, consequently deliberately snubbed Fuʾād, causing his resignation in early March 1853. For a year from March 1854 Fuʾād was special commissioner with military authority in Epirus and Thessaly, successfully repressing Greek insurgents who sought to profit from the Crimean War situation. Thereafter he was appointed to the new Tanẓīmāt Council, and in early May 1855, when ʿĀlī again succeeded Reshīd as Grand Vizier, again became Foreign Minister, with the rank of *vezīr* and *müshīr*. Fuʾād had a major share in elaborating the *Khaṭṭ-i Hümāyūn* [*q.v.*] of 18 February 1856. He did not, however, attend the Paris peace congress; ʿĀlī was the Ottoman plenipotentiary. Owing to Stratford's pressure concerning the Principalities Fuʾād resigned in early November 1856. In early August 1857 he was again President of the Tanẓīmāt Council.

Fuʾād again became Foreign Minister, and ʿĀlī Grand Vizier, on 11 January 1858, four days after Reshīd's death. As Foreign Minister he represented the empire at the Paris conference on the Principalities, 22 May to 19 August 1858; Couza's double election the next year, however, sabotaged the plan adopted for separate administrations. When Druze attacks on Maronites provoked intervention by the great powers, Fuʾād was sent on 12 July 1860 to Beirut with full civil and military powers. News of massacres in Syria took him to Damascus, where he had over 700 persons tried and 167 executed, including the *wālī* Aḥmed Pasha. This severity, earning Fuʾād the local nickname "father of the cord", successfully forestalled further penetration by French troops. Back in the Lebanon, Fuʾād punished some guilty Druze, though the French claimed he let most escape. He was chairman of the international commission that sat there from 5 October 1860 to 4 May 1861, although missing the first five sessions. The new Lebanese administrative statute of 9 June 1861 resulted.

On 6 August 1861, while still in Syria, Fuʾād was appointed Foreign Minister for the fourth time, and on 22 November Grand Vizier, which post he took up on arriving in Istanbul on 21 December. His first job was to deal vigorously with a financial crisis of panic proportions; he withdrew the *ḳāʾime* [*q.v.*], drew up a budget, and negotiated the successful loan of 1862. A Montenegrin campaign was successfully concluded, but the Belgrade incident of 1862 forced Turkish evacuation of two Serbian fortresses. Fuʾād helped secure new *millet* constitutions for the Greeks, Armenians, and Jews. He resigned on 2 January 1863. His famous letter of resignation to ʿAbd al-ʿAzīz pointed out financial difficulties and the danger of Balkan nationalisms; it was evidently also an effort, though vain, to present a united ministerial front. On 13 January Fuʾād was president of the *medjlis-i wālā*, and on 14 February *serʿasker*. In this capacity he accompanied ʿAbd al-ʿAzīz to Egypt in April, and regained the imperial favour. On 1 June 1863 he was again appointed Grand Vizier, keeping the war ministry also.

Fuʾād's three-year term was marked by the *wilāyet* law, prepared by Fuʾād and Midḥat [*q.v.*] in 1864 for the new provincial administration experiment in Bulgaria; by the final authorization of the construction of the Suez Canal; by the necessity of recognizing Karl of Hohenzollern as the new prince of Roumania; by the firman of 27 May 1866 granting Khedive Ismāʿīl's heirs direct succession from father to eldest son; and by Fuʾād's growing feud with Muṣṭafā Fāḍil Pasha [*q.v.*] over finances. Fuʾād was dismissed on 5 June 1866 because he opposed ʿAbd al-ʿAzīz's taking a daughter of Ismāʿīl as wife.

When ʿĀlī once more became Grand Vizier, on 11 February 1867, Fuʾād became Foreign Minister again. His masterly memorandum of 15 May for the Powers delineated Ottoman progress under the Tanẓīmāt, but, with ʿĀlī, Fuʾād was subject to increasing attacks from New Ottoman writers, especially over the Cretan rebellion and the final Turkish military evacuation of Serbia. From 21 June to 7 August 1867 Fuʾād accompanied ʿAbd al-ʿAzīz on his trip to Paris, London, and Vienna; Fuʾād kept the sultan from blunders, and the trip succeeded in diminishing the likelihood of serious foreign intervention in Crete, as well as interesting the sultan in western material progress. Fuʾād returned exhausted. Nevertheless he also was acting Grand Vizier in the autumn of 1867 when ʿĀlī went to Crete. He helped develop plans for the Council of State (*Shūrā-yi Dewlet* [*q.v.*]) and the Galatasaray lycée, both inaugurated in 1868. On medical advice, for his heart condition, Fuʾād travelled via Italy to Nice for a rest in the winter of 1868-69. There he died on 12 February 1869. His body was brought to Istanbul by the French dispatch-boat Renard.

Fu'ād was a convinced westernizer. He worked on many of the reforms of the later Tanẓīmāt period. He may have favoured representative government, though he was in no hurry to achieve it. His main objective was preservation of the Ottoman Empire through diplomacy and reform. He loved high office, but was not so jealous and grudging as ʿĀlī, and rather bolder in innovation. His honesty has been impugned, especially as regards gifts from Ismāʿil, but his objectives remained constant. Fu'ād was a brilliant conversationalist. He was completely at home in French. His witticisms are famous; some imputed to him are apocryphal. He also wrote well, although sometimes carelessly, and helped to clarify Ottoman Turkish by having vowel marks put in the 1858/59 *sālnāme* and in his grammar. His so-called political testament is not proven genuine; it does, however, reflect his known views.

(R. H. Davison)

AL-FUḌAYL B. ʿIYĀḌ, Abū ʿAlī al-Tālaḳānī, of the tribe of Tamīmī, an early Ṣūfī, disciple of Sufyān al-T̲h̲awrī, was born in Samarḳand, grew up in Abiward, and in his youth was a highway robber. After his conversion, he betook himself to the study of *Ḥadīth* at Kūfa. He was summoned to give ascetic addresses to Hārūn al-Ras̲h̲īd, who called him "The chief of the Muslims". He settled in Mecca and died there 187/803.

Mentioned frequently as a transmitter of Traditions, he was also a noted ascetic and advocate of other-worldliness, known as one who lived with God. "The servant's fear of God", he said, "is in proportion to his knowledge of Him and his renunciation of this world is in proportion to his desire for the next", and again, "Satisfaction (*riḍā*) with God is the stage of those who are close to Him, who find in Him joy and happiness". Asked what he thought of the condition of mankind, Fuḍayl replied, "Forgiven, but for my presence among them". It was said that when Fuḍayl left the world, sadness disappeared.

AL-FUDJAYRA, (officially, al-Fujairah), one of the seven Trucial S̲h̲ayk̲h̲doms in Arabia and the only one lying in its entirety on the eastern side of the peninsula separating the Gulf of ʿUmān from the Persian Gulf. The tiny state is wedged between the Sultan of Muscat's territory of Rūs al-Dj̲ibāl, to the north, and the once independent territory of Kalbā (Kalba in Yāḳūt, *TA*, and the *Ḳāmūs* of al-Fīrūzābādī), to the south. Kalbā, since 1371/1952 a part of the Trucial S̲h̲ayk̲h̲dom of al-S̲h̲āriḳa (Sharjah), lies between al-Fudj̲ayra and the central part of the Sultan of Muscat's domains. From Kalbā north to Rūs al-Dj̲ibāl, the narrow littoral and steep eastern watershed of the mountains of al-Ḥadj̲ar behind the coast constitute the region known as al-S̲h̲amāliyya.

The little town of al-Fudj̲ayra is at the mouth of Wādī Ḥām and about two miles from the sea. Most of the inhabitants of the town and wādī are members of the tribe of al-S̲h̲arḳiyyūn. Strung along the coast to the north are other villages of the state: Sakamkam, al-Ḳurayya, Murbiḥ, Ḍadna and a part of Dabā. Between Murbiḥ and Ḍadna is the enclave of K̲h̲awr Fakkān (Fukkān in Yāḳūt, *TA*, and the *Ḳāmūs* of al-Fīrūzābādī) belonging to al-S̲h̲āriḳa.

Al-Fudj̲ayra has long been under the influence of al-Ḳawāsim of Ra's al-K̲h̲ayma and al-S̲h̲āriḳa, who were occupying K̲h̲awr Fakkān as early as 1188/1775. Al-Fudj̲ayra, however, became virtually independent in 1321/1902 and was recognized as such by Great Britain in 1371/1952, when the Ruler, S̲h̲ayk̲h̲ Muḥammad b. Ḥamad al-S̲h̲arḳī, subscribed to the agreements in force between Britain and the Trucial S̲h̲ayk̲h̲doms.

(ʿAbd al-Hafez Kamal)

FUḌŪLĪ, Muḥammad b. Sulaymān (885?-963/1480?-1556), (in Turkish Fuzūlī) one of the most illustrious authors of Classical Turkish literature. He was born in ʿIrāḳ at the time of the Aḳ-Ḳoyunlu (White Sheep Dynasty) domination, probably at Karbalā, although Baghdād, Ḥilla, Nadjaf, Kirkūk, Manzil and Hīt are also mentioned as his birthplace. It is reported on uncertain authority that his father was *muftī* of Ḥilla, that he was taught by one Raḥmat Allāh, that he first took to poetry when he fell in love with this teacher's daughter and that his literary taste was formed by the Ādharī poet Ḥabībī. It can, however, be said with certainty that Fuḍūlī came from an educated family and was himself fully trained in all the learning of the age. His learning is also attested by the titles of *Mollā* and, later, *Mawlānā* which are given to him. It appears that his education commenced at Karbalā and was continued at Ḥilla and Baghdād.

Meḥmed b. Sulaymān (v. Ḥādjdjī Khalīfa, 255, 645, 805, 914, 1075, 1571, 1719) invariably used the *makhlaṣ* (pen-name) Fuḍūlī in all his verse and prose works and is, therefore, mentioned among poets known by their *takhalluṣ* (Sām Mīrzā, *Tuḥfa*, Tehran 1314, 136). He explained the choice of this original pseudonym, meaning both "inappropriate" and even "improper" and also, if taken as the plural of *faḍl*, "of great value", in the preface to his Persian *Dīwān* (Br. Mus. Or. 4911; Fāʾiḳ Reshād, *Fuḍūlī'nin ghayr-i maṭbūʿ eshʿārī*, Istanbul 1314, 43; Suleymān Naẓīf, *Fuḍūlī* (1925), 13-14). In the preface to his Turkish *Dīwān* he speaks of his innate artistic temperament and mentions that he started writing poetry at a very early age (*Türkçe Divan*, Ankara 1958, 4 ff.). His first known poem is a *kaṣīda* in praise of Elvend Bey (904-8/1498-1502), a grandson of the Aḳ-Ḳoyunlu Uzun Ḥasan (*Madjmūʿa-i nafīsa*, in the author's possession, 178a-b). When the Ṣafawī Shāh Ismāʿīl captured Baghdād in 914/1508, Fuḍūlī was already quite well known as a young man of literary and religious learning. He dedicated to this Shīʿī Shāh (Fuḍūlī being himself a Shīʿī) his first *mathnawī*, *Beng-ü-Bāde*. He enjoyed the patronage of the Ṣafawid Wālī of Baghdād, Ibrāhīm Khān Mawṣillü, and dedicated *ḳaṣīdas* to him (*Türkçe Divan*, 87, 89; *Beng-ü-Bâde*, Istanbul 1956, 3-4; Ṣādiḳī, *Madjmaʿ al-khawāṣṣ*, İst. Üniv. Kütüph. T.Y. 408, 533b, 34b —for a Persian translation of this see Khayyāmpūr, Tabrīz 1327).

When Sultan Suleymān the Magnificent conquered ʿIrāḳ in 941/1534, Fuḍūlī addressed *ḳaṣīdas* to him too, feeling no embarrassment at the change of administration and hastening to sing the praises in *madḥiyyas* of members of the entourage of the new conqueror. These included the Grand Vizier Ibrāhīm Pasha, the *Ḳāḍīʿasker* Ḳādir Čelebi, the *Nishāndjī* Djalāl-zāde Muṣṭafā Čelebi (cf. *Turkçe Divan*, 85, 98, 101; see also ʿĀlī, *Kunh al-akhbār*, unpublished part, İst. Üniv. T.Y. 5959, 385a-b; ʿĀshiḳ Čelebi, *Mashāʿir al-shuʿarāʾ*, Istanbul Ali Emirî Lib. No. 772, 528; Ḥasan Čelebī, *Tadhkira*, same lib. No. 761, 221a-222a). Fuḍūlī met also two poets who participated in the campaign, Khayālī (d. 964/1557) and Tashlīdjalī Yaḥyā (d. 990/1582). While the Sultan was in Baghdād, Fuḍūlī was promised a pension payable from *waḳf* funds. Difficulties arose, however, when a later *berāt* stipulated the payment of nine aspers a day from *zewāʾid* funds. These difficulties are the subject of the letter known as the *Shikāyet-nāme* (Abdülkadir Karahan, *Fuzûlî'nin mektupları*, Istanbul 1948, 31-8). Fuḍūlī entered also into correspondence with Aḥmed Bey, the *Mīr-i liwā* of Mawṣil, Āyās Pasha, the *Ḳāḍī* ʿAlā al-Dīn (cf. Karahan, op. cit., 38-41, 42-4, 44-6) and the *Shehzāde* Bāyezīd (Hasibe Çatbaş, *Fuzûlî'nin bir mektubu*, in *AÜDTCFD*, iv (1948), 139-46.

Fuḍūlī composed *ḳaṣīdas* praising the Pashas Uways, Djaʿfar, Āyās and Meḥmed, when they were *Wālīs* of Baghdād, and also the *Ḳāḍī* of Baghdād Fuḍayl Efendi. He also wrote some of his most important works, including *Ḥadīḳat al-suʿadāʾ* and *Laylī wa Madjnūn*, under the Ottomans. Although he spoke with longing of travel in his poems, and although in his youth he hoped to visit Tabrīz and in his mature age to go to India and Asia Minor, Fuḍūlī never left the confines of ʿIrāḳ. He seems to have spent a large portion of his long life in employment at the *ʿAtabāt-i ʿĀliya* in Nadjaf (cf. the Persian *ḳaṣīdas* in praise of the *Imām* ʿAlī in the *Madjmūʿa*, in the author's possession, fols. 166 ff.). He died and was buried at Karbalā in 963/1556 during a plague (*ṭāʿūn*) epidemic (ʿAhdī, *Gulshen-i shuʿarāʾ*; Ali Emirî Lib. No. 774, 155a; Riyāḍī, *Riyāḍ al-shuʿarāʾ*, İst. Üniv. T.Y. 3250, 46 etc.). The year 970/1562 is sometimes given in error as the date of his death (Ḥasan Čelebi, loc. cit.; Ḥādjdjī Khalīfa, loc. cit., gives both dates).

The only known member of Fuḍūlī's family is the poet's son Faḍlī Čelebi. In his religion the poet can be described as a moderate *Ithnā ʿasharī* Shīʿī. In spite of traditions to the contrary, it was unlikely that he was a Bektāshī (ʿAlī Suʿād, *Seyāḥatlerim*, Istanbul 1330, 100-7), a Ḥurūfī (ʿAbbās al-ʿAzzawī, *Taʾrīkh al-ʿIrāḳ*, Baghdād 1939, iii, 246) or a Bāṭinī (A. Gölpınarlı, *Fuzûlî'nin Bâtınîliğe temayül* ..., in *Azerbaycan Yurt Bilgisi Mecmuası*, no. 8-9, 265 ff.; for objections cf. Sadeddin Nüzhet Ergun, *Türk musikisi antolojisi*, ii, 640). Nevertheless it is right to consider Fuḍūlī as standing above sects and schools in his *ṣūfī* approach (cf. Karahan, *Fuzûlî-Muhiti, hayatı ve şahsiyeti*, Istanbul 1949, 144 ff.).

Fuḍūlī wrote some fifteen works in Arabic, Persian and Turkish, as follows: (*a*) Arabic: (1) *Dīwān*; (2) *Maṭlaʿ al-iʿtiḳād*; (*b*) Persian; (3) *Dīwān*; (4) *Haft-djām* (or *Sāḳī-nāma*); (5) *Anīs al-ḳalb*; (6) *Risāla-yi muʿammayāt* (he also wrote riddles in Turkish); (7) *Rind wa zāhid*; (8) *Ḥusn wa ʿishḳ* (or *Ṣiḥḥat wa maraḍ*); (*c*) Turkish: (9) *Dīwān*; (10) *Beng-ü-bāde*; (11) *Leylī vü Medjnūn*; (12) *Ḳirḳ ḥadīth terdjemesi*; (13) *Shāh-ü-gedā*; (14) *Ḥadīḳat al-suʿadāʾ*; (15) Letters.

Four other works are attributed to him on doubtful grounds. These are: *Suḥbat al-athmār*, *Djumdjume-nāme*, a Turkish-Persian rhyming dictionary and the *Konya Risālesi* (Müze Ktph. 2617).

The known manuscript of Fuḍūlī's Arabic poems and of the tract entitled *Maṭlaʿ al-iʿtiḳād* is to be found in a *Ḳulliyāt-i Fuḍūlī*, preserved in the Asian Museum in Leningrad (see E. Bertels, *Arabskie stikhi Fuzulī*, in *Zapiski Kollegii Vostokovedov*, v, Leningrad 1930; idem, *Novaya rukopis 'Kulliyata Fuzuli'*, in *Izvestya Ak. Nauk*, iv, 1935). *Maṭlaʿ al-iʿtiḳād*, together with the Arabic *ḳaṣīdas*, was published in Baku in 1958. Another edition is being printed in Turkey. There are many manuscripts in existence of the poet's works in Persian, many of which have also been printed (for details see Abdülkadir Karahan, *Fuzûlî*; Müjgân Cunbur, *Fuzûlî hakkında bir bibliografya denemesi*, Istanbul 1956)

There is a Turkish translation of the Persian *Dīwān* (which is also about to be published), with the exception of the *ḳaṣīdas* (Ali Nihad Tarlan, *Fuzûlî'nin Farsça divanı*, Istanbul 1950). *Haft-djām* has been printed several times under the title of *Sāḳī-nāma* as part of Fuḍūlī's collected works (a Turkish translation was added at the end of the translation of the Persian *Dīwān*). Other published works are as follows; *Anīs al-ḳalb*, ed. Süleyman Cafer Erkılıç, Istanbul 1944; *Risāle-i muʿammayāt*, ed. Kemal Edib Kürkçüoğlu, Ankara 1949; *Rind wa zāhid*, same ed., Ankara 1956; *Ḥusn wa ʿishḳ* as *Safar-nāma-i Rūḥ*, ed. Muḥ. ʿAlī Nāṣiḥ, in *Armaghān* (Tehrān), xi, 418-24, 505-17);the same work as *Ṣiḥḥat wa maraḍ*, ed. Necati Hüsnü Lugal and O. Reşer, Istanbul 1943—for the latest Turkish translation and a summary in French, see Fuzuli, *Sihhat ve maraz*, Istanbul 1940.

Critical editions of most of Fuḍūlī's Turkish works have appeared recently. Of the *Dīwān* 26 printed editions and more than a hundred MSS are known to exist (cf. op. cit., by Karahan and Cunbur, also *Istanbul kitaplıkları Türkçe yazmalar kataloğu*, Istanbul 1947, 124-37; a MS copied during the poet's lifetime is in the author's possession). The latest edition of the *Beng ü bāde* is that by K. E. Kürkçüoğlu, Istanbul 1956. An interleaved edition of *Leylī vü Medjnūn* by Necmettin Halil Onan has been published by the Turkish Ministry of Education (Istanbul 1950) (for a German translation of this famous work see N. Lugal and O. Reşer, *Des Türkischen Dichters Fuzûlîs Poëm "Laylâ-Meğnûn" und die Gereimte Erzählung "Benk u Bâde"* (*Haşiş und Wein*), Istanbul 1943; Engl. tr. by Sofi Huri, *Leyla and Mejnun*, in *Fuzûlî ve Leylâ ve Mecnun*, published by the Turkish National UNESCO Committee, Istanbul 1959). The author has edited the first published version of the *Ḳïrḳ ḥadīth terdjemesi* (A. Karahan, *Fuzûlî'nin tetkik edilmemiş bir eseri*: *Kırk hadîs tercemesi*, in *Selâmet Mecmuası*, Istanbul 1948, nos. 57, 59, 61, 63, 64, 66). It was later published by Kürkçüoğlu, Istanbul 1951. *Shāh ü gedā* is known only through a reference in Ṣādiḳī, op. cit. A critical edition of the *Ḥadīḳat al-suʿadā'* is in preparation; MSS of this work are numerous (in addition to the works cited above, cf. catalogues by Rieu, Flügel, Pertsch, Blochet and Rossi). Five letters by Fuḍūlī are known: the author of this article has published four (*Fuzûlî'nin mektupları*, Istanbul 1948), while the fifth was published by Hasibe Çatbaş (*Fuzûlî'nin bir mektubu*, Ankara 1948).

Both Fuḍūlī's artistry and his wide learning are reflected in almost every one of his works. The penetrating quality of his thought and his scholarship in many fields are made clear in many passages, chief amongst them being the *tawḥīd* (praise of Divine unity) in the form of a *ḳaṣīda* at the beginning of his Turkish *Dīwān*. Fuḍūlī's notions on medicine, material and spiritual welfare, love and beauty can be gathered from his tract *Ḥusn wa ʿishḳ*; his *ṣūfī* philosophy and the advice which he had to give are made clear in *Rind wa zāhid*; *Haft-djām* is full of the *ṣūfī* symbolism in which mystic love and wine are equated; mystic love and ṣūfism inspire also *Leylī vü Medjnūn* and the *ghazals*; stories about the prophets and the poet's feelings about the tragedy at Karbalā can be found in the *Ḥadīḳat al-suʿadā'*; the *Dīwāns* (especially in the brief *ḳiṭʿas*) and *Anīs al-ḳalb* reflect the poet's philosophy of life in general.

Fuḍūlī was a brilliant linguist. No fault can be found with the language and technique of his Arabic poetry. Nevertheless in feeling they are overshadowed by his work in Persian and Turkish. It is true that in spite of their technical brilliance and richness of content his poems in Persian cannot compete with the great masters of Persian literature, in which Fuḍūlī is ranked as a better than average second class writer. In Turkish literature, however, he ranks with the greatest. Fuḍūlī does not owe this reputation to the originality of his subject-matter, which he drew from earlier Persian writers. Thus, the subject of the *Ḥadīḳat al-suʿadā'*, which can be classed as a *maḳtal* (a description of the tragedy at Karbalā) is drawn from the *Rawḍat al-shuhadā'* of Ḥusayn Wāʿiẓ Kāshifī; the desert story narrated in *Leylī vü Medjnūn* had been told many times before, particularly in the poems of the same name by Niẓāmī and Hātifī; the forty traditions of the Prophet in *Ḳïrḳ ḥadīth terdjemesi* are drawn from Djāmī's *Tardjama-i arbaʿīn ḥadīth* (cf. A. Karahan, *Islâm-Türk edebiyatında kırk hadîs*, Istanbul 1954, 100-6, 167-72). Fuḍūlī succeeded, however, in impressing the particular stamp of his personality on his treatment of this common subject-matter. His treatment of the themes of love, suffering, the impermanence of this world, the emptiness of worldly favours and riches and of the theme of death attain to a lyricism and directness which no other Turkish poet has reached. He is the Turkish poet who has expressed with the greatest effect a feeling of pity for the unfortunate, of patience in the face of adversity and of separation.

Fuḍūlī's Turkish has the characteristics of literary Ādharī. This is true both of his grammar and of his vocabulary. The works of his age of maturity reflect, however, some Ottoman influences which followed naturally the Ottoman conquest of ʿIrāḳ in 941/1534. Fuḍūlī's fame and influence, marked already in his lifetime, have not ceased to grow in the Muslim Turkish world. He has always been the most popular poet in all the countries inhabited by Turks. He has influenced many classical Turkish writers, such as Rūḥī, Newʿī-zāde ʿAṭā'ī, Nā'ilī, Nābī, Sheykh Ghālib and Nigārī. Such writers wrote imitations (*naẓīras*) of his poems, or *takhmīs* and *tasdīs* to his *ghazals*.

Traces of Fūdulī's influence occur also in post-*Tanẓīmāt* modern Turkish literature, as well as in poems written specially for musical settings (*sāz*). Many of his own poems have also been set to music, starting from the 17th century. Even today, some of his *ghazals* are sung by *khʷānendes* and are occasionally recorded.

(ABDÜLKADİR KARAHAN)

FULANI [see FULBE].

FULBE, pl. of *Pullo* (called Fula(s) in Gambia and Sierra Leone; usual French name: Peuls; usual English name: Fulani; their language is variously called Fula, Fulani, Peul (French usage), Ful (German usage), their own name for it being variously *Pular*, in Senegal, Gambia and Sierra Leone, and *Fulfulde*, in Mali and territories further east), a pastoral people—the only people of white (or red) stock in negro Africa—the 'cattle-men' who for more than a thousand years have been moving in groups across Africa at its greatest width. Wearing their would-be white rags with unfailing pride, they look at you with a glance of aristocratic nonchalance. They are one of the few nomadic societies of negro Africa, and G. Vieillard, who professed a brotherly affection for them, spoke of the Fulani as "parasites on the bovine species". Living amongst groups of stalwart negro farmers, the Fulani seem relatively frail, their frailty offset, according to Gautier (*Afrique noire occidentale*, 167) by a certain intellectual superiority.

According to Barth, Peul means "light-brown, red", in contrast to *Olof* (black), while according to Gaden the term *Fulbe* means "the scattered ones". Peul being the Wolof name which was adopted by the French, coming from the coast of Senegal, it is more correct to speak of *Pul* or *Ful*, or in the plural *Fulbe*, the name by which the Fulani call themselves.

Al-Maḳrīzī (765-845/1364-1442) was probably the first to speak of the Fūlāniyya, a term which was used again by al-Saʿdī in the *Taʾrīkh al-Sūdān* (1667). João de Barros speaks of them at length in his *Asia*, as do the various explorers who travelled through Africa from the 18th century onwards (Moore, René Caillé, d'Avezac (1829), Clapperton (1825), the Lander brothers (1830), d'Eichtal (1842), Barth (1850-55). Substantial studies have been devoted to them by De Crozals (1883), Gaden, Delafosse (1912), Mischlich (1931), and finally Tauxier (1937) who during his official career was for more than ten years in charge of districts containing many Fulani groups, and who produced an excellent comprehensive study. Vieillard (1938), Lhote (1951) and de Lavergne de Tressan must also be mentioned, as must Colonel Figaret, who settled at Bamako on his retirement, and died there in 1943.

Reference must also be made to the monographs by the British writers, East (on Adamawa), Stenning and Hopen, by the Germans Passarge and Strümpell, and by the Frenchmen Lacroix, Richet and Froelich, and also the works of Wolf and Ahmadou Hampaté Ba on Macina and Senegambia.

Origin of the Fulani. The problem of the origin of the Fulani is one that is the subject of hot dispute among Africanists. In fact it seems vital to know whence came these pastoralists, often turned warriors, who have played such an important part in the establishment of various African kingdoms, from Senegal to central Cameroon. Racial resemblances, or reminders of some passage in the Bible or the Ḳurʾān, have often led well-meaning authors along innumerable false trails which it is pointless to follow, now that considerable light has been shed on the existence in neolithic times of a humid Sahara, which for several millennia sheltered cattle-owning pastoralists who came from the east of Africa and are most probably the ancestors of the Fulani. Until quite recently, ignorance of the Sahara's climatic changes obliged authors to search, far or near, for peoples bearing a physical resemblance to the Fulani, and to conjure out of nothing a migration route which would have led them to Futa Toro in Senegal, the place where they are first mentioned in history. The various theories, many of which read like pure fiction, can be grouped under two headings; non-African origins, and African origins.

It has been maintained in all seriousness that the Fulani were descended from the Tziganes, from the Pelasgians, primitive inhabitants of Greece and Italy, or from Gauls or Romans who vanished in the sands of the desert. In support of the Judaeo-Syrian theory, supported as early as the end of the 18th century by Winterbottom and Matthews, the explorers of Sierra Leone, M. Delafosse in his *Haut-Sénégal-Niger* put forward plausible arguments which for long were generally accepted. On this view the Fulani would have been the descendants of Jews from Tripolitania and Cyrenaica, a party of whom are known to have fled into the desert after the great Roman persecution of 115 A.D. Travelling by way of Fezzan, Aïr and Macina they would have reached the region between upper Senegal and the Niger, occupied by the ancient kingdom of Ghāna. Tauxier, writing with merciless accuracy, has disproved this theory.

The supposed Indian origin of the Fulani has been upheld by many writers, including Faidherbe and Binger. It has been reinforced by the linguistic theories of which Mlle. Homburger has made herself the ardent propagandist, arguing as she does a relationship between the Dravidian languages and certain African languages such as "Serer-Peul", a relationship rejected by most writers. Finally Etienne Richet, in a lengthy study entitled *Peuls de l'Adamaoua*, has adduced evidence of anthropological and sociological similarities between the Fulani and the ancient Iranians.

Two original African stocks have been invoked as representing the ancestors of the Fulani. The closest, geographically speaking, is the most difficult to defend. It seems clear that the Fulani are not Arabo-Berbers, as Cortambert, F. Dubois and C. Monteil have maintained—Monteil claiming that the Fulani are the descendants of the Honainen, mentioned by al-Bakrī as the grandchildren of the soldiers sent in 734 by the Umayyads against the kingdom of Ghāna. The Nubian-Ethiopian origin seems much more worthy of consideration. It has moreover been supported by the greatest number of authors. Mollien, the first of these, in his *Voyage dans l'intérieur de l'Afrique aux sources du Sénégal et de la Gambie*, 1818, sees a resemblance between the features, character and customs of the Fulani and those of the Barabra of Nubia; he makes them a race of red Ethiopians. Barth (1855) is inclined to admit that the Fulani occupied western Africa prior to the expansion of the Berber people; he likens the Fulani to the *Pyrrhi Aethiopes* of Ptolemy, Ethiopians burnt to a copper-red colour. Coming from the east of Africa, the Fulani would have passed by southern Morocco (approximately 150 B.C.) and then, under pressure from the Arabs (from about 132/750), would have reached Senegal, occupying the region

of Futa Toro. This theory was supported (1868) by F. Müller, who connects Fulfulde, the language of the Fulani, with Nuba in Kordofan, relates the Fulani to the Nuba or Nuba-Fula people, and supposes that the Fulani occupied North Africa, displacing the Berbers. Two years later Schweinfurth associated the Mangbutu (Mombutu) with the *Pyrrhi Aethiopes*, and found in them a resemblance to the Fulani, whose origin he too placed in eastern Africa. This theory was to be revived some years later (1881) by O. Lenz in his book on Timbuctoo; he makes the Fula and Nuba halfway between negroes and Mediterranean Hamites. About the same time E. H. Haeckel (1868-75), in his *Natürliche Schöpfungsgeschichte*, takes the hair as a fundamental criterion, and this leads him to group together the Nubians and Fulani who are euplocomes (soft curly hair) like the Dravidians and Mediterranean peoples. He states: "the Nubians, properly so-called, inhabit the regions of the Upper Nile (Dongola, Changalla, Barabra, Kordofan), from there the Fula or Fellata migrated towards the west and at present occupy a large zone in the western Sahara between the Sudan in the north and the negro peoples in the south". Haeckel, then, makes the Nubians and Fulani a race half-way between whites and negroes. He includes in these groups some lower Hamites or Cushites (Beja, Galla, Somali, Danakil), some elements of which have more negro features than the Fulani, who resemble rather the upper Hamites (Egyptians and Berbers) and Semites (Jews, Arabs, Indo-Europeans). Topinard (1879) says that the Fulani are a red people; he connects them with the Barabra and with the Aḥmar described by Caillaud in the course of his explorations in Upper Egypt (1823).

Hartmann (1876) makes the Fulani some kind of sub-Ethiopians, a kind of cross between Berbers and Nigritians. Quatrefages and Hamy, in their *Crania Ethnica*, indicate a close connexion between Fulani and Egyptians, at the same time suggesting that there are fairly clear signs of admixture with negro peoples. Machat, in 1906, revives the theory of Dr. Tautain (1895) and of Dr. Verneau showing the relationship of the Fulani to the peoples of Upper Egypt and Nubia, which was supported by the Fulani traditions collected by Olivier de Sanderval and Hecquard. Verneau's view was confirmed by Dr. Lasnet, who however connects the Fulani with the 240,000 soldiers of Psammetichus who in the 6th century B.C. left Egypt for Nubia; reaching the south of Morocco they would have become the leuco-Ethiopians and would then have moved down towards the Senegal. Deniker, in *Les races et les peuples de la terre*, after studying the Ethiopians or Cushito-Hamites, points to a Fula-Sande group derived from a mixture of Ethiopian and Nigritian stock. He makes the Fulani essentially Ethiopians with Berber or negro admixture. Montandon, in his *Ologonèse humaine*, places the Fulani among the pan-Ethiopian races (which include also Barabra-Danakil-Somali, Abyssinians-Galla-Masai, Badima), while Chantre, in his contribution to the study of the human races in western Sudan, connects the Fulani with the Beja in view of the following common features: colour of skin, which is not black but reddish; texture of hair, which is not woolly; the principal indices, which often differ only by a few millimetres; numerous common ethnographic features. Seligman, in his book *The races of Africa* (1936), attempts to show that the Fulani are really Hamites and not Semites or Judaeo-Syrians, that the Fula language is an ancient Hamitic language, sister of the language whose impact on the previously Sudanic-like negro languages produced the Bantu languages.

On the other hand it can now be said that the Fulani are not the very tall men which the statistics of Verneau (1.74 m./5 ft. 8 1/8 ins.) and Deniker (1.75 m.) seem to suggest. Although they are taller than the average of negro peoples, they are shorter than the Wolofs. The height of the Fulani varies according to the region, and the samples taken give from 1.67 to 1.71 m. (5 ft. 5 3/4-7 1/4 ins.) for men and 1.54 to 1.62 m. (5 ft. 0 1/2-3 3/4 ins.) for women.

The Fulani are distinctly dolichocephalic (average horizontal cephalic index 74) and platyrrhine (average nasal index 96). These anthropological data enabled Dr. Verneau (1897-99), Deniker (1926) and Seligman to confirm the theory according to which the Fulani would be lower Hamites, Ethiopians. Tauxier, to whom we are indebted for the most complete study of the Fulani which has so far appeared, notes in this connection that they have always given the name *Phouta* or *Fouta* (*Futa*) to the countries where they have settled—Futa Toro, Futa Dj̲allon, Futa Damga (west of Nioro Circle)—and he underlines the similarity of these names to the country of Phout (Fuṭ) in Nubia. A. Berthelot accepts that the Fulani are Ethiopians, and 'red'-skinned, and relates them to the Barabra and the Baḳḳāra, and makes their language a negro language. Recently S̲h̲eyk̲h̲ Anta Diop has supported this Nilotic origin by identifying the only two typical totemic proper names of the Fulani with two equally typical concepts in Egyptian metaphysical beliefs, *Ka* and *Ba*. On the other hand he supports the close connexion existing between the Fula language, Wolof and Serer.

The Fulani have no firm national tradition about their origin. They regard themselves sometimes as Arabs, sometimes as a cross between Jews and Arabs, sometimes as a cross between Arabs and negroes, or between Moors and negroes. In actual fact the legends most often date from the time of islamization, and on that account lack any kind of validity.

Saharan route of the Fulani. Although a number of authors have found little difficulty in demonstrating the relationship of the Fulani to the Nubians and the Masai, the difficulty of crossing the Sahara seems to have caused a diversion of the Fulanis' supposed migration routes, so that almost all are made to pass by the northern fringe of the desert, in fact all over the Mag̲h̲rib. It is only quite recently that the explorer H. Lhote has thrown light on a probable travel route across the present desert, a route possible in the climatological conditions of the 3rd millenium B.C. when the terrain of the Sahara resembled the present-day Sudan zone. More than a thousand rock engravings and paintings are found at intervals across the desert from Egypt to the Atlantic, depicting cattle and their herdsmen. The cattle portrayed belong to two types—longhorns, and the short-horned cattle, long ago domesticated in Egypt, which are indigenous to Africa. The style recalls that of Egypt—in the way the animal is depicted in profile and full face, and in the presence of a spherical object or appendage between the horns, suggestive of a cult identical with or related to the cults of Egypt; the human figures, with the hair fashioned into a crest, are identical with those of present-day Fulani women.

The tools (polished axes, grinding stones) which

have been recovered near these engravings, particularly at Mertutek (Hoggar) date from the neolithic period (perhaps the 3rd millennium B.C.). It was probably around this period that these pastoralists left the Upper Nile and moved into a pastoral zone covering the presentday Sahara. They reached the Djebel Wenat, where some very beautiful paintings of cattle have been found, then reached the Fezzan, travelled along the high plateaus of Tassili, passed by way of the deep canyons to the Hoggar uplands, and then followed the valleys of the Hoggar and of Wādī Tamanrasset. They passed to the north of Adrar of the Ifoghas, and were unknown in Mauretania until quite recently (their art, probably learnt in Egypt, had been lost). These movements are explained by the search for new pastures and the need for continual change of habitat that is typical of nomadic peoples, and also no doubt by the gradual encroachment of desert conditions through changes of climate; a contributory factor may also have been the importance which the Fulani attach to their cattle.

The vexed question of the origin of the Fulani is as hotly disputed by Africanists today as it has been in the past. Various branches of science—anthropology, ethnology, linguistics and prehistory—have made their contribution towards the solution of the problem. The type of the hair (Haeckel, Chantre), cranial indices (Tautain, Verneau, Deniker, Chantre), linguistic relationships (Mlle. Homburger, F. Müller, Seligman), and the ethnographic context (Lhote, Tauxier) constitute a body of important presumptions concerning the common origin of these light-skinned peoples who set out from the vicinity of Ethiopia with their cattle, one group going west, the other south, peacefully driving their cattle before them. Often superior to the tribes they encountered, they became their advisers and their suppliers of meat—a luxury commodity—and then, when circumstances were favourable, they seized power, assisted by the fact that they were also skilled horsemen, and that in the open country of the savannah regions cavalry is always at an advantage, especially when the opposing infantry is equipped only with bows and featherless arrows, which make it impossible to shoot any distance.

Spread of the Fulani. Futa Toro plays an important role as the centre of the dispersal of the Fulani élite. It is nevertheless probable that where these élite have succeeded in establishing their authority, it is to a large extent due to the presence on the spot of other Fulani elements. It was probably in the 11th century that the Fulani established themselves at Futa Toro, and from there, at the time of the fall of the empire of Ghāna, they spread towards the east by way of Dhombogo and Kaarta, where several clans remained. Others mingled with the settled Mandinka population to produce the *Fulanke*. A fairly large group remained up to the end of the 14th century at Kaniagan (south of Bagana), whence Maga Djallo and his companions were to set out at the beginning of the 15th century in the direction of Macina. Another section was to settle at Bakunu. Another contingent from Futa Toro was to reach the northern shore of Lake Debo and then, after crossing the Niger at Say, was to settle first in the Sokoto area and then in Adamawa. From Macina were to come the Fulani of the Dogon country and of Liptako, as well as those of Futa Djallon. By intermarriage with the local negro population the Fulani were to produce six groups which were to be of considerable importance in the evolution of the African continent. The alliance of Fulani with Serer was to produce the ***Tukulors***, the ***Futanke*** and the ***Toronke***, important groups in the valley of the Senegal. Crossed with the Mandinkas they formed the groups of Fulanke who number more than 100,000 in the vicinity of Bafoulabe, Kita, Bougouni and Sikasso. The ***Khassonke*** and ***Wassulonke***, who evolved during the 18th century at Wassulu, were to distinguish themselves during the struggle against the Fulani of Futa Djallon (1760).

The supremacy of the Fulani. The Fulani are normally regarded as fierce Muslims. Although this is true in general, nevertheless numerous pagan customs still persist, and their influence made itself felt at first in a pagan reaction against Islam.

The details of the spread of the Fulani have often been described. At first, as guardians of the cattle which farmers entrusted to them, they played an important economic role, and were fully conscious of their intellectual superiority. As a second step, the owner was reduced to slavery and his land and cattle appropriated. The extraordinary spate of Fulani conquests of the 18th and 19th centuries is then readily understandable. The extent of the Fulani dispersion from Chad to Senegal made it possible for them to rely on the support of one or other of the various Fulani communities. Moreover their herds constituted a reserve of food which gave them great mobility. Richard Mollard has rightly observed that the two most important Fulani empires, Adamawa and Futa Djallon [*qq.v.*], were also two mountain massifs—"two well-watered castles, the two Fulani bastions; it was certainly the mountains which provided this race with the ideal base for establishing a solid empire, thanks to the nature of the terrain, the climate, the suitability of its soil for pasture as well as for agriculture, and the miserable standard of living of the pagans, who were powerless to resist, having nothing to offer in opposition, and who were often quite ready to admire, to submit and to serve". From Futa Toro the Fulani, or at least their ruling classes, set out towards the east, establishing kingdoms as they went, first Macina, then Futa Djallon, and the Fulani empires of Nigeria and of Adamawa.

The Fulani empire of Macina was created by one Maga Djallo at the end of the 14th century. The Ardos resisted the assaults of the Songhai of the Sonni Ali Ber, and then came under the control of the Moroccans of Gao before finding themselves, at the end of the 18th century, caught between the Bambara invasions and the Tuareg expansion. It was left to Sēku (Sheku) Hamadu (1810-44) to carry the Fulani empire of Macina to the peak of its power, thanks to the rise of Usman (ʿUthmān) dan Fodio. He established his capital at Hamdallahi ("Praise to God") in 1815, and organized his states into provinces, with governors, judges, and fiscal and military systems. Sēku Hamadu succeeded in converting to Islam almost all the Fulani and a considerable number of Bambara. After Hamadu Sēku (1844-52), who established his suzerainty over Timbuctoo, his son Hamadu Hamadu (1852-62) saw his army of 50,000 warriors defeated at Sayewal at the hands of Al-Ḥadjdj ʿUmar's 30,000 Tukulors. Hamdallahi was conquered and Hamadu Hamadu put to death. Two years later his brother Ba Lobbo was to succeed in defeating the Tukulor army while Al-Ḥādjdj ʿUmar was to escape into the cave at Degembere with his reserves of ammunition. But Tīdjānī, nephew of Al-Ḥādjdj ʿUmar, soon took his revenge. From that time on, the Tukulors were to be in control of Macina.

The Fulani (Fulas) of Futa Djallon came from Macina around 1694, led by a certain Saʿīdī. As soon as the Fulani felt themselves strong enough, they were to seize power and wage a succession of holy wars against the pagans. The position of Almamy was to be held alternately by the Sorya and Alfaya families; the most famous of the Almamys was Ibrahim Sori Maudo (1751-84).

The Fulani of Nigeria are among the best known of the Fulani groups, owing to the many written documents which have survived. Here, as elsewhere, a distinction is made between the *Fulanin Gida*, who took up a sedentary life and often intermarried with the local inhabitants, and the *Bororo*, who still faithfully tend their herds of cattle. In contrast to many of the Filanin Gida, the Bororo are tall and slim, with a proud carriage, light skin, aquiline nose and thin lips. According to the Kano Chronicle, it was in the 18th century that the Fulani came from Futa Toro to establish themselves in the kingdom of Gobir, one of the Seven Hausa States.

Usman dan Fodio (born 1754) set himself up in opposition to the Emir of Gobir, declared a holy war, defeated the Emir's troops (21 June 1804), and had himself proclaimed Sarkin Musulmi ("Commander of the Faithful"). Thereafter he extended his authority over Kano, where he established his base while his armies overthrew the Hausa states of Katsina, Kebbi, Nupe, Zaria and Liptako. Usman attacked Bornu (1808), although its people too were Muslims, but was repulsed by El-Kanemi (1810) and died some time afterwards in a fit of religious frenzy. Abdullahi, brother of Usman, received the western provinces (with their capital at Gwandu) while Muhammadu Bello, son of Usman, was given the recently-conquered eastern provinces and established himself at Sokoto. Under Muhammadu Bello the Fulani empire of Nigeria reached its zenith, and included the emirates of Katsina, Kano, Zaria, Hadejia, Adamawa, Gombe, Katagum, Nupe, Ilorin, Daura, and Bauchi. In spite of his many campaigns, Muhammadu Bello found time to write works of history, geography and theology. Unfortunately, he had the papers and documents of the Hausa kingdoms destroyed. In 1824 and 1826 he received the British explorer, Lieutenant Clapperton, and sent a friendly letter to the King of England.

Usman dan Fodio and Muhammadu Bello established an administration based on the Ḳurʾānic law. The nature and value of a person's property determined the tax (*zakāt*) he was to pay. The ruler was assisted by a *Waziri* (chief minister), a *Ma'aji* or *Ajiya* (treasurer) and a *Sarkin Dogarai* (chief of police). The corruption in this administration at the end of the 19th century was to be a factor favourable to the establishment of British rule.

The Fulani empire of Usman dan Fodio was to give rise to two important chiefdoms, those of Liptako and of Adamawa.

The Fulani influence at Liptako had started with the Ferobe ("those who have abandoned their land"), who came from Macina under the leadership of Birmali Sala Pate. The latter established himself at a place called Bayel near Wendu, and began to win over to Islam the Fulani who had been in the country for a long time. The success of Usman dan Fodio enabled the Fulani to rise against the Gurma chiefs. The battle of Dori (April 1810), which resulted in seven deaths among the Gurmas, established the authority of Brahima bi Saidu, grandson of Birmali. Salifu bi Hama, who succeeded him in 1817, founded Dori. He overcame the Gurmas in the south, but had to abandon the north (Udalam) under pressure from the Tuaregs. The reign of Sori (1832-61) was to be a glorious one, but was marred in 1840 by the bloody battle of Kassirga (1900 dead). After Lieutenant Monteil had passed through Liptako (1891), and the Tukulor troops of Ali Bori had been wiped out by Capt. Blachère at Duentza (1894), Bubakar Sori signed a protectorate treaty with Capt. Destenave (4 October 1895).

The Fulani of Adamawa entered the plateau areas during the 18th century in search of pasture. They settled peacefully among the Bata, Fali, Mundang, and Masa tribes in the neighbourhood of the Mandara mountains and the Benue, Mayo Kebbi and Logone rivers.

At the call of Usman dan Fodio the Fulani seized power. Summoning the influential *malams* (those learned in the Ḳurʾān) to Kano, Usman dan Fodio appointed Adama of the Ba clan to carry his standard. Adama installed himself at Yola and conducted a campaign against the pagans of the north "for the faith, not to capture slaves and fill his harem". Meanwhile he attacked the chief of Mandara before carrying the war against the hill tribes of the Fali, Mufu and Daba. He overcame the Mundang of Mayo Kebbi, and to the south he fought the Vere, Chamba, Namchi and Doni. After the wars of liberation were to come the wars of domination. The captives made a plentiful labour force for tilling the soil. The Fulani themselves settled in the best-situated villages abandoned by the pagans.

On the death of Adama (1847) the conquest was practically complete. The country which had up to then been called Fombina ("the South") in the Fula language became Adamawa ("country of Adama"), subdivided into several chiefdoms (such as Banyo, Garua, Ngaundere, Rai and Tibati), whose incumbents received their appointments from Yola. After the death of Adama the chiefdoms of Ngaundere, Tibati and Bindere became independent, while the southern areas remained vassals of Yola.

The half-century between the death of Adama and the arrival of the Germans saw the gradual attrition of Yola's authority. The emirs were much more preoccupied with possible profitable raids and the sale of slaves to the Kanuri, the Arabs and the Hausas, than with converting the infidels.

Society and language. Fulani society is marked by a caste system consisting of nobles (*rimbe*, plural of *dimo*), serfs (*rimaibe*), traders and herdsmen (*jawambe*), singers and weavers (*mābube*), leatherworkers (*sakēbe* or *gargassābe*), woodworkers (*laōbe* or *sakaēbe*) and smiths (*wailbe*).

The language of the Fulani (Fula, Fulani, Pular, or Fulfulde) has been the subject of a great many studies. Once considered a Hamitic language related to the Berber dialects, Fula is generally grouped with the languages of Senegal and Guinea. It is a language with characteristic noun classes, marked by sets of suffixes and a pronominal system of an alliterative type. The roots are mainly monosyllabic roots consisting of closed syllables (consonant + vowel + consonant) like those of the other languages in the area. The verbal system is very rich, and includes three voices—active, middle and passive—and various moods and aspects.

(R. Cornevin)

FŪMAN (Fūmin), the centre of a region (*ḳaṣaba*) in Gīlān [*q.v.*], with (in 1914) about 27,000 inhabitants (mostly Shīʿī Persians: Gīlak) whose main crops are rice and some cereals, and who also produce silk. The town of Fūman is 21 km. W.S.W. of Rasht [*q.v.*] on the right bank of the Gāzrūdbār and it contains some four hundred houses. Before the advent of Islam in the 7th-8th century it was the seat of the Dābūya dynasty [*q.v.*] and for part of the middle ages it was considered the most important town in Gīlān. After the country's surrender to the Mongols in 1307, the prince of Fūman, said to be a descendant of the Sāsānids and the only Shāfiʿī of the country, was, after the ruler of Lāhīdjān [*q.v.*], the Ilkhān's confidant in Gīlān. Fūman was then the centre of a fertile agricultural area and an important market for trading, and was considered the focal point of the Daylam [*q.v.*] district. (The assertions of al-ʿUmarī, in *Notices et extraits des mss. de la Bibliothèque du Roi*, ed. M. E. Quatremère, xiii, Paris 1838, 298, and Ḥamd Allāh Mustawfī, *Nuzha*, i (text), 162 = ii (trans.), 159, contradict each other in many respects). Thereafter, until 980/1572-3, Fūman remained the capital of the Bīya-pas ("beyond the river") region (see gīlān) which was then transferred to Rasht. After that Fūman was the centre for two important clans, one of which migrated to Rasht in the nineteenth century. Today Fūman is a small country town of little significance.

FŪMANĪ [see ʿabd al-fattāḥ fūmanī].

FUNDJ Origins: The Fundj appear in the early 10th/16th century as a nomadic cattle-herding people, gradually extending their range down the Blue Nile from Lūl (or Lūlū), an unidentified district, to Sinnār. The foundation of Sinnār, subsequently the dynastic capital, is ascribed to ʿAmāra Dūnḳas in 910/1504-5. Hypotheses of remoter Fundj origins among the Shilluk, in Abyssinia, or among the Bulala, are unsubstantiated, while the Sudanese tradition of their Umayyad descent is a typical device for the legitimation of a parvenu Muslim dynasty.

Fundj kings to the establishment of the Regency. (Dates from the list obtained by James Bruce at Sinnār in 1772: Bodleian Library, Oxford, MS Bruce 18(2), ff. 54b-57a).

1. ʿAmāra I (Dūnḳas) b. ʿAdlān, d. 940/1533-4.
2. Nāyil b. ʿAmāra, d. 957/1550-1.
3. ʿAbd al-Ḳādir I b. ʿAmāra, d. 965/1557-8.
4. ʿAmāra II (Abū Sikaykīn) b. Nāyil, deposed 976/1568-9.
5. Dakīn b. Nāyil, d. 994/1585-6.
6. Dūra b. Dakīn, deposed 996/1587-8.
7. Ṭayyib b. ʿAbd al-Ḳādir, d. 1000/1591-2.
8. Ūnsa I b. ?, deposed 1012/1603-4.

9. ʿAbd al-Ḳādir II b. Ūnsa, deposed Radjab 1015/November 1606.
10. ʿAdlān b. Ūnsa, deposed 1020/1611-2.
11. Bādī I (Sīd al-Ḳawm) b. ʿAbd al-Ḳādir, d. 1025/1616-7.
12. Rubāṭ b. Bādī, d. 1054/1644-5.
13. Bādī II (Abū Diḳan) b. Rubāṭ, d. 6 Dhu 'l-Ḥidjdja 1091/28 December 1680.
14. Ūnsa II b. Nāṣir b. Rubāṭ, d. 21 Ramaḍān 1103/6 June 1692*.
15. Bādī III (al-Aḥmar) b. Ūnsa, d. 20 Rabīʿ II 1128/13 April 1716*.
16. Ūnsa III b. Bādī, deposed 1 Shaʿbān 1132/8 June 1720*.
17. Nūl, d. 16 Shawwāl 1136/8 July 1724*.
18. Bādī IV (Abū Shulūkh) b. Nūl, deposed 2 Ramaḍān 1175/27 March 1762.

* Date of accession of the next king.

The early monarchy: The northward expansion of the Fundj coincided with a southward Arab expansion under the hegemony of the ʿAbdallāb dynasty, connected with the overthrow of the Christian Nubian metropolis of Sūba. The two migrations clashed near Arbadjī, the southernmost ʿAbdallābī town, on the Blue Nile, in the Gezira (Djazīrat Sinnār, Dj. al-Hōī, Dj. al-Fundj). The victorious Fundj chief became the high-king in a partnership with the ʿAbdallābī *shaykh*, whose own authority extended over the nomads and sedentaries northwards as far as the Third Cataract. The tradition that ʿAmāra Dūnḳas and the ʿAbdallābī eponym, ʿAbd Allāh Djammāʿ, combined to overthrow Sūba is probably a face-saving legend. The Fundj rulers were early converted to Islam. ʿAmāra had Muslims in his retinue, and his second successor, ʿAbd al-Ḳādir I, bore a Muslim name, and one which furthermore indicates the predominant role of the Ḳādiriyya *ṭarīḳa* in the Fundj territories. Our principal source of information on the islamization of the region, the *Ṭabaḳāt* of Wad Ḍayf Allāh, says little about the true Fundj lands, but is almost wholly concerned with the ʿAbdallābī districts further north. The dual hegemony was subjected to severe strain, when the ʿAbdallābī chief, ʿAdjīb al-Māndjilak (*i.e.*, "the Viceroy"), revolted against ʿAdblān b. Ūnsa, and was killed in the battle of Karkūdj (1016/1607-8). Peace was restored, and the ʿAbdallābī dynasty re-established, through the mediation of an influential Ḳādirī shaykh, Idrīs b. Muḥammad al-Arbāb (d. 1060/1650).

The heyday of the monarchy: Fundj power expanded across the southern Gezira into Kordofān, west of the White Nile. The first stages were the conquest of the isolated hills of Saḳadī and Mūya, ascribed to ʿAbd al-Ḳādir I, c. 1554, and the securing of the crossing of the White Nile, at this time dominated by the Shilluk, a pagan tribe, celebrated for their canoe raids. Bādī II defeated the Shilluk, and raided the Muslim hill-state of Taḳalī, south of Kordofān, which he laid under tribute. The command of al-Ays, the Fundj bridge-head on the White Nile, was always held by a member of the royal clan. The plains of Kordofān proper, ruled by the Musabbaʿāt, kinsmen of the Kayra dynasty of Dār Fūr [*q.v.*], were not conquered until the reign of Bādī IV. Fundj expansion eastwards was barred by Abyssinia. Two Fundj-Abyssinian wars are recorded: the first (known only from Abyssinian sources) in 1618-9, and the second in the reign of Bādī IV, culminating in a Fundj victory (Ṣafar 1157/March-April 1744). The auriferous district of Fāzūghlī [*q.v.*] on the upper Blue Nile, under a tributary chief, formed the southern limit of the Fundj dominions.

The monarchy in decline: On several occasions the dynasty showed signs of internal weakness, as indicated by the deposition of monarchs. Bruce's statement that there was a custom of regicide (*Travels*, vi, 372) seems, however, to be a gratuitous generalization. A development of great importance was the creation of a slave-army by Bādī II, as a consequence of his successful raid in the west. These slaves, augmented by natural increase, purchase and further raiding, were settled in villages around Sinnār. Their existence created tensions between the dynasty and the Fundj warrior aristocracy. Bādī III overcame a revolt of the Fundj of Sinnār and al-Ays, who were supported by the ʿAbdallāb, but his son, Ūnsa III, was deposed after the "troops of Lūlū" had marched northwards on the capital. This marked the end of the direct male line. The next king, Nūl, was connected through his mother with the former royal clan, the Ūnsāb; there are other traces of matrilineal customs. Under Nūl and his son, Bādī IV, the monarchy temporarily regained strength. Bādī was, however, overthrown by his victorious commander and viceroy in Kordofān, Muḥammad Abū Likaylik, who profited from the renewal of dissensions between the king and the Fundj aristocracy to march on Sinnār and depose Bādī. Although the succession of Fundj monarchs continued, power now passed to Abū Likaylik and his clan as hereditary regents. This indicated the revival of a submerged element in the population, which had been overwhelmed by the Arab and Fundj migrations: Abū Likaylik is described as belonging to the Hamadj (*i.e.*, autochthons), or as a Djaʿalī (*i.e.*, an arabized Nubian; see DJAʿALIYYŪN). After his death, the Hamadj wasted their power in struggles over the regency. Simultaneously with the Fundj, the ʿAbdallāb were in decline. Their old capital, Ḳarrī, was abandoned for Ḥalfāyat al-Mulūk in the eighteenth century, while Arbadjī was devastated in 1198/1783-4. The arabized Nubians along the main Nile revived, notably the Saʿadāb Djaʿaliyyūn, whose capital, Shandī, was the commercial metropolis of the Nilotic Sudan in the early nineteenth century. A dynasty of religious teachers, the Madjādhīb, made al-Dāmir into a centre of learning and devotion. The Shāykiyya, who had revolted against the ʿAbdallāb in the reign of Bādī I, formed an independent and predatory confederacy. At the time of the Turco-Egyptian invasion of 1821, neither the ʿAbdallābī chief, Shaykh Nāṣir, nor the last Fundj king, Bādī VI, offered any resistance to the forces of Muḥammad ʿAlī.

FUNDUḲ, a term of Greek origin (πανδοχεῖον) used, particularly in North Africa, to denote hostelries at which animals and humans can lodge, on the lines of the caravanserais or *khān*s of the Muslim East. These hostelries consist of a court-yard surrounded by buildings on all four sides. The ground floors are generally used to house animals from caravans or owned by passing country-dwellers and also, when necessary, any merchandise stored there until such time as the consignee takes delivery of it. On the upper floor (usually there is only one), small rooms give onto a gallery which encircles the entire building; it is here that people are housed. The gate to the street is large enough to allow fully laden animals to pass through. In the Middle Ages it often happened that in towns open to international trade *funduḳ*s were placed at the disposal of European traders on a "national" basis. Thus in Tunis there was a *funduḳ* for the French, in Cairo a *funduḳ* for the Venetians, etc. These hostelries were patronized almost exclusively by the poor; others went out of their way to avoid the discomfort, the contiguity with the animals, and in many cases the presence of prostitutes who often occupied several rooms where they entertained travellers.

In Morocco the same type of building is often used by a group of merchants to store their goods. The court-yard is shared, and each participant hires one or more rooms; in this type of *funduḳ* there is no stabling for animals. It also happens that groups of artisans, often of the same trade, hire the various rooms in a *funduḳ* and use them as a collective workshop, each member remaining fully independent.

In general, *funduḳ*s belong to the administration of religious estates (*ḥubūs* or *awḳāf*) which let them out to the various occupants, in the case of traders or artisans, or to a concessionaire in the case of a hostelry.

Some of these buildings are of artistic merit, such as the *funduḳ al-nadjdjārīn* and the *funduḳ al-Tiṭṭawniyyīn* in Fez. *Funduḳ*s for storage or workshops are found in the industrial or trading quarters, while *funduḳ*s in the sense of hostelries are usually situated near the main gates of the town.

Bibliography: No work exists dealing specifically with *funduḳ*s. Information relating to Fez will be found in R. Le Tourneau, *Fès avant le Protectorat*, Casablanca-Paris 1949, in particular 190-1 and 317-8. See also KHĀN.

(R. Le Tourneau)

FÜNFKIRCHEN [see PÉCS].

FUNG [see FUNDJ].

FUR [see FARW].

AL-FURĀT is the Arabic name of the Euphrates, called in Sumerian BU-RA-NU-NU, Assyr. *Purātu*, Hebrew פְּרָת, Syriac ܦܪܬ; in Old Persian it was called *Ufrātu*, whence Middle Persian *Frat*, modern Turkish *Fırat*. On the name and the notices by authors in antiquity see Pauly-Wissowa, art. *Euphrates* (by Weissbach). The main stream of the Euphrates is formed by the junction of two principal arms, now called the Karasu (length 450 km./280 miles) and the Murad-suyu (650 km./400 miles). The former, though the shorter, long bore (and in its lower course still bears) the name Furāt/Fırat, and is regarded by all the sources as the true Euphrates. Its headwaters are the numerous streams flowing down from the high mountains (Gavur-dağı [see GAWUR DAGHLARI], Dumlu-dağı, Karga-Pazarı-dağı) north of the plain of Erzurum. According to the Arab geographers, it rises in the district of Ḳālīḳalā [see ERZURUM] in a mountain called ʾFRDKHS or some such name, in which we may probably recognise the Παρυάδρης ὄρος of Ptolemy, and the *Mons Paruerdes* of the Tabula Peutingeriana. For the upper course of the river we have the very important description by Ibn Serapion, whose text has been published with translation by G. Le Strange in *JRAS*, 1895; his statements were discussed by Tomaschek in a valuable paper in the *Festschrift für H. Kiepert*, 1898, 137-49.

After leaving the marshy plain of Erzurum, the river flows westward through narrow gorges, accompanied by the line of the Erzurum-Erzincan-Sıvas railway; the Erzurum-Trabzon road turns off north-west at Aşkale. Twisting south, between the ranges of the Cemal and Keşiş dağları, it is joined by the Tuzla çayı flowing from Tercan [see TERDJĀN], and then turns west again to emerge into the plain of Erzincan [see ERZINDJĀN] (altitude 1200 m./4000 ft.). From there it proceeds through very steep and narrow gorges along the foot of the northern slopes of the Monzor range. Turning sharply south-east, it receives the Çaltısuyu (the Nahr Abrīḳ of Ibn Serapion), which flows from Divriği [see DIWRIĞI] to meet it, passes by Eğin [*q.v.*] /Kemaliye, receives the Arabkir-suyu (the Nahr Andjā of Ibn Serapion), and some 12 km./8 miles north of Keban, at an altitude of 680 m./2230 ft., is joined by the other main arm, the Murad-suyu.

The Murad-suyu rises in the volcanic Aladağ and Tendürük mountains north of Lake Van, and flows westwards to traverse the Kara-köse plain. Alternately passing through steep gorges and across broad plains [see MALĀZGERD, TUTAK], it enters from the north the extensive plain of Muş [see MŪSH], where it is joined by the Kara-su, flowing westward across the plain from the Nemrut-dağı. Now accompanied by the recently constructed railway to Elâzığ, it again flows westward, receiving from the left the Harinket-deresi, which drains the plain of Elâzığ, and from the right the Peri-suyu, before uniting with the Kara-su.

The name of the Murad-su in antiquity was Arsanias, whence the Nahr Arsanās of the Arab geographers, who describe it as rising in Ṭarūn (Taraunitis) and being joined near Shimshāṭ (Arsamosata) by the Nahr al-Dhiʾb and the Nahr Salḳiṭ (identified by Tomaschek with the Peri-suyu and the Sungut-suyu respectively). The origin of the name Murad is not clear; the hypotheses of Belck (*Beiträge zu alten Geographie*, i, 45), that it may be a popular etymology for Purāt, and of Tomaschek (*Sasūn*, 17), that it rises in a mountain region once called Murad, should be mentioned. Although some European maps and text-books refer to the Murad-su as the 'Eastern' and the Kara-su as the 'Western' Euphrates, such a distinction is not known in the

region itself (and indeed the 'Western' Euphrates is in fact the northern arm).

The united stream flows, first south-west and then south, past Ḥiṣn al-Minshār (the modern Muṣar; Khalīl al-Ẓāhirī, *Zubda*, 52: Mūshār), receives on the west bank the Kuru-çay or Hekimhan suyu (probably the Nahr Djardjāriyya of the mediaeval geographers, reported as flowing from the neighbourhood of Kharshana) and the Tohma-çayı. The latter (the mediaeval Nahr Ḳubāḳib), into which flow the Nahr Ḳurāḳis = Sultan-su and the Nahr al-Zarnūḳ, which irrigates by a branch Malaṭya, is crossed by the celebrated Ḳanṭarat Ḳubāḳib, the modern Kırkgözköprü (see Yorke in the *Geogr. Journ.*, viii (1896), 328 f.; Lehmann-Haupt, *Armenien*, i, 486). On the east bank the Euphrates receives the Nahr Henzīṭ (Büyük çay) which still preserves the name of the capital of the old district of Anzitene and then, breaking through the south-east Taurus, enters the cataract district, which it does not leave till it reaches Gerger (see von Moltke, *Briefe über Zustände ..... in der Türkei*[6], 305-10; E. Huntington in *Zeitschr. für Ethnol.*, 1901, 183-204; idem, in *Geog. Journ.*, xx (1902), 175-200).

Leaving the mountainous country the Euphrates divides the flat tableland into two, and forms the boundary between Syria and al-Djazīra below Samsat (Ṣumayṣāṭ [*q.v.*]). At first the river continues as before to receive important tributaries from the west only. Of these the most important is the Nahr Sandja or Nahr al-Azraḳ crossed by the famous Ḳanṭarat Sandja, which, like the Singas of the ancients (cf. R. Kiepert, *Formae Orbis Antiqui*, text to sheet 5, p. 1[b]), is certainly to be identified with the Göksu. Below the rocky citadel of Ḳalʿat al-Rūm and the crossing of al-Bīra, of particular importance since the Crusading period [see BĪREDJIK], there is still the Nahr Sādjūr (modern Turkish Sacur) to be mentioned. Immediately after being crossed by the bridge of the Aleppo-Baghdād railway, the river crosses the frontier into Syria.

In the early middle ages Djisr Manbidj (the later Ḳalʿat al-Nadjm) and al-Raḳḳa [*q.v.*] were the main places where the Euphrates could be crossed. After Meskene [see BĀLIS], where it swings eastwards, the river is navigable. It passes the battlefield of Ṣiffīn [*q.v.*], near which is the ruined citadel of Djaʿbar [*q.v.*] with the reputed tomb of Süleymān-shāh [*q.v.*]. Below al-Raḳḳa the al-Balīkh, rising in the neighbourhood of Ḥarrān, joins the mainstream at al-Raḳḳa al-Ṣawdāʾ, the modern ruins of al-Samrāʾ (see Sarre and Herzfeld, *Archäol. Reise im Euphrat- und Tigris-Gebiet*, i, 160). The now very important crossing at Dayr al-Zōr has only become of any considerable importance in modern times. The place held by Dayr al-Zōr at the present day was held in ancient times by Circesium, the Ḳarḳīsiyā of the Arabs, at the mouth of the Khābūr; this river flowing from Raʾs al-ʿAyn formed, according to the repeated statements of the Arab authors, with its tributary the Hirmās from Ṭūr ʿAbdīn, a navigable connection between the Euphrates and the Tigris in the Nahr al-Tharthār, but, according to the investigations of Sarre and Herzfeld, *op. cit.*, i, 193, this must be regarded as more than doubtful. The rôle of the ancient Circesium and of the modern Dayr al-Zōr was filled, particularly in the later middle ages, by the double village of Raḥba, or the Dāliya of Mālik b. Ṭawḳ, a little south of the former, the lands of which were watered by the Nahr Saʿīd canal, which began before Ḳarḳīsiyā, and was called after Saʿīd b. ʿAbd al-Malik b. Marwān (see Peters, *Nippur*, i, 127, 129-30; A. Musil, *In Nordwestarabien und Südmesopotamien*, p. 10 of the reprint from the *Anzeiger der phil.-hist. Kl. der Wiener Akad.*, 1913, I).

While modern geographers make Southern Mesopotamia begin at ʿĀna [*q.v.*], already celebrated in the Middle Ages for its palms, where the cultivation of the datepalm in the Euphrates valley begins, the writers of the Middle Ages as a rule place the boundary between al-Djazīra and al-ʿIrāḳ much farther south on the Euphrates. The Čerī Saʿde, which was led out of the Euphrates downwards from Hīt, the course of which can be traced almost as far as Nadjaf (see Peters, *Nippur*, i, 166 and 313; ii, 327; Meissner, *Von Babylon nach den Ruinen von Ḥīra und Ḫuarnaq*, 15), has unfortunately not been sufficiently explored to establish its real importance and relation to Khandaḳ Sābūr (see Nöldeke, *Sasaniden*, 57; Le Strange, 65) and to the Wādī ʿAyn al-Tamr (see Musil, *op. cit.*, 11), which, according to Ibn Serapion, flowed into the Euphrates at Hīt. According to Ibn Serapion a canal, called Nahr Dudjayl, flowed from the Euphrates at al-Rabb (7 *farsakh* from al-Anbār, 12 from Hīt; possibly the Umm al-Ruʾūs in Peters, *Nippur*, ii, 45) to the Tigris near ʿUkbarā (see Streck, *Die alte Landschaft Babylonien*, 24), but it seems soon to have been silted up, as the later geographers give this name only to a Tigris-canal perhaps originally connected with the ancient Dudjayl (see Streck, *op. cit.*, 33 and 220 f.).

Only a little farther down, at al-Anbār [*q.v.*] begins the great network of the Babylonian canal system, which dates back into remote antiquity, although only the remains survive today. The usual identification of the four main canals, Nahr ʿĪsā, Nahr Ṣarṣar, Nahr al-Malik and Nahr Kūthā, led from the Euphrates, is given in the article DIDJLA (for details see Streck, *op. cit.*, 25 f.), but in the present state of our knowledge of the country it can only be regarded as highly hypothetical. Shortly after they branch off, the Euphrates divides into two arms. The western arm, according to the Arabs the river proper, which flows past Kūfa and is finally lost in the Baṭīḥa [*q.v.*] west of Wāsiṭ, is also called al-ʿAlḳamī, which Musil (*op. cit.*, 13) has found east-north-east of Karbalāʾ as the name of an ancient canal, perhaps forming the northern continuation of the modern Hindiyya arm. The eastern arm of the Euphrates, which even in Ibn Serapion's time held a greater stream of water, for the first part of it corresponded to the bed of the modern Euphrates proper until, since about 1889, the river began to pour the greater part of its waters into the Hindiyya arm (see Peters, *Nippur*, ii, 335; Sachau, *Am Euphrat und Tigris*, 38 and 57), again divides near Bābil. Its eastern arm, which flows to the Tigris under the names Nahr Sūrā al-Aʿlā, Sarāt al-Kabīra, Nahr al-Nīl, or Nahr Sābūs via the town of al-Nīl (the modern Nīliyya), has been thoroughly explored by Sarre and Herzfeld (*Arch. Reise*, i, 234-47) except for its eastern extremity. How far the western branch, the Nahr Sūrā al-Asfal, corresponds to the modern course of the Euphrates or the canals Shaṭṭ al-Nīl, Shaṭṭ al-Kār, which flow to the southeast, cannot yet be exactly determined. This arm likewise ends in the great swampy area of the Baṭīḥa, the outflow from which, Nahr Abi 'l-Asad, which runs into the Didjlat al-ʿAwrāʾ, may in a way be described as the lower course of the Euphrates.

This is in its main outlines the picture drawn by the Arab geographers, particularly Ibn Serapion.

That the details which they give us are not always intelligible is not remarkable, considering the deficiencies in our knowledge of the country; that contradictions seem to be found in them need not cause surprise, when we consider how much the river has changed its course, of which the shifting to the south in quite recent times of its confluence with the Tigris is a striking example (see *Geogr. Journ.*, xxxv, 11 with map). The Arabs themselves knew of considerable changes in the course of the Euphrates; for example, Masʿūdī (*Murūdj*, i, 216) says that in the period of Ḥīra's prosperity sea-going ships came up as far as Nadjaf in the old riverbed (*al-ʿatīḳ*). A detailed account has been given above (s.v.) of the Arabs' knowledge of the history of the Baṭīḥa, which is at the same time the history of the Lower Euphrates. It is perhaps evidence of the gradual alteration in this area of swamps that, according to certain authors (see *BGA*, iii, 20, note 1; cf. also Yāḳūt, iii, 860 f.), an arm of the Euphrates—it can only be the Nahr Sūrā al-Asfal—entered the Tigris at Wāsiṭ. Not only is the history of the Euphrates in antiquity and the middle ages still very obscure, but we have only very meagre information regarding the changes in its course in recent times.

Bibliography: The Arab geographers and the more important western works are given under DIDJLA; we may here mention as a cartographical aid R. Kiepert's excellent *Karte von Kleinasien* (1: 400,000). For further details see the separate articles. For the course, tributaries, etc. of the Euphrates in the modern Turkish Republic, see *IA*, s.v. Fırat (by Besim Darkot) and Naval Intelligence Handbook, *Turkey*, 2 vols., 1942-3, index. (R. HARTMANN*)

The Euphrates measures 2333 km./1480 miles from the confluence of the Karasu and the Murad-suyu to Baṣra. It drains an enormous basin, which is made up as follows: Karasu, 21,500 sq. km./8400 sq. miles; Murad-suyu, 39,700 sq. km./15,500 sq. miles; the Euphrates as far as Djarablus (where it enters Syria), 96,000 sq. km./37,500 sq. miles; as far as ʿĀna (where it enters ʿIrāḳ), 229,000 sq. km./89,300 sq. miles; to the point where it enters the Gulf, 444,000 sq. km./173,000 sq. miles. It must however be realized that the greater part of this area is complete desert and contributes no water at all to the river.

The area from which the Euphrates is fed is virtually confined to the mountainous area to the North, which consists of 82,330 sq. km./32,110 sq. miles, only some 20% of the total area of the basin, 80% of which is made up of steppe and desert. After it has left the mountains the Euphrates is nothing more than an artery for carrying away the rains and snows which have fallen in Eastern Turkey. Consequently, very soon—from Djarablus, on the Turco-Syrian frontier, 1980 km./1230 miles from the Persian Gulf—the river begins to dwindle. At Hīt, its average annual flow is 838 cubic metres/29,595 cubic feet per second; at Hindiyya, 629 cu. m./22,213 cu. ft.; at Shināfiyya, 573 cu. m./20,236 cu. ft.; at Nāṣiriyya, 458 cu. m./16,174 cu. ft. (for comparison, the figure for the Rhine is 2200 cu. m./77,696 cu. ft. per sec.; for the Loire, 935 cu. m./33,020 cu. ft.; for the Oder, 510 cu. m./18,011 cu. ft.; for the Seine, 485 cu. m./17,127 cu. ft.). Between Hīt and Nāṣiriyya (680 km./420 miles) the Euphrates loses 46% of its water.

Similarly wide variations are found between different years. Although the average annual flow at Hīt is 838 cu m./29,595 cu. ft. per sec., in 1941, a very high year, it rose there to 1140 cu. m./40,260 cu. ft., while in 1930, a very low year, it fell to 382 cu. m./13,489 cu. ft.

There are also fairly wide variations between the different months of the year. During the hot season the flow decreases: (at Hīt), August, 354 cu. m./12,501 cu. ft.; September, 293 cu. m./10,347 cu. ft. In the autumn it begins to rise again with the first rains: November, 433 cu. m./15,291 cu. ft.; December, 547 cu. m./19,317 cu. ft.; January, 587 cu. m./20,730 cu. ft., and rises still further during the winter: February, 668 cu. m./23,590 cu. ft.; March, 962 cu. m./33,973 cu. ft.; April, 1880 cu. m./66,394 cu. ft.; May, 2230 cu. m./78,755 cu. ft.; June, 1210 cu. m./42,732 cu. ft. Thus 63% of the water carried by the Euphrates flows during March, April, May and June only, and in May there flows $7^1/_2$ times as much water (2230 cu. m./78,755 cu. ft.) as in September (293 cu. m./10,347 cu. ft.).

Especially striking is the rapidity with which the average flow declines in the space of two months—June and July—and also how late the annual maximum flow is reached (in May), whereas in the Tigris it appears a month earlier (in April). This is explained by the fact that the Euphrates is supplied to a large extent by snow which, on the high plateaus, does not melt until very late spring.

In addition to its extreme seasonal variations in rate of flow, the floods of the Euphrates are also extreme, though much less so that those of the Tigris. At Hīt on 6 September 1938 a flow of 5200 cu. m./183,645 cu. ft. per sec. was recorded. On such occasions the Euphrates would burst its banks and spread eastwards as far as the eye could see, reaching as far as the suburbs of Baghdād.

The countries through which the Euphrates flows are very varied: the mountains of Turkey, where the river is more or less torrential; the Syrian steppes of al-Djazīra, where it is slightly sunk below the level of the surrounding plateau and where the slope averages 30 cm. per km. between Djarablus and Hīt; Mesopotamia proper, where the slope falls to 10 cm. per km. between Hīt and Shināfiyya. After Shināfiyya and Nāṣiriyya the slope practically disappears: 3 cm. per km.

A very important feature of the geography of Mesopotamia is the fact that the Euphrates between Hīt and Shināfiyya flows at a slightly higher level than the section of the Tigris between Baghdād and Kūt. The northern part of Mesopotamia is thus irrigated by canals which lead off from the Euphrates to the east and the south-east, and this has been so since remotest antiquity (no canal can lead off to the west because of the edge of the Syrian plateau), while the southern part on the other hand is irrigated by canals leading off from the Tigris, the main one—practically the only one—being the Gharrāf, in whose bed the Tigris itself at one time flowed.

From Samāwa to the Shaṭṭ al-ʿArab, the Euphrates clings to the desert plateau, the slope is very slight, and the area was formerly filled by the great marsh which, according to some sources, appeared in the 5th century A.D., while others say that it appeared at the time of the great flood of 629 A.D. The last traces of it are now represented by the 110 km./70 miles of lake Hammar.

At all periods embankments have been built to combat the floods. Since the building of the Ramādī barrage in 1955-6, it has been possible when the water level is very high to divert 2800 cu. m./98,900 cu. ft. per sec. in the direction of Lake Habbāniyya along a canal 8.5 km./5 miles long and 210 metres/230 yards wide. In the same year there

was completed on the Tigris at Sāmarrā a similar barrage, which is capable of diverting 9000 cu. m./318,000 cu. ft. per sec. towards the depression of the Wādī Tharthār along a canal 65 km./40 miles long. Now, and for the first time in history, Mesopotamia is protected from the catastrophe of floods.

AL-FURĀT, BANŪ [see IBN AL-FURĀT].

FURḌA, a term used interchangeably in Ottoman documents and Arabic texts with *firda*, in reference to personal taxes. Attested in Ottoman Egypt after about 1775 as one of the many illegal charges imposed on peasants by soldiers of the provincial governors, in 1792 this tax was legalized under the name *Firdat al-taḥrīr*, as a comprehensive levy to replace all the previous illegal charges. It was not a regular imposition, nor was it applied everywhere at the same time, but only where and when local authorities needed money for special purposes. The total amount levied on each village and individual varied according to ability to pay and the amount of money needed. It was one of the *mukhridjāt* revenues of the Treasury, *i.e.*, those collected and spent locally, without being sent to Cairo, although they were included in the accounts of revenues and expenditures of the central treasury. It was also considered to be one of the *Kushūfiyye-i djedīd* taxes. In 1798, 7,096,194 *paras* were collected in this way, approximately five per cent of the total Treasury revenues. In March 1801 it was abolished by the French, along with most of the other taxes inherited from Ottoman times.

After the departure of the French, Muḥammad ʿAlī restored the *firda* and changed it into a general personal tax, theoretically an income tax (called *Firdat al-ruʾūs*). This was levied annually on Muslim and non-Muslim males alike, with only European subjects and natives in the employ of foreign consulates being exempted. In the large cities, it was levied on individuals at a rate of about eight per cent of their incomes or salaries, but no one had to pay more than five hundred piastres. The tax was deducted directly from the salaries of government employees and was a major cause of their discontent. In the villages and smaller towns, it was levied on households, which were divided into three classes according to ability to pay. It provided about one-sixth of the Treasury's revenues, and was used principally to pay for the expenses of the rapidly expanding armed forces. The *firda* was also collected in Syria during the period of Egyptian occupation.

(S. J. SHAW)

FURFŪRIYŪS, *i.e.*, Πορφύριος, Porphyry (A.D 234-about 305) of Tyre, amanuensis, biographer and editor of Plotinus, and outstanding as the founder of Neoplatonism as a scholastic tradition. The philosophical syllabus common in Arabic philosophy is ultimately due to him: since his days it became customary to use the lecture courses of Aristotle as set-books in the Neoplatonic schools of late antiquity and to start with the *Categories*. He himself wrote commentaries on Aristotle and Plotinus, which seem to have reached the Arabs either in their original or in some diluted form. It is not impossible that his conviction that Plato's and Aristotle's views were basically identical—he wrote a lost work, in seven parts, Περὶ τοῦ μίαν εἶναι τὴν Πλάτωνος καὶ Ἀριστοτέλους αἵρεσιν (Suda, s.v. Πορφύριος)—became of some importance for Muslim philosophers like Al-Fārābī [*q.v.*] or Ibn Sīnā [*q.v.*]. Most of his very numerous Greek works are not preserved. A long and careful survey of his life and his huge literary output, by R. Beutler, is to be found in Pauly-Wissowa,Kroll, xliii, 1953, cols. 275-313; it is, however, still indispensable to consult in addition J. Bidez, *Vie de Porphyre le philosophe néoplatonicien*, Gand-Leipzig 1914, reprinted Hildesheim 1964, and E. Zeller, *Philosophie der Griechen*, iii/2[4], 693 ff. For a brilliant sketch of the man cf. R. Harder, *Kleine Schriften*, Munich 1960, 260 ff.

A very sketchy Arabic account of Porphyry's works is to be found in Ibn al-Nadīm, *Fihrist*, 253 (= Cairo ed., 354), cf. Ibn al-Kifṭī, *Taʾrīkh al-ḥukamāʾ*, 256 (ed. Lippert); cf. Bidez, *op. cit.*, 54 ff.; also F. Rosenthal, *Isḥāḳ b. Ḥunayn's Taʾrīkh al-aṭibbāʾ*, in *Oriens*, vii (1954), 69-79, and F. Gabrieli, *Plotino e Porfirio in un eresiografo musulmano*, in *La parola del Passato*, i, 1946, 338 ff.

(1) Only one of Porphyry's surviving Greek works is preserved in a complete Arabic version as well, the *Isagoge* (cf. *Commentaria in Aristotelem Graeca*, IV, 1), a rather elementary treatise on logic, which had become the first philosophical book to be studied in the schools. It became as popular in the Islamic world as it had been in Greek and Latin (cf. W. and M. Kneale, *The Development of Logic*, Oxford 1962, 187 ff.). The translator is Abū ʿUthmān al-Dimashḳī (flor. A.D. 900); it can be read in two Egyptian editions, both published 1952, by Aḥmad Fuʾād al-Aḥwānī, and by ʿAbd al-Raḥmān Badawī (*Manṭiḳ Arisṭū*, 1021-68), together with the corrections given in S. M. Stern's article on Ibn al-Ṭayyib's commentary on the *Isagoge*, *BSOAS*, xix (1957) 419 ff. The *Isagoge* was well known to all the Arabic philosophers. from the days of Al-Kindī's [*q.v.*] *First Philosophy*. Ibn Sīnā's [*q.v.*] treatment of its subject matter is now available in a critical edition by Dr. Ibrahim Madkour and others: *Al-Shifāʾ, La Logique. I. L'Isagoge*, Cairo 1952. The commentary of Porphyry's work by Ibn Sīnā's contemporary Ibn al-

Ṭayyib (434/1043) is preserved in the Bodleian MS Marsh 28. The 7th/13th century commentary by Al-Abharī (cf. Brockelmann, I², 609, S I, 841) became most popular in later centuries, was in its turn frequently commented upon and eventually completely replaced the original work.

(2) Commentaries on Aristotle. (a) The *Fihrist*, 252, 2 (= Cairo ed. 351, 21), refers to a lost commentary on the *Nicomachean Ethics*, in twelve books (translated by Isḥāḳ b. Ḥunayn), which is not mentioned in the Greek tradition but was obviously used by Arabic writers. Al-Fārābī [*q.v.*], for example, mentions it in the essay on the identity of Plato's and Aristotle's views, *al-Djamʿ bayna raʾyay al-ḥakīmayn Aflāṭūn wa-Arisṭū* (ed. Dieterici, 17; ed. Nader, 95, 17): "As Porphyry and many commentators after him say". We are not in a position to decide whether he made much use of it in his other writings but it is obviously likely. Abu 'l-Ḥasan Muḥammad al-ʿĀmirī (d. 382/992) refers to Porphyry four times by name in his very interesting ethical work *Fi'l-saʿāda wa'l-isʿād* (ed. M. Minovi, Wiesbaden 1957-8); once, p. 53, he mentions the commentary expressly while discussing Aristotle's treatment of pleasure. The definition of felicity (p. 5) is given according to Porphyry; the other references occur on pp. 192 and 353, but much more in that book may ultimately be derived from this commentary or from other ethical works by Porphyry. Porphyry as an interpreter of Aristotle's ethical doctrines is again referred to in the beginning of the third chapter of Miskawayh's *Tahdhīb al-akhlāḳ*; moreover, chapters 3-5 of the treatise reproduce selections from a Neoplatonic commentary on the *Nicomachean Ethics*, and it is an obvious guess to think of Porphyry as its author (cf. R. Walzer, *Greek into Arabic*, Oxford 1962, 224 ff.). The possibility that the late Greek ethical treatise tentatively attributed to Nicolaus of Laodicea and discussed in *Oriens*, xiii-xiv (1960-1), 34 ff. by M. C. Lyons may be connected with Porphyry's commentary deserves certainly to be considered. (b) A reference to the second book of Porphyry's *Commentary on Aristotle's Physics* I-IV (translated by Basīl) occurs in Muḥammad b. Zakariyyā al-Rāzī [*q.v.*], *Opera philosophica*, i, 121 (ed. P. Kraus, Cairo 1939). (c) It is very likely that Al-Fārābī used Porphyry's commentary on the Περὶ ἑρμηνείας; a comparison of his commentary (ed. W. Kutsch-Stanley Marrow, Beyrouth 1960) with the commentaries by Boethius and Ammonius and Stephanus may yield interesting results.

(3) Porphyry's *History of Philosophy* in four books (Greek remnants of it were edited by A. Nauck, *Porphyrii Opuscula*, Leipzig 1886, 3-52) was known in Syriac (*Fihrist*, 245, 12 = Cairo ed., 355) and in Arabic (the *Fihrist* (i, 245) mentions a translation of two books by Abu 'l-Khayr al-Ḥasan ibn Suwār). The Arabic text of the *Life of Pythagoras* (Nauck, 11-52) is accessible in Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ*, ed. A. Mueller, 38, 18-41, 4, and is discussed by F. Rosenthal, *Arabische Nachrichten ueber Zeno den Eleaten*, in *Orientalia*, vi (1937), 43 ff.; F. Rosenthal edited from al-Mubashshir a section of Porphyry's life of Solon (*ibid.*, 40 f.), and an unknown biography of Zeno of Elea (*ibid.*, 30 ff.), which is most likely derived from Porphyry's work. Al-Bīrūnī, *Hind* (Sachau, 21-43), seems to refer to this book. R. Beutler (*op. cit.*, 287) does not mention the Arabic tradition at all.

(4) The so-called *Theology of Aristotle* [see ARISṬŪṬĀLĪS and AL-SHAYKH AL-YŪNĀNĪ], a running paraphrase of Plotinus, IV 3, IV 4, IV 7, IV 8, V 1, V 2, V 8, VI 7, arranged in a systematic order, is introduced in its Arabic text as 'the interpretation (*tafsīr*) of Porphyry of Tyre'. There is, in my view, every likelihood that it must ultimately somehow be connected with Porphyry's explanations of the *Enneads* (ὑπομνήματα and κεφάλαια) which he mentions in § 26 (l. 29 ff.) of his biography of Plotinus. An English translation of the work by G. Lewis, arranged in the order of Plotinus' *Enneads*, is to be found in the second volume of P. Henry and H.-R. Schwyzer's monumental critical edition of Plotinus, Paris-Bruxelles 1959, cf. particularly p. XXVI ff. Whether the *Epistula de Scientia Divina* (cf. P. Kraus, *Plotin chez les Arabes*, in *BIE*, xxiii (1941), 263 ff.) which contains similar extracts from *Enneads* V 3, V 4, V 5, V 9 (also translated by G. Lewis in the same volume) goes back to the same source, is uncertain but it is quite probable.

(5) A fragment from a treatise *On soul* was published and translated into German by W. Kutsch S.J.; *Ein arabisches Bruchstueck aus Porphyrios (?)* Περὶ ψυχῆς *und die Frage des Verfassers der Theologie des Aristoteles*, in *Mélanges de l'Université St. Joseph*, xxxi (1954), 265 ff.; cf. S. M. Stern, *Ibn Ḥasday's Neoplatonist*, in *Oriens*, xiii-xiv (1960-1), 92 and n. 1; P. Merlan, *Monopsychism, mysticism, metaconsciousness*, The Hague 1963, 25 f. It looks as if Ibn Sīnā, *Shifāʾ* v, 6 (ed. Raḥmān, 240, 3 ff.; ed. Bakoš, 236) and *Ishārāt* (ed. Forget, 180) has either this treatise in mind or the ʾΑφορμαὶ πρὸς τὰ νοητά (which he seems to quote as the treatise *Fi 'l-ʿaḳl wa'l-maʿḳūl* in the *Ishārāt*) while voicing his dissatisfaction with Porphyry's view of the *unio mystica* (cf. F. Rahman, *Prophecy in Islam*, London 1958, 15 ff.). As one 'who is not among the most subtle of philosophers' Porphyry is blamed by Ibn Rushd, *Tahāfut al-Tahāfut*, ed. Bouyges 250, 10 ff. (cf. van den Bergh, *Incoherence* ..., i, 154, ii, 100) for his explanation of the cause of plurality. Porphyry's view on matter is rejected in the *Epitome of Aristotle's Metaphysics* (Amīn, 73), cf. S. van den Bergh, *Die Epitome der Metaphysik des Averroes*, Leiden 1924, 63 and 201.

(6) The *Letter to Anebo* (recent edition of the Greek and Latin fragments by A. R. Sodano, Naples 1958) is referred to by al-Masʿūdī, *Kitāb al-Tanbīh wa 'l-ishrāf*, 162, 6 (p. 222 of Carra de Vaux's French translation). A rather long fragment of it is quoted by al-Shahrastānī *K. al-Milal wa 'l-niḥal*, ed. Cureton, 345, 8-347; German translation by Th. Haarbruecker, *Religionspartheien*, Halle 1850-1, ii, 208 ff.; Italian translation by F.Gabrieli, *La parola del passato*, i, 1946, 344 ff. Muḥ. b. Zak. al-Rāzī wrote a refutation of the book. Cf. P. Kraus, *Jābir ibn Ḥayyān II*, in *MIE*, xlv (1942), 128, n. 5. These passages are not mentioned by Sodano.

(7) The great corpus of Alchemy attributed to Djābir ibn Ḥayyān refers to a most probably spurious work of Porphyry entitled 'The book of Generation', a book in which the creation of artificial human beings was discussed at some length. It is mentioned neither in Greek nor in Arabic lists of Porphyry's works. It is described by P. Kraus, *op. cit.*, 114 ff., 122 n. 3; cf. E. R. Dodds, *The Greeks and the irrational*, Los Angeles 1951,295. (R. WALZER)

FURGAČ [see ʿIZZET PASHA, AḤMED].

FURḲĀN, soteriological expression used in the Ḳurʾān. The word occurs in various connexions in the Ḳurʾān and is usually translated as "discrimination", "criterion", "separation", "deliverance", or "salvation", where it is translated at all. The Aramaic word *purḳān* on which it is modelled,

means "deliverance", "redemption", and (in the Christian sense) "salvation". The Arabic root *faraḳa*, which must be considered as another element in the *furḳān* of the Ḳur'ān, means "to separate", "to divide", "to distinguish".

Sūra VIII, 29 runs: "O believers, if you fear God, He will assign you a *furḳān* and acquit you of your evil deeds, and forgive you". In *Sūra* VIII, 41 "the day on which the two hosts met" (which must refer to the battle at Badr) is described as "the day of the *furḳān*". At the same time it is said that on that day something which must be believed in was "sent down" to the Prophet. On the five other occasions where the word is used it is always in connexion with the giving of divine revelation; twice Moses, or Moses and Aaron, are named as those who receive the revelation (II, 53; XXI, 48); on three occasions it is mentioned in connexion with Muḥammad and the Ḳur'ān (II, 185; III, 4; XXV, 1).

The difficulty of interpreting these passages springs chiefly from the fact that the relationship between revelation-writings and *furḳān* is not always defined in the same way. In *Sūra* XXV, 1 the *furḳān* seems to be identified with the Ḳur'ān (*tabāraka 'lladhī nazzala 'l-furḳāna alā ʿabdihī li-yakūna li'l-ʿālamīna nadhīr^{an}*). Again, *furḳān* may perhaps be identified with the Ḳur'ān in III, 4. The phrase *wa-anzala 'l-furḳāna* must then be a repetition, since the "sending-down" of the Ḳur'ān (and the Torah and the Indjīl) have already been mentioned in the previous verse (*nazzala ʿalayka 'l-kitāba bi 'l-ḥaḳḳi muṣaddiḳ^{an} li-mā bayna yadayhi wa-anzala 'l-tawrāta wa 'l-indjīla min ḳablu hudan li'l-nāsi*). In XXI, 48 *furḳān* could mean the Torah (*wa-la-ḳad ātaynā Mūsā wa-Hārūna 'l-furḳāna wa-ḍiyā'^{an} wa-dhikr^{an} li'l-muttaḳīna*). But in II, 53 this is hardly possible, for here "the scriptures" are named first and then afterwards, in the same connexion, the *furḳān* (*wa-idh ātaynā Mūsā 'l-kitāba wa 'l-furḳāna laʿallakum tahtadūna*). The terms used in *Sūra* II, 185 are noteworthy (*shahru Ramaḍāna 'lladhī unzila fīhi 'l-ḳur'ānu hudan li'l-nāsi wa-bayyināt^{in} mina 'l-hudā wa 'l-furḳāni*). This means that the giving of the Ḳur'ān (especially in Ramaḍān) should serve man as moral guidance and as "proof of moral guidance and the *furḳān*".

Even the early commentators made some effort to interpret the term satisfactorily. Since the time of Abraham Geiger western orientalists have made renewed attempts at interpretation but without ever reaching any certain conclusions. See the review of the whole question in A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 225-9. W. Montgomery Watt, *Muhammad at Medina*, 1956, 16, is in general agreement with the conclusion first reached by Richard Bell in *The origin of Islam in its Christian environment*, 1926, 118-25, and adds: "In VIII, 41 'the day of the *furqān*, the day the two parties met' must be the day of Badr; and *furqān*, in virtue of its connexion with the Syriac word *purqānā*, 'salvation', must mean something like 'deliverance from the judgement'. This being so the *furqān* which was given to Moses (II, 53; XXI, 48) is doubtless his deliverance when he led his people out of Egypt, and Pharaoh and his hosts were overwhelmed. Similarly, Muḥammad's *furqān* will be the deliverance given at Badr when the Calamity came upon the Meccans. That was the 'sign' which confirmed his prophethood. Perhaps there is also a reference to the experience, analogous to the receiving of revelation, which Muḥammad apparently had during the heat of the battle, and as a result of which he became assured that the Muslims had invincible Divine assistance".

In his *Introduction to the Qur'ān*, 1953, published posthumously, Richard Bell again tackled the question (136 ff., *Note on al-Furqān*), and put forward an interpretation of the whole subject which is both well-considered and complete in itself. According to Bell, "it was from Christian sources that the word was derived, but Muhammad must have associated it with the Arabic root *faraqa* to separate, and taken it to imply the separation of an accepted religious community from the unbelievers". To explain the places where the *furḳān* is said to have been given to Moses (and Aaron) he adduces *Sūra* V, 25, in which Moses, referring to his people's hesitation to enter the Holy Land, prays to God: "I control no one but myself and my brother: make a separation (*fa-'fruḳ*) between us and the reprobate people". And he accounts for the passages referring to Muḥammad's own period by reference to the situation at (and before) the battle of Badr. "The victory at Badr was not only a "deliverance" of the small band of Moslems who had gone out with Muḥammad expecting to intercept a caravan and had found themselves face to face with an army. It was a final separation between Muḥammad's followers and the unbelieving Meccans". "Here [in the Ḳur'ān passages referred to] then, we have the appearance of the Qur'ān as the distinctive Scripture of an independent Moslem religious community, linked with the *furqān*, the separation of believers from unbelievers, and the assurance of forgiveness and acceptance with God; and both linked with the day of Badr".

AL-FURS, one of the two terms used by the Arabs to denote the Persians, the other being al-ʿAdjam [*q.v.*]. In the following lines we shall attempt to show in precisely what way the Arabs were acquainted with the Persians and their civilization; for other aspects, see ĪRĀN.

From remotest antiquity, the Arabian peninsula had maintained relations with Persia; shortly before Islam, these connexions were established, in the north-east, through the Lakhmids [*q.v.*] of al-Ḥīra, and, in the south, through the medium of the Yemen, a vassal of Persia, and the *Abnā'* [*q.v.*] who were settled in the country. The word *Furs* does not appear in the Ḳur'ān, which, however, contains a certain number of words of Persian origin, but among the Prophet's entourage there was in particular one Salmān al-Fārisī [*q.v.*], whom legend has made a figure of outstanding importance. Already in the 1st/7th century, relations between Arabs and Persians were strengthened as a result of the Islamic conquests, and some elements of Iranian civilization penetrated to Mecca and Medina through prizoners

who became *mawālī* [*q.v.*] and played an essential part in the history of the first centuries of Islam. However, it was only in the 2nd/8th century, and especially through the efforts of Ibn al-Muḳaffaʿ [*q.v.*], that there first began to circulate Arabic translations of Pahlavi works such as the *Khʷatāy-nāmak* (*K. Siyar mulūk al-ʿAdjam* or *al-Furs*), the *Āʾīn-nāmak*, the *Tādj-nāma*, etc., which helped to nourish the growing *adab* [*q.v.*] and Arabic historiography, and later served as a source for Firdawsī (see F. Gabrieli, *L'opera di Ibn al-Muqaffaʿ*, in *RSO*, xiii/3 (1932), 197-247).

The dissemination of these translations and of the works they inspired coincided with the accession and rise of the ʿAbbāsid dynasty, which drew closer to Persia and, through its officials, increased Iranian influence to the point when it sometimes gives the impression of being heir to the Sāsānids (cf. D. Sourdel, *Vizirat*, *passim*). It is unnecessary to dwell here on the considerable importance of the *kuttāb* who, while attempting to acquire Arab culture, perceptibly followed the Iranian tradition, nor upon the rôle played by the *Shuʿūbiyya* [*q.v.*] in the shaping of Islamic civilization.

What must be noted is the introduction into Arabic historiography, from the end of the 2nd/8th century or beginning of the 3rd/9th, of the history of Persia in the form of monographs (al-Haytham b. ʿAdī, Abū ʿUbayda, etc.) which, together with the translated sources, were to serve as the basis for "universal" history. From then onwards historians writing in Arabic, among whom Iranians are not uncommon, were able to plan and write universal history, to include first the Biblical data and the legends transmitted by non-Muslims, representing a kind of scriptural history from Adam to Jesus Christ and then to Muḥammad; then a summary of the actual or legendary events that had occurred since the earliest times in non-Arab countries now under Muslim rule; and finally the history of Islam up to the writer's own period. Muslim Spain and the Maghrib are somewhat neglected by the eastern historians, who on the other hand are better informed on the subject of Egypt, and in particular Persia. Basing themselves in this way on translations from Pahlavi, on previously published monographs and occasionally on traditional accounts transmitted orally, authors such as al-Ṭabarī, al-Dīnawarī, al-Yaʿḳūbī, Ibn Ḳutayba, al-Masʿūdī, al-Thaʿālibī and Ḥamza al-Iṣfahānī devoted one or several chapters of their works to the ancient history of Persia, from Kayūmarth to the last Sāsānid sovereigns who were conquered by the Arabs, though not without falling into various errors which derive from the state of the sources used, or from accepting legends and myths handed down by tradition as authentic historical facts. Thus al-Masʿūdī, for example (*Murūdj*, trans. Pellat, i, 197 ff.), enumerates the mythical Kayānids, and then passes immediately to Alexander and Darius (Dārā [*q.v.*]), ignoring the Achaemenids who preceded him or, rather, confusing them with the "kings of Babylon", deals cursorily with the Arsacids (*Mulūk al-ṭawāʾif* [*q.v.*]), but is happier to dwell on the Sāsānids, with whom he is obviously more at his ease.

It is very natural that the Sāsānids should be the most familiar to the Arabs, and Arab sources have provided the historian of the dynasty, A. Christensen, with a large part of his documentation (see *L'Iran sous les Sassanides*², Copenhagen 1944, 59-74); this work deals partly with the historical facts properly speaking, and partly with Persian society, especially with the religions of Persia, which seem to have been fairly well known. While the glories of the Sāsānids provided the *Shuʿūbiyya* with something to boast about without fear of contradiction, those who upheld the supremacy of the Arab element found in Mazdaism and Manicheism arguments against this same *Shuʿūbiyya*. In fact, the Persian religions were known only rather superficially, but we do know that the system of the *kishwār*s which inspired the division of the world made by the Arab geographers [see DJUGHRĀFIYĀ] was familiar to al-Djāḥiẓ (see *Tarbīʿ*, ed. Pellat, index) who, what is more, was acquainted with certain other details of Mazdaism and Manicheism. Incidentally, for him there were only four civilized nations on earth—the Arabs, the Indians, the Byzantines and the Furs (*al-Akhbār*, in *Lughat al-ʿArab*, ix, 174 ff.) and it is a matter of surprise to him that these last, so brilliant in other respects, should have accepted certain religious practices, allowed incestuous unions, worshipped fire, etc. We may feel sure that, in private conversations, these questions must have given rise to passionate discussions. A little later Ṣāʿid al-Andalusī, who acknowledged that eight nations "were distinguished for their taste for things of the mind", the Indians, Persians, Chaldeans, Greeks, *Rūm*, Egyptians, Arabs and Israelites, attributed to the Persians "a marked taste for the art of medicine and a profound knowledge of astrology and the influence of the stars on the sublunary world" (*K. Ṭabaḳāt al-umam*, tr. R. Blachère, Paris 1935, 49-52). Ibn al-Nadīm, in the *Fihrist*, gives some particulars concerning the religions of Persia, but the Arabic author best acquainted with these questions certainly seems to be al-Shahrastānī, who drew upon the early sources and gave a comparatively objective account.

It must not be forgotten that the Arabic translation of *Kalīla wa-Dimna* [*q.v.*] can be regarded as one of the first monuments—if not the first—of simple prose, and that *adab*, which is the core of secular prose literature, is a product of Iranian influence. The early authors who sought to achieve a balance between the component elements of Arabic culture took pains to restrict borrowings from Iranian civilization, but they were unable to prevent the Arabs from adopting and handing down with marked pleasure those traditions that had most impressed them. The names of emperors like Ardashīr or Anūshirwān, even though obscured in the mists of legend, were well known to the authors who delighted in reproducing passages from the testaments (*ʿahd*) of Persian sovereigns, and, thanks to the *adab* which popularized the figure of Buzurgmihr [*q.v.*], gave the whole nation a reputation for wisdom and political adroitness, at least at a time when the Shuʿūbī threat had been removed.

Bibliography: it is hardly feasible to give a restricted bibliography of the subject dealt with in the above article, since it would mean listing all ancient works which mentioned the Persians. We confine ourselves therefore to referring to the articles ʿADJAM, ĪRĀN and SHUʿŪBIYYA, and also to the works of M. Inostranzev, *Iranian influence on Moslem Literature*, i, trans. G. K. Nariman, Bombay 1918 and R. N. Frye, *The heritage of Persia*, London 1962, 234 ff. (CH. PELLAT)

FÜRSTENSPIEGEL [see SIYĀSA].

FURŪʿ [see FIḲH, UṢŪL].

FURŪGH, the pseudonym of two Persian poets: (1) Abu 'l-Ḳāsim Khān, younger son of Fatḥ ʿAlī Khān Ṣabā, poet laureate at the court of Fatḥ ʿAlī Shāh Ḳādjār, was regarded as one of the scholars of

his time and had been well educated. He spent some time in Mas͟hhad in the civil service and, after the crown prince ʿAbbās Mīrzā had visited the region, he entered his service, principally as a poet. Later he returned to Tehrān where he retired from public life and lived until the end of the 19th century. (2) Muḥammad Mahdī ibn Muḥammad Bāg͟hir Iṣfahānī lived until the time of Muḥammad S͟hāh Ḳād͟jār (1250-64/1834-48) and wrote a most interesting work on the *Siyāḳ* numerals, mathematics, calligraphy, weights and measures, contemporary currencies and accountancy, entitled *Furūg͟histān*, dedicated to the Grand Vizier Ḥād͟jdjī Mīrzā Āḳāsī. The author of the *Mad͟jmaʿ al-fuṣaḥāʾ* (ii, 396-9), who included some of his poems, referred to him incorrectly as Furūg͟h al-Dīn, and said that he was born in Tabrīz in 1223/1808, had a good education from the age of seven, entered the service of the crown prince ʿAbbās Mīrzā and his eldest son Farīdūn Mīrzā, travelled in Ād͟harbayd͟jān and Fārs, finally settled in Tehrān where he entered the finance department, and wrote various works including the *Ṣaḥāʾif al-ʿālam* and the *Tad͟hkirat al-s͟habāb* ("Recollections of youth"), a kind of autobiography in which he included poems in Arabic and Persian. He also must have lived until the end of the 19th century.

Bibliography: Riḍā-Ḳulī K͟hān, *Mad͟jmaʿ al-fuṣaḥāʾ*, ii, 370-82 and 396-9; *Furūg͟histān*, contemporary manuscript dating from the month of Rabiʿ II 1259/May 1843, in the author's possession. (SAID NAFICY)

FURŪG͟H AL-DĪN [see FURŪGH 2].

FURŪG͟HĪ, the pseudonym of three Persian poets: 1) Mīrzā Muḥammad Iṣfahānī, a scholar and native of that town. During his travels in the middle of his life he attached himself to Tīmūr S͟hāh, amīr of Afghanistan (1187-1207/1773-93) and became his court poet. 2) Mīrzā ʿAbbās, son of Āḳā Mūsā Bisṭāmī, born in 1213/1798 in ʿIrāḳ, where his father was travelling. As a youth he travelled in Māzanderān and Karmān where he started his career as a poet, at first using the pseudonym "Miskīn". After taking the name "Furūg͟hī" he came and settled in Tehrān, living under the protection of his paternal uncle Dūst ʿAlī K͟hān, the court treasurer. After joining the circle of the Čis͟htī Ṣūfīs, he led a retiring life of devotion and died in 1274/1858. Furūg͟hī ranks among the best modern lyric poets and his *g͟hazal*s are very popular, seven editions of them having been published in Tehrān. He is regarded as one of the best followers of the school of Saʿdī. 3) Mīrzā Muḥammad Ḥusayn, son of Āḳā Muḥammad Mahdī Arbāb-i Iṣfahānī, born in 1255/1839 in Iṣfahān where he was educated. As a youth he went with his father to India where he was engaged in trade. Later he lived in ʿIrāḳ, and finally went to Tehrān where he later served in the Ministry of the Press, under the direction of the celebrated publicist Muḥammad Ḥasan K͟hān Ṣanīʿ al-Dawla, later Iʿtimād al-Salṭana. He collaborated in the publication of both official and unofficial newspapers of the time, as well as in some of his director's publications. At the end of his life he received the honorary title of D͟hakāʾ al-Mulk, a title which was granted to his eldest son Mīrzā Muḥammad ʿAlī K͟hān who chose the family name Furūg͟hī. The father was later appointed head of the translation department at court and director of the School of Political Science. He died in Tehrān in 1908. He was very active as poet, writer, translator, publicist and journalist. On 11 Rad͟jab 1314/16 December 1896 he started publication in Tehrān of the weekly *Tarbiyat* which was influential in introducing modern ideas into Īrān and which appeared until his death. His chief activity was the editing of works which his eldest son translated from European languages, including *La Chaumière Indienne* by Bernardin de Saint-Pierre, *Le Tour du Monde en 80 Jours* by Jules Verne, *The Seventh Great Oriental Monarchy* by George Rawlinson, etc. His eldest son started his career by teaching in secondary schools in Tehrān, was then elected Deputy and Leader of the Chamber of Deputies during the second legislature. He was nominated several times as ambassador, president of the Court of Cassation, Minister and Prime Minister. He died in Tehrān on 5 Ad͟har 1321 s/27 November 1943. From the time of the founding of the Iranian Academy (*Farhangistān-i Īrān*) he was elected a member, and ranked among the best writers and translators of his day. He translated other works into Persian without his father's collaboration, in particular Plato's Dialogues, the *Discours sur la Méthode* of Descartes and the *Kitāb al-S͟hifāʾ* of Ibn Sīnā.

Bibliography: Riḍā-Ḳulī K͟hān, *Mad͟jmaʿ al-fuṣaḥāʾ*, ii, 383, 394-6; *Dīwān-i D͟hakāʾ al-Mulk Mīrzā Muḥammad Ḥusayn K͟hān mutak͟halliṣ bi-Furūg͟hī*, Tehrān 1325. (SAID NAFICY)

FURŪSIYYA, (A.), the whole field of equestrian knowledge, both theoretical and practical, including the principles of hippology (*k͟halḳ al-k͟hayl*), the care of horses and farriery (*bayṭara*), and *siyāsat al-k͟hayl*, a more exact rendering of the concept of "equitation" in European languages, which can be defined as the art of training and using correctly a saddle-horse. The words *farāsa* and *furūsa*, more rarely used, embrace the same group of ideas. If we consult the indexes of the classical catalogues, such as the *Fihrist* of Ibn al-Nadīm or the exhaustive bibliographies on this subject compiled in the 19th century by Hammer-Purgstall, we gain the quite erroneous impression that a great number of works still exist from which a detailed study of riding could be made. However, this excess of material must not deceive us, and a critical study of these works reveals little material of any use. The Arabic sources can be divided according to the following principle of classification: works of lexicography and *adab*, and treatises on *furūsiyya*.

The lexicographical works do not present any great interest for those who wish to study riding under the Arabs, since they are the work of philologists, not horsemen. The earliest, the *Kitāb al-K͟hayl* of al-Aṣmaʿī (ed. Haffner, Vienna 1875), has been widely used and drawn upon by later authors; we may also mention His͟hām al-Kalbī and Ibn al-Aʿrābī, whose works have been partly edited by G. Levi Della Vida (Leiden 1928) and Abū ʿUbayda, said to be the author of three works entitled *Kitāb al-Sard͟j*, *K. al-K͟hayl* and *K. al-Lid͟jām*, mentioned in the *Fihrist*, the only parts of which to have survived are certain fragments incorporated by al-Dimyāṭī in his *K. Faḍl al-k͟hayl*. The *Kitāb al-Ḥayawān* of al-D͟jāḥiẓ quotes from works no longer extant. It is mainly in texts not dealing specifically with horses, like the *Risāla fī manāḳib al-Atrāk* of al-D͟jāḥiẓ, that valuable information about riding is to be found.

Treatises on *furūsiyya* appeared at a late stage in Arabic literature. The writers of these treatises were horsemen, veterinary surgeons or riders who in their writings rehashed or quoted passages wholly or in part from works of lexicography, as proof of their

erudition. Very fortunately, they also added some pages on riding, in which they describe various methods of schooling or the principles to be inculcated in the young rider.

It is essential to make a fundamental distinction between two types of riding which co-existed in the Muslim world, that practised by the Arabs in the desert, and, at a later stage, high school riding. With regard to the former, we possess few documents which allow us to build up a detailed picture of it. It occurred in two basic forms, for war and for racing. The tribal warriors, basing their riding on the tactics of *al-karr wa 'l-farr* (attack and flight), practised it in small bands of combatants (*katība*) using the sabre and lance in preference to the bow, their handling of the latter being decidedly clumsy in the eyes of al-Djāḥiẓ, according to whom "the Khāridjī when fighting at close quarters relies solely on his lance. Neither the Khāridjīs nor the Bedouins are renowned for their skill as archers when mounted". The problem of harness is also difficult to solve for this period. The poems do not help us to decide what sort of saddle was used by the tribal horsemen.

The question of the bit also arises. From the accounts of 19th century travellers we know that the curb bit was very seldom used by Arab horsemen in the East, their preference being for the bozal (*rasan*). We may question whether the word *lidjām*, in passages of ancient poetry, in fact represents the curb bit. Perhaps bits were used for horses only at the time of an action, to make it possible to perform sudden halts and swift half-turns. We possess fuller documentation on the subject of horse-racing (*sabḳ, sibāḳ*). Though with certain discrepancies in points of detail, writers have described the conditions of training (*taḍmīr, iḍmār*). This lasted from 40 to 60 days and had the effect of bringing the horses into good condition by a suitable system of feeding, while excessive weight was sweated off under blankets. Horses thinned down in this way were called *ḥināḍ*, and the sweat they lost *sirāḥ*. In pre-Islamic Arabia, races covering very great distances and over varied terrain were organized between the horses of the different tribes; they were often the source of long and bloody wars [see FARAS], although even at that time they were governed by rules. The field (*ḥalba*) consisted of 10 horses; seven tokens were placed on lances, in an enclosure into which the first eight horses of the field made their way; seven received a prize proportionate with their placing, and only the eighth received no prize, its admission being purely a matter of honour. Each horse was given a name, according to the order of finishing, but the list of these names varies in the different authors. According to al-Masʿūdī, they were: 1st - *sābiḳ*, 2nd - *mutabarriz*, 3rd - *mudjallī*, 4th - *muṣallī*, 5th - *musallī*, 6th - *tālī*, 7th - *murtāḥ*; al-Thaʿālibī, following al-Djāḥiẓ, gives a slightly different list, in which the 3rd is called *muḳaffī* and the 5th *ʿāṭif*; the 9th and 10th have the same names in the two traditions, *laṭīm* (knocked out of the enclosure by a blow) and *sukkayt* (silenced by shame at finishing last).

The Prophet did not forbid racing, which fostered rivalry between breeders and encouraged the preservation and increase of the stock of horses so much reduced by the wars. During his lifetime he made regulations for them, and by his advice tried to establish what were for the most part open competitions by making the size of the field uniform and fixing the distance to be covered according to the age of the horses taking part. The traditionists relate that he organized races at Medina, from Ḥafya to Thaniyyat al-Wadāʿ (60 *ghalwa*) for mature horses and from Thaniyyat al-Wadāʿ to Banū Zurayḳ (10 *ghalwa*) for young horses. He himself presented substantial prizes for these competitions and entered his own horses. A ruling on the subject of betting (*rihān*) had been made earlier by the *ḥukamāʾ* of the large tribes. As Islam forbade the *maysir*, the ancient custom was slightly modified to include the entry, among the other runners, of a horse called *muḥallil* or *dākhil*, whose owner made no wager and gained the whole amount staked by all the other entrants if his horse won.

The wars of conquest waged by the Arabs under the first caliphs brought them into contact with foreign equestrian traditions and led them to organize new tactics for warfare on horseback. Three foreign traditions contributed, Iranian, Turkish and Greek. The arabized names of the Iranian or Turkish riders referred to by the writers of treatises on riding are an indication of the part placed by foreigners in the elaboration of the new equestrian art. This influence made itself felt at a very early period; even in the 1st/7th century the *fatā* Ḳanbar, a freedman of ʿAlī, had, according to the traditionists, tamed an unridable horse belonging to that caliph (see *TA*, iii, 507). To make a chronological study would be of little interest; indeed, in riding, two series of factors alone can determine any radical evolution—the type of horse used, and the use of new arms. The first of these factors cannot enter into it, even though the Arab stock was very largely interbred with the stock owned by the conquered peoples [see FARAS]; the resulting progeny was still of the eastern type. The second of these factors, which is closely concerned with the art of war, had a decisive influence on the Islamic equestrian art which sprang up in the 2nd/8th century, and whose apogee can be placed in the 6th/12th and 7th/13th centuries in Spain and Egypt.

Principles of schooling.—Treatises on the first steps of dressage for the young colt, started at about the age of three, might bear the signature of modern riders, but the principles of the more elaborate schooling are somewhat obscure. The terminology is often Turkish or Iranian: the term *maydān* must represent the "track" and the *nāward ḳazan* the circular show-ring where the horse is made supple (*istikhradj al-khayl fi 'l-nāward*). The expression *tartīb al-maydān* can no doubt be interpreted in the sense of organized movements of groups of horsemen; they doubtless served the same purpose as our show-ring movements. The riders also alluded to the balance between front-quarters and hind-quarters (*taʿdīl*) and to the flexibility of the jaw (*ʿalk al-lidjām, lawk al-lidjām*). The advice given to aspiring riders is very simple: the secret of riding rests in the firmness of the seat (*thabāt*) and the evenness of the reins (*taswiyat al-ʿinān*). This firmness is acquired by riding bare-back (*ʿala 'l-ʿārī*), the rider being held in position by the grip of his thighs. As soon as he has some measure of experience, the young rider uses a saddle and fork seat. It will be seen how different such methods of riding are from that practised today in North Africa and Andalusia under the name *a la jinete*. This style is difficult to date and no doubt corresponds to the appearance of the cross-bow and gun. Writers have drawn up long lists of vices both natural and acquired, from which we can give a typical list: *ḥarūn*, a horse that refuses to walk forward; *rawwāgh*, a horse that shies; *djamūḥ*, that checks its head to escape from control by the hands; *munāziʿ*, that takes the bit in its teeth and jerks the hands; *ramūḥ*, a horse that kicks; *khabūṭ*, that

stamps its fore-feet; *shabūb*, that rears; *shamūs*, difficult to mount; *ḳalūḳ*, a horse of uncertain temper; *nafūr*, that swerves and shies; finally, the *ṭamūḥ* is regarded as impossible to ride. In this list the writers have classed faults in carriage of the head and withers; the horse with bad head carriage is called *munakkis*. The remedies suggested for dealing with these defects are often brutal and sometimes fantastic.

Harness.—The treatises define with considerable precision the nomenclature of the harness (*lidjām*) which includes the reins (*ʿinān*), the cheek straps (*idhār*) and the browband (*ʿiṣāb*). Three types of bits were used—the *īwān*, a light bit, the *fakk* a snaffle bit (?) and the *nāzikī*, which must be the equivalent of the modern bit used by the Spahis. The bit is composed of branches (*shākima*), mouthpiece and port (*faʾs*) and curb-chain (*ḥakma*); in other cases, this term also denotes the bozal or martingale. The saddle used, the so-called saddle of Khʷārizm, was flat and wide, the pommel (*ḳarbūs*) and cantle (*muʾakhkhara*) being only slightly raised. It rested on a pad (*mirshaḥa*), held in position by one or two girths (*ḥizām*) and a breast-strap (*labab*). The horse was provided with collars (*ḳilāda*) and cloths (*kabūsh* and *shalīl*, the terms *tashāhir* and *djulla* being confined to stable-cloths). The war-horse wore *barāsim* (carapaces) and *barāḳiʿ* (helmets).

Throughout the whole of this period (6th-7th/12th-13th centuries) equestrian sports were regularly practised. Horsemen took part in *djerīd* [*q.v.*] or *burdjās*, a chivalrous duel with lances, in polo [see ČAWGĀN], venery (*ṭard*) and hunting by means of a closed drive (*ḥalḳa*), a favourite sport of the Mamlūks. All these sports provided men and horses alike with excellent training for the *djihād*. Various works, with abundant illustrations, deal with the technique of fighting with the sabre and lance, giving detailed descriptions of lunges and parries (*al-bunūd wa 'l-tabṭīl*); they also describe training in archery with a small target (*kabaḳ*) or with the long bow (*nidāl*). All these activities were abandoned in turn, and in the modern Muslim world where racing is governed by western rules, only the "fantasia" (*laʿb al-bārūd, laʿb al-khayl*) remains as a last vestige of the equestrian displays of bygone ages.

Bibliography: see FARAS. (G. DOUILLET)

IN THE MAMLŪK STATE

Mamlūk historical sources contain exceptionally ample data on *furūsiyya* exercises. By far the most important of these sources is Abu 'l-Maḥāsin Yūsuf b. Taghrībirdī [*q.v.*], who was the son of a high-ranking Mamlūk *amīr* and had close links with some of the great *furūsiyya* masters of his time. It should, however, be stressed that full use of the data furnished by the historical sources will only be possible after a very much more extensive study of Muslim military technical literature.

According to Ibn Taghrībirdī, "*Furūsiyya* is something different from bravery and intrepidity (*al-shadjāʿa wa 'l-iḳdām*), for the brave man overthrows his adversary by sheer courage, while the horseman (*fāris al-khayl*) is one who handles his horse well in the charge (*karr*) and the retreat (*farr*), and who knows all that he needs to know about his horse and his weapons and about how to handle them in accordance with the rules known and established among the masters of this art" (*Nudjūm*, ed. Popper, vi, 445). This is undoubtedly an excellent definition of the strict technical meaning of the term *furūsiyya*. In everyday use, however, the distinction between *furūsiyya* and *shadjāʿa* (or *iḳdām*) had become blurred, and Mamlūk historians confuse them frequently. Sometimes, though very rarely, *furūsiyya* was even used in the meaning of 'high moral character' or 'chivalry'.

In most cases the term *furūsiyya* does not appear independently, but in conjunction with another word. The most common combinations are *funūn al-furūsiyya* and *anwāʿ al-furūsiyya*, *i.e.*, the 'branches' or 'kinds' or 'arts' of the military exercises. Sometimes the word *funūn* appears alone in the sense of *funūn al-furūsiyya*. The expression *funūn al-Atrāk* in the same sense is rather rare. The expression *fann al-furūsiyya* (in the singular) is not very common. The term *ʿilm* ('science') *al-furūsiyya* is rare in Mamlūk historical sources, but frequently found in some of the technical military treatises. The combination *anwāʿ al-malāʿīb* or *anwāʿ al-malāʿib* (the 'branches of games') in the meaning of *anwāʿ al-furūsiyya* is quite common. Mastery of the *furūsiyya* exercises constituted a prerequisite for the Mamlūk horseman. These exercises (or high proficiency in them) were sometimes called *kamālāt* ('perfections', 'accomplishments') or *faḍāʾil* ('excellent qualities' or 'virtues').

In any study of the *furūsiyya* training, special attention must be paid to the condition of the 'hippodromes' (*mayādīn*, sing. *maydān*). No intensive cavalry training is possible for any length of time in dilapidated hippodromes. Their number and state of repair are, therefore, useful indications of the level of training reached. During the Baḥrī period (648/1250-784/1382) there was a considerable number of hippodromes in Cairo and its immediate vicinity, where *furūsiyya* exercises were carried out systematically and intensively, especially under Sultan Baybars (658/1260-676/1277) and to a lesser degree under Sultans Ḳalāūn (678/1279-689/1290) and al-Nāṣir Muḥammad (693/1293-741/1340, with interruptions). After al-Nāṣir Muḥammad's death the disintegration of the Ḳalāūnid dynasty set in; and it seems that the accompanying disturbances also had an adverse effect on Mamlūk training. Sultan al-Ashraf Shaʿbān (764/1363-778/1376) attempted to arrest the deterioration of *furūsiyya* training, but in vain. The decline continued at an accelerated pace during the Circassian period (784/1382-923/1517), with a short interruption during the reign of Sultan Ḳanṣūh al-Ghawrī (905/1500-922/1516).

The standard of the *furūsiyya* training is clearly reflected in the state of the hippodromes. In the Baḥrī period there were the following hippodromes, most of which did not remain in use throughout that period: a) al-Maydān al-Ṣāliḥī, built in 641/1243 by Sultan al-Ṣāliḥ Nadjm al-Dīn Ayyūb, the founder of the Baḥriyya regiment; b) al-Maydān al-Ẓāhirī, built by Sultan Baybars; c) Maydān al-Ḳabaḳ, built by the same sultan in 665/1267; d) Maydān Birkat al-Fīl built by Sultan al-ʿĀdil Kitbughā (694/1294-696/1296); e) al-Maydān al-Nāṣirī or al-Maydān al-Kabīr al-Nāṣirī, built by Sultan al-Nāṣir Muḥammad in 712/1312-3; f) Maydān Siryāḳus, built by the same sultan in 724-5/1323-5; g) Maydān al-Mahāri, built by the same sultan in 720/1320.

From the end of the reign of al-Nāṣir Muḥammad and up to that of Ḳanṣūh al-Ghawrī no sultan is reported to have built a hippodrome. The remaining Baḥrī hippodromes were abandoned in the first years of Circassian rule. Towards the middle of the 9th/15th century, exercises were performed on a limited scale in the Royal Courtyard (al-Ḥawsh al-Sulṭānī) in the Citadel. The performance of such

exercises near Birkat al-Ḥaba*sh* is also mentioned in the sources from time to time, but no source refers to the existence of a hippodrome there.

Ḳanṣūh al-*Gh*awrī was the only Circassian sultan who constructed (in 909/1503) a hippodrome in Egypt. But his attempt to revive *furūsiyya* training came too late, for the decline of traditional military training in the Mamlūk Sultanate coincided with the slow but steady rise of fire-arms, which revolutionized the whole art of war and, necessarily, of training for it (for a discussion of this aspect of *furūsiyya* see my *Gunpowder and firearms in the Mamluk Kingdom*, London 1956, 46-140, and art. BĀRŪD above).

Furūsiyya included the following 'branches': a) the lance game (*laʿb al-rumḥ, thaḳafat al-rumḥ, thaḳāfa* or *thiḳāf*); b) the polo game (*laʿb al-kura, al-ḍarb bi 'l-kura, laʿb al-ṣawladjān*); c) the *ḳabaḳ* (or 'gourd' game); d) archery (*ramy al-nushshāb, al-ramy bi 'l-nushshāb*); e) fencing (*al-ḍarb bi 'l-sayf* or *ḍarb al-sayf*); f) the *birdjās* game (*sawḳ al-birdjās*); g) the mace game (*fann al-dabbūs*); h) wrestling (*ṣirāʿ*); i) the games accompanying the *maḥmil* procession (*sawḳ al-maḥmil*); j) hunting (*ṣayd*); k) shooting with the crossbow (*al-ramy bi 'l-bunduḳ*); l) horse racing (*sibāḳ al-khayl*).

The information furnished by the sources on the first three 'branches', as well as on the games accompanying the *maḥmil* procession, is considerably richer than that supplied on the other 'branches'. The mace game is mentioned rarely in the sources. Fencing is mentioned quite frequently in the enumeration of *funūn al-furūsiyya*, but is rarely referred to independently. The *birdjās* game is often mentioned; but without any details. Though the sources frequently speak of the games of archery, they furnish no details regarding them. This is particularly disappointing, seeing that the bow was the main weapon of the Mamlūks and was far more important in battle than the lance. The game of chess (*shitrandj*) was very popular among the Mamlūks. Though it cannot be included among the *furūsiyya* games in the strict sense of the word, the mastery of chess was considered an accomplishment deserving of mention side by side with the Mamlūk's accomplishments in the field of *furūsiyya*.

The *furūsiyya* master (or expert or instructor) was called *muʿallim*. If he was an expert in the handling of the lance, he was called *muʿallim al-rumḥ* (or *rammāḥ*). If he was an expert in the handling of the bow and arrows he was called *muʿallim al-nushshāb*, and so on. The name *ustādh* in the same sense is also mentioned from time to time in the Mamlūk sources, but it is much more frequent in technical military literature. We know the names of a considerable number of such masters, especially from the Circassian period.

Bibliography: D. Ayalon, *Notes on the Furūsiyya exercises and games in the Mamluk Sultanate*, in *Scripta Hierosolymitana*, ix (*Studies in Islamic History and Civilization*), Jerusalem 1961, 31-62 (see the literature cited there).

(D. AYALON)

FUSAYFISĀʾ mosaic. The fact that the Arabic word for the mosaic itself is ultimately derived from the Greek ψῆφος, perhaps through Aramaic פסיפס, and the word *faṣṣ*, used for the little coloured cubes which are arranged according to a pre-designed cartoon, derives from the Greek πεσσός, leads us to consider this form of architectural decoration as a borrowing by Muslim art from Byzantine art. This borrowing is undeniable and we shall examine it later. All the same, apart from this importation from abroad, Muslim art of the early centuries seems to have included a form of mosaic which was rather different from any whose technique could have been learned from Constantinople and which the Islamic peoples must have found still flourishing in the countries which they conquered. The Byzantine mosaic is characterized by the use made in it of cubes of glass, called *smalts*, and by its use to cover walls, arches and domes. The pavement mosaic which derives from the Roman tradition is quite different, being composed almost exclusively of cubes of stone of various colours, mostly cut from pieces of marble. Being limited to these mineral components, the colouring of these pavements is usually confined to a few warm tones: creamy white, black, red, bistre and grey-green; the cartoons are often composed of large areas of geometrical motifs, chequered designs and polygonal figures, interlaced plant forms, and plaits, which, in state rooms, frame a central picture (*emblema*).

This type of decoration, appearing first in the Greek lands of the Near East, spread across the Mediterranean world with the Roman conquest. Not only in Italy, but in Syria and in North Africa and southern Gaul it enjoyed great popularity. The triumph of Christianity extended its domain and increased the uses to which it was put. The mosaics which had covered the floors of villas and baths now, in a rougher style and with a less elaborate technique, adorned the apses and naves of churches. Pagan forms now represented Christian symbols. Nevertheless, these survivals from antiquity became suspect to the strict: fear of profanation caused these pictures to be banished from the chancels, while long inscriptions and geometrical patterns, often of improverished invention, covered vast areas. Paving mosaic underwent a great decadence, yet it did not disappear completely from Christian buildings: in the form of ornamented pavements it is still found in basilicas of the 8th and 9th centuries A.D.

Fairly recent discoveries allow us to state that at about the same period, and even later, Islam preserved the taste for mosaics and the technique for making them.

North of Jericho, excavation has revealed the ruins of an Umayyad palace, called *Khirbat al-Mafdjar* [*q.v.*]. To this princely residence is attached a magnificent bath. A vast columned hall, 30 metres long, with a central dome and with walls containing scooped-out apses, has a pavement consisting of thirty-eight mosaic panels, all different. The geometrical decoration consists of rectilinear and curvilinear interlacing patterns, chevrons and imbrications, splendidly executed and with a harmonious colouring produced solely by cubes of stone. In one corner of this monumental *frigidarium* is a small apsidal hall whose floor is adorned with a particularly elaborate decoration. A leafy tree rears itself along the axis, separating two groups of animals very realistically drawn: on one side two gazelles, on the other a third gazelle attacked by a lion. The very recent excavations of Khirbat al-Miniya [*q.v.*], another Umayyad building, have revealed halls and courtyards paved with mosaic. The exclusively geometrical ornament consists of strapwork, lattice work, Greek key patterns and other related themes.

Although less well represented in the West, the tradition inherited from pagan and Christian mosaic-artists is attested by remains found in eastern Barbary. Five miles from al-Ḳayrawān there has been identified the site of al-Raḳḳāda which was,

at the end of the 3rd/9th and the beginning of the 4th/10th centuries, the seat of the Aghlabid *amīrs*, vassals of the Baghdād caliph. Cubes of mosaic are found there, either at ground level or buried in the masonry. Beside an enormous pool there had been erected palaces, of which very little remains. All the same, some rooms paved with mosaic are still to be found. The very simple decoration, of black on a white background, consisted of scatterings of geometrical figures, square, lozenge-shaped and hexagonal, and of compartments adorned with knots and of spirals arranged in crosses. These pavements of Ifrīḳiya, executed in about 290/900 and so similar to Christian mosaics, betray themselves as being the work of local craftsmen who put at the disposal of Arab *amīrs* a technique and a style of decoration which had been entirely inherited from their Romanized Berber ancestors.

Some forty years later was executed a mosaic revealed by the excavations of Mr. Sliman Zbiss at Mahdiyya (in Tunisia), among the ruins of the palace of the Fāṭimid caliph al-Ḳāʾim (322/934-334/946). This fine pavement covered the floor of a room of state 13 yards long and 4 yards wide. It consisted of a central panel adorned with quatrefoils interlaced like the rings of a coat of mail and a wide border containing pelta-ornaments, quatrefoil squares and circles. The colours represented are black and white, with ochre and bistre. Neither the colours nor the polygonal shapes are foreign to what is attested in Roman work. Yet the theme of interlacing patterns gives the decorative scheme an oriental character (for interlacing polygonals are hardly ever found in Roman pavements); the compact plant themes enclosed by these polygons belong still more obviously to the flora of ʿAbbāsid ʿIrāḳ or Ṭūlūnid Egypt. The craftsmen working at Mahdiyya would seem to have been using cartoons imported from the East; just as the contemporary architecture of Ifrīḳiya bears the stamp of the same foreign influences.

This pavement mosaic, whose survival in the first centuries of Islam is attested only by excavation, is to be distinguished from mural mosaic, of which East and West alike have preserved magnificent examples. In the East, they are to be found at the Ḳubbat al-Ṣakhra [*q.v.*] in Jerusalem, built in 72/691 by ʿAbd al-Malik, and at the Great Mosque of Damascus, built in 86/705 by al-Walīd; in the West, at the Great Mosque of Cordova, in the superb *ḳibla* of the caliph al-Ḥakam I [*q.v.*], of 350/961. As is evident, these are the three most important religious buildings of the Umayyads owing their adornment to mosaics. The interior of the Ḳubbat al-Ṣakhra is largely covered with mosaic, which adorns the peripheral arcades, the drum surmounting them, and the dome. As for the Great Mosque of Damascus, only fragments survive of the pictures representing a great gilded vine and whole towns, the most striking of them adorning some surfaces of the arcade surrounding the courtyard. As for the Great Mosque of Cordova, in it are preserved, more or less worked over, the frame of the *miḥrāb* and of the doors flanking it, and also the dome in front of the *miḥrāb*. These three examples, from East and West, have many features in common, but are distinguished one from another by more than one characteristic. The materials used show clearly their interrelation. White and black cubes of marble and red or pink stones are to be found, as in the mosaic pavements; but much more numerous (85% at Damascus) are the cubes of glass paste coloured throughout, and particularly such cubes consisting of a brown base of glass paste upon which is applied gold leaf, which in turn is covered with a protecting layer of glass. It is the use of gold which creates the richness and the harmony of the Byzantine mosaic. The varied positions of the cubes, stuck in either vertically or slightly inclined towards the spectator, diversify the tones and, in particular, relieve the monotony of the areas of gold and bring life to these shining surfaces.

The subjects of the decorations vary from one monument to another. That of the Ḳubbat al-Ṣakhra is the richest, and in it floral designs predominate. The most frequent theme is that of acanthus leaves or vine leaves with grapes, the main stem emerging from a cluster of leaves, a bowl or a cornucopia. Narrow panels are provided with vertical supports reminiscent of the antique candelabras on which are placed trays, foliage or fruit. The plant themes, arranged in bands placed side by side, alternate with motifs of jewellery, ribbons, bandeaus, and pendants inspired by necklaces and diadems; plaques cut from mother-of-pearl add their lustre to these themes of adornment. This ornamentation derives almost entirely from Hellenistic tradition; the jewellery motifs seem to be inspired by the imperial decoration of Byzantium; some palm-branches in the form of wings and some flowers derived from the lotus are probable borrowings from the Sāsānid flora and were familiar also to Syrian sculpture of the same period.

Quite different are the very beautiful mosaics of the Great Mosque of Damascus, at any rate those which the removal of the layer of plaster has revealed in the courtyard. They contain large green trees rising up among groups of buildings: fortresses whose walls border on the terraces alternate with balconied houses with pitched roofs and wide cornices, pavilions with colonnades and conical roofs, and exedras; lower down, more modest houses overlook the shore lapped by lively waves. The Pompeian character of the architecture has been remarked. The waters which form the foreground of the decoration have been thought to be the Barada, the river which flows through the oasis of Damascus. This realistic interpretation, which associates a familiar and not very highly esteemed landscape with the adornment of a great mosque, does not seem compatible with Muslim aesthetic. Perhaps we should rather consider this decoration of the courtyard as the complement of the geographical pictures which spread across the walls of the prayer hall, and identify the tumultuous waters on the shore with those of the surrounding Ocean (*al-baḥr al-muḥīṭ*) which, according to the Arab geographers, encircles all the inhabited lands of the world.

According to the traditions which Ibn Idhārī has transmitted and which we shall examine, the Umayyad caliph al-Ḥakam II, following the example set by his ancestor al-Walīd, the builder of the mosque of Damascus, obtained from the emperor of Constantinople the despatch of a mosaicist and the necessary materials to decorate the Great Mosque of Cordova, which he was providing with a new *ḳibla*. In fact the mosaics of the *miḥrāb* of Cordova and the parts which frame it or lead to it scarcely recall the picturesque decoration of Damascus. This is not surprising, for two and a half centuries separate the Syrian from the Andalusian work. The latter presents a simplified and schematic flora with its central stems rigid or slightly curving, regularly bent into foliated scroll-patterns or doubled and forming wide symmetrical interlacings. These stems bear palm leaves with two or three incurved fronds, flowers, or

bunches of grapes, each separate. The inscriptions play an important part here and their Kūfic script is sober and elegant. One seeks in vain Christian mosaics of the same period analagous to these Muslim mosaics; on the contrary, analysis reveals the relation between this flat and coloured decoration and the sculptured decoration which surrounds it. We find the same floral themes portrayed by the two techniques, sculpture and mosaic, but both belong to the same Islamic art.

Nevertheless the historical conditions make it probable that mosaics were sent from Byzantium to Cordova. Relations between the two powers, interrupted for over a century, had been resumed since 346/958, and at the end of the reign of ʿAbd al-Raḥmān III they were active and cordial. The sending of gifts—notably of Byzantine mosaics—served for the embellishment of the Madīnat al-Zahrāʾ. The continuation of these relations between al-Ḥakam II and Nicephorus Phocas is therefore not surprising and we have no difficulty in accepting the tradition, albeit three hundred years old, related by Ibn ʿId͟hārī (*Bayān*, ii, 253, tr. ii, 392). At the request of al-Ḥakam, a mosaicist came from Constantinople with 320 quintals of mosaic cubes. The caliph assigned to him a certain number of slaves (some of whom had already begun to learn the craft at Madīnat al-Zahrāʾ). They worked under the direction of the Greek and were not long in surpassing their master in skill. When the latter left Cordova, where he had been lodged magnificently, he received from the caliph gifts and robes of honour; his pupils continued the work alone and completed it. The story seems to be historically possible.

However, we have seen that (according to Ibn ʿId͟hārī) al-Ḥakam, in requesting the Byzantine emperor to send a mosaicist, was following the example of al-Walīd, the founder of the Damascus mosque. Now it seems that this is a legend which was unknown to the earliest sources and which does not appear until the 6th/12th century. According to Ibn ʿAsākir (d. 571/1176) al-Walīd accompanied his request with the threat to overrun the territory of Byzantium and destroy the churches on his own lands if the Basileus refused; and the Basileus complied. The attribution of such an attitude to the two rulers is doubtful. But although the story cannot be applied to the Damascus mosque it may be possible to associate it with the mosque of Medina. According to al-Yaʿḳūbī, al-Wāḳidī and al-Ṭabarī, for the re-building of this mosque, a request for a mosaicist was made to the emperor of Byzantium and was granted. This is nevertheless rather surprising. Al-Balād͟hurī (d. 279/892), speaking of the work on the mosque of Medina, gives a more likely report. Al-Walīd, he says, wishing to embellish the Mosque of the Prophet, obtained the collaboration of mosaicists and other craftsmen of Rūm recruited in Syria and in Egypt. This supposes the existence in these countries of ateliers or individual artists, presumably of Greek origin, continuing in the 2nd/8th century the technique of Byzantine mosaic. The tradition of this fine craft, which had formed the glory of Antioch, could have survived in Syria from Christian times, which saw the building of the Church of the Ascension in Jerusalem, the Basilica of the Nativity in Bethlehem and the churches of Edessa and of Lydda. It seems very possible that for the first religious foundations of Islam local mosaicists as well as builders were recruited, and probably they were still available during the following centuries to complete and restore the decorations of the sanctuaries of Syria. In Jerusalem there are the mosaics of the Fāṭimid al-Ẓāhir (411-27/1021-36), of the Ayyūbid Ṣalāḥ al-Dīn (570-89/1174-93), and of the Mamlūk Tanḳiz (729/1329), and at Damascus those of Baybars. The date of the mosaics of the Kaʿba of Mecca described by Ibn D͟jubayr is not known.

In Egypt, which, as we have seen, had possessed, like Syria, artists from 'Rūm', who practised the art of Byzantine mosaic, only a few and late examples of this work remain. In Cairo, the tomb of S͟had͟jar al-Durr (648/1250) retains a *miḥrāb* the lower part of which is decorated with cubes of blue, green, red and gilded glass with the addition of mother-of pearl. Of the same type are the decoration of the *miḥrāb* which the sultan Lād͟jīn gave to the mosque of Ibn Ṭūlūn in 696/1296, and the *miḥrāb*s of the *madrasa*s of Ṭaybars (709/1309) and of Aḳbug͟hā (740/1339), dependencies of the Al-Azhar mosque.

(G. Marçais)

AL-**FUSṬĀṬ**, the first city to be founded in Egypt by the Muslim conquerors and the first place of residence of the Arab governors. It was built on the east bank of the Nile, alongside the Greco-Coptic township of Babylon or Bābalyūn [*q.v.*], traces of which are still preserved in the ramparts of the Ḳaṣr al-S͟hamʿ. A bridge of boats, interrupted by the island of al-Rawḍa [*q.v.*], linked the Ḳaṣr with the city of Giza (al-D͟jīza) on the other bank of the Nile. Al-Fusṭāṭ was partly built beside the river, which at that time followed a more easterly course, and partly on high desert ground, shaped in the form of a saddle and extending for more than four km. from north to south. The hills to the south of S͟haraf were called al-Raṣad after 513/1119; those to the north were called D͟jabal Yas͟hkur. It was not far from D͟jabal Yas͟hkur that the K͟halīd͟j started, the Pharaohs' canal connecting the Nile with the Red Sea, which was restored on the orders of ʿAmr b. al-ʿĀṣ.

In former times the name al-Fusṭāṭ was written in various ways, enumerated by the Arab authors, which betray uncertainty as to the true origin of the word. One of the meanings suggested is that of "tent"; for the town was founded on the spot where ʿAmr b. al-ʿĀṣ had pitched his tent (*fusṭāṭ*) during the siege of Babylon. It seems likely that this name was merely the arabization of the word

Φοσσάτον, camp, encampment, used by the bilingual papyri to denote the town. The chroniclers also use the expression Fusṭāṭ-Miṣr or even simply Miṣr, colloquially pronounced Maṣr. The quarter of modern Cairo, which contains the remains of al-Fusṭāṭ and Babylon, is called Maṣr al-ʿAtīḳa, Old Cairo.

When ʿAmr b. al-ʿĀṣ returned from the first siege of Alexandria, probably early in 22/643, he established the foundations of a permanent encampment at al-Fusṭāṭ which was gradually transformed into a town. The proximity of Babylon made it easy for the Arabs to employ and control Coptic officials. Later came the distribution of the land and the building of the mosque (Dj̲āmiʿ ʿAmr or al-Dj̲āmiʿ al-ʿAtīḳ). This mosque, the first to be built in Egypt, originally measured 50 by 30 cubits. It is possible that it had a *minbar* from the start; but the *miḥrāb*, in the form of a niche, seems to have been built only in 92/711. Reconstructed and enlarged several times, it attained its present dimensions in 212/827. It served simultaneously as a place of prayer, council chamber, court room, post (office) and as lodgings for travellers. It was there that the main grants of leases of land were made. Not far away was ʿAmr's house and the army stores. There was also a *muṣallā*, an immense place of prayer in the open air, where, on the *ʿīd al-Fiṭr* 43/January 664, prayers were offered over the body of ʿAmr b. al-ʿĀṣ, who had died the previous night. Each tribe was allotted a certain fixed zone (*k̲h̲iṭṭa* which, in Fusṭāṭ, is the equivalent of the *ḥāra* in Cairo, that is to say quarter or ward). Certain *k̲h̲iṭaṭ* included inhabitants belonging to different tribes, for example, the *k̲h̲iṭṭat ahl al-rāya* surrounding ʿAmr's mosque, the *k̲h̲iṭaṭ al-Lafīf* just to the north of it, and the *k̲h̲iṭaṭ ahl al-Ẓāhir*, the last-named being reserved for new arrivals who had been unable to settle with their own respective tribes (cf. Guest, in *JRAS*, 1907, 63 f.). Each *k̲h̲iṭṭa* had its own mosque. In 53/673, for the first time, minarets were built for ʿAmr's mosque and for those in the *k̲h̲iṭaṭ*, with two exceptions. The Arab army of conquest included a very large proportion of Yamanīs. Christians and Jews from Syria with political affiliations with the Muslims had accompanied the invading armies; they were settled in three different quarters near the river, named respectively, going north from ʿAmr's mosque, *al-Ḥamrāʾ al-dunyā*, *al-Ḥamrāʾ al-wusṭā*, and *al-Ḥamrāʾ al-ḳuṣwā*. Other *d̲h̲immī*s settled with them.

The original encampment was gradually transformed. The different quarters were separated by open spaces. Whole zones, particularly to the north in the desert, were then abandoned, only to be reoccupied later. Permanent structures multiplied. The treasury, *bayt al-māl*, was built (Becker, *Beiträge zur Geschichte Ägyptens*, ii, 162). Al-Fusṭāṭ was not fortified and, in 64-5/684, the K̲h̲āridjīs of Egypt who had seized power had a ditch built on the east side to defend the town against the caliph Marwān and his forces. The governor ʿAbd al-ʿAzīz b. Marwān, who founded or developed Ḥulwān, where he had taken refuge from the plague (70/689-90), also built houses, covered markets and baths in Fusṭāṭ. The Copts imperceptibly became intermingled with the conquerors. Coptic was spoken in Fusṭāṭ in the 2nd/8th century. Some churches also were built, and are occasionally mentioned by the chroniclers. Warehouses were set up along the Nile for water-borne merchandise. When the last Umayyad caliph Marwān II, in flight before the ʿAbbāsids, went through Fusṭāṭ (132/750) he caused the stores of grain, cotton, chopped straw and barley, and indeed the whole town, to be set on fire, according to Severus of As̲h̲munayn (*Patr. Orient.*, v, 168). Further east, between Fusṭāṭ and the cliffs of Muḳaṭṭam was the cemetery of al-Ḳarāfa [*q.v.*]. The ʿAbbāsid governors did not reside in the centre of Fusṭāṭ; they chose instead the old *al-Ḥamrāʾ al-ḳuṣwā*, in the open spaces of the original encampment, to found the suburb of al-ʿAskar. Al-Maḳrīzī explains in this connexion that the actual town of Fusṭāṭ was divided into two districts—the *ʿamal fūḳ* or upper district with its western section (the high ground in the south as far as the Nile) and eastern section (the rest of the desert as far as al-ʿAskar), and the *ʿamal asfal* or lower district, including the remainder. The ʿAbbāsids tried a new and short-lived settlement on the Dj̲abal Yas̲h̲kur, as a refuge from an epidemic, in 133/751. Later they settled at al-ʿAskar where a "Palace of the Amirate" (*dār al-Imāra*) was built and then in 169/785-6, just beside it, a large mosque (*dj̲āmiʿ al-ʿAskar*, also called *dj̲āmiʿ Sāḥil al-G̲h̲alla*). All around there grew up a real town, with shops, markets and fine houses. Nothing now remains of it.

In the 3rd/9th century Aḥmad b. Ṭūlūn also created his own capital called al-Ḳaṭāʾiʿ, between the north-east tip of the Dj̲abal Yas̲h̲kur (where he had a large and striking mosque built) and the *mas̲h̲had* of Sayyida Nafīsa and the future Rumayla square. The mosque (*dj̲āmiʿ Ibn Ṭūlūn*), the oldest in Greater Cairo still existing in its original form, was completed in 265/879. The architect, a Christian and probably of Mesopotamian origin, took his inspiration from the buildings of Sāmarrā. He had previously built an aqueduct, the ruins of which still stand to the north-west of Basātīn, leading towards ʿAyn al-Ṣīra. Besides the mosque and a number of houses, al-Ḳaṭāʾiʿ also included a palace, a *dār al-Imāra* and some magnificent gardens. It was all to vanish very swiftly. On the fall of the Ṭūlūnids (292/905), the ʿAbbāsids demolished the palace. They did not touch the mosque, which was later restored by sultan Lādj̲īn (696/1297) (cf. Salmon, *Études sur la topographie du Caire*, in *MIFAO*, 1902, where also all necessary details on the later history of the district are given).

The founding of al-Ḳāhira (358/969) did not put an end to the prosperity of Fusṭāṭ which, in the Fāṭimid period, was one of the wealthiest towns of the Muslim world, with its lofty houses of from five to seven stories (Nāṣir-i K̲h̲usraw, in the *Safar Nāma*, trans. Schefer, 146, even speaks of fourteen stories), the crowded souks round ʿAmr's mosque and the network of narrow streets recently excavated on the desert plateau. Al-Ḳāhira, where the houses were lower and furnished with gardens, was then the city of the caliphs and the military aristocracy; Fusṭāṭ, more populous, remained the home of commerce and industry, as is testified by very fine ceramics and pieces of glassware discovered during excavations, as will as texts on papyrus and paper. In the 7th/13th century the town still manufactured steel, copper, soap, glass and paper (Ibn Duḳmāḳ, iv, 108), not to mention its production of sugar and textiles. In 513/1119 the town was able to produce a massive ring of polished copper, graduated, and measuring more than ten cubits in diameter, weighing several tons and intended to act as a support for an apparatus for astronomic observations. However, during the anarchic reign of the caliph al-Mustanṣir, over a period of eighteen years (from 446/1054 to 464/1072) the town suffered sixteen years of severe famine,

accompanied by epidemics. Al-ʿAskar, al-Ḳaṭāʾiʿ and whole zones of the desert quarters of Fusṭāṭ were consequently abandoned. The vizier Badr al-Djamālī then caused the materials of the ruined buildings to be removed for re-use in Cairo. A second operation of this kind took place between 495/1101 and 524/1130; it was concerned with those buildings which the owners, despite a general warning, had failed to put into a state of repair. The year 564/1168-9 was catastrophic. The Frankish armies of Amalric were encamped just to the south of al-Raṣad, at Birkat al-Ḥabash; Shāwar, their former ally, had summoned them four years earlier, and he himself was now attacked by them. Fearing that they would occupy Fusṭāṭ, which had no ramparts to defend it and which might be used by them as a base against Cairo, he had the town evacuated and his men systematically set it on fire. The conflagration lasted for fifty-four days. After all these cataclysms life began once again; the place was rebuilt. All the same, to prevent the recurrence of such incidents Ṣalāḥ al-Dīn built a city wall enclosing Cairo, the citadel and Fusṭāṭ. The remains of this wall can be seen to the south of the citadel, and also 900 metres to the east as well as to the south-east of ʿAmr's mosque. New quarters were built on the abandoned land by the Nile, while the notables erected pleasure pavilions alongside the water. The eastern districts were increasingly neglected, while ʿAmr's mosque remained a flourishing centre of religious instruction until the great plague of 749/1348. Under the Mamlūk sultans, however, Cairo attracted great commerce; it was the souks of Cairo, not of Miṣr, that the astonished European travellers described. Fusṭāṭ (which name disappears, being replaced by Miṣr) fell into obscurity. It remained merely the administrative capital of Upper Egypt whose produce was constantly brought by ship to its river banks. At the time of Napoleon's expedition, Old Cairo contained 10,000 inhabitants, 600 of whom were Copts.

FŪTA DJALLON (accepted French spelling Fouta), principal massif of tropical West Africa, situated at the north-east of the Republic of Guinea. This group of mountains has been thoroughly studied by J. Richard Molard (1913-51). It is twice the size of Switzerland and of very varied character. Its eastern section has a crystalline base which rises to about 700 m./3000 ft., with some peaks of over 1000 m./3,300 ft. The Tinkisso, a tributary of the Niger, rises there. The central Fouta is an internal "Tassili" divided into three masses: in the north the massif of Mali (with its highest point at Mount Tennsira, 1515 m./4,970 ft), in the centre the plateau of Timbi, Labé and Popodara, with an average height of 1000 m./3,300 ft., which is divided by numerous canyons with impressive waterfalls (Ditinu, Kinkon, Kambadaga, the Sala, etc.), and finally in the south the massif of Dalaba (1425 m./4,675 ft. at Mount Tinka). From these massifs with their sheer cliffs (those of Massi reach 800 m./2,600 ft.) rise the Bafing, the principal feature of Senegal, the Upper Gambia, the Rio Grande of Portuguese Guinea and many mountain rivers, which together form the water tower of the western region of Africa. Because of its altitude the Fouta enjoys a favourable climate. It has a high rainfall in summer and its winter is a healthy dry season, the effect of which is further increased from December to February by the 'harmattan'; the rainy season is from July to September. The scorching heat of the Sahara attracts the Atlantic clouds and each year Dalaba has a rainfall of 2035 mm./80 ins., Pita 1882 mm./73 ins., Labé 1764 mm./70 ins. and Mali 1893 mm./76 ins. Three types of vegetation are found in the Fouta: (a) bush, either brushwood (*bururhe*) or trees (*fitare*); (b) sparse grassland, sometimes on the shores of a small lake (*dunkere*) on the clay covering a plateau (*hollande*), sometimes on sand which fills a depression (*dantari*); (c) the *bowal*, which covers three quarters of the surface of the Fouta and which is "in the dry season a vast and torrid surface of desert, marked at intervals by mushroom-shaped white-ant-heaps" (Richard Molard).

Population. The Fouta is a mountain district suitable for the rearing of livestock. As Vieillard says: "half-way between the Sahelian steppe and the dense forest: the former stretches over the endless barren plains of the high plateaus, the latter clothes the sides of the mountains in the form of tall riverside forests. This hybrid environment has favoured the formation of a composite society, a mixture of settled forest-dwellers and of shepherds and cowherds". The Baga and Landuman, probably autochthonous, were driven out in the 13th century by the Susu-Dialonke expelled by the Mandinkas of Sundjata. In 1534, the Fulakunda of Koli Tenguela came from the Fouta Toro to settle to the west of this group of mountains. Finally, in 1694, Fulani who had come from Macina formed an empire which was to last for two centuries. Apart from these great movements, there were small migrations from the plains of the north. The Fulani replaced the hump-backed cattle by the *ndama* which was more or less immunized against trypanosomiasis. They enslaved or drove out the former negro inhabitants of the forests, borrowing features of their material civilization. According to Vieillard they "brought with them their language, their faith which permitted the foundation of a Muslim fraternity, and a harsh exploitation mitigated by intermarriage.

Of the 750,000 inhabitants of the Fouta, two-thirds are Fulani and the others are former slaves who have adopted the Fulani language and belonged to the feudal system of the Fouta. These vassals, *rimaibe* (singular *dimadio*), cultivate the ground for their Fulani masters. They live in *rundes* near the country house of the master (*marga*).

The administrative organization consists of the *missidi* (village mosque) at the bottom, then the

teku, a group of *missidi*s with the *lamdo-teku* at the head. When the system of alternative government came into operation the chief of a *diwal* (province) was changed every second year, at the same time as the *almamy*.

The fiscal laws were very carefully worked out. The tax on inheritance consisted of the *homidia* (assigning to the marabout a quarter of the possessions of the deceased) and the *kombabete*, collected by the chief of the *diwal* or the *lamdo-teku* five months after the death. The *assaka* (or *saka* or *fariba*) was due to the chief of the *missidi* for the poor. The *ussuru* was a tithe on manufactured goods. In addition the ruler of the Fouta received a fifth of the booty of war and the tributes (*sakkale*) paid by the vassal peoples of the coast.

History. A large contingent of the Fulani of the Fouta came from Macina at the end of the 17th century, led by Seri or Sidi. After Muhammadu Saïdi, elected chief in 1700, they chose the pious Kikala, then his son Sambigu, whose two sons disputed the succession (1720-26). So the Fulani called on Ibrahima Mussu, called also Karamoko Alfa, a man of immense piety, who was invited to wage war against the pagans. Karamoko Alfa inaugurated that permanent state of Holy War which was to become one of the characteristic political features of the Fouta. In the Fouta Djallon Islam served as a justification for the seizure of power. A committee of insurrection consisting of Karamoko Alfa and six other members was formed and the movement was supported by young Islamized Dialonkes and Malinkes. The fetishist Dialonke were conquered and Timbo and Fukumba occupied. But some years later, Puli Garme, chief of the pagan Dialonke, re-took Timbo. Karamoko Alfa died insane in 1751, Ibrahima Sori (= early-rising) took his place; he was given the by-name of Mawdo (= the great) and his reign was marked by military campaigns against the Wassulonke and the Sulima. Tradition has it that he exterminated 174 kings (who were probably nothing more than village chiefs), he subdued the Fulani chief of Labe, seized the Mandingo province of Niokolo (Upper Gambia) and forced Maka, the king of the Bundu, to become a Muslim. But these military successes disturbed the council of the elders, and particularly its president Modi Maka, who caused Abdulay Ba Demba, son of Karamoko Alfa, to be appointed in place of Ibrahima Sori Mawdo. But the latter was soon recalled because of dangers which threatened from outside. Ibrahima Sori then transferred his capital from Fukumba to Timbo. On the death of Ibrahima Sori Mawdo (1784) the principle was adopted of rule alternating every two years between the Alfaya and Sorya families; but it was put into practice only with difficulty. The 19th century was dominated by the reign of the Almani Omar (1837-72) who had to suppress the rising of the fanatical Hubbus. These, won over by the Modi Mamadu Djoue, took the name of *Hubbu rasul Allai* (one who loves the Messenger of God). These Hubbu, fighting in the name of an intransigeant Islam, took Timbo (1859) before being beaten at Kuni and Kusogogya. Mamadu Djoue died after taking refuge in the mountains between Bafing and Tinkisso. His son, Mamadu Abal (= the wild), was to be defeated. Umaw died during the campaign undertaken in the Rio Grande. In 1887-8, an extraordinary nobleman, Aimé Olivier, Count (?) of Sanderval, got himself recognized by the Almami as a citizen of the Fouta Djallon, and obtained the grant of the uplands of Kahel and the right to mint coins. He played an important part in helping the chief of Labe to fight Bokar Biro. The latter, put on to the throne by French authority, signed the treaty of the protectorate with *Bissimilahi* (*bi-'smi 'llāh*) instead of his own name. Then Captain Müller marched on Timbo and Bokar Biro and his 1500 warriors were defeated at Poredaka. This was the end of the independence of the Fouta, which was divided by the French administration into districts.

The Fulani chiefdoms, which had been retained throughout the colonial period, were suppressed by the Council of Government set up during the summer of 1957. But by then they were already of very little significance. The Fouta Djallon had ceased to be an independent fortress and had become fully integrated into the political and economic life of Guinea.

(R. CORNEVIN)

FŪTHĀGHŪRAS [see FĪTHĀGHŪRAS].

FUTŪḤĀT [see ṬARĀBULUS (AL-SHAʾM)].

FUTUWWA, a term invented in about the 2nd/8th century as the counterpart of *muruwwa* [*q.v.*], the qualities of the mature man, to signify that which is regarded as characteristic of the *fatā*, pl. *fityān*, literally "young man"; by this term it has become customary to denote various movements and organizations which until the beginning of the modern era were wide-spread throughout all the urban communities of the Muslim East. The study of these movements is made difficult by the fact that, in the course of history, they have assumed very diverse forms, corresponding with which are two fundamental categories of documentation, the information from which often appears for that reason to be irreconcilable. Thus, from the time when, over a century ago, Hammer-Purgstall drew attention to them, many representations of them have been given and, despite the advance that has been made in our knowledge of them, it cannot be said that even now we really know exactly what they were. Hammer-Purgstall for his part regarded the *futuwwa* as a form of chivalry, and one finds this interpretation repeated up to our own time; but, for the past fifty years, particular attention has been given to the connexions maintained by the *futuwwa* at a late period on the one hand with Ṣūfism, and on the other with the professional groupings; however, even in the latter case the nature of the treatises specifically devoted to it has resulted in its being approached from the doctrinal or psychological angle rather than being integrated within the social structure, of which nevertheless it constitutes an important element. It is to this last aspect that I wish to give especial emphasis.

In the pre-Islamic and early Islamic periods, the Arabic language does not use the term *futuwwa*, but only *fatā*, itself used in the singular rather than in the plural, in that the word denoted individuals, not groups. At that time the *fatā* was a man still young and vigorous, valiant in warfare, noble and chivalrous: an essentially personal attitude and, though obviously linked with tribal society and its combats, one not dependent on any collective activity or explicit religious belief; and indeed it so happens that a modern work will still extol this type of character under the name *futuwwa*. The semi-legendary model for it in ancient Arabian society was prince Ḥātim al-Ṭāʾī [*q.v.*]; but, in Islam, the gradual growth of the figure of ʿAlī has resulted in his being regarded as the *fatā* par excellence, as is expressed in the old saying *lā fatā illā ʿAlī*.

Quite soon, however, in the complex society of the Arabo-Islamic Empire new *fityān* (now in the plural) made their appearance; it is however impossible to trace their origin back exclusively to the ancient Arab tradition. Indeed, these new *fityān* themselves are presented to us in two categories of portraits which are at first sight incompatible.

A first group of texts, consisting for the most part of relatively late accounts of mystics, but also of earlier narrations of the lives of poets, presents the *fityān* as young adults living in small communities, coming from varied social, ethnic (and, to start with, religious?) circles and, free from any sort of attachment to family (they were frequently bachelors), profession (even if they had one) or tribe, associating together to lead in common the most comfortable possible life in an atmosphere of solidarity, mutual devotion and comradeship (with joint ownership of goods), without which such an aim could obviously not be achieved. The setting was more extensive than that of a single town, in the sense that a fraternity existed between the *fityān* of each town and others elsewhere by whom they were received when travelling, like the old "companions" in Europe. It seems that they wore a special costume. It was still largely under this aspect that Ibn Baṭṭūṭa, the famous traveller of the 8th/14th century, was to see them when he encountered them among the common people in Turkish Asia Minor; but among the Persian aristocracy also, where *futuwwa* was translated by *djavānmardī*, the life of the *fityān* appeared to a prince such as the author of the *Ḳābūsnāma* (5th/11th century) to be a desirable vocation, indeed an ideal.

In contrast, however, to these peaceful impressions the ancient chroniclers record many others which are far less so. In this connexion the name *fityān* is not in fact the one that occurs most frequently; since they were discussing elements of disorder, the writers, who belonged to the official classes, gave them names suggestive of the mob or rabble; the most general term, which the recipients adopted with just as much pride as did other men of the people in revolutionary France the term *sans-culotte*, is *ʿayyār(ūn)* "vagrant, outlaw"; other quite common terms were *awbāsh* "riff-raff", *shāṭir*, pl. *shuṭṭār* "artful [ones]" and, from the time of the Saldjūḳids, *rind* [*q.v.*], pl. *runūd* "scamp". It is with their condition in Baghdād that we are through the documentation most familiar, but it must not be forgotten that the special character of that town may mean that they did not occur there in their widely-spread form, and it is important to study them also in any other place where it is possible to do so.

In Baghdād, we see the *ʿayyārūn* emerging from obscurity in the periods when authority was relaxed. Well-known pages of al-Ṭabarī and al-Masʿūdī evoke them for us, armed with stones and staves and with no protection other than helmets made of palm-leaves, standing together in defence of the caliph al-Amīn against the attacks of the Khurāsānīs who supported his brother al-Maʾmūn, or, half a century later, in the cause of al-Mustaʿīn against the troops of al-Muʿtazz. The three centuries from the 4th/10th to the 6th/12th are full of tales of disturbances fomented by them or in which they took part, their exploits only ceasing at exceptional times under strong rulers (the Būyid ʿAḍud al-Dawla, the three great Saldjūḳids). During the civil wars of the last years of the independent caliphate, numerous leaders sought their help and enrolled them in their police forces. In 361-2/972, when arms had been distributed

to those who had declared themselves ready to set off for the Holy War against the Byzantine invaders, disorders ensued which were ended only by burning down a quarter of the town. In about 420-5/1028-33 two of their leaders, Ibn al-Mawṣilī and al-Burdjamī, were the real masters of the capital and forced the appointment as head of police of Muḥammad al-Nasawī who was regarded as one of their friends and who in any case treated them with consideration and relied on them. If we are to believe later traditions, it is possible that the Būyid Abū Kālīdjār was in league with them. In the following century the head of the *fityān* in Baghdād in about 530/1135 and the succeeding years included the governor and members of the vizier's and the sultan's families among his followers. These are only a few instances out of a multitude of other less striking ones. When they were strong, they succeeded in plundering, but the chief complaint of the merchants in the *sūḳ*s was in general less of their "thefts" than of the "protection" *khifāra, ḥimāya* [*qq.v.*] which, following the example of certain great men, they extended over the *sūḳ*s for the sake of the spoils that fell to them. They were particularly powerful in the outlying districts, but also in certain quarters of Karkh, inhabited by artisans, on the left bank of the Tigris and, later, at Bāb al-Azadj on the right bank, at the gates of the capital which provided their livelihood.

Who were they, what were their aims? In the first place they were clearly humble people, often without any established or definite profession; but more exalted persons readily mingled with them, either being attracted by them or, from ambition, desiring to have followers. They certainly had no 'programme' in the sense that a modern popular party would have, and often an inclination towards plunder and the rewards derived from it seem to have been their sole motivation; however, at the same time they had a more specific ambition, which may cause some surprise: they wanted to be enrolled in the police (*shurṭa*), partly of course for the sake of the regular pay, but also and primarily because to join the police is the surest way of avoiding trouble with them. This is also the reason why one sometimes comes across reformed *ʿayyārūn* who, acting as volunteers (*muṭṭawiʿūn*), helped the government against their former companions. Among the masses, the true *ʿayyārūn* enjoyed the popularity of thieves who attack the rich, an elementary form of class repossession to which no moral stigma was attached. Their leaders claimed official recognition for the title of *ḳāʾid* which they assumed and which, besides gratifying their self-esteem, gave them a secure place in the social hierarchy. Finally, as regards religion, they included Shīʿīs and Sunnīs; the Ismāʿīlīs may have attempted to penetrate their groupings in order to organize political activities there (as in the case of the "plot" which a pious organization denounced in 473/1080 to the government of the Caliph under the Saldjūḳid protectorate); and the Ḥanbalīs certainly had their social "base" among some of them: but these diverse movements co-existed, and the *futuwwa*, in its general character common to all, owes nothing to them and is not more specifically affected by any one of them than by any other.

What we have just said applies, we repeat, more particularly to Baghdād, where the importance of the forces of the government and the aristocracy in general thrust back *ʿiyāra* (*i.e.*, the quality and posture of the *ʿayyārūn*) into a role of extra-legal opposition. But the picture suggested by the documentation relating to other towns is, despite its deficiencies, somewhat different. There was not a single town in the Iranian and peri-Iranian world, from Central Asia to Mesopotamia, which did not have its *ʿayyārūn*, and although they appear to be somewhat similar to what we have just seen in the capital of the Caliphate they nevertheless seem to be more closely linked with the local bourgeoisie, even in the functioning of official political institutions. Sometimes they joined forces with the bourgeoisie in support of a native prince, as in the Sāmānid territory; sometimes the bourgeoisie relied on them in resisting the authorities whom it resented as foreigners, particularly during the Turkish period. Their greatest success, in Sīstān, was the elevation to princely authority of a dynasty that had sprung up from themselves, that of the Ṣaffārids, which had started out by superseding the inadequate forces of the Caliph during the struggle against the bedouin Khāridjīs; and without going as far as that, there were many occasions when they made and unmade princes. More usually, in the majority of towns which had no *shurṭa*, they formed an indispensable local militia, whose quality was enhanced by their active traditions of sporting and military training and upon whom the *raʾīs* of the city relied, whether or not he was their actual leader (see the case of Bukhārā, where the *K. al-Dhakhāʾir* clearly shows the official standing of their battalions alongside the army and the *ghāzī*s).

It will naturally be asked what connexion there is between the *fityān* whom we described at the beginning of this article and the *ʿayyārūn* of whom we are now speaking. The texts, however, make it clear beyond question that many of the *fityān* of the first sort called themselves or were called *ʿayyārūn* or some equivalent name, while many of the *ʿayyārūn* on the other hand called themselves *fityān* or followers of the *futuwwa*. An at least partial equivalence is therefore indisputable, and the only question is to know if this is or is not absolute and, insofar as it is confirmed, to understand its significance. To find the answer, we have to remember the existence of the urban *ʿaṣabiyyāt*. In eastern towns certain kinds of factions existed almost everywhere under this name, feuding in the name of some particular doctrine or eponym; but they are more profoundly characteristic of a certain type of urban society. Now the texts also leave no doubt that the concepts of *ʿaṣabiyya* and *futuwwa* were, at least in part, inter-related. In the moral sense, *ʿaṣabiyya* is the principle of solidarity of a group, *futuwwa* the individual qualities by which it can be achieved. This being said, it is evidently as impossible to attribute any great numerical strength to the sodalities of *fityān* of the mystico-literary texts as it is to deny it to the *ʿayyārūn* belonging to the *ʿaṣabiyyāt* who inspired the accounts in the historical and related works; but we see very clearly that, in a sense that is materially elastic but morally no less strong, the members of the *ʿaṣabiyyāt* could have regarded themselves as true adherents of the *futuwwa* and that, among the *fityān* in the apparent idyllic sense, many individuals or groups may in fact have been steeped in the *ʿaṣabiyyāt* and the disturbances that they engendered. Consequently the *futuwwa* must apparently be considered neither as an interesting but marginal socio-ideological institution, as most of the ancient descriptions imply, nor even solely or precisely as a form of reaction by the destitute classes, but as a general and fundamental

structural element of urban society in the mediaeval East.

Within which frontiers, in the East? Though attested throughout the whole Irano-Mesopotamian territory, the *ʿiyāra-futuwwa* is not recorded, at least under those names, in Syria or Egypt. There were militias there, it is true, the *aḥdāth* [*q.v.*], a name which, like *fityān*, evokes "youth"; they are found first in the 4th/10th century, ranged against the authorities while simultaneously entrusted with the functions of the *shurṭa*; later, towards the end of the following century, they became an officially accepted institution, their *raʾīs* then being *raʾīs* for the town, sometimes almost by inheritance; however, they progressively declined in face of the organization of new powers relying on military garrisons. The resemblance to the *fityān*, both in the facts and the meaning of the name, is evident; and yet the analogy is not absolute. The status of the *aḥdāth* became more systematically official than that of the *fityān*, their recruitment was perhaps more bourgeois, and above all there is no indication that their organization was in any way concerned with the communal life, the rites of initiation and the ideological elaboration which, as we shall see, characterize the *futuwwa*; if we add to this that the latter's domain was that of Sāsānid tradition, while the *aḥdāth* only existed in the former Syro-Byzantine territories, we shall concede that, in spite of a certain parallelism in conditioning and evolution, there may be differences in their historical origins. But in Damascus the ordinary *aḥdāth* were sometimes opposed by more popular *aḥdāth* who were accused of *ʿiyāra*; in Egypt, at Tinnīs, there was in the 4th/10th century a large organization of *shabāb shudjʿān* "young heroes", who combined communal life with violent anti-aristocratic activities; though Muslims, they were denounced by the Christian notables to the Fāṭimid caliph al-Muʿizz who had them exterminated, like others in Damascus (*Histoire des Patriarches d'Alexandrie*, ed. Soc. d'Arch. Copte, ii/2, 88-9); and later, in Cairo, there were popular groups then called *ḥarāfīsh* who reveal an undeniable relationship with the *ʿayyārūn*, if not explicitly with the *futuwwa* in the strict sense of the term, with whom they do not appear to have claimed kinship (see W. Brinner, *The significance of the ḥarāfīsh and their Sultan*, in *JESHO*, vi/2 (1963)). Nothing comparable seems to have been recorded in western Islam.

The *futuwwa* is often represented as being linked with the guild organizations, and it has even been suggested that, through the initiation rites to which we shall return later, both of these were influenced by the Ismāʿīlīs, who were credited with particular interest in the world of labour. We have already said what we think about this last point. More generally, it is important to make a careful chronological distinction. In the later Middle Ages (*v. infra*) a certain kind of interpenetration between the trade guilds in the Irano-Turkish territories and the *futuwwa* is undeniable; but until the 7th/13th century, when guild life remained very much under State control, the most that could be said is that the *futuwwa* clientèle was evidently recruited for the most part at a popular level. On the one hand, it was apparently not the well-established masters of regular trades who constituted the chief recruits; on the other hand there is in any case nothing to indicate that the corporate groups of *futuwwa* were set up and marked off from one other on an occupational basis. No doubt relationships in respect of their work can be traced; but if a European parallel may be cited, it is that of the inter-professional Companies and not the trade guilds, and the term 'corporation' must not be taken implicitly as the equivalent of 'profession'.

The point remains that the *futuwwa*, as we have noted, is strictly speaking an urban phenomenon. Naturally it happened that, in the course of their activities, the *fityān* went beyond urban boundaries and mingled with other social categories, and the diversity of the groups and the uncertainties of terminology in the various writers perhaps permit us to admit the existence of some intermediate cases between the true *futuwwa* and other corporate organizations. But it seems necessary to make a distinction in principle between the urban *fatā* and the *ṣuʿlūk* [*q.v.*], the knight-errant of the desert (even if he derives from the proto-Arab *fatā* or the *djavānmard* of Persian tradition); and although, in the frontier zone, the *fatā* may be replaced by the *ghāzī*, for the rest he is a phenomenon of wider occurrence, and even there generally coexisted with the other without confusion.

These remarks on the *ʿayyārūn* apply particularly to the period up to the 5th/11th century; at that time there occurred an evolution, both among them and in the surrounding society, which in itself is of great historical importance, but which furthermore, as we shall see, is at the origin of the appearance of that form of literature on *futuwwa* which, when compared with the reality, is at first sight so misleading. The growing importance of the *fityān-ʿayyārūn*, attracting persons of high social rank and an increasing number of men of erudition, provoked a tendency among them to clarify and scrutinize the values that the *futuwwa* in fact implied; in the second place, and simultaneously with this process, another movement came into being within Ṣūfism which, for long restricted to individual forms of asceticism and mysticism, became organized into communities where, very naturally, the problems of collective life brought them into touch with the experience of *futuwwa*; it was perhaps the extra-legal aspect of the *futuwwa* which formed the attraction for some Ṣūfīs like the Malāmatiyya. It was in these circles, from the 5th/11th century, that a specific literature on *futuwwa* made its appearance, the characteristic feature of which is that it provides us with a spiritual elaboration of the subject, with the addition of certain pseudo-historical traditions and a selective and idealized portrayal of the ancient *fityān* (such as we described earlier, partly from this source), without any other allusion being made to the real organizations of *fityān* and the use of violence, of which nevertheless the chroniclers continue to provide such irrefutable evidence—to such an extent that we might well wonder if we really are dealing with the same people, were it not that we know that at least from the 7th/13th century some of the writers of the treatises of this type were well-known as leaders of authentic groups of real *fityān*.

The attitude of the governments and aristocracy towards the *futuwwa* was consequently modified. It is true that they continued their struggle against those who fomented disturbances or who were suspected of heterodoxy, but, far from being opposed to the concept of the *futuwwa*, they were hostile only to what they called distortions, or deviations from what it should in fact be. Niẓām al-Mulk, the great Saldjūḳid vizier, in whose lifetime a vizier of the Caliph persecuted the group of *fityān* suspected of Ismāʿīlism to whom we have already referred, was at the same time the man to whom one of the first treatises of *muruwwa* and *futuwwa* was dedicated.

Again, during the following century, in the well-known pages where the Ḥanbalī Ibn al-Djawzī attacked the *fityān* of his day and their conception of sexual honour, their acts of violence, etc., what he preaches is not so much their destruction as the taking over of the *futuwwa*, in its anarchic condition, by a superior authority capable of guiding it towards its true aims.

It was this reform that the caliph al-Nāṣir (577/1181-620/1223) was to accomplish. The dominating preoccupation of this remarkable man was his attempt to regroup under the aegis of the Caliphate all spiritual families and all organizations claiming kinship with Islam. At a very early date (578/1182 according to Ibn Abi 'l-Damm and al-Sakhāwī quoted in Muṣṭ. Djawād, see *Bibl.*) he had himself initiated into the Baghdād *futuwwa* by its grand master, *shaykh* ʿAbd al-Djabbār. As we have seen, the *futuwwa* was to a greater or lesser degree diversified, and in the time of al-Nāṣir in Baghdād there were five branches of it, one of which, the *Nabawiyya*, whose existence is attested as early as the 4th/10th century and which was also known elsewhere in the 6th/12th century by Ibn Djubayr, devoted itself to fighting against the heretic and the infidel, while another was the *Raḥḥāṣiyya*, ʿAbd al-Djabbār's branch. Al-Nāṣir cannot have been a simple, ordinary devotee of the *futuwwa*. Legislating in this domain as in others, he tried to unify, discipline and co-ordinate the *futuwwa* of Baghdād while at the same time encouraging the ruling circles of religious, military and administrative society to belong to it, with the aim of converting into an instrument of social education and general solidarity what had previously been a source of disturbance and discord, and also to reconcile the Ṣūfī-influenced *sharīʿa* of his conception with a corpus of regulations and customs that had grown up independently of it. Afterwards he exhorted the princes of the whole Muslim East to adhere to this new *futuwwa*, to develop its organization in their respective States, to associate themselves generally with him in the establishment, under his aegis, of a pan-Islamic *futuwwa*. For the aristocratic clientèle, privileges had to be found; hence the emphasis placed on the monopoly of performance of certain sports to which the *fityān* had long devoted themselves with enthusiasm. Indeed in Syria and Egypt the *futuwwa*, in this form, remained aristocratic. But it so happens that it was with this form that Hammer-Purgstall was acquainted, with the result that he looked upon it as an order of chivalry; we can see to what extent this view is, if not misdirected, at least restricted in fact to a single tardy excrescence, destined not to last and in no way representative of the real *futuwwa*. In Baghdād society the caliph's efforts were nullified, after his death, by the Mongol conquest. Strangely enough, it was in Anatolian-Turkish society, during its first phase of organization, that the great caliph's initiative was to rouse the strongest echoes; the *futuwwa* that developed there in the original form of the *akhī*s [*q.v.*] never ceased to be ascribed to the patronage of al-Nāṣir (see below).

It is through the writings on *futuwwa* that resulted from al-Nāṣir's policy that we are best acquainted with the organization of the *fityān*, without of course being able always to specify exactly which elements of the description given would also have been valid in the preceding centuries, and which were al-Nāṣir's innovations. The treatises of Ibn al-Miʿmār, who is the most factual, al-Khartaburtī who is more imbued with the spirit of Ṣūfism, and al-Suhrawardī, the first of a series of writers in Persian, inaugurated a literary category which, in Irano-Turkish territories (and also in Egypt during the Ottoman period), was to continue until the beginning of modern times. The rôle of communal initiatory groups which they ascribed to the *futuwwa* organizations is certainly applicable, though not uniformly, in the "classical" periods of Islam. Membership, preceded by a period of probation, was accompanied by a ceremonial which entailed in particular the drinking of a cup of salt water during a communal meeting at which a belt was buckled round the new devotee; he also adopted the distinctive clothing of the *futuwwa*, the trousers being especially significant. He was introduced by a sponsor to whom he was bound as by the inflexible duty of the son (*ibn*) or junior, inferior man (*ṣaghīr*) to the father (*abū*) or senior (*kabīr*). In al-Nāṣir's *futuwwa*, an interval of time separated the first ceremony of adoption of the novice (*murīd*) from the presentation of the trousers, the action which alone conferred the rank of full member, comrade (*rafīḳ*). The *Futuwwatnāma* of Suhrawardī adds a hierarchy between the simple adepts by the spoken word only (*ḳawlī*) and those who had girded on the sword (*sayfī*), but we do not know how far this corresponded to reality; at the end of the century an intermediate stage was still spoken of, that of those who had drunk the cup (*shurbī*). Solidarity between comrades had to be absolute. The general organization, in which the Grand Master was the caliph assisted by a *naḳīb*, was divided into a certain number of sub-groups (*aḥzāb*, pl. of *ḥizb*), each of which consisted of several *buyūt*; and a kind of autonomous internal jurisdiction settled their disputes by a procedure in which the oath of honour of the *futuwwa* played a great part. The books on *futuwwa* do not mention any sporting privileges; but we know that these did apply to the rearing and flying of homing pigeons, an ancient occupation of the *fityān* but despised by the aristocracy, and the sport of the *bunduḳ* [see ḲAWS] (accompanied by the shooting of birds), the rules for which were then officially promulgated, and which seems to have been a favourite diversion of the Turkish military caste; we may suppose that this aspect of the *futuwwa* did not interest the writers who were considering the *futuwwa* in its moral and religious aspects.

There is no doubt, however, that from then onwards there was a certain convergence between the popular *futuwwa* and the *futuwwa* of the Ṣūfīs. One of the most ardent disseminators of the reformed institution was the same Suhrawardī, general theological adviser to al-Nāṣir and founder of an order of Ṣūfīs, and one who commanded extraordinary respect, especially in Asia Minor. A certain reciprocal penetration took place between the combative spirit of the *fityān* and the spiritual ideal of the Ṣūfīs. One manifestation of this was the adoption for the *futuwwa* of *isnād*s inspired by Ṣūfī models, by means of which each group claimed attachment to ancestors, whether true or suppositious, whose patronage was morally significant: generally, in the end, to ʿAlī, on account of the ambivalence of the word *fatā*, and very often after him to Salmān, the patron of the Irano-Mesopotamian artisans. In more general terms, we thus see the *futuwwa* demonstrating in its own particular way the method of absorption of popular movements by Ṣūfī organizations which from the end of the Middle Ages to our own time has characterized such large sectors of social evolution in Muslim countries. It is merely necessary to repeat that the literature that resulted from this evolution cannot

be taken as a guarantee of what the classical *futuwwa* had been in earlier times.

Bibliography: It is impossible to enumerate here all the historical, literary, religious etc. works which provide occasional and sometimes valuable documentation on *futuwwa*; references will be found in the articles listed below, particularly those of Fr. Taeschner and Cl. Cahen; we shall confine ourselves to adding two works which have more recently become known, the *K. al-Dhakhā'ir wa 'l-tuḥaf* of al-Rashīd b. al-Zubayr, ed. Ḥamīdullah, Kuwait 1959 (on Bukhārā, 153), and the *Ta'rīkh* of Ibn Abi 'l-Damm, unpublished, passage quoted by Muṣṭafā Djawād in the work listed *infra*, 52. In the section following we shall consider only those treatises which, either wholly or in part, are devoted specifically and explicitly to the *futuwwa*, with the reservations noted in the article. The earliest is that of Sulamī (about 400/1010), ed. Fr. Taeschner, *As-Sulami's Kitab al-Futuwwa*, in *Studia Orientalia Joanni Pedersen ... dicata*, Copenhagen 1953, which is followed by some special sections on the *futuwwa* in the larger works of mysticism or *muruwwa* of Thaʿālibī (Brockelmann, I, 286), of ʿAbd Allāh al-Anṣārī (Abdülbaki Gölpınarlı, *op. cit.*, *infra*, 10), of Ibn Djadawayh (ed. Taeschner in *Documenta Islamica Inedita* [*Festschrift R. Hartmann*], 1952) and of Ḳushayrī (*Risāla*, see R. Hartmann, *al-Kuschairis Darstellung des Sufitums*, Türk. Bibl. XVIII, Berlin 1914). In the following century appeared the critical chapter of Ibn al-Djawzī in his *Talbīs Iblīs*, ed. Cairo 1340, 421-2. But it was naturally around the caliph al-Nāṣir that works on *futuwwa* especially developed. The most notable of these is the *Basṭ madad al-tawfīḳ* of the Ḥanbalī Ibn al-Miʿmār (and not ʿAmmār, as has been read until recently), which was studied by Thorning (see *infra*) as early as 1913, though its attribution to al-Nāṣir's circle was only established by P. Kahle in his article *Die Futuwwa-Bündnisse des Kalifen al-Nasir*, in *Festschrift Georg Jacob*, 1932; the last-named writer has now, under the same title, produced a German translation of the work in his *Opera Minora*, 1956; the same text has been published with a scholarly introduction, under the title *K. al-Futuwwa*, by Muṣṭafā Djawād and Muḥammad al-Hilālī (with two other collaborators), Baghdād 1958, who have established the true name of the author. To the writings of al-Nāṣir's circle belong also the *Tuḥfat al-Waṣāyā* of Ilyās al-Khartaburtī analysed by Taeschner in *Islamica*, v (1932), and published in facsimile with Turkish translation by Abdülbaki Gölpınarlı in his *Islam ve Türk illerinde fütüvvet teşkilatı ve kaynakları*, in *Istanbul Üniversitesi Iktisat Fakültesi Mecmuası*, xi (1952) (the French edition of the same review, *Revue d'Histoire Economique*, reproduces the introduction), and a treatise, the precursor of a series in Persian, by al-Nāṣir's spiritual adviser, Shihāb al-Dīn ʿUmar Suhrawardī, analysed by Fr. Taeschner in *Oriens*, xv (1962), in which he refers to another treatise by the same author. Moreover, P. Kahle has extracted from the Chronicle of Ibn al-Sāʿī, ed. Muṣt. Djawād, 227 ff., and translated and studied the text of the caliph's decree of 604/1207 on the reorganization of the *futuwwa*, *Der Futuwwa-Erlass des Kalifen al-Nasir*, in *Festschrift Oppenheim* (=Beiheft I zum Archiv f. Orientforschung, 1932). For subsequent works after al-Nāṣir's time, see the second part of this article.

As has been said, the first European writer to have noted—in however fortuitous and digressive a manner—the existence of the *futuwwa* was J. v. Hammer-Purgstall, in his article *Sur la chevalerie des Arabes*, in *JA*, 1849 (mainly following Ibn al-Furāt). After him, however, it was in fact H. Thorning who, from an entirely different approach, inaugurated the study of the *futuwwa*, to which P. Kahle in the articles enumerated above made decisive contributions; but the principal specialist, to whom we are indebted for a mass of information and ideas, has for over thirty years been Franz Taeschner. This scholar has from time to time undertaken various restatements of the problem, the last general one being his *Futuwwa, eine gemeinschaftbildende Idee im mittelalterlichen Orient und ihre verschiedene Erscheinungsformen*, in *Schweizerisches Archiv für Volkskunde*, lii (1956), 122-58; nevertheless, although in this article the author has on certain points completed and modified his earlier expositions, the latter should still be consulted for detailed information, particularly his principal works: *Die islamischen Futuwwabünde, das Problem ihrer Entstehung und die Grundlinien ihrer Geschichte*, in *ZDMG*, lxxxvii (1933); *Futuwwa-studien*, in *Islamica*, v (1932); *Der Anteil des Sufismus an der Formung des Futuwwaideals*, in *Isl.*, xxiv (1937); *Islamisches Ordensrittertum zur Zeit der Kreuzzüge*, in *Die Welt als Geschichte*, iv (1938); *Das Futuwwarittertum des islamischen Mittelalters*, in *Beiträge zur Arabistik, Semitistik und Islamwissenschaft*, Leipzig 1944 (not to mention his contributions on the later Turkish *futuwwa* and the *akhīs*, for which see below). More recently, critical views of varying validity have been expressed by G. Salinger, *Was the Futuwwa an oriental form of Chivalry?*, in *Proceedings of the American Philosophical Society*, xciv (1950). A valuable and illuminating study of social psychology has been made by L. Massignon, *La futuwwa ou pacte d'honneur entre les travailleurs musulmans au Moyen Age*, in *La Nouvelle Clio*, 1952. After bringing to light certain details concerning *Les Débuts de la futuwwa d'al-Nasir*, in *Oriens*, 1953, Cl. Cahen has attempted, by a more complete use of historical information, to further our knowledge of the *futuwwa* organizations as an organic part of oriental urban society, in his *Mouvements populaires et autonomisme urbain dans l'Asie Musulmane du Moyen Age*, in *Arabica*, 1958-9 (also printed separately, 1959; abridged German version: *Zur Geschichte der städtischen Gesellschaft im islamischen Orient des Mittelalters*, in *Saeculum*, ix (1958), 59-76), and quite recently the *fityān* of Khurāsān have attracted the attention of C. E. Bosworth in *The Ghaznevids*, Edinburgh 1963, chap. VI. Of the Arab scholars, besides the contributions of Muṣṭafā Djawād reproduced in the introduction to his edition of Ibn al-Miʿmār, we should add S. ʿAfīfī, *al-Malāmatiyya wa 'l-Ṣūfiyya wa ahl al-futuwwa*, Cairo 1364/1945. For the Turkish scholars, who for the most part have concerned themselves with the Turkish period of the *futuwwa*, see below.

The *fatā*, in its ancient Arab form, has been the subject of expositions, for example in Bishr Farès, *L'honneur chez les Arabes avant l'Islam*, Paris 1932, ʿUmar al-Dasūḳī, *al-Futuwwa ʿind al-ʿArab*, Cairo 1953, and M. Bravmann, *On the spiritual background of Early Islam*, in *Muséon*, lxiv (1951).

(CL. CAHEN)

Post-Mongol Period

(i) Survival of the courtly *futuwwa* after the Mongol Invasion.

When Hülegü, the grandson of Čingiz Khān, conquered Baghdād in 1258, putting a bloody end to the ʿAbbāsid Caliphate, he also dealt a blow to the *futuwwa* organization, which the Caliph al-Nāṣir li-Dīn Allāh had reformed and brought to new greatness by introducing it into courtly life. *Futuwwa* writings, which had come into being under al-Nāṣir, survived for a time to the extent of entries in the great encyclopaedias (here I would mention the Persian encyclopaedia *Nafāʾis al-funūn fī masāʾil al-ʿuyūn* of Āmulī, and the *Tuḥfat al-ikhwān* of ʿAbd al-Razzāḳ Kāshānī), which have a chapter on *futuwwa*, giving extracts from the *Kitāb al-Futuwwa* of the Ḥanbalī *faḳīh* Abū ʿAbd Allāh Muḥammad al-Shārim (?), known as Ibn al-Miʿmār, which was written for the *futuwwa* circles of the caliph al-Nāṣir. But it is doubtful whether this literary survival was matched by any actual survival of the organizational *futuwwa* in its courtly form.

For some time, however, the courtly *futuwwa* did in fact persist in Egypt. This was connected with the move of the ʿAbbāsid Caliphate to that country under the Mamlūk sultan al-Ẓāhir Baybars (658-676/1260-1277). Before he left for Damascus on 19 Ramaḍān 659/18 August 1261, the ʿAbbāsid prince who had fled to him, and whom he recognized as Caliph al-Mustanṣir II, clothed him with the "garment of the *futuwwa*" (*libās al-futuwwa*). After Mustanṣir II had been killed on his unsuccessful campaign against the Mongols, a second supposed ʿAbbāsid descendant arrived in Cairo, and was in turn recognized by Baybars as the Caliph al-Ḥākim bi-amr Allāh, and Baybars in his turn now bestowed on him the "garment of the *futuwwa*". Baybars's successors maintained the investiture with the "garment of the *futuwwa*" for some time. They invested Mamlūk *amīrs* and foreign princes with it, issuing the relevant documents, *e.g.*, that made out for the Mamlūk sultan al-Ashraf Khalīl in 691/1292 in respect of the Kurdish prince ʿAlāʾ al-Dīn al-Hakkārī. Mamlūk *amīrs* who had received the *futuwwa* showed this in their coat of arms. As time went on, however, interest in the *futuwwa* seems to have waned. During the 8th/14th century, or at the latest during the 9th/15th, courtly *futuwwa* appears to have become extinct even in Egypt—at least, no more is heard of it. Only Ḳalḳashandī, in his work *Ṣubḥ al-aʿshā*, makes brief mention of the ceremony of admission, the girding (*shadd*). There are also a few documents opposing the *futuwwa*, written by members of the *ʿulamāʾ*, such as the one by the famous Ḥanbalī reformer Ibn Taymiyya (died 728/1328), but otherwise no further evidence has come to light.

Bibliography: Concerning the Egyptian *futuwwa*: E. Blochet, *Moufazzal ibn Abilfazaïl, Histoire des Sultans Mamlouks* (*Patrologia Orientalis*, xii, treatise iii), Paris 1919, 426 [84]; *Chronicle of Aḥmed ibn ʿAlī al-Maḳrīzī, entitled Kitāb al-Sulūk fī maʿrifat duwal al-mulūk*, ed. by M. Muṣṭafā Ziada, vol. I, Part 2, Cairo 1936, 459, note 5 (reproduction of Mufaḍḍal's report); Fr. Taeschner, *Eine Futuwwa-Urkunde des Mamlukensultans al-Aschraf Chalīl von 1292*, in *Aus der Geschichte des islamischen Orients* (*Philosophie und Geschichte* 69), Tübingen 1949, 1-15; al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, Cairo 1336/1918, 274-9 (reproduction of the above-mentioned *futuwwa* document, and a further one with an introduction); I. Goldziher, *Eine Fetwā gegen die Futuwwa*, in *ZDMG*, lxxiii (1919), 127 f.; J. Schacht, *Zwei neue Quellen zur Kenntnis der Futuwwa*, in *Festschrift Georg Jacob*, Leipzig 1932, 276-87.

(ii) Popular *futuwwa*. The Turkish *Akhīlīk*.

Wherever *futuwwa* once existed, it continued in a different form, by becoming linked with the crafts, and thus, in time, it became the rule of the guilds. This process, occurring in all the countries of the Islamic Orient, is by no means clear, but we know more about its history in Turkey than in most other places. This is due to the fact that here (*i.e.*, in Saldjūḳ Anatolia), it took on a rather interesting form among the urban craftsmen, noticeable because the bearer of the *futuwwa* (Turkish *fütüwwet*), the *fütüwwetdār*, was referred to as *Akhī*; hence the Turkish name *Akhīlīk* (see akhī) for this particular Anatolian form of *futuwwa*.

We know from the historian Ibn Bībī that courtly *futuwwa* did exist in Anatolia. He reports that the Rūm-Saldjūḳ Sultan ʿIzz al-Dīn Kaykāwūs I had requested and received the "garment of the *futuwwa*" from the Caliph al-Nāṣir (c. 611/1214). In the time of his successor ʿAlāʾ al-Dīn Kayḳubād I (616-634/1219-1236), the great Shaykh Abū Ḥafṣ ʿUmar al-Suhrawardī—al-Nāṣir's theological adviser—came to Konya as ambassador and, amongst other duties, performed the *futuwwa* rituals. One might be justified in assuming that this contributed to the spread of *futuwwa* in Anatolia, yet this impetus from courtly *futuwwa* does not seem to be solely resonsible for the development of *Akhīlīk*.

The existence of this form of *futuwwa* in Iran can be proved even before that in Anatolia, and everything points to the fact that it must have reached Anatolia from there. This theory is also supported by the cult of Abū Muslim [*q.v.*]—the propagator of the ʿAbbāsid revolt against the Umayyads—who (rather like Sayyid Baṭṭāl [*q.v.*]) became a sort of national hero, first for the Persians and later also for the Turks. However, whilst Sayyid Baṭṭāl was regarded as the model of fighters for the faith—the Ghāzīs—Abū Muslim was the model for the artisans and the lesser people, who formed a corporate body under the name of *Akhī*. According to a widespread tale which was responsible for shaping the picture of Abū Muslim in the imagination of the people, the *Akhīs* led by him—especially those of Marw and Khurāsān—were the ones chiefly concerned with the ʿAbbāsid rising. Even if one regards this as a mythical elaboration of the figure of Abū Muslim, one may still assume that the institution as a popular element in the social structure of Iran dates quite a long way back.

Although there is clearly a connexion between the *futuwwa* and the *Akhīlīk*, there is some question about the earlier Islamic and Iranian antecedents of the *futuwwa* (see above). *Akhī* Faradj Zindjānī (died 457/1065), one of the most famous saints in Iran, is the earliest personality on Iranian soil who is mentioned as an *Akhī*, and he is also revered by the Anatolian *Akhīs* (whose adherence to the *futuwwa* is beyond doubt) as one of their own shaykhs, appearing in their rolls of honour (*silsila*). *Akhī* Faradj Zindjānī is held to be the master of the great Persian poet Niẓāmī, but as the latter was born only in 535/1141 (that is to say 80 years after Zindjānī's death), one can only regard Niẓāmī as a spiritual disciple of the great master.

In the 7th/13th and 8th/14th centuries, when *Akhīlīk* flourished in Anatolia (as is borne out by

numerous documents) it also flourished in Iran. There were a number of *Akhīs* in the time of Shaykh Ṣafī al-Dīn Ardabīlī (1252-1334), the ancestor of the Ṣafawid Shāhs, and some of them must be numbered among his own companions and followers. Notable amongst these is *Akhī* Sulaymān of Gilkhwārān, the father-in-law of the Shaykh. In connexion with these, one should probably also mention a certain *Akhī* Aḥmad al-Muḥibb ..... al-Ardabīlī, by whom we have a *Kitāb al-Futuwwa* in Arabic (which contains, however, only quotations from the Ḳur'ān and *ḥadīth*, and sayings concerning generosity). The Ṣafawid *Akhī* tradition may also be the basis of the fact that we find the word *Akhī* (with reduced significance) several times in the *Dīwān* of Khaṭā'ī (*i.e.*, Shāh Ismā'īl), as a name for followers of the Ṣafawiyya.

Further evidence for the existence of the Iranian institution is to be found in the work of the great Persian Ṣūfī Shaykh and saint Amīr Sayyid ʿAlī b. Shihāb al-Dīn Hamadānī, called ʿAlī II (714-786/1313-1384), entitled *Risāla-i Futuwwatiyya*, in which he not only equates *futuwwa* and *taṣawwuf* (and where the 'possessor of the *futuwwa*', the *futuwwatdār*, is referred to by the name of *Akhī*), but where there is also clear reference to the institution as such.

Like the Anatolian *Akhīs*, the Iranian ones occasionally intervened in politics. This can be seen from the example of Akhīdjūḳ [*q.v.*] who gained power in Tabrīz and Ādharbāydjān for three years (758-760/1357-59), until the Djalā'irid Shaykh Uways conquered Tabrīz.

Bibliography: Concerning *Akhī* writing see [besides the works mentioned in the article AKHĪ (Nāṣirī, Gülshehrī)] the following: *Gülşehrī, Manṭiḳu'ṭ-ṭayr*, a facsimile edition with an introduction by Agâh Sırrı Levend, Ankara 1957 (the relevant *fütüwwet* chapter at 180 ff.); Abdülbâki Gölpınarlı, *Burgâzî ve "Fütüvvet-Nâme" si*, in *Iktisat Fakültesi Mecmuası*, XV (1953), 76-153, transliterated edition with an introduction. Concerning Abū Muslim: I. Mélikoff-Sayar, *Abu Muslim, patron des Akhis* (in *Akten des xxiv. intern. Orientalisten-Kongresses, München*, Munich 1957, 419-21). Concerning the institution in Iran: Fr. Taeschner, *Spuren für das Vorkommen des Achitums ausserhalb von Anatolien*, in *Proceedings of the Twenty-second Congress of Orientalists, held in Istanbul Sept. 15th to 22nd 1951*, vol. II, Leiden 1957, 273-77; H. W. Duda, *ʿImāduddīn Faqīh und die Futuwwa*, in *ArO*, vi (1933), 112-24; B. Nikitine, *Essai d'Analyse du Ṣafvat-uṣ-Ṣafā* [of Ibn Bazzāz, died 773/1371-72], in *JA*, 1957, 385-94 (particularly 393, *Akhīs* in the entourage of Shaykh Ṣafī); concerning *Akhī* Aḥmad al-Muḥibb al-Ardabīlī cf. *Islamica*, v (1932), 314, under no. 5; A. K. Borovkov, *K istorii bratstva "Achi" v Sredney Azii* (Concerning the history of the *Akhī* constitution in Central Asia), in *Akademiku V. A. Gordlevskomu ... sbornik statey*, Moscow 1953, 87 ff.; Fr. Taeschner, *Der Achidschuk von Tebriz und seine Erwähnung im Iskendernāme des Aḥmedī*, in *Charisteria Orientalia* (Festschrift Jan Rypka), Prague 1956, 338-44.

(iii) *Futuwwa* as a system of guilds.

There have probably always been guilds (*ṣinf*, [*q.v.*], pl. *aṣnāf*, Turkish *esnaf*) in the towns of the Islamic Orient. This is also indicated by the fact that whereas individual trades are scattered all over the town in the Occident, those in the Orient are grouped around the market area in streets bearing their name. In the absence of clear evidence, one cannot state with any certainty what the organization of the guilds was like in the Middle Ages, and whether there has always been a link with the *futuwwa*. The few guild documents which we do possess are of a relatively more recent date (at the earliest of the 9th/15th century): that is to say, dating from the era of the great Ottoman expansion which grew until its rule extended over three continents. In the documents of the guild records, there is a corresponding prominence of Turkish writings with evidence of their having influenced the Arabic.

These guild documents, now generally referred to as *Fütüwwet-nāmes*, primarily—not to say exclusively—deal with the organization of the guilds. The numerous catechisms which survive, collections of questions put to the apprentice who was being examined and their answers, are exclusively concerned with matters of organization and ritual and not with questions of training in the trades. From these, it appears that it is not only the *Akhīlik*, as we know it from its writings, which is responsible for the organization of guilds as a *futuwwa* union; the documents differ in several respects, so that it appears probable that other *futuwwa* groups also exerted their influence over the guilds.

The so-called "Great *fütüwwetnāma*" (*fütüwwetnāme-i kebīr*) of Sayyid Meḥmed b. Sayyid ʿAlā' al-Dīn al-Ḥüseynī al-Raḍawī, dated 931/1524, the full title of which is *Miftāḥ al-daḳā'iḳ*, is the most important of these documents. It describes the *fütüwwet* customs of the guilds in full detail, and from this it appears that the *fütüwwet* of the guilds had nine grades (whereas that of the *Akhīlik* had three). The first three of these, *nāzil*, *nīm-ṭarīḳ*, and *meyān-beste*, may be taken to correspond to the three grades of a trade: apprentice (*terbiye*, or *čıraḳ*), journeyman (*ḳalfa*), and master (*usta*), which do not, however, appear under these names in the *fütüwwetnāme*. The next three grades (that is to say, 4 to 6), are those of the master of ceremonies, the *naḳīb*: *bīshrewīsh* (*i.e.*, the assistant of the *naḳīb*), *naḳīb*, and head *naḳīb* (*naḳīb al-nuḳabā'*); the three top grades (7 to 9), are those of the Shaykh: the representative (*khalīfe*) of the shaykh, also known as *Akhī*, the *Shaykh*, and the Supreme Shaykh (*shaykh al-shuyūkh*). The *Akhī*, therefore, is the seventh grade in the hierarchy of this particular guild *fütüwwet*.

There is a further difference: whereas the *Akhīlik* shows a division into two classes, the *fütüwwetnāmes* of the guilds give evidence of a division into three: *Ḳawlī*, *Shürbī* and *Seyfī*. Thus there is an intermediate class between the lowest members—those who are committed by their word only—and the full members—those who have received the accolade; this is the class of those who have partaken of the ritual cup.

A further interesting custom of the guild-*fütüwwet* is the one by which the novice, or apprentice—the *nāzil*—chooses not only a master as "Patron of the Journey" (*yol atasī*), but at the same time he has to chose two "Brothers of the Journey" (*yol kardeshleri*)—apparently from among the older apprentices—who are to assist him along the path of the *fütüwwet*.

A further thing which emerges clearly from almost every page of the "Great *fütüwwetnāme*" of Sayyid Meḥmed b. Sayyid ʿAlā' al-Dīn, is its decidedly Shīʿī (and more specifically "Twelver" Shīʿī, Imāmī) character. Doubtless this is because at the time when it was written, at the beginning of the 10th/16th century, the "Twelver" Shīʿa enjoyed a

time of expansion because of the Ṣafawiyya, and this led to the foundation of the new Persian Empire. It threatened to spread also to Ottoman territory, until Sultan Selīm I put an end to the threat of the new Shīʿī Persians by his campaign against Shāh Ismāʿīl, over whom he won the victory of Čāldirān [*q.v.*] in 1514. This was also the time when the Shīʿī order of the Bektāshiyya [*q.v.*] was organized by Bālim Sulṭān. There are, in fact, some points of contact between the "Great *fütüwwetnāme*" of Sayyid Meḥmed, and the Bektāshiyya: a number of the *terdjümān*—the short verses mentioned there which were recited or sung at the celebrations of the guilds —can also be found in the book *Mirʾāt al-maḳāṣid fī dafʿ al-mafāsid* of Sayyid Aḥmad Rifʿat, which describes the Bektāshī ceremonies.

There appear to be only a few complete manuscripts of the "Great *fütüwwetnāme*" of Sayyid Meḥmed. There are, however, shorter guild extracts in all libraries, and these are usually also called "*fütüwwetnāme*". They are generally excerpts from the "Great *fütüwwetnāme*". One may therefore assume that every guild compiled its own little *fütüwwetnāme* from that source. It is worth noting that the Shīʿī character of the original no longer emerges in these. This fact reflects a trend in the history of religion of the Ottoman Empire where—after earlier indecision between Sunnī and Shīʿī—the Sunnī creed progressively gained ground from the days of Selīm I onwards. Arabic *futuwwa* writings (discussed by Thorning in a study which has become an indispensable basis for all work on *futuwwa*) also seem to be based on the Turkish "Great *fütüwwetnāme*" of Sayyid Meḥmed, and to represent Arabic translations of excerpts from this work.

Whilst there were other *futuwwa* traditions besides *Akhilik* in most of the guilds whose rule was Sayyid Meḥmed's "Great *fütüwwetnāme*", there was also a group of guilds which must be regarded as the direct continuation of *Akhilik*, namely the tanners and all trades concerned with the treatment of leather, such as saddlers and cobblers. All these paid homage to their *pīr* Akhī Ewrān [*q.v.*], properly Evren, an *Akhī* saint of Kīrshehir in Central Anatolia (south-east of Ankara), who is himself said to have been a tanner. They did not use Sayyid Meḥmed's "Great *fütüwwetnāme*" as their rule, but the original *fütüwwetnāme* of the *Akhī*s, which is that of Yaḥyā b. Khalīl al-Burghāzī. There is, however, in most of these manuscripts which come from tanner circles, an appendix informing the reader of the more modern terms, and these are the terms familiar to us from Sayyid Meḥmed's "Great *fütüwwetnāme*". Thus there is evidence that influence was exerted by the *fütüwwet* tradition represented by the latter over the *Akhī* tradition kept up by the tanners.

For their part, the tanners, thanks to their *Akhī* tradition, could exert their own influence over the other guilds, particularly as they had a firm and centralized organisation which had its centre at the grave of their patron saint Akhī Evren in Ḳīrshehir. At this place there was a *tekye* whose guardian, called Akhī Baba [*q.v.*], was taken to be a descendant of Akhī Evren, and regarded (admittedly only in the Turkish provinces of the Ottoman Empire, Anatolia, Rumelia, Bosnia and even the Crimea, but not in the Arab provinces) as the head of all the tanners in the Ottoman Empire. This Akhī Baba, or his representative, travelled through the provinces every year, receiving the apprentices into the guild. The main part of this ceremony was their girding with the belt (*ḳushaḳ ḳushatmasī*). Naturally, such ceremonies brought a certain income, and this formed the financial basis of the organization. The Akhī Babas succeeded in gaining the privilege of girding the apprentices of other guilds as well, and thus they gained a position of considerable power among the craftsmen of the ancient Ottoman Empire. Akhī Evren thus became *pīr* not only of the tanners but of the whole of the Turkish guilds. This position of the Akhī Babas of Ḳīrshehir was repeatedly confirmed by edict and, on the whole, the Ottoman sultans protected the guilds and their organizations. These were useful to them on several counts: firstly, they supplied not only the general populace, but in particular the armies on their campaigns, and secondly they were a reserve of men—some of the guilds were bound to do military service; in the earliest days, the guilds were also the only means of reaching the whole population of the Empire. This was the purpose of the occasional processions of the guilds. Ewliyā Čelebi describes one which took place under Murād IV in 1048/1638. Such gatherings gave the ruler a picture of the military and economic strength of his country.

There were, however, some protests from *ʿulemāʾ* circles, both against the Shīʿī leanings of the "Great *fütüwwetnāme*" by Sayyid Meḥmed, and against the Akhī Evren cult of the tanners. A learned man by name of Münīrī (Ibrāhīm b. Iskandar) Belghrādī wrote a book entitled *Niṣāb al-intisāb wa-ādāb al-iktisāb*, attacking these things and presenting the crafts from the strictly Sunnī point of view. The book was of no avail; probably it never even reached the hands of those for whom it was intended.

There is a great amount of important documentation concerning the guilds (including their rules and regulations) in Turkish archives, the major part of which has not been studied.

The European provinces, including those inhabited by other races, like Bosnia, took part in the general development of the Turkish guilds; they also relied on the same writings.

As has already been mentioned, the "Great *fütüwwetnāme*" of Sayyid Meḥmed b. Sayyid ʿAlāʾ al-Dīn was also the accepted authority in the Arabic provinces of the Ottoman Empire. There, the guilds used extracts, written in Arabic, and adapted them to their special needs. This is the material on which H. Thorning based his epoch-making work. There is a description of the guilds in Damascus in 1883 by Elia Qoudsî, from which it becomes clear that the organization at that time was still essentially the same as that which we know to have existed among the Turkish guilds.

A valuable document concerning the *fütüwwet* as an organization of the guilds comes from Persia. This is the *Fütüwwetnāme-i sulṭānī* of the well known writer Kamāl al-Dīn Ḥusayn Wāʿiẓ Kāshifī (died 910/1505), a nephew of the famous poet Djāmī. Unfortunately only one manuscript has so far come to light; it is in the British Museum, but is incomplete and still awaits an editor. One may hope, though, that further manuscripts of this important work, and of others concerning the *futuwwa* and the guild organizations, will emerge from the still largely unexplored libraries of Iran.

In Turkestan also it can be shown that *futuwwa* is at the basis of the guild organizations. The eastern Turkish guild treatises (of which there was quite a number in the collection of the Berlin orientalist Martin Hartmann), are generally called *risāla*. It has recently been shown that there is even a reference to the Anatolian saint of the guild,

Akhī Evren. Thus the effects of his cult stretched as far as Turkestan.

In the course of the 19th century, with the influx of European goods and the expansion of the European type of commerce, the guild-organizations fell into decay in all states of the Islamic Orient. For this reason it has been gradually abolished in all countries of the Islamic world. In Turkey, it was discontinued in Young Turk times, and replaced by chambers of commerce (by a law of 13 February 1325 *mālī*/26 Feb. 1910; chambers of commerce were instituted in 1943). A few surviving features were abolished in the time of the Turkish Republic. With this, therefore, the organization of the *futuwwa* also came to an end.

In the Arabic dialect of Egypt, *futuwwa* means "ruffian"; cf. the *Mudhakkirāt futuwwa*, 2nd ed., Cairo 1927, written in colloquial Arabic.

AL-FUWAṬĪ [see IBN AL-FUWAṬĪ].

FUYŪDJ, pl. of FAYDJ, (from Persian *payk*), is the name not only of the couriers of the government *Barīd* [*q.v.*], but also of the commercial mail serving the population at large. This term was common all over North Africa and Egypt during the 5th/11th and 6th/12th centuries, while on the Egypt-Syria route the word *kutubī*, letter-bearer, was used. Occasionally, *rasūl* appears in the same sense, although the latter is more regularly applied to special messengers (see below).

Since only a few letters written in Arabic script on paper have been published, for the time being our information about the *fuyūdj* is derived exclusively from the letters of the Geniza [*q.v.*], which are written in the Arabic language but in Hebrew script.

In addition to carrying letters between the cities of a country, the *fuyūdj* provided the international mail services during the winter, when the sea was closed, and in midsummer, since the ships used to sail in convoys in spring time and in the autumn. As with the *Barīd*, one and the same man would carry the dispatches entrusted to him from the starting point to the final destination, *e.g.*, from al-Ḳayrawān to Cairo, or even from Almeria, Spain, to Alexandria. For the task of the *fuyūdj* was of a confidential nature. The names of the *fuyūdj* (mostly Muslim, some Jewish) are often referred to in a way which indicates that they must have been personally known to the addressee, albeit coming from a distant country.

No traces of any guild organization of the *fuyūdj* have been found thus far, but the times for their departures and arrivals must have been more or less fixed. The Geniza letters suppose that there was a weekly service between Cairo and Tyre (and presumably also other Syro-Lebanese-Palestinian cities, see below), while that between Cairo and al-Ḳayrawān also was regular, but dependent on the caravans, which, in normal years, seem to have made the double journey three times during one winter.

As to the speed of this service, the way between Cairo and Alexandria required four days approximately. A letter from the Egyptian capital to Ascalon, Palestine, took twelve days, while those carried between Tunisia and Egypt required from one to

two and a half months, depending on the length of the stay of the caravans in each of the localities visited by them (which stay was used by the *fuyūdj* for collecting additional mail).

The cost of the forwarding of a letter from Jerusalem to Ramle was half a *dirham*, that from Alexandria to Cairo one *dirham* exactly, that from Almeria to Alexandria, referred to above, one and a half *dirhams*, four letters being sent to the same address. These prices are indicated in the letters preserved because payment was to be made after delivery. The prices were certainly not fixed, but probably customary.

The payments to special messengers, called *rasūl*, of which three cases have been traced thus far, were up to fifty times as high as those made to *fuyūdj*. A service midway between the latter, who moved too slowly, and the special messengers, who were too expensive, was provided by the *faydj ṭayyār*, or express courier. The request *tuṭayyir lī kitābak*, "fly your letter to me", most probably refers not to carrier pigeons, but to this express service. Carrier pigeons might have been intended in another letter, in which the addressee is asked to send a *barā'*, or release, *maʿa'l-ṭayr*, "with the birds", possibly a technical term, parallel to the usual request to send a letter either *bi 'l-marākib*, "by boat" or *maʿa 'l-fuyūdj*, "with the mail couriers".

FYZABAD [see FAYḌĀBĀD].

G

GABAN, properly GABNOPERT (cf. Abu 'l-Faradj, *Chron. Syr.*, ed. Bruns, 329 and Καπνίσκερτι φρουρίον, Cinnamus, i, 8), an Armenian mountain stronghold on the Tekir-Su, a tributary of the Djayhān, now called Geben and belonging to the *ilçe* of Enderin in the *il* of Maraş. Here the kings of Armenia kept their treasures and retired in case of need; the last king Leon VI de Lusignan entrenched himself here in 776/1374, for example, but had to surrender after a siege of nine months to the Mamlūk Sultan al-Malik al-Ashraf Shaʿbān.

GABÈS [see ḲĀBIS].

GABON, one of the few African countries into which Islam was introduced in the colonizer's baggage-train. It was in 1843 that the first Senegalese soldiers (Wolofs or Tukulors) were stationed with the garrison of Fort d'Aumale and then in the camp on the plateau at Libreville; some of these soldiers, on the completion of their service, chose to settle in Gabon where for the most part they went into trade along the Ogoué, the Ngounié or the Fernan Vaz lagoon. They married Gabon women who remained Christian, and their children generally attended the Catholic school of the St. Mary mission.

A garrison of colonial infantry mainly composed of riflemen who were natives of Senegal and French Sudan meant the constant introduction of new Muslim contingents, but they stayed two or three years and then returned to their country. Hausa and Dyula pedlars and shopkeepers had to replace these soldiers. Some of these Muslims acted as professional fortune-tellers or witch-doctors, taking advantage of the credulity of the peasants in the bush.

It is not possible to speak of autochthonous Islam; the total number of converts in Gabon does not exceed a few dozen.

The statistics for 1959, given in the year-book of missions in the apostolic prefecture of Dakar, arrived at a total (probably an under-estimate) of 2,000 Muslims (1090 in the prefecture of the estuary, 266 in the Woleu Ntem, 175 in maritime Ogoué, 80 in Ogoué Ivindo, 31 in the Ngounié, 21 in the Ogoué-Lolo, 10 in the Nyanga and 4 in Upper Ogoué).

The paucity of Muslims is matched by the small number of mosques, one at Port Gentil, one at Lambaréné, two at Libreville, the biggest of which was built at the expense of the French Government.

The Muslims in Gabon, representing 0.4% of the population, were of importance only during the colonial period in the capacity of subordinates in the administration. They still play a certain part as a commercial bourgeoisie.

Bibliography: Some lines in the various works relating to Gabon. The Abbé Raponda-Walker has very kindly furnished the essential features of the information contained in the above article. (R. CORNEVIN)

GABR, term generally used in Persian literature—with rather depreciative implications—to indicate Zoroastrians. Philologists have not yet reached agreement on its etymology. Several suggestions have been made, *e.g.*, (a) from Hebrew *ḥabher* ("companion") in the sense of *Ḳiddūshīn* 72a; (b) from Aramaeo-Pahlavi *gabrā* (read *mart*), especially in the compounds *mōġ-martān* ("the Magi") (written *mōġ-gabrā-ān*); (c) from a Persian corruption of Arabic *kāfir* ("unbeliever"). The first two etymologies are very improbable, so that the derivation from A. *kāfir* seems the most acceptable. In Persian literature the word takes often the depreciative suffix *-ak* (*gabrak*, pl. *gabrakān*). Persian knows also the form *gawr*/*gaur*, Kurdish the forms *gebīr* (applied to Armenians), *gawr* (Zoroastrians), *gāvir* (applied to Europeans, especially Russians), Turkish the well-known word *gâvur* (unbeliever). In Persian literature the word is applied only secondarily to "unbelievers" in general, the oldest texts using it especially and technically for Zoroastrians. This, together with the iranization of the Arabic word which probably lies behind it, points to a very old origin—purely "oral"—of the loan, certainly at a period preceding that when Arabic words were introduced in abundance into new-Persian, at the birth of new-Persian *written* literature.

GABRIEL [see djabrā'īl].

GAFSA [see ḳafṣa].

GAFURI [see ghafūrī, madjīd].

GAGAUZ, a small Turkic tribe speaking a Turkic language but Orthodox Christian in religion. At the present time they are settled in the south of the Moldavian S.S.R. (Bessarabia) in the district of Komrat, Čadîr-Lunga, Kangaz, Tarakliya, Vulkanešti; in the south of the Ukrainian S.S.R. in the district of Zaporože and Odessa (Izmail) and in the district of Rostov in the Russian S.S.R. There are also small Gagauz settlements in Central Asia—in the districts of Kokpektï, Žarma, Čarskiy, Aksuat and Urdžar in the region of Semipalatinsk and in the eastern Kazakh and Pavlodar region of the Kazakh S.S.R. The Gagauz also live in the region of Frunze in the Kirghiz S.S.R. and in the district of Tashkent in the Uzbek S.S.R. The total number of Gagauz in the U.S.S.R. is 124,000 (1959). In Bulgaria the Gagauz occupy the villages in the district of Varna, near Provadya, in the Dobrudja near Kavarna and in the south of Bulgaria in the district of Yambol and Topolovgrad. In Rumania there are only a few Gagauz villages left—and those in the Dobrudja.

The ancestry and origin of the Gagauz are not clear. According to one hypothesis the Gagauz originate from the Kumans or Polovtsians who played an active role in the history of the south Russian steppes until 1237. According to another theory the Gagauz are possibly the descendants of the Torks or Uzes who were related to the Kumans and who are well known to the old Russian chronicles under the name of Black Caps (*čornïye klobuki*) (11th century). These Karakalpaks seem to have been a very mixed tribe; with Russian rule they also adopted the Russian religion (Greek Orthodoxy). Since the Gagauz too are Christian and Orthodox, it is possible to equate them with the Karakalpaks.

Bulgarian scholars, however, consider the Gagauz to be descendants of the Bulgars who were turkicized in the 15th-19th centuries but who retained Orthodox belief.

The most probable hypothesis seems to be the one which regards the Gagauz as descendants of the Turkish-Oghuz tribes (and of the Seldjūḳs). The area which was later named the Dobrudja was inhabited in the first half of the 13th century by Turkish tribes and bore the name of Karvuna-land after its capital Karvuna (later Balčîḳ). The Byzantines obtained their troops from among the population of that area, especially from among the Uzes. The Oghuz tribes often threatened the security of the Byzantine empire as they joined forces with other tribes during their raids. Byzantium, therefore, had always to beware of them and strove to subject them in order to utilize their forces for itself. In 1261 there appeared at the court of Michael VIII Palaeologus the Seldjūḳ Sultan ʿIzz al-Dīn Kay Kā'ūs, who had fled before the Mongols from Anatolia. The Byzantine Emperor enfeoffed him with the possession of land in the Dobrudja, where he established an independent Oghuz state with the capital Karvuna (Balčîḳ). The ethnic appelation Gagauz seems to stem from the name Kay Kā'ūs. Greek Orthodoxy was recognized as the dominant religion. Ecclesiastical authority was exercised by the Patriarch of Constantinople through the agency of the exarch in Karvuna. The newly founded state was strengthened by the incorporation of Seldjūḳ Turks and created its own army and fleet. As a result of the struggles between the tribes, Balîḳ came to the fore and, at the head of the Oghuz tribes, was chosen to be ruler of the state. In 1346 Balîḳ took part in the disorders in Constantinople where he sent 1,000 horsemen to the aid of the Regent Anne of Savoy. After the death of Balîḳ, Dobrotič came to the throne (1357). In his reign the state was strengthened considerably. Dobrotič increased his fleet. The name Karvuna-land was changed to Dobrotič-land. The form 'Dobrudja' became current at a later date. Dobrotič was followed by Yanko (1386)—according to other sources Ivanko—the last Oghuz ruler. In 1398 he was obliged to acknowledge the suzerainty of the Ottoman Turks. After the fall of the Oghuz state some of the population accepted Islam but the rest remained true to Christianity. With the conquest of Constantinople the Ottoman Sultan recognized the Greek Patriarch of Constantinople as head of all the Christians without reference to their nationality. Although the sources are silent for many years concerning the Gagauz, it must be assumed that they too came under the authority of the Patriarch. There is evidence relevant to this from the year 1652 concerning the decision of the Patriarch to give authority over all towns and villages to the local bishop instead of to the exarch in Karvyna.

From 1750 until 1846 there occurred a migration of the Gagauz of the Balkan peninsula—in connexion with a similar movement by the Bulgars—over the Danube to Russia (until 1769 into the province of New Russia; between 1787 and 1791 and most strongly between 1801 and 1812 to Bessarabia). Initially this went on without any apparent interference from the Russian government, which only later introduced order into the management of the land and the administration. This migration was apparently caused by the oppression of the robber bands (the Daghlî and Ḳîrdjalî) of Pasvand-oghlu ʿOthmān [*q.v.*], the notorious Pasha of Vidin, and of Ḳara Feyḍī).

Since 1940 the territory of the Bessarabian Gagauz has belonged to the U.S.S.R. In 1949 all the Gagauz villages in the Moldavian and Ukranian S.S.R. were collectivized together with those in Bulgaria and Rumania. The Gagauz work mainly in agriculture, cattle-raising, wine growing and, on the coast, fishing. As a result of being the long-standing neighbours of the Bulgarians, the Gagauz have borrowed much from their way of life, their customs and their domestic activity. The most salient characteristics of the Gagauz are diligence, hospitality, cheerfulness and contentment.

The language of the Gagauz belongs to the southern group of Turkic languages, *i.e.*, it is closest to the Turkish of Turkey, of Ādharbaydjān and of Turkmenistān. Several phonetic features, almost the whole syntax and phraseology as well as most of the morphology and vocabulary of the Gagauz are not Turkish. The following points may be enumerated here:

(1) the softening of consonants before front vowels;
(2) the appearance of the gender suffixes *-ka*, *-yka*;
(4) syntactically the Gagauz language is completely Slavicized and un-Turkish;
(4) the strong foreign element in the vocabulary (Greek, Rumanian and Slavonic).

For a long time the Gagauz possessed no literature of their own. For ecclesiastical purposes the Greek Church used 'Ḳaramanlî' books written in the Turkish language and in the Greek alphabet. These books contain lives of the saints and prayers. By contrast a rich folk poetry has developed, together

with riddles (*bilmeydžä*), proverbs (*söleiš*), folk-songs (*türkü*, *mani*), stories (*masal*), anecdotes (*fiḳra*) etc. The Gagauz alphabet, based on the Russian with additional letters, was created in the Moldavian S.S.R. in 1957. Since 1958 elementary education in the Gagauz language has been introduced. For this purpose text books are being compiled. Work is gradually going on towards the development of a Gagauz literary language. In Kishinev a Gagauz newspaper is published twice a month as a supplement to the *Moldova Socialistă*.

(WŁODZIMIERZ ZAJĄCZKOWSKI.)

GAKKHAŔ, a war-like Muslim tribe, inhabiting mostly the Hazāra district and parts of the districts of Rāwalpindī, Attock and Djehlam (Jhelum) of West Pakistan and that part of the Indian-held territory of Djammū which lies to the west of the Čināb; it is of indigenous origin. Agriculturists by profession, the Gakkhars are considered socially high and stand apart from the local tribes of Rādjpūt descent who resent their arrogance and racial pride. Many of the religious and social ceremonies observed by them reflect Hindu influences. They do not permit remarriage of widows and observe very strict *pardah*. According to their own legends they are descended from Anūshirwān and Yezdegird and claim the title of Kayānī; their eponym is said to have been one Sultan Kaygawhar (later corrupted into Gakkhaŕ), a native of Kayān in Iṣfahān. Cunningham's opinion that they are Kushāns seems nearer the truth, as the territory inhabited by them up to this day (described by Djahāngīr, *Tūzuk*, tr. Rogers, i, 99, ending at the Mārghala pass between Rāwalpindī and Ḥasan Abdāl) was once the stronghold of Buddhism. Buddhism flourished in northern India during the rule of the Kushān dynasty, who were mostly Buddhists. The claim of the Gakkhaŕs that they entered India in the train of Maḥmūd of Ghazna (*reg.* 388-421/998-1030) and that they once ruled Tibet as vassals of the Chinese, is evidently fictitious. According to Firishta (Lucknow ed., 26), it was the Gakkhaŕs (and not the orthographically similar Khokhars) who joined the confederacy of the local Hindū *rādjās* against Maḥmūd of Ghazna in 399/1008. No less than 30,000 Gakkhaŕs "with their heads and feet bare, and armed with various weapons" stormed the camp of the Sultan at Peshāwar but had to suffer badly for their audacity as did the Mēds and the Djāts [*q.v.*] of Sind who had harrassed and attacked Maḥmūd's rear on his return from Somnāth in 417/1026.

In 601/1204-5 they rose in revolt against the rule of the Ghūrid Sultan Muʿizz al-Dīn Muḥammad b. Sām, who took strong measures against them and quelled the rebellion with an iron hand. After this crushing defeat they were so thoroughly demoralized that their chief, simply because a Muslim captive had initiated him into the tenets of Islam, willingly became a convert, followed *en masse* by the whole of the tribe soon afterwards. However, this mass conversion was a mere act of expediency as these very Gakkhaŕs, only the next year (602/1205), treacherously fell upon the retreating Sultan *en route* to Ghazna, while he was encamped at Damyak, a small place on the bank of the Djehlam, three-quarters of a mile from modern Sohāwa, and murdered him. The place where he was murdered is still known to the local population as "*Ghūrāń dā phaŕ*", *i.e.*, passage of the Ghūrids. Raverty's lengthy discussion (*Ṭabaḳāt-i Nāṣirī*, tr. i, 485 *n*) on the identification of the tribe to which the Sultan's assassins belonged leaves the question open as Ibn al-Athīr (*sub anno* 602 A.H.) and the *Tādj al-maʾāthir* of Ḥasan Niẓāmī, a contemporary source, describe them as *malāḥida* and *fidāʾīs* (*i.e.*, agents of the Alamūt Ismāʿīlīs), which is somewhat curious in view of the recent conversion of the Gakkhaŕs to Islam. There is, therefore, reason to suppose that the assassins of Muḥammad Ghūrī were most probably Khokhars, who might have turned Ismāʿīlī under the influence of the Carmathians of Multān, their close neighbours. On the other hand since the murder took place in the territory of the Gakkhaŕs there is equally strong reason to suspect them of the crime or of complicity in it, for no strangers to the place could be bold enough to break into the royal camp and murder a powerful Sultan who had not only ravaged their territory and inflicted a crushing defeat on them but was also instrumental in their conversion to Islam. It is also possible that some disgruntled members of the tribe, who had unwillingly abandoned the faith of their forefathers, might have nurtured a grudge against the Sultan and, finding a suitable opportunity, wreaked their vengeance. Here again we are confronted with a difficulty in that history does not record any large-scale defections on the part of the Gakkhaŕs. The *Ṭabaḳāt-i Nāṣirī* (Raverty, i, 485) also says that the Sultan "attained martyrdom at the hand of a disciple of the Mulahidah (*sic*)", who was apparently a Muslim, and not a Hindū as stated by Ḥamd Allāh Mustawfī (*Taʾrīkh-i Guzīda*, i, 412), and al-Djuwaynī (tr. Boyle, i, 326; where 'Hindu' has been wrongly translated as 'Indian'), as he was

found on capture to have been circumcised. He could not, therefore, have been a Khokhar as there is no evidence to prove that the Khokhars had embraced Islam long before the assassination of Muʿizz al-Dīn Muḥammad Ghūrī. Piecing all the recorded evidence together one is led to believe that the assassin was a Gakkhaŕ, smarting under the insult and humility suffered by his tribe. It was the result of a personal vendetta and had no political or religious implications as has been suggested by Rashīd al-Dīn (*Djāmiʿ al-tawārīkh*, ed. Smirnova, i, 58) and Ibn al-Athīr (*sub anno* 602 A.H.) involving even Fakhr al-Dīn al-Rāzī [*q.v.*] in the conspiracy.

The Gakkhaŕs continued to harry the Delhi Sultans and in 645/1247 even a peace-loving prince like Nāṣir al-Dīn Maḥmūd had to take measures against them. He appointed Balban, who reduced their country, took revenge on them for their continued incursions, chastised them for having allowed passage to the Mongols through their territory and made thousands of them captives. Malik Alṭūniya, who had forcibly married Raḍiyya Sulṭāna, most probably had pressed these very Gakkhaŕs, along with the Djāts and other tribes, into an army with which he opposed the forces of the slave king Muʿizz al-Dīn Bahrām Shāh but was defeated. Almost a century later they invaded the Pandjāb in 743/1342, during the reign of Muḥammad b. Tughluḳ, killed Tatār Khān, the viceroy of Lahore and "completed the ruin of the province". Taking advantage of the disturbed conditions in the wake of Tīmūr's invasion of India (802/1399), they tried to harrass the great conqueror but had to pay dearly for their audacity. They again gave trouble to Bābur [*q.v.*] during his victorious march (932/1525) against the Delhi Sultan Ibrāhīm Lodī. Bābur seized their fort Paŕhālah (now called Phaŕwāla, but mostly in ruins, about 12 miles east of Rāwalpindī), ruled by Hātī Khān, their chief, who had to flee before the onslaught of the Mughals. At the end of 933/1526 Hātī Khān waited on the emperor during his return to the Pandjāb and assisted greatly in procuring supplies for the Mughal army. Bābur fully recognized his services, made him a handsome present and conferred on him the title of Sulṭān (proudly retained by the Gakkhaŕs till the middle of the 18th century when they were subjugated and reduced by the Sikh generals Gudjdjar Singh Bhangī and Ṣāḥib Singh). During the reign of Humāyūn, the Gakkhaŕ chief Sulṭān Sārang gained much prominence. He became so powerful that he struck his own money, included his name in the *khuṭba* and refused to recognise Shēr Shāh Sūr, on the defeat of Humāyūn, as the new sovereign of India. He even obstructed by all the means at his disposal the construction in 948/1541 of the historic Rohtās fort by Shēr Shāh. This act of open hostility coupled with his contumacious behaviour enraged Shēr Shāh who personally led an expedition against him resulting in the rout of the Gakkhaŕs, the capture of Sulṭān Sārang and his subsequent execution. His tomb still exists at Rawāt, near Rāwalpindī. He was succeeded by his brother Sulṭān Ādam, who had several skirmishes with the troops of Islām Shāh Sūr. Ādam was so powerful that in 959/1552 prince Kamrān, the rebel brother of Humāyūn, who had been refused shelter by Islām Shāh, sought refuge with him. He was, however, betrayed and given up to Humāyūn who had him blinded, Ādam receiving robes of honour, kettle-drums and other insignia of nobility as a reward for his treachery (cf. Djawhar Āftābačī, *Tadhkirat al-wāḳiʿāt*, Urdu transl., Karachi 1955, 151-7). Following a family scandal, Sulṭān Ādam had to suffer disgrace at the hands of his own nephew Kamāl Khān, a son of Sulṭān Sārang, who confined him in the fort of Phaŕwāla, where he subsequently died, and hanged his son Lashkar Khān, who had been guilty of an illicit love-affair with the wife of Kamāl Khān's brother. Abu 'l-Faḍl gives a different version omitting all reference to the love-affair and asserting that on a petition from Kamāl Khān, Akbar ordered the division of the Gakkhaŕ territory between him and his uncle Ādam; this resulted in a dispute which culminated in a pitched battle in which Ādam was utterly defeated and captured. This was clearly a stratagem which Akbar employed in order to punish the refractory chief by pitting his own kinsmen against him and to implant his suzerainty firmly in the territory of the Gakkhaŕs (cf. *Akbarnāma*, Bibl. Indica, iii, 560 ff.). In order further to cement his relations with the Gakkhaŕs and to use them as an ally against the turbulent Afghans, Akbar, in accordance with his well-known policy, contracted matrimonial alliances with them. Prince Salīm (sc. Djahāngīr) was married to a daughter of Sayd (Sayyid ?) Khān, a brother of Kamāl Khān. Sayd Khān had fought under the Mughal general Zayn Khān Kōkah against the Afghans in Swāt and Bādjawŕ [*qq.v.*]. Later Awrangzīb also honoured the Gakkhaŕ chief, Allāh Ḳulī Khān (1093-1117/1681-1705), by marrying one of his daughters to his son, Prince Muḥammad Akbar. Thus two Gakkhaŕ ladies, apart from several Rādjpūt princesses, found their way into the Imperial *ḥarem*. Akbar's policy of pacification and reconciliation had its desired effects and we find the Gakkhaŕs leading a peaceful, uneventful life during the major part of the Mughal rule. They seem, however, to have reluctantly accepted the Tīmūrids as their overlords, inasmuch as a celebrated Gakkhaŕ warrior-chief, Muḳarrab Khān, sided with Nādir Shāh Afshār [*q.v.*] and took part in the battle of Karnāl (1152/1739), which showed up the cracks in the crumbling fabric of the Mughal empire. As a reward for his services he was confirmed in his possession of the fort of Phaŕwāla and on return to Kābul, Nādir Shāh conferred upon him, as a mark of further favour, the title of Nawwāb. (This seems to have been a personal title as no later Gakkhaŕ chief ever used it). He was defeated by the Sikhs at Gudjrāt [*q.v.*] in 1179/1765 and had to surrender the whole of his possessions up to the Djehlam to the victors. Four years later he was treacherously captured and put to death by a rival chief, Himmat Khān. The Sikhs, finding it a suitable opportunity, annexed the entire Gakkhaŕ territory to the Sikh kingdom of the Pandjāb. Muḳarrab Khān's two elder sons were, however, allowed to retain the Phaŕwāla fort as a *djāgīr*; this too was confiscated in 1234/1818 by the Sikh governor of the area. Chafing under successive insults and acts of expropriation, the Gakkhaŕs revolted in 1835 but were crushed by the Sikhs who put their chieftains—Shādmān Khān and Muddū Khān—along with their families in confinement, where both of them died. On the annexation of the Pandjāb in 1849, the British conferred a pension of Rs. 1200 per annum on Ḥayāt Allāh Khān, a son of Shādmān Khān, he and the other members of his family having been released from captivity by the British two years earlier. In 1853 Nādir Khān, the Gakkhaŕ chief of Māndla, joined a Sikh conspiracy against the British. The rising, which might have been serious, was promptly quelled and Nādir Khān was captured and hanged. Apart from this incident

the Gakkhaŕs remained loyal and peaceful; they joined the army and served the British well, who honoured one of their chiefs, Rādja Djahāndād Khān (d. 1906) of Hazāra (Khānpur), by conferring upon him the order of C.I.E. The present chief of the tribe is Sulṭān Īradj Zamān Khān, an 18-year old youth, who succeeded to the title in October 1963 after the accidental death of his father, a grandson of Djahāndād Khān.

The Gakkhaŕs are divided into several clans, the leading being: the Būgīyāl, Iskandarāl, Fīrūzāl, Sārangāl and Ādamāl. Of these the last two are more influential and powerful; they are the descendants of Sārang and Ādam respectively, the two chiefs who gained prominence during the reigns of Humāyūn and Akbar. While the Sārangāls are found in Hazāra and Attock, the Ādamāls inhabit the districts of Rāwalpindī and Djehlam. As compared with the Gakkhaŕs of Hazāra and Djehlam those of the Rāwalpindī district are generally considered the senior and most important branch of the tribe (for details see *Rawalpindi District Gazetteer*, 63 ff.).

GALATA [see istanbul].

GALATA-SARAY [see ghalaṭa-sarāyī].

GALEN [see djālīnūs].

GALICIA [see djillīḳiya].

GALLA (own name *Oromo*, 'the people'). A people widespread in the modern state of Ethiopia, speaking a language belonging to the Eastern (or Low) Kushitic group which includes ʿAfar-Saho and Somali). They irrupted from the region south of the Webi during the first half of the 16th century, almost contemporaneously with the campaigns of Aḥmad Grāñ [*q.v.*] and spread fanwise, penetrating deeply into the Abyssinian highlands. For long they were a menace to the existence of the Ethiopian state but were finally subjected by Menelik II between 1872 and 1888.

When their expansion began they were all nomadic herdsmen with an elaborate political system based on a cycle of generation-sets (*gada*), but in consequence of their tribal movements and settlement in different environments many groups underwent profound changes. When they first expanded they came into contact first with Islam and then with Ethiopian Christianity. Their gradual and qualified adoption of the one or the other religion was slow, piecemeal, and tribal or regional. Although all the other Hamitic nomads of north-east Africa (Bedja, Saho, ʿAfar and Somali) had long been Muslim, and although the important Muslim city of Harar [*q.v.*] and the southern Muslim states of Bali and Dawaro lay in their path, the Galla remained impervious to religious change so long as they remained nomads and their *gada* system intact. But when they settled in contact with Amhara and Sidama they became either Christian or Muslim.

The vast number of tribes forbids any formal classification here, whilst the syncretistic character of their religion, whatever they call themselves, also prevents any clear-cut religious classification. The southernmost Galla, small groups of Warday or Orma of Tanaland in Kenya, detached from the rest by Somali expansion, have adopted Islam in this century. So have many Bōran of northern Kenya. But the nomadic Bōran of southern Ethiopia, occupying a vast territory between the Lake Stephanie region and the River Djuba, and those Arsi (Arūsi in Amharic), living to the north of the Bōran between the Somali of Ogaden and the Sidama, who continue to maintain a pastoral nomadic life, remain pagan. Some Arsi are Muslim and in their territory lies the famous Muslim-pagan pilgrimage sanctuary of Shaykh Ḥusayn. Muslims are the northernmost Galla of the highlands (Yedju and Raya or Azebo), who inhabit a region once occupied by a Muslim population known as Dobʿa, and the Wallo, covering a wide area of the eastern highlands north of the Tulama, who played an important part in the history of the empire in the 18th and 19th centuries, during which many embraced Christianity. Among the Shoan Galla (collectively known as Tulama) Christianity prevails. The Galla who penetrated the Gibē region of south-west Ethiopia, where they mingled with Sidama, were transformed in form of government, forming a group of five monarchical-type states (Djimma, Limmu, Gera, Gomma and Guma), and became Muslim between 1820 and 1870. Many of the Macha tribes (*e.g.*, Nonno) to the north of these states have Muslim minorities. In the west the Leqa Galla of the Waleqa region are pagan, very few being influenced by Islam, whilst the chiefs are generally Christian. In the south-east the sections who live in the Harar region became Muslim during the last century: Nolē and Djaso north of Harar, Ala around the city, Itu to the west, and Ania (Ennia) to the south.

GALLIPOLI [see gelibolu].

GAMBIA, British Colony and Protectorate, West Africa, 13° 25′ N., 16° W.; 4,000 square miles in extent with a population of about 260,000. It forms a narrow enclave in the surrounding territory of Senegal, occupying both banks of the Gambia river to a distance of 200 miles from the coast and being nowhere more than 39 miles broad. The principal tribal groups are Mandingo, Fula and Wollof.

The country is entirely agricultural, millet and rice providing the staple food of the people. The main economic crop is groundnuts, which accounts for nine-tenths of the revenue in an average year. There is no mining and apparently no mineral wealth. The only town is the capital Bathurst (population, 20,000). Under the constitution introduced in May 1962, the country has attained full internal self-government, the prime minister being Mr. D. Jawara the leader of the People's Progressive Party. A measure of union with Senegal is under active consideration (1964).

The British trading interest in the Gambia dates from early in the seventeenth century, and from 1662, when the fort on James Island was seized from the Duke of Courland, the succession of British African Companies maintained permanent occupation of one or more trading posts. The eighteenth century was a period of intense commercial rivalry with the French, who had established a factory at Albreda on the north bank and were not finally excluded from the river until 1857. Bathurst was founded in 1816 to provide an additional base for the campaign against the slave trade.

At least four-fifths of the indigenous population are Muslim. Islam was first introduced in the period from the 5th/11th to the 8th/14th century but conversion remained very superficial until towards the close of the eighteenth century, and the present strength of orthodoxy dates only from the period of the "marabout" wars, about a hundred years ago. All Gambia Muslims follow the Mālikī school of law and most of them are attached to one of two Ṣūfī orders, the Ḳādiriyya or the Tid̲j̲āniyya, the latter being dominant, at least on the lower river. In some areas literacy in Arabic is not uncommon. Protestant and Catholic missions have been at work for more than a century, but there are very few Christians outside Bathurst.

GAMES [see laʿb].

GANĀFA [see d̲j̲annāba].

GANDĀPUR, the name of a Pathan tribe which lives in the Dāmān area of the Dēra Ismāʿīl K̲h̲ān district of Pakistan. The tribe is now, for the most part, absorbed in the population of the area.

The tribe descended from the Afghan highlands to the plains of Dāmān during the 17th century. The centre of their winter quarters developed into a town in the 19th century, probably because of the trading activities of the tribesmen between K̲h̲urāsān and India. This town is at present called Kulāčī.

The Gandapūr tribe took part in Pathan tribal wars during the 18th century but under British rule the tribe became settled and peaceful, mixing with other Pashto-speaking settlers. The origin of the name is unknown, as is the history of the people.

Bibliography: *Gazeteer of the Dera Ismail Khan District*, Lahore 1884, 53, 109, 202; M. Elphinstone, *An account of the Kingdom of Caubul*, London 1839, ii, 67; I. M. Reisner, *Razvitie feodalizma i obrazovanie gosudarstva u Afgantsev*, Moscow 1954, *passim*. (R. N. Frye)

GAND̲J̲A, Arab. D̲j̲anza, the former Elizavetpol, now Kirovabad, the second largest town in the Azerbaijan S.S.R.

The town was first founded under Arab rule, in 245/859 according to the *Taʾrīk̲h̲ Bāb al-abwāb* (V. Minorsky, *A History of Sharvān and Darband*, Cambridge 1958, 25 and 57). It is not mentioned by the oldest Arabic geographers like Ibn K̲h̲urradād̲h̲bih and Yaʿḳūbī; it seems to have taken its name from the pre-Muslim capital of Ād̲h̲arbayd̲j̲ān (now the ruins of Tak̲h̲t-i-Sulaymān). Iṣṭak̲h̲rī, 187 and 193, mentions Gand̲j̲a only as a small town on the road from Bard̲h̲aʿa [*q.v.*] to Tiflīs; according to him the distance between Bard̲h̲aʿa and Gand̲j̲a was 9 *farsak̲h̲*, according to Yāḳūt (ii, 132) 16 *farsak̲h̲*. After the decline of Bard̲h̲aʿa Gand̲j̲a became the capital of Arrān; the S̲h̲addādid dynasty ruled here from *ca.* 340/951-2; after it had been overthrown by Sultan Malik S̲h̲āh, the latter's son Muḥammad was granted Gand̲j̲a in fief. In 533/1138-9 the town was destroyed by an earthquake in which, according to ʿImād al-Dīn al-Iṣfahānī, there perished some 300,000 persons (130,000 according to Ibn al-At̲h̲īr), including the wife and children of Ḳara-Sonḳur, *amīr* of Ādharbayd̲j̲ān and Arrān, who was absent at the time; Demetrius, king of Georgia, sacked the ruined town and carried off one of its gates. ʿImād al-Dīn says that the Georgians built a new town in their country, gave it the name D̲j̲anza and set up the gate they had carried off there; soon afterwards Ḳara-Sonḳur destroyed the new town and brought the gate back to Gand̲j̲a. The latter statement does not agree with the facts; the gate that was carried off still exists in the Gelathi monastery in Kutais; a Georgian inscription gives an account of its removal; and there has also survived on the gate itself an Arabic inscription of the year 455/1063 (the year of its erection) which has been deciphered by Frähn (Mém. de l'Acad., 6th Ser., *Sciences politiques*, iii, 531 ff.).

Ḳara-Sonḳur died in 535/1140-1, his successor Čavlī in D̲j̲umādā I 541/9 October-7 November 1146; Rawādī is next mentioned as ruler of Arrān; but a few years later we find Arrān reunited with Ād̲h̲arbayd̲j̲ān under the rule of the Ildegizids. The town of Gand̲j̲a is said to have been rebuilt by Ḳara-Sonḳur "in all its splendour"; in the 7th/13th century it was considered one of the most beautiful cities of Western Asia (cf. the verses in the *Nuzhat al-ḳulūb*, *GMS*, 91); the poet Niẓāmī Gand̲j̲awī [*q.v.*] belongs to this period; Ibn al-At̲h̲īr (xii, 251) calls Gand̲j̲a "mother of the cities of Arrān". When the Mongols appeared before Gand̲j̲a in 618/1221, they did not dare to attack the strongly fortified town, the inhabitants of which had proved their courage in frequent battles with the Georgians; but the retreat of the enemy had to be purchased with money and clothstuffs. In 622/1225 Gand̲j̲a, whither the last Ildegizid, Öz-Beg [*q.v.*], had fled from Tabrīz, was taken by Sultan D̲j̲alāl al-Dīn K̲h̲ʷārizms̲h̲āh [*q.v.*]; a few years later all the K̲h̲ʷārizmīs were massacred in a rebellion of the inhabitants; nevertheless, after suppressing this rising D̲j̲alāl al-Dīn refused to allow his troops to sack the town and only had the ringleaders, 30 in all, executed (618/1231). Four years later (1235) the town was captured and burned by the Mongols. On this occasion also it was soon rebuilt but does not seem to have attained great importance again. Under the Il-K̲h̲āns Arrān with Gand̲j̲a as its capital was one of their provinces; the land afterwards usually shared the lot of Ād̲h̲arbayd̲j̲ān and from the reign of Ismāʿīl S̲h̲āh Ṣafawī [*q.v.*] onwards formed part of the Persian kingdom; under Persian rule the governor of Gand̲j̲a bore the title of K̲h̲ān. In 991/1583 K̲h̲ān Imām Ḳulī was defeated by

the Turks, who in 996/1588 captured the town itself; invested in Shawwāl 1014/February-March 1606 by Shāh ʿAbbās I it was recovered for the Persians after a six months' siege. Shāh ʿAbbās transferred the town to another site about 1 *farsakh* "higher", *i.e.*, to the south-west. The new Gandja was captured by the Turks in 1135/1723; regained by Nādir Shāh in 1148/1735 it remained after his death under the rule of Khāns who were practically independent, passed at the end of the 18th century into the power of the Ḳādjārs and was stormed on the 3rd (15th) January 1804 by the Russians under Prince Tsitsianov to be definitely ceded to Russia by the treaty of Gulistān [*q.v.*]. On the 13th (25th) September 1826 Paskevič defeated a Persian army under ʿAbbās Mīrzā in the immediate neighbourhood of the town. Called Elizavetpol by the Russians, Gandja resumed its old name in 1924, to change it again in 1935 to Kirovabad in honour of the Soviet statesman S. M. Kirov.

The modern town with a population (1959) of 116,000 inhabitants, lies on both banks of the Gandja Čay, a tributary of the Kura. In the older western half of the town, fortifications and the so-called "Tatar" mosque have survived from the time of Shāh ʿAbbās; the "Persian" mosque belongs to a later period. The climate is unhealthy and malarial but favourable to the growth of vegetation. Vines, fruit trees, vegetables and tobacco are cultivated in the surrounding countryside; it is also a centre of sericulture.

GANDO [see fulbe].

GANGĀ, the Ganges (also Gang گنگ, گنك in the Muslim historians of India), the principal river of Upper India [see hind] which rises in the snows of the Himālaya in the district of Gaṛhwāl at an altitude of some 3100 m., flows through the present provinces of Uttar Pradesh, Bihār and Bengal, and falls in the Bay of Bengal after a course of about 2500 km., the last 500 km. through the Bengal delta. Above the delta it receives successively the waters of the Rāmgangā, Yamunā (Djamnā, [*q.v.*]), Gōmatī, Gōgrā, Sōn, Gandak and Kōsī; above the Djamnā confluence at Prayāg (Allāhābād, [*q.v.*]) it is fordable. The delta commences south of the ruins of Gawṛ [see lakhnawtī], the westernmost channel which passes close to Murshidābād [*q.v.*] being known in its upper reaches as the Bhāgīrathī and in its lower as the Hūglī [*q.v.*]. The main (eastern) channel, known also as the Padmā, runs south-east to Goālanda where it joins the (Bengal) Djamnā, *i.e.*, the lower reaches of the Brahmaputra. The confluence forms a broad estuary, now called the Meghnā, which enters the Bay of Bengal near Noākhālī as the most easternly of a number of channels. The delta is fertile in the north, and the swampy Sundarbans (salt, timber for boat-building) form its southern base; the Hūglī is its main commercial channel. Until the construction of the railways the Ganges formed, with its tributaries, a most important traffic artery (J. Rennell, *Memoir of a map of Hindoostan* ...[3], London 1793, 335 ff.), its major towns (*e.g.*, Kanawdj, Allāhābād, Fayḍābād, Banāras, Paṭnā, Munger, Rādjmaḥall [*qq.v.*]) having in many cases stone or brick landing stages. Its irrigation waters are extended by the Upper and Lower Ganges canals, with headworks at Hardwār.

In its lower reaches the fall is no more than from 1 to 3 cm. per kilometre, and hence its course is very liable to change under the weight of monsoon rainfall; for example, before the Muslim conquest of Bengal the main stream instead of turning south at its present point ran eastwards to Mālda and then turned south along the present course of the Mahānadā, running east of Gawṛ (cf. E. V. Westmacott in *JASB*, 1875, 7 ff.); the transfer of the Bengal capital from Gawṛ to Pānḍuā in 739/1338-9 was evidently occasioned by such a change, as was a subsequent removal of the court from Gawṛ to Tānḍā about 850/1446. The differences between the present courses of the Ganges and its deltaic tributaries and those shown on Rennell's map (*op. cit.*, facing p. 364; cf. *ibid.*, 345 ff.) are striking. For further details of change of course see hūglī.

To the Hindūs the Ganges is a sacred river, having its source in paradise whence it is precipitated on to the earth as the centre of seven streams; this legend, represented in Sanskrit sources in the *Matsyapurāṇa*, *Vāyupurāṇa*, *Rāmāyaṇa*, etc., is recounted in al-Bīrūnī's *K. al-Hind*, Eng. tr. E. Sachau, London 1888, i, 261. Its water has a special ritual purity, either for bathing at the confluences, especially at Allāhābād when the sun is in Aquarius, or for drinking (for the express courier which took Ganges water to Muḥammad b. Tughluḳ's court in Dawlatābād see Ibn Baṭṭūṭa, iii, 96, tr. Gibb, 184; for Akbar's use of Ganges water see Abu 'l-Faḍl, *Āʾīn-i Akbarī*, i, 55; and cf. Tavernier's observation (*Voyages*, Eng. tr. ed. W. Crooke, London 1925, i, 95) that the emperor (Shāhdjahān) and his court drink no other). For the Hindū practice of self-immolation in its waters, and casting the ashes of the dead therein, see Ibn Baṭṭūṭa, i, 79, iii, 141 f., tr. v. Mžik, 57; tr. Gibb, 193; V. Minorsky, *Gardīzī on India*, in *BSOAS*, xii (1947-8), 639 f.

GANZA [see gandja].

GAO, a town in the republic of Mali, situated on the left bank of the Niger (10,000 inhabitants), is one of the oldest commercial centres in West Africa, standing at the point where the caravan route from Tilemsi reaches the Niger. In older writers, Gao is referred to under the names Kaukau, Kawkaw, Kookou, Kankou and Kounkou. Two etymologies are suggested: according to al-Bakrī (*Description de l'Afrique*, 399), the name Kaukau derives from the sound of tom-toms; Houdas (*Taʾrīkh al-Sūdān*, 6, n. 3) suggests that it is an abbreviation of *kokoy Korya* (the king's town).

Probably founded in about 690 A.D. by the Sorko Faran fishermen expelled from Kukia by the Songhai Gao became an important commercial centre. It is probably the town referred to by al-Khwārizmī (before 218/833) and, in about 258/872, by al-Yaʿḳūbī as "Kawkaw, the greatest and most power-

ful of the kingdoms of the Sudan", which would anticipate by some twenty years the date 890 given by Barth as marking the extension of the authority of the Songhai rulers of Kukia over Gao.

Gao was then very much frequented by traders from the Maghrib. Hence it happened that, according to Ibn Khaldūn (*Berbères*, trans. de Slane, iii, 201), it was at Gao, during one of his father's business journeys, in about 271/885, that Abū Yazīd [*q.v.*], "the man on the donkey", was born.

Al-Muhallabī tells us: "The king of this people sets his subjects the example of the faith of Islam, and the majority of them follow his example. It has a town on the east bank of the Nile (Niger) named Sarna; this town contains markets and merchandise and is regularly frequented by people from all countries. The king also has a town on the west of the Nile where he lives with his nobles and intimates. He has a mosque where he prays, while the people have their own *muṣallā* between the two *madrasas*. In his town the king has a palace which no-one lives in except himself and which now harbours only a single eunuch. They are all Muslims. The king and his principal companions wear tunics and turbans and ride horses bareback". These lines, quoted by Y.- Kamal (*Monumenta Cartographica Africae et Aegypti*, iii/2, 683), were written in about 385/996, that is to say 15 years before the date given for the conversion to Islam and the settling at Gao of Dia Kossoï (1009-10).

Al-Bakrī (459/1067) describes the division of the town into two quarters: "(Kawkaw) consists of two towns, one is the residence of the king and the other is inhabited by the Muslims. Their king bears the title of *Kanda*. Like other negroes, they wear a loincloth and a jacket of skins or other material, the quality of which varies according to the wealth of the individual. Like the negroes, they worship idols... When a new king mounts the throne, he is given a seal, a sword and a Ḳur'ān ... Their king professes the faith of Islam, they never entrust the supreme authority to anyone other than a Muslim" (*Descr. de l'Afr. sept.*, trans. de Slane 1859, Algiers 1913, 342-3).

In 1939, royal steles of the 12th century were discovered at Sane (9 km. east of Gao). Al-Zuhrī (before 545/1150) noted a greater volume of trade came from Egypt and Wargla than through the Tafilelt.

Gao was captured by Sagamandia, one of the generals of Kango Mūsā (Mansa Musa), at the time of the return from pilgrimage of the emperor of Mali (724/1324) who had a mosque with *miḥrāb* built, perhaps on the plans of the poet al-Sāḥilī. Dia Assibaï, a vassal of Mali, had to surrender his two sons as hostages. One of them, ʿAlī Kolen (the cricket), managed to escape and restored the Songhai empire by deposing the *dia* Bada who was governing Gao on behalf of the Mali. He was called *Sonni* (the liberator) and founded the second dynasty which ruled from 739/1339 until 898/1493.

Gao, however, remained a highly prosperous capital and, after his visit in 753/1352, Ibn Baṭṭūṭa stated that it was one of the most beautiful and extensive cities in the Negroes' country, and most abundantly supplied with foodstuffs. But during the 8th/14th century the Songhai were driven back to the former capital of Kukia. It was only in 802/1400 that the Sonni Ma Daou (or Ma Dogo, that is, the Giant) passed to the attack and sacked the town of Mali. The last ruler Sonni ʿAlī (868/1464-898/1493) or ʿAlī Ber (the Great) brought the Songhai empire to its apogee when he captured Timbuctoo (872/1468) and Djenne (877/1473). But it was a period of pagan resurgence and of persecution of the Muslims.

When nominated chief of the Songhai on 21 January 1493, the Sonni Barou refused to adopt Islam; he was compelled to fight against ʿAlī Ber's best commander, the Sarakole (Soninke) Muḥammad Toure who won a victory (12 April 1493) and took the name *Askia* (signifying *usurper* or *it is not he*). Muḥammad Askia (898/1493-934/1528) made the pilgrimage to Mecca (1497-8), and then extended and organized his conquests. He received a visit (907/1502-909/1504) from the reformer al-Maghīlī who had just had the Jewish colonies at Touat (Tuat) massacred.

The 16th century represents the great period of the empire of Gao. The *Ta'rīkh al-Fattāsh* enumerates 7626 houses, which represents a large town. Leo Africanus, who probably visited Gao at the beginning of the 16th century, related: "Gao is a very large city without walls ..., the greater part of the houses are ugly in appearance; however, there are some quite handsome and commodious buildings in which the king lives with his court". In 999/1591, the army of the pasha Djawdhar captured Gao. But, accustomed to the splendours of Morocco, Djawdhar was disappointed: "the head donkey-driver's house in Marrākush is better than the Askia's palace" (*Ta'rīkh al-Sūdān*, 221).

But dependence on Morocco was soon no more than nominal. In any case, it merely took the form of plundering the educated and bourgeois classes, which explains the utter collapse of Islamic culture. After 1021/1612, the pashas commanding the Moroccan army no longer came from Morocco, but were appointed on the spot by the soldiers. The *Arma*, half-breed descendants of Moroccans, had difficulty in fighting against the Tuareg who occupied Gao for the first time in 1091/1680, but were driven from it in 1099/1688 by the pasha Manṣūr Seneber, who however left no further garrisons there.

Thereafter, decline set in, and in 1184/1770 Gao, following Timbuctoo, was under Tuareg control.

At the time of Barth's visit in 1854, Gao was no more than a wretched village with from three to four hundred huts, where only a single partly ruined monument was to be seen, the tomb of the great Askia Muḥammad. Although they reached Timbuctoo in 1893, the French military authorities established a base there only in 1899 (Lt.-Col. Klobb). On their arrival, the French found merely a small group of *sharīfs* called *Sherifikalo* in the neighbourhood of the Askia tomb.

The peace brought by French rule permitted the intermingling of the various races which nevertheless retained some degree of specialization, with Songhai farmers, Arma artisans, Moorish shopkeepers, Hausa traders and Bambara fishermen and tailors.

GARDEN [see bustān].

GARDĪZ, town of modern Afghanistan, headquarters of Paktiya Province (originally called 'The Southern Province'), situated 65 km. east of Ghaznī in the direct line, though further by road, in 69° 6′ E. 33° 36′ N. Gardīz stands on the route from Ghaznī towards the Kurram Valley, which there joins the route passing south-eastwards from Kābul through the Logar Valley. The town stands at an altitude of 2289 metres amid extensive orchards in the Zurmatt plain, surrounded except to the south-west by substantial mountains. It is dominated by an artificial fortress-mound, the Bālā Ḥiṣār, which is crowned by an elegant fortress apparently dating from the 19th century. Within these fortifications are contained a barracks, and a *ziyārat* which occupies the remains of an ancient mud-brick bastion. Local tradition attributes the foundation of the city to a certain Zamar, who is apparently not otherwise documented. None the less, the discovery in 1947 at Mir Zakah, 53 km. east-north-east of the town, of a sacred spring containing an important treasure of Indo-Bactrian and Indo-Scythian coins, suggests that Gardīz was a place of consequence already in the second century B.C. Preserved at Kābul is an image of the elephant-headed god Gaṇeśa, bearing a Sanskrit inscription of the eighth year of the Hūna king Khingāla (Khingila). The image is reputed to have been brought to Kābul from Gardīz, and this if true would attest the importance of the place in the 6th century A.D. According to the *Ta'rīkh-i Sīstān* (p. 24) Gardīz was founded (or re-founded) by the Khāridjī leader Ḥamza b. ʿAbd Allāh in about 181/797. The connexion of the Kharidjīs with this town is confirmed in the *Ḥudūd al-ʿālam*, but the later history of its Khāridjī *amīrs* is little known. A bilingual Arabic-Sanskrit inscription from the Tochi Valley now in the Peshawar Museum dated 243/857 contains the words *fī barr*[i] *ʿUmān* 'in the land of ʿUmān', which appears to refer to the well-known Khāridjī connexions beyond the Persian Gulf. The ruler's name has not been read, but the early date suggests that he must have been one of the princes of Gardīz. The historian Gardīzī [*q.v.*] (*Zayn al-akhbār*, ed. Nazim, 11) reports an attack by the Ṣaffārid Yaʿḳūb b. al-Layth on the *amīr* of Gardīz, Abū Manṣūr Aflaḥ b. Muḥammad b. Khāḳān in 256/869. In 364/974 Bilgetegin, one of the predecessors of Maḥmūd of Ghaznī, died whilst he was undertaking a siege of Gardīz. However, the town soon fell into the hands of the Ghaznawids, for during the reign of Sebüktigīn, in 385/995 according to Barthold, the former was housing political prisoners in the fortress of Gardīz. With the loss of its independence, the historical importance of the town began to diminish. During the Mongol invasion it was the scene of a counter-attack by the Sultan Djalāl al-Dīn upon the Mongol vanguard. The Emperor Bābur, in his Memoirs, mentions it as a strong fortress, and the scene of a skirmish with the 'ʿAbd al-Raḥmān Afghans'. Modern research has devoted little attention to Gardīz, and it is remarkable that its earlier rulers are apparently unknown to numismatics.

Bibliography: R. Curiel and D. Schlumberger, *Le trésor de Mir Zakah près de Gardēz*, in *Trésors monétaires d'Afghanistan* (Mémoires de la Délégation archéologique Française en Afghanistan, Tome XIV), Paris 1953, 67-99; D. C. (A. D. H. Bivar)

GARDĪZĪ, Abū Saʿīd ʿAbd al-Ḥayy b. al-Ḍaḥḥāk b. Maḥmūd, Persian historian who flourished in the middle of the 5th/11th century. Nothing is known of his life. His *nisba* shows that he came from Gardīz [*q.v.*]; since he says that he received information about Indian festivals from al-Bīrūnī [*q.v.*], he may have been his pupil. His work, entitled *Zayn al-akhbār*, was written in the reign of the Ghaznawid Sultan ʿAbd al-Rashīd (440/1049-443/1052). It contains a history of the pre-Islamic kings of Persia, of Muḥammad and the Caliphs to the year 423/1032, and a detailed history of Khurāsān from the Arab conquest to 432/1041: no sources are named, but for the history of Khurāsān Gardīzī must have been mainly following al-Sallāmī [*q.v.*]; the work includes also a valuable chapter on the Turks, based on the works of Ibn Khurradādhbih, al-Djayhānī and Ibn al-Muḳaffaʿ [*qq.v.*] (ed. with Russian tr. by W. Barthold, in *Otčet o poezdke v Srednuyu Aziyu* (Zap. Imp. Akad. Nauk po Ist.-Phil. Otd., i, no. 4), St Petersburg 1897, 78 ff., and with Hungarian tr. by G. Kuun in *Keleti Kútfök*, 1898, 5 ff. and *KS*, 1903, 17 ff.), a chapter on India (see E. Sachau, *Alberuni's India*, London 1888, ii, 360, 397 and V. Minorsky, *Gardīzī on India*, in *BSOAS*, xii (1948), 625-40), and essays on Greek sciences, chronology, the religious festivals of various peoples, and genealogy. Only two incomplete manuscripts are known: Bodleian, Ouseley 240, dated 1196/1782, which is a transcript of Cambridge, King's College 213, dated (?)930/1524. The contents, so far as they survive, are listed by E. Sachau and H. Ethé (*Catalogue* .... *Bodleian Library*, i, 9 ff.). Historical sections on the Ṭāhirids, Ṣaffārids, Sāmānids and Ghaznawids have been edited by Muhammad Nazim, *Kitab Zainu 'l-akhbar*, Berlin-London 1928 (E. G. Browne Memorial Series, i).

GARĔBĔG [see ʿīd and indonesia—v].

GARMSĪR [see ḳīshlaḳ].

GARSĪF (in the Marīnid period *Agarsīf* occurs quite as frequently; the occlusive Berber *g* is some times transcribed in Arabic characters as *djīm*, sometimes as *kāf*, each distinguished by three diacritical points), the Guercif of French maps, a small place in eastern Morocco 60 km. east of Taza, in the middle of the immense Tāfrāṭa steppe. It is situated on the spit of land between the Mulullū and Moulouya rivers at their confluence; hence its name (Berber *ger-* "between" and *āsīf* "river").

Marmol wished to identify Guercif with Ptolemy's *Galapha*; but this is scarcely likely, since the Greek geographer clearly put the latter place east of Molo-

chat (= Moulouya): Tāwrīrt seems a more probable identification.

Guercif was founded towards the middle of the 3rd/9th century by the Banū Abi 'l-ʿĀfiya, one of the tribes of the Miknāsa, a Berber people who led a nomadic life in the Moulouya valley. It became the centre of the lands of Mūsā b. Abi 'l-ʿĀfiya (d. 327/938) and then of his sons who were renowned for their wars with the Idrīsids and Fāṭimids.

Its commercial and strategic importance was due to its situation at the intersection of two important routes, one from Fez to Tlemcen, the other from Sidjilmāsa to Melilla. In the middle of the 5th/11th century al-Bakrī described it as an important village with a considerable population (*ḳarya ʿāmira*). But after being captured and destroyed by the Almoravid Yūsuf b. Tāshfīn in 473/1080 it lost its former importance; and al-Idrīsī (middle of the 5th/11th century) did not know it.

At the beginning of the 7th/13th century, the site of Guercif was frequented by the Banū Marīn, nomadic Berber tribes belonging to the Zanāta group. In summer they came down from the high plateaus of the pre-Saharan zone and spent the summer in the lower Moulouya valley. It was at Guercif that they stored their stocks of grain; it was also there that, at the approach of autumn, their tribes met before returning to their grazing-lands in the Sahara. In 610/1213, taking advantage of the enfeebled state into which the Almohad empire had fallen as a result of the disaster at al-ʿUḳāb, the Banū Marīn settled down along the lower Moulouya and occupied Guercif. It was there that, in 646/1248, they lay in wait for the Almohad army in its retreat from Tlemcen to Fez, and then defeated and routed it. In about 1275 the Marīnids became masters of the whole of Morocco. However, on the eastern borders of their empire the Zayyānid kings of Tlemcen constituted a dangerous enemy. Along with the neighbouring localities of Tāwrīrt and Dubdū [*q.v.*] Guercif formed a march (*thaghr*), barring access to the interior of Morocco. In 721/1321 the Marīnid Abū Saʿīd had the walls rebuilt. Later, after a revolt by the inhabitants, Guercif was sacked and part of the fortifications were destroyed by Abū ʿInān.

After his death (759/1358) Guercif, together with the fortified castle of Murāda (15 km. to the north-west, on the Moulouya) became a fief of the celebrated Wanzammār b. ʿArīf, chief of the Suwayd Arabs, who was in command of all the Bedouin tribes supporting the Marīnids, and the mentor of the kings of that dynasty. Numerous attacks were made against it by Abū Ḥammū, king of Tlemcen, and the two fortified places were on several occasions captured and sacked.

Later, Guercif lost its military importance when the boundary between Morocco and Turkish Algeria was moved east of Oujda; the Saʿdids and ʿAlawids preferred Tāwrīrt.

From 1912 Guercif was occupied by France and acquired a measure of importance through being at the head of the railway from Oujda. After the line had been extended, first to Taza, then to Fez, the village declined rapidly. With Msoun, it is one of the two centres of the Hawwāra, an important tribe who move with their flocks to summer pasturages and who devote themselves to sheep-rearing.

Bibliography: Bakrī, index; Ibn Khaldūn, *Histoire des Berbères*, index; Leo Africanus, ed. Schefer, ii, 329, tr. Epaulard, 299. (G. S. Colin)

GASPRALI (GASPRINSKI), ISMĀʿĪL, prominent ideological writer of the Turks, more particularly of the Russian Turks, was born in 1851 in the village of Avčī, near Baghčesarāy. His father, Muṣṭafā Agha, was one of the notables of the village of Gaspra, between Yalta and Alupka (whence their family name Gasprali, later Gasprinski), and a graduate of the Military Lycée in Odessa. At the time of the Battle of Sevastopol in 1854 Muṣṭafā Agha settled in Baghčesarāy and sent his son Ismāʿīl first to the Zindjirli Medrese in Baghčesarāy and later, at the age of ten, to the Simferopol Gymnasium. Two years later Ismāʿīl went to the Voronezh Military Lycée and was then transferred to the Moscow Military Lycée. Together with Muṣṭafā Mīrzā Davidovič, a Lithuanian Tatar in origin, he attracted the attention of their principal teacher, Ivan Katkov, the famous Pan-Slavist and editor of the newspaper *Moskovskiya Vedomosti*, who invited them every week to his house. At the time of the rebellion in Crete in 1867 the hostility which Katkov showed toward Turkey produced a reaction in these two youths, and they went to Odessa with the intention of serving in Crete as volunteers on the Turkish side. As they had no passports, however, they were arrested and sent back to their homes in the Crimea. Ismāʿīl Bey was appointed a teacher in Russian, the study of which was compulsory, in the Zindjirli Medrese in Baghčesarāy. He constantly thought of going to Turkey and becoming an officer; and when he discovered that it was necessary to learn French to do this, he learned French during his four-year appointment at Baghčesarāy. He had, in fact, acquired some knowledge of this language while at the Military Lycée in Moscow. In 1871 he resolved to go to Istanbul; but, seeking to perfect his French, went by way of Vienna to Paris. The results of his observations in Paris were reflected in works which he later published in Russia—especially in his work named *Rūsyā Islāmlīghī* ('*The Muslim Community in Russia*')—and also in a work named *Avrūpā medeniyetine bir naẓar-ī müvāzene* ('*A balanced view of European civilization*') which he wrote while still in Paris.

While in Paris he earned his living by working as at ranslator in an advertizing agency. Since his aim was to go to Turkey, he did not mix much with the Young Ottoman circles in Paris. Finally in 1874 he went to Istanbul and stayed with his paternal uncle, Süleymān Efendi, who had settled there earlier. He made great efforts to enter the Turkish War College, but when the Russian Ambassador Ignatiev learned of this he brought influence to bear on the Grand Vizier Maḥmūd Nedīm Pasha and prevented it. After vainly waiting a year, Ismāʿīl returned to the Crimea. While in Istanbul he published non-political articles describing Eastern life for some Russian newspapers appearing in St. Petersburg and Moscow.

Between the years 1874 and 1878 he became familiar with the village life of the Crimean Turks, and described this period of his life in his story *Gün Doghdu*, published in 1906. In this he refers to himself under the name "Dāniyāl Bey". While becoming familiar with the needs of his nation, with education and village life, this Dāniyāl Bey sees the vital need of bringing out a newspaper and making his nation aware of the world. In 1878 Ismāʿīl Bey was elected mayor of Baghčesarāy, and in 1879 he applied to the Czar's government for permission to bring out a newspaper, but was refused. He thereupon wrote in the Russian-language newspaper *Tavrida*, published in Simferopol, serious political articles pertaining to the Muslims of the Russia Empire. He also published

occasional collections of articles: *Tunguč* (lithograph, Simferopol); *Shefeḳ* and *Laṭā'if* (Ünsizādeler Press, Tiflis); and, later, *Ay*, *Yildiz* and *Günesh*. These writings were mostly in the Crimean dialect. In the next year (1882) Ismā'īl Bey expanded a little the articles he had published in Russian in the newspaper *Tavrida* and published them in the form of a fifty-four page work with the title *Russkoye Musulmanstvo* ('*Russian Islam*'). This work was a pioneer work relative to the political and cultural problems of the Muslim subject-peoples of the Russian Empire. Although Ismā'īl Bey presented himself in this work as a loyal Russian subject, even speaking approvingly of the salvation of the Russians from Tatar domintion, Russian circles believed this to be a device and regarded this work with suspicion. In it he considered the "Turco-Tatars" under Russian rule as a single Russian Muslim community and showed the road by which they might join Western civilization. In the pamphlets which he published in Turkish he pointed out that if the Turco-Tatar group were to remain dispersed the result would be calamitous: he tried to explain that the sole road of salvation for them was to work together to join the new Western civilization by means of their own languages. In the year 1883 he received permission to publish a newspaper named *Terdjümān*. The Russian title of the newspaper was *Perevodčik*; and in the first issues the Russian-language section was more important. It explained that it was to perform the role of translator in the matter of spreading Western civilization among the Russian Muslim community. The Turkish-language section gradually expanded and became more serious and later, in 1890, *Terdjümān* became "the national newspaper concerning politics, education, and literature". After 1905, it took the name *Terdjümān-i Aḥwāl-i Zamān*, and at the head of the newspaper was the slogan: "Unity in language, work, and thought". Finally the part in Russian was abandoned altogether, and the newspaper became the interpreter of the thoughts and aims of the Muslim community in the Russian Empire. All the Turks living in the regions of Kazan, the Caucasus, Turkistan, and Siberia recognized this newspaper as being the disseminator of their national ideas. The deep influence of this newspaper on Turkish intellectuals may be judged from the first novel in the Tatar language, entitled *Molla Ḥusām al-Dīn* by Mūsā Aḳyegitzāde, published in 1886, from the speeches and gifts of the delegates who came from every part of the Russian Empire on the occasion of the twenty-fifth anniversary of the appearance of *Terdjümān* in 1908, and from the increased numbers of newspapers that year.

Ismā'īl Bey married Zehrā Khanïm, a member of the Aḳčura (Akčurin) manufacturing family, one of the noble Kazan families. Through this marriage his ties with the Kazan Tatars became close. He was in constant touch with Azerbaijan Turkish writers, Ḥasan bek Melikov, Ünsizāde, Topčïbashï and others. Muṣṭafā Davidovič, the Lithuanian Muslim who had studied with him at the Moscow Military Lycée, settled in Baghčesarāy, where he was mayor for twenty years, helping Ismā'īl Bey in all his enterprises. The work with which Ismā'īl Bey was most occupied was to create modern primary schools for Russian Muslims and to publish textbooks for these. He also wanted to ensure modern methods of instruction by opening teachers' courses in Baghčesarāy and other places, and to assure the opening of this type of school throughout the Muslim community of Russia. He himself visited every part of that community, including Tashkent, Bukhārā, and Siberia. He set up and printed personally on his own press *Khwādje-i ṣibyān*, *Ma'lūmāt-i nāfi'a* and other works which he brought out for the primary schools. Together with his wife, Zehrā Khanïm, and the mayor, Muṣṭafā Davidovič, he opened a handicrafts institute for girls on the twenty-fifth anniversary of the appearance of *Terdjümān*, an idea which spread to other provinces as well. He brought out the first magazine for women, entitled *'Ālem-i niswān*, and placed his daughter Shefīḳa at the head of it. He also published a work concerning women's rights, entitled *Ḳadïnlar ülkesi*. Inspired by Shams al-Dīn Sāmī's *Ḳāmūs al-a'lām*, he began to publish an encyclopaedia for Russian Muslims, but was unable to complete it. He became occupied with problems of language and literature. After the 1905 Revolution he planned a programme especially designed to deal with the problems of instruction and "literary language". It envisaged that in the first three years of primary school instruction would be carried out in the local Turkish dialects; afterwards, the "common literary language" would become the general language of instruction. His original idea of the "common literary language" was some addition of Ottoman to a language which was mainly Tatar; but the Ottoman influence increased under the influence of those who were working with him, and the result was a simple Ottoman which could be understood by the Muslims of Russia. National Turkish literature, according to Ismā'īl Bey, would consist of novels which would reflect the life of the regions in which the Turks lived and which would inculcate in them new thoughts and ideals. The supplements named *Ḍamīme-i Terdjümān*, which he published as additions to *Terdjümān* in the years 1892-4, and his novel *Dār al-Rāḥat Müslümānlarï* are important in this respect. In language, Ismā'īl Bey earnestly opposed the domination of Arabic and Persian in Ottoman and also the tendency among the Kazan Tatars to take words from Russian, and he put forward the idea of drawing on popular literature for the literary language. His stories *Arslan Ḳïẓ* and *Güldjemāl Bikeč* telling of the 18th century Chinese occupation of Kāshghar, and his writings entitled *Baghčesarāydan Tashkende*, which included the memoirs of his travels, were serialized in many issues of the *Ḍamīme*. In 1893 he published stories about Baghdād Khātūn [*q.v.*], who played an important role in the history of the Ilkhānids. He also published an expanded version of the treatise *Türklerde 'ilim ve funūn* of Bursalï Ṭāhir, publishing some of it—the discussions of Sa'd al-Dīn Taftāzānī, for example—in the *Ḍamīme*.

At first Ismā'īl Bey valued Islam as being useful in preserving for the Turks their national identities but, aside from the "pocket Ḳur'ān", he did not devote much space to religious publications. After the 1905 Revolution he saw the adverse results of Socialism and Communism, which were beginning to appear in those years in Kazan and Baku, and became frightened of those movements, especially in the face of publications which, opposing the separate political institutions of the Russian Muslims, claimed allegiance solely to the Russian socialist parties, and which made haphazard efforts to impose Russian as the literary language. In the series of articles which he published in *Terdjümān* under the title "*Ishtirākiyyūn*", he moved noticeably to the right and began to think of bringing about a cultural unity among Islamic nations. With this aim in mind he wanted to convene a general Muslim

congress in Egypt in 1907, and, having gone there himself, even began to publish an Arabic newspaper named *Al-Nahḍa* with ʿAbd Allāh Taymas. He also made a journey to India to further this endeavour; but when these efforts did not give the results he had hoped for, he resumed his old activities in Baghčesarāy.

Among the other publications of Ismāʿīl Bey are the *Mebādiʾ-i temeddün-i Islāmiyyān-i Rūs*, published in 1901, and the twenty-page work *Rūs ve Sharḳ anlashmasī*, published in Russian (*Russko-vostočnoye soglashenye*) in 1896. Ismāʿīl Bey, having seen the positive results of his efforts, fought in the last years of his life against the excessive bias which viewed Westernization as a form of spiritual suicide for Turks and other Muslims in Russia. Ismāʿīl Bey, carried away with new hopes at the time of the beginning of the First World War, died on 11 September 1914, in his house in Baghčesarāy and was buried there. His son and daughters carried on for a period after his death the publication of the newspaper *Terdjümān* which had continued for thirty-one years.

Bibliography: The biography of Ismāʿīl Bey has been written by Yusuf Akçura in *Türk Yılı*, 1928, 338-46. Cafer Seydahmet also published a fairly large work entitled *Gaspralı Ismail Bey* in 1934. A complete set of *Terdjümān* is preserved in the Leningrad Public Library; outside Russia, some copies of this newspaper may be found in the Helsinki University Library, the Inkilap Library in Istanbul, the British Museum, the Ankara National Library, and in various private libraries. The Centre Russe de l'École Pratique des Hautes Études in the Sorbonne is now collecting microfilms of all the years of publication of this newspaper. (Z. V. Togan)

GATE, GATEWAY [see bāb].

GAUR [see lakhnāwtī].

GÂVUR [see kāfir].

GĀWĀN, MAḤMŪD [see maḥmūd gāwān].

GĀWILGAŔH, in the histories also Gāwīl, Gāwīlgaŕh, a fortress "of almost matchless strength" (Abu 'l-Faḍl, *Āʾīn-i Akbarī*, Eng. tr. Jarrett, ii, 237) in Berār, Central India, lat. 21° 20′ N., long. 77° 18′ E., seven *kos* (about 25 km.) north-west of Eličpur (Iličpur [*q.v.*]). According to Firishta the fortress was built by Aḥmad Shāh Walī [see bahmanīs] in 829/1425-6; but from its name it appears to have been a former stronghold of the Gāwalī chiefs, and it is more likely that Aḥmad Shāh merely strengthened the fortifications during the year he spent at Eličpur in the consolidation of his northern frontiers before proceeding to his attacks on the Vidjayanagar kingdom on his south. A Brāhman captured in an earlier Vidjayanagar campaign who was received into Islam under the name Fatḥ Allāh was sent for service under the governor of Berār; later, under the Bahmanī minister Maḥmūd Gāwān, this Fatḥ Allāh, with the title ʿImād al-Mulk, was himself made governor in 876/1471. The increasing loss of power by the Bahmanī sultans to their Barīdī ministers in the capital, Bīdar, had led Fatḥ Allāh to prepare against possible opposition by strengthening the defences of Gāwilgaŕh in 893/1488 (inscription on Fatḥ Darwāza), from which time also dates the rebuilding of the Djāmiʿ Masdjid "with the old stones" and Fatḥ Allāh's use of the Vidjayanagar emblems on the gates (see below, Monuments). Two years later Fatḥ Allāh assumed independence [see ʿimād shāhī] with headquarters at Eličpur and the fortresses of Gāwilgaŕh and Narnālā as his strongholds, and these remained ʿImād Shāhī possessions until the extinction of the dynasty in 982/1574 when Berār became a province of the Niẓām Shāhī [*q.v.*] dynasty of Aḥmadnagar. After the cession of Berār to the Mughals in 1004/1596 Gāwilgaŕh was still held by *amīr*s of Aḥmadnagar, and Akbar's son Prince Murād, reluctant to besiege it, made Bālāpur his principal stronghold; two years later, however, it fell to Abu 'l-Faḍl. The description of the *sūba* of Berār was added to the *Āʾīn-i Akbarī* immediately after the cession of Berār, obviously before the Mughals had had time to reorganize the province, and thus the place given to Gāwīl as the largest and richest of the thirteen *sarkār*s must reflect the pre-Mughal administrative division. This division was substantially unchanged in the great scheme of reorganization of the Deccan provinces under Awrangzīb as viceroy in 1046/1636. In the Marāṭhā troubles in the Deccan in the early 12th/18th century the province was held together by Āṣaf Djāh Niẓām al-Mulk, but on his absence in Dihlī in 1151/1738 Berār with its great fortresses of Gāwilgaŕh and Narnālā was taken by the Bhonsla Marāṭhās. In 1803 Gāwilgaŕh fell to Wellesley, but was retained by the Bhonsla in the treaty which followed; in 1822, however, it was restored to the Niẓām. In 1853 it was assigned to the East India Company, and the fortifications were dismantled five years later.

Monuments. Much of the walling of the fort still remains, with gates and bastions. One fine tall bastion on the west wall, the Burdj-i Bahrām, gives its date of repair (985/1577 by chronogram) by Bahrām Khān, governor of Gāwilgaŕh under the Niẓām Shāhīs at a time when it was expected that Akbar's forces would advance. The Dihlī Darwāza is most interesting for its sculptured symbols: the lions with elephants beneath their paws, level with the top of the arch, are devices of the Gond kings, but the two-headed eagles holding elephants in each beak, which lie over the lions, are the *ganda-bherunda* symbols of the Vidjayanagar empire; this is the northern gate, which leads to the outer fort built in the 12th/18th century by the Marāṭhā Bhonslas of Nāgpur. The Djāmiʿ Masdjid stands on the highest point within the fort, and in its present form doubtless represents the rebuilding by Fatḥ Allāh recorded in the inscription on the Fatḥ (south-west) Darwāza; the western *līwān* was three bays deep behind the seven-arched façade, on which was some blue tile decoration in addition to fine stonework, and bore a rich *čhadjdjā* on carved brackets; the *miḥrāb* wall has fallen. The most interesting feature, characteristic of the local style, is the pylon standing at each end of the *līwān* façade, which bears not a *mīnār* as in the other Deccan styles but a square *čhatrī* with projecting eaves, rich brackets, and *djālī* screens in each side. A large walled *ṣaḥn* stands in front of the *līwān*, with a great eastern gateway. To the north-east of the great mosque stands a smaller unnamed mosque, similar but supported on octagonal columns. Few other buildings remain.

Bibliography: Almost the sole source for the history of Berār is Muḥammad Ḳāsim b. Hindū Shāh Firishta, *Gulshan-i Ibrāhīmī*, *passim*. See also T. W. Haig, *Inscriptions of Berar*, in *EIM*, 1907-8, 10-21; *Archaeological Survey of India, Annual Report 1920-1*, Plate VIIIa; *ibid.*, *Report 1922-3*, 56-8 and Plate XXIc; *ibid.*, *Report 1926-7*, 36-8; *Dispatches of . . . the Duke of Wellington . . .*, London 1838, ii, 560 ff. (J. Burton-Page)

GAWR [see lakhnāwtī].

GAWUR [see kāfir].

GĀWUR DAGHLARÎ, literally "the mountains of the unbelievers", the name given by the Turks to several mountainous massifs, notably to (1) that where the Euphrates has its source to the north of Erzurum, and especially to (2) the Amanos, an arc of mountains which forms the south-western extremity of the eastern Taurus. It consists of a vast anticline rising to 7,411 ft./2,262 metres, orientated north-north-east/south-south-west, changing to north-east/south-west in its southern section after the col of Belen, with a structure of palaeozoic strata, accompanied by chalk and greenstone, which forms a fragment of the north-western edge of the Syrian plateau, rising, then descending below the level of it along the great fracture of the lower Orontes. The Amanos is very well watered and on it at a high level is found an isolated region of humid forest, where *Fagus orientalis* mingles with evergreen oaks and *Pinus nigra*, with peaty soils. The population consists of Turks and ʿAlawīs. Apart from the permanent villages (which are found up to a height of about 3,000 ft./900 metres) there are *yayla*s (Belen, Sorkun) which in summer are occupied especially by the inhabitants of the coastal towns and villages. The official Turkish name is now Amanos. For the other names, which are very varied, see Streck, art. ALMA DAGH, in *EI*[1]. The most important is the Arabic: Djabal al-Ukkām = Turkish Kara dağ, "the black mountain", very probably the origin of the name Akma daghî used by several European travellers, owing to a confusion with Alma (or Elma) daghî.

Bibliography: see in general *İA*, s.v. Gâvur dağları (B. Darkot); on (2) for structure: E. de Vaumas, *Structure et morphologie du Proche-Orient*, in *Revue de Géographie Alpine*, 1961, 469-72; idem, *L'Amanus et le Dj. Ansarieh, étude morphométrique*, in *Revue de Géographie Alpine*, 1954, 633-64; for vegetation: H. Louis, *Das natürliche Pflanzenkleid Anatoliens*, Stuttgart 1939, 98; among the travel accounts see also Th. Kotschy, *Reise in den Amanus*, in *Petermanns Mitteilungen*, 1863, 340 ff. (X. DE PLANHOL)

GAYKHĀTŪ, Īlkhān [*q.v.*] from 1291 until 1295, the younger son of Abaḳa, was raised to power by the leaders of his country after the death of his brother Arghūn [*q.v.*]. He ascended the throne on 23 Radjab 690/22 July 1291, when he also adopted the Buddhist (Tibetan) names Rin-čhen rDo-rje "precious jewel"; he was, however, in no way hostile to the Muslims, and he was the only Īlkhān who did not carry out any executions. Earlier, as an official in Asia Minor, he had been renowned for his unbounded liberality; now he squandered the State Treasury within a short space of time, devoted himself to drunkenness and pederasty and—apart from an attack against Asia Minor in 1292—paid no attention to State affairs. In order to prevent financial disaster, Ṣadr al-Dīn Aḥmad b. ʿAbd al-Razzāḳ Khālidī (also called Zandjānī), his Finance Minister (*Ṣāḥib dīwān*) since 1292, advised him to introduce paper money on the Chinese pattern; the name *čāw* (from Chinese *tsʿau*) was retained in Persia [see ČAO]. Since the population was not familiar with this type of currency and since it was not covered by treasury resources, the State finances collapsed in the autumn of 1294 (under circumstances described most dramatically by Rashīd al-Dīn). Gaykhātū was consequently deserted by his *amīr*s and troops when Prince Bāydū of Baghdād advanced against him. Three days after his defeat at Hamadān (3 Djumādā I 694/21 March 1295) he was taken prisoner and executed. The paper money was again withdrawn.—After six months of civil war, his nephew Ghāzān [*q.v.*] succeeded him.

GEBER [see DJĀBIR].

GEBZE (formerly *Geğbize*, *Geğibüze*), the ancient Dakibyza, a small town in north-west Anatolia, 40° 48′ N., 29° 26′ E., situated in undulating country not far from the mouth of the Gulf of Izmit in the Sea of Marmara; at one time a *ḳaḍā* in the *liwā* (*sandjaḳ*) of Ḳodja Eli (chief town Iznikmid/Izmit, *Eyālet* of Djezāʾir [islands]), later (in the 19th century) in the *vilâyet* of Istanbul, today in the *vilâyet* of Kocaeli; population, in 1960, of the town 8,018, and of the *ḳaḍā* 30,442.

At the time of Orkhan Geğibüze seems to have been already occupied by the Ottomans; in any case, the town was from the time of Meḥemmed I certainly Ottoman. The *ḳāḍī* of the town, by name Faḍl Allāh, who played a certain part under Meḥemmed I, was a descendant of Aḳča Ḳodja, the conqueror of this region under Orkhan.

Buildings in the town that are worthy of note are the Orkhan-Djāmiʿ, a simple construction with a single cupola and an entrance hall, and, in particular, the mosque of Čoban Muṣṭafā Pasha with *türbe*, *ʿimāret* and *medrese*. The builder was an official from Egypt who had the decoration of his mosque carried out in the Egyptian Mamlūk style (925/1519, but according to Ewliyā Čelebi 930/1525-6). The *türbe* is in the high Ottoman style.

The plain near Gebze bears the name Tekfūr Čayrî or Khunkar Čayrî in ancient sources. It was a halting-place on the route followed by the imperial armies on their campaigns in the east and south-east. It was here that sultan Meḥemmed II died on 4 Rabīʿ I 886/3 May 1481. Not far from Gebze can be seen the grave of Hannibal who met his death nearby, at Libyssa, when his protector king Prusias of Bithynia was planning to hand him over to the Romans.—Beyond Gebze, on the shores of the Gulf of Izmit, stand the picturesque ruins of a castle, Eskiḥiṣār.

Gebze is situated on the great military and caravan routes that lead across Anatolia from Istanbul to the east and south-east. The imperial armies followed these along the north shore of the gulf as far as Izmit, where they curve southwards towards Iznik; the pilgrim caravans, on the other hand, continued south-eastwards from Gebze for about 10 km. to Dil Iskelesi, a port situated at the narrowest point of the gulf, where they crossed to Hersek in order to go on to Iznik. Since 1873 Gebze has been connected with Ḥaydarpasha by a railway.

GEDI or **GEDE,** a late mediaeval Arab-African town, built on a coral ridge four miles from the sea and ten miles south of Malindi on the Kenya Coast of East Africa. It is shown on sixteenth century Portuguese maps as Quelman, a rendering for the Swahili Kilimani, meaning "on the hill". Gedi is a Galla word meaning "precious", the name which the site acquired in the seventeenth century.

The ruins, excavated during the years 1948-58 and maintained as a National Park, cover an area of forty-five acres, and are surrounded by a town wall. They include a *dj̲āmiʿ*, seven other mosques, a palace, a number of private houses and three pillar tombs. The excavations have produced large quantities of Chinese porcelain and Islamic faïence, and also glass beads.

The single dated monument is a tomb with date 802/1399-1400. The original settlement may go back to the 7th/13th century, but the majority of the structures remaining are unlikely to be older than the 9th/15th century. It may have been destroyed in the early 10th/16th century, but was re-occupied at the end of the century. In the early 17th century it was abandoned as a result of the southern advance of the Galla from Somalia.

J.*, xxxvii (1957); idem, *The Tomb of the Dated Inscription at Gedi*, Roy. Anthropological Inst. Occ. Paper 14, 1959; idem, *Gedi, the Palace*, The Hague 1963. (J. S. Kirkman)

GEDIK [see ṢINF].

GEDIZ ČAYÎ, a river in west Anatolia, the former Hermos; it takes its modern name from Gediz, a place (39° 3′ N., 29° 29′ E.) near its source. It rises on Murat Dağı (2312 m.) and in its upper reaches flows through the Lydian mountains.

In its central section the Gediz Čay traverses the broad plain which is bounded on the south by Mount Sipylos (Manisa Daği), at the foot of which lies the town of Manisa [*q.v.*] (formerly Mag̲h̲nisa, the ancient Magnesia). Further along on the southern extremity of this plain lie the towns of Turgutlu (Kasaba) and Salıhlı which have been connected with Izmir by a railway since 1863. In this plain are also to be found the remains of the ancient Sardes, near Sartköy.

After forcing its way through a ridge of mountains the Gediz Čay flows past Menemen in the plain near to its mouth in the Gulf of Smyrna (Izmir). And indeed in ancient times and in the Middle Ages the river-mouth was dangerously near to the old port of Smyrna. Since the land round the river-mouth was continually being enlarged by deposits from the river and Izmir was in danger of being cut off from the sea, in 1886 the mouth was removed above Menemen, so that it now flows into the more open part of the Gulf. (Fr. Taeschner)

GEG [see ARNAWUTLUḲ].

GELIBOLU, in English Gallipoli, town on the European coast and at the Marmara end of the Dardanelles (Turkish: Čanaḳ-ḳalʿe Bog̲h̲azî [*q.v.*]), in the Ottoman period a naval base and the seat of the ḳapudan-pas̲h̲a [*q.v.*], now an *ilçe* belonging to the *il* of Çanakkale; the name derives from the Greek Kalliopolis, Kallioupolis, also Kallipolis (for the various forms see E. Oberhummer, in Pauly-Wissowa, x, 1659-60).

When, towards 700/1300, the Turks of Anatolia first concerned themselves with the town, it was one of the greatest and strongest Byzantine fortresses in Thrace (P. Lemerle, *L'émirat d'Aydin, Byzance et l'Occident*, Paris 1957, 69-70), the base, towards 720/1320, for all the crews of the Byzantine fleet. In the winter of 704/1304-5, the Catalans in the service of Byzantium were stationed there, and when their leader Roger de Flor was killed in the following year they seized and fortified this strategic position (L. Nicolau d'Olwer, *L'expansió de Catalunya en la Mediterrània oriental*, Barcelona 1926, *passim*). Some 500 Turks, led by Ed̲j̲e K̲h̲alīl, came from Ḳarasî [*q.v.*] to join them. When these Turks, returning from the raids they had made with the Catalans in Thrace, wished to cross back from the Gallipoli peninsula into Anatolia, they were attacked by the Byzantines (709/1309) and obliged to stay there two years longer (P. Wittek, *Yazîjiog̲h̲lu ʿAlī on the Christian Turks of the Dobruja*, in *BSOAS*, xiv (1952), 639-68, at 662-7). In 731/1331 or 732/1332 Umur Beg [*q.v.*] of Aydîn made an unsuccessful attack on Gelibolu with his fleet, but was able to seize and sack the fortress of 'Lazgöl' (Lazu ?) (Lemerle, *op. cit.*, 70). Enwerī (*Düstūrnāme*, ed. M. K̲h̲alīl [Yınanç], Istanbul 1928, 25-6; ed. and tr. I. Mélikoff-Sayar, *Le Destan d'Umur Pacha*, Paris 1954, 62) states explicitly that this fortress was on the harbour, but Lemerle thinks it might be a small fort in the neighbourhood.

The Ottomans, under the command of Süleymān Pas̲h̲a [*q.v.*] and as allies of John Cantacuzenus, in 753/1352 occupied the fortress of Tzympe (in the Ottoman registers and in the *waḳfiye* of Süleymān Pas̲h̲a, 'D̲j̲inbi'), north of Gelibolu, and, occupying the whole of the hinterland, cut Gelibolu off from Thrace. In order to maintain pressure on the strong fortress, the Ottomans made an *ud̲j̲* here, under the command of Yaʿḳūb Ed̲j̲e and G̲h̲āzī Fāḍil (ʿAs̲h̲iḳpas̲h̲azāde, ed. Giese, 45; tr. R. Kreutel, 77). While the Byzantines were trying to buy them off (Cantacuzenus, Bonn ed., iii, 278-81; Fr. tr. Cousin, *Hist. de Constantinople*, viii, Paris 1774, 230-1), a violent earthquake, on 7 Ṣafar 755/2 March 1354, destroyed the walls of Gelibolu (*Düstūrnāme*, 82; P. Wittek, in *Byzantion*, xii (1937), 320; P. Charanis, in *Byzantion*, xiii (1938), 347-9; idem in *Byzantinoslavica*, xvi (1955), 113-7). The Ottomans immediately occupied Gelibolu, and other neighbouring fortresses whose walls had been thrown down. Süleymān Pas̲h̲a crossed from Anatolia, repaired the citadel, and settled there Turks brought over from Anatolia (Cantacuzenus, *loc. cit.*). This occupation of Gelibolu made it possible for the Ottomans to install themselves in Europe: Süleymān Pas̲h̲a made Gelibolu the base for the conquests in Thrace (ʿAs̲h̲iḳpas̲h̲azāde, ed. Giese, 47; tr. Kreutel, 80), and Gelibolu became the first centre of the *Pas̲h̲a sand̲j̲ag̲h̲î* in Rumeli. After Süleymān's death (758/1357), he was succeeded at Gelibolu by Prince Murād (later Murād I): the *taḥrīr*-registers mention his palace at Gelibolu (Tapu def. no. 67 [see *Bibl.*], 428). On 15 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 767/23 August 1366, the Duke of Savoy, Amadeo VI, attacked Gelibolu with a Crusader fleet and captured it. The Crusaders handed it over to the Byzantines on 15 S̲h̲awwāl 768/14 June 1367 (N. Jorga, *GOR*, i, 226; idem, *Philippe de Mézières*, Paris 1896, 334-5). In a speech made in the summer of 773/1371, N. Cydones was urging that Gelibolu must not be returned to the Turks (*Oratio de reddenda Gallipoli*, in Migne, *PG*, cliv, 1009; R. J. Loenertz, *Les recueils de lettres de Demetrius Cydones*, Vatican 1947, 112), but finally

Andronicus IV yielded to the Sultan's insistence and returned the fortress to the Ottomans on 14 Rabīʿ II 778/3 September 1376 (G. Ostrogorsky, *History of the Byzantine State*, tr. J. Hussey, Oxford 1956, 483).

During the reign of Murād I Gelibolu was the regular crossing-point for Ottoman armies, and became also the principal base for the Ottoman fleet. In 791/1389 Murād I transported the army to Rumeli under the protection of the fleet stationed here, and left Yanīdj̲ Beg at Gelibolu to protect his line of communications with Anatolia (Nes̲h̲rī, ed. Taeschner, i, 68). In 790/1388 Venice had sent her fleet to make a threatening demonstration off Gelibolu (N. Iorga, *La politique vénitienne dans les eaux de la Mer Noire*, in *Bull. de la sec. d'histoire de l'Acad. Roumaine*, no. 2-4 (1914), 14-5). Indeed, during the 8th/14th and 9th/15th centuries, to blockade the Strait and destroy the Ottoman fleet at Gelibolu were always two main objectives in the plans of the Crusaders (such a plan had been mooted even before 767/1366: O. Halecki, *Un empereur de Byzance à Rome*, Warsaw 1930, 63-144; for the plan of 798/1396 see M. Silberschmidt, *Das orientalische Problem zur Zeit der Entstehung des türkischen Reiches*, Berlin 1923, 145; for the plan of 848/1444 see H. Inalcık, *Fatih devri*..., i, Ankara 1954, 12, 30); G. de Lannoy wrote in 825/1422: "Et qui auroit dit chastel et port les Turcs n'auroient nul sçeur passage plus de l'un à l'autre et seroit leur pays qu'ilz ont en Grèce comme perdu et deffect" (*Voyages et ambassades de Messire G. de Lannoy 1399-1450*, Mons 1840, 117-8).

Bāyezīd I well understood the vital importance of Gelibolu for his imperial policy. He rebuilt completely the ruined citadel and fortified with a strong tower the harbour, which was capable of accommodating large galleys. His aim was to control the Strait (Ducas, ed. Grecu, 41 = Turkish tr. by V. Mirmiroğlu, Istanbul 1956, 9; Silberschmidt, 115). In 806/1403, Clavijo saw a great arsenal and docks at Gelibolu and reported that the fortress was full of troops and that there were about 40 ships in the harbour; between the inner and the outer basins there was a bridge with a three-storey tower (presumably that which Ducas mentions) at one end of it to protect the inner harbour. G. de Lannoy, who visited Gelibolu in 825/1422, speaks of a "ville très grande" outside the wall; there was a citadel with eight towers, and a fine large square tower to protect the harbour. The harbour was protected on the seaward side by a wall (for a 16th century engraving see F. Kurtoğlu, *Gelibolu ve yöresi tarihi*, Istanbul 1938, 17), with a small gateway in it by which galleys entered the harbour; there was no chain. In the Gelibolu *defter* of 879/1475 (Cevdet O. 79 [see *Bibl.*], 154-62) this tower, 'Birg̲h̲oz-i Gelibolu' (Greek πύργος, reproduced with various spellings in Turkish), is mentioned separately from 'Ḳalʿe-i Gelibolu': it had a garrison of 42, 9 of them *tīmār*-holders and 33 on stipend (*ʿulūfeli*). The upper part of this tower was destroyed in 1920 (Kurtoğlu, *op. cit.*, pl. 32). In 1069/1659 Ewliyā Čelebi described Gelibolu as a strong fortress, hexagonal in shape, with 70 (?) towers of hewn stone (*Seyāḥatnāme*, v, 315).

By thus making Gelibolu into a powerful fortress and naval base and by strengthening the fleet (Silberschmidt, 159), Bāyezīd I hoped to establish complete control over the Strait, and compel foreign ships to halt off Gelibolu, undergo inspection and pay a due for the right of passage. But Venice decided to fight for the right of free passage through the Strait. In alliance with Hungary she planned to destroy both the naval base and the Ottoman fleet (Silberschmidt, *op. cit.*, 111-2, 145; F. Thiriet, *Régestes des délibérations du Sénat de Venise concernant la Romanie*, i, Paris 1958, docs. 881, 896). The Ottoman fleet was not in fact very powerful (Bāyezīd had 17 galleys); it would emerge from the shelter of the strong base at Gelibolu and attack Venetian territory and merchant ships in the Aegean, but only when the Venetian fleet was not at sea; and it could not prevent Marshal Boucicaut from sailing past Gelibolu in 1399, although it seriously hindered Venetian attempts to bring relief to Constantinople, then under investment by Bāyezīd (see Thiriet, *op. cit.*, ii, Paris 1959, doc. 1023). After the Ottoman defeat at Ankara (804/1402), the Venetian fleet was ordered to seize Gelibolu (Thiriet, *op. cit.*, ii, docs. 1070, 1078), but the plan was not carried out, and the Ottoman threat continued in the reign of Emīr Süleymān, so that Venice was obliged to send warships to protect her merchant ships in their passage through the Strait (Thiriet, *op. cit.*, ii, docs. 1283, 1431). In 812/1409 Emīr Süleymān built another fortress (the so-called 'Emīr Süleymān Burḳozī') at Lapseki on the Anatolian coast, primarily as a protection against his rivals in Anatolia. While the struggle among the Ottoman princes continued, Venice encouraged the Byzantines in their hopes of recovering Gelibolu (Thiriet, *op. cit.*, ii, doc. 1415) and came to an agreement with Mūsā Čelebi by which he granted her free passage through the Strait. In 817/1414 she was unable to renew this agreement with Meḥemmed I (Thiriet, *op. cit.*, ii, doc. 1538), so that Gelibolu became the main object of dispute in Venetian-Ottoman relations. When, in 818/1415, an Ottoman fleet based on Gelibolu attacked Venetian territory in the Aegean, the Venetian fleet, under Pietro Loredano, appeared off Gelibolu and, when the Ottoman fleet rashly emerged from the well-protected harbour, destroyed it (1 Rabīʿ II 819/29 May 1416; see Jorga, *GOR*, i, 372). Maḳrīzī (*al-Sulūk li-maʿrifat duwal al-mulūk*, MS. Istanbul, Fatih 4380, fol. 66a) mentions that the Venetians captured 12 ships (Venetian sources say 14, Ducas says 27) and killed 4000 Muslims. In spite of this victory, Venice was unable to achieve complete control of the Strait and remained obliged to convoy her merchant ships (see Thiriet, *op. cit.*, ii, docs. 1667, 1708, 1749, 1783, 1896). During the peace negotiations of 822/1419 Venice endeavoured above all to obtain freedom of passage past Gelibolu and exemption from tolls (Thiriet, ii, doc. 1750). In the Venetian-Ottoman war of 826/1423-834/1430 (for possession of Salonica/Selānik [*q.v.*]), Venetian attacks were mainly aimed at Gelibolu (see Thiriet, ii, docs. 1931, 1949; Jorga, *GOR*, i, 401; idem, *Notes et extraits* ..., 2nd series, i, Paris 1899, 374). When her merchant ships were seized, the Venetian fleet under Silvestro Mocenigo launched an attack on the inner harbour: Mocenigo broke through the 'palissade' of the bridge and penetrated the inner harbour, but was obliged to retire (Iorga, *Notes et extraits* ..., i, 505-6; *Tarihî takvimler*, ed. O. Turan, Ankara 1954, 26); the aim of the Venetians was to destroy once more the Ottoman fleet (Thiriet, ii, docs. 2189, 2212; Jorga, *GOR*, i, 409). At about this time the Emīr Süleymān Burḳozī at Lapseki was destroyed on the orders of Murād II, for fear that it should be occupied by the enemy (*Tarihî takvimler*, 26; according to Ducas, 149 = Turkish tr., 67, this occurred in 1417).

In 824/1421 the authorities at Constantinople hoped that the struggle for the throne between Murād II and his uncle Muṣṭāfā would enable them

to recover Gelibolu by negotiation, but neither of the rivals was willing to relinquish control of this important base (see *IA*, art. Murad II, 599-601). In the reign of Meḥemmed II, when the long war with Venice broke out (winter of 868/1463-4), two strong fortresses, named Kilīd al-baḥr and Ḳalʿe-i sulṭāniyye, were built on opposite sides of the Strait towards the Aegean end, and an arsenal and harbour were constructed in Istanbul at Ḳadirgha Limanî (see *IA*, art. Mehmed II, 523); nevertheless Gelibolu remained the principal harbour and naval base of the Empire (Iorga, *Notes et extraits*, iv, Bucharest 1915, 339) until superseded by the great arsenal and base constructed on the Golden Horn in 921/1515 (F. Kurtoğlu, *op. cit.*, 57-8). When the Venetian fleet attempted to gain control of the Strait during the war for Crete, two more fortresses were built at the Aegean entrance to the Strait, Seddü 'l-baḥr (Sadd al-baḥr) and Ḳum-ḳalʿesi, also called Khāḳāniyye and Sulṭāniyye (Naʿīmā, iv, 420; Silāḥdār, i, 168). By this time, according to Ewliyā (v, 317), Gelibolu had lost its former military importance and counted as '*ič-el*'.

When the Ottomans first occupied Gelibolu, the upper class of the Greek population fled by ship to Constantinople (*Düstūrnāme*, 83). Those that remained settled in the area known as Eski Gelibolu and the nearby village of Ḳozlu-Dere. The *taḥrīr*-register of 879/1474 (Cevdet O 79, see *Bibl.*) shows the Greeks of Gelibolu organized into two principal *djemāʿat*, the *kürekčiyān* (rowers) and the *zenberekčiyān* (arbalesters); of the latter, a group of 35 served in the citadel and a group of 22 in the 'tower'. A further 95 Greeks were organized into various *djemāʿat*s for ship-building and repair, and for the maintenance of the base. Some of these were paid a daily wage, others were recompensed by exemption from *kharādj*, *ispendje* and *ʿawāriḍ-i dīwāniyye*. The register of 925/1519, however, shows that all the members of these *djemāʿat*s were by then Muslims. It shows the Greeks living in six *maḥalle*s, and records also 80 Greeks as '*khaymāne*', organized in five *djemāʿat*s: these are presumably migrants who had come to settle at Gelibolu.

After the occupation, Gelibolu developed as a typical Ottoman city. The population at various dates, as revealed by the *taḥrīr*-registers, was:

879/1474	39 *maḥalle*s comprising 1095 households (*khāne*)
924/1518	55 *maḥalle*s comprising 1305 households
1009/1600	58 *maḥalle*s (four of them Christian and one Jewish).

Each *maḥalle* was usually named after the founder of the mosque which served it: most of these founders belonged to the military or to the theological class (*e.g.*, Ḥasan Pasha, Ṣarudja Pasha, Aḥmed Beg, Ḳapudan, Ḥādjdjī Dizdār, Shaykh Meḥmed, ʿAlī Faḳīh, Mütewellī Khoshḳadem, etc.); some were merchants (Kečedji Ḥādjdjī, Weled-i Ḳîlabdandjî, Khʷādja Ḥamza); the founder of the Ḥādjdjī Khiḍr mosque (Tapu def. 67, 509) was presumably the Ḥādjdjī Khiḍr who had accompanied Süleymān Pasha into Rumeli. According to Ewliyā Čelebi there were in his day some 300 two-storeyed houses in the fortress; outside the walls the city, with most of the principal buildings to the west, contained seven or eight hundred fine two-storeyed houses. The population in the middle years of the 19th century was 12-17,000 (N. V. Michoff, *La population de la Turquie et de la Bulgarie*, iv, Sofia 1935, 58, 94, 112, 128).

According to a register (Tapu def. 12), at the end of the reign of Meḥemmed II the principal buildings were: (1) the mosque of Ghāzī Khudāwendgār (Murād I), also known as Eski Djāmiʿ, with a bath (*ḥammām*) and a shop (*dükkān*) among its *waḳf*-properties; (2) the *zāwiye* and mosque of Ḳaradja Beg, built by the close associate of Emīr Süleymān, who was killed with him (Hammer-Purgstall, i, 349; on his grave-stone at Gelibolu he is called Ghāzī Ḳaradja b. ʿAbd Allāh and the date of his death is given as first decade of Shawwāl 813/end of February 1411); (3) the *ʿimāret* (with inscription dated 840/1436) and *medrese* of Ṣarudja Pasha, who was *beglerbegi* of Rumeli until 840/1436, when he was dismissed and banished to Gelibolu (see H. Inalcık, *Fatih devri* ..., i, 86; Saʿd al-Dīn, i, 374): he appears as *sandjaḳ-begi* of Gelibolu until the winter of 847/1443; the *waḳf*-properties of his foundations were, at Gelibolu, a *bezzāzistān*, a *kārbānsarāy*, 96 shops, a bath and two abattoirs (see M. T. Gökbilgin, *Edirne ve Paşa Livâsı*, Istanbul 1952, 248); (4) the *zāwiye* and mosque of Khāṣṣ Aḥmed Beg (b. ʿAbd Allāh), an officer of Murād II; his *waḳfiye* (reproduced in M. T. Gölkbilgin, *op. cit.*, 257-61) is dated Shawwāl 863/August 1459; among the endowments he made are several shops and fields and a *kārbānsarāy* beside the quay at Gelibolu; for the property-grants (*temlīk*) made by Murād II there are deeds of confirmation (*muḳarrer-nāme*) issued by Meḥemmed II in 856/1452 and by Bāyezīd II in 886/1481; (5) the *medrese* of Balaban Pasha; the *waḳfiye* (Gökbilgin, *op. cit.*, 223), dated 846/1442, endows the *medrese* with a bath and some shops; (6) the *zāwiye* and *türbe* of Güyegü (Güvey = Dāmād) Sinān Pasha, the husband of Bāyezīd II's daughter ʿAyshe (ʿĀʾisha) Khatun; as *beglerbegi* of Anatolia he played a part in bringing Bāyezīd II to the throne; in 907/1501 he was *beglerbegi* of Rumeli, and from then until his death in 909/1503 was governor of Gelibolu and *Ḳapudan* (Saʿd al-Dīn, ii, 220-1); the *zāwiye*, of which the ruins survive, was built in 896/1491; the *türbe* was, in Ewliyā's day, a place of pilgrimage.

These and several other similar religious foundations, and the khans, markets, baths and shops, whose revenues supported them, promoted the development of Gelibolu as one of the chief cities of the Ottoman Empire. This development was most pronounced during the reign of Murād II, but important buildings were added in later years, such as the mosques of Mesīḥ Pasha [*q.v.*] and of Aḥmed Pasha (941/1534). Ewliyā Čelebi credits Gelibolu with 164 mosques, *zāwiye*s and *tekke*s, 14 *ʿimāret*s, 900 shops and 8 baths. The *tekke*s of Yazîdjîzāde Meḥmed [*q.v.*] and of the Mewlewī order (detailed description in Ewliyā, v, 318) were especially famous.

Gelibolu, known as 'Dar al-mudjāhidīn', remained the principal naval base and arsenal of the Empire until the 10th/16th century, so that a high proportion of its population consisted of fighting men. The register of 879/1474 shows the sailors organized in 4 *djemāʿat*s: captains (*reʾīs*) and *ʿazeb*s of (1) the galleys (*ḳadîrgha*), (2) the galleots (*galyata*), (3) the '*ḳayîḳ*s' (at this period a *ḳayîḳ* was a transport big enough to take 14 horses), and (4) the horse-transports (*at gemileri*). Each *djemāʿat* was divided (like the *djemāʿat*s of the Janissaries [see YENI ČERI]) into a number of *bölük*s [*q.v.*]. The *djemāʿat* of the galleys comprised 92 *bölük*s: the first, that of the *Ḳapudan*, contained also, in two separate *djemāʿat*, 7 *mehter* [see MIHTER] and 5 non-Muslim '*kümi*' (from Latin *comes*, Greek κόμης, officer in charge of the galley-slaves, see Tietze and Kahane, *The Lingua Franca in the*

Levant, Urbana 1958, no. 789; these were mostly non-Muslims, Greeks or Genoese); it was headed by the *ḳapudan* and a *ser-oda*, the rest being *ʿazeb*s, *i.e.*, seamen. Each of the other *bölük*s was similarly composed of a *reʾīs* (captain), a *ser-oda*, a *kümi*, and a number of *ʿazeb*s. The captains and *ʿazeb*s were all Muslims (a captain named 'Frenk Ilyās' is presumably a convert). The *djemāʿat* of the galleys comprised 1112 men, and the division into 92 *bölük*s shows that the strength of the fleet at that time was 92 galleys. There were 5 *bölük*s in the *djemāʿat* of the galleots (hence 5 in number) and 11 in that of the *ḳayïḳ*s. In the register of 925/1519 we find 93 *bölük*s in the *djemāʿat* of the galleys, and very little change in the organization. At the time of the Malta campaign of 973/1565, the construction of a new arsenal was begun (*Mühimme* register no. 5, p. 183; I. H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâti*, Ankara 1948, 395, n. 3).

Of the 59 captains making up the *djemāʿat* of horse-transports, nine were holders of *čiftlik*s [*q.v.*] in the neighbourhood, the rest drew stipends (*ʿulūfe*); they served only on campaigns. In 925/1519 they were all stipendiary, *i.e.*, more closely bound to the service of the state. 181 *khāne* (households) of *ʿazeb*s were registered as living in various *maḥalle*s of the town, liable to be called to serve when necessary. In the town and in the nearby Greek villages of Maydos and Kirte there were living Christian *kürekči*s (rowers) who served in the fleet in return for exemption from taxes.

Besides these naval crews, there were the garrisons of the citadel (*ḳalʿe*), consisting in 879/1474 of 56 men (27 with *tīmār*s, 29 with *ʿulūfe*), and of the 'tower', consisting of 42 men (9 with *tīmār*s, 33 with *ʿulūfe*). The *djemāʿat*s of Christians who rendered service as arbalesters or in the upkeep of these fortresses numbered 60-65 men.

The first *odjaḳ* of *ʿadjamī oghlan*s [*q.v.*] was established at Gelibolu. In the 10th/16th century they numbered between four and five hundred, and served on the transports plying between Gelibolu and Čardaḳ.

Particularly in the 9th/15th century, Gelibolu was the most important point on the great trade-route between Bursa (via Mikhālič—Bighā—Lapseki or Čardaḳ) and Rumeli (see H. Inalcık, in *Belleten*, xxiv/93 (1960), 55). From Gelibolu the Florentines carried the silk which they had bought in Bursa overland, via Edirne, Foča and Ragusa; at Gelibolu, Italian ships took on cotton and nut-gall (W. Heyd, *Hist. du commerce du Levant*, ii, Leipzig 1936, 300, 337, 665). The register of 879/1474 records five families of 'Franks' at Gelibolu, that of 925/1519, eight. At about this time 15 Jewish families had come from Istanbul to settle here as merchants. In the reign of Meḥemmed II there were also Venetian trading-houses (Heyd, *op. cit.*, ii, 328).

Before the capture of Constantinople, Gelibolu was one of the principal customs-houses of the Ottoman Empire. Under Meḥemmed II the *muḳāṭaʿa* ([*q.v.*] tax-farm) of the Gelibolu customs was included in that of the customs of Istanbul. The customs levied at all harbours from Edje-ovasï to Tekfur-daghï (Rodosto) were farmed out as a separate *muḳāṭaʿa*; in about 880/1475 the 'Gelibolu customs' brought in some 9000 gold ducats (about 400,000 *aḳča*s) a year (F. Babinger, *Die Aufzeichnungen des Genuesen Iacopo de Promontorio-de Campis* ..., Munich 1957 (*SBBayr.Ak.*, 1956/8), 63); in 1009/1600 it brought in 766,663 *aḳča*s (*Mufaṣṣal* register 141 [see *Bibl.*]); Ewliyā Čelebi (v, 316) gives a similar figure—700,000 *aḳča*s—for 1069/1658-9. But by this time the port was declining, and the French consulate there was closed in 1100/1689. Customs dues (for the rates see MAKS) were levied at Istanbul or Gelibolu on all cargoes, and it was also the practice that a 'gift' (*armaghan*) should be given to the *sandjaḳ-begi* and the *emīn* ([*q.v.*], 'intendant') (R. Anhegger and H. Inalcık, *Ḳānūnnāme-i sulṭānī ber mūceb-i ʿörf-i ʿOsmānī*, Ankara 1956, 48, 63, 79; cf. N. Beldiceanu, *Les actes des premiers sultans* ..., Paris-The Hague 1960, 112 ff, 133 ff., 151-2). Every foreign ship, after being inspected at Istanbul, was inspected again at Gelibolu before passing out into the Mediterranean and issued with an *idjāzet tedhkiresi* ('clearance'); in about 1091/1680 the charge for this '*idhn-i sefīne*' was about 100 *ḳurush*; the revenue from these charges amounted in 1009/1600 to 610,000 *aḳča*s. By article 27 of the French capitulation of 1153/1740, ships inspected at Istanbul were relieved from the obligation to be inspected again at Gelibolu.

Gelibolu served also as the principal control-point for traffic between Rumeli and Anatolia. A traveller going in either direction was obliged to obtain from the *ḳāḍī* of his starting-point a 'chit' (*tedhkire*) attesting the purpose of his journey and produce it to the authorities at Gelibolu. The '*pendjik resmi*' [see PENDJIK], levied on enslaved prisoners-of-war being transported from Rumeli to Anatolia, was collected at Gelibolu by the '*pendjik emīni*'. Gelibolu was also a centre for the slave-trade. Here too a tax of four *aḳča*s a head was levied on sheep and goats being taken from Rumeli to Anatolia; this tax brought in 66,499 *aḳča*s in 1009/1600. There was an additional levy of 80 *aḳča*s per thousand sheep, which was assigned to the *khāṣṣ* of the *sandjaḳ begi*.

The chief exports from Gelibolu were wheat (see A. Refik, *Onaltıncı asırda Istanbul hayatı*, Istanbul 1935, 82), cotton, fish, wine and arrack (idem, *Hicri onikinci asırda Istanbul hayatı*, Istanbul 1930, 119), bows and arrows, and naval stores such as cables and sails. In 1009/1600 the 'municipal' taxes, which were assigned to the *khāṣṣ* of the *sandjaḳ-begi*, amounted to 15,000 *aḳča*s from *iḥtisāb* [see ḤISBA] dues, 12,000 *aḳčas* from *niyābet* [*q.v.*] dues, and 3,500 *aḳčas* from the *shemʿkhāne* [see SHAMʿ].

Until 940/1533 Gelibolu was the chef-lieu of a *sandjaḳ* belonging to the *beglerbegilik* of Rumeli (see M. T. Gökbilgin, in *Belleten*, xx/78 (1956), 252). As commander of the fleet, the *sandjaḳ-begi* of Gelibolu held a position of especial eminence among the other *sandjaḳ-begi*s: his *khāṣṣ* approached in value the *khāṣṣ* of a *beglerbegi* (500,000 *aḳča*s early in the reign of Süleymān I, 605,000 later in that reign). The post of *sandjaḳ-begi* was often given to prominent statesmen—dismissed viziers or *beglerbegis*, or pashas with the rank of *beglerbegi*. When in 940/1533 Khayr al-Dīn Pasha [*q.v.*] ('Barbarossa') was appointed both *beglerbegi* of Algiers and Ḳapudan Pasha [*q.v.*], Gelibolu was incorporated in this *beglerbegilik*; later it became the chef-lieu of the *eyālet* of *Djazāʾir-i Baḥr-i Safīd* [*q.v.*], *i.e.*, the '*Pasha-sandjaghï*' of the Ḳapudan Pasha [see EYĀLET, SANDJAḲ]. According to the register of 1009/1600, the *nāḥiye*s of the *sandjaḳ* were: Gelibolu and Evreshe (together), Lemnos, Tashoz (Thasos), Mighalḳara (Malkara) and Harala (together), Abri, Keshan, Ipsala, Gümüldjine. In the time of ʿAyn-i ʿAlī (*Ḳawānīn*, Istanbul 1280, 20 = German tr. by P. A. von Tischendorf, *Das Lehnwesen* ..., Leipzig 1872, 70 f.) it contained 14 *zeʿāmet*s and 85 *tīmār*s, in the time of Ewliyā Čelebi (v, 316), 6 *zeʿāmet*s and 122 *tīmār*s.

During the confinement there of the pseudo-Messiah Shabbetay Ṣebi [*q.v.*] in 1666, Gelibolu briefly became a place of pilgrimage for his Jewish disciples.

By the new provincial law of 1281/1864, Gelibolu became a *sandjaḳ* (*liwā*ʾ) of the *wilāyet* of Edirne, containing in 1287/1870 six *ḳaḍā*s: Gelibolu, Sharköy, Firedjik, Keshan, Malḳara and Enoz (*Edirne sālnāmesi*, 1271). The *sandjaḳ* was later reduced in size, to comprise only the three *ḳaḍā*s of Keshan, Mürefte and Sharköy (*Edirne sālnāmesi*, 1309). The town is now the centre of an *ilçe*, population (1960) 12,945.

GENEALOGY [see NASAB].

GENEROSITY [see KARAM].

GENIE [see DJINN].

GENIL [see SHANĪL].

GENIZA, a Hebrew word of the same Persian origin as Arabic *djanāza*, designates a place where Hebrew writings were deposited in order to prevent the desecration of the name of God which might be found in them. As a term of scholarship, Geniza, or Cairo Geniza, refers to writings coming from the store-room of the "Synagogue of the Palestinians" in Fusṭāṭ [*q.v.*] and, to a small extent, from the cemetery al-Basātīn near that ancient city. When the synagogue was pulled down and rebuilt in 1889-90, a good deal of the manuscripts preserved in its Geniza were dispersed and acquired by various libraries in Europe and the United States, until, in 1897, Solomon Schechter brought the bulk of what remained to the University Library, Cambridge, England, where it forms the famous Taylor-Schechter Collection.

Naturally, it was mostly Hebrew literature which gained from these treasures. Paul E. Kahle's book with the somewhat misleading title *The Cairo Geniza* (second edition, New York 1960) deals exclusively with this aspect. For Islamic studies, it is mainly the documentary material, such as letters, accounts, court records, contracts etc., which is of immediate interest. Most of these documents come from Fāṭimid and Ayyūbid times; there is little from the Mamlūk period; but from the 10th/16th century onwards, the Geniza was again used somewhat more frequently, albeit in a sporadic way. This article is concerned with "the classical Geniza", the three hundred years between 354/965 and 663/1265 approximately.

The major part of the documentary material of the Cairo Geniza is written in Arabic language, though in Hebrew characters. Business letters were invariably and family letters generally written in Arabic, and the same applies to court records and other legal documents with the exception of writs of divorce, deeds of manumission and the formal—but not the substantial—parts of marriage contracts. Only subjects related to religion or the life of the Jewish community were largely, but by no means exclusively, transacted in Hebrew. As to the number of the Geniza documents preserved, if we disregard mere scraps and confine ourselves to complete pieces and fragments which are self-contained, meaningful units, we arrive at a total of about ten thousand items.

In addition to Egypt itself, Tunisia and Sicily are conspicuously represented in the Geniza. This has its reason in their prominence in Mediterranean trade during the first half of the 5th/11th century and the migration of many Maghribīs to Egypt in the second half (see S. D. Goitein, *La Tunisie du XI^e^ siècle à la lumière des documents de la Geniza du Caire*, in *Études d'Orientalisme . . . Lévi Provençal*, 1962, 559-79). Most of the Geniza letters dealing with the India trade come from the 6th/12th century, but here

again we find that the majority of the Mediterranean merchants active in South Arabia and India were Maghribīs (see idem, *Letters and documents on the India trade in medieval times*, in *IC*, xxvii (1963), 188-205). Spain is only sparsely represented during the 5th/11th century (see E. Ashtor, *Documentos españoles de la Genizah*, in *Sefarad*, xxiv (1964), 41-80), and somewhat more generously during the 6th/12th, but Spanish products loom large in the Geniza papers and so do persons called 'Andalusī', although many of these seem to have originated in countries other than Spain. There is much correspondence from Palestine and the cities on the coast of Lebanon and Syria, but very little from Damascus and other Syrian and Mesopotamian cities and next to nothing from Baghdād. On the other hand, thousands of responsa (*fatwā*s) and a number of letters of the heads of the two Jewish academies of Baghdād have been found in the Geniza. Most of them were addressed to places in Tunisia and Morocco, but were preserved in Fusṭaṭ, partly because they were copied there before being sent on to the West and partly because they were brought back by immigrants from the Maghrib. Still, the discrepancy between the abundance of official correspondence with Baghdād and the almost complete absence of business and private letters is not easily explained. A few Persian items (see D. S. Margoliouth, *A Jewish Persian law-report*, in *JQR* xi (1898-9), 671-5 (there are more)), and one or two beautifully written Arabic letters from Iran have also been found.

Material in Arabic characters also made its way into the Geniza, either because blank reverse sides of Arabic documents were used for Hebrew writings, or because the persons concerned were Jewish, or for no apparent reason. Much of this material is dispersed all over the various Geniza collections. In the Cambridge University Library some of it was put aside in boxes labelled 'Mohammedan', which is, however, somewhat inaccurate, since most of the documents contained in them concerned Jews. There are a number of pieces from the Fāṭimid chanceries (see *Bibl.*) as well as a variety of material on widely different topics: thus, two Christians lease from a Muslim two-thirds of his vegetable garden (the vegetables to be grown are specified) on the outskirts of Alexandria; an archer (*aḥad al-rumāt*) in prison requests his commander to work for his release; a *funduḳānī*, or proprietor of a caravanserai, undertakes to transport to the *ṣināʿa*, the customs station on the Nile at Fusṭāṭ, all consignments for which no customs had been paid, whether brought to his own *funduḳ* or to any other in the city; a tax-farmer makes a contract with a representative of the caliph al-Mustanṣir; the *al-sāda al-fuḳahā*ʾ are requested to give a *fatwā* in a disputed case of inheritance, etc. Jews also corresponded sometimes with each other in Arabic characters. When a schoolmaster writes a complaint to a father about his son in this way, he certainly did so because he did not want the boy, who thus far had learned only the Hebrew letters, to read it. When a scholar boasting of his Jewish learning asks a notable for financial help in a letter written in Arabic characters, he followed that course because he knew that the addressee was more fluent in Arabic than in Hebrew (there is an express statement to this effect). However, even a letter addressed to the Gaon, or head of the Jewish academy of Jerusalem, and dealing exclusively with communal affairs, is written in Arabic characters.

Research on the Geniza documents began immediately after their discovery in the eighteen-nineties. A survey of the widely scattered publications is contained in S. Shaked (see *Bibl.*). Jacob Mann's work, although intended to serve Jewish history, is important for Islamic studies as well, and so are the publications of S. Assaf and D. H. Baneth, which are, however, all in Hebrew. The importance of the Geniza documents for the economic, social and cultural history of mediaeval Islam, as well as for the history of the Arabic language, is being more and more recognized. Joshua Blau, *A Grammar of mediaeval Judaeo-Arabic*, Jerusalem 1961, is a mine of linguistic information, and, albeit in Hebrew, can be used with profit also by scholars not familiar with that language, since each paragraph has also a name in English and consists mainly of examples culled from the Geniza and similar sources. E. Ashtor is completing a book on prices in mediaeval Islam, based largely on the Geniza. N. Golb has prepared an edition of the magnificent series 18 J of the Taylor-Schechter Collection with an English translation and commentary. S. D. Goitein has written two volumes containing a general survey of the Geniza material under the title *A Mediterranean society: The Jewish communities of the Arab world as portrayed in the Cairo Geniza*, accompanied by a volume of selected translations in English, called *Readings in Mediterranean social history*. His collection of Geniza papers dealing with the India trade amounts now to 315 items. M. Michael is preparing an edition of letters emanating from or addressed to Nahray ben Nissim, a prominent Ḳayrawānī merchant scholar and public figure who was active in Egypt in the second half of the 5th/11th century. Muhammad El-Garh of Cairo University is preparing a selection in Arabic characters of Geniza documents written in Hebrew script.

The Geniza contains also a considerable number of fragments of Judaeo-Arabic literature (see, *e.g.*, the series of articles *The Arabic portion of the Cairo Genizah at Cambridge*, in *JQR*, xv-xvi (1902-4), by H. Hirschfeld), and some items from Islamic Arabic literature, which might not have been preserved otherwise, *e.g.*, a manual of correspondence prepared for Muhadhdhab al-Dawla ʿAlī b. Naṣr (cf. D. S. Margoliouth, *Eclipse*, Index 93), publ. by Richard Gottheil in *BIFAO*, xxxiv (1933), 103-28, under the title *Fragments from an Arabic Commonplace book*, or *A Muhammedan book of augury in Hebrew characters*, publ. I. Friedlaender, in *JQR*, xix (1907-8), 84-102. Cf. also H. Hirschfeld, *A Hebraeo-Sufic poem*, in *JAOS*, xlix (1929), 168-73, and the literature on the subject noted by S. M. Stern, in *JQR*, l (1960), 356, n. 21.

GERDEK RESMI [see ʿARŪS RESMI].

GERMIYĀN-OGHULLARÎ. Germiyān, at first the name of a Turkoman tribe, was afterwards applied to a family, then to an amīrate. Mentioned from the 6th/12th century in the history of the Anatolian Turks, the Germiyān appeared for the first time in 636-7/1239 in the reign of the Saldjūḳid Ghiyāth al-Dīn Kaykhusraw II; at this time the Germiyān Muẓaffar al-Dīn b. ʿAlī Shīr, installed in the region of Malaṭya, was sent at the head of a troop of Kurds and Germiyān against the Turkoman rebel Baba Isḥāḳ (cf. Ibn Bībī, ed. Houtsma, 229, 232). It was, however, in western Anatolia, in the region of Kütāhya, that the Germiyān were in 675-6/1277 when, under the leadership of Ḥusām al-Dīn b. ʿAlī Shīr, they took part in the punitive expedition against Djimrī and his ally Meḥmed the Ḳaramānid (cf. Ibn Bībī, 326-7, 332). After the execution of Ghiyāth al-Dīn Kaykhusraw III by the Mongols in 682/1283, and the accession of Masʿūd II, it seems that the Germiyān sought to break their bonds of vassalage towards the Saldjūḳids and to proclaim their independence. The downfall of Masʿūd, however, put an end to the hostilities between the Germiyān and the Saldjūḳids, as is revealed by an inscription in the mosque of Ḳîzîl Beg at Ankara, dated 699/1299, according to which Yaʿḳūb b. ʿAlī Shīr, whose possessions at that time extended up to this town, declared himself a vassal of ʿAlāʾ al-Dīn Kayḳobād III. This Yaʿḳūb b. ʿAlī Shīr was the founder of the amīrate of Germiyān, under the nominal suzerainty of the Saldjūḳ sultan and the Mongol Ilkhān; the breakdown of the central power was progressively to give him complete independence. According to al-ʿUmarī he was the most powerful of the Turkish amīrs; he led a princely life and exercised a suzerain's authority over the neighbouring amīrs, many of whom, such as his former *ṣubashî* Meḥmed Beg Aydîn-oghlu, had at first waged war in his name before becoming independent; the Byzantine emperor paid him an annual tribute of 100,000 pieces of gold. The amīr of Germiyān, whose capital was Kütāhya, occupied the greater part of the ancient Phrygia, according to Gregoras (i, 214); his sovereignty extended to the region of Ṭoñuzlu-Lādīḳ, which was governed by a member of his family, and to that of Ḳaraḥiṣār, where his son-in-law was amīr; Pachymeres (ii, 426, 433, 435) attributes to him possession of Tripoli on the Menderes, and al-ʿUmarī that of Gümüsh-Shār (not to be confused with the town of the same name in northern Cappadocia) where there were important silver and alum mines, and of Sivri-Köy, a rice-producing region; the conquest of the regions of Sīmav and Kula, regained by the Catalans and then reconquered by his son Meḥmed, is attested by the inscription of the *madrasa* of Yaʿḳūb II at Kütāhya; Yaʿḳūb b. ʿAlī Shīr also coveted Philadelphia (Alashehir), to which he laid siege but which was liberated by the Catalans in the spring of 703/1304 (cf. Pachymeres, ii, 421, 427-8); we learn, however, from an inscription in the Wādjidiyya *madrasa* in Kütāhya that in 714/1314 the town of Alashehir, the only Byzantine possession in Turkish territory, had been forced by him to pay the *djizya*. In the reign of Yaʿḳūb I the amīrate of Germiyān was prosperous; it was famous for its breeding of horses, the best in all Anatolia, and for its cloths and brocades; thanks to the Menderes it maintained an active commerce, transporting goods by this waterway as far as the Aegean Sea ports. The date of the death of Yaʿḳūb I is not known; it took place after 720/1320. His successor was his son Meḥmed Beg, on whom there is little information; a court romance composed for his elder son, Süleymān Shāh, relates that Meḥmed Beg was surnamed Čakhshadān (cf. *Khurshīdnāme*, B.M. ms. Or. 11408, fol. 14 v°). We also know, from the inscription of his grandson mentioned above, that he reconquered the regions of Sīmav and Kula which the Catalans had retaken from his father. The date of his death is not known; but, from the inscriptions of his son Süleymān Shāh, it is known that the latter was reigning by 764/1363. In Süleymān's time the Germiyān amīrate was no longer the prosperous state described by al-ʿUmarī: separated from the sea by the coastal principalities founded by his former vassals, Aydîn-oghlu, Ṣarukhan, Ḳaresi, the Germiyān amīrate was reduced to the situation of an inland state confined by the states of two rival powers, the Ḳaramān-oghlu and the ʿOthmānlî. Before the increasing threats towards him by the amīr of Ḳaramān, Süleymān Shāh decided, forgetting the hostilities which had opposed his family to that of the ʿOthmānlî, to align himself with the latter and to consolidate their friendly relations by matrimonial ties: in 783/1381 he gave his daughter Dewlet Khātūn in marriage to the prince Yîldîrîm Bāyazīd, with the towns of Kütāhya, Sīmav, Egrigöz (Emed) and Ṭawshanlî as dowry, and himself withdrew to Kula (cf. ʿĀshîḳpashazāde in *Osmanlı tarihleri*, i, 129-31; Neshrī, Türk Tarih Kurumu ed., i, 203-9). Süleymān Shāh was a generous and benevolent prince and a patron of men of letters; many works were written for him: at his request Baba ʿAlī b. Ṣāliḥ b. Ḳuṭb al-Dīn translated the *Ḳābūs-nāme* and the *Marzbān-nāme* from Persian; Shaykh-oghlu Muṣṭafā, who filled the offices of *nishāndjî*, *defterdār* and treasurer at his court, composed for him a work in prose entitled *Kanz al-kubarāʾ* and, in particular, the *Khurshīdnāme*, a verse romance

manuscripts of which exist in Istanbul, London and Paris, and which is a valuable source of information; from this work we learn that Süleymān died in 789/1387. His son Yaʿḳūb II, called Yaʿḳūb Čelebi in his inscriptions, succeeded him. In 791/1389, on the death of Murād I, Yaʿḳūb Čelebi, in connivance with the Anatolian amīrs, turned against the sultan Bāyazīd I, and tried to regain the towns given to his sister as dowry; but Bāyazīd I, free from the affairs of Rumeli, chastised the Anatolian begs in 792/1390, imprisoned Yaʿḳūb in the fortress of Ipsala, and annexed the whole of the Germiyān amīrate (cf. ʿĀshīḳpashazāde, 139-40; Neshrī, i, 315). After nine years in captivity Yaʿḳūb succeeded in making his escape and, in disguise, reached Syria by sea, where he joined Tīmūrleng. During the battle of Ankara he contributed to the capture of Bāyazīd I by pointing him out to Tīmūrleng on the battlefield (cf. ʿĀshīḳpashazāde, 142-4; Neshrī, i, 343, 353). After his victory Tīmūr restored the Germiyān amīrate to Yaʿḳūb, together with the towns which had been given to his sister as dowry (804/1402). In the dynastic struggle which involved the sons of Bāyazīd I, Yaʿḳūb aligned himself with his sister's son Meḥmed Čelebi. Robbed once more of his principality in 814/1411 by the amīr of Ḳaramān, who took the opportunity in this troubled period to enlarge his territories, he had his amīrate restored to him, after two and a half years of exile, by Meḥemmed I, who had triumphed first over his brothers and then over the amīr of Ḳaramān. Yaʿḳūb II was thereafter able to reign under the protection of the ʿOthmānlīs. In 824/1421, however, on the death of Meḥemmed I, he upheld, with the amīr of Ḳaramān, the claim to the throne of the young brother of Murād II, Küčük Muṣṭafā (cf. ʿĀshīḳpashazāde, 160-1; Neshrī, ii, 567-71). After the tragic end of this unfortunate prince relations between Yaʿḳūb II and Murād II became more and more friendly. In 831/1428 the amīr of Germiyān, at the end of his life and without male heirs, decided to bequeath by will his principality to Murād II; on this occasion the sultan offered him a sumptuous reception at Edirne. Yaʿḳūb II was to die a year after this event, at Kütāhya, and, in accordance with his last wishes, Murād II annexed the principality of Germiyān (cf. ʿĀshīḳpashazāde, 171-2; Neshrī, ii, 605-7). Like his father, Yaʿḳūb II had been a learned prince, renowned for his generosity, and a great patron of men of letters; his court was adorned with scholars like Isḥāḳ Faḳīh, and with poets like Aḥmedī, his brother Ḥamzawī, Aḥmed-i Dāʿī, and above all Shaykhī, known as *Shaykh al-shuʿarāʾ*, who in his *ḳaṣīda*s celebrated the virtues of his patron. All these poets and scholars were to move on to the court of the ʿOthmānlī sultans and there contribute to the development of classical poetry.

GERONA [see DJARUNDA].

GEVHERĪ, MEḤMED, Turkish folk poet, a contemporary of ʿĀshiḳ ʿÖmer with whom he shared a wide-spread and lasting popularity among both the educated classes and the ordinary people. He flourished during the second half of the 11th/17th and the first half of the 12th/18th century. Very little is known about his life. From scanty and scattered information in available sources and in his own works, we learn that he probably came from the Crimea or had some connection with that area, he travelled in Syria, Arabia and the Balkans, was at one time secretary to Meḥmed Baḥrī Pasha (d. 1112/1700), wrote at Eger an elegy on the death of Aḥmed Agha, an officer of the Fort and grandfather of Ibrāhīm Naʿīm al-Dīn of Temeshvar, author of the *Ḥadīḳat al-shühedā*, who gives us this information, and wrote a poem in honour of Selīm Giray I, Khān of the Crimea, on the occasion of his visit to Istanbul in 1100/1689.

Apart from his *koshma*s, *türkü*s, *türkmani*s, etc., in the popular tradition, Gevherī also wrote, like most folk poets, many poems in the classical style. He was better educated than most folk-poets. This made him a better imitator of the classical form and style, but at the same time adversely influenced the language of his more spontaneous folk-poems, where the use of the vocabulary and mannerisms of "upper class literature" is sometimes overdone. In his poems in the *dīwān* tradition he is repetitive and achieves nothing but an awkward and uninspired imitation of classical poets, particularly of Fuḍūlī. In his poems in the folk tradition, which revolve on themes of love, separation, nostalgia and epic exploits, he proves to be a most original and spontaneous poet, one of the strongest representatives of the ʿĀshiḳ [*q.v.*] literature. Some of his poems have been set to music and are still sung.

Gevherī seems to have died after 1150/1737 (see H. Dizdaroğlu in *Fikirler*, no. 262 and 263, Izmir 1944).

AL-**GHĀB**, name of the foundered trough, about 200 m./650 ft. above sea-level, crossed by the Orontes half-way along its course, between the plain of Ḥamāt and the narrow valley of Djisr al-Shughr [*q.v.*], characterized by unhealthy swampland. The faulted rock ledges of the Djabal Anṣāriyya in the west and the Djabal Zāwiya in the east stand out in sharp relief against the absolute flatness of the sedimentary levels where the river stretches out and receives yet more waters rising from many springs. Thus is presented the strange landscape which continues into northern Syria the series of tectonic rift-valleys marking the western edge of the Arabian plateau and which is situated exactly on the axis of the plains of al-Buḳayʿa [*q.v.*] and al-Biḳāʿ [*q.v.*].

This region, today semi-desert, was remarkably prosperous in antiquity, when the Seleucids raised here their horses and elephants near the city of Apamea which they had founded, an important town and the centre of their military power. There is no doubt that at that time a drainage system was in existence, about which we have little information but which continued to function well into the Middle Ages. Arabic geographers of the time of the Crusades did in fact know about the two lakes of Afāmiya [*q.v.*], which must have collected the overflow of stagnant water, and a certain amount of activity seems to have continued in this valley, which the Franks occupied until its reconquest by Nūr al-Dīn in 544/1149, at the time of the victory of Inab. It is known also that up to the Ottoman

period a north-south traffic was carried on, as is borne out by the ruins of Ottoman caravanserais, one of them that of Ḳalʿat al-Muḍīḳ, near the site of the ancient Apamea/Afāmiya. The gradual spread of reed-covered lagoons and the ravages of malaria explain the increasing abandonment of this area, where there soon remained no more than some few poor villages, almost surrounded by lakes, living by buffalo-breeding and chiefly by fishing for catfish, carried on every winter on a very big scale. However, important modern land improvement works have already been started; besides the control of the course of the Orontes by damming, they provide for the drainage of the swamps and the installation of a new system of irrigation.

(J. Sourdel-Thomine)

GHĀBA, forest. The territory of Islam, lying for the most part within the arid and semi-arid districts of the Old World, includes comparatively few areas of dense and continuous forest. The monsoonal forests of parts of East Pakistan, Malaysia and Indonesia are of course exceptional. The hazel woods of the coastal mountains of north-east Turkey and the adjacent parts of the Caucasus, the forests of plane and alder which overlook the Caspian shores of Iran, and the stands of deodar and pine in the district of Chitral in north-west Pakistan all occupy those limited areas of the Middle East where the rainfall is copious and virtually perennial. But there is abundant evidence that forests were much more extensive in south-west Asia during the Ice Ages, when conditions were both cooler and wetter than at present, and these regions formed a refuge for the flora of the glaciated parts of Central and Northern Europe. After the retreat of the ice, this flora recolonized Europe and within the Middle East, which was becoming progressively drier, withdrew to those mountains and seaward slopes where the drought of summer was less extreme. The rich variety of species which can still be found even in small and isolated areas of woodland, such as those on the slopes of Mount Erciyas [see ERDJIYAS DAGHĪ], bears witness to the more extensive nature of the forests of earlier Quaternary times, of which these are the few remaining outliers.

In view of the anxiety of many modern Islamic states to replant their forests, it is of practical as well as academic interest to know when and why the natural vegetation deteriorated, and in particular to understand how far this degeneration has been due to natural causes and how far to human intervention. The Chicago expedition to Kurdistan, for example, has made abundantly clear the degree to which the vegetation has declined since neolithic times. But from the accounts of classical authors, notably Strabo, it would seem that the forests of the Eastern Mediterranean lands and the Middle East were as recently as 2000 years ago much more abundant and widespread than at present. There is evidence from the study of mountain moraines that there has been no significant decline in rainfall in this region since that time, and the main cause of the devastation of the forests would appear to have been their reckless exploitation during Hellenistic times for ships' timbers, resin, and fuel for smelting metals. The rapid rate of silting of many harbours of the Levant between the third century B.C. and the third century A.D. was a direct result of the widespread destruction of forests and loosening of topsoil at this time. By comparison with the devastation wrought during this period, the injury done to the natural vegetation by the nomadic incursions of the Middle Ages was much less serious. Yürük, Kurdish and Arab tribes have been guilty of tapping pines for turpentine, cutting wood for charcoal, lopping branches for fodder, digging up roots for tannin, and allowing their animals to crop the seedlings. The general effect of their economy, however, has been not so much to destroy trees as to prevent their regeneration. But there are signs of serious encroachment on the few remaining forests of the Middle East during the twentieth century. Timber has often been cut for railway fuel, and the woods about Shaubak in Jordan, for example, were felled to feed the engines of the Hejaz line. The soil scientist, John Nowland, has remarked the recession of the forests of Pamphylia since Tchihatcheff described them in the last century, and Professor Orhan Yamanlar has lately studied in detail the encroachment of farmers and herdsmen on woodland in various parts of Turkey, a consequence, doubtless, of growing numbers and pressure on the means of subsistence. Replanting has as yet been only local and experimental, and may in turn give rise to new problems, as when the afforestation of high valleys in Cyprus led to the desiccation of wells downstream.

(W. C. Brice)

GHADAMÈS (Ghdāms), a little oasis in the Lybian Sahara, situated approximately on the 30th parallel and the 10th meridian east of Greenwich (at almost the same longitude as Ghāt, Gabès and Tunis). It lies at an altitude of 350 m. between the great oriental erg and the arid plateaus of al-Ḥamāda al-Ḥamrāʾ, almost at the meeting-place of the Libyan, Algerian and Tunisian frontiers. It owes its very ancient existence and its continuance to the artesian spring called ʿAyn al-Fres (*faras*) (temperature 30° C., 2-3 grammes per litre of sodium and magnesium chloride), and also to its situation, almost equidistant from Gabès, Tripoli, Ouargla, the heart of the Fezzān and Ghāt. Far more than its very limited agriculture, it was trans-Sahara trade which made its fortune over the course of the centuries and it is the disappearance of this trade which explains its decline.

Paleolithic and Neolithic implements have been discovered in the neighbourhood. In 19 B.C. Cornelius Balbus camped in this Libyan centre, which was to become Cydamus, and, under Septimus Severus,

an advance post with a garrison of the 3rd Augusta legion, 200 km. to the south-west of the *limes*. In Byzantine times, it had a church and a bishop; the "idols" (*al-aṣnām*) which stand nearby are ancient ruins, Byzantine mausolea or perhaps even more ancient remains. The Arab conqueror, ʿUḳba b. Nāfiʿ, occupied it with a detachment of cavalry between his conquest of Fezzān and his march on Gafsa in 47/667. It was Ibāḍī between the 2nd/8th and the 4th/10th centuries. Ibn K͟haldūn (*Berbères*, iii, 303), far more than al-Bakrī (340), dwells on the prosperity and importance of this "port" of the desert, both for traders and pilgrims. In the 10th/16th century again, Ghadamès seems to have consisted of several *ḳṣūr*. Then it seems to have become concentrated into a single village which has preserved its appearance and its sharply graded society. Ghadamès, on the boundaries of Ifrīḳiya, was able to safeguard, both for its trade and for itself, an independence which was, however, always limited by its obligatory association with the Touareg Ajjer, and the no less compulsory good relations with Tunis and Tripoli. It suffered several attacks by Ḥafṣid and Turkish troops but always managed to free itself rapidly from the taxes imposed by Tunis. It was nevertheless obliged to recognize the authority of the Turks of Tripoli in 1860. It then became a seat of a *ḳāʾimmaḳām* and after 1874 was given a little garrison; it continued none the less to administer itself with a *s͟hayk͟h* and a *d͟jamāʿa* formed from the heads of noble families.

The Italians, who disembarked at Tripoli in 1911, did not at first occupy Ghadamès, but did so later from April 1913 to November 1914, then from February to July 1915, and finally and more permanently from 15 February 1924 on. They left it before the arrival of General Leclerc's troops on 27 January 1943. First of all attached to the Territory of Fezzān [*q.v.*], it was provisionally administered by the Tunisian Protectorate from January 1948 until 1 July 1951; but following the proclamation of independence of the United Kingdom of Libya on 24 December 1951, and then of the Franco-Libyan treaty of 10 August 1955, Ghadamès was evacuated by the French authorities. It was attached to the province of Tripoli in the spring of 1957.

All the texts are in agreement to show that trans-Sahara trade was the essential activity of Ghadamès. They dwell on the comings and goings of the caravans, on the remarkable aptitude of its traders who were to be encountered in the Sudan as far away as Timbuktu, as well as at Tunis and Tripoli, and who made large profits under the protection, for which they paid tribute, assured to their caravans by the Touareg Ajjer, at the extreme limit of whose territory Ghadamès was situated. Caravans coming from the south brought above all slaves, as well as gold, leather and hides, ostrich feathers, ivory and incense. On the return journey, they carried cotton goods and cloth, sugar, and various products manufactured in Europe. The extreme points of their journeys were Tunis and Tripoli in the north, Agadès, Kano and, more rarely, Timbuktu (for which G͟hāt was the first halt) in the south.

Trade profited above all the nobles (*aḥrār*), who also possessed gardens and sometimes herds; they had many black slaves (*agnaw*) whom they sometimes allowed to become free men (*atāra*); the *ḥumrān* formed a small and not very numerous middle class of artisans and shopkeepers; mostly, no doubt, of foreign origin, they formed the retainers of the principal noble families.

In the middle of the 19th century, Duveyrier notes the beginning of the decline in trade, following the abolition of the slave trade, for the most part still little enough respected. In 1910, Pervinquière, the geologist, described the stagnation of a much diminished cross-Sahara trade which had turned away from Ghadamès. To-day it is practically dead, the towns of the Mediterranean coast no longer needing the produce of the Sudan region, which in its turn is provisioned by sea. At the same time, the artisans, once extremely prosperous, many-sided, and since the 5th/11th century famous for their hides, have almost ceased to exist, lacking raw materials.

The people of modern Ghadamès are almost all reduced to cultivating their little oasis, and the Touareg to the raising of camels, sheep and goats. The palm-grove has barely 20,000 palms and the whole area of the gardens is only 75 hectares. It seems that the flow of ʿAyn al-Fres has become less since 1872-7. The Italians opened an artesian well in 1932 and another was sunk by the French but their flow also tends to diminish. The departure of a great number of *atāra* and former slaves, now become free men, provoked a man-power crisis which brought about the ruin of most of the nobles, only a few of whom were willing to apply themselves to agriculture.

The population of Ghadamès, estimated at 7,000 by Duveyrier round about 1850, had fallen to 1,900 by 1952. Most of the people have emigrated to Tripolitania or Tunisia; nearly 2,000 live in Tunis, the town to which the young people used to go in former times to get their initiation into the business world, which led to a local proverb saying: 'Ghadamès gives birth and Tunis brings up'.

Ghadamès is a pretty little oasis which attracted some tourists in Italian times. The palm-grove and gardens are surrounded by crumbling mud walls, and the village, all of unfired brick, is in the interior, a little to the south-east, beside the attractive pool of ʿAyn al-Fres. Most of the houses are very unusual with their urban appearance, rooms placed in uneven storeys or spanning the streets, often transforming them into dark tunnels. The inhabitants, Berbers of the Beni Wazit and Beni Ulīd, and the Awlād Bellīl who consider themselves of Arab origin, used to live as enemies, one group against another, shut up in seven districts isolated from one another by walls whose gates were shut at night. Despite these divisions, hard to understand for people travelling between the Mediterranean and the Sudan, the little urban centre of Ghadamès has been able to maintain across the centuries its personality as a city of caravaneers, its own Berber dialect (a little different from that of the Touareg), its social castes, its original houses and, for a long time, its independence.

Three kms. west of Ghadamès, Tounin is no more than a hamlet with a few palm-trees. The poor oases of Derd͟j and Sināwan are situated on the trail which goes via Nalout to Tripoli. Oil research has been going on in this area since 1956.

AL-GHAḌANFAR [see ḤAMDĀNIDS].

GHAḌANFER AGHA [see ḲAPI AGHASI].

GHADĀR [see KHAZAF].

GHADĪR KHUMM, name of a pool (or a marsh) situated in an area called Khumm, between Mecca and Medina, about 3 miles from al-Djuḥfa. The waters from which it was formed came from a spring which rises in a *wādī*, and from it they flowed to the sea about six miles away, along a valley which was also called Khumm; the name is no longer in use. As the place was frequently watered by rain, there were there bushes and thorn trees which provided large shady areas around the pool and the mosque built in honour of the Prophet between the pond and the spring. The climate there was very hot and unhealthy, and the inhabitants, belonging to the Khuzāʿa and Kināna tribes, who in any case were not numerous, finally abandoned the region because of the fevers which afflicted them and the lack of pasturage.

Ghadīr Khumm is famous in the history of Islam because of a sentence (or some sentences) in favour of ʿAlī which the Prophet uttered there during a discourse, the circumstances of which, according to the most detailed accounts which are preserved in some *ḥadīths*, were as follows. On his return from the Farewell Pilgrimage, Muḥammad stopped at Ghadīr Khumm on 18 Dhu 'l-Ḥidjdja 10/16 March 632. As he wanted to make an announcement to the pilgrims who accompanied him before they dispersed, and as it was very hot, they constructed for him a dais shaded with branches. Taking ʿAlī by the hand, he asked of his faithful followers whether he, Muḥammad, was not closer (*awlā*) to the Believers than they were to themselves; the crowd cried out: "It is so, O Apostle of God!"; he then declared: "He of whom I am the *mawlā* (the patron?), of him ʿAlī is also the *mawlā* (*man kuntu mawlāhu fa-ʿAlī mawlāhu*)". Nothing which can explain the inner meaning of the main sentence is added either by the additions supplied by several *ḥadīths*, *e.g.*, "O God, be the friend of him who is his friend, and be the enemy of him who is his enemy (*Allāhumma wāli man wālāhu wa-ʿādi man ʿādāhu*)", or by the variants (the most interesting of which is the substitution of the word *walī* for *mawlā*, which proves that the meaning of the latter word, at least in its metaphorical sense, was not very precise). Most of those sources which form the basis of our knowledge of the life of the Prophet (Ibn Hishām, al-Ṭabarī, Ibn Saʿd, etc.) pass in silence over Muḥammad's stop at Ghadīr Khumm, or, if they mention it, say nothing of his discourse (the writers evidently feared to attract the hostility of the Sunnīs, who were in power, by providing material for the polemic of the Shīʿīs who used these words to support their thesis of ʿAlī's right to the caliphate). Consequently, the western biographers of Muḥammad, whose work is based on these sources, equally make no reference to what happened at Ghadīr Khumm. It is, however, certain that Muḥammad did speak in this place and utter the famous sentence, for the account of this event has been preserved, either in a concise form or in detail, not only by al-Yaʿḳūbī, whose sympathy for the ʿAlid cause is well known, but also in the collections of traditions which are considered as canonical, especially in the *Musnad* of Ibn Ḥanbal; and the *ḥadīths* are so numerous and so well attested by the different *isnāds* that it does not seem possible to reject them. Several of these *ḥadīths* are cited in the bibliography, but it does not include the *ḥadīths* which, although reporting the sentence, omit to name Ghadīr Khumm, or those which state that the sentence was pronounced at al-Ḥudaybiya. The complete documentation will be facilitated when the *Concordances* of Wensinck have been completely published. In order to have an idea of how numerous these *ḥadīths* are, it is enough to glance at the pages in which Ibn Kathīr has collected a great number of them with their *isnāds*. This author informs us that al-Ṭabarī, in a two-volume work (probably the unfinished work mentioned by Yāḳūt, *Irshād*, vi, 452, the title of which was *K. al-Faḍāʾil*) in which he reported the Prophet's discourse at Ghadīr Khumm, had collected, he says, "the fat and the thin, the strong and the weak". Abu 'l-Ḳāsim Ibn ʿAsākir (d. 571/1176) also reproduces many *ḥadīths* on the same subject and it is from his collection that Ibn Kathīr has chosen the principal traditions, which however, he adds, supply no basis for the Shīʿī claims.

The beliefs of the latter concerning the affair of Ghadīr Khumm are as follows: Muḥammad had already known through divine inspiration (or by revelation on the night of the *Miʿrādj*) that ʿAlī was to become his successor as leader of the Muslim community, but he had kept this divine decision secret, waiting for the moment when there should be no more opposition to ʿAlī among the Muslims. At Ghadīr Khumm he received the revelation: "O Apostle, communicate that which was revealed to you by your Lord" (Ḳurʾān, V, 71/67). Then, in the presence of the Companions, taking ʿAlī's hand in his own, he pronounced the sentence *man kuntu mawlāhu* etc., which is thus a *naṣṣ* [*q.v.*] nominating ʿAlī as *imām* of the Muslims after the death of their Prophet. On the same occasion, Muḥammad announced his impending death and charged the Believers to remain attached to the Book of God and to his family. After the communal prayer he went into his tent and, on his orders, ʿAlī received, in his tent, the congratulations of the Muslim men and women, who greeted him with the title of *amīr al-muʾminīn*. Among them was ʿUmar b. al-Khaṭṭāb. Ḥassān b. Thābit recited, with Muḥammad's approbation, some verses in honour of ʿAlī (some verses by him, affirming that ʿAlī was named as the successor of the Prophet on the day of Ghadīr Khumm, are quoted by Ibn Shahrāshūb (ii, 230) and, if they are authentic, they are, apart from the *ḥadīths*, the earliest attestation of the event at Ghadīr Khumm, and not, as Goldziher has suggested, the verse of al-Kumayt). It is said that the same day Muḥammad received at Ghadīr Khumm the revelation of Ḳurʾān, V, 5/3 ("Today I have perfected your religion for you, and I have completed my blessing upon you, and I have approved Islam for your religion"), which is generally accepted to have been revealed at ʿArafāt a few days earlier.

The Sunnīs do not deny that Muḥammad may have expressed himself in the above manner concerning ʿAlī, but they consider that in the sentence in question he was simply exhorting his hearers to hold his cousin and son-in-law in high esteem and affection. On this point, Ibn Kathīr shows himself yet again to be a percipient historian: he connects the affair of Ghadīr Khumm with episodes which took place

during the expedition to the Yemen, which was led by ʿAlī in 10/631-2, and which had returned to Mecca just in time to meet the Prophet there during his Farewell Pilgrimage. ʿAlī had been very strict in the sharing out of the booty and his behaviour had aroused protests; doubt was cast on his rectitude, he was reproached with avarice and accused of misuse of authority. Thus it is quite possible that, in order to put an end to all these accusations, Muḥammad wished to demonstrate publicly his esteem and love for ʿAlī. Ibn Kat͟hīr must have arrived at the same conclusion, for he does not forget to add that the Prophet's words put an end to the murmurings against ʿAlī.

Because of the importance in their eyes of Muḥammad's discourse at G͟hadīr K͟humm, the S͟hīʿīs have considered 18 D͟hu 'l-Ḥid͟dja as an anniversary to be celebrated with solemnity. In ʿIrāḳ, the *īd G͟hadīr K͟humm* was introduced by Muʿizz al-Dawla Aḥmad b. Būya in 352/964 and in Egypt by al-Muʿizz in 362/973; under the Fāṭimids, with the exception of some years of the reign of al-Ḥākim, it was one of the most important religious feasts. In Persia today it is celebrated by making for the occasion three pastry figures filled with honey, which represent the caliphs Abū Bakr, ʿUmar and ʿUt͟hmān, and by stabbing them with knives: the honey which comes out symbolizes the blood of the three hated usurpers. This feast also holds an important place among the Nuṣayrīs.

According to Ibn Kat͟hīr, Muḥammad's discourse is reported also by al-Nasāʾī in his *Sunan* and in his book on the *k͟haṣāʾiṣ ʿAlī*, by Ibn Mād͟ja, Abū Dāwūd and al-Tirmid͟hī. On the Prophet's discourse, see also Ibn al-Kalbī, *D͟jamhara*, MS British Museum, fol. 256 v.; Yaʿḳūbī, *Historiae*, ed. Houtsma, ii, 125; Masʿūdī, *Tanbīh*, *BGA*, viii, 234; Ibn ʿAbd al-Barr, *al-Istīʿāb*, 473; Ibn al-At͟hīr, *Usd*, iv, 28; Ibn K͟hallikān, *Wafayāt*, no. 699, Cairo 1950 iv, 318 f., tr. de Slane, iii, 383 (Ibn K͟hallikān mentions the discourse in favour of ʿAlī, but without reporting the famous sentence. A partial variant is found in some *ḥadīt͟hs*: Ibn Ḥanbal, *Musnad*, Cairo ed., i, nos. 950, 964 and 1310); Muḥibb al-Dīn al-Ṭabarī, *al-Riyāḍ al-nāḍira*, Cairo 1327, ii, 169; D͟hahabī, *Taʾrīk͟h*, MS Paris, fols. 188-9; Ibn Kat͟hīr, *al-Bidāya wa 'l-nihāya*, 1348-55, v, 208-14.—A discussion by a Muʿtazilī: al-D͟jāḥiẓ, *ʿUt͟hmāniyya*, Cairo 1374/1955, index.—On the beliefs of the S͟hīʿīs: Ibn S͟hahrās͟hūb, *Manāḳib Āl Abī Ṭālib*, Nad͟jaf 1376/1956, ii, 224-56 (unsystematic in treatment, but interesting because it mentions the authors who have dealt with the subject and many verses by early poets, including some attributed to Ḥassān b. T͟hābit); Mad͟jlisī, *Ḥayāt al-ḳulūb*, Tehrān 1374, iii, 39-46; Muḥsin al-Amīn al-ʿĀmilī, *Aʿyān al-s͟hīʿa*, iii/1, 524-32 (a lucid modern treatment); I. Goldziher, *Beiträge zur Literaturgeschichte der Šīʿâ und der sunnitischen Polemik*, in *Sitzungsb. der phil.-hist. Classe der K. Ak. der Wissenschaften*, lxxviii (1874), 496 f.; idem, *Muh. Studien*, ii, 115 f.; idem, *Vorlesungen über den Islam*[1], Heidelberg 1910, 239, cf. 274 (Fr. tr., *Dogme*, Paris 1920, 192, cf. 292). On the work of Ṭabarī, idem, *Die liter. Thätigkeit des Ṭabarī nach Ibn ʿAsākir*, in *WZKM*, ix, 366; L. Caetani, *Annali dell'Islām*, 40 A.H., § 293; D. M. Donaldson, *The Shīʿite Religion*, London 1933, 1-3. On ʿAlī's behaviour during the expedition to the Yemen: Ibn His͟hām, 947 f.; Wāḳidī-Wellhausen, 418; Ṭabarī, i, 1752 f.; Ibn al-At͟hīr, *Usd*, 27 f.; Caetani, *Annali*, 10 A.H., § 17 (p. 322). On the festival: Maḳrīzī, *K͟hiṭaṭ*, Būlāḳ 1270, i, 388 f.; R. Dussaud, *Histoire et religion des Noṣairîs*, Paris 1900, 137-41; Hughes, *Dict. of Islam*, 138. Certain practices of the ʿAlawīs of Syria inspired Jehan Cendrieux with a novel entitled *Al-Ghâder* (sic) *ou le sexe-Dieu*, Paris 1926.

(L. Veccia Vaglieri)

al-G͟HĀḌIRĪ, hero of a series of anecdotes collected, probably in the 3rd/9th century, under the title *Kitāb al-G͟hāḍirī* (*Fihrist*, 435). He is said to have been a foundling, who became a humourist of Medina and rival of As͟hʿab [*q.v.*]; the name of al-Ḥasan b. Zayd [*q.v.*], governor of Medina from 150 to 155/767-72, which appears in one anecdote, would seem to give some grounds for thinking him a historical personality. However, as the Banū G͟hāḍira have a reputation as wits, it is possible that the anonymous collection referred to by Ibn al-Nadīm is made up of anecdotes attributed to various members of this group, among whom they had existed as a common heritage.

Bibliography: D͟jāḥiẓ, *Ḥayawān*, v, 241-3; idem, *Buk͟halāʾ*, ed. Ḥād͟jirī, 192, 365; Ibn Ḳutayba, *ʿUyūn*, ii, 52; Ḳālī, *Amālī*, ii, 242; *Ag͟hānī*, v, 132, xvii, 101; Ḥuṣrī, *Zahr*, 160-1; idem, *D͟jamʿ*, 69, 152; Ābī, *Nat͟hr al-durar*, MS Dār al-Kutub, ii, 208; Āmidī, *Muʾtalif*, 161; F. Rosenthal, *Humour*, 7, n. 4.

(Ch. Pellat)

G͟HAFFĀRĪ, Aḥmad b. Muḥammad, Persian historian, descendant of a family originating from Sāwa, later established at Ḳazwīn, and descended from the S͟hāfiʿī *imām* Nad͟jm al-Dīn ʿAbd al-G͟haffār (d. 665/1266), author of the work *Ḥāwī al-ṣag͟hīr*, whence the patronymic "G͟haffārī". Five of his ancestors had held the office of *ḳāḍī*. His father (d. 932/1526), who composed poetry under the pseudonym of Wiṣālī, as well as his brother, had held the same office at Rayy. Since he lived at Ḳazwīn and bore the title of *ḳāḍī*, it would seem that he had held the same post in his native town. It is said that at the end of his life he had resigned the official functions he performed for the princes. He made a journey from Ḳazwīn to Kās͟hān in the company of the *amīr* Taḳī al-Dīn Muḥammad, the grandson of the *amīr* D͟jamāl al-Dīn Muḥammad Ṣadr, and of the poet Nit͟hārī of Tabrīz. During this journey he met the great poet Muḥtas͟ham of Kās͟hān. At the end of his life he made the pilgrimage to Mecca and on his return he died at Daybūl (Sind) in 957/1567. Although a poet, he composed two considerable works of history: *Negārestān*, a collection of historical anecdotes collected from the best known works and arranged in chronological order, completed in 959/

1552 and dedicated to the Ṣafawid Shāh Tahmāsb; *Nusakh-i djahān-ārā*, a history of the dynasties from the beginning up to 972/1564, dedicated to the same sovereign.

Bibliography: Sām Mirzā Ṣafawī, *Tuḥfa-yi sāmī*, Tehrān 1314/1936, 72-4 (six members of the family, with printing errors in the names); *The Muntakhab al-tawārīkh of Abd al-qādir bini-Malūk shāh al-Badaoni*, iii, Calcutta 1860, 185-6; Amīn Aḥmad Rāzī, *Haft iḳlīm*, Tehrān, iii, 178; Luṭf ʿAlī Beyk Āzar, *Āteshkadeh*, Bombay 1299, 228; Raḥmān ʿAlī, *Tadhkira-yi ʿulamā-yi Hind*, Lucknow 1914, 18; Sayyid Muḥammad Ṣiddīḳ Khān, *Sham'i andjuman*, Delhi 1293, 57; ʿAlī Shīr Ḳāniʿ Tatawī, *Maḳālāt al-shuʿarā'*, Karachi 1957, 17-18; Storey, section II, 114-6; Saʿīd Naficy, *Ta'rīkh-i naẓm o nathr dar Īrān wa dar zabān-i Fārsī*, Tehrān 1342/1963, 354, 508. (S. Naficy)

AL-**GHĀFIḲĪ**, Muḥammad b. Ḳassūm b. Aslam, Spanish-Arab scholar and oculist, probably of the 6th/12th century. The Arabic chroniclers are silent with regard to his biography and we know almost nothing of his life. It has been no more than supposed that he was born in Cordova and that he practised for a long time in this city. According to Wüstenfeld, he was the father of Abū Djaʿfar Aḥmad b. Muḥammad al-Ghāfiḳī [*q.v.* in Supplement], the famous doctor and pharmacologist, author of the *Kitāb al-Adwiya al-mufrada*.

Of Muḥammad al-Ghāfiḳī, there remains only the *Kitāb al-Murshid fi 'l-kuḥl*, "The Oculist's Guide", of which a single copy exists in the Escorial (N. 835). This book is regarded as a summary of all the knowledge of ophthalmology possessed by the Arabs of both the Islamic east and west, in its author's time. It is divided into six sections of which, in fact, only the fifth (partially) and the sixth (entirely) treat of the medicine and the hygiene of the eyes.

Although the *K. al-Murshid* is considered to be the most remarkable ophthalmological text of the Islamic west, it has been said of it that it is no more than a vast compilation without original contributions, that the part which concerns the oculist in reality only occupies a limited space in relation to that dedicated to general medicine, and that it lacks a sense of proportion (Hirschberg). But in judging it from the point of view of present-day knowledge, it is precisely in the plan of the work and the arrangement of its material that it is possible to catch a glimpse of a kind of anticipation of the modern conception of the pathology of the eye, necessarily linked to and following as a corollary on that of the entire organism.

Pansier, *Breve conspecto de la oftalmologia árabe* (tr., ed. and notes by J. M. Millás Vallicrosa), Barcelona 1956. (T. Sarnelli)

GHAFŪRĪ, MEDJĪD, one of the best-known national poets of the Bashḳurts and Tatars. He was born in 1881 in the village of Djilim Ḳaran, a village inhabited by both Tatars and Bashḳurts belonging to the Isterlitamak administrative district of Bashḳurdistan. He died in 1934, a Soviet poet. His father, Nurgani, was the village teacher, and Medjīd (ʿAbd al-Madjīd) received his primary education from him. For his intermediate schooling he went to the *medrese* in the neighbouring village of Ötesh, and from 1898 to 1904 he studied in the *Resūliye Medresesi* in the city of Troysk. Through teaching among the Ḳazaḳs he became attracted to their style of literature. He published his first poetry in *Terdjümān* in 1902, and later, in 1904, in the form of a collection with the title *Sibir Temiryolu yaki Aḥwāl-i millet*. He subsequently published small collections of poems with titles like *Yash ʿömrüm* (1906), *Millet Maḥabbeti* (1907), *Zamāne shiʿirleri* and *Medjīd Ghafūrī shiʿirleri* (1909), *Te'eththürātīm* (1910), *Muñ-Zar* (1911), *Millī shiʿirler we emthāl* (1913), and *Yangan Yürek* (1915). As he knew little Russian, he did not derive much inspiration from Russian literature, being influenced only by Krylov's *Fables* and some of the works of Gorky. His first poems, written under the influence of Ḳazaḳ literature and especially of the Ḳazaḳ poet Aḳmolla, were beautiful, and bring a fresh style to Bashḳurt and Tatar literature. After 1907 he wrote his poems wholly in Tatar, in the classical metres (*ʿarūḍ*). Because of lack of variety in his thoughts and carelessness in metre and style, however, he was considered to be in the second rank of poets, compared with men like Shams al-Dīn Izek and Sheykhzāde Babič among the Bashḳurts, and ʿAbd Allāh Toḳay among the Tatars. In *Zamāne shiʿirleri*, in which he imitated Ṣūfī Allāhyārī, he made it clear that he had read Čaghatāy literature first by way of poetry. In his collected works, which appeared in 1904, he complained of the backwardness of the Bashḳurts and Tatars, of the ignorance of the Mollas and so on. He manifested his belief that the Siberian railway, which was completed in 1902, "the longest railway in the world", would bring about some changes in the life of the eastern Turks. In his works generally, he reflected the early twentieth-century life of the Tatars and Bashḳurts and also their complaints and desires. Before the 1917 Revolution, the works which he had written under the influence of the popular literature of the Ḳazaḳs and the Bashḳurts, not attempting to rival the Tatar poets, had made him very popular in his own land. One of his finest works is the *ḳaṣīde Aḳ-Edil*, published at Ufa in 1911. After 1923 he was drawn into propaganda work by the Soviets, and he was much used for this purpose. In the Soviet period his collected works were published in five volumes, which included the greater part of his early writings, as well as later works of an entirely different character and outlook.

(Z. V. Togan)

GHĀ'IB, absent, usually means in law the person who at a given moment is not present at the place where he should be. But, in certain special cases (see below), the term is applied also to the person who is at a distance from the court before which he was to bring an action or who does not appear at the court after being summoned.

If to this first notion is added that of uncertainty concerning the person's existence, the term used is not *ghā'ib* but *mafḳūd*, although sometimes the state of the *mafḳūd* is called also *ghayba*, to which is added the epithet *munḳaṭiʿa* (absence not interrupted by information on the person's existence). This state of affairs may give rise to juridical consequences of greater or less importance according to circumstances. If such an absence extends to a period when persons of the same generation as the missing person are dead, the judge declares him dead: his estate goes to his heirs, and his marriage or marriages are dissolved. Up to this time, the estate of the *mafḳūd* continues to be administered by his agent, if he had appointed one, or, failing such an appointment, by

a trustee nominated by the judge; inheritances which are due to him remain in suspense; his marriage or marriages continue to subsist.

Ghayba, in its normal and general sense, gives rise to various juridical consequences, particularly the following:

As regards marriage, the absence of a husband which extends beyond a certain term—four years, four months and ten days, according to the majority opinion—permits the wife to apply for judicial divorce if she is not regularly receiving alimony.

Ghayba is also a reason for suspending the prescription of an action at law. In this connexion, it lies in the plaintiff's being three days' journey (on foot) away from the place where he should have brought his action. But this absence must be continuous (in this case too called *ghayba munkaṭiʿa*), so that if during the period when prescription is suspended the plaintiff once more comes to the place where he could bring his action, the period of his absence is no longer of any affect.

The non-appearance of a litigant at a hearing does not permit the judge to decide the case by default, a procedure which, in principle, is not recognized, although various means may be employed to compel the litigant to appear, provided that he is not too far away. Nevertheless in the most recent stage of Muslim law, as it is represented by the Ottoman codification of the second half of the 19th century, judgement by default is admitted.

In public law, in certain states (for example the Mamlūk Empire) the Sultan, when himself absent from the capital, often appointed a *locum tenens*, who was called *nāʾib al-ghayba* (literally, 'substitute of absence').

In public worship, *ṣalāt al-ghāʾib* ('prayer of the absent') is the name given to the prayer said for a dead person whose body cannot be produced.

GHALĀFIḲA (or Ghulāfiḳ(a), Ghulayfiḳa; pl. of *ghalfak*=*ṭuḥlub* "sea-moss"), a coast town in the Tihāma of Yaman, situated half-way between Ḥudayda and Zabīd, at the southern end of a bay (Khor Ghalāfika). Here was in earlier times the main port of Zabīd, whose west gate is called "Bāb Ghulāfiḳa". The geographer Muḳaddasī, who visited this place, mentions its famous mosque, its date- and cocoapalms, and several wells—Ghalāfiḳa is said to be the only place in this part of the coast with a supply of fresh water—but says that the climate is pestilential and mortal to strangers. According to Ibn al-Mudjāwir (7th/13th century) Persians from Sīrāf, *viz.* fugitives from Djidda, restored the town after a period of decay. Towards the end of the Middle Ages the place lost its importance in favour of the "lower" port of Zabīd, al-Ahwāb, and Mokhā, the great harbour for the export of coffee. In 1763, Niebuhr found Ghalāfiḳa a miserable village, difficult to reach even with small boats, owing to the coral reefs. In our days, according to the *Red Sea and Gulf of Aden pilot*, the harbour can still afford anchorage for small craft, its depth being 3-4 fathoms, but it is gradually silting up.

GHALAṬA [see ISTANBUL].

GHALAṬA-SARĀYİ, Palace School and later modern lycée at Pera (Beyoğlu) across the Golden Horn from Istanbul. It was founded during the first years of the Ottoman Sultan Bāyezīd II (886-918/1481-1512), as one of the palace schools in Istanbul and Edirne for the education of the *ʿadjamī oghlāns* [*q.v.*]. It covered a large area on which numerous buildings, dormitories, a hospital, a kitchen, baths, mosques and a *ḳaṣr* (small palace) for the sultan, were built. The administration of the school was entrusted to an *agha* (or *bashagha*) who had under him the teaching staff and a large body of servants. The students were divided into three *odas* (rooms) called *küčük*, *orta* and *büyük*, each comprising at the beginning 200 boys. Their number varied with time. They were recruited at first mainly through the *devshirme* [*q.v.*], but from Süleymān the Magnificent's reign on, Muslim boys too were accepted. The students were educated in Islamic sciences and liberal arts, instructed in the palace ceremonial and trained in military exercises. After completing their education, which lasted from seven to fourteen years, the most able were chosen for the imperial palace, the Topḳapï sarāyï [*q.v.*] where they continued their studies at the *Enderūn*. Other joined the permanent cavalry regiments (*sipāhīs*).

Ghalaṭa-sarāyï was changed many times into a *medrese* but from its restoration in 1127/1715 under Aḥmed III it remained a palace school, up to its closing in 1251/1835-6. During this period Maḥmūd I had added a library to the school in 1167/1753. Burnt in the first years of Maḥmūd II's reign, the school was rebuilt in 1235/1819-20. Ghalaṭa-sarāyï became a medical school under the name of Ṭïbbiyye-i ʿadliyye-i shāhāne [*q.v.*] in 1254/1838. European and Turkish doctors taught there modern medicine for ten years: a fire in August 1848 obliged the Ṭïbbiyye to move into Khalïdjïoghlu on the Golden Horn.

Ghalaṭa-sarāyl was later reconstructed in stone and was opened as a preparatory school to the military academies in 1862. But this did not last for long. On 1 September 1868 the Imperial lycée or Mekteb-i sulṭānī was opened there. Thanks to the initiative of the Grand Vizier ʿĀlī Pasha and the Minister of Foreign Affairs Fuʾād Pasha, the new institution was supported by the French government. It was modelled after the French lycées, had to be administered by a French director and the teaching was to be mainly in French. The school aimed at producing Western-educated officials for the Ottoman administration. 341 boys from all nationalities of the empire were accepted at the opening. When the French director, M. de Salve, left in 1872, a Christian Ottoman was appointed to this post. Later only Turkish directors

were nominated to the administration of the school. Except for two short intervals, the Impérial lycée remained on the same site. In September 1873 it moved into Gülkhāne, to provide accommodation for the Faculty of Medicine. But three years later, in 1876, it returned to its old premises. On 6 March 1907 a fire burnt the school, and courses continued in a pavilion in the courtyard. The construction of the new building ended the next year, offering more space to the school.

The programmes were revised after the proclamation of the Turkish republic in 1923. Meanwhile the main courses continued to be given in French, mostly by French teachers. Able directors and distinguished professors, many of them famous Turkish poets, scholars and scientists, served in the lycée of Ghalaṭa-sarāyî (now Galatasaray). Graduates of the school contributed much in all fields of activities in Turkey, the Balkans and the Arab countries. The share of the lycée of Ghalaṭa-sarāyî in the modernization of Turkey is important. It still continues to educate Western-minded young men.

GHALAṬĀT-I MESHHŪRE, Ottoman term meaning literally 'well-known errors' and hence 'solecisms sanctioned by usage'. Arabic and Persian loan-words in Ottoman Turkish generally retained the spelling current in the parent languages and were modified in pronunciation only so far as was essential to accommodate them to the Turkish repertory of consonants and vowels. Occasionally, however, phonetic changes characteristic of Turkish produced more drastic modifications in the loan-words; when the modified forms supplanted the original forms in the literary language they were branded by the purists as '*ghalaṭāt-i meshhūre*'. Some of these 'solecisms' consist only of the change of a single vowel: *djenāze* for *djināze*, *terdjüme* for *terdjeme*, *ḳandīl* for *ḳindīl*, *ḳumāsh* for *ḳimāsh*, etc. But sometimes the modification was more drastic: *merdiven* < *nerdubān*, *mushamba* < *mushammaʿ*, *sehpā* < *sepā*, *pabuč* < *pāpūsh*, *čamashïr* < *djāma-shūy*, *čarshaf* < *čādir-i sheb*, *bedāwā* < *bād-i hawā*, etc.; many Arabic broken plurals are used in Turkish as singulars: *ṭalebe*, *elbise*, *khademe*, *ʿamele*, *eshḳiyā*, *eshyā*, *aʿdā* (*aza*); some abstract nouns, unknown to Arabic and Persian, were invented by analogy with Arabic 'measures': *nezāket* ('refinement' < P. *nāzik*), *felāket* ('disaster'), *ṭabābet* ('medicine'), *ṣalāḥiyet* ('authority'), etc.; new words were formed by the addition of an Arabic or a Persian suffix to a Turkish word: *variyet* ('wealth' < T. *var*), *gidishāt* ('goings-on', pseudo-A. pl. of *gidish*), *oyunbāz* ('trickster'), *emekdār* ('veteran'), *sandjaḳdār* ('standard-bearer'), *ishgüzār* ('officious'), etc.

From the 10th/16th century onwards Ottoman scholars and pedants compiled treatises of *ghalaṭat-i meshhūre*, among them Kemāl Pashazāde (*al-Tanbīh ʿalā ghalaṭ al-djāhil wa 'l-nabīh*, see Brockelmann, II 452, S II 671 (no. 106); tr. and printed, Istanbul 1289, as *Terdjüme-i Ghalaṭāt al-ʿawāmm*), Abu 'l-Suʿūd and Khusrew-zāde Meḥmed; many such treatises were written in the period of the Tanẓīmāt [*q.v.*] and after, when there was increased controversy over the rules of correct usage. A number of these Ottoman 'well-known errors' have been accepted in modern Arabic usage.

Bibliography: ʿAlī Seydī, *Defter-i ghalaṭāt*, Istanbul 1324; Muṣṭafā ʿIzzet, *Taṣḥīḥ al-ghalaṭāt wa 'l-muḥarrafāt fi 'l-lughāt*, Istanbul 1303; ʿAlī Himmet, *Fādiliñ ghalaṭāt defteri*, Samsun 1338; Sîrrî, *Ghalaṭāt*, Istanbul 1301. For a discussion of the phonetic phenomena involved (dissimilation, assimilation, labialization, etc.) see J. Deny, *Principes de grammaire turque*, Paris 1955; T. Banguoğlu, *Türk grameri, i: sesbilgisi*, Ankara 1959. (G. Alpay)

GHALČA, an imprecise designation of those mountain peoples of the Pamirs who speak Iranian lamguages. The term has been used in English scholarly literature for the Iranian Pamir languages. In New Persian the word means 'peasant' or 'ruffian', while in Tādjikī it means 'squat, stupid'. In old Yaghnābi *ghalča* meant 'slave'. The origin of the word is uncertain, for one might compare Sogdian γδ 'to steal', (Pashto γəl 'thief') or Sogdian γr 'mountain', hence 'mountaineer'. Usually the term Ghalča has been used in modern literature to cover the speakers of the following languages and dialects (from north to south): Wandjī, Yazgulāmī, Orošorī, Bartangī, Sarikolī, Rošānī, Shughnī, Wakhī, Ishkāshmī, Mundjī, Sanglēčī, Yidgha. A wider use of the term would include such tongues as Yaghnābī in the north and Parāčī near Kābul.

The earliest attested use of the word by an European is found in the travel account of Benedict de Goès *circa* 1603 (Lentz 12). The term Ghalča was brought into prominence by Shaw, who early investigated some of the languages.

Little is known of the history of the Pamir region. Although much of the area paid tribute to Muslim rulers in Balkh in the first three centuries A. H., it is probable that the majority of the population of Islam remained non-Muslim until the Ismāʿīlī missionary activity of the 5th/11th century. The most famous missionary in neighbouring Badakhshān was the author Nāṣir-i Khusraw. Various forms of the Shīʿa creed remained among the populace down to the present. Today the area is divided between Afghanistan, the USSR and China.

GHĀLIB [see WAHHĀBIYYA].

GHĀLIB B. ʿABD AL-RAḤMĀN, AL-ṢIḲLABĪ, freedman (*mawlā*) of ʿAbd al-Raḥmān III, in whose time and those of his son al-Ḥakam and grandson

Hishām he was one of the great generals. He led expeditions against the Christians of the Peninsula and also against the Idrīsids and Fāṭimids in Morocco and Ifrīḳiya. In 335/946 he was appointed chief of the Upper Frontier and rebuilt Medinaceli, which he made the base for operations against the Christian positions of the middle and upper Duero valley. His expeditions against Castile in 342/953 were very successful as concerns prisoners and booty but achieved no territorial gains. In 344/955 his fleet attacked the coast of Ifrīḳiya in order to avenge the sack of Almería by the Sicilian fleet of al-Muʿizz the Fāṭimid. This first attack failed but in the following year, 345/956, he returned with another squadron of 70 ships, took and set fire to Marsā al-Kharaz (La Calle) and laid waste the districts of Susa and Ṭabarḳa. In 357/968 he attacked Calahorra and was sent in 361/972 to Morocco to subdue the Idrīsids. After a long and victorious campaign he brought them back in subjection to Cordova. In 364/974 he undertook a carefully prepared expedition against the Castile-Navarre-Leon coalition in which he beat firstly the Christian allies under the walls of Gormaz, then count García Fernández at Langa, south of the Duero, on 25 Shawwāl 364/8 July 975. At this time he took the title of Dhu 'l-Sayfayn and established himself at Medinaceli where he had Ibn Abī ʿĀmir, the famous Almanzor, as his intendant general. When Hishām succeeded to the throne Ibn Abī ʿĀmir joined with Ghālib in his campaigns as commander of the forces of the capital and married his daughter in 367/978. But discord soon broke out between father-in-law and son-in-law when the old general, devoted to the Umayyads, saw the affront suffered by the dynasty at the hands of the parvenu Ibn Abī ʿĀmir, who restricted the activities of the young caliph to pious exercises. The conflict now open, Ibn Abī ʿĀmir seized Medinaceli, Ghālib's fief, at the head of big Berber contingents. Ghālib, to spite him, allied himself with his old enemies the count of Castile and the king of Navarre. The first encounters went in his favour, but Almanzor decided to wager all and provoked a decisive engagement on 4 Muḥarram 371/10 July 981. The battle took place near the castle of San Vicente, probably the modern Torre Vicente about half way between Atienza and Gormaz. In spite of his 80 years Ghālib gave, as always, proof of his courage and boldness, but in a furious attack his horse stumbled and, pierced in the breast by his saddle-bow, he fell dead. The field was thus left free to the unbridled ambition of his lucky rival.

GHĀLIB b. **ṢAʿṢAʿA** b. Nādjiya b. ʿIḳāl b. Muḥammad b. Sufyān b. Mudjāshiʿ b. Dārim, an eminent Tamīmī, famous for his generosity, the father of the poet al-Farazdaḳ.

The tradition that Ghālib was a contemporary of the Prophet (*lahū idrāk*) seems to be valid; the tradition that he visited the Prophet and asked him about the reward of the deeds of his father in the time of the Djāhiliyya (*Aghānī*, xix, 4) seems however to be spurious. Ghālib belonged to the generation after the Prophet; his name is connected with the names of Ṭalba b. Ḳays b. ʿĀṣim and ʿUmayr b. al-Sulayl al-Shaybānī, tribal leaders in the time of Muʿāwiya, in the story of the men of Kalb who tried to find the most generous man (*Aghānī*, xix, 5; in Ibn Abi 'l-Ḥadīd's *Sharḥ*, iii, 426, ed. 1329 A.H., Ghālib is mentioned with Aktham b. Ṣayfī and ʿUtayba b. al-Ḥārith, which is an obvious anachronism). The most generous man among the three sayyids was indeed Ghālib. (Ghālib was a neighbour of Ṭalba in al-Sīdān, in the vicinity of Kāẓima). He is said to have visited ʿAlī b. Abī Ṭālib and introduced to him his son al-Farazdaḳ; ʿAlī recommended him to teach his son the Ḳurʾān. (According to the tradition of *Aghānī*, xix, 6 he visited him in Baṣra after the battle of the Camel. According to the story quoted in Baghdādī's *Khizāna*, i, 108, Ghālib was then an old man; al-Farazdaḳ was in his early youth).

Ghālib earned his fame by his generosity. Muḥ. b. Ḥabīb counts him in his list of the generous men of the Djāhiliyya (*al-Muḥabbar*, 142); al-Djāḥiẓ stresses that he was one of the generous men of the Islamic period, not inferior to the generous men of the Djāhiliyya, although public opinion prefers the latter (*al-Ḥayawān*, ii, 108, ed. ʿAbd al-Salām Hārūn). Ghālib is said to have granted bounteous gifts to people, not asking them even about their names. The story of his contest with Suḥaym b. Wathīl al-Riyāḥī in slaughtering camels in the time of ʿUthmān is quoted in many versions. Al-Farazdaḳ mentions this deed of his father boastfully in his poems; Djarīr refers to it disdainfully; the competition was censured in Islam as a custom of the Djāhiliyya (Goldziher, *Muh.St.*, i, 60). A peculiar story in *Naḳāʾiḍ* 417 tells how he threw to the populace in Mecca (*anhaba*) 40,000 dirhams.

Ghālib was assaulted by Dhakwān b. ʿAmr al-Fuḳaymī in consequence of a quarrel between Fuḳaymī men and a servant of Ghālib, who tried to prevent them from drinking water from a reservoir belonging to Ghālib in al-Ḳubaybāt. Mudjāshiʿī tradition denies the Fuḳaymī claim that Ghālib died in consequence of this assault. He died in the early years of the reign of Muʿāwiya and was buried at Kāẓima.

Al-Farazdaḳ mourned his father in a number of elegies (cf. *Dīwān al-Farazdaḳ*, 163, 210, 611, 676, ed. al-Ṣāwī). His tomb became a refuge for the needy and the oppressed who asked help, which had indeed always been granted to them by al-Farazdaḳ (cf. *Dīwān al-Farazdaḳ*, 94, 191, 757, 893 and *Naḳāʾiḍ* 380). Al-Farazdaḳ often mentions him in his poems as "Dhu 'l-Ḳabr" or "Ṣāḥib al-Djadath" (Goldziher, *Muh. St.*, i, 237).

(M. J. Kister)

GHĀLIB DEDE, MEḤMED ESʿAD, also SHAYKH GHĀLIB (1171/1757-1213/1799), Turkish poet, the last of the five great representatives of the *dīwān* literature (the others being Bāḳī, Fuḍūlī, Nefʿī and Nedīm [*qq.v.*]). He was born in Istanbul at the Yenikapı Mewlewīkhāne, in 1171/1757, as is recorded in two famous chronograms: *ether-i ʿishḳ* and *djezbet-ullāh*. His father Muṣṭafa Reshīd, poet and scholar, belonged to a Mewlewī family, and exercised a decisive influence on Ghālib's life and his choice of career. Of his mother we only know, from a chronogram by Ghālib himself, that her name was Emīne and that she died in 1209/1794. Ghālib does not seem to have had a regular *madrasa* training, but to have been thoroughly educated in Islamic classics in the family circle and in the Mewlewī convent. After his father, his main teacher and guide seems to have been Ashdjī-bashī Ḥüsayn Dede who became the Shaykh of the Ghalaṭa convent in 1194/1790. Ghālib began to write poetry at a very early age and was able to arrange a *dīwān* at the age of twenty-four, while at the same time serving as an official at the Beylikdji Odasī of the Dīwān-ı Hümāyūn. At the suggestion of the poet Neshʾet he adopted as pen-name (*makhlaṣ*) Esʿad, which he later changed to Ghālib. Ghālib became increasingly interested in the works of Djelāl al-Din Rūmī and the Mewlewīs. He suddenly decided in 1198/1783 to join the order and went to Ḳonya accompanied by his young friend Ibrāhīm Khān-zāde Yūnus Bey to perform the necessary rites in the headquarters of the order, under the guidance of the head of the Mewlewīs, Seyyid Ebū Bekir Čelebi. On his return he completed his *čille* at the famous Ghalaṭa convent of the order and then retired to his house in Sütlüdje on the Golden Horn where he wrote a commentary to Yūsuf Sīnečāk's *Djezīre-i Methnewī*.

His appointment by the Čelebi of Ḳonya as the *shaykh* of the Ghalaṭa convent is a turning point in Ghālib's life. He soon attracted the attention of the Sultan Selīm III, himself a poet and musician, an admirer of Djelāl al-Dīn Rūmī and a member of the Mewlewī order. The Sultan became a great personal friend of Ghālib and used to pay him frequent visits in the convent, and the poet was always welcome in the Imperial Palace. With the Sultan's help Ghālib succeeded in restoring the convent and its annexes completely and then in making it the most important literary centre of the capital; he himself moved to the living quarters of the convent. Princess Beyhan, the sister of Selīm III, a cultured and intelligent woman, had great sympathy for the poet, which seems later to have developed into an attachment. She helped and protected him in many ways until his death. Ghālib reveals his great respect and admiration for her in many of his poems. It is not impossible that he was in love with her, judging from the many passages where feeling and affection are couched in expressions of reverence.

In the circle of the Mewlewīs Ghālib's best friend was Esrār Dede, poet and biographer, on whose death he wrote his famous elegy. Ghālib himself died in 1209/1799, at the age of forty-two. The sources are not in agreement as to the causes of his early death. It seems likely that he fell victim to tuberculosis. He is buried at the Ghalaṭa convent cemetery by the side of Ismāʿīl Rüsūkhī Dede, the famous 11th/17th century *Mathnawī* commentator.

Ghālib owes his great fame mainly to his *mathnawī* *Ḥüsn u ʿAshḳ*. His *dīwān*, which contains the richest variety of forms and metrical patterns of the classical school and contains many poems of high standard, has often been qualified by most critics as second rate, for his brilliant and unusual *mathnawī* eclipsed for them everything else he wrote. *Ḥüsn u ʿAshḳ* is an allegorical romance of mystic love. One night a boy Ḥüsn (Beauty) and a girl ʿAshḳ (Love) are born in the Benī Maḥabbat (Sons of Love) tribe. They are at once betrothed by the elders of the tribe. They go to the same school where their teacher is Mollā-yi Djünūn (The Master of Folly). The two are devoted to each other. In the garden Nüzhet-geh-i Maʿnā (The Promenade of Meaning) where they go, they meet an old man Sukhan (Word), the owner of the garden who becomes their go-between. Ḥayret (Astonishment), the local judge, tries to prevent their meeting. But ʿIṣmet (Chastity), the guardian of Ḥüsn, and Ghayret (Zeal), the nurse of ʿAshḳ, try to console and help them in their difficulties. ʿAshḳ asks for Ḥüsn from the tribe, but they make fun of her. She must first go to the Kingdom of the Ḳalb (Heart) and on the way overcome many trials. But ʿAshḳ is prepared to face all things and sets out with Ghayret. At the first step they fall into the bottomless well of a giant who wishes to fatten and eat them. Sukhan rescues them by a rope he lets down. Then freezing Winter detains them on their way and they fall into the power of a wizard. Again Sukhan comes with a horse (Ashḳar) and a sword (*Tīgh-i āh* 'Sword of Sighs') from Ḥüsn, and they set out on their journey reaching the Deryā-yi Ātesh (the Sea of Fire) where there are ships of wax. They have no choice but to fly over, which Ghayret does by opening his wings. ʿAshḳ mounts on Ashḳar who goes without hesitation into the fire. Thus they reach the borders of China. The Emperor's daughter Hūsh-Rübā (Reason-captivating) assumes the shape of Ḥüsn and deceives ʿAshḳ, shutting her up in the Dhāt al-Ṣuwer (painted) fortress. Again Sukhan comes in the shape of a nightingale and tells ʿAshḳ that there is a treasure in the castle and it is necessary to burn the castle to get the treasure. So the castle and all its paintings are burnt. ʿAshḳ becomes thin and ill and can no longer stand even the weight of her clothes made of cloth of moon silk. But a more auspicious day dawns. Sukhan comes as a healing doctor and orders ʿAshḳ to go the castle of the *Ḳalb* (Heart) where Ḥüsn is King. ʿAshḳ sees that the castle of the *Ḳalb* (Heart) is like the fortress Dhāt al-Ṣuwer, but it is truly real. There she sees all her old teachers and nurses. Sukhan tells her that there are no perils or dangers, that it had been he who slew the monsters, and had been the nightingale and the doctor, and now he invites her to come to union with her beloved. Love is Beauty and Beauty is Love and no evil tongue can separate them.

Ghālib, as the last great exponent of *dīwān* poetry, occupies a unique place in the history of Ottoman Turkish literature. From the late 7th/13th until the 11th/17th century, Ottoman Turkish *dīwān* poets were mainly inspired by the great Persian classics the last of whom was Djāmī [*q.v.*]. But in the Indian courts of Babur's descendants there developed a new style of Persian poetry (*sabḳ-i Hindī* [*q.v.*]) in the 10th/16th and 11th/17th centuries, which, abandoning the tradition of the great classics, made fashionable the exaggerated use of conceits, allegory and ornate expressions, and laid emphasis on symbolic and obscure style and unusual words with over-elaborate and far-fetched colour-imagery. This 'Indian School'

of poetry began to influence 11th/17th century Ottoman poets like Nefʿī and more particularly Nāʾilī and a host of other minor writers.

The appearance of a poet of genius like Nedīm in the early 12th/18th century seemed to announce a radical change in the Persian-inspired tradition of Ottoman poetry. Nedīm, although not daring to do away with traditional themes, forms and clichés, made great efforts to "depersianize" Ottoman poetry, introducing many themes and motives from his time and surroundings and using unconventional and often colloquial language. Ghālib, with his poetical genius, unusual power of imagination and mastery of form, might have achieved what Nedīm had started: to create a thoroughly Turkish *dīwān* poetry in the classical tradition, had he chosen to follow his example. Instead, although he admired Nedīm and owes much to him in some of his poems, he decided to turn the clock back and picked up again the "Indian School" tradition where Nāʾilī had left off. But as he was a greater poet with more vision and imagination, and imbued with mysticism, he created, at the close of the classical period, his original blend of both sources.

(Fahir İz)

GHĀLIB, Ismāʿīl [see ismāʿīl ghālib].

GHĀLIB, Mīrzā Asad Allāh Khān, one of the greatest Muslim poets of the Indo-Pakistani subcontinent. He was born in 1797 at Āgra in an aristocratic Muslim family; his childhood and early boyhood were passed at Āgra where he received the classical Mughal education (Persian being one of its chief subjects). He moved to Delhi when he was about 15 years of age and lived in the Mughal capital till his death on 15 February 1869, except for a brief sojourn in Lucknow and Benares on his way to Calcutta where he remained two years (1830-32) in connexion with an unsuccessful attempt to have his pension increased. Returning to Delhi, he lived on pensions granted him in recognition of his talents first by the nawab of Oudh, then by the court of Delhi. Thus Ghālib lived a major part of his life near the degenerate Mughal court of his times and witnessed the hard days of the famous "Mutiny" of 1857. Only with great difficulty and after painful humiliations did he succeed in freeing himself of suspicion of having taken part in the Mutiny and get his pension restored to him by the British Government. Apart from domestic unhappiness (he lost his father at the age of five years, all his seven sons died in infancy, etc.) Ghālib's life was rather quiet and colourless. Hardly any hints at the grave political events of his time can be found in his poetry. He was not even passionately concerned with the Muslim religion, and his broad and tolerant attitude in this respect is shown in a letter to Munshī Hargopāl Tāfta, to whom he writes: "I hold all human beings, Muslim, Hindu or Christian, dear to me, and regard them as my brothers"; the mystical imagery present in his lyrics is due rather to his following the traditional style than to genuine Ṣūfī feeling. The real protagonist of all his poetry is his own mind, which creates extremely refined intellectual images; his poetry, chiefly of a very melancholic trend, is therefore extremely fragmentary, but those "fragments" (he himself defines his *Dīwān* as a "selection") are amongst the most perfect specimens of Urdu literature.

Ghālib's more important works are: (1) His Urdu *Dīwān* first published in 1841 and then, with additions, four times again during his life (last edition in Ghālib's life in 1863 with 1795 *bayts*), and numerous times after his death (*Dīwān-i Ghālib*, ed. Dhākir Ḥusayn, Berlin 1925 is an attractive pocket edition without notes; the last good edition is: *Dīwān-i Urdū*, ed. and annotated by Imtiyāz ʿAlī ʿArshī, ʿAlīgaṛh 1958); (2) His Persian *Kulliyyāt*, consisting of *ḳaṣīdas*, *ghazals*, short *mathnawīs*, *ḳiṭʿas* etc., first published in 1845 and then repeatedly, especially by Nawalkishore in Lucknow (1862, 1924 etc.); (3) Various works in Persian prose included in his *Kulliyyāt-i nathr* first published together by Nawalkishore in Lucknow in 1868. They are: *Pandj gandj-i āhang* (a treatise on Persian grammar and stylistics), *Mihr-i nīm-rōz* (first part of a *Partavistān*, which was a history of the Mughals and the Mughal Empire, the second part of which never came out), and *Dastānbū* (an account of the Indian Mutiny as seen by Ghālib); (4) *Ḳāṭiʿ-i Burhān*, a critical work on the famous Persian Dictionary *Burhān-i ḳāṭiʿ*, first published in Lucknow in 1861-62, and then, with additions, in 1865-66 as *Dirafsh-i Kāviyānī*; (5) The two famous collections of letters in Urdu, the *ʿŪd-i Hindī* first published in 1868 (162 letters) in Meerut, and *Urdū-e Muʿallā* (472 letters) published only 19 days after his death, in March 1869 in Delhi; further letters, fragments in Persian and Urdu etc. were repeatedly published afterwards.

Ghālib expressly stated that he entrusted his fame and renown not to his Urdu, but to his Persian works, and his letters reveal his keen interest in Persian grammar, lexicography and stylistics. He declares that at first he was fascinated by Bīdil [*q.v.*] and his difficult style, but afterwards he preferred a sounder and simpler, more classical Persian. Actually the most mature part of his Persian work is far superior to that of many Indo-Persian writers, but historically speaking its value is rather reduced by the fact that Persian had, already in Ghālib's time, been superseded in the Indian administration by Urdu and had practically no future in India. Therefore a more durable trace was left by Ghālib's Urdu productions. In spite of the difficulty, the wealth of conceits and the extreme over-persianization of its style, his small Urdu *Dīwān* shows what has been called by some of his commentators a "passionate intensity of thought", partly at least derived from his former master Bīdil. In some of his fragments he tries even the supremely refined experiment of simplicity. Simplicity—in contrast to his rather complicated Persian prose—is the chief and revolutionary aspect of his Urdu letters, an unsurpassed model of direct, unaffected expression. Ghālib can therefore be considered the father of modern Urdu prose; for what concerns poetry, he is the father of only one aspect of modern Urdu

poetry, the intellectual and psychological deepening of the old imagery; his complete aloofness from outward reality (no more than 15-20 lines out of the nearly 1800 verses of his Urdu *Dīwān* have Nature as the main theme!) renders him a not very suitable source of inspiration for modern realistic writers of poetry, who may rather look to Urdu poets of the *gīt* type (*e.g.*, Naẓīr Akbarābādī). Attempts at translations of Ghālib into European languages are therefore very scanty, though some of his poems well deserve a modern European re-interpretation.

Bibliography: Books and articles on Ghālib are numerous, especially in India and Pakistan. We mention only: A. H. Ḥālī, *Yādgār-i Ghālib*, 1897; ʿAbd al-Raḥmān Bijnaurī, *Maḥāsin-i kalām-i Ghālib*, Agra 1928; S. M. Ikrām, *Ḥakīm-i farzāna*, Lahore 1957; Khalīfa ʿAbd al-Ḥakīm, *Afkār-i Ghālib*, Lahore 1954; a useful commentary on the Urdu *Dīwān* is: Āghā Muḥammad Bāḳir, *Bayān-i Ghālib*, Lahore 1946 (includes also opinions of earlier commentators); an attempt at a free English translation of fragments of Ghālib's Urdu poetry is: J. L. Kaul, *Interpretations of Ghalib*, Delhi 1957. See also A. Bausani, *The position of Ghālib (1796-1869) in the history of Urdu and Indo-Persian poetry*, in *Isl.*, xxxiv (1959), 99-127. (A. Bausani)

GHĀLIB, Sharīf [see hāshimids and makka].

GHĀLIB PASHA [see mehmed saʿīd ghālib pasha].

GHALZAY (Ghaldjī, Ghilzay), a large western Afghān (Pashto speaking) tribe with many subdivisions, mainly located between Ḳandahār and Ghazna.

Much has been written about the origins of the Ghalzay and one may assume they are a mixture, including Hephthalite and Turkish elements. The name in Pashto would mean 'the son of Ghal,' which in turn means 'thief'. This is the popular explanation of the name Ghalzay. According to legends in the *Makhzan-i Afghānī*, the Ghalzays are descended from Mato, a daughter of Bitan (or Batnī) who was a son of Ḳays, the eponymous ancestor of all Pathans. Mato had an affair with Shāh Ḥusayn, a refugee prince of Ghūr, and Ghalzay was born of this union, the progenitor of the tribe.

It is probable that the name Ghalzay is derived from Khaladj, a Turkic (or Hephthalite?) tribe, which lived in the Ghazna area in the 4th/10th century (cf. Minorsky). The Khaldji (Khildji) dynasty of India was founded by leaders of this tribe, and a mixture of 'Turks and Afghāns' is indicated by the *Djahān-nāma*, a geographical text of the early 7th/13th century. Bābur campaigned against the Ghaldjī near Ghazna, and we may assume this is the earliest mention of the name of the Ghalzays. The Ghalzays came into prominence in the 11th/17th century when they moved into the region of Ḳandahār, occupying territory vacated by Abdālī tribesmen who had been moved to Harāt by Shāh ʿAbbās I. In 1707 Mīr Ways, leader of the Ghalzays of Ḳandahār, revolted against the Persians, slew the governor and declared his independence. Mīr Ways died in 1715 and was succeeded, after some conflict, by his son Maḥmūd. The latter captured Kirmān in 1720 and the Ṣafawī capital Iṣfahān in 1722. The Ghalzays ruled Persia under Maḥmūd and Ashraf until 1730. With the victories of Nādir Shāh the power of the Ghalzays melted away. In place of the Ghalzays, the Abdalīs or Durrānīs became the principal tribe of Afghānistān, led by Aḥmad Shāh.

The Ghalzays aided Shāh Shudjāʿ to take Kābul in 1218/1803, and ties of marriage joined the Ghalzay chiefs to the ruling Durrānī tribe. In more recent times a Ghalzay force was defeated at Aḥmad Khēl in 1880 by a British detachment under Stewart marching from Ḳandahār to Kābul. The Ghalzays revolted against the ruler of Afghānistān, ʿAbd al-Raḥmān in 1886, and have participated in many local uprisings and raids since that time.

At present the Ghalzays are mainly found east and south-east of Ghazna, although groups of them are settled in northern Afghānistān near Maymāna and in Badakhshān. They are divided into two main groups, the Turān (Tōkhī and Hōtakī sub-tribes) and the Burhān (Sulayman-khēl, ʿAlī-khēl, Tarakkī and Isḥākzay). There may be almost two million Ghalzays, of whom three-quarters live in Afghanistān, and the rest in Pakistān.

GHĀMID, tribe and district in western Saudi Arabia. The tribe is said to descend from Ghāmid b. ʿAbd Allāh of al-Azd of Ḳaḥtān, who moved northward from the Yaman and settled in the area now called Bilād Ghāmid in the highlands of southern al-Ḥidjāz, centred around approximately 20° N. and 41° 45′ E.

The tribe is now subdivided into a large number of sections, most of which are sedentary. The few nomadic sections, called Āl Ṣayyāḥ, roam along the northern and eastern edges of the settled district and own a few gardens in al-ʿAḳīḳ and along Wādī Ranyā.

The district of Ghāmid is relatively thickly settled, fertile, and prosperous. Rainfall allows dry farming, and fruits, wheat, barley, beans, and tobacco are grown. The villages consist for the most part of stone houses, made from locally quarried granite blocks. The fertility of the area, the extreme fragmentation of tribal splinter groups, and the raids by the Bedouin, formerly always at odds with the farming population, led to the construction of innumerable defensive towers, also made of granite blocks, which are characteristic of the area. Many of these towers have been allowed to decay.

Before the First World War Ghāmid owed allegiance to either the Turks or the Sharīf of Mecca, and its administrative centre was in the village of al-Ẓafīr (from Āl al-Ẓafīr section of Ghāmid). Since the establishment of the Saudi government, the district of Ghāmid and that of Zahrān [*q.v.*] to the north have been administered as a unit. The seat of local government is now some 15 miles south of al-Ẓafīr at Baldjurshī (or Baldjurashī), a name designating twenty-four small settlements scattered over a wide plain (altitude 1,960 meters). Four of these settlements: al-ʿAwadha, al-Ṣilmiyya, al-Rukba, and al-Ghāzī, collectively referred to as Dār al-Sūḳ, are close together and form the administrative and marketing centre.

GHĀNA, a town in the Nigerian Sudan in the

Middle Ages, now vanished, the site of which should apparently be identified with Kumbi Ṣāliḥ (15° 40′ N., 8° W.), some 330 km./200 miles north of Bamako, 95 km./60 miles west-north-west of Nara and 70 km./44 miles south-south-east of Timbedra. Kumbi Ṣāliḥ belongs to the administrative district of Aïoun el Atrous (*ʿUyun al-ʿatrūs*) (subdivision of Timbedra) in the Islamic republic of Mauritania.

The term *ghāna* signified sovereign in the Awkār. By extension, it denoted the capital city of the first negro kingdom of Nigerian Sudan. Al-Fazārī (before 184/800) is the first to speak of "Ghāna, the land of gold", which is mentioned also by al-Yaʿḳūbī (256/870) and, in particular, by Ibn al-Faḳīh al-Hamadhānī who died probably in 290/903 and who, in his *Kitāb al-Buldān* (*BGA*, vi, 87), provides some amusing details (ed. and trans. M. Hadj-Sadok, Algiers 1949, 51): "from Ṭarḳala to Ghāna it is three months journey on foot through the desert; in the country of Ghāna, gold grows in the sand like carrots (*djazar*); it is dug up at sunrise; the natives live on millet (*dhura*) and beans (*lūbiyā*); their name for millet is *dukhn*; they clothe themselves in panther skins since these animals are abundant in their country".

The first eyewitness account by a traveller is that of Ibn Ḥawḳal, who in 366/977 wrote the *K. al-Masālik wa 'l-mamālik* in which he says "The king of Ghāna is the richest in the land on account of the gold mines he governs", but gives almost no other information about his visit to the Sudan.

Al-Saʿdī (d. *ca.* 1065/1655), inthe *Taʾrīkh al-Sūdān* (ed.-tr. O. Houdas, Paris 1900, 2nd ed. Paris 1964) mentions 44 princes of white stock of unknown origin, 22 of whom are said to have ruled before the *hidjra* and 22 afterwards, but Delafosse thinks (*Haut Sénégal-Niger*, iii, 1912, 23) that the tradition mentioned 44 sovereigns, a number of whom were before the *hidjra*, and that the writer of the *Taʾrikh* translated *a number* by *half*. In fact nothing is known about this period, except that the Soninke, a negro race, co-existed with these princes of white stock; R. Mauny, however, disputes that there was in this period a race of white princes, whom al-Idrīsī (549/1154) is the first writer to mention. In about 174/790, Kaya Maghan Cissé, the first negro *tounka* (king) of Ghāna, drove back the Whites towards Tagant, Gorgol and Fūta. This kingdom included Awkār, Bagana, Diaga, Kaniaga, northern Beledugu, Kaarta, Kuigui, Diafunu and Wagadu. Almost nothing is known about this kingdom until the first Berber attacks in the 3rd/9th century which have been described for us by Ibn Abī Zarʿ (*Rawḍ al-ḳirṭās*) and Ibn Khaldūn. This Berber invasion led to the kingdom of Awdaghost [*q.v.*] which became a vassal of Ghāna. In 380/990 the town of Awdaghost was taken by the king of Ghāna, who appointed a negro governor to ensure that the dues on their caravans were paid by his Berber vassals. For half a century Ghāna was the most powerful kingdom of the Sudan; thanks to al-Bakrī (460/1067-8) we have a good deal of information about it. The capital consisted of two towns, one of which was inhabited by Muslims among whom were several jurists and other scholars; it had twelve mosques to which *imāms*, *muʾadhdhins* and readers (*rātibūn*) are attached; the Friday prayer is observed in one of them. The other, situated six miles away, was the royal town. Here the sovereign had a palace comprising a castle and a number of huts with round roofs, the whole being surrounded by a wall. Not far from the king's court stood a mosque for the use of Muslims visiting the Prince on special missions. The houses were made of stone, a unique feature in the Sudan, or of wood of the gum-tree. Nearby were extensive woods, from which the royal town took its name of *ghāba* (forest). In huts in this forest lived the sorcerers and priests who guarded the idols; it was there also that the kings' tombs and the prisons were located. The people were fetish-worshippers, as was their sovereign, though in fact he treated the Muslims with great respect, and thus chose his interpreters, his treasurer and most of his ministers from among them; according to al-Bakrī, they had also special privileges of dress. Since Delafosse, many descriptions have been given of the royal audiences. They began with the beating of drums (*daba*). The king's subjects prostrated themselves and threw earth over their heads, but the Muslims showed respect by clapping their hands.

The commercial rôle of Ghāna was very important. The Maghribī traders arrived from Tafilalet with stocks of merchandise, in particular salt bought at Teghāza and aromatic wood which was used to sweeten the water-skins and to make the water kept in them for a long time fit to drink. The wares brought from the north included copper earrings and rings. From the Sahara came caravans laden with salt. But the principal commodity was gold from the mines of Wangara (Upper Senegal and Faleme basin) which the traders fetched from Gadiaro, 18 days' journey from Ghāna and probably near Kayes, and which they exchanged by silent barter. The figures given by al-Bakrī relating to the strength of the Ghāna army (200,000 warriors, 40,000 of them archers) are obviously an exaggeration.

Awdaghost was captured by the Almoravids of Yaḥyā b. ʿUmar (446/1054). After checking the revolt of the Berber Maṣṣūfa, Abū Bakr b. ʿUmar decided to put their bellicose instincts to good use and sent them to attack Bassi, the king of Ghāna (1061) who was renowned for his justice and for his friendship towards the Muslims; he was succeeded the next year by his nephew Tounka Menin. After 15 years of warfare, Abū Bakr took possession of Ghāna (1076). The inhabitants were massacred or compelled to accept conversion. The death of Abū Bakr ibn ʿUmar (480/1087) must have allowed Ghāna to regain its independence. But the various provinces had broken away, with the result that in the 6th/12th century the authority of the ruler of Ghāna hardly extended beyond Bassikūnū and Awkār. In 1203 Sumangūrū Kante, the ruler of the Sosso, took Ghāna and established in it a pagan garrison from which the Muslim Sorinke had to flee to Walata (1224), which replaced Ghāna as the centre of trading caravans and of Muslim education, and to Dienné (1250). In 1240 Soundjata Keita captured Ghāna, which was entirely destroyed.

Nevertheless, al-ʿUmarī, writing before 750/1349, stated: "In the length and breadth of the lands of the lord of this kingdom (of Mali), there is no-one who bears the title of king save the lord of Ghāna, who is, however, his deputy, despite his title of king". Incidentally, Ibn Khaldūn speaks of his meeting in 796/1393 with Shaykh ʿUthmān, *muftī* of the inhabitants of Ghāna. These two passages seem to indicate the persistence, after the expeditions of the 7th/13th century, of an important community perhaps residing at Walata and including a king and *muftī*.

It was the extraordinary renown of this negro kingdom that induced Dr. Nkrumah, the political leader of the Gold Coast, to name his country Ghana when it attained independence in 1957.

GHANA. Islam first spread into the area comprised in the modern Republic of Ghana, the former British colony of the Gold Coast, probably in the late 8th/14th or early 9th/15th century, when the Muslim Dyula—specialized trading groups of Malinke and Soninke affiliations—extended their activities from the metropolitan districts of Mali outwards to various centres of primary economic production far beyond the imperial frontiers. Attracted into the Voltaic region to the south mainly by its abundant resources of gold, the Dyula established themselves in small colonies distributed along the trade-paths leading from the goldfields northwards to the greater markets on the Niger, termini of the trans-Saharan caravan trails. A Dyula centre of early importance, from which many later Muslim communities in both the Ivory Coast and Ghana stemmed, was at Begho, on the western border of Ghana near the modern Nsorkor; before its collapse probably in the early 18th century it had become one of the main focuses of Muslim activity within the Voltaic region. Another early centre was that of Wa, in northern Ghana, where the present *amīr al-muʾminīn*, the Dyula-mansa or Shehu Wangara, claims to be forty-second in office.

A second course of Muslim influence was that from the north-east. Muslim merchants from the Hausa states, active in the kola trade, may, on the evidence of the *Kano Chronicle*, have extended their activities into Ghana as early as the mid-9th/15th century. With the expansion of the trade in the 18th century, Hausa immigration into Ghana was greatly stimulated, and important settlements grew up in such northern market centres as Salaga and Yendi.

On the available evidence, it was not until the later 10th/16th century that Islam began to spread beyond the confines of the Dyula and Hausa trading communities. At that time the Begho *shaykh* Ismāʿīl, and his son Muḥammad al-Abyaḍ, converted to the faith the Malinke-Bambara ruling aristocracy of Gonja, then the rising power in northern Ghana. This was the period when, according to the *Taʾrīkh Kunta*, the disciples of ʿUmar al-Shaykh (d. ca. 949/1552-3) were planting the Ḳādiriyya order throughout the Western Sudan, and it may be that the Begho movement is to be seen against this background.

Not until a century and a half after the Gonja conversions does Islam appear to have made further significant gains in Ghana. In the early years of the 18th century the Dagomba ruler Muḥammad Zanjina became a convert to Islam, as did, at much the same time, Atabia (d. 1154/1741-2), king of the sister state of Mamprusi. Thus by the early 18th century the three major states of northern Ghana, Gonja, Dagomba, and Mamprusi, each had a Muslim ruler. None developed, however, into an Islamic state on the model of the 18th century imāmates of Futa Toro and Futa Jalon: since their political and socio-legal systems had become rigid in earlier times, they preserved, beneath an Islamic super-structure, an essentially pre-Islamic sub-structure.

In the late 18th and early 19th centuries Muslim communities established themselves further to the south. In Kumasi, capital of the Ashanti empire, Muslims served on the king's council, staffed the chancery, and, with the concurrence of the king who was apprehensive of the growth of a revolutionary native Ashanti merchant class, established their control over important sectors of the Ashanti economy.

The early 19th century Muslim reform movement initiated by ʿUthmān dan Fodio, which led to the establishment of the Fulani amīrates of northern Nigeria, made some impact upon north-eastern Ghana Muslim communities such as that of Yendi, the Dagomba capital, but by its doctrinal emphasis upon non-cooperation with pagan rulers perhaps tended in general to retard the spread of Islam further south. In the second half of the same century a wave of Islamization in the north-west, affecting in particular sections of the Sisala, appears to have resulted from the *djihād* of al-Ḥādjdj Maḥmūd Karantao of Wahabu (Republic of Volta), whose forces included Dagari-Dyula contingents from Wa. Later in the century the Wa area, and western Gonja, were for a brief time brought under the dominion of the Mandinka empire of Samori Ture, while in the central districts of northern Ghana the Zabarima and locally-recruited forces of Alfa Kazare, Babatu and Hamaria were creating the nucleus of a Muslim state in the midst of the pagan 'Grunshi'. An alliance between the Muslim forces of Samori, Babatu and Mukhtār ibn al-Ḥādjdj Maḥmūd Karantao, and even the non-Muslim Ashanti, directed against the British and French, failed to consolidate in time and by the beginning of the present century the strength of each had been broken by the colonial powers.

Muslim immigration increased in volume throughout the 19th and into the 20th century, Zabarima, Hausa and Yoruba constituting the bulk of the settlers. Today no town in Ghana is without its Muslim section. The recent spread of Islam has been largely a result of this process, though in the extreme south Islam gained new ground among the Fante as a result of the proselytizing activities from c. 1885 of Abū Bakr, a northern *malam*, and his two Fante disciples Benjamin Sam and Madhi Appah.

No census of the Muslim population of Ghana has been made. Over the country as a whole the proportion of Muslims is unlikely to be less than 10%, and may be significantly higher. The largest concentrations are found in the capital, Accra, which probably has about 75,000 Muslims (total popu-

lation: 388,000), and in Kumasi with probably about 60,000 (total population: 221,000). Estimates of the extent of Islamization in northern Ghana vary widely from 15% to 50%; much depends upon the view taken of the many marginally Muslim groups there.

No detailed study of Muslim organization in Ghana has yet been made. The Ḳādirī and Tidjānī orders are both established. The history of the former in Ghana, as already suggested, may date back to c. 960/1550, though its main growth took place in the early 19th century, largely through Hausa intermediaries. The Tidjāniyya spread widely, often at the expense of the Ḳādiriyya, in the second half of the 19th century and is still ascendent. The Tidjānī *wird* in Ghana is probably partly of ʿUmarī origin (al-Ḥādjdj ʿUmar of Segu, d. 1864), but has certainly also been received immediately from the Senegambia, and, through pilgrims, from Meccan contacts. There are no reliable estimates of the numerical strength of either order. In addition, since 1921 Aḥmadī missionaries have been active especially in Saltpond in the extreme south, in Kumasi, and in Wa. In 1963 they claimed a following of between thirty and forty thousand. In the political life of Ghana Muslims are represented by the Moslem Council, a wing of the ruling Convention Peoples Party. The Moslem Association, founded in 1932 as an eductional and cultural organization, as the Moslem Association Party joined the opposition to the C.P.P. in 1956, but was disbanded in late 1957.

The development of Islamic learning in Ghana was one result of the spread of the faith. A tradition of local authorship was certainly well established by the early 18th century; it is exemplified in the extant *Kitāb Ghundjā*, an important historical work of Gonja authorship compiled in the middle of that century. The tradition is still a thriving one, and is excellently represented in the works of al-Ḥādjdj ʿUmar b. Abī Bakr of Salaga and Kete Krachi (b. Kano, c. 1850; d. Kete Krachi, 1934), of which over a hundred are known. They are characterized by their lively treatment of topical events,—the coming of the Christians; the Salaga civil war; the influenza epidemic; the claims of a false Mahdī; etc. Al-Ḥādjdj ʿUmar's pupils are now widely dispersed throughout Ghana and the surrounding territories. The Institute of African Studies in the University of Ghana has a growing collection of works in Arabic script from Ghana; these are mainly in the Arabic language but also include items in Hausa, Dagbane, Mamprule and Guan.

The ancient Western Sudanese tradition of mosque architecture, best known from the Niger Bend, is represented in about thirty surviving buildings in northern Ghana, of which the Friday mosques at Larabanga and Bole (Gonja) are particularly worthy of note. In general, however, the old mosques are rapidly being replaced by undistinguished (though more commodious) structures of concrete and corrugated iron. Much of the domestic architecture of north-western Ghana is also heavily Sudano-Islamic in style. (I. Wilks)

GHANAM [see badw (ii,a), yürük, zakāt].

GHANĪ, *takhalluṣ* of the Persian poet Mullā Muḥammad Ṭāhir Ashaʾī of Kashmīr, who flourished during the reign of the Mughal emperors, Shāhdjahān and Awrangzīb [*qq.v.*]. Nothing is known with certainty either about the date of his birth or the origins of the clan—the Ashaʾīs—to which he belonged. It is, however, certain that he was the son of an obscure poor *shālbāf* (a weaver of woollen shawls). A pupil of Muḥsin Fānī, assumed by some scholars to be the author of *Dabistān-i madhāhib*, Ghanī began writing poetry at the early age of twenty. The numerical value of his pen-name Ghanī (*i.e.*, 1060/1650) supplies the date. True to the literal meaning of his poetical name, he hated and detested meeting and attending on princes, potentates or men of power and riches. When his fame as a great poet reached the emperor Awrangzīb, he wanted to see him and ordered the governor of Kashmīr, Sayf Khān, to send Ghanī to Delhi. Learning of the governor's intention the poet refused to comply with his wishes and asked Sayf Khān to inform the emperor that Ghanī had gone mad. Finding the governor adamant, the poet all of a sudden tore his collar and rolled in the dust. Three days later he died (1079/1688). Gifted with an extraordinarily fertile imagination and a high-soaring intellect he composed fine poetry rich in *īhām* [*q.v.*].

His *dīwān*, comprising *ghazal*s, *rubāʿī*s and *ḳaṣīda*s, was arranged and edited posthumously by Muḥammad ʿAlī Māhir, a Hindu convert to Islam and an adopted son of Mīr Djaʿfar Muʿammāʾī. It contains over 2,000 select verses and was printed in Lucknow in 1261/1845. Given to composing verses which admitted of more than one interpretation, Ghanī has few rivals in this field of *sanʿat-i īhām-gūʾī*. Piqued and offended, he gave up attending on ʿInāyat Khān, son of Ẓafar Khān Aḥsan, the Mughal governor of Kashmīr and a great patron of art and culture, as the former had once remarked that a couplet which could not be properly understood on the first hearing or reading was absurd and meaningless. Ghanī lies buried in the Gurgārī Maḥalla (formerly known as Ḳuṭb al-Dīnpūr), Zayna Kadal, Srinagar where his grave is still extant. His cottage in Rādjwer Kadal, a quarter of the same city, is also pointed out to visitors although the simple brick-built structure does not show any signs of age.

(A. S. Bazmee Ansari)

GHANĪ B. AʿṢUR b. Saʿd b. Ḳays (b.) ʿAylān, an Arab tribe. They were, according to the genealogists, the brothers of Bāhila [*q.v.*]. Their grazing-grounds lay between Bīsha [*q.v.*] and the later *ḥimā* Dariyya [*q.v.*]. Being small in number they were never prominent. In pre-Islamic times one of them, Riyāḥ b. Ashall, killed towards the middle of the 6th century A.D. Shaʾs, the son of Zuhayr b.

Djadhīma, the powerful chieftain of the ʿAbs (*Aghānī*[1], x, 9 ff., 16). Riyāḥ's daughter Khabiyya was married to Djaʿfar b. Kilāb b. Rabīʿa (*Naḳāʾiḍ Djarīr wa ʾl-Farazdaḳ*, 106, 10; *Mufaḍḍaliyyāt*, 353, 1 and 710, 17; Mubarrad, *Kāmil*, 482, 16), the ancestor of the leading "house" of the Banū ʿĀmir b. Ṣaʿṣaʿa. Since then the Ghanī were in subordinate alliance with them, though not considered their equals (*Naḳāʾiḍ*, 533, 17; cf. also *Mufaḍḍaliyyāt*, no. 105, 19). The Ghanī fought about 580 A.D. on the side of the Banū ʿĀmir b. Ṣaʿṣaʿa at Shiʿb Djabala (*Aghānī*[1], x, 37, 20; *Naḳāʾiḍ*, 659, 18). Men of the Ghanī took part in the fight on the Day of al-Raḳam (*Mufaḍḍaliyyāt*, 31, 18) towards the end of the 6th century and on other occasions (*Naḳāʾiḍ*, 227, 1; 1060, 12; 1061, 9; 1063, 6). Some time afterwards they suffered heavily on the Day of Muḥadjdjar, when Zayd al-Khayl al-Ṭāʾī (d. 10/632) fell upon the Banū Kilāb and Banū Kaʿb; but they soon took revenge on him (*Aghānī*[1], xvi, 52 and vii, 147; Ṭufayl b. ʿAwf, nos. I and III).

It seems that the Ghanī were indifferent towards the rising power of Muḥammad; there was, to be sure, amongst his earlier companions Abū Marthad al-Ghanawī, but he was a confederate (*ḥalīf*) of Ḥamza b. ʿAbd al-Muṭṭalib (Ibn Hishām, 322, 3 etc.). After the battle of Ḥunayn (8/630) the Ghanī accepted Islam without resistance, nor did they take part in the revolt (*ridda*) after Muḥammad's death (11/632). During the conquests many of them went to Syria. In the wars that ensued after the battle of Mardj Rāhiṭ (64/684) between the Kays and the Yemenīs and later the Taghlib, the Ghanī with the Banū ʿĀmir, Bāhila and Sulaym fought against the Taghlib (Ibn al-Athīr, iv, 256, 259 ff.).

The best known poet among the Ghanī is Ṭufayl b. ʿAwf, nicknamed Ṭufayl al-Khayl for his skill in describing horses (the Ghanī were renowned horse-breeders, see Ṭufayl no. I, 22). Then there is one Kaʿb b. Saʿd al-Ghanawī of the early Islamic period, whose *Bāʾiyya* is considered to be one of the finest elegies (*Ḳālī*, *Amālī*[1], ii, 150 ff., etc.). The otherwise unknown Abū Khālid al-Ghanawī (*Fihrist*, 105, 10) wrote a *Kitāb Akhbār Ghanī wa-ansābihim* which is lost.

For Ṭufayl al-Ghanawī see F. Krenkow's introduction to his edition *The poems of Ṭufail ibn ʿAwf* etc., *GMS*, xxv. (J. W. Fück)

GHANĪMA, or *ghunm*: booty. The term *maghnam* denotes either the mass of the booty or that part of it which goes to the central government (al-Balādhurī, 145, 11). In Bedouin tribal society, where the basic problem is the provision of the bare necessities of life, plunder has always been a salient feature. Notwithstanding the risk of initiating blood-feuds, the Arabs were proud to have the reputation of being indomitable raiders, even, when hard-pressed, upon related tribes (cf. al-Ḳuṭāmī, ed. Barth, 58 ff.). Far from being considered criminal the *ghazw*s [*q.v.*] were regarded as normal practice, and no doubt served to suppress other criminal activities, appealing as they did to collective responsibility and small-scale co-operation. Customary rules for the sharing of moveable booty existed in pre-Islamic times. The leader was entitled to one fourth or one fifth in addition to the *ṣafi*, or items that especially attracted him. Furthermore he had the right to dispose of, firstly the *nashīṭa*, or casual plunder obtained while journeying to meet the enemy—no doubt because such plunder was taken in less dangerous circumstances and was therefore handed over to the one who controlled the whole group—, and secondly the *fuḍūl*, or surplus items, the strict division of which would be wasteful, such as a horse or a camel (*LA*, s.v. *nashīṭa*; *Ḥamāsa* (Abū Tammām), 458). It is known that the deputy (*ridf*) of the king of al-Ḥīra obtained one fourth of the booty (*Mafātīḥ*, ed. v. Vloten, 128), probably not because he and the king together claimed half of it, but rather in his capacity as a leader in warfare. It would thus seem that the *ghanima* was not regarded as the concern of the State.

Under Islam it was difficult to maintain the simple Bedouin method of division, for the amount of the booty was vast and complicated strategic situations preceded its acquisition. Moreover there was the need for an enhanced State authority and the responsibility for upholding the existing administrative and economic regime. All this opened the door to foreign influence.

While the neglect of any rules for the division of immovables or landed property did not trouble the Bedouins, who dealt with them under the heading of communal reserves, *ḥimā*, it would have posed a serious problem for the urban societies of the Arabian peninsula. But apart from this the Prophet's deviations from ancient custom as to the division of moveables were, in principle, few and insignificant. Nevertheless he was forced on several occasions as a matter of policy to make considerable adaptations, lest, in view of the vital interest taken in this question by his followers, discontent should become serious.

Most later theorists regard it as a settled rule that the spoils (*salab*), comprising the clothes, weapons and occasionally the mount of an adversary killed in battle, are the property of the victor and are not to be included in the rest of the booty. But after Badr the Prophet, according to one tradition, hesitated to comply with this custom in one case (al-Bayḍāwī, *Tafsīr*, on VIII, 1).

Certain scholars hold that the *anfāl*, or bonus shares given to those warriors who have distinguished themselves, should be provided for out of the leader's portion of the *khums* (see FAYʾ); but Sūra VIII, 1, seems best interpreted as deciding a major problem, and the fact that the Prophet was free to dispose of his personal share of four per cent of the booty (*khums al-khums*) as he wished could scarcely have given rise to discontent. There is some authority for the view that *nafal* should be promised before the battle as a fixed share of the expected booty (*Ikhtilāf*, 118 ff.), but this view was not generally regarded as valid. Criticism was especially severe after Ḥunayn, when the political insight of the Prophet led him to reconcile former opponents with Islam (*taʾalluf al-ḳulūb ʿala ʾl-islām*) by bestowing upon them large shares of the booty to the detriment of his old supporters (cf. Sūra IX, 60). There is hardly any reason for posterity to attempt to exculpate the Prophet for this manœuvre on the ground that the booty in fact went to persons who had already embraced Islam. Since the obvious political aim of Muḥammad was to secure a stable centre among the wavering Bedouin tribes it was essential for him to establish his position in Mecca. The *ridda* after Muḥammad's death demonstrated, in its extreme form, a situation which he had successfully kept in check during his lifetime—rival prophetic movements in certain tribes which detested

a centralized government and aversion to the poor-tax. Subsequent opponents of the Umayyads, using in their invectives against the dynasty the term *al-mu'allafatu ḳulūbuhum* (al-Dīnawarī, 175, 1), failed to appreciate that the Prophet had won over the ablest politicians of the day, who were destined to provide an effective government at a time of crisis. Once triumphant, however, Islam could afford to abandon this line of approach and was not loth to do so. But, of course, even in later Islam the way to political influence was occasionally paved by economic means, although other names were used. When al-Māwardī (239) calls transferred property (*amwāl manḳūla*, cf. *Mafātīḥ*, 64, 11) by the term *ghanā'im ma'lūfa*, it shows that he was not unaware of the fact that such property was taken from the shares of the militia [see further TA'LĪF AL-ḲULŪB].

A highly interesting example of the vast amount of booty and the unpreparedness of the government for sweeping successes in the field appears in the tradition of Djarīr and his tribe Badjīla. After the latter's exploits in ʿIrāḳ the laxity of the rules for division left them in possession of some of the richest areas known at that time. According to one tradition they had previously been promised a third of the booty as *nafal* over and above the *khums* (al-Balādhurī, 253). The most widespread tradition, however, maintains that they formed one fourth of the conquering force, and that they got one fourth of the Sawād, the conquered territory. In fact the tradition seems to concern the leader's customary one fourth. One cannot doubt that there is a basis of historical fact to these traditions; nor can other traditions be doubted that relate how ʿUmar I realized, on second thoughts, how dangerous this precedent would be. Having appealed to their honour they were faced with the alternative of accepting his proposals or acknowledging that their share of the booty was a payment of the category of *ta'alluf* (al-Balādhurī, 268). Perhaps there were more powerful arguments in reserve, but at any rate such a blot on his honour could not be borne lightly by any good Muslim.

The traditions are undoubtedly right in maintaining that it was ʿUmar I who first settled fixed annual pensions or incomes on the most influential and deserving of the inner circle of conquerors and on the Prophet's widows. The transfer of the militia to a *dīwān* of fixed stipends also took place under his leadership, a process which undoubtedly continued to develop under ʿUthmān. A Muslim could choose the state of *hidjra*, or military service, and so become entitled under the law governing the *dār al-hidjra* to *fay'* contributions (Abū Yūsuf, 85; al-Dīnawarī, 131, 141; al-Balādhurī, 275).

In the systematized rules enunciated by the jurists for the division of the booty it is possible to trace the growth of Islam from its small beginnings and the development of skirmishes into large scale operations. The booty was divided on the basis of military potential. As with regular pay a distinction was drawn between foot soldiers and mounted troopers. The precedent may have been set by the Prophet but the aim behind it was well suited to the armament of the times. Every man was given one share, but the mounted soldier got one or two extra shares for his mount. Some jurists would go even further and give to the horseman one share for each of his mounts. This no doubt marks the trend of development. An illustration is provided by a case in the 4th/10th century of an increase in pay in the ratio 10 : 1 (al-Ṣūlī, *Akhbār al-Rāḍī wa 'l-Muttaḳī*, ed. J. Heyworth Dunne, 1935, 226).

Where large armies were engaged it was naturally not only upon those in the front ranks or those who actually came to grips with the enemy that victory depended. Tradition in fact represents ʿUmar I as faced with the situation of the appearance of certain troops after the battle had been won (al-Balādhurī, 256). He is said to have decided that they were entitled to booty if they had arrived before the dead had been buried. Some jurists claim that even if the army is returning to the *dār al-islām* and is then met by other troops or auxiliaries, these latter can claim part of the booty. Furthermore the next of kin of fallen soldiers may inherit their shares. On the other hand, since only free Muslims are entitled to booty, bondmen, women and *dhimmīs* who may in some way have contributed to victory may take only a bonus share, *raḍkh*, to be given at the discretion of the Imām. Such shares may even be given to those who are temporarily absent. It is not clear whether this also applies to those who are represented by a hired substitute (*badīl*). Such shares are usually small, and ought not in any case to exceed the normal share of one person.

As regards ransom money there was a precedent from Badr, where the captor received it for his own captive. With Ḳur'ānic support this was later regularly added to the booty to be distributed by the Imām. In general the majority of jurists emphasize the free discretion of the latter, and in so doing undoubtedly reflect what was growing practice. Here also precedents from the Prophet might be adduced. Irregular warfare is curbed and the necessary condition that the troops have been officially dispatched is underlined. Of course such rules could never be invariably applied in practice, since situations varied and hired troops occasionally got out of control. Plundering and rioting soldiery mark the decline of the ʿAbbāsid power, although this naturally falls outside normal conditions. See also BARANTA, GHAZW, YAGHMĀ.

GHANĪMAT, MUḤAMMAD AKRAM, Indian poet who wrote in Persian, a descendant of a family of *muftīs* who originated from the village of Kandjāh five miles from Gudjrāt (Pandjāb). Nothing is known about his life and it is not proved that he was governor of Lahore from 1106 to 1108/1695-7, as is asserted by Éthé (*Gr.Ir.Ph.*, ii, 251). He was in the service of Mukarram Khān at Gudjrāt and we do not even know the exact date of his death, which occurred, it is said, at the end of the 9th century A.H. (about 1690). He is best known for a *mathnawī*, highly esteemed in India, entitled *Neyrang-i ʿIshḳ*, which tells of the love of the young prince ʿAzīz (who seems to have been the son of his patron) for a gipsy dancer named Shāhid; Éthé gives the date 1096/1685 for the composition of this poem. He left also a small collection of *ghazals* which have recently been published (Lahore, 1337).

(S. Naficy)

GHĀNIYA, Banū, family of Ṣanhādja Berbers who, in the Almohad epoch (6th/12th century), attempted to restore the Almoravids in North Africa.

The feminine name Ghāniya which designates them is that of an Almoravid princess who was given in marriage by the Almoravid sultan Yūsuf b. Tāshfīn to ʿAlī b. Yūsuf, head of the family. He had two sons by her, Yaḥyā and Muḥammad. Yaḥyā fought victoriously against Alfonso the Battler, king of Aragon (528/1133), and was governor of Murcia and Valencia. Thirteen years he successfully defended Cordova against Alfonso, but following fresh attacks by the Christian king was forced to submit.

Meanwhile, the Almohads had just landed in Spain (541/1146). Yaḥyā b. Ghāniya was one of the last defenders of the peninsular part of the Almoravid domains. He died at Granada in 543/1148.

Muḥammad, Yaḥyā's brother, had been nominated governor of the Balearic islands by ʿAlī b. Yūsuf in 520/1126. At the time of the Almoravid collapse many members of the fallen clan came to join him there. The governor was declared an independent sovereign and this was the beginning of a new dynasty. Following a palace revolution authority passed to Isḥāḳ b. Muḥammad (560/1156). Under his rule the small Almoravid kingdom enriched itself by piracy at the expense of the Christians; the islands were peopled by refugees and prisoners. Isḥāḳ himself died in 579/1183 during a piratical expedition. The eldest of his many children, Muḥammad, succeeded him, but he was compelled to submit to the threats of the Almohad Abū Yaʿḳūb, who forced him to recognize his sovereignty. Majorca was given a representative of Almohad authority. The Majorcans, having revolted, gave the power to ʿAlī, Muḥammad's brother. ʿAlī, pressed by the Almoravid refugees who surrounded him, decided to carry on the battle against the Almohads in Barbary. Thirty-two ships disembarked the Majorcan troops near Bougie. This town had once been the capital of the Ṣanhādja Banū Ḥammād, but had become the capital of an outlying province dependent on Marrākush. It cannot easily have tolerated this loss of status and no doubt sheltered partisans of the overseas Ṣanhādja, so it was easily taken while the Almohad garrison was absent and the inhabitants were at the mosque (6 Shaʿbān 580/12 November 1184).

ʿAlī Ibn Ghāniya, having conquered the Almohad troops who returned towards Bougie, gained the support of numerous nomad Arabs of the Hilālī tribes of Riyāḥ, Athbadj, and Djudhām. Leaving the government of Bougie to his brother Yaḥyā, he marched westwards, seized Algiers, Muzāya, and Miliana, then, returning eastwards and recruiting numerous allies on the way, occupied Ḳalʿat Banī Ḥammād and laid siege to Constantine. However, the Almohad caliph Yaʿḳūb al-Manṣūr, informed of the Almoravid success, had sent an army which retook the lost cities and expelled Yaḥyā b. Ghāniya from Bougie. ʿAlī was forced to raise the blockade of Constantine. Fleeing to the desert, he passed to the south of the Aurès and reached the Djarīd (S. Tunisia), which became his base of operations from then on.

Helped by Arabs of the region, he took Tozeur and Gafsa. Setting himself up as sovereign, he paid homage to the ʿAbbāsid caliph, who promised him his support. From Gafsa he went to Tripoli, where he met the Armenian Ḳarāḳūsh, the freedman of a nephew of the Ayyūbid Saladin, who ruled the country with a troop of Turkomans (Ghuzz). An understanding between the two chiefs was effected. The Almoravid troops, reinforced by Ghuzz contingents who had been joined by Arabs from the Banū Hilāl and Banū Sulaym, entered the country, leaving a trail of ruin in Ifrīḳiya. The taking of Mahdiyya and Tunis were the aims of the expedition. Not having been able to seize them, and learning of the arrival of the caliph al-Manṣūr with an Almohad army, ʿAlī Ibn Ghāniya retired to the Djarīd. Six thousand Almohad horsemen followed him there, and he inflicted a bloody defeat on them on the plain of al-ʿUmra (583/1187). Al-Manṣūr then went at the head of his troops and gained a victory at al-Ḥamma near Gabès, and reoccupied Tozeur and Gafsa, whose ramparts were razed. ʿAlī Ibn Ghāniya and Ḳarāḳūsh fled to the desert. Scarcely had al-Manṣūr retaken the road to the Maghrib than the two allies reformed, rallied their followers, and began their campaign afresh. In the midst of all this ʿAlī Ibn Ghāniya died (584/1188). Power passed to his brother Yaḥyā, who for nearly fifty years was to deal the heaviest blows against the Almohad might.

His action began with two fruitless attempts against Constantine. He retired to the desert, the traditional refuge of the vanquished, and rejoined Ḳarāḳūsh there. Not that his relations with the Armenian condottiere were unclouded. They had broken off their alliance many times. The dubious attitude of Ḳarāḳūsh with respect to the Almohads and his severity towards the Arabs caused opposition, and conflict broke out in 591/1195. Yaḥyā Ibn Ghāniya, helped by the Sulaym Arabs, seized Tripoli and Gabès and then proceeded north, where he took Mahdiyya from Ibn ʿAbd al-Karīm al-Ragrāgī, a curious character who had declared himself its independent sovereign. Two years' campaigning had made him master of Béja, Biskra, Tébessa, Kairouan, and Bône; then, on 7 Rabīʿ II 600/14 December 1203, the Almohad governor of Tunis, the Sīd Abū Zayd, surrendered to him. Learning that the Khāridjīs of Djabal Nafūsa were profiting by his absence to stage an uprising, he mounted a rapid expedition against them, defeated them, and extorted a crushing indemnity from them. Yaḥyā Ibn Ghāniya, master of eastern Barbary, was then at the height of his power. He was at Tunis when he learnt that the Almohad caliph al-Nāṣir was on the way to attack him. He did not wait for him but withdrew towards the Djarīd. He was overtaken on the Tādjura plain, where he suffered a heavy defeat. Al-Nāṣir re-took possession of Mahdiyya and Tunis, where he appointed Abū Muḥammad ibn Abī Ḥafṣ governor, with orders to continue the reconquest of the country. Knowing the danger which hung over him in Ifrīḳiya, the Almoravid chief transferred his efforts to the central Maghrib. With his Arab allies he wished to halt al-Nāṣir on his return but was overwhelmingly defeated on the Chélif plain. Passing along the edge of the desert

he rallied fresh nomad allies, met Abū Muḥammad ibn Abī Ḥafṣ on the river Shabrū near Tébessa, and suffered a fresh defeat. He returned westwards as far as Tāfīlālt and took Sidjilmāsa, which he gave up to pillage. Loaded with booty, he encountered the Almohad governor of Tlemcen and beat him, and passed through Tiaret, which he devastated along with many small towns of the central Maghrib of which Ibn Khaldūn, in the 8th/14th century, was to say "there no more will you find a lighted hearth, nor hear any more the crowing of the cock". On his return from this campaign of destruction a meeting with Abū Muḥammad proved disastrous for him; a second battle fought in the Djabal Nafūsa was still more catastrophic (606/1209).

Thus decisively driven out of Ifrīḳiya, Yaḥyā Ibn Ghāniya sought refuge in Waddān in the south of Tripolitania. Ḳarāḳūsh the Armenian was installed there but capitulated, unable to resist his old rival. Yaḥyā had him executed and took his place.

Abū Muḥammad ibn Ḥafṣ had been replaced in the governorship by the Muʾminid prince Abu 'l-ʿAlāʾ, who resumed the struggle against the Almoravid. The latter, taking the field again, took possession of Biskra; he even conceived a bold plan of marching anew on Tunis. At Madjdūl, not far from Tunis, a bloody battle decimated the Almoravid force and put Yaḥyā to flight (620/1223).

Having lost all hope of action in Ifrīḳiya the indefatigable rebel, having got himself new allies in the south, again took the road to the central Maghrib and once more sowed ruin there. He went on to Bougie, laid siege to Dellys, Mitīdja, and Algiers, and stirred up a revolt at Tlemcen which came almost to the point of recognizing Almoravid sovereignty. He fled before an army from Tunis which was marching on his heels and took refuge at Sidjilmāsa (624/1226). The eleven years of life left to him saw a hopeless prolongation of his activity. He gave up hope of returning to a too well defended Ifrīḳiya but he pursued to the end of his career the harrying and pillaging along the border of the central Maghrib and perished on the banks of the Chélif, not far from Miliana, in 633/1237. He left three daughters whom he entrusted to the generosity of the Ḥafṣid Abū Zakariyyāʾ who was governor of Tunis. They were treated considerately and housed in a palace called Ḳaṣr al-Banāt (Palace of the Daughters) which a Tunis boulevard (Bāb Banāt) still commemorates.

As a conclusion to this account of a turbulent enterprise which lasted more than 50 years some observations may be made to fix its place in history and underline its importance.

The attempt to restore the Almoravids failed completely and could scarcely have succeeded. But although apparently a mere episode in the past of Barbary it was one of the gravest crises which befell the country and its consequences were long-lasting. Four may be indicated.

1. By stirring up the nomad Arabs and feeding their passion for loot, the exploits of the Banū Ghāniya appears as a prolongation of the invasion begun by the Banū Hilāl and continued by the Banū Sulaym. It was an aggravation—after some 130 years—of the catastrophe from which eastern Barbary was never fully to recover.

2. The Banū Ghāniya extended the Arab scourge to the central Maghrib. In this region, which had remained relatively flourishing, urban centres disappeared which we can hardly locate on the maps. Only Tlemcen, which resisted, profited by the surrounding devastation and began to assume its rôle as capital of a kingdom.

3. If the Almoravid enterprise ended in failure at least it hastened the downfall of the Almohad state. Engaged elsewhere in resisting the Christian reconquest, torn between Spain and eastern Barbary, the empire of ʿAbd al-Muʾmin's successors could not fend off the double danger and began to decine.

4. More evident than the rise of Tlemcen in central Barbary is that of Tunis in Ifrīḳiya, where a strong rule was established which delivered the province from the danger of the Almoravids. The handing over of the government by the Almohads to the Ḥafṣids, who soon assumed autonomy, seems to be one of the only happy consequences of the epic of the Banū Ghāniya.

(G. Marçais)

GHARB, part of the Moroccan coast situated approximately between the Wādī Lukkus, the Wādī Subū and the mountains which border the coastal plain to the east. This territory has never been precisely defined, but its limits have varied according to the tribes which occupied it and were or were not considered as tribes of the Gharb. It is an alluvial plain, humid and marshy, along the coast and bordered to the east by rolling hills.

The Gharb, thus roughly defined, was at first inhabited by Berbers and probably formed part of the territory of the Barghawāṭa [*q.v.*]. These were exterminated by the Almoravids and the Almohads, leaving an uninhabited area so that the Almohad Yaʿḳūb al-Manṣūr could establish there at the end of the 6th/12th century levies of the Hilāl Arabs which he intended to use in his battles against the Christians of Spain. The Marīnid rulers Abū Yūsuf and Abū Thābit similarly used the Maʿḳil Arabs in the 7th and 8th/13th and 14th centuries. Hence the population of the Gharb is almost entirely of Arab origin (Banū Mālik, Sufyān, Khluṭ and Ṭlīḳ) and, until the 19th century, the tribes inhabiting this territory were fighting tribes and nomadic rather than settled, pastoral rather than agricultural, which have been of some importance, particularly during the period of Saʿdid anarchy (first half of the 17th century).

With the French colonization, heavy in this region, the Gharb became a prosperous agricultural district, where the growing of rice particularly has flourished.

With the possible exception of al-Ḳaṣr al-Kabīr and the large market of Sūḳ al-Arbaʿ, no thriving urban centre has so far flourished in this area.

GHARB AL-ANDALUS, Algarve, the West of Andalusia. This name, now that of the southernmost province of Portugal, was applied by the Muslim historians and geographers to the territory lying to the south-east of Lisbon, reaching as far as both banks of the Guadiana estuary. Mūsā b. Nuṣayr [*q.v.*] took Mérida in 94/713 and his son ʿAbd al-ʿAzīz made himself master of Niebla, Beja, and Ocsónoba, but the Gharb soon began to show itself a focus of rebellion with the revolt of the Berbers, who were beaten in the Mérida region by the governor Thaʿlaba in 124/742. The Syrian *djund* of Ḥimṣ settled in Niebla and a part of that of Egypt in Beja and Ocsónoba. Niebla was the scene of a revolt of Yemenites against ʿAbd al-Raḥmān I, whose son Sulaymān also revolted against his nephew al-Ḥakam I. In 213/828, Mérida was the centre of a prolonged Berber rebellion under Muḥammad b. al-Djabbār. Hemmed in by the forces of ʿAbd al-Raḥmān II, he withdrew to a fortified position on Monte-Sacro, not far from the present-day town of Faro in the Ocsónoba district, but soon emigrated to Galicia, where he was killed by Alfonso II in 225/840. During the reign of the amīr Muḥammad I one ʿAbd al-Raḥmān b. Marwān b. Yūnus, known as Ibn al-Djillīḳī (son of the Galician) as being a member of a *muwallad* family originally from the north of Portugal but long settled in Mérida, proclaimed himself champion of independence in the west of Andalusia and in alliance with Alfonso III kept up a struggle in Badajoz, Esparraguera (between the Guadiana and Almadén), and Antaniya (*Idanha a Velha*, about 140 km. from Mérida and 30 km. north-west of Castelo-Branco). His dynasty, the B. Marwān, survived till 318/930, in which year ʿAbd al-Raḥmān III recovered Badajoz. Soon afterwards he also recovered the little principalities of their vassals in Beja, Santa María del Algarve, and Silves. On the fall of the caliphate of Cordova, during the first period of 'party kings', the petty kingdom of the B. Muzayyin was formed at Silves and lasted from 420/1028 to 445/1053. In 433/1041 Muḥammad b. Saʿīd b. Hārūn made himself independent at Santa María del Algarve but had to submit to al-Muʿtaḍid the emir of Seville. At Huelva and Saltes there reigned ʿAbd al-ʿAzīz al-Bakrī, the father of the famous geographer Abū ʿUbayd al-Bakrī, from 403/1012 to 443/1051 when he surrendered to al-Muʿtaḍid. Niebla suffered the same fate. Tādj al-Dawla came to power there in 414/1023 and was recognized by Huelva and Gibraleón. On his death in 433/1041 he was succeeded by his brother Muḥammad al-Yaḥṣubī, who retired to Cordova in 443/1051 leaving the power to his nephew Nāṣir al-Dawla who handed it over to al-Muʿtamid and took refuge in Cordova in 450/1058. When the Almoravid power declined a party kingdom re-formed in Algarve under Ibn Ḳasī at Mértola, who was acknowledged by Sidrāy b. Wazīr at Évora and Beja, Muḥammad al-Mundhir at Silves, and Yūsuf al-Biṭrūdjī at Niebla. However, finding himself soon betrayed and attacked, he summoned the Almohads, and ʿAbd al-Muʾmin, after taking Marrākush, sent an army to the Peninsula under the command of Barrāz al-Massūfī who subdued all the petty kings of Algarve. They gave in easily but equally easily rose again when they saw the speed and scope of Ibn Hūd al-Māssī's rebellion and his initial victory. Yūsuf al-Biṭrūdjī ejected the African garrison from Niebla as did Ibn Ḳasī at Silves and Muḥammad b. al-Ḥadjdjām at Badajoz. But when ʿAbd al-Muʾmin was as victorious in Andalusia against Ibn Ghāniya and Alfonso VII as he had been in Morocco against the followers of al-Māssī and the Baraghwāṭa they asked for *amān*. They were summoned to Salé and attached to the Caliph's court except for Ibn Ḳasī who did not accede to the summons and allied himself with the king of Portugal. He was killed by his own followers in 546/1151. In 560/1165 the Portuguese under Giraldo Sem Pavor seized Jurumeña, besieged Badajoz, and took Évora, Beja, and Serpa. In 564/1169 the Almohads took Tavira, which still preserved its independence under al-Wuhaybī; and though Sancho I of Portugal besieged and took Silves in 585/1189 Yaʿḳūb al-Manṣūr retook it in 587/1191, along with Alcaçer do Sal. The great Almohad incursions into Portugal end with this campaign. Castile had still to endure the rout of Alarcos, be victorious at Las Navas de Tolosa, and put an end to the danger of the B. Marīn at El Salado. Little by little the Portuguese retrieved their cities and fortresses, which had fallen again into Muslim hands from Alcaçer do Sal to Silves, and met no more than the sporadic resistance put up by each locality as it found itself encircled. The lack of definite information makes the chronology uncertain. Herculano fixes it thus: 1232 Mora and Serpa taken; 1234 Aljustrel; 1238 Mértola; 1239 Tavira and Cacella. But according to the *Cronicas dos sete primeiros reis* Mértola and Aljustrel were not conquered till 1243. The battle in the neighbourhood of Tavira took place in 1244. It may be deduced from the new edition of the *Crónica de Alfonso II* that Maestro Payo Correa took Tavira, Silves, Estombar, and Alvor between 1243 and 1246 and that in 1249-50 Alfonso III took Faro and in 1250, finally, Loulé and Aljazur.

AL-GHARBIYYA, a province of Lower Egypt, lying within the Nile Delta, now composed of nine districts. An administrative unit of this name has existed since the early Muslim period (cf. Becker art. EGYPT in *EI*¹). In the time of Abū Ṣāliḥ (7th/13th century) it comprised 165 villages; it was described by al-Ḳalḳashandī (d. 821/1418) as fertile and prosperous. Cotton is now extensively grown, while al-Maḥalla al-Kubrā (until 1836 the provincial capital), which has an old tradition of spinning and weaving, is now the centre of the most modernized textile manufacture in Egypt. Ṭanṭā, now the capital of the province, has the tomb of Sayyid Aḥmad al-Badawī [*q.v.*], where the annual feasts attract thou-

sands of devotees. The population of the province in 1960 was 1,815,000 persons.

GHARDĀYA (current spelling: Ghardaïa), the chief town of the Mzab, situated 635 km. by road south of Algiers on the parallel 32° 30′. Between 500 and 560 metres in altitude, it is built over a rounded hillock on the right bank of the Wādī Mzab, which cuts a hundred metres into the completely desert-like and deeply channeled limestone plateau of the *shebka* ("net") of the Mzab.

Ghardaïa was founded in 445/1053, after al-Ateuf (al-ʿAṭf, 407/1011), Bou Noura (Bū Nūra), Beni Isguen (Isgen) and Melīka, its lower neighbours, by the Ibāḍīs who, little by little, abandoned Sedrata (south of the oasis of Ouargla), their first refuge in the Sahara, after the ruin of their capital, Tiaret (Tāhart), in 296/909 by the Fāṭimids. It was families from Ghardaïa who later founded Guerara (Grāra) in 1631 and Berriān in 1679, 100 km. to the north-east and 50 km. to the north respectively. Ghardaïa, like all the other towns of the Mzab, gives the impression that it has always lived by trading across the Sahara, and, above all since the 10th/16th century, by its dealings with Algiers, far more than by an agriculture seriously limited by shortage of water.

The Mzabis have remained fiercely Ibāḍī and attached to their Berber speech. Ghardaïa has grown over the centuries owing to Ibāḍī immigration. To the Awlād ʿAmmī ʿĪsā and Awlād Bā Slīmān, the groups which founded the city, have later been added Ibāḍī groups from Tafilalet, from the Wādī Rīgh, Djerba and Djabal Nafūsa. It has grown equally through the Mdābīḥ, Mālikī Arabs from the *ḳṣar* of al-Māya, on the foot-hills of the Djabal ʿAmūr, and little by little, through some Benī Merzūg families from the old *ḳṣar* of the Shaʿanba of Metlili; Mdābīḥ and Benī Merzūg are Arabic speaking and belong to the Mālikī school. Ghardaïa also shelters a community of Jews, of whom the earliest are supposed to have come from Djerba from the 14th century on, and others from Morocco, Tripolitania and Algeria.

Ghardaïa surrendered to France with the rest of the Mzab in 1853 and was peacefully occupied in 1882. To-day it has a population of 16,000 (1957), of whom about 1,000 are Arabs and about 1,500 Jews, and there is a small number of Europeans. Both in its appearance and in the way it functions, even more than from the size of its population, Ghardaïa is a true city and not a simple Sahara *ḳṣar*.

Originally, its shape was oval and its plan concentric and radiating. Its single mosque, focal point of the city, place of worship, refuge and storehouse in the troubled times of the past, dominates the whole town with its annexes (schools, *takerbust* for the ablutions of the scholars) and its great truncated cone of a minaret (*ʿassās*), twenty metres high, which overlooks the whole surrounding countryside. The circular streets, with others radiating from them, narrow but rarely covered, and lined with houses side by side, are the main thoroughfares of the district which surrounds the mosque. To the south-west there is a way down to the edge of the town through a place where the ancient ramparts have been demolished to form a rectangular market place, 75 by 44 metres in extent, lined with porticos of irregular arches and shops—the souk. Eight streets coming from three directions of the compass, lead into this and here are to be found the shopkeepers and artisans. This is the economic centre of the town as well as the political and administrative one, where the *ḳāʾid* has his office and the *djamāʿa* meets. To the south-east, the little Jewish quarter leads into the new business district; the Mdābīḥ live together to the north-west. Several vast cemeteries enclosed by walls cover the land immediately surrounding the town.

Ghardaïa is primarily a town of merchants and business men. Little by little, the trade across the Sahara has disappeared, but its population lives mainly on the profits of its approximately 2,000 shopkeepers, grocers and textile merchants in the towns of the Tell. Ghardaïa is also the principal market of the Mzab and a transit post for food supplies for the stations further south. Arabs and Jews share the transport business with the Ibāḍīs. Since 1920, lorry traffic has little by little replaced the traditional caravan. Tourists visiting the Mzab usually stay in Ghardaïa. It is also the chief town of the administrative district (*cercle*) of the Mzab. Some of the traditional artisans (the women make carpets and woollen textiles, the men are coppersmiths) are encouraged by the schools and workshops of the White Sisters and find some exterior outlets. Blacksmiths, carpenters, tailors, shoemakers, work for the local population as do the Jewish jewellers; the building industry has always been active.

Agriculture, on the contrary, shows a debit balance. The 60,000 palm trees and the gardens in the lower part of the valley, watered with difficulty by deep wells, which are worked by animal traction, or flooded by the rare spates of the Wādī Mzab, are used more as pleasure gardens where, for the last threequarters of a century, the people of Ghardaïa have built houses of an urban type in which they live during the summer. The profits of trade pay for the upkeep of these gardens.

In many features of its activities, in its type of housing, in its particular form of administration, and even more in its social and religious life, Ghardaïa is inseparable from the other cities of the Mzab [*q.v.*].

Bibliography: see mzab. (J. Despois)

GHARDJISTĀN, Gharshistān, a territory in the mountains of Afghānistān east of Harāt on the upper valley of the Murghāb River and north of the upper Harī Rūd. Al-Muḳaddasī (309) was probably right in explaining the word as "mountain", hence "country of the mountaineers".

Little is known of this land before the time of the Sāmānids [*q.v.*], but we may assume that it was ruled by petty Hephthalite princes. Ghardjistān was raided by Asad b. ʿAbd Allāh al-Ḳasrī, governor of Khurāsān in 107/725-6. The local ruler Namrūn (?) made peace and accepted Islam (al-Ṭabarī, ii, 1488-9). The title of the ruler of Ghardjistān was *shār*, derived from an Old Iranian word for "king" (Marquart). The Muslim geographers knew that *shār* meant "king" (al-Muḳaddasī, 309; *Ḥudūd al-ʿālam*, 105), but Ibn Khurradādhbih (39) says that the king of Ghardjistān was called Barāz bandah, which is probably a confusion with the ruler of neighbouring Mānshān.

The geographers (al-Muḳaddasī, 50; Ibn Ḥawḳal, 443; Yāḳūt, s.v. *Gharshistān*) speak briefly of two

principal towns in the country, Bas̲h̲īn and S̲h̲ūrmīn, which cannot be located.

Muḥammad b. Karām (d. 255/869) converted many people in G̲h̲ardjistān to his heretical doctrines (al-Bag̲h̲dādī, 202), and centres of this heresy remained in the mountains (al-Muḳaddasī 323). The rulers of G̲h̲ardjistān acknowledged the suzerainty of the Sāmānids but Maḥmūd of G̲h̲azna had to conquer the territory in 403/1012 after it had previously submitted. The S̲h̲ār, Abū Naṣr Muḥammad, a man of learning well versed in Arabic, was taken to G̲h̲azna where he died in 406/1015 (ʿUtbī, 146). The kingdom of G̲h̲ardjistān was placed under the governor of Marw al-Rūd̲h̲, but apparently local princes resumed control of the country for we hear of several S̲h̲ārs again in the time of the G̲h̲ūrids (Djūzdjānī, 49). The founder of the dynasty of K̲h̲ʷārizms̲h̲āhs, Nus̲h̲ Tegīn, was a Turkish slave from G̲h̲ardjistān (Djuwaynī, ii, 1).

The name of G̲h̲ardjistān appears in many annals of the G̲h̲ūrīd and Mongol periods, while the "kings" of G̲h̲ardjistān are mentioned as late as 715/1315 (*Taʾrīk̲h̲-nāma-i Harāt*, ed. M. Z. Siddiqi, 626). Thereafter the name does not appear in relevant sources.

Frye)

G̲H̲ARĪB, literally: "strange", "uncommon", a technical term in philology and in the science of tradition. As a term in philology it means: "rare, unfamiliar (and consequently obscure) expressions" (in which sense the terms *waḥs̲h̲ī* and *ḥūs̲h̲ī* are also used), and frequently occurs in the titles of books, mostly such as deal with unfamiliar expressions in the Ḳurʾān and in the Tradition (books carrying the titles *G̲h̲arīb al-Ḳurʾān* and *G̲h̲arīb al-Ḥadīt̲h̲* seem to have existed as early as the second century). The term also occurs in works on literary theory (where it may also have the non-technical, laudatory sense of "uncommon", "original"). More or less anecdotal reports purport to show that some Umayyad and early ʿAbbāsid critics rejected the use of unfamiliar language by certain contemporary poets such as Ṭirimmāḥ, Kumayt, and Ibn Munād̲h̲ir, because this unfamiliar language was not part of the native vocabulary of these poets, but resulted from an archaizing tendency. Most classical scholars of literary theory follow the same line with regard to the poet's vocabulary, allowing only expressions that are known in the poet's own time, and likewise condemn the use of the *g̲h̲arīb* in prose and oratory. Ibn al-At̲h̲īr, however, who deals with the subject at great length, holds that unfamiliar expressions may be used in poetry as long as they are not unpleasant to the ear.

For the technical meaning of the term *g̲h̲arīb* in the science of tradition see ḤADĪT̲H̲.

(S. A. Bonebakker)

al-**G̲H̲ARĪḌ** ('the fresh [voice]') was the nickname given to Abū Zayd (? Yazīd) or Abū Marwān ʿAbd al-Mālik, a renowned singer of the Umayyad era. He was a half-breed of a Berber slave and a *mawlā* of the famous ʿAbalāt sisters of Mecca who were noted for their elegies. It was one of these—T̲h̲urayya, of whom ʿUmar b. Abī Rabīʿa sang in praise—who placed al-G̲h̲arīḍ under the tutelage of the famous singer Ibn Suraydj [*q.v.*], but the former soon outshone his teacher as an elegiast (*nāʾiḥ*), so much so that the latter abandoned that career for that of an ordinary singer (*mug̲h̲annī*), although as late as 105/724 he performed as an elegiast at the obsequies of Ḥabāba [*q.v.*] the beloved of Yazīd II. Even as a *mug̲h̲annī* al-G̲h̲arīḍ challenged Ibn Suraydj. Having passed into the household of Sukayna bint al-Ḥasan [*q.v.*] greater fame was to come his way, and he sang at the court of al-Walīd I. On one occasion when these two musicians appeared before Sukayna, both were singing to the verses of the Meccan poet ʿAbd Allāh al-ʿArdjī [*q.v.*]. Sukayna confessed that she could not say which of these two musicians was the better, simply likening them to two exquisite necklaces, one of pearls and the other of rubies. When Nāfiʿ b. ʿAlḳama became governor of Mecca he made an edict against wine and music, which compelled Al-G̲h̲arīḍ to seek refuge in the Yaman, where he is said to have died about 98/716-17, although another account shows him at the court of Yazīd II (101/720-105/724). According to the legend, he died at the hands of the *djinns* at a festive gathering in the bosom of his family. Like others of his profession—Ibrāhīm al-Mawṣilī and Ziryāb—he is said to have been inspired by the *djinns*. It was the success of Al-G̲h̲arīḍ in the *ramal* and *hazadj* rhythms which led Ibn Suraydj to follow in that path. Perhaps it was the tenderness (*g̲h̲arīḍ*) in his voice—due to his training as a *nāʾiḥ*—that brought him fame, especially with the womenfolk of Mecca, and pilgrims to the Holy City clamoured for him. He participated in the concerts of Djamīla [*q.v.*] so elaborately described in the *Kitāb al-Ag̲h̲ānī*, and also excelled as a performer on the lute (*ʿūd*), tambourine (*duff*) and rhythmic wand (*ḳaḍīb*). Isḥāḳ al-Mawṣilī [*q.v.*] placed al-G̲h̲arīḍ as the fourth in eminence among the great musicians of Islam, and even compiled a *Kitāb Ak̲h̲bār al-G̲h̲arīḍ*, whilst Abū Ayyūb al-Madīnī also wrote a *Kitāb al-G̲h̲arīḍ*, both of which would seem to prove the high esteem in which this singer was held in the early days of Islam.

G̲H̲ĀRIM (*g̲h̲arīm*, according to the lexicographers, is a synonym): debtor or creditor. By analogy with other legal terms this semantic distinction was

favoured by the jurists. In Islam the *g̲h̲ārim* was entitled to a share of the *zakāt* (Sūra IX, 60) to pay his debt, provided he was destitute and the debt did not arise from any disreputable cause or, if it had so arisen, the debtor had duly repented. Other debtors had this claim although they were not destitute, if the debt had been incurred "for God's sake", *i.e.*, for Islam or for an unselfish purpose. The *zakāt* of relatives might be employed to this end as an exception. This latter case reflects pre-Islamic standards, where it was praiseworthy for a man of standing to take upon himself the burden (*ḥamāla*) of blood money (*diya*) in order to prevent or stop a blood feud (Ḥātim al-Ṭāʾī, ed. Schulthess, 1897, lii, 40 (ar.) ff.; *Ḥamāsa*, Cairo 1335, i, 145; *The* Naḳāʾiḍ *of D̲j̲arīr and al-Farazdaḳ*, ed. Bevan, i, 345, 8; 382, 14; ii, 789, 17; 1046). The Prophet also paid *diya* on several occasions (al-Buk̲h̲ārī, 87, 22; 93, 38).

(F. Løkkegaard)

G̲H̲ARNĀṬA, Granada, the capital of the province and ancient kingdom of that name, does not come into prominence in Spanish history until the early 5th/11th century when a collateral branch of the Ṣanhād̲j̲a Zīrids (ruling in the Ḳalʿa of the Banū Ḥammād, and later in Bougie) realized that its power was waning and offered its services to the first minister of His̲h̲ām II, ʿAbd al-Malik al-Muẓaffar, son and successor of al-Manṣūr Ibn Abī ʿĀmir. The reply was satisfactory, so they embarked with a considerable band of fellow-tribesmen and retainers, with Zāwī b. Zīrī at its head, soon to become one of the most important and turbulent sections of the Berber army recruited by the ʿĀmirids. On the death of ʿAbd al-Raḥmān Sanchol they espoused the cause of the leader of the Berber party in Spain, Sulaymān al-Mustaʿīn, and contributed largely to his succession to the Caliphate. When Sulaymān rewarded his chief followers by the grant of fiefs, to these he allotted the district of Elvira, *i.e.*, the rich lands of the high valley of the Genil and the surrounding rocky heights, so called because its capital was the ancient city of Illiberis-Elvira; but before long it was to be supplanted by its neighbour Granada, a more recent foundation hitherto inhabited mainly by Jews.

Historians and geographers of Muslim Spain are at one in stressing the beauty of Granada and the fertility of its plains. The admiration inspired in the Zīrids by this fine prospect is best expressed by the last amīr ʿAbd Allāh, who says in his *Memoirs* that "they gazed astonished on that lovely plain, furrowed by streams and clothed in trees. They admired the mountain where the city of Granada now stands, entranced by its situation ... and they were persuaded that if an enemy were to lay siege to it, he would be unable to prevent them from entering or leaving to provision it. So they decided to found a city there, and everyone, Andalusian or Berber, set about building a house, and soon Elvira fell in ruins".

During the Roman period, certainly by the reign of Augustus, there was a township of Elvira, nestling on the slopes of the range of this name, in whose neighbourhood archaeological remains have been found, of Roman, Early Christian and Arab origin. We have no details of the Barbarian invasion of the 5th century, nor of the devastation caused in the Illiberis-Granada country when Leovigildo subsequently broke in by way of Baza with his army to pacify the whole of the south of the Peninsula. With the coming of the Muslims, Mūsā b. Nuṣayr left to his son ʿAbd al-ʿAzīz the task of subduing eastern Andalusia and Levante. On his way to overcome the princedom of Orihuela-Murcia, he occupied Málaga and Elvira-Granada. Abu 'l-K̲h̲aṭṭār al-Ḥusām b. al-Ḍirār became governor in 125/743 and allotted the district of Elvira-Granada to the men of the Syrian *d̲j̲und* of Damascus, whose pro-Umayyad *s̲h̲ayk̲h̲*s supported the landing of ʿAbd al-Raḥmān I. Under the rule of amīr ʿAbd Allāh the *kūra* of Elvira witnessed many a bloody struggle between the *muwallad*s loyal to the central power, and the Arabs under Sawwār b. Ḥamdūn. While besieged in the palace of the Alhambra, the latter made a bold sortie and put the Andalusians to flight in the Battle of the City (*waḳʿat al-madīna*), as it was to be called. The beaten troops entered the service of Ibn Ḥafṣūn who proceeded to Elvira to continue the struggle in the Genil plain, taking and losing Elvira by turns, until he lost it finally during the rule of ʿAbd al-Raḥmān III.

There is now no disputing the once doubtful identification Illiberis-Granada-Elvira: the administrative and military territory of the *kūra* of Elvira corresponded roughly during the Middle Ages to the present province of Granada. There was indeed a diocese of Illiberis before the time of the Muslims, where a council was held between 309 and 312, and the first Muslim governors lived in Illiberis (which they Arabicized into Ilbira) until the provincial *wālī*s preferred, as they often did, to move to a new foundation near the ancient capital. Thus, not long before the Umayyad restoration, the new capital, Castilia or Castella, was built not far from Illiberis; nevertheless, the district continued to be called the *kūra* of Elvira, and this name prevailed, displacing that of Castella, just as the name Illiberis was later replaced by Granada, which itself in the 3rd/9th century was no more than a large walled village on the right bank of the Darro, near its confluence with the Genil. Few Muslims lived there; there were more Christians, while Jews were so numerous that it was sometimes known as "Granada of the Jews". Opposite on a rocky escarpment dominating the left bank of the Darro arose an old citadel which got its name of "the Red" (*al-Ḥamrāʾ*) from its reddish colour. The Alhambra was to be the seat of the Naṣrid kings, and famous in history.

In the story of the Zīrid dynasty (treated at length in the article zīrī (banū)) the principal events directly affecting the city of Granada are: the siege by the caliph al-Murtaḍā, who incited and betrayed by the ʿĀmirid *fatā*s al-Mund̲h̲ir and K̲h̲ayrān sought to drive out the Zīrids, only to flee and perish in Guadix, after a shameful defeat. After this unexpected victory and the consolidation of the dynasty during the amīrates of Ḥabūs and of Bādīs, and with the effective support of the Jewish viziers Samuel and his son Yūsuf b. Nagralla (Negrello), Granada was the scene of a notorious pogrom, whose victims included the vizier Yūsuf as well as a large number of his co-religionists. Just after this the amīr Bādīs, old and conscious of the threat to his rule, spent large sums on making the old *alcazaba* of Granada strategically impregnable, judging that if the nearby states, or his enemies, or his own rebellious subjects should drive him to a last resort, he might shut himself up in it with the possibility of embarking at need for Ifrīḳiya, as his grandfather Zāwī had done before him. Of the last

Zīrid amīr, ʿAbd Allāh, Bādis's grandson, who began his reign when little more than a child, we have only to mention that after a chequered career of plots, risings and wars with his Muslim and Christian neigbours, he finally incurred the enmity of the Almoravids, and prepared for armed resistance against them by provisioning and fortifying his castles, and building walls adjoining the *alcazaba*. However, when Yūsuf b. Tās͟hfīn appeared before Granada, his innate cowardice and the advice of his ministers and his mother decided him to go out to welcome the Almoravid amīr, to open the gates of Granada to him, and give him all the treasures of his palace.

After this, Granada was administered by Almoravid governors from 483/1090 to 551/1166, when it passed into the hands of the Almohads. Its first Almoravid governor was Abū Muḥammad ʿAbd al-ʿAzīz, himself followed by the amīr Yaḥyā b. Wasīnū, related to Yūsuf. The latter returned to the Peninsula for the last time in 496/1102 to safeguard the position of his son ʿAlī as heir apparent (he had been proclaimed the year before in Marrākus͟h), proceeded via Granada, whose governor at the time was Abu 'l-Ḥasan b. al-Ḥad͟jd͟j, and went first to Levante. Attacked by Alfonso VI at Medinaceli, he counter-attacked through Toledo and Talavera, but was defeated and died on the field of battle. The next governor was Abu 'l-Ḥasan's brother Muḥammad b. al-Ḥād͟jd͟j; he, with the Granada forces, came to the help of the amīr Sīr, governor of Seville, whose territory was threatened by Alphonso VI, but at al-Muḳāṭiʿ, close to Seville, he was forced to retire with heavy losses. The following year (499/1105) we find as governor Abū Bakr b. Ibrāhīm al-Lamtūnī who, on the death of Yūsuf b. Tās͟hfīn (500/1106), attempted some opposition to the proclamation of ʿAlī b. Yūsuf; the citizens of Granada, however, gave him no support, and he was captured and sent to Marrākus͟h. ʿAlī, accompanied by his faithful but incompetent elder brother Abu 'l-Ṭāhir Ṭamīm, went straight to Andalusia to stifle this attempt at revolt and another which had broken out in Cordova, and appointed Ṭamīm governor of Granada. The latter organized the expedition against Uclés, during which Alphonso VI's son the Infante Sancho met his death. However, he was dismissed in that same year, and after a brief period under the governor of Valencia, ʿAbd Allāh b. Fāṭima, the governorship of Granada was taken over by ʿAli b. Yūsuf's cousin the amīr Mazdalī b. Sulankān. Though his attack at Guadalajara (506/1112-3) had no success, in the year following (507/1113) he took Oreja, and in July 1114 attacked the Sagra of Toledo, pillaged Peginas, Cabañas and Magán, and defeated the alcaide Rodrigo Aznárez. His success was short-lived, for during S͟hawwāl 508/March 1115 this great ally of Yūsuf b. Tās͟hfīn and his successor ʿAlī was defeated and killed. His son ʿAbd Allāh b. Mazdalī, who succeeded him as governor of Granada, went with his forces to the assistance of Abū Bakr b. Yaḥyā b. Tās͟hfīn, amīr of Cordova; he was engaged by the Castilians around Baeza, and was defeated with heavy losses. In 519/1125, while Ṭamīm was once again in Granada, Alphonso I (the Battler) undertook his great expedition across Andalusia, in the course of which he twice camped before Granada but did not manage to lay siege to it; he defeated Ṭamīm at Aranzuel. Dismissed at last for his inefficiency, Ṭamīm was succeeded by Abū ʿUmar Īnālū, grandson of Yūsuf b. Tās͟hfīn and a former governor of Fez, who had engaged Alphonso during the retreat before Guadix. When Ibn Rus͟hd told ʿAlī b. Yūsuf what had been happening in Andalusia and advised him to complete the fortifications of Marrākus͟h, he felt bound to offer the same advice about Andalusia. Orders were therefore sent to the governors of Seville, Granada, Cordova and Almería to mend and reinforce the walls and defences of their cities. In Granada the new governor Īnālū made great efforts to get this done even though while the work was in progress the Genil rose and swept away his building materials around Bāb al-Ramla and Bāb Ilbīra, and many lives were lost. ʿAlī dismissed Īnālū on D͟jumādā 522/May 1128 and ordered him to Marrākus͟h to face serious charges preferred by the Mozarabs of Granada. These were proved at a court of inquiry, and he was imprisoned and sentenced to make good the wrongs he had committed. This unpublished episode from the Almoravid *Bayān* shows clearly that by no means all the Mozarabs were deported to Morocco, no more were they all accomplices and collaborators of Alphonso the Battler, for the majority of them suffered no punishment or reprisals, and even after the great damage caused by him, their rights were respected and justice was done to them. The new governor Abū Ḥafṣ ʿUmar, a son of ʿAlī b. Yūsuf, campaigned in Levante and seized an unnamed castle, only to be deposed after four months (May-September 1128) and replaced by another of ʿAlī's sons, the famous and unfortunate Tās͟hfīn, who for ten years struggled with vigour but without success against the Castilians. In 526/1132 he had to take on as well the governorship of Cordova, and therefore delegated that of Granada to Abū Muḥammad al-Zubayr b. ʿUmar, the Azuel of the Christian chronicles, whose valorous exploits came to a tragic end in 538/1143, when he was beaten and slain by the heroic Toledan *alcaide* Muño Alfonso.

The last of the governors answerable to Marrākus͟h was ʿAlī b. Abī Bakr, son of ʿAlī b. Yūsuf's sister Fannū; he died during the revolt of Ibn Ad͟hā who gave up Granada to Sayf al-Dawla (Zafadola) the last descendant of the Banū Hūd of Saragossa, who had made his submission to Alphonso VII. The Almoravids, shut up in the old *alcazaba*, firmly resisted the assaults of Sayf al-Dawla and forced him to retire after killing his son ʿImād al-Dawla during a sortie. After the Granadan populace had expelled ʿAlī b. Ad͟hā who retired to Almuñecar, they acknowledged the sovereignty of the Almoravids of the *alcazaba*. Commanded by Ibn G͟hāniya's lieutenant Maymūn b. Yiddar, they stood their ground until 551/1156, but the achievements of the Almohad governors of Cordova and Seville, added to their sense of isolation and dwindling numbers, moved them to write to Marrākus͟h and sue for peace. Their offer to surrender the city was accepted, and orders went to ʿAbd Allāh b. Sulaymān, admiral of the Ceuta fleet, and to the new governor of the two coasts of the Straits, the *sayyid* Abū Saʿīd ʿUt͟hmān, to set sail for Algeciras and take the road to Granada. Maymūn b. Yiddar gave up the city, and he and all the Almoravids of Granada were removed to Marrākus͟h, where they were suitably accommodated.

The new governor of Granada made thorough preparations for a land attack on Almería, in the hands of the Castilians, while the Ceuta fleet was blockading it by sea, and he succeeded in reconquering it. Alphonso VII and his ally Ibn Mardanīs͟h hastened to its support, but could not hinder its encirclement. So they tried to surprise Granada,

whose garrison was absent in Almería, but the vizier Abū Dja'far Aḥmad b. 'Aṭiyya and the *sayyid* Yūsuf b. 'Abd al-Mu'min, having expedited the surrender of Almería, were able to outpace him, and assured the defence of Granada. Meanwhile Ubeda and Baeza were relieved, and Alphonso VII died at the foot of the Despeñaperros, in Fresneda, on 21 August 1157. Granada now enjoyed five years of peace, broken in 577/1162 by Ibn Hamushk who, enraged at the loss of Carmona, made an assault on Granada with the connivance of the Jewish and Mozarab population. The Almohad garrison entrenched itself in the old *alcazaba*, which Ibn Hamushk attacked with battering-rams from the Alhambra in the Sabīka. He appealed for reinforcements to Ibn Mardanīsh, who arrived with his soldiers and the Christian mercenaries commanded by Alvar Rodríguez the Bald, grandson of Alvar Fáñez. The governor of Granada, the *sayyid* Abū Sa'īd 'Uthmān, was absent in Marrākush, so he set off and crossed the Straits to bring help to the beleaguered city, and from Málaga he reached the plain of Granada, picking up reinforcements from Seville; but at a place called Mardj al-ruḳad ("sleepy meadow") some four miles from the city he suffered defeat and fled to Málaga. 'Abd al-Mu'min, in Rabat at the time, sent picked forces over the Straits, commanded nominally by his son and heir Yūsuf but in reality by the veteran Yūsuf b. Sulaymān, who scaled by night the rocky cliffs above the Genil, near to the Sabīka and the Alhambra, surprised the enemy encampment at dawn, and achieved total victory. He freed the beleaguered garrison and received the submission of all the dwellers of the plain (who had already submitted to Ibn Hamushk), and provisioned and restored the liberated Alcazaba. In 563/1168, at the very moment when Granada had recognized Yūsuf I as *amīr al-mu'minīn*, its governor defeated between Granada and Guadix a detachment of Christian mercenaries in the service of Ibn Mardanīsh which had got as far as Ronda. Returning from his abortive expedition against Huete (autumn 568/1172) Yūsuf I came by Granada where he left as governor his brother Abū Sa'īd 'Uthmān, who had been with him on this campaign. Nothing of importance occurred in Granada during the reign of the subsequent Almohad caliphs until al-Ma'mūn, who, proclaimed in Seville, before he left for Morocco had to tackle Muḥammad b. Yūsuf b. Hūd al-Djudhāmī, the personification of general insurrection of the Spanish Muslims. During al-Ma'mūn's absence, Ibn Hūd quickly mastered the whole of Andalusia. He had recognized the sovereignty of the 'Abbāsid caliph al-Mustanṣir, and in 630/1232 the caliph's ambassador was received with due solemnity when he came to invest Ibn Hūd with the title of amīr of all Andalusia. But Ibd Hūd was assassinated in Almería in 535/1237, and his enemy Ibn al-Aḥmar rose in Arjona and took possession of Granada in 536/1238 and founded the Naṣrid dynasty.

One of his first tasks was to make a thorough inspection of the Alhambra. He traced the foundations of the Alcázar, appointed the excavators, and before the year was out many defensive works had been built. He brought water from the river, set up an *azūd* and dug a dike to feed it. When this work was just beginning he put to death in the Alhambra itself the tax-gatherer of Almería, Abū Muḥammad b. 'Arūs, and later other collectors of revenue, demanding from them the sums needed for his building programme. When the Almohad caliph al-Rashīd died in 640/1242 he transferred his allegiance to the Ḥafṣid amīr of Tunis, Abū Zakariyyā', from whom he received considerable sums intended to be used by the Spanish Muslims in the holy war; but Ibn al-Aḥmar spent them on the works he had undertaken and on the extension of the mosques of the city, and made the *ḳāḍī* Muḥammad b. 'Ayyāsh swear that this money from the Tunisian sovereign was not intended for any definite purpose, but could be spent at will. For the rest of the long and eventful story of the Naṣrid dynasty up to the capture of Granada by the Catholic Kings, see the article NAṢRIDS.

MONUMENTS

A. — The town

The Roman and Visigothic town. — Granada originated in a small Roman town, Illiberis, built on the site where, in the 5th/11th century, the palace of the Zīrids, *al-Ḳasaba al-ḳadīma*, arose, and on the hillside sloping down towards the Darro. Ancient tombs have been discovered on the other side of the river, at the foot of the Alhambra hill. The remains found in the ground at Granada are inadequate for a reconstruction of the topography of the town, or for assessing the value of its monuments. A Visigothic inscription preserved at Granada, but which may have come from somewhere else, mentions the founding of three churches in an unspecified place. Hence the history of the monuments of Granada can only be written from the Muslim period onwards.

Granada in the 4th/10th century. — Up till the 5th/11th century Granada was not the most important town in the region. The chief town in the district was Madina Elvira, at the foot of the ridge of mountains of that name, where excavations have unearthed remains of the period of the caliphs with painted or carved decorations. However, from the 4th/10th century onwards Granada had monuments of a certain importance, built according to the techniques current in Spain under the caliphate. The minaret which served as the base for the bell-tower of the church of San José is similar in its plan and arrangement of stretchers and bondstones to all the minarets of that date. As early as that period the town had a fortified wall, some remains of which are still in existence: the wall was of concrete: the towers and the remains of a gateway are chained with free-stone. Old drawings show that the façades of the gates of Elvira and of Hernán Román had

kept their 4th/10th century work up to modern times. The bridge over the Genil, several times altered and replastered, seems to go back to this same century as far as its original construction is concerned. So Hispano-Moorish art, which had its source and principal home in Cordova, was flourishing already in 4th/10th century Granada, which proves that the town had acquired importance and wealth.

Zīrid Granada. — It was in the century of the *Mulūk al-Ṭawā'if* that Granada came into its own. The *amīr*s Ḥabūs (409-29/1019-38) and Bādīs (429-65/1038-73) gave their capital a strong surrounding wall which still exists, inside the present town, from the gate of Elvira to the Puerta Nueva. It is a high concrete rampart with irregular quadrilateral or semicircular towers. There are two gates in this part of the wall : the Puerta Monaita and the Puerta Nueva or Arco de los Pesos. They have arches made of stone or brick, surmounted by brick lintels and relieving arches. They are the oldest known examples in Spain of gateways with crooked entry made of vaulted halls, interrupted, at the Puerta Monaita, by an open bay. The gates of Bibarambla and of the Mauror, now vanished, belonged to this enclosing wall.

This rampart was prolonged on the left bank of the Darro by a stone archway between two towers, allowing the curtain to cross the river without interrupting the route of the patrol. What remains of this beautiful work is commonly known as the Bridge of the Ḳādī. The wall reached right up to the summit of the Alhambra plateau, where it was supported by two small fortresses. It enclosed a fairly extensive suburb in the quarter of the Mauror, where wealthy houses were erected. What is left of this Zīrid enclosure remains one of the finest fortifications of the Andalusian 5th/11th century.

The palace of the Zīrids occupied the upper part of *al-Ḳaṣaba al-ḳadīma*. Nothing of it remains beyond a cistern with four cradle-vaulted bays, and several pieces of wall utilized in later buildings.

Of the buildings of the town itself only a *ḥammām* called the Bañuelo remains. After a room for undressing and resting—with a basin in its centre and which doubtless comprised galleries on the first floor—come three parallel vaulted rooms: the *tepidarium* had columns along three sides; the *frigidarium* and the *caldarium* were prolonged by little loggias reached through twin arches. The columns, with neither base nor astragal, are surmounted by re-used antique capitals. The walls are made of a very hard concrete; the arches and vaults of brick. The Bañuelo with its row of three parallel rooms is the perfect example of a Hispano-Moorish bath, which persisted in Spain during the following centuries and is often found in Morocco.

Few remains of decoration have been found in Granada, apart from a few capitals. A curious piece of sculptured marble, divided into several sections and decorated with a Kufic inscription, preserved at Madrid in the Instituto de Valencia de Don Juan, seems to have been a spice tray.

Granada under the Almoravids and the Almohads. — Under the African dynasties Granada apparently did not undergo great changes. It is possible that the fortification to the west of the Alhambra, now known as Torres Bermejas, goes back in the main to the 6th/11th century.

Some carved woodwork and fragments of moulded plasterwork of the Mauror, all of which have been collected in the Archaeological Museum, seem to be of the Almoravid period. They are of excellent quality. This continuity of the Granada workshops played its part in assuring the rise of Naṣrid art.

Naṣrid Granada. — With the dynasty of the Naṣrids, the founder of which, Muḥammad Ibn al-Aḥmar, settled in Granada in 635/1238, Granada became, and remained till its conquest by the Catholic monarchs in 897/1492, the capital of the last Muslim state in Spain (see NAṢRIDS).

Naṣrid Granada, while maintaining profitable economic relations with Castile and Aragon, was closed to all spiritual and artistic influence from the Christian world. It shut itself up within its Muslim traditions, which it preserved, without renewing them, with pious faithfulness. Naṣrid art was thus the final outcome and the supreme flowering of Muslim art in Spain.

The end of the 7th/13th century and the 8th/14th century were the periods of active construction: architecture and decoration, within formulas now become classical, continued to evolve slowly. But in the 9th/15th century in this increasingly threatened kingdom, often shaken by internal strife, buildings of importance seem to have been very rare, while the decoration of monuments lost its spontaneity and fine quality.

The surrounding wall. — From the moment that it became the capital of Muḥammad ibn Aḥmar, Granada was transformed, especially by the influx of refugees. The wall was extended to the north in order to take in the Albaycín quarter; a concrete rampart with oblong quadrilateral towers, a part of which still exists, enclosed this extension. The rest of the city wall was underpinned and reinforced. In engravings made shortly after the reconquest, the wall appears with *albarranas* towers in many places. But all this fine array of fortifications was demolished when the modern enlargement of the city took place.

Religious buildings. — Granada has kept hardly any of its religious buildings. The church of the Salvador retains some remains of the *ṣaḥn* of the great mosque of the Albaycín, the site of which it occupies. From an old description we know that this Naṣrid sanctuary was a beautiful building with nine naves, the arcade of which rested on eighty-six marble columns. A 7th/13th century minaret serves as the belfry of the church of San Juan de los Reyes. It is a square tower, with a cradle-vaulted staircase rising round a square central newel. The outside walls are decorated with a pattern of interlaced links in brick. The top band of the tower's decoration is in the form of a frieze of star-shaped polygons. This minaret, which belonged to a small 7th/13th century mosque, has neither the size nor the sumptuousness of the great Marīnid minarets of Fez which belong to the same architectural style: it lacks ceramic decoration.

Of the *madrasa* which was built in 750/1349 only the hall of prayer remains, and now much restored. Some remains of the façade have been assembled in the Museum. Finally, outside the old city, the *ermita* of San Sebastián is a small Muslim sanctuary of the 9th/15th century, probably a funerary building, of square form, covered by a sixteen-sided cupola with fine and numerous ribs.

Secular buildings. — Naṣrid Granada had many public baths: only one has been preserved, that of the Calle Real. It is of thoroughly classical type: its three vaulted rooms, on parallel axes, are preceded by a room for undressing and resting, with a gallery on the first floor.

The hospital—the *Māristān*—has been destroyed; but its plan has been preserved. Its central court

was bordered by porches with pointed arches on the ground floor, and wooden lintels on the first floor. The rooms opened through twin bays onto galleries. Its façade was symmetrically disposed. Above the entrance archway, richly decorated, and above its lintel, an arcade contained the foundation inscription: on the first floor there were windows, single or geminated.

Of the many *funduḳ*s which Granada boasted, only one has been preserved: the Corral del Carbón. The court, the arrangement of which is similar to that of the *Māristān*, is surrounded by a two-storied colonnade on lintels. Of purer lines and better proportions, it has the same plan that one finds in Marīnid hostelries of the same period in Fez. This utilitarian building, the interior of which remains very sober, had a monumental doorway which was richly decorated. Its approach reveals a short vestibule with a horse-shoe arch, surmounted by a false lintel and a geminated window framed in two arcades. All this arrangement is decorated with moulded plaster. The ceiling of this type of portico is made of stalactites. One enters the court by a door with a lintel surmounted by a geminated arcade. The *funduḳ*s of Fez retained, up till the modern period, the tradition of monumental doors, decorated to a greater or lesser extent.

Although the public buildings of Granada have nearly all disappeared, five beautiful dwelling-houses, more or less restored, still remain in part.

The convent of Santa Isabel la Real retains the remains of the Daralhorra: a court whose shorter sides consist of three arches on the ground floor and first floor, and whose big halls have an alcove at each end.

In the convent of Santa Catalina de Zafra can be seen the remains of a house with a court which had, in its original form, the same arrangement as that of Santa Isabel la Real, and the decoration of which was mainly painted. These two fairly simple houses, the disposition of which is often to be found in the Morisco houses of the 16th century, seem to date back to the middle of the 9th/15th century.

The Casa de los Girones has been much restored. It too had porticoes along the shorter sides of its court. Its beautiful staircase had groined vaulting. Its richly moulded plaster-work on a coloured background dates it as late 7th/13th century.

Outside the city wall the Naṣrid sovereigns and persons of high rank in the kingdom had, *extra muros*, beautiful country houses.

At the Cuarto Real de Santo Domingo a tower which formed part of the city wall contains a beautiful square room, entered by a portico. The walls are decorated with moulded plaster and with very lovely faïence mosaic panels, which, in the older parts, belong to the end of the 7th/13th century.

The buildings of the Alcazar Genil have been even more restored than those of the Cuarto Real de Santo Domingo. There remains a tower with a square room flanked by two alcoves with two interior basins. The moulded plaster-work belongs to the 8th/14th century.

These only too rare remains show us the same intention, the same structure, the same decoration in the houses of Granada as in the palace of the Alhambra, and frequently of an equally good quality. Luxury and refinement in their dwellings was not the prerogative of the sovereigns. These private houses testify to the perfect architectural and decorative unity of the art of Granada.

B. — The Alhambra

The Alhambra before the 7th/13th century. — The name of al-Ḥamrā' appears at the end of the 3rd/9th century: it was applied to a small fortress where the Arabs who were being pursued by the rebel peasants took refuge during the revolts that took place under the Umayyad *amīr* ʿAbd Allāh. This fortress must have been built on the westernmost point of the plateau of the Sabīka. The Naṣrid Alhambra was later to cover the whole of this plateau. This castle, built at the end of the 3rd/9th century, was doubtless abandoned during the latter years of the caliphate and during the first half of the 5th/11th century. It was rebuilt and without doubt enlarged by the Jewish vizier Samuel Ibn Nagrello between 443/1052 and 447/1056. The Zīrid *amīr* ʿAbd Allāh improved it, inspired by the arrangement of the Christian castle of Belillos which he had just captured.

This castle is mentioned several times in the struggle of the Spanish *amīr*s against the Almoravids and the Almohads. It was of small dimensions, for the Christian contingents of Ibn Hamūshk had to camp outside its walls. Some stretches of wall of very hard rubble and some remains of towers with corners chained with flat stones and bricks, in the neighbourhood of the present Alhambra wall, show that the fortress previous to that of the Naṣrids was very plainly built.

The Alhambra, seat of the Naṣrid government. — When Muḥammad Ibn al-Aḥmar entered Granada in Ramaḍān 635/May 1238 he took up residence in the Zīrid Alcazaba, in the town itself. But he lost no time in ordering the construction of the present Alhambra, work on which began after a few months. The new foundation was something quite different in its intention and size from the original fortress. The Alhambra is more than a fortress and a palace: it is a royal city, a seat of government, as had been Madīnat al-Zahrā', al-Madīna al-Zāhira and the Almohad Ḳaṣaba of Marrākush.

Opposite the commercial part of the town there was a *ḳaṣaba* which had been enlarged for the governmental needs of the Naṣrids. It contained, in addition to the royal palaces, the State administration: offices, mints, barracks for the guards, accommodation for the palace servants and some high dignitaries; in short, all the organs necessary to the administrative city's ordinary life: workshops, shops, a great mosque, baths.

Never was the separation of town and palace more happily reflected in the landscape: above the Darro and its confluence with the Genil, the hill of the Sabīka is the last platform of a spur that comes down from the Sierra Nevada. It is a narrow plateau, rising almost sheer above the Darro, easy to defend in all other respects, and separated by a ravine from the slopes which overlook it from the direction of the mountain. This "enormous boat anchored between the mountain and the plain", as L. Torres-Balbás has described it, has a maximum length of 740 metres and width of 220.

Work began with the construction of an aqueduct which brought in the water coming from the mountains: there was water flowing everywhere in the town and in the palaces of the Naṣrids. The enclosure and the first palaces were probably not completed till the time of the second *amīr* Muḥammad II (671-701/1273-1302). The Naṣrids never gave up their residence there.

The Alhambra is first of all a powerful fortress. The high rampart flanked by strong towers which surrounds it is not one of the least of its beauties. The interior of the enclosure, sloping at either end, was divided into three parts: to the west a compact block of fortifications: the Alcazaba; on the highest part, the main body of these palaces; on the gentle slopes which stretch to the east, the town itself.

The fortress. — At the end of the hill, facing the Vega, the Alcazaba formed a sort of fortified keep, completely independent of the rest of the Alhambra. A large parade-ground, then occupied by small houses, is surrounded by a strong triangular wall made up of high curtains, flanked by towers, reinforced by three powerful vaulted bastions, and with an outer wall to the east. This fortress had its own gateway opening into the exterior.

The wall which surrounded the whole of the Alhambra and which the Alcazaba completed to the west consisted of a single rampart made of concrete. This wall is exceptionally high and is strengthened by twenty-three high, wide towers, in the upper storeys of some of which there are halls or small houses belonging to the palaces. The whole of the surrounding wall was built by Muḥammad I and Muḥammad II. In the 8th/14th century, during the reign of Yūsuf I (733-55/1333-54), were built the towers of Comares, of Machuca, of the Candil, and the three great monumental gateways of la Justicia, of Siete Suelas, and of las Armas. The tower of the Peinador was completed under the following sultan, Muḥammad V. So the surrounding wall acquired its present appearance as far back as the middle of the 8th/14th century. The last sultans, in the face of the Christian threat, contented themselves with building platforms for cannon at the foot of the three great gateways.

Three of the Alhambra gates, those of la Justicia, of Siete Suelos and of los Picos, opened onto the exterior. Only the gate of las Armas which flanked the Alcazaba linked the Alhambra to the town.

The Alhambra gates, of huge proportions, form deep masses of masonry enclosing vaulted passages with two or even three bends, often cut across by an open bay. They were made of concrete with façades and arches of brick, sometimes set off by ceramic decorations. Quite apart from their military value, they are beautiful examples of architecture. The gate of la Justicia, which is not flanked by towers, but which forms part of a raised bastion, is pierced by an arch with high piers and has a vigorous elegance all its own. The others do not differ from the great gates of the Almohads or Marīnids in Morocco, especially when they are flanked by two towers.

The curtains, which are very high, had a sentry-walk edged by a parapet crowned by merlons with pyramidions. The lay-out of the ramparts, closely following the contours of the terrain, often makes use of re-entrant angles. The spacing of the towers, which is fairly irregular, reaches and sometimes exceeds fifty metres.

The high bastions of the surrounding wall are often big enough to contain, at the top, one of the halls of the palace, or a small house with a courtyard. The Hall of the Throne, or Hall of the Ambassadors, occupies the top floor of a huge square bastion. All these halls and dwelling-houses overlooked, through numerous windows, the beautiful view of the town and of the Vega.

The magnificent group of fortifications built by the Naṣrid Sultans was never attacked. The numerous Christian incursions to reach Granada stopped before the walls of the town, which never underwent a formal siege, till the last campaign of the Catholic Monarchs, in 896-7/1491-2. The town capitulated and the surrender of the keep took place on 1 Rabīʿ I 897/2 January 1492. Ferdinand and Isabella made their entry into the Alhambra on 6 January. Thus the ramparts of the Alhambra and the palaces they enclosed suffered no damage during the progressive collapse of the kingdom and the fall of the dynasty.

The palaces. — The palaces of the Alhambra, like all Hispano-Moorish palaces, are arranged in groups of buildings round courtyards. The main element is not the body of the building, but the court, more or less spacious, with or without porticoes surrounding it, onto which open the state and living rooms. These groups of buildings often have different axes: they are linked together by corridors or by connecting chambers. The palaces of the 7th/13th century were demolished in the following century to make room for the present palaces. A first group of buildings to the west, long since ruined, and recently uncovered by excavations, comprised a square court onto which opened some small rooms and a small mosque. This fairly simple dwelling-house was followed by a huge court, the patio of Machuca, bordered to the north by a portico which gave access to a hall in the top of one of the towers of the enclosing wall.

The present palaces form two groups built round two courts with perpendicular major axes. The first group, the Cuarto de Comares, preceded by a vestibule, by the Mechouar, and by a small patio, was built by Yūsuf I (733-55/1333-54); the second, the Cuarto de los Leones, by Muḥammad V (755-9/1354-8 and 769-94/1368-92). Some older baths and a mosque link these two 8th/14th century groups.

To the south of the Cuarto de los Leones was the burial-ground of the dynasty, the *Rawḍa*, the plan of which has been rediscovered through excavations. The Partal, a pavilion bordering a pond, the rich houses which complete the towers of the Peinador de la Reina and of the Captive, form separate groups.

The two big patios are surrounded by porticoes or buildings on all four sides. The reception halls are always on the ground floor: the living rooms, of much smaller proportions, occupied the first floor. Thus each of the quarters of this palace forms a small enclosed world round its patio. But, with happy inconsistency, the higher parts are pierced with bays and open galleries surmounted by belvederes.

The architectural composition. — It is in the patio of Comares, known also as the patio of la Alberca or of the Myrtles, the work of Yūsuf I, that we can grasp the methods of composition of the Granada architects. The centre of the court, a very elongated oblong, is occupied by a large pond, emphasized by two borders of myrtles. The buildings which surround this vast patio are disposed in three different styles. The long sides have walls pierced by doors on the ground floor, and by twin windows on the first floor. A mezzanine with single or double windows is inserted along the south front between two colonnades of slender pillars. To the north there is a portico of equally graceful elegance, dominated, above a tile roof, by the huge mass of the bastion that contains the Hall of the Ambassadors, the throne room of the Naṣrid palace. This paradoxical composition which contrasts occupied spaces with empty ones, smooth walls with airy colonnades, which aims at picturesqueness and variety rather than unity, for all its apparent and intentional lack

of balance, yet remains a work of the most consummate skill.

Classical traditions govern the arrangement of the state rooms, which open onto the south of the court. The gallery gives access to a very long ante-room, the hall of la Barea. From this sumptuous antechamber one enters the Hall of the Ambassadors: of huge proportions and square in form, it has no middle support: its vast dome rests directly on its walls. It is lit only by nine bays, three to a side, at ground floor level. From these windows one can gaze at the Generalife and the mountain side, the town rising in tiers on its double hill beyond the gully of the Darro, the Vega edged by the distant *sierras*. The bright light in the lower part of the room shades off little by little on the moulded plaster-work. The decoration forms a faint grisaille network: the delicacy of this facing does not detract from the dimensions of the room. The architect who worked for Yūsuf I had, to a rare extent, a taste for architectural contrast and decorative paradoxes.

It is round the famous Court of the Lions that are grouped the majority of the buildings which Sultan Muḥammad V built in the second half of the 8th/14th century. On a plan, the disposition of the four rooms which flank the patio, different in size and in shape, seems to lack severity. But seen from above, the masses of the roofs combine a happy equilibrium with a picturesque variety. The architect has voluntarily deprived himself of the facile resources of symmetry of detail. When one goes through these halls, where perspectives of arches and bays have been skilfully contrived to form axes of light, one cannot help admiring the vital and yet subtle discipline of the architectural arrangement. In spite of the great variety of the decoration the rows of arches re-establish the unity of the composition through the spacing of their lacework of light and shade.

The Court of the Lions itself is of a very classical style: it is divided by two paths which intersect at right angles: their intersection is marked by a fountain whose basin rests on stone lions doubtless belonging originally to a 5th/11th century palace. Four projecting pavilions occupy the middle of the sides. The porticoes and pavilions are made of rich arcades of moulded plaster resting on high and slender marble columns. On the ground floor the portico makes use of one motif only—the ringed column with palm-leaf capitals: here the architecture seems to melt into music. However, the vigorous masses of the tile roofs and pavilions which dominate this ethereal portico save the composition from insipidity. The very placing of the columns shows a rare subtlety: sometimes isolated, sometimes paired, the little columns form symmetrical groupings which link up on successive axes and sometimes overlap. Thus, in the Court of the Lions, the architecture itself becomes a symphony of decoration, through the play of association and repetition of motifs.

At the Partal there is a pool along whose edge runs a long pavilion with a five-arched portico surmounted by tile roofs. This colonnade faces the interior of the palace; but the great hall which opens onto this portico and its central pool have, like the Hall of the Ambassadors, windows at ground level which unite the whole of the landscape with this pleasure pavilion. The left hand side of the patio has a belvedere above it, also pierced by windows which allow one to enjoy the whole panorama of the palace, the mountain, and the town.

Thus the arrangement and classical themes of the Muslim palace have been treated here with true originality. The Naṣrid architects have not been seeking what is grand and massive, but have made use of contrast and nuance with incomparable virtuosity and variety.

The interior decoration. — The Alhambra is famous all over the world for the beauty and opulence of the decorations which overspread its halls. Throughout the palace the tradition of covering everything with decoration dominates. Examples of walls left bare or covered by a fairly large and simply engraved geometrical net-work are rare. The decoration is distributed on three levels. On the floor and on the panels at the base of the walls are to be found ceramic facings. On the floors there are usually geometrical motifs with juxtaposed elements, sometimes star-shaped. But on the panels there are polygonal stars ceaselessly sending out a whole complex of lines, and, through a subtle interweaving, rejoining and forming themselves into frames. In the less important rooms the faïence mosaics are sometimes replaced by glazed paintings, composed of geometrical networks in which are set epigraphic and floral motifs. The middle part of the walls is covered by moulded plasterwork. As a rule it is divided into panels, which, especially in the first half of the 8th/14th century, are arranged with as much skill as variety, thanks to the subtle play of axes and levels. The frames, made up of interlacing bands of inscriptions of varying width and content, allow for both precision and nuance in the grouping of these panels. But in the second half of this century, long high friezes tend to cover, with their uniform distribution, a large proportion of these walls.

In this moulded plasterwork one often finds geometrical networks which make up the general plan. But it is in the epigraphs and floral design that we seek the essentials of the decoration. Kufic script expresses eulogies and spreads out into complex arcatures, but it is the *naskh̲ī* which dominates nearly everywhere: thanks to the balance of its movement it has acquired monumental dignity. Some of the Alhambra inscriptions are perhaps the finest examples of cursive epigraphy. The abundant floral design, usually disposed in foliated scrolls, unites the palm leaf, single or double, ribbed or smooth, to the pine cone and the palmette. Under Muḥammad V an effort was made to renew the forms of the palm and the palmette. But it is not so much a case of innovation as of inspiration rooted in the past, sometimes even in the art of the Cordovan caliphate. But this attempt was short-lived, and apparently limited to the Alhambra.

The quality of the detailed forms is still excellent in the work produced under Yūsuf I. But at the end of the 8th/14th century a certain stiffness appears in the moulding and even in the forms. This incipient decadence became more pronounced in the 9th/15th century, in the moulded plasterwork of the Tower of the Infantes, one of the few buildings of the last Naṣrid rulers in the palace of this dynasty.

This moulded plaster-work composes delicate symphonies in grey, each panel with a shade of its own, because of the distribution of light and shade. The movement of the lines also counts. The double play of light and line prevents any banality or monotony, and gives personality to each panel.

Colour was often used to enhance the moulding, particularly in the background, but sometimes covered the floral or epigraphic forms themselves. The shades—mainly blues and reds—were usually

fairly dark, but gold was not lacking. This polychromy, in spite of its sobriety, sometimes impaired the delicate play of light and shade.

All this ornamentation, though no longer renewing either its methods of composition or the forms of its details, yet shows great artistry and real beauty. Its worth lies in its exquisite sense of nuance: but it has lost the vigour of the art of the 6th/12th century.

Above all, it no longer troubles to produce an original composition for each panel. Indefinitely repeated motifs—the background decoration—overrun the whole of the *décor*. This decorative art of the 8th/14th century, in its delicate classicism and its artistry, is already imprisoned in the past: it lacks the boldness of the architecture which it covers. The main motifs—apart from the quadrangular panels—are the arched doorway, its palm-leaf spandrels, its bold rectangular setting, and its arcading, isolated or in tiers.

The ceilings are always most luxurious. Roofs with an interlacing framework, or *artesanados*, are still used. They are nearly always painted. But the biggest and most beautiful halls are covered by domes with stalactites. The *muḳarnas* are small in size, and some of their sides are moulded and painted. These small stalactites are created with great variety, and provide a play of line and shadow both rigorous and hallucinating. The cupolas of the halls of the Kings, of the Two Sisters, and of the Abencerrajes boast a richness and complexity which have never been surpassed.

The human figure is found in some of the famous paintings which cover some of the vaults of the Hall of the Kings: but these have been painted by artists of Christian upbringing. However at the Partal small paintings have been found which in their subjects—scenes of hunting and war and domestic reunions—belong to the Muslim tradition. The costumes and arms are those of the Muslims of Granada.

The Alhambra is the supreme example of monumental decoration in Muslim Spain in its final stage: an art which is still wonderful, but imprisoned in a tradition which it no longer attempts to renew, and already in its decline.

The gardens. — The largest of the patios of the Alhambra must have been laid out as gardens. But the most beautiful were to be found beside the pleasure pavillions, such as the Partal, and above all in the country houses which the sovereigns and wealthy citizens owned in the Vega and on the lower slopes of the mountain. These gardens hardly ever include vast prospects and distant views: they are contained within walls, in a network of alleys intersecting at right angles. More often than not there were just four hollowed-out beds between two raised walks, with a basin at their intersection. Throughout the Alhambra beautiful gardens have been laid out following this tradition, bringing back the gardens of the 8th/14th century, if not in their exact form, at least in their spirit.

It was the Christians who supplied the abundant foliage which today provides so magnificent a screen of greenery to the Alhambra. Although there was running water in the town and palaces of the Naṣrids, the walls and their towers overlooked bare slopes.

The town. — Hardly anything remains, apart from the remains of two houses, of the town enclosed by the walls of the Alhambra, to the south and to the east of the palace. The great Mosque was on the site of the church of Santa Maria de la Alhambra. The *madrasa*, the baths, and the richest houses have disappeared. Excavations have revealed the foundations of houses similar to those still to be found in the business part of the town. To the east was the artisan quarter. The ordinary life of the Muslim city was reproduced at the foot of the palaces, which, in themselves, aimed rather at elegance than at majesty. And this moderation which is expressed by a concern for maintaining the human scale remains one of the great values and charms of the Alhambra.

The Generalife. — On the spur which dominates the Alhambra the Naṣrids had a series of country houses: only the nearest of the palaces, the Generalife, remains. Its water comes from the same aqueduct as supplies the Alhambra.

The gardens are much more extensive than the buildings. After two or three entrance patios one emerges into a long rectangular walled garden. Contrary to the general rule, this *Patio de la Acequia* is not entirely closed in: one of its sides is pierced by arches through which the landscape can be seen; a belvedere marks the centre of this line of arches. The main axis of the garden is formed by a canal with water gushing up along its sides, flanked by two long flower-beds. At both ends of the gardens there are pavilions, the one to the north having three floors. The most sumptuous of the halls, which overlooks both the garden and the vast landscape of Granada, is on the top storey. The halls are richly decorated. The whole of this pleasure pavilion, built for height, dates from the beginning of the 8th/14th century. The style of its plaster mouldings is excellent.

A slightly higher garden stretched out to the east: but it has been greatly altered. Nevertheless, the lay-out of its walks may date back to the Muslim era. With its constantly renewed trees and flowers and the flowing and bubbling of its water, the Generalife evokes, even better than the Alhambra, the private life of the Naṣrid princes. And the architects of Granada have never surpassed this perfect alliance of gardens, water, landscape and architecture, which was their supreme aim, and sets the seal upon their art.

The Alhambra in modern times. — The Alhambra is the only palace of the Muslim Middle Ages to come down to us whole and well preserved. We owe this unique good fortune to the Christian conquerors, who were able to love the Alhambra and defend it against the incurable fragility of its buildings. The Catholic Monarchs, Ferdinand and Isabella, had the palaces they had conquered strengthened and restored. Their successors, the kings and emperors of the house of Habsburg, continued this pious work of preservation. The palace of Charles V was not built after the demolition of part of the Naṣrid residences, but beside them. It was not till the 18th century, under the Bourbon dynasty, that the Alhambra ceased to be looked after: it was partly abandoned to the poor and to the gipsies, who set up their homes within its walls.

In the 19th century the great task of restoration was begun: by clearing the ground, excavating and laying out new gardens, the total of Naṣrid remains has been increased and assured an admirable presentation.

Historic value of the Alhambra. — It is mainly the art of the 8th/14th century that is revealed by the Alhambra. In the following century the sovereigns of Granada were too poor to rebuild the palaces of their predecessors. Otherwise work of less value—such as the few alterations to the Tower of the Infantes then made—would have replaced the masterpieces of Yūsuf I and Muḥammad V. And so

Naṣrid art has left us the *chef d'œuvre* of its classical age, the greatest testimony of its architecture and art of decoration. And the Alhambra has naturally become nothing less than a place of pilgrimage for all who wish to know, and for all who love, the arts of Spanish Islam in their final flowering.

GHAṢB, usurpation, *i.e.*, "highhanded appropriation", is neither robbery as it is often translated, nor larceny (*sariḳa*), both of which pertain to the field of criminal law, but the illegal appropriation of something belonging to another or the unlawful use of the rights of another. *Ghaṣb* is thus restricted to civil law, so that it is dealt with by the Islamic jurists in the *Kitāb al-Buyūʿ*. While contractual, legal possession by the non-owner (*e.g.*, tenants, depositaries) is regarded as trusteeship (*amāna*), illegal possession not based on a contract is regarded as *ghaṣb*. The Islamic jurists consider *ghaṣb* from the point of view of an obligation arising from a tort. Hence the question is primarily whether the *ghāṣib* has to return the object obtained by unlawful interference (*maghṣūb*) to the deprived person (*maghṣūb minhu*) or to pay compensation. If the return of the object is no longer possible on account of loss (*halāk*) or as a result of specification, commixtion and confusion, he has to repay the value. As the *ghāṣib* has illegally taken possession of another's property, a high degree of liability is incurred: in all cases of loss, even through *force majeure*, he is liable, *e.g.*, if a usurped child dies from lightning or snake-bite. In the case of *ghaṣb* of *res immobilis* (*ʿaḳār*) jurists disagree over the question of liability.

As far as the consequences, under the law of property, of specification and confusion are concerned, two schools exist in Islam, just as in Roman and Jewish law: the Shāfiʿīs, like the Sabinians or the school of Shammay, direct their attention to the substance of the resulting article, the Ḥanafīs, like the Proculians or the school of Hillel, to the work performed. The Mālikīs represent a *media sententia*, which, however, diverges materially from the Code of Justinian, while the Jewish *media sententia* coincides with the Roman and certainly goes back to it.

GHĀSHIYA, (A.), "the covering", particularly, a "covering for a saddle". Among the Saldjūḳs, Mamlūks etc., the *ghāshiya* was one of the insignia of royal rank and carried before the ruler in public processions (see C. H. Becker, *La Ghâshiya comme emblème de la royauté*, in *Centenario M. Amari*, ii, 148 ff.). *Ghāshiya* is also used metaphorically of a great misfortune that overwhelms someone; in this sense it is found in Sūra LXXXVIII, 1, for the day of the last judgement or for the fires of hell, and from this the Sūra has received the name *al-Ghāshiya*.

GHASĪL AL-MALĀʾIKA, nickname by which Ḥanẓala b. Abī ʿĀmir (= ʿAbd ʿAmr) b. Ṣayfī al-Awsī, a Companion of the Prophet, is known. Son of a Christian monk counted among the "People of the Interval" [see fatra], he embraced Islam and took part in the battle of Uḥud; he was about to kill Abū Sufyān [*q.v.*], when he was mortally wounded by one of the enemy (some think that he fell at the hand of Abū Sufyān who, by killing a Ḥanẓala, would thus have avenged his own son Ḥanẓala who had fallen at Badr). On hearing of his death, the Prophet exclaimed: "The angels will prepare his body for burial", and this earned him posthumously the name of Ghasīl al-Malāʾika. He was buried at Uḥud with the many other Muslims killed in this battle.

GHASSĀN, a division of the great tribal group al-Azd who migrated from South Arabia, wandered in the Peninsula, and finally settled within the Roman *limes* ca. A.D. 490, having accepted Christianity and agreed to pay tribute.

After a short period of co-existence with Salīḥ [*q.v.*] as tributaries, ὑπόφοροι, they overpowered the latter group and superseded them as the new Arab allies, σύμμαχοι, of Byzantium in A.D. 502-3. Their relations with the Empire were regulated by a treaty, *foedus*, according to which they received annual subsidies, *annonae foederaticae*, and in return they contributed mounted contingents to the Byzantine army. Their leaders in the various provinces were technically called phylarchs, φύλαρχοι, and were generally endowed with the rank *clarissimus*, λαμπρότατος. The chief Ghassānid phylarch whose seat was Djābiya in the province of Arabia was accorded the highest honours and titles; he was *patricius*, *biṭrīḳ* [*q.v.*], and *gloriosissimus*, ἐνδοξότατος, and was allowed to wear the crown of a client king. Although Romanized in many respects and passionately attached to Monophysitism, the Ghassānids remained Arabs at heart. Poets from the Peninsula, like Nābigha and Ḥassān b. Thābit [*q.v.*], visited their courts and composed on them panegyrics which give intimate glimpses into their inner life and document their history for three decades.

As allies, σύμμαχοι, politically and militarily, the Ghassānids performed for Byzantium their most important function: (*a*) they supplied the Army of the Orient with an efficient, mobile contingent in the war against the Persians. Their most notable political and military contribution was during the reign of al-Ḥārith b. Djabala [*q.v.*], A.D. 529-69, and before disagreements with the Roman Emperors Justin II, Tiberius, and Maurice limited and frustrated their military efforts. Ḥārith participated regularly in the two Persian Wars of Justinian's reign (A.D. 527-65) and fought with distinction at Callinicum (A.D. 531) and in Belisarius' Assyrian

Campaign (A.D. 541); (*b*) the war against the Lakhmids was successfully prosecuted. Ḥārith triumphed signally over the Lakhmid Mundhir at *Yawm* Ḥalīma [*q.v.*] in A.D. 554 near Ḳinnasrīn, and his son Mundhir triumphed over Ḳābūs, possibly at ʿAyn Ubāgh [*q.v.*], in A.D. 570, captured Ḥīra, and burnt it. Ghassānid military superiority over the Lakhmids solved for Byzantium its most serious Arab problem; (*c*) from their main base in Arabia and Palaestina Tertia, the Ghassānids kept the nomads in check and conducted military operations against the Jews of Ḥidjāz. The Arabian aspect of their function included, also, the protection of Byzantine commercial and political interests along the spice-route, and their importance in this sector is reflected by their participation in the diplomatic mission to Abraha [*q.v.*], the Abyssinian ruler of *Arabia Felix*.

In the history of Syrian Monophysitism the Ghassānids were a determining factor. It was mainly through the efforts of their king Ḥārith b. Djabala that the Monophysite Church in Syria was resuscitated after its disestablishment during the reign of the Chalcedonian Emperor Justin I, A.D. 518-27. Around A.D. 540, and with the help of the Empress Theodora, Ḥārith secured the ordination of two Monophysite bishops, Theodorus and the famous Jacob Baradaeus, after whom the Syrian Monophysite Church was called Jacobite. The indefatigable efforts of these two bishops put the Monophysite Church in Syria on its feet again. The Ghassānid kings, Ḥārith and his son Mundhir, continued to protect the Monophysite Church not only against the hostility of the Chalcedonians but also against divisive movements from within: *e.g.*, the Tritheistic heresy of Eugenius and Conon; the discord which broke out between Jacob Baradaeus and Paul the Black; and the patriarchal strife between the sees of Antioch and Alexandria. But they did not neglect the Arabian Peninsula. Their missionary activities, particularly in Nadjrān, were important contributions towards the propagation of Christianity in those southern parts. Although their staunch support of the Monophysite movement ruffled their relations with the Orthodox Emperors and brought about the downfall of their king Mundhir [*q.v.*], A.D. 569-82, and his son Nuʿmān [*q.v.*], it was through Monophysitism that the history of these war lords underwent that spiritual refinement which made of it the maturest expression of a Christian Arab culture.

The Ghassānids made important contributions to the urbanization of Syria and to its architectural life in the sixth century: (*a*) they were credited with the building of a number of towns, *e.g.*, Djillik, and of public works, *e.g.*, the cisterns, *ṣahāridj*, of Sergiopolis (Ruṣāfa); (*b*) genuinely pious, and living in an age which witnessed a great building activity, they erected churches and monasteries for the resurgent Monophysite Church, *e.g.*, the *Ecclesia extra muros* (possibly a *praetorium*) at Sergiopolis; (*c*) anticipating later Umayyad practice they built, in and near the desert, palatial residences which were sometimes also military establishments, *maṣāniʿ*. [In addition to the dated monument in Sergiopolis there are at least three more, arranged here in chronological order: (i) the tower of the monastery in Ḳaṣr al-Ḥayr al-Gharbī, of 559 A.D., by Ḥārith b. Djabala (D. Schlumberger, *Les fouilles de Qasr el-Heir el-Gharbi*, in *Syria*, xx (1939), 366-72); (ii) a house in al-Ḥayāt (Ḥawrān) built by Flavios Seos in 578 (H. C. Butler, *Syria, Princeton Expedition, division II*: *Archtecture, section A*: *Southern Syria*, Leiden 1919, 362-3); (iii) the castle in Ḍumayr, built by al-Mundhir (569-82) (described in Brünnow-Domaszeski, *Die Provincia Arabia*, Strassburg 1909, iii, 200; at that time the foundation inscription (Wetzstein, no. 173, Waddington, 2562c) was lost, but in the summer of 1963 I was able to rediscover it on the site, and the Syrian Service of Antiquities is going to exhibit it in the Damascus Museum).— note communicated by K. Brisch]. The prosperity of the province of Arabia in the sixth century, archaeologically attested, can to a great extent be made explicable by the activities of this energetic dynasty whose main base was Arabia, and who, consequently, animated the region and relieved it of its technically insignificant and provincal status.

Relations between Byzantium and the Ghassānids were not uniformly smooth. Their independent spirit, but more, their unflinching support of Monophysitism crossed the will of Orthodox Byzantium. Around A.D. 580, the Emperor Tiberius had Mundhir arrested and brought to Constantinople, and in A.D. 582-3 ?, Maurice gave the same treatment to his son Nuʿmān. This considerably weakened the Ghassānid Phylarchate. But it was the Persian invasion of A.D. 613-14 that dealt the crushing blow to the Ghassānids who, however, re-emerge, serving in the army of Heraclius and represented by the Djabala b. al-Ayham [*q.v.*] at the decisive battle of Yarmūk, A.D. 536.

The Muslim Conquest of Syria swept away the Ghassānids beyond recall. Some of them went over to Byzantium and settled in Anatolia; others adopted Islam and were assimilated in the new Arab Muslim community; the rest remained Christian and stayed on in Syria. To these, some of the Arab Christian families of the contemporary Near East trace their descent.

(IRFAN SHAHÎD)

AL-**GHASSĀNĪ**, ABŪ ʿABD ALLĀH MUḤAMMAD

(Ḥammū) b. ʿAbd al-Wahhāb, descendant of an Andalusian family which emigrated to Morocco towards the end of the Middle Ages, was secretary to Mawlāy Ismāʿīl (1082/1672-1139/1727), who entrusted him with various diplomatic missions: one to Spain (1101/1690-1102/1691) for the ransoming of Muslim captives and another to Algiers (1103/1692) as a member of the suite of Muḥammad al-Ṭayyib al-Fāsī. He wrote the story of his journey in Spain under the title *Riḥlat al-wazīr fī iftikāk al-asīr* (ed. and Spanish tr. by A. Bustani, Larache 1940; partial French tr. by H. Sauvaire, Paris 1884). In it he shows himself to be an acute observer and uses the chronicle entitled *Fatḥ al-Andalus* as a source of his historical information. He gives only a few details of the way in which he accomplished the mission with which he was charged, namely to obtain 5,000 books and 500 captives in exchange for the Spanish garrison of Larache imprisoned by Mawlāy Ismāʿīl; if he should not obtain all the books the number of captives was to be increased to 1,000. The Spanish archives complete the information which he gives: he arrived at Madrid on 4 Rabīʿ I 1102/6 Dec. 1690 and after he had presented himself to Charles II the king ordered Cardinal Portocarrero to conduct the negotiations which terminated to the satisfaction of all before 27 Shaʿbān 1102/27 May 1691, the date on which al-Ghassānī set out again for Morocco. The ransomed captives were assembled at Barcelona, Cartagena, and Alicante, whence they were sent to Cadiz and must have crossed to Morocco some time after March 1692.

(J. Vernet)

GHASSĀNIYYA, name given by later Sunnīs to the Murdjiʾī position associated with Abū Ḥanīfa. In Ashʿarī (*Maḳālāt al-Islāmiyyīn*, ed. Ritter, i, 138 f.), Abū Ḥanīfa appears as head of a section of the Murdjiʾa asserting that *īmān* is the affirmation of God and the Prophet, however poorly these are understood; some of his followers, including Ghassān, differ from him in including reverence within *īmān* and allowing that it may increase. Al-Baghdādī (*Al-farḳ bayn al-firaḳ*, ed. Muḥammad Badr, 191) cites this latter difference as proof that Ghassān did not follow Abū Ḥanīfa at all, and then ascribes the whole position to Ghassān under the name of Ghassāniyya, omitting Abū Ḥanīfa from the Murdjiʾa. Going still further, Shahrastānī (*Kitāb al-Milal wa 'l-niḥal*, ed. Cureton, 263-5) transfers Ashʿarī's quotations of Abū Ḥanīfa to Ghassān al-Kūfī himself. (M. G. S. Hodgson)

GHĀT, a *ḳṣar* of the Sahara among the Touareg Ajjer on the frontier between the Fezzān (Libya) and the Algerian Sahara, in the neighbourhood of the 25th parallel and the 10th meridian. It stands at an altitude of 780 metres, 3 km. to the west of the Wādi Tanezzouft, whose valley lies in a north-south direction between the bank of primary sandstone on the side of the Tadrart in the east and the similar plateaus of the Tassili of the Ajjer in the west. It owes its existence to the richness and shallowness of the phreatic underground water-level and to its situation on the route of the ancient trans-Sahara track which, coming from Kano, Zinder and Agadès, leads towards southern Tunisia by way of Ghadamès, and to Tripoli either via Ghadamès or via the Fezzān, thus avoiding the mountains of the Tassili and the ergs of the Fezzān.

The region was inhabited in ancient times, as is proved by the numerous rock engravings and more than one necropolis such as those of al-Barkat and of Tin Alkoun, but it has never been proved that the *oppidum* of Rapsa mentioned by Pliny was situated there. Ghāt itself does not go back for longer than 700 years and is mentioned for the first time by Ibn Baṭṭūṭa in the 8th/14th century. Its prosperity depended upon the vicissitudes of trade across the Sahara, about which our only exact information comes from some 19th century travellers, in particular Muḥammad al-Otsman al-Hachaïchi (al-Ḥashāʾishī); he remarks, at the end of the century, that if for the Touareg Ajjer "Ghāt is their Paris", most of the traders of Ghāt "which is the Marseilles of the Sahara" are people of Ghadamès and people from Tripoli; the Touareg hired their camels to the traders, but the essential part of the cross-Sahara traffic already went via the Fezzān. This trade disappeared little by little in the early years of the twentieth century.

For a long time Ghāt remained independent, governed by an hereditary *amghar* [*q.v.*] and an elected municipality, but nevertheless under the somewhat heavy protection of the Touaregs. In 1875, the Turks of Tripoli installed a garrison there and a *ḳāʾimmaḳām*, and remained its masters until 1914. Ghāt was occupied for the first time by the Italians, conquerors of Libya, from April to December, 1914, and a second time from February 1930 until January 1943. It was then taken by the French troops of southern Algeria at the same time as the expedition of General Leclerc made itself master of the Fezzān; it was annexed to the region of Djanet (Fort Charley). French forces left Ghāt after the Franco-Libyan treaty of 10th August, 1955, and Ghāt was attached once more to the Fezzān, a province of the United Kingdom of Libya.

Ghāt is a picturesque *ḳṣar*, fortified in an irregular rectangle 700 by 500 metres in area, surrounded by a crenellated wall with five gates; part of it also are the suburbs of Tadramt and Tounin. Al-Fewet, 10 km. away to the west, and the fortified *ḳṣar* of al-Barkat, 8 km. to the south, as well as some hamlets scattered within modest palm groves, are under its control. The whole area has more than 2,000 inhabitants. The Kel Ghāt fall into five groups: the Tel Talaḳ and the Tel Makammazan who are the oldest, the Iadhenan, the Tel Inan Tamalgat and the Tel Khabsa; some Arabicized families, Ghadamesians, Touaregs who have become sedentary (especially at Fewet and al-Barkat) and many negro share-croppers of Sudanese origin, called here *atāra*, complete the population. All speak Tamāhaḳḳ but many understand Arabic and even Hausa which is spoken by the negroes.

Ghāt is the centre for about 1,000 Imanan and Oraghen nomads and for some Imanghassaten families. Some springs and shallow wells (both the type worked by animal traction and those worked by balancing poles) make possible the irrigation of 21,000 palm trees, some fruit trees, winter cereals (corn and barley) and summer cereals (sorghum and Indian millet). The nomads raise dromedaries, goats and a few sheep. The artisan class (skins and woodwork) is declining rapidly. Trade to-day is reduced to modest exchanges between the nomads and the sedentary population and the importation of some

manufactured goods from the Fezzān. But if oil research to the north and the east comes to anything, it may perhaps change very rapidly the modest economy of Ghāt.

(J. Despois)

GHAṬAFĀN, name of a group of Northern Arabian tribes, belonging to the Ḳays ʿAylān [*q.v.*] and represented in the genealogical system as the descendants of Ghaṭafān b. Saʿd b. Ḳays b. ʿAylān. Their lands lay between the Ḥidjāz and the Shammar mountains in that part of the Nadjd which is drained by the Wādī al-Rumma. Here lived from West to East their principal tribes: the Banū Ashdjaʿ, the Dhubyān (with the sub-tribes Fazāra, Murra, and Thaʿlaba), the ʿAbs, and—in the region al-Ḳasīm—the Anmār. Of these tribes the Banū ʿAbs (b. Baghīḍ b. Rayth b. Ghaṭafān) rose to prominence c. 550 A.D., when their chief, Zuhayr b. Djadhīma, gained power not only over all Ghaṭafān, but also over the Hawāzin, the other important group of the Ḳays-ʿAylān. After Zuhayr was slain by Khālid b. Djaʿfar of the Banū ʿĀmir b. Ṣaʿṣaʿa, the power of the ʿAbs declined. A quarrel between Ḳays b. Zuhayr b. Djadhīma und Ḥudhayfa b. Badr, chief of the Banū Fazāra (b. Dhubyān b. Baghīḍ b. Rayth b. Ghaṭafān), led to the so-called war of Dāḥis between the ʿAbs and Dhubyān; during it nearly all Ghaṭafān took up arms against the ʿAbs and forced them to leave their pasture grounds. After many wanderings they found shelter with the Banū ʿĀmir b. Ṣaʿṣaʿa and c. 580 A.D. both groups defeated in the battle of Shiʿb Djabala [*q.v.*] the coalition of Tamīm, Dhubyān, Asad, and other tribes (see the poem of Khurāsha b. ʿAmr al-ʿAbsī in *Mufaḍḍaliyyāt*, no. 121). Later on peace was restored between the ʿAbs and Dhubyān through the good offices of two chiefs of the Banū Murra (b. ʿAwf b. Saʿd b. Dhubyān) named al-Ḥārith b. ʿAwf and Harim b. Sinān, both of whom were praised by Zuhayr b. Abī Sulmā [*q.v.*] in his *muʿallaḳa*. After this reconciliation the ʿAbs and Dhubyān stood together against the Banū ʿĀmir b. Ṣaʿṣaʿa (see Bakrī, *Muʿdjam* s.v. al-Bathāʾa) and were often joined by the other Ghaṭafān tribes, *e.g.*, in the battle of al-Raḳam (see the poem of Salama b. Khurshub al-Anmārī in *Mufaḍḍaliyyāt*, ed. Lyall, no. 5). About the same time the Ghaṭafān concluded an alliance with their neighbours the Ṭayyiʾ and Asad. There were also fights between the Ghaṭafān and the Hawāzin and Sulaym till the rising power of Islam ended these clashes. The Ghaṭafān were, like almost all Bedouins, hostile towards Muḥammad and his religion. At this time ʿUyayna b. Ḥiṣn al-Fazārī, of the famous "house" of Badr, was the leading chief amongst the Ghaṭafān, and the Meccans tried to win his support, whilst Muḥammad was eager to forestall all hostile movements (*e.g.*, in the expedition of al-Kudr against Sulaym and Ghaṭafān). After the expulsion of the Banu 'l-Naḍīr from Medina to Khaybar, the Jews and Meccans made an alliance and gained the support of the Ghaṭafān and Sulaym. A contingent of the Banū Fazāra and perhaps of the Banū Murra under ʿUyayna took part in 5/627 in the siege of Medina (the so-called War of the Trench), but when this attempt had failed, the Banū Ashdjaʿ, who of all Ghaṭafān lived nearest to Medina, concluded a treaty with Muḥammad (Ibn Saʿd, i/2, 48), and ʿUyayna thought it best to refrain from open opposition. He was in Muḥammad's camp during the conquest of Mecca in 8/630, accompanied him during the subsequent campaign of Ḥunayn, and the Prophet honoured him at Djiʿrāna, when the spoils were distributed, by a special gift of one hundred camels, to the chagrin of al-ʿAbbās b. Mirdās al-Sulamī, who got only four, though the Sulaym had taken an active part in the fighting. It was only in 9/631 that a deputation of the Fazāra and the Murra, led by Khāridja b. Ḥiṣn and al-Ḥārith b. ʿAwf, went to Medina to announce their tribes' conversion. But in the revolt (*ridda*) that broke out immediately after Muḥammad's death, the Ghaṭafān and the Banū Asad took up arms. A band of them, led by Khāridja b. Ḥiṣn, attacked Abū Bakr in his camp near Dhu 'l-Ḳaṣṣa but was driven back. Then Khālid b. al-Walīd defeated the Banū Asad under Ṭulayḥa and a corps of the Fazāra under ʿUyayna b. Ḥiṣn in the battle of Buzākha [*q.v.*] and broke the last resistance of Khāridja b. Ḥiṣn at Ghamr in Fazāra territory. In consequence of this defeat the Fazāra lost part of their grazing-ground. ʿUyayna b. Ḥiṣn was brought as captive to Medina, but pardoned by Abū Bakr. His daughter Umm al-Banīn became wife to ʿUthmān b. ʿAffān (Ṭabarī, i, 3056-7).

In the wars of conquest the warriors of the Ghaṭafān joined the armies; some of them settled in the newly conquered countries. The Syrian army which was sent after Muʿāwiya's death in 60/680 against Medina was led by Muslim b. ʿUḳba of the Banū Murra. In Kūfa we find members belonging to the leading families of the Banū Fazāra, *e.g.*, Manẓūr b. Zabbān, father-in-law to Ḥasan b. ʿAlī, Muḥammad b. Ṭalḥa b. ʿUbayd Allāh, al-Ḥadjdjādj, ʿAbd Allāh b. al-Zubayr, and Mundhir b. al-Zubayr (Ibn Durayd, *Genealogisch-etymologisches Handbuch*, 173 etc.). Hind bint Asmāʾ b. Khāridja b. Ḥiṣn was married to ʿUbayd Allāh b. Ziyād, then to Bishr b. Marwān, and later to al-Ḥadjdjādj.

In the contest between the Northern (*Muḍar*) and the Southern (*Kalb*) Arabs the Ghaṭafān naturally sympathized with the former. They fought at Mardj Rāhiṭ 65/684 under al-Ḍaḥḥāk b. Ḳays al-Fazārī against the Banū Kalb. It seems that later on the Fazāra at Kūfa supported Zufar b. al-Ḥārith of the Banū Kilāb b. ʿĀmir and ʿUmayr b. Ḥubāb al-Sulamī in their fight against Ḥumayd b. Ḥurayth al-Kalbī (see Ibn al-Athīr, iv, 259, 19). When Ḥumayd killed some of the Fazāra in their homeland in Arabia the latter took revenge in the battle of Banāt Ḳayn in the Samāwa c. 74/693 (see Wellhausen, *Das arabische Reich*, 128 f.). It was to the advantage of the Fazāra that Wallāda bint al-ʿAbbās, one of the wives of ʿAbd al-Malik and mother of the caliphs al-Walīd and Sulaymān (Ṭabarī, ii, 1174) was a descendant of Zuhayr b. Rawāḥa al-Fazārī (see the verses in Abū Tammām, *Ḥamāsa*, 672). When ʿUmar b. Hubayra al-Fazārī [*q.v.*] was viceroy of the East in 102/721-105/725 all Ḳays were again in the ascen-

dency. After the downfall of the Umayyad Empire we hear little of the Ghaṭafān. The Fazāra, Ashdjaʿ, and Thaʿlaba are mentioned in connexion with the revolt of the Bedouin tribes in 230/844-5 which was put down by Bughā al-Kabīr (Ṭabarī, iii, 1342 ff.). But the majority of the Ghaṭafān had left Arabia, and their lands were occupied by the Ṭayyiʾ. There were apparently no Ghaṭafān groups among the Northern (Ḳays) Arabs settled by order of Hishām b. ʿAbd al-Malik in 107/725-6 in Egypt (see Haytham b. ʿAdī *apud* Maḳrīzī, *al-Bayān wa 'l-iʿrāb*, 39 f., Wüstenfeld). Later on we find clans and families claiming descent from Ghaṭafān tribes in Egypt, Libya, the Maghrib and in Spain.

Amongst the poets of the *Muʿallaḳāt* there are two belonging to the Ghaṭafān: ʿAntara b. Shaddād al-ʿAbsī [*q.v.*] and al-Nābigha al-Dhubyānī [*q.v.*]. Lesser poets of the Ghaṭafān are ʿUrwa b. al-Ward and al-Ḥuṭayʾa from the ʿAbs; al-Ḥāḍira and al-Shammākh from the Thaʿlaba b. Saʿd; Ibn Mayyāḍa (see *Aghānī*[3], iii, 261-340) from the Banū Murra b. ʿAwf; and Ibn Dāra (see *Ḥamāsa*, ed. Freytag, 191 ff.) of the Banū ʿAbd al-ʿUzzū, commonly called Banu 'l-Muḥawwala because the Prophet changed their ancestor's name into ʿAbd Allāh, and ʿUwayf al-Ḳawāfī (see *Aghānī*[1], xii, 105-118) from the Fazāra.

Very little is known of the pagan religion of the Ghaṭafān. They worshipped like other tribes an idol called al-Uḳayṣir [*q.v.*]. They also had a sanctuary of al-ʿUzzā at Buss—misrepresented by Muslim writers as a rival institution to the Kaʿba at Mecca—which was destroyed in the first half of the 6th century by Zuhayr b. Djanāb al-Kalbī (see *Aghānī*[1], xxi, 94; xii, 126). Then there is Khālid b. Sinān al-ʿAbsī, who according to a saying attributed to Muḥammad was "a prophet whom his people let perish" (Ibn Saʿd, xii, 42, 7; Ibn Ḥadjar, *Iṣāba*, Cairo 1328 A.H., i, 466 ff.).

The etymology of the name Ghaṭafān is unknown. Besides the well-known Ghaṭafān of the Ḳays-ʿAylān there are also clans of the same name amongst the Djuhayna, Djudhām, and Iyād (Wüstenfeld, *Gen. Tabellen*, i, 19; 5, 18; A 12; see also Nöldeke, in *ZDMG*, xl, 180). Ghaṭafān b. Unayf al-Kalbī was a poet of the 1st/7th century (Ṭabarī, ii, 456, 799). One of the secretaries of Marwān b. al-Ḥakam had the *kunya* Abū Ghaṭafān (Ṭabarī, ii, 837; see also Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, xii, 199).

AL-**GHAWĀR**, a tract of broken limestone hills, now (1963) an important oil field, in Eastern Arabia. Centred 30 kilometres southwest of the oasis town of al-Hufūf, al-Ghawār proper is an elevated area elongated along a north-south axis. Bounded on the north by the depression of Djaww Umm ʿUnayḳ, the tract extends 50 kilometres south to Wādī al-Ḳuṣūr. It averages 20 kilometres in width. Al-Ghawār has only a few poor quality hand-dug wells, and Bedouins consider it a poor pasture area. The machine-drilled wells near the oil field camp of al-ʿUḍayliyya now provide a reliable source of summer water for small groups of Āl Murra and al-Dawāsir tribesmen. Darb Mazālīdj, formerly an important camel track between al-Ḥasāʾ and Central Nadjd, passes through al-Ghawār from northeast to southwest. The hill of al-ʿUthmāniyya and the hill and rock shelter of Ghār al-Shuyūkh, both well-known landmarks of the area, lie near this trail. The derivation of the name al-Ghawār is popularly explained as an alternative plural of *ghār* (common plural *ghīrān*), "rock shelter, shallow cave", or as a plural of *ghawr*, "low ground, depression".

The central portion of Ghawār (Ghawar) Oil Field coincides with al-Ghawār proper. Extending north to Fazrān and south to Wādī al-Sahbāʾ, the oil field has a total length of 256 kilometres. This, with an average width of 20 kilometres, gives it a greater surface area than any other oil field in the world. Discovered by the Arabian American Oil Company in 1948, Ghawār Field yielded an average of 715,200 barrels daily during 1962, nearly one-half of the Company's total production.

GHAWĀZĪ [see GHĀZIYA].

AL-**GHAWR**, "depression", "plain encircled by higher ground", a geographical term denoting various regions in the Muslim countries.

1. The best known is the Ghawr in Palestine, which corresponds with the deep hollow, called *Aulôn* in the Septuagint, through which the Jordan flows, between Lake Tiberias and the Dead Sea, and which is merely a section of the central Syro-Palestinian rift-valley. At first, the Ghawr consists of a plain, overshadowed by the mountains of Samaria on the one side and Mount ʿAdjlūn on the other, 105 km./65 miles long, and sloping down gradually from -208 m. /-680 ft. on the shores of Lake Tiberias to -394 m. /-1300 ft. by the Dead Sea; the width of the plain, though variable, does not exceed 12 km./8 miles in the northern part but reaches 20 km./$12^1/_2$ miles in the Jericho region. It then embraces the basin of the Dead Sea, the deepest point of which goes down to -793 m. /-2600 ft., while the width reaches 12 km./8 miles [see BAḤR LŪṬ]. Finally, it is continued by the Wādī al-ʿAraba, as far as the approaches to the gulf of ʿAḳaba.

From the earliest times of the Muslim occupation, the Ghawr belonged, for administrative purposes, to two different provinces, the *djund* of al-Urdunn and that of Filasṭīn. The Arab geographers describe it as a very hot, unhealthy district with bad water, but possessing numerous streams and covered with pasturages and sub-tropical plantations (palm-trees, sugar-cane and indigo). Besides the capital Arīḥā (Jericho), they mention Ṭabariyya (Tiberias), Baysān, ʿAmmatā and lastly Zughar to the south of the Dead Sea. As for the region called al-ʿArabāt and belonging to the Ghawr in Palestine where, according to Ibn Isḥāḳ (Ṭabarī, i, 2125; cf. 2107), ʿAmr b. al-ʿĀṣ linked up with the forces from the east of the Jordan before the battle of al-Adjnadayn, this no doubt corresponds with the steppe zone lying to the South of the Dead Sea.

In the Mamlūk period, the Ghawr was divided into several administrative districts, all forming part of the second or southern march of the province of Damascus. It was followed by the trade and post route between Damascus and Ghazza. At the beginning of the Mamlūk period, the couriers made the crossing of the Jordan near Baysān, at a place where the river could be forded in normal times or crossed by ferry-boat in times of

flood; in the middle of the 8th/14th century, the route was modified to spare couriers from having to climb too steep gradients; they made use of the bridge of al-Madjāmiʿ, further to the north, at the confluence of the Jordan and the Yarmūk.

2. Another Ghawr is Ghawr Tihāmat al-Yaman or Ghawr Tihāma (al-Farazdaḳ, ed. Boucher, 20), called also, as a dual, Ghawrā Tihāma (al-Ṭabarī, ii, 219). The statements by the geographers regarding it are very vague, for it is sometimes identified with Tihāma and sometimes described as a separate district adjoining it. For example, according to Ḳudāma b. Djaʿfar, it stretched from Nadjd to the extreme borders of Tihāma; on the other hand, according to a passage in al-Bakrī, it lay between Tihāma (the district from Dhāt ʿIrḳ to two days' journey beyond Mecca) and the Sarāt.

AL-GHAYB (a.). The two connotations of the root are *ghāba ʿan*, to be absent, and *ghāba fī*, to be hidden. In current usage, *ghayb* (and especially *ghayba*) may signify "absence" (and *ghayba*, correlated with *shuhūd*, "presence", may be a technical term of Ṣūfism); but more frequently *ghayb* may indicate what is hidden, inaccessible to the senses and to reason—thus, at the same time absent from human knowledge and hidden in divine wisdom. It is to this second meaning that *al-ghayb* refers, as a technical term of the religious vocabulary. It may then be rendered by "the mystery". Such is its meaning, with rare exceptions, in the Ḳurʾān. Its use there is frequent.

"*Al-ghayb* belongs only to God" (*Ḳurʾān*, X, 20); "He has the keys of *al-ghayb* which are known only to Him" (VI, 59), etc. Reference is here made to the Divine mystery, of itself inaccessible to man. Hence the translation adopted (by R. Blachère) of 'Inconnaissable', "Unknowable". The idea which reappears most often is the inaccessibility of *al-ghayb*, which remains totally hidden. "God knows the Unknowable and enlightens no-one about it" (LXXII, 26), "He does not raise you up to the Unknowable" (III, 174).

The *ghayb* nevertheless is an object of faith (II, 3), just as is the Word revealed to the Prophet (II, 4). Man ought therefore to cling to the unknowable mystery "from where God is" (*ladunī*), and God, if He wishes, will reveal it in part to him. "This is part of the story (*anbāʾ*) of the Unknowable which We reveal to you" (III, 44; cf. II, 49; XII, 102). It is thus, as Gaudefroy-Demombynes emphasizes, that the *ghayb* of the Ḳurʾān is "sometimes the Revelation, sometimes the Unknowable, sometimes both together" (*Les sens du substantif Ghayb dans le Coran*, in *Mélanges Louis Massignon*, ii, Damascus 1957, 250). In fact, the common denominator is still the notion of (divine) Mystery, sometimes unrevealed, sometimes revealed in fragments—to the extent that this revelation is necessary to lead man along the straight path (*hidāya*). The Ḳurʾān does not communicate all the *ghayb* to man, but the whole Ḳurʾān is a (partial) communication of the *ghayb*. It is in this sense that Fakhr al-Dīn al-Rāzī was to entitle his great commentary "The keys of the Mystery", *Mafātīḥ al-ghayb*.

This partial revelation of the *ghayb* is explained by L. Massignon (*Passion d'al-Ḥallādj*, Paris 1922, 500) as a participation which God vouchsafes to the prophets in His "essential mystery" (*al-sirr al-dhātī*, as al-Djurdjānī says in *Taʿrīfat*, Leipzig 1845, 169). In the commentaries on the Ḳurʾān and in religious literature, *al-ghayb* is in fact applied at times to the absolute mystery of God Himself, but more often it is the invisible world taken as a whole. The distinction frequently appears between *ʿālam al-ghayb* and *ʿālam al-shahāda*, the world of the invisible mystery, created and uncreate, and the perceptible world, also called *ʿālam al-mulk*. These refinements of meaning are found in the *tafsīr* commentaries on *Ḳurʾān*, II, 3. Al-Bayḍāwī there explains the *ghayb* in which belief is required as "that which is not perceived by the senses or which is not immediately understood by the reason". But al-Ṭabarī, on the other hand, there defines the *ghayb* which is an object of faith as being the Will of God—thus an "attribute of the Essence".

However, this resort to the Divine Will seems to relate the idea of *ghayb* to the Decreee of God, rather more than to the notion of "essential Mystery". In his profession of faith, the Ḥanbalī Ibn Baṭṭa lays down: "One must throw oneself (*taslīm*) upon the Divine Omnipotence (*ḳudra*) and have faith in the Divine Mystery (*ghayb*), for the individual reason is unable to raise itself to the understanding (*maʿrifa*) of this mystery" (cf. the translation of H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 105). This "Divine Mystery" is thus simultaneously the "mystery of things" and the destiny of men (and of each man). It is reserved to God, who reveals it to his prophets to the extent that He wills.

Other usages of the expression *al-ghayb*: — (a) in Shīʿī theology, the *imām* has, of himself, knowledge of the *ghayb*; a view attacked by the Ḥanbalī al-Barbahārī and others. *Mafātīḥ al-ghayb* is the title of a work of the Shīʿī Shīrāzī (Mullā Ṣadrā). — (b) Ibn Baṭṭa compares astrology with "the pretension to know the *ghayb*" and condemns both severely (cf. H. Laoust, *op. cit.*, 155). Under the same title of *Mafātīḥ al-ghayb* (Cairo 1327) the Egyptian Aḥmad al-Zarḳāwī treats of magic and divination. — (c) Ibn ʿArabī uses the same title again, but this time to designate Ṣūfī *maʿrifa*. In fact *taṣawwuf* frequently interprets the *ghayb* as the threefold world of *djabarūt*, *malakūt* and *lāhūt* [cf. ʿĀlam], but also as the hidden essence of all that is, whether visible or invisible. It is then the *ghayb al-huwiyya* ("mystery of selfhood") or absolute *ghayb* (*muṭlaḳ*) (cf. al-Djurdjānī, *Taʿrīfāt*, 169-70).—The hierarchy of the *abdāl*, the "saints apotropéens" (Massignon), crowned by the *Ḳuṭb* ("Pole"), is called "the men of the Mystery" (*ridjāl al-ghayb*, Lane, *Arabian Nights*, xxx, n. 17).—And according to C. Wells (*Mehemet the Kurd* . . ., 129), *ibn al-ghayb* describes a child begotten without a father and endowed with mysterious intellectual faculties.

Al-ghayb, the Mystery, therefore, may be understood in three possible meanings. — 1) Normal religious sense: the mystery of the Divine Decree, unknowable in itself, partially revealed in the Ḳurʾān. — 2) The invisible world which magic, occultism and astrology try to penetrate (but the man who persists in crossing its boundaries by his own powers is committing a sin). — 3) In Ṣūfism,

al-ghayb means, according to context, the reality of the world beyond the senses and beyond discursive reason which gnosis (*maʿrifa*) experiences,—the hierarchy of the invisible worlds,—the beings of these worlds,—and even the world of the Divine Essence. (The penetration of the *ghayb* through a pleasurable intellectual experience was to become extremely suspect to the adversaries of *taṣawwuf*).—Finally, we should note that in Shīʿism, the *ghayb* known to the *imām* recalls the latter's actual condition when he has become *ghāʾib* and his state of *ghayba*, absence, or better, "occultation".

Bibliography: Further to references given in the text: *Dict. of tech. terms*, 1033 f. (s.v. *ʿālam*), 1090, 1539 f. (s.v. *huwiyya*): Max Horten, *Theologie des Islam*, 219 f.

(D. B. Macdonald-[L. Gardet])

GHAYBA (*maṣdar* of *ghāba*) means "absence", often "absence of mind". The latter sense was developed by the Ṣūfīs as the obverse of *ḥaḍra* [*q.v.*], absence from the creation and presence with God. The word is also used for the condition of anyone who has been withdrawn by God from the eyes of men and whose life during that period (called his *ghayba*) may have been miraculously prolonged. It is so used of al-Khaḍir [*q.v.*]. A number of Shīʿī groups have recognized the *ghayba*, in the latter sense, of one or another *imām*, with the implication that no further *imām* was to succeed him and he was to return at a foreordained time as Mahdī [*q.v.*]. The first instance of this was that of Muḥammad b. al-Ḥanafiyya.

Among the Ithnāʿasharī Imāmīs, the *Ghayba* became a major historical period, lasting from the disappearance of the twelfth *imām* until his reappearance in eschatological times. It was divided into two parts. In the "lesser *Ghayba*", from 260/874 to about 329/941, the Hidden Imām was represented among his followers by *safīr*s [*q.v.*], held to be in touch with him and exercising his authority. They maintained the organization, in its legal and financial functions, which had grown up around the later *imām*s (cf. Javad Ali, *Die beiden ersten Safire des zwölften Imāms*, in *Isl.*, xxv (1939), 197-227). The fourth of these did not pass on his authority to a successor; on his death, therefore, began what is called the "greater *Ghayba*" when the Imām is represented only indirectly or through occasional miraculous interventions. Though kept generally invisible, the Imām still lives on earth, has from time to time been seen by some and been in written correspondence with others (for instance, he receives letters placed on holy tombs), and maintains a control over the fortunes of his people. At the time of pilgrimage he is at Mecca, unrecognized, scrutinizing the hearts of the believers. The earlier organization of the sect has been replaced by the presence of independently learned *mudjtahid*s in the various Shīʿī centres, recognized by the community as qualified to interpret the Imām's will. The *Ghayba* has legal effects on account of the absence of the *imām*, whose active presence in the community is regarded as necessary for validating certain community actions. Hence some have regarded *djihād* as in abeyance during the *Ghayba*, as well as the full celebration of the *ṣalāt al-djumʿa*. It has not been excluded from the thought of many Imāmīs that another direct representative of the Imām should appear under the title *Bāb*, an equivalent of *safīr*; but none of the claimants to this office has been generally recognized. (On the Imāmī *Ghayba* see I. Goldziher, *Vorlesungen*, 232 ff., 269 f.; idem, *Abhandlungen zur arabischen Philologie*, ii, p. lxii ff.; Ibn Bābūya al-Ḳummī, *Kamāl al-dīn wa-tamām al-niʿma fī ithbāt al-ghayba*, ed. Ernst Möller *Beiträge zur Mahdilehre des Islam*, I, Heidelberg 1901).

The corresponding periods of absence of an *imām* among the Ismāʿīlī groups are differently interpreted, and called *satr* [*q.v.*]. But among the Durūz [*q.v.*], the concept and term were revived to refer to the period of absence of al-Ḥākim and Ḥamza.

(D. B. Macdonald-[M. G. S. Hodgson])

GHAYLĀN b. MUSLIM, Abū Marwān al-Dimashḳī al-Ḳibṭī, is chiefly known as one of the first advocates of free will [see ḳadariyya], at the same time as Maʿbad al-Djuhanī [*q.v.*]. The son of a freed slave of ʿUthmān b. ʿAffān, he appears, like Maʿbad, to have been the disciple of a Christian from ʿIrāḳ, but he lived in Damascus where he held the position of secretary in the chancellery. Al-Djāḥiẓ (*Bayān*, iii, 29) mentions him on the same footing as Ibn al-Muḳaffaʿ, Sahl b. Hārūn and ʿAbd al-Ḥamīd, and even one so strictly orthodox as al-ʿAsḳalānī acknowledged his professional ability (*Lisān al-Mīzān*, iv, 424), while Ibn al-Nadīm (*Fihrist*, 171) estimated his *rasāʾil* to amount to about 2,000 leaves; they were probably not all of an administrative and diplomatic character, to judge by al-Khayyāṭ (*Intiṣār*, ed. and trans. Nader, Ar. text 93, trans. 115) who when answering the accusations of Ibn al-Rāwandī [*q.v.*] appealed to their content and stated that they were very widely known; he added that Ghaylān believed in the five Muʿtazilī principles, but the heresiographers rank him solely among the Ḳadarīs. According to al-Shahrastānī (margin of Ibn Ḥazm, i, 194), who names him as one of the Murdjiʾī Ḳadarīs, his principal doctrine concerned the primary, innate knowledge (*maʿrifa*) which allows it to be known that the world has an Artificer created by Himself; the *īmān* is only the secondary, acquired knowledge.

The activities of Ghaylān, who apparently embraced the cause of al-Ḥārith b. Suraydj al-Kadhdhāb [see djahm b. ṣafwān], earned him the imprecations of ʿUmar b. ʿAbd al-ʿAzīz, but it was only Hishām b. ʿAbd al-Malik (105-25/724-43) who gave orders that his hands and feet should be cut off and who had him crucified, after al-Awzāʿī (born about 87/706, d. 157/774 [*q.v.*]) had subjected him to interrogation and given a verdict in favour of his execution.

(Ch. Pellat)

GHAYLĀN b. ʿUḲBA [see dhu 'l-rumma].

GHAYN, 19th letter of the Arabic alphabet, here transcribed *gh*; numerical value: 1000.

Definition: a voiced postvelar fricative; according to the Arab grammatical tradition: *rikhwa madjhūra mustaʿliya*. As regards the *makhradj*: *min adnā 'l-ḥalḳ* (from the part of the throat nearest to the mouth). The Arabs thus made *ghayn* (and *khāʾ*) guttural. They contrasted them with *ʿayn* and *ḥāʾ*, *min awsaṭ al-ḥalḳ*; and with *hāʾ* and *hamza*, *min aḳṣā 'l-ḥalḳ* (al-Zamakhsharī, *Muf.*² § 732). The velaric articulation of *ghayn* is well described by

R. Růžička as "between the soft palate (velum) and the back of the tongue" (*Existence du g̲h̲*, 182). The soft palate is divided into two areas: upper (prevelar) and lower (postvelar). The articulation of *g̲h̲ayn* takes place in the latter area, hence the adjective employed in the definition. To the extent that a channel is formed on the back of the tongue permitting the uvula to vibrate, *g̲h̲ayn* approximates to uvular *r*.

In a few cases the passage from *g̲h̲* to *k̲h̲* is quoted (J. Cantineau, *Cours*, 94), see Ibn al-Sikkīt (*al-Ḳalb wa 'l-ibdāl*, 32). But particularly interesting is the passage from *ʿayn* to *g̲h̲ayn*, which has been illustrated with numerous examples by R. Růžička, notably in *L'alternance de* ع — غ *en arabe* (*JA*, ccxxi (1932), 67-115). Since his article in *ZA*, xxi (1907), 293-340, he has sustained and defended the theory of the secondary origin of *g̲h̲ayn* in Semitic, by the passage of *ʿayn* into *g̲h̲ayn* in Arabic and only in Arabic (references to these writings: *Ar. Or.*, xix (1951), 100, n. 4).

One of his last articles summarizes his ideas and his activity in this controversy: *La question de l'existence du g̲h̲ dans les langues sémitiques en général et dans la langue ougaritienne en particulier*, in *Ar. Or.*, xxii (1954), 176-237 (quoted as *Existence du g̲h̲*). K. Petráček, his pupil, who is loyal to his ideas (*Ar. Or.*, xxi (1953), 240-62 and xxiii (1955), 475-8), acknowledges (*ibid.*, xxi, 243, n. 16) that only H. Torczyner has accepted the theory. During the lifetime of its author, and to his great chagrin, it seems to have encountered only indifference or neutrality in the world of orientalists. S. Moscati, in his recent *Lezioni di linguistica semitica* (Rome 1960), includes *g̲h̲ayn* among the phonemes of common Semitic (41-3), as had W. Leslau in the *Manual of phonetics* (ed. L. Kaiser, Amsterdam 1957), 327. The existence of doublets is not sufficient to prove the secondary character of the Arabic *g̲h̲ayn* (according to the judgment of J. Cantineau, *Cours*, 94). Further, R. Růžička appears to have underrated the data of South Arabian epigraphy and to have misinterpreted those of Ugaritic (cf. S. Moscati, *loc. cit.* and *Rend. Lin.*, series VIII, xv/3-4 (1960), 87; compare also the account of C. H. Gordon, *Ugaritic manual*, Rome 1955, i, ch. 5, 8). We would ourselves also retain *g̲h̲ayn* among the articulations of common Semitic. The most recent documents to be discovered (see *GLECS, Comptes rendus*, viii, 73; C. Virolleaud, *Palais d'Ugarit*, ii, 201, *Mission Ras Shamra*, vii, 1957), pending a fuller report, do not contradict this view.

But the dispute has at least brought to light a certain instability in the Arabic *ʿayn* (which can pass into *g̲h̲ayn*), *at least among certain tribes*; (we must also eliminate false doublets arising from simple graphic errors in the manuscript tradition). An analogous case seems to be reproduced in present day dialects, where *g̲h̲ayn* is seen to have passed into *ḳāf*: dialects of North Arabian nomads: Rögga, the Mawāli; the majority of the dialects of the Algerian Sahara, an immense region which seems to cover also the South Moroccan and Mauritanian Sahara (see J. Cantineau, *Cours*, 95).

In Classical Arabic *g̲h̲ayn* undergoes few conditioned changes (*ibid.*, 94). For the phonological oppositions of the phoneme *g̲h̲* see J. Cantineau, *Esquisse*, in *BSL* (no. 126), 105, 22°; for its incompatibilities see *ibid.*, 135.

For a general discussion of the phonetics of Arabic as seen by the classical grammarians, see ḤURŪF AL-HID̲J̲Āʾ; for modern studies, see LINGUISTICS and PHONETICS.

Bibliography: in the text and under ḤURŪF AL-HID̲J̲Āʾ. (H. FLEISCH)

G̲H̲AYR MAHDĪ [see MUḤAMMAD AL-D̲J̲AWNPŪRĪ].

G̲H̲AYṬA, G̲H̲ĀʾITA or G̲H̲ĪTA. A reed-pipe of cylindrical bore or an oboe of conical bore, popular in Muslim Spain and North Africa. The word is not Arabic, but originated in the low Latin *wactare* and the French *guetter*, whence the old English term *wayte*—the modern *wait*—who sounded the hours at night on an instrument thus named. Delphin and Guin say that the *g̲h̲ayṭa* was introduced by the Turks, but it is mentioned by Ibn Baṭṭūṭa (d. 779/1377) who likens the instrument to the Mesopotamian *surnāy*. It was blown by means of a single or double reed (*ḳaṣba*) placed in the inflation end of the instrument. It is practically identical with the Eastern *zamr* or *mizmār*. Like the mediaeval shawmer of Europe, the player takes the entire inflation reed (*ḳaṣba*) into his mouth as far as a disc called *ʿarrāḍ*, which means that the player's lips have no more control over the tone of the instrument than have those of a bagpiper. The 'bell' of the instrument is widely conical as that term implies, and is perforated with tiny holes. The tube of the *g̲h̲ayṭa* is perforated with seven finger holes on its breast with one on its back for the thumb. Nowadays these holes on the breast—from the top to the bottom—bear Iranian names, *viz.*, *yaka sāʿida*, *s̲h̲as̲h̲ka*, *band̲j̲ka*, *d̲j̲ahārka*, *sīka*, *dūka*, and *yaka*, the thumb-hole at the back being *haftakā*. Persian musical terminology is current even in conservative Morocco, and the instrument is delineated in Höst, *Nachrichten von Marokos und Fes*, 1787. The *g̲h̲ayṭa* is chiefly an out-door instrument and is usually accompanied by a drum (*ṭabl*) played with two sticks, and a larger drum termed *ṭanbar*, *i.e.*, the French *tambour*, which is struck with an animal bone. In southern Tunisia it retains the old Arabic name of *zammāra*, which in Egypt is reserved for a double reed-pipe because — perhaps — the term signifies 'shackled'. Strangely enough Ibn K̲h̲aldūn calls the instrument *zallāma*, which A. Cour considered to be a metathesis of *zammāra*. On the other hand there was a certain musician named Zunām mentioned in the 18th *maḳāma* of al-Ḥarīrī who is claimed to have been the inventor of a *nāy zunāmī* or *nāy zulāmī*, and he was at the court of Hārūn (d. 193/809) and onwards. Al-S̲h̲aḳundī (d. 628/1231) of Seville calls it *zulāmī*. In some places of North Africa, where Turkish influence once prevailed, the instrument is known as the *zurna*; the term *zukra* is also used in Tunisia. In modern Spain the *gaïta Gallega* is still favoured in Galicia, and since that land was held by the Muslims for a mere five years, it is likely that the name of this instrument is not of Arabic origin; nevertheless the initial *g̲h̲ayn* in the arabicized word has bred the crossed Spanish forms *gaita*, *raita* and *raica*. The Turkish form is *g̲h̲aydā* (modern Turkish *gayda*) and this term is used in a part of the Slavonic field for a kind of bagpipe.

(HENRY G. FARMER)

GHAZAL, "song, elegy of love", often also "the erotico-elegiac *genre*". The term is Arabic, but passed into Persian, Turkish and Urdu and acquired a special sense in these languages.

The semantic development of the word from the root *gh z l*, "to spin", "spinning", is not in doubt, but presupposes intermediary meanings for which we have no evidence; the *ghazal* was not in fact a song of women spinning, like that of which Tibullus speaks (ed. Rat, Paris 1931, Book II, no. 1, line 60), but a man's song addressed to a girl; contamination by the noun *ghazāl* "gazelle", from the images and comparisons associated with it, is not perhaps to be excluded (cf. "to make sheep's eyes"). Whatever the reason, the idea evoked by the term *ghazal*, like the English "gallantry" and particularly the noun "gallant", now fallen into disuse, became elaborated in a realm of ideas where there mingle the notions of flirtation, compliments made to a lady, complaints at her coldness or inaccessibility and the description of effeminate languishing attitudes on the part of the lover (cf. the noun-adjective *ghazil*, "affected, mincing, without vigour"; on the ambiguity of the idea, see Ḳudāma, 42, to be compared with the definition in *LA*, xiv, 4, line 20, where the stress is on the idea of "amorous addresses"). The word *ghazal*, as early as in a line of al-Akhṭal (ed. Ṣalḥānī, 142), is associated with *lahw* "pleasure"; in a contemporary poet, Surāḳa (ed. Ḥusayn, in *JRAS*, 1936, no. 20, verse 9), the term appears in the phrase *yalhū ilā ghazal al-shabāb* "he seeks his pleasure in the *ghazal* of youth". The meaning of love-song inspired by youthfulness is clear in a verse attributed to Waḍḍāḥ [*q.v.*], where the composition of *ghazals* and the fear of death are contrasted. By the 3rd/9th century, *ghazal* had finally acquired the general sense given above (see *al-Washshāʾ*, 54 bottom, Ibn Ḳutayba, *Poesis*, 525); the comparative *aghzalu* is as much applied to a verse as to a poet and thus represents the general idea of preeminence in this genre (see *Aghānī*[3], i, 114, line 5, and Ibn Rashīḳ, ii, 115). The noun-adjective *ghazil* means the "elegiac poet" as early as the 3rd/9th century (thus *Aghānī*[3], viii, 352 and *Aghānī*[3], xx, 149 onwards). The 5th form of the verb, *taghazzala*, before it meant "to compose love-songs", would seem to have had the meaning "to express a sorrow of love" (see the passage in Ibn Rashīḳ, ii, 118); for his period, Ḳudāma established a distinction between *ghazal* and *taghazzul* (see Ḳudāma, 42, where the basis of the *ghazal* is further distinguished from that of the *nasīb*).

To the same realm of ideas as *ghazal* there belong the verbal noun and the verb *tashbīb* and *shabbaba*, whose etymology, curiously enough, was not discovered by certain Arab critics (see Ḳudāma, in Ibn Rashīḳ, ii, 121); the term is quite certainly derived from *shabāb*, "youthfulness, youth"; it is frequently used as a simple synonym for *ghazal* and *nasīb* (*LA*, i, 463, line 21). According to Ibn Durayd (in Ibn Rashīḳ, ii, 122 bottom), the term *nasīb* would be more commonly used; the origin of this remains obscure; perhaps it originally described a type of dedicatory verse addressed to a lady; but the possibility must not be excluded of a relationship, by loss of emphasis, with the word *naṣb*, "a kind of camelman's lament similar to the *ḥidāʾ*" (see al-Djāḥiẓ, *Tarbīʿ*, index; *Aghānī*[3], ix, 133 and also vi, 63, where it is a matter of a singer bearing the tribal name of al-Naṣbī). The word *nasīb*, in ancient times, designates the elegiac *genre*, in a list in which there also figure the poem of praise, the satire and the *fakhr* (thus in Ibn Rashīḳ, i, 100 and especially Ibn Sallām in *Aghānī*[3], viii, 6, line 4; cf. *ibid.*, 97, line 12); sometimes this genre appears in a five-fold list (see Ibn Rashīḳ, *loc. cit.*, bottom of page). In certain passages, the verb *nasaba* constructed with *bi-* clearly means "to sing of the beauty of a lady and the agitation she inspires" (thus in *Aghānī*[3], vi, 219, viii, 99, 123). It is well known that in its common meaning *nasīb* designates the amatory elegiac prologue at the beginning of a *ḳaṣīda*. Ḳudāma, 42, attempted very artificially to establish a distinction between the thematic elements of the *ghazal* and those of the *nasīb*.

i. — THE *Ghazal* IN ARABIC POETRY

1. The amatory elegy in Arabic poetry can be made the subject of historical and critical study only from the last quarter of the 6th century A.D. onwards. Of course, we have no text originating in this era, but those which have come down to us under the names of poets belonging to this period, such as Imruʾ al-Ḳays, Ṭarafa and a number of others, are very instructive. At that time the *ghazal* was handled according to a tradition which is clearly ancient and honoured. According to all the evidence, this genre was one of those most current in "spontaneous poetry", that is, in the camelman's chant (or *ḥidāʾ*); at this level it must have been improvised and for this reason no example of it has come down to us. Under what influences, where, and when did there appear and become established the custom of prefacing the *ḳaṣīda* with an amatory elegiac prelude, known from the 1st/7th century onwards as the *nasīb*? We can only guess at the answers to these questions. Since the *ḳaṣīda* was both originally and essentially not a framework but a lyrical movement consisting of a sequence in the key of *fakhr* or a Dionysiac expression of the ego, it is possible that the *nasīb* owed its place to the very importance of the carnal and psychic impulses which it evoked; in fact there also occur in the *ahal* of the Tuaregs the same lyrical flights introducing identical explosions of boasting; the procedure is not therefore peculiar to the Arabs. Though at first episodic in the poetry of the nomads of Central and Eastern Arabia, the elegiac production known as *nasīb* seems to have become incorporated in the *ḳaṣīda* under the influence of a fashion current among or created by poets belonging to groups on the Euphrates steppe; certain data accepted among ʿIrāḳī scholars indeed assume that the *nasīb* is the invention of a certain Ibn Ḥidhām (see Ibn Sallām, ed. Hell, 13, line 9) or of the famous Muhalhil [*q.v.*] (*ibid.* and also al-Djāḥiẓ, *Bayān*, ed. Hārūn, ii, 297) or even in fact of Imruʾ al-Ḳays (Ibn Ḳutayba, 40, 52); as may be seen, these indications demonstrate the existence of a tradition which was still living in the 3rd/9th century and according to which the *nasīb* was associated with an idea peculiar to the Bakrī poets or others in the orbit of al-Ḥīra (see Blachère, *Litt.*, chap. V, § C.). This feature is significant since, in so far as it may be historically acceptable, it permits us to infer that this centre, with its musicians and its circle of poets, probably exercised an influence on the *ghazal* cultivated in the desert. It would seem that this

influence became apparent in the last quarter of the 6th century A.D. at the latest. From certain indications it may be possible to descry a similar phenomenon in other centres closely linked with the *badawī* way of life such as Tayma', Mecca and al-Ṭā'if. Most probably, though of still uncertain date, the verse texts attributed to ancient poets like Ṭarafa, Zuhayr, ʿAlḳama, Imru' al-Ḳays, Ḥassān b. Thābit, al-Aʿshā Maymūn, and al-Ḥuṭay'a, to mention only the most representative, evoke reasonably well the themes which were habitually developed in the amatory elegiac *nasīb* of this period. The apostrophe to the deserted encampment, the description of the migrating group disappearing into the distance, the sorrow aroused by the separation, the memory left in the poet's heart by the promises of the beloved, the recital of the efforts made to rejoin her, all constitute a thematic sequence arising from the environment; even the detail of the development, as much as the stock phrases, derives from the same origin; to a certain extent, the thematic elements belong to the real world but they are transposed into a kind of fiction by the use made of them. Already at this time convention may well have been very powerful; everything leads us to believe that the elegiac poet from now on makes use of a vocabulary, of formulas, of stock phrases, whose use reinforces the tyranny of convention.

2. Among the generation of poets which arose about 50/670, the amatory elegiac *genre* received a particular twist which conditioned its subsequent development. This generation to varied degrees freed itself from the grip of the poetic tradition inherited from Central and Eastern Arabia. The three areas of the Muslim Arab East which were to struggle for leadership during the eighty years or so which followed differed in the extent of their contribution to this change. Syria and Palestine were of secondary importance and followed the lead of the Arabian peninsula and ʿIrāḳ. The latter, while occupying a prominent place in the poetic movement, carried on the previous tradition; the artists and versifiers were led by circumstances to specialize in the laudatory, satirical and descriptive styles; in the works of the representative ʿIrāḳī poets, amatory elegiac themes occur only in the *nasīb*s of the *ḳaṣīda*s; in some, like al-Farazdaḳ, they are in fact noticeably neglected; in all, they are treated in a manner which suggests a mere prolongation of the tradition passed on from the desert and cultivated at al-Ḥīra or under its influence.

In the Ḥidjāz on the other hand, and more particularly in Mecca, al-Ṭā'if and Madīna, the situation was entirely different. The influx of wealth from the conquest, the disruption of the social structure resulting from the enrichment and political advancement of certain families such as the Umayyads, the Zubayrids, and several Makhzūmī clans, the introduction into the population of Mecca and Madīna of foreign elements, particularly captives brought from Palestine and ʿIrāḳ, as well as the choice of Madīna as political capital, had all played their part in turning this province, with its urban centres, into a world very different from that which the generation of the Caliph ʿUmar I had known. The establishment of the Umayyad dynasty in Syria, the gradual political and religious rise of the cities of ʿIrāḳ and the ten years during which the revolt of the Zubayrids cut off the Ḥidjāz from the rest of the Empire, succeeded in giving society in Madīna and Mecca a character of its own. Certain aristocratic elements renounced an active rôle and sought solace for their unsatisfied ambitions in the pursuit of pleasure and the taste for sentimental intrigues. The anecdotal literature collected by Abu 'l-Faradj al-Iṣfahānī from the writings of the ʿIrāḳī "logographers", especially the *ḳāḍī* of Mecca, al-Zubayr b. Bakkār (d. 256/870), subject to the necessary critical adjustments, helps us to form an idea of what life in this circle was like. Women occupied an important place, together with dilettanti, aristocrats with violent passions, intriguers, characters of doubtful morality, singers and singing-girls. The setting was favourable to the development of lyric poetry; by a happy chance, the aristocracy produced several poets like al-ʿArdjī, al-Aḥwaṣ and ʿUmar b. Abī Rabīʿa, who devoted their talent to the celebration of their love affairs; others of more humble origin like Kuthayyir and Nuṣayb imitated them, without entirely being able to avoid becoming court poets. In this poetic movement a significant part is played by singers and singing-girls, as much by reason of the practices they introduced as because they took part in the composition of the works; often in fact they selected fragments of verse or commissioned them from poets, which implies an artistic production entirely governed by musical considerations.

The study of the amatory elegiac verse which developed in the Ḥidjāz between about 50/670 and the end of the first quarter of the 2nd/8th century comes up against the difficulty posed by the state of the texts. On the one hand a considerable volume of verse has disappeared; on the other, what has survived has often been preserved only in anthologies or late or even very recent recensions, as is for example the case with the poems of Kuthayyir (ed. Pérès, Algiers 1928-30) and those of Nuṣayb (ed. Rizzitano in *RSO*, xxii, 1943); frequently, these recensions consist only of fragments which poorly represent the original outpouring; even in the case of the relatively important *Dīwān* attributed to ʿUmar b. Abī Rabīʿa (ed. P. Schwarz, Leipzig 1901-2, 1909; reprinted by ʿAbd al-Ḥamīd, Cairo 1952), many problems arise; it is in fact apparent that this collection includes pieces which give evidence of reconstruction, retouching, and indeed the hand of imitators. The very conditions in which the *ghazal* of the Ḥidjāz was born explain the disappearance of these works and the state of those which survive; many were simply extempore compositions, occasional pieces, ephemeral by nature; some seem to have been commissioned by musicians, singing girls or dilettanti from poets forced to compose in haste and to refurbish earlier works. The uncertainties of attribution are great; it was indeed enough for a piece to contain the name of ʿAzza for it to be attributed to Kuthayyir, who was accustomed to celebrate a lady of this name; often too, single lines or pieces attributed to a poet are nothing more than elaborations in verse drawn from fictional biographies or romances about the poet; thus the small historical and literary value to be accorded to such compositions is easily seen. Taken together, nevertheless, the amatory elegiac texts which have been preserved allow us to evoke satisfactorily the general characteristics of the style in the period under consideration. In order to estimate the extent to which this is possible, however, we must constantly keep in mind the fact that our texts contain passages where the influence of the courtly style of ʿIrāḳ appears, as indicated below.

The poetic instrument used by the poets of the Ḥidjāz was substantially different from that of their contemporaries in Central and Eastern Arabia.

Under local influences the connexion between poetry and music remained very much alive; this is shown especially in the use of metres practically unknown to the poets in the desert tradition; thus, the ***khafīf***, the ***hazadj***, the ***ramal*** are found to be extensively represented among the elegists, and the identity of these with the musical modes of the same names must be emphasized. Among the poets of this school ***enjambement*** is much less rare than among their desert rivals. The vocabulary is equally characteristic; free from rare words and ***hapax legomena***, it aims at simplicity and naturalness; the dialogue form is frequent and corresponds to the description of real scenes; naturally, many expressions are proper to the evocation of feelings connected with the excitements of the heart and the flesh.

The elegists of the Ḥidjāz were primarily poets of the desert school. Their surroundings simply brought about a development which set them aside from the main stream of the ***badawī*** tradition. This can easily be shown from the texts. Often, for example, the elegist of Madīna and Mecca invokes the deserted encampment, describes the departure of a migrating group, bewails his sorrow at a separation; thus thematic elements proper to the ***nasīb*** of the ***ḳaṣīda*** continue to appear (cf. specimens in Kuthayyir, ed. Pérès, no. 44, and ʿArdjī, no. 2, lines 7 ff. and no. 5, lines 1-4). These remnants of the desert setting lead quickly to stylization, but they still do not preclude a certain realism of description. This derives from the abiding nature of things. The elegist is above all a lyric poet and self-expression cannot do without a minimum of sincerity in its references to life. The various themes which he develops are in effect the highlights of the more or less stylized narration of known circumstances or real events; even the poetical texts inserted in fictional or romantic narratives still represent elements of verisimilitude within the pattern of the whole. It is clear that the elegist of the Ḥidjāz loves to note those details which evoke reality. We can therefore say that this lyric poetry was above all marked by an effort to express sentiments and emotions which were really felt, to represent scenes where the participants retained their attitudes and reactions; this is so unquestionable that in many cases the poet felt obliged to allude to the lady by a name other than her own.

A rapid examination of several themes treated by the elegists of the Ḥidjāz demonstrates the trends just sketched and emphasizes the persisting ***badawī*** influences. The thematic sequence relating to the obstacles encountered by the poet in seeking to find his lady reproduces the essential features of what is found in the desert tradition. There are few novelties; at the most we may note a certain harping on the obstacles arising from the separation of the sexes and the rigour of the new ethic in the society of Madīna and Mecca; we may also note the realism concealed beneath the fiction of conventional personages such as the ***raḳīb*** or "censor", the ***kāshiḥ*** or "ill-wisher", the ***ʿādhil*** or "blamer"; according to our biographical information, these personages correspond to known real persons. The poetical texts also refer very often to the difficulties which arise from human nature, to the quarrels and misunderstandings between lovers, to the rupture of relations never to be resumed (thus ʿUmar b. Abī Rabīʿa, ed. ʿAbd al-Ḥamīd, 61, and also al-ʿArdjī in *Aghānī*[3], i, 392). One element, however, is original: in these elegists, an important rôle is played by the evocation of the meeting of the poet and a lady on the occasion of the Pilgrimage; clearly the theme in question does not refer to imaginary circumstances; a typical example is to be found in al-ʿArdjī (see *Dīwān*, no. 13 and the account in *Aghānī*[3], i, 408). In these meetings, the lady acts the part of "the silent one" but the lyricism of the poet requires nothing more than her presence for its release. Similarly, the thematic sequence concerned with rediscovery is very suggestive, and appears frequently; here again the poet refers to events he has experienced, to night rides to rejoin his lady, to the surprise caused by his unexpected arrival; hardly have they met when the two lovers enter upon a dialogue whose simple pattern evokes a conversation which has actually taken place; the amorous quest is recorded as an exploit, which re-establishes the connexion between the elegiac theme and ***fakhr*** (thus in ʿUmar b. Abī Rabīʿa, ed. ʿAbd al-Ḥamīd, no. 1, line 25 ff.; no. 6, line 10 and no. 258); among the Ḥidjāz poets rediscoveries are given substance by the description of details designed to emphasize the reality of the experience; thus, the lover, either alone or with companions, surprises the lady amusing herself with her women; sometimes the event is prearranged and organized by the lady; the two lovers meet in a secluded spot (thus in al-ʿArdjī no. 13, line 15, no. 23, line 2); the account very frequently ends with a description of the beloved and the evocation of sensual excitement between the two lovers (thus ʿUmar b. Abī Rabīʿa, no. 1, lines 35-41, no. 5, lines 10 ff., no. 258, lines 9 ff.; al-ʿArdjī, no. 47, lines 6-26).

There emerges from the whole pattern of these amatory elegiac themes a certain literary concept of love, which, for convenience, we shall call the Ḥidjāz manner. This concept is seen primarily in the images formed of the lover and his lady. The latter remains a somewhat unfocussed character, owing to the lack of any poetess able to express herself in verse with the authority of such men as ʿUmar b. Abī Rabīʿa, Nuṣayb or Kuthayyir; her physical appearance is described according to the canon already established in the traditional ***nasīb***, evoking a softness and luxury that correspond with an ideal of womanhood having little in common with the generality of real ***badawī*** women; socially, she belongs to a noble family, which does not at all imply any insistence on the part of the elegist on celebrating her intellectual merits; on the contrary, under the influence of a tradition which may have already been established for centuries, the lady is depicted as a creature formidable in charm, coquetry and beauty, which she wields with a kind of unself-consciousness and at times with manifest cruelty. Nevertheless, on this point, the feminine ideal differs from what seems to have been the ideal of the desert poets; in the texts we are considering, there is a certain contradiction in the fact that the Ḥidjāz elegist takes pleasure in saying that his lady is the embodiment of womanly love, humble in the face of Destiny, eagerly submissive to her seducer (as in ʿUmar b. Abī Rabīʿa, ***passim***, and esp. no. 7, lines 1-4, nos. 181 and 187, lines 13-18, and no. 242); this attitude is what distinguishes the Ḥidjāz lady most completely from her ʿIrāḳī sister, so imbued with courtly spirit. The poet-lover, in contrast to the lady, emerges from our texts with more defined features; two thematic sequences can be distinguished: in the first the lover represents himself according to the psychology and in the attitudes already familiar in the desert tradition; like his ***badawī*** brother, the elegist of Madīna and Mecca appears to us as a victim of his love for his lady, a prey to the hostility of a world in which he is alone with his agony and despair; his

tears flow easily and his complaints are shrill; a fairly large number of clichés strengthen the already apparent links with a completely traditional mentality; at many points, even in his plaintive attitudes, the poet-lover reveals his latent *badawī* traits, and, conspicuously, his *fakhr*; one example of this lies in his boast of *kitmān*, or "discretion", and of *ṣabr* or "constancy and courage in love"—two virtues to display which is to infringe them. A second thematic sequence comprises dominant ideas deriving from a certain realism; of particular importance in this field are those fragments of passages in which the poet portrays himself as a breaker of hearts, a kind of Don Juan whom no beautiful woman can resist (see details in *Aghānī*³, i, 119, 139, 144, 166 f.; ʿUmar b. Abī Rabīʿa, no. 10, lines 10-18, and no. 45); the realities of life are also evident in the developments which might be grouped under the title "love withers with age"; indeed, the poet often stresses the transience of the passions he has aroused or felt; this theme is further linked with the tendency of the desert poets to replace the elegiac *nasīb* with a stereotyped sententious reflection on the flight of youth (thus al-Farazdaḳ, ed. Ṣāwī, 78 and 89). Whatever the reason, the Ḥidjāz manner stands in absolute contradiction here to one of the basic principles of the courtly spirit, which imposes on the lover the obligation of submission to the lady of his choice. There is also another point on which this contradiction is accentuated even more decisively; the Ḥidjāz manner excludes *ʿiffa*, that is, a refusal to yield to desire, both in the lover and the lady. These poets adhere to what is human and do not seek to transcend it; their sensuality is as much part of their love as is their constancy (cf. the strikingly sensual passages in al-ʿArdjī, no. 15, lines 19-21, no. 5, lines 11 f., no. 131, line 7, no. 28, lines 1, 9; and frequent also in ʿUmar b. Abī Rabīʿa, as no. 28, lines 2, 5). In view of this, these poets have been named *ibāḥiyyūn*, "licentious"; it is justifiable, provided one makes it clear that their licence does not descend to indecency or depravity; it is very noteworthy in this connexion that the Ḥidjāz manner never offends against nature and a certain respect for good manners.

3. A new phase in the development of the amatory elegiac genre begins at the point where one can observe the characteristic features of *ʿUdhrī* [*q.v.*] love or the courtly spirit. It is very difficult to fix the *terminus a quo* when this phase makes its appearance; in the texts ascribed to the Ḥidjāz elegists there are in fact widespread courtly traces to be noticed, which arise from the uncertainties of subsequent revision; this very delicate question has not so far been the subject of any very profound research, even though it affects the whole problem. The origins of *ʿUdhrī* love are nevertheless illuminated with a new clarity by a very elaborate examination of the poetic texts attributed to Djamīl [*q.v.*] or Madjnūn [*q.v.*]; this examination must of course be linked with an enquiry into these poets and their ʿUdhrī rivals. Here and now it can be postulated that the amatory elegiac poetry of courtly inspiration acquired its character under influences coming from outside the primitive Arab homeland; certain factors are strictly ʿIrāḳī and to be sought in the preoccupations and tastes of some elements of society in Baṣra, Kūfa or Baghdād; others derive from contacts between centres in ʿIrāḳ and the Ḥidjāz; indeed, when in the first quarter of the 2nd/8th century Madīna was purified of worldly occupations, singer-composers left to settle in ʿIrāḳ, carrying with them the spirit which had favoured the flourishing of the Ḥidjāz manner; without creating it, this current could not but whet the curiosity of a certain ʿIrāḳī public regarding the stories which had spread about the elegists of Madīna or Mecca. From the end of the 2nd/8th century and in the following twenty-five years, there developed in Baṣra and Baghdād a semi-romantic, semi-historical literature, of which Ibn al-Nadīm, *Fihrist*, 306, cites several authors, such as Ibn al-Kalbī, al-Madāʾinī, or al-Haytham b. ʿAdī; these writings, widely utilized by Abu 'l-Faradj al-Iṣfahānī in his *Kitāb al-Aghānī*, demonstrate that the poet-lovers sometimes underwent a genuine transfiguration, which in certain cases turned real persons like Djamīl into veritable heroes of love. From then on the poetical works collected or mis-attributed under the names of these poet-lovers could not but reflect the psychology of the heroes who figured in the romances or romanticized biographies. Can certain tribal groups of Western Arabia have been familiar in their folklore from the 1st/7th century or even earlier with love stories centred on a more or less legendary personality? It is very possible. In particular it seems that the little tribe of the ʿUdhra, which in the 1st/7th century frequented an area extending from the oasis of Taymāʾ to the Wādī 'l-Ḳūra (see *Aghānī*³, viii, 123, 126, lines 4-5) prided itself on having produced one of these heroes, the famous Djamīl. The ʿUdhra were not, however, the only ones to claim such a title to fame; the Nahd of the same area were equally proud of having given birth to the *sayyid* Ibn ʿAdjlān, who later became the hero of a love saga (cf. Ibn Ḳutayba, *Poesis*, 449; *Aghānī*¹, xix, 102-4 and xx, 22; Blachère, *Litt.*, ii, chap. IV, § B). Under the pressure of tribal particularism, other groups seem later to have developed creations of a similar kind in the ʿIrāḳī centres where they had installed themselves; such seems to have been the case with the ʿĀmir b. Ṣaʿṣaʿa and Madjnūn, their "fool of love" who became a famous hero through his passion for Laylā.

Before it was finally established in a closely defined system, the courtly spirit seems to have spread through diffuse influences as a kind of heightening of the Ḥidjāz spirit. There is no doubt that the poet Bashshār b. Burd (b. about 95/714, d. about 167/784) played a considerable part in popularizing certain themes at Baṣra; in his *Dīwān*, which is unfortunately incomplete, it is easy to note, among verses or fragments addressed to ʿAbda and other female personalities of the city, lyric pieces where in fact his love is from the first known to be hopeless and draws its lasting character from this certainty. The setting in which Bashshār was composing his *ghazal*s was in any case favourable to such emotional exaltation; it was the time indeed when at Baṣra mystical experiences were particularly to be observed among women; it was also the time when, in this centre as at Kūfa, a giddy society, free thinking and morally lax, was plunging into easy pleasures which, in occasional flashes, inspired a thirst for purer and serener joys. Bashshār himself seems to have experienced such disillusion, like his contemporary of Kūfa, Muṭīʿ b. Iyās (d. 170/787); here and there in Bashshar's elegiac works he gives evidence of a fruitless desire to detach himself from carnal pursuits. The merit of having achieved such an escape must be ascribed to his younger compatriot, al-ʿAbbās b. al-Aḥnaf (b. about 133/750, d. about 193/808). The work of this poet is unique in the history of Arabic poetry; it is exclusively a song of

courtly love. Inspired by real love for a lady designated by various names, this elegist composed occasional pieces and more elaborate works all concerned with one ideal; for the poet, the lady is the unattainable, the distant incarnation of a desired being which one owes it to oneself to love while obeying a self-imposed rule never to try to go beyond dreaming. Renunciation is the law imposed from the moment when the heart ceases to heed the reason; nothing can permit one to dream of being healed from an affliction sent by fate. To express his experience, this courtly poet turns to the instrument developed by the elegists of the Ḥidjāz for their own purposes; he employs the same metres, *khafīf*, *ramal* and *hazadj*; he shares their taste for a flexible vocabulary free of lexical pathos; for him even rhetoric has a certain spontaneity. A number of indications suggest that his poems were composed to be set to music; without doubt, many were composed at the request of certain aristocratic women of Baghdād; it is plausible that the chosen lady of al-ʿAbbās was the princess ʿAlya, as ʿĀtika Khazradjī seems to have established. All this tends to show that the courtly *ghazal* is a genre born among the aristocratic society of the ʿIrāḳī cities; it corresponds to a certain sophistication cultivated by the youth of both sexes who described themselves as *ẓarīf* [*q.v.*], "smart" (pl. *ẓurafāʾ*, fem. pl. *ẓawārif*).

The emergence of Abū Nuwās (b. between 130/747 and 145/762, d. at Baghdād about 200/815) represents a new stage in the development of the amatory elegiac *genre*. The work attributed to this name offers many problems. In the two available recensions it might well in fact not be one individual's works at all, but a collection; whatever the case, if the greater part of it is from the pen of Abū Nuwās alone, this clearly implies a convergence of influences; the poet was actually the child of an Iranian mother and a half-Arab father, and seems to reflect a double trend in which the Arab tradition is no longer the only dominant. In many characteristics the elegiac poems brought together under his name certainly resemble those of other poets of Baṣra. Though they lack much of the courtly spirit of al-ʿAbbās b. al-Aḥnaf, they are nevertheless written in the fluid style typical of that elegist and offer notable similarities to the poems of Bashshār; the setting of Baghdād where Abū Nuwās lived for many years certainly must be taken into account here. There remain nevertheless features which specifically distinguish Abū Nuwās or his school; the courtly spirit occupies a secondary place in these works and must be sought in some pieces addressed to the enigmatic Djanān. These poems prefer to develop, with significant exuberance and insistence, an Epicureanism which embraces every kind of satisfaction; to a certain extent the Bacchic pieces verge, in certain episodes, on the elegy of sentiment; but the poet's eyes are no longer turned towards a chosen lady but towards loose women, or towards young men who, in these works, inflame passions which are hardly Platonic. If, as one may be justified in accepting as a hypothesis, the collection attributed to Abū Nuwās is not the work of one individual, it follows that this lyricism, so definite in character, corresponds to the taste and manners of one sector of Baghdād society. The break with the courtly spirit and romantic love on the part of this sector is clear; in opposition to an idealism lacking relation to the human, there now arises an unashamed naturalism which refuses to blame itself.

4. The 3rd/9th century saw the elaboration of a coherent doctrine of the courtly ideal under the growing influence of neo-Platonism. This ideal is represented by the kind of treatise on sophistication which the *Kitāb al-Muwashshā* of al-Washshāʾ [*q.v.*] constitutes; it is also illustrated by that notable anthology of love which we owe to the Ẓāhirī theologian Muḥammad b. Dāwūd al-Iṣfahānī (d. 297/909), called *Kitāb al-Zahra*. It is unnecessary here to recall the characteristic traits of this spirit [see ʿUDHRA]. But we must indicate the connexions which seem to have existed between this concept of love and its reflexions in the neo-classical poetry whose principal representatives in the East are Abū Tammām, al-Buḥturī and al-Mutanabbī. Among the poets of this period the field of expression of the amatory elegiac genre became more restricted; the only developments to be found are confined in fact to the *nasīb*s prefacing *ḳaṣīda*s. In several respects this is a recollection of the *badawī* tradition, but the tone differs completely and the themes are treated more intellectually and are reduced to the notation of states of mind, and the expression of aphorisms on the vanity and fleeting nature of love, on the sorrow it inspires and the dissatisfaction to which it leads. This lyricism is sinking into conventionality and frigidity. Nevertheless, some urban poets of lesser fame, both in ʿIrāḳ and in the Muslim West, composed poems of a more personal lyricism in the *ghazal* manner. Their tone is given by certain pieces by the ʿAbbāsid prince Ibn al-Muʿtazz (b. 247/861, d. at Baghdād 296/908); the influence of the courtly spirit is perceptible in these works but it does not go so far as to exclude references to a lived experience, in which emotion seeks to express itself with a spontaneity which is frequently suppressed. During the 4th/10th century, similar efforts are visible in other Baghdād poets, particularly those who flourished in great numbers under the Būyids; many names could be cited, but the most typical seem Ibn Sukkara (d. 385/995) and al-Salāmī (d. 393/1003). In this group of poets the influence of Abū Nuwās is undeniable. Like their predecessor these artists sing as much of the joy of loving as of the emotional troubles which passion brings; in all of them we find a stylistic simplicity which in its directness of expression is decidedly a characteristic of the genre. Certain works of the Baghdād poet Ibn al-Ḥadjdjādj (d. 391/1001) raise the question already put regarding Abū Nuwās; should they be cited in connexion with this *genre*? As far as Ibn al-Ḥadjdjādj is concerned, the reply is of even greater delicacy, since the amatory elegiac inspiration of this poet is usually nothing but cynical eroticism. A more elaborate analysis of the *genre* at this stage in its development may lead to the conclusion that two currents are forming: the one idealistic and courtly; the other realistic, either with the moderation of the Ḥidjāz manner or with the extremism of the obscene poems of Ibn al-Ḥadjdjādj. Whatever the case may be, the latter tendency shows itself only sporadically, since the conventionalism and the religious ethic of society do not offer it a favourable soil in which to develop.

In the period we have now reached, poetry in Arabic was cultivated in all the intellectual centres of the Muslim world. The amatory elegiac *genre* naturally therefore had its representative figures in each of these centres. In ʿIrāḳ under the Saldjūḳs, they were numerous, competent in the manipulation of their instrument, but entirely without originality (see al-Ṭāhir, ii, 97-102 and the examples given). In Egypt, the same comment is valid, though under the Ayyūbids al-Bahāʾ Zuhayr (b. 581/1187, d. at Cairo 656/1258) frequently manages to achieve tones which

recall Abū Nuwās in their sincerity. In Spain, the Cordovan Ibn Zaydūn (b. 394/1003, d. at Seville 463/1071) contrived also to give the *genre* a somewhat newer air by the employment of a more elaborate vocabulary and the substitution here and there in the traditional thematic material of more acute psychological analyses. Similarly, Ibn Ḥamdīs of Syracuse (b. 447/1055, d. at Bougie (?) 527/1132) achieved the combination of a generalized lyricism with amatory elegiac movements of real charm. It seems also that the cultivated society of the cities of Spain particularly relished this spirit, which induced a sort of "sad delight".

5. Faced with their incapacity to revivify the thematic elements of the *ghazal*, the Arabic Muslim poets from the 5th/11th century onwards turned their efforts at originality in another direction. Both in the East and the West, there were groups who abandoned the exclusive cultivation of this *genre* by means of the resources of the classical vocabulary and prosody only. The signal was given in Spain by the composition of lyrical and elegiac pieces in the *muwashshaḥ* [*q.v.*] or *zadjal* [*q.v.*] forms. From the West, this novelty passed to the East, where Ibn Sanā' al-Mulk (b. about 550/1155, d. 608/1211) in Egypt (see Rikābī, 69 ff.) and Ṣafī al-Dīn al-Ḥillī (b. 677/1278, d. about 750/1359) in ʿIrāḳ compiled treatises with examples of these new poetic forms. These attempts signified an effort to return to the very foundations of all lyric poetry, but they did not aim at what was essential, namely a profound renewal of the themes dealt with in the *ghazal*.

In modern times throughout the Middle East we are witnessing efforts aimed precisely at effecting such a revolution. Poets of this persuasion are subjected to the influence of the Symbolists and indeed of the Surrealists who have gained importance in some literary circles of Western Europe. These efforts deserve our interest, but it is too early as yet to say whether they will be sufficiently widely followed to give new life to elegiac lyricism in Arabic poetry.

Bibliography: For the study of the poets up to the end of the 3rd/9th century, see the accounts in *K. al-Aghānī*[3] (Cairo 1923-, 16 vols. publ.) and in Ibn Ḳutayba, *Shiʿr*. For the subsequent periods see Thaʿālibī, *Yatīmat al-dahr* (Damascus 1303, and ed. ʿAbd al-Ḥamīd, Cairo 1366/1947); al-ʿImād al-Iṣfahānī, *Kharīdat al-Ḳaṣr* (ed. Sh. Fayṣal, Damascus 1375/1955 and 1378/1959; Syrian section). The principal poetical texts to be used are: al-ʿArdjī, *Dīwān* (in the recension of Ibn Djinnī, ed. Khiḍr al-Ṭā'ī, Baghdād 1375/1956); Kuthayyir, *Dīwān* (ed. Pérès, 2 vols., Algiers 1928-30); ʿUmar b. Abī Rabīʿa, *Dīwān* (ed. ʿAbd al-Ḥamīd, Cairo 1371/1952); Djamīl, *Dīwān* (ed. Naṣṣār, Cairo no date; on its relation to the ed. of F. Gabrieli see Masnou, in *Arabica*, ix (1962), 88-90); Bashshār b. Burd, *Dīwān* (ed. Ṭ. Ben ʿAshūr, 3 vols., Cairo 1950-57); al-ʿAbbās b. al-Aḥnaf, *Dīwān* (ed. ʿĀ. Khazradjī, Cairo 1373/1954); Muslim b. al-Walīd, *Dīwān* (ed. S. Dahhān, Cairo 1376/1957); Abū Nuwās, *Dīwān* (see *EI*[2], i, 144b); Ibn al-Ḥadjdjādj, *Dīwān* (part established by Āl Ṭāhir according to the summary of al-Asṭurlābī; unpublished thesis, Sorbonne 1955); Ibn Zaydūn, *Dīwān* (ed. K. Kīlānī and ʿA. Khalīfa, Cairo 1351/1932); Ibn Ḥamdīs, *Dīwān* (ed. Schiaparelli, Rome 1897); also the abundant quotations in Thaʿālibī and al-ʿImād al-Iṣfahānī.

On the courtly spirit in poetry and the related romantic literature see Washshā', *K. al-Muwashshā*, ed. R. Brünnow, Leyden 1886; Muḥammad b. Dāwūd al-Iṣfahānī, *K. al-Zahra*, ed. Nykl and Tukan, Chicago 1351/1932; *Fihrist*, 306; ʿAlī al-Daylamī, *K. ʿAṭf al-alif al-ma'lūf ʿala 'l-lām al-maʿṭūf*, ed. J. Vadet, Cairo 1962.

On the aesthetics of the elegiac movement, see Ḳudāma, *Naḳd al-shiʿr*, Istanbul 1302; Ibn Rashīḳ, *al-ʿUmda*, ed. ʿAbd al-Ḥamīd, Cairo 1353/1934, ii, 43, 98, 114, 116, 119.

ii. — In Persian Literature

The *ghazal* is one of the most common instruments of Neo-Persian lyrics. In its present form it consists of a few *bayt*s (verses, or distichs), generally not less than five and no more than twelve, with a single rhyme (often accompanied by a *radīf*); in the first *bayt*, called *maṭlaʿ*, both hemistichs too rhyme together; the last *bayt*, called *maḳṭaʿ*, contains the nom-de-plume (*takhalluṣ*) of the author; the contents of the *ghazal* are descriptions of the emotions of the poet in front of love, spring, wine, God, etc., often inextricably connected.

The problem of the origin of the neo-Persian *ghazal* coincides practically with the problem of the origin of neo-Persian poetry. Various hypotheses have been proposed, *e.g.*: (a) the neo-Persian *ghazal* originated from the *tashbīb* or *nasīb* of the Arabic *ḳaṣīda* [*q.v.*], isolated from its context and later developed into an independent form (Shiblī Nuʿmānī, etc.); (b) its origin lies in Persian folk-songs, antedating Arabic influence (Braginskiy and other Soviet authors); (c) a distinction between a "technical *ghazal*" and a more generic *ghazal* should be made: the first can be said to have found its final form only in Saʿdī (7th/13th century), the second owes its origin to folk poetry, later refined at the courts under Arabic influence (Mirzoev). All these hypotheses have their share of truth. Actually it should always

be borne in mind that neo-Persian poetry in its specific sense has its origin in the literary experiment of adapting the Persian language to Arabic metres and forms, an experiment first begun at the courts of the first independent Persian dynasties of Khurāsān by people with a perfect knowledge of Arabic. On the other hand "Arabic", in this case, does not imply an ethnic meaning, as many Arabic poets of the time were, ethnically, Persians, and, from the point of view of its content, Arabic poetry of that period was in its turn influenced by Persian ideas. A very useful distinction is that between *ghazal* in its technical sense and *ghazal* in its generic sense, proposed especially by Mirzoev. In its generic sense the *ghazal* may also have been influenced, in its origins, by elements from folk-poetry, though this can in no way be demonstrated by documents, as we know nothing about Persian folk-poetry of the 3rd/9th century, and the very little we know about pre-Islamic Persian poetry shows us something totally different, technically, even from the oldest and least specific and technical forms of the neo-Persian post-Islamic *ghazal*.

The formal history of the neo-Persian *ghazal* can be divided roughly into five periods. The first is the period of the origins, rather obscure, as we have seen, for which we possess actually only fragments of poetical compositions not too different from fragments of *nasīb*s of *ḳaṣīda*s. Many elements of the "technical" *ghazal* still are lacking (*e.g.*, *takhalluṣ*, regular *maṭlaʿ* and *maḳṭaʿ*) and the style is rather decorative/descriptive, with a certain unity and congruity of meanings in the same composition (as compared with the conceptual incongruity of the "technical" *ghazal*) accompanied by a lack, or rarity, of *taghazzul* (the name given to the hardly definable general *Stimmung* of the classical *ghazal*). Rūdagī and Daḳīḳī may be regarded as the greatest poets of this period (3rd/9th and 4th/10th centuries).

The second period could be called the formative one (4th/10th to 7th/13th centuries). In it the proto-*ghazal* acquires a very important element: the mystical experience. At the end of this period the classical *ghazal* is perfectly formed, though the "atmosphere" of the *ghazal* is either mystic in tendency (*e.g.*, ʿAṭṭār), or predominantly profane, as in Anwarī, best known as a *ḳaṣīda* writer but clearly distinguishing the *ghazal* as a special literary genus having as its object the *maʿshūḳ* "the Beloved" whereas the *ḳaṣīda* has as its object the *mamdūḥ*, "the Praised" (Prince or patron).

The third period (7th/13th to 10th/16th centuries) could be called the classical period. The *ghazal* finds its perfectly defined present shape, both from the point of view of form (all the technical elements implied in the definition of *ghazal* given above are present) and from the point of view of content: the decorative style of the origins, after the mystical injection of the formative period, passes into a highly refined and complex symbolic style. Saʿdī and Ḥāfiẓ are the supreme *ghazal* writers of this period. Especially in Ḥāfiẓ the chief object of the *ghazal*, the *maʿshūḳ*, the (earthly) Beloved, becomes inextricably connected not only with the *maʿbūd*, the divine Beloved (God, or better His representative on earth, the mystical Initiator) but even with the *mamdūḥ*, the traditional object of the *ḳaṣīda*: it has been demonstrated, recently especially by Lescot, that the Beloved of the *ghazal*s of Ḥāfiẓ is often his Prince or patron.

The fourth period, that of the so-called Indian style (10th/16th to 12th/18th centuries) [see SABK-I HINDĪ], sees an intellectual reflection on the accepted symbols of the classical *ghazal*, which becomes an arena for a quasi-philosophical exercise of the mind. The *ghazal* finds a renewed congruity of meaning, and its protagonist, instead of the *maʿshūḳ/mamdūḥ/maʿbūd* seems to be the Mind of its Author, creating ever new purely intellectual combinations of the old worn-out symbols. (The greatest poet of this period is probably Ṣāʾib).

The fifth and last period is not easily definable: in Iran a tendency to revive the classical and even pre-classical *ghazal* is followed by attempts to use the *ghazal* for more modern and profane purposes, for which this poetical form, with the refined neo-Platonic symbolism acquired in its classical period, seems rather inadequate.

A description of classical *ghazal* at the time of its "perfection" can be given only by showing the features and symbolic motifs of a single concrete example. We have selected for this purpose the *ghazal* of Ḥāfiẓ whose *maṭlaʿ* is:

rawnaḳ-i ʿahd-i shabāb-ast digar bustān-rā
mīrasad mozhdè-yi gul bulbul-i khush-alḥān-rā

(for full text see edition by M. Ḳazwīnī and Ḳ. Ghanī, Tehrān n.d., 7-8).

1. Once more the age of youth has returned to the garden—and the sweet-singing nightingale receives the good news of the Flower.

2. Oh, gentle breeze! should you once more reach the budding plants in the meadow, give my greetings to the Basil, the Rose, the Cypress tree.

3. The young Son of the Magi, the Vintner, appears before me in such charming motions that I am ready to sweep with my eyebrows the dust of the Tavern.

4. Oh, thou who coverest with purest amber the face of the Moon, do not perturb yet more this man perplexed by love.

5. I greatly fear that those who laugh at wine-bibbers may at last make a tavern of their Faith in God.

6. But mayest thou remain a friend of the Holy Men, for in the Ship of Noah there is still a handful of Mud that knows how to defy the Deluge.

7. Go out from this Dwelling, that has the Heavens for roof, and do not ask it for Food, for that Vile One at the end shamelessly kills her Guest.

8. And say to those whose last resting-place will be a handful of Dust: "Friend, what avails it to raise high palaces to the Skies?"

9. Oh, moon of Canaan! The throne of Egypt has been allotted thee; it is now high time that thou shouldst say farewell to the Prison!

10. Oh Ḥāfiẓ, drink wine, and be a libertine, and live joyfully, but take care not, as others do, to make a snare of the Book of God!

We have here an excellent example—the poem has been chosen almost by chance—of many features characteristic of the style of Persian lyrical poetry of the golden age. Let us list, first of all, the several motifs: of the images indeed none, without exception, is original.

(1) Nightingale-Rose. It may seem strange, but this motif, perhaps the one that occurs most frequently in Persian lyrics, has never been the object of historical research.

It appears in the most ancient Persian lyrics of the 4th/10th century. In the maturer lyrical forms (Ḥāfiẓ) it contains the following meanings:

The rose is Beauty aware of itself, the supreme, inaccessible symbol of the divine *istighnā*; often the rose disdainfully derides the nightingale but as soon as it blossoms it dies. This is the cause of the twofold

sadness of the nightingale, which mourns over the rapid death of the rose and its disdainful rejection of union. But between the two there is a kind of mysterious connection: the Bird of Dawn (an epithet very frequently applied to the nightingale) alone understands the secret language of the rose. The nightingale sings in *Arabic*—the sacred language—invitations to partake of the mystic wine. Inebriated with the perfume of the rose it fears to end as did the magician-angel, Mārūt. As the prayer offered at dawn is of special value and has special power (cf. Ḳur'ān, XVII, 78), so the lament of the nightingale is the auroral prayer. But it is a doleful prayer, offered to something inaccessible, for, as Muḳaddasī says in his charming book translated in the middle of the last century by Garcin de Tassy, "my song is a song of grief and not of joy ... Each time that I flutter over a garden I warble of the affliction that will soon replace the gaiety that reigns there". In an Indian Muslim allegory, the romance of the *Rose of Bakāwalī*, the inaccessible Rose, so difficult to find, is the only remedy that can restore the sight of King Zayn al-Mulūk, etc. The God-Rose identity in the famous preface of the *Gulistān* of Saʿdī can be clearly seen when the Mystic who travels in the transcendental world is unable to bring back any gift from his travels because: "I had in mind that when I reached the Rose-tree I would fill my lap with roses as gifts for my friends, but when I reached it I was so inebriated with the perfume of the Rose that the hem of my robe slipped from my hand".

The enthusiastic pan-Iranist, Pizzi, has endeavoured, but without adequate evidence, to show influence of the Persian Rose motif in the mediaeval *Roman de la Rose*, whose symbolism is reminiscent of this. But in the absence of definite documentary evidence and of preparatory studies we cannot exclude the opposite hypothesis, namely that a Hellenistic motif may have penetrated into both cultures, derived from that civilization which in various ways and forms fertilised them both, *i.e.*, the late Hellenistic symbolism. One should, however, bear in mind that what we refer to is a *motif* and not *an emotional and original perception* by Ḥāfiẓ of the "romantic" and vivid reality of the Spring and the flowers.

(2) And here we have another "personage", the *ṣabā*, "the zephyr", the springtime breeze, generally held to be—and not for the first time by Ḥāfiẓ but by innumerable poets before and after him—the Messenger *par excellence*. The breeze also is personified in a bird, more especially the hoopoe. Why? because with a very slight change in the transcription, the pronunciation of its name is identical to that of the famous region of *Sabā'* whose Queen, we read in the Ḳur'ān, sent a hoopoe as her messenger to King Solomon. Thus the "secondary images" aroused in the mind of the listener by the word *ṣabā* are quite other than those awakened in us by the word "zephyr", now ineradicably associated in our minds with Metastasio and Watteau. *Sabā* is a sound that reverberates with a rich symbolism which can be traced back historically and clearly to a "gnostic" world. Basil (*rayḥān*), mentioned soon after, which to us suggests little more than the idea of "perfume", is instead a word used in the Ḳur'ān. The fragrance of basil is one of the chief components of the olfactory joys of the Islamic paradise (cf. Ḳur'ān, LVI, 89), and singularly enough, of the Zoroastrian paradise also (cf. *Mēnōkē Xrat*, ch. VII). On the other hand, the Cypress, familiar to all amateur collectors of Persian carpets and miniatures, in its charming conventionalized shapes, is the sacred tree of Zoroaster. It is identified with the Prophet himself who planted a specially memorable cypress (that of Kā<u>sh</u>mar) just at the time when the ecstatic-prophetic experience first thrilled him. It is a motif that seems to have come straight from a Central Asian spiritual area: the Shaman, indeed, plants a tree when starting on his "prophetic" career. Thus, even if in the case in point the words are not always intentionally and knowingly symbolical, they are not merely descriptive but are related to verbal-psychological cycles with which they have no connexion in our languages.

(3) In the springtime scenery summoned before us, the nightingale, the rose, the zephyr, the cypress, basil and the "young" (plants) of the meadow are playing a part in a scene which, even from our descriptive standpoint, might acquire a certain unity. But now there enters a character who to our eyes may seem truly extraneous. He is the young Magian (*mog<u>h</u>baččė*), the vintner, and the *Tavern*. The "Zoroastrian" character of the images connected with wine, with the *Superior* of the Magi, and with the Young Magian (the connexion between inebriety and forbidden practices with Zoroastrian belief dates back to Daḳīḳī) are but words used to summon up the idea of that which is forbidden, of sacred impiety. Poets, ancient and modern, to evoke this idea use indiscriminately the words *Magian, Christian, temple of fire* or *church*. Saʿdī, although the differences were known to him, uses indiscriminately the words "priest", "bishop", "Brahmin" "Magian", "temple of fire", "church", "monastery" in the same poem. The ideas that these lyrical-symbolic images summon up are not something precisely and theologically Zoroastrian (wine indeed is only a secondary element in the Zoroastrian ritual); they serve as signs indicating an esoteric rite. As lyrical poetry was traditionally condemned both by Islam and by Zoroastrianism, the motif of *self-abasement* is added to this intricate image-motif. The poet, the Initiate, is willing even to wipe with his face the door of the tavern-temple where the Young Magian reigns. Here is summed up the material inherited from the frankly libertine poetry of the Arab *muta'a<u>khkh</u>irīn* (wine-Christian Convent, already found in pre-Islamic Arab poetry) with the mystical gnostic motif of a Rite of the Wine which is of ancient syncretic-gnostic origin.

(4) And now, as in a filiform succession of images, the Young Magian takes on the ambiguous appearance of a beautiful boy. The fourth verse should more accurately be translated as: "Oh thou, who drawest across the moon a polo-stick (*čawgān*) of the purest amber, do not make me, whose head whirls (like a polo ball), yet more confused". And we must then add that the game of polo, which is of Persian origin, supplies a wealth of images to this lyric. The polo stick, with its characteristic hooked shape, is the *zulf*, the long wisp of hair, black as the night, and the moon is no other than the face (the roundness of the face is traditionally greatly admired in this lyric). The Child-Magian who is also the Beloved of the Poet (or his *Initiator*, or *God*) has the brilliant and round face of the moon. By mischievously half-veiling it with his black curl, shaped like a polo stick, he only makes the already confused head of the poet whirl like a polo-ball.

(5) In this verse the poet introduces another motif: he upbraids the *doctors of the law*, the *orthodox*. But Ḥāfiẓ must not for this be taken for an "anticlerical", a "progressive". There may be cases in the traditional poetry of Persia of *mullās* who, when indulging in

this literary style, are obeying its conventions in abusing . . . themselves as a class. This motif can only have arisen from the fact that this kind of poetry gave a gnostic-Neoplatonic interpretation to materials —derived from the Arabian ʿAbbāsid libertine poetry —quite alien to Islamic orthodoxy. The result was a strange combination of libertinism and mysticism, that confers on it a special kind of style of its own.

(6) The verse that follows contains a transparent allusion to the superiority of the Saint (the man of God) over the Doctor of the Law, very skilfully expressed. Noah's ship is the human race, the handful of mud that it contains, possessing, however, the supreme faculty of overcoming any deluge, is the Perfect Man, the Saint, the mystic Master. He is "earth", mud indeed, but one which—as the original puts it—*be-ābī nakharad ṭūfānrā*, that is to say "would not buy the deluge for a drop of water", *i.e.*, gives no importance to external "deluges" (and here note the word-play water-deluge-earth). We should therefore be friends of those Masters and not of the doctors of the law.

(7-8) The ethical-mystical warning continues. But, be it always remembered, without undue personal tension. The world is seen as a house, an "old dilapidated convent". But the world—in Arabic a word of feminine gender—is also often compared by the Persian poets to a malicious, faithless *old woman*. Here the word we have translated by "Vile One" is *siyah-kāse*, "of the black pot", also "miserly" "despicable"; hence the play of words "food"-"pot".

(9) The following verse contains a metaphor which may be familiar to the Westerner also: Joseph the Israelite, the symbol of perfect beauty, or of the Soul, for whom the throne of Egypt is prepared, but who yet groans in prison (a typical Neoplatonic metaphor). The last verse reiterates the traditional accusation of hypocrisy addressed to the *mullās*.

In classical *ghazal* each verse forms a closed unit, only slightly interconnected with the others. Some modern scholars, to explain this, have invoked the "psychology of depth" to show that there is unity, but an *unconscious* one, in the *ghazal*. However this may be, external incongruity would seem to be a real rule in classic Persian poetry. We are in the presence of a bunch of motifs only lightly tied together.

iii. — Ottoman Literature

[Circumstances beyond our control have obliged us to refer the reader to the Supplement. Editors' note].

iv. — In Urdu Literature

In spite of its difficulty the *ghazal* enjoyed a wide popularity in all literatures belonging to the Islamic cultural cycle. Urdu literature was born under the strong influence of Persian culture, more precisely, of the Persian literature of the period wrongly called of "decadence", the period of Indian style (10th/16th to 12th/18th centuries). This fact accounts for some special features of the Urdu *ghazal*. Its history should be divided into some four periods. The first period is that of *dakhnī* Urdu (9th/15th to 11th/17th centuries). In it the *ghazal* is only one, and not the most successful, of the instruments of Urdu lyrics, that prefer indigenous poetical forms. Dakhnī *ghazals* are generally descriptive and more congruous than the classical Persian ones. With Walī (1668-1741) the experiment of adapting the contemporary Persian style to Urdu poetry is widened and deepened. Urdu *ghazals*, more or less imitating the contemporary Indian-style Persian *ghazals*, find acceptance also in the literary circles of North India; so begins the classical period of the Urdu *ghazal*, culminating perhaps in Mīr Taḳī Mīr (d. 1810). Ghālib (d. 1869 [*q.v.*]) initiates the modern period of Urdu *ghazal*, which finds still newer developments in the contemporary period, the greatest names of which are, besides Iḳbāl (d. 1938 [*q.v.*]), who uses the *ghazal* in his peculiar ideological way as a symbolic channel to introduce ideas, Asghar of Gondwāna (1884-1936), Ḥasrat Mohānī (1875-1951), Fānī of Badāyūn (1879-1941) and Djigar of Murādābād (b. 1890).

The Urdu *ghazal*, born under the influence of the Indian-style Persian *ghazal* (*e.g.*, Bīdil of Paṭna, d. 1721, who left almost no trace in the development of the Persian *ghazal* of Iran, had an enormous influence on Urdu *ghazal*), shows a more marked intellectualistic character than Persian *ghazal*, together with a comparatively greater congruence in meaning. In later times this led *ghazal* writers to use this form too as an ideological instrument, especially under the influence of Ḥālī (d. 1914) and Iḳbāl (d. 1938). Ḥālī advocated, in his stylistical treatise *Muḳaddima-i shiʿr u shāʿirī*, added as a preface to his own *Dīwān*, a reform of the classical *ghazal* in a modern sense, based on a widening of the scope of *ghazal* so as to include real love, and other human emotions of our times; the rather limited *Wortschatz* of the classical *ghazal* should also be widened, according to Ḥālī, while the *malāmatī* and anacreontic aspects of the old *ghazal* should be abandoned. The renovation brought about in Urdu *ghazal* by the aforementioned personalities led to the result that now, in the Indo-Pakistani subcontinent the *ghazal* has become a serious instrument of modern poetry and its old popularity has found an interesting development in a modern sense.

GHAZĀL, (A., fem. *ghazāla*, pl. *ghizlān*, *ghizla*), is the source of our term 'gazelle' denoting, in the Bovidae family, the species, all wild, of the subfamily of the Antilopinae. It is a noun much more restricted in application than *ẓaby*, which covers indiscriminately antelopes and gazelles, that is the Tragelaphini, Alcelaphinae, Oryginae, Reduncini, Antilopinae and Cephalophini. *Ghazāl*, in common with a number of names of animals, is at once a masculine singular denoting the male, and a collective noun denoting the species (see Ch. Pellat, *Sur quelques noms d'animaux en Arabe classique*, in *GLECS*, viii, 95-9), but its most frequent use is in the wider sense. Herbivores, small of stature, both

sexes having tapering horns which are ringed for the lower two thirds and curve forward at the tip, gazelles are creatures of the semi-desert steppe and the savannah; thus they bulk large among the fauna of the Arabic-speaking countries in general, and among those of the Muslim world in particular. The desert-dwellers, nomads and camel-drivers, have from ancient times distinguished different species of gazelle, and the Arabs early gave them different names according to their coats; the modern systematic classification accords perfectly with these denominations, so that we have: — a. the Goitrous Gazelle, *Gazella subgutturosa* (*ghazāl*), in western Persia, Mesopotamia, and north-eastern Arabia; — b. the Rhim or Loder's Gazelle, or Slender-horned Gazelle, *Gazella leptoceros* (*rʾim*/*rīm*, pl. *ārām*), with the sub-species *G. l. loderi* on the fringe of the Sahara and *G. l. marica* in Arabia, Palestine and Sinai; — c. the Dorcas or Atlas Gazelle, *Gazella dorcas* (*ādam*, pl. *udm*, *ādamī*, *sīn*, *sīnī*), with the sub-species *G. d. saudiya* in northern Arabia, Palestine and Sinai, *G. d. dorcas* in Egypt, *G. d. neglecta* in the Sahara and *G. d. massaesyla* in Morocco; and the three sub-species *G. d. littoralis*, *tilonura* and *Pelzelni* occurring by turns along the Red Sea coast; — d. the Dama Gazelle or "Biche Robert", *Gazella dama* (*aryal*, *adraʿ*), with geographical sub-species the Mhorr or Nanguer Gazelle, *G. d. mhorr*, in southern Morocco, *G. d. dama* (the sub-species bearing the specific name) in the central Sahara, the Red-necked Gazelle or Addra Gazelle, *G. d. ruficollis*, and the Korin or Red-fronted Gazelle, *G. d. rufifrons* (*umm djaʿba*, *ḥamra*), the two last-named being widely scattered throughout the scrub zones of Arabia and Africa; while the distribution of the Soemmering's Gazelle, *G. d. Soemmeringi*, extends from Somalia across into the coastal border of southern Arabia; — e. the Arabian Gazelle, *Gazella gazella* (*aʿfar*, *yaʿfūr*), with the sub-species *G. g. arabica* in the mountainous areas of Arabia, *G. g. gazella* in Syria and Palestine, and *G. g. cuvieri* (Maghribī: *ādam*) throughout the Maghrib.

The excellence of its meat, a food permitted by the Ḳurʾān, and the difficulty of capturing a beast so fleet-footed, made the gazelle, "daughter of the sand" (*bint al-raml*), from earliest times highly prized game alike for the nomad in search of sustenance and the prince whose main pastime was hunting. Methods of capture varied with the hunter's rank. For the well-to-do, there was the noble chase (*ṭarad*, Sahara: *taldjādj*) with gazelle-hounds (*sulūḳiyya*), usually in the heat of the day (*taḥmīṣ*); this hunting down in strength, together with the lightning attack of the trained cheetah [see FAHD], were the forms which venery most often took in the Orient, the Arabs preferring them to the spectacular massacres in a closed battue (*ḥalḳa*) in which the Sāsānids took pride. The gazelle was also hunted by means of falconry, with eagles, gerfalcons, sakers and goshawks trained for this purpose [see BAYZARA]. Partaking less of sport, but more productive, were capture by net (*ḥibāla*, *ḥibāka*, *kaṣīṣa*), snare (*nushka*), or radial trap (*miḳlā*, *ḳula*) set at the approaches to watering-places; advantage was even taken of the animals' being dazzled by fires at night (*nār al-ṣayd*), when driven in towards them for capture (see al-Djāḥiẓ, *Ḥayawān*, iv, 349, 484). Moreover, wealthy Muslims often kept domesticated deer in their parks, Persian-fashion; Usāma Ibn Munḳidh, the famous Syrian gentleman huntsman of the 6th/12th century, notes (*K. al-Iʿtibār*, ed. P. Hitti, Princeton 1930, 207-8) that his father's residence had a score of white gazelles and Atlas or Dorcas gazelles, male and female, grazing at liberty and breeding, each year, undisturbed, and reckoned among the domestic animals (*al-dawādjin*) of the household.

From the first century of Islam, Arab philologists active in linguistic enquiry among the nomad tribes assembled a valuable lexicographic collection of terms differentiating the gazelle as to species, shape, age, coat, posture at rest, leap, gait at speed, quavering call and habits, which forms no negligible aid to the ecological study of the animal. The fawn, for example, was known successively as: *ṭalw*/*ṭalāⁿ* at birth, *khishf* at a day old, when already on its feet, *shādin* at the appearance of the protuberances later to be horns, *rashaʾ* when weaned, *shaṣar*/*shafar* at a month, *djahsh* or *djady* at six months, *djidhaʿ* at a year, and finally *thanī* at two years and for the rest of its adult life; the gazelle differs from other ungulate ruminants in that the *thanī* is not succeeded by the *ribāʿī*, or *sadasī*, *ṣāliʿ*, or lastly *shabūb*, terms denoting the increasing ages of the young animals as determined by teeth development.

Without the gazelle, Arabic literature would have been without an important source of inspiration. The treatises on falconry and hunting [see BAYZARA and FAHD], in the first place, would virtually have lacked a raison d'être, the antilopinae being in Arab countries the noble game which the cervidae are for the West. Then poetry, classical and popular, would have been without its hunting themes (*ṭaradiyyāt*) in *radjaz*, with their vivid descriptions of the hunt in full cry and triumphant halloo, and erotic writing, in its search to idealize feminine grace and attractions, without countless metaphors drawn from the slender delicacy of the gazelle, its wild starting shyness and maternal tenderness, and the velvety glance owed to the contrast (*ḥawar*) of the ebony pupil set in ivory; such transports of earthly beatitude were induced by these eyes in the heart of the Oriental that the gazelle was to surrender them to the virgins of Paradise, the "houris" (*al-ḥūr al-ʿīn*), promised to the Muslim elect in the after-life (Ḳurʾān, XLIV, 54, LII, 20, LV, 72, LVI, 22).

The aura of lyricism enveloping the gazelle must not obscure the saddening fact that in our day the number of these gracious animals has dwindled considerably in the Islamic countries as a result of firearms and the reckless destruction made possible by modern vehicles; if stringent measures are not taken for the gazelle's protection, the species will be speedily on the way to extinction, and the term *ghazāl* will become an archaism in the Arabic language.

For the *ghazāl al-misk*, see MISK.

(F. VIRÉ)

AL-GHAZĀL, YAḤYĀ B. ḤAKAM AL-BAKRĪ, a native of Jaén, was called by this name ('the gazelle') in his youth because of his slenderness and good looks. He became prominent, along with ʿAbbās b. Firnās, at the court of al-Ḥakam I, who, on returning from his continual campaigns, liked to take part in the poetical tournaments of the little literary group which he had allowed to spring up round him. Al-Ghazāl was already 50 years old when his star shone even brighter at the court of ʿAbd al-Raḥmān II, who made him one of his favourite poets. In 225/840, after receiving with every honour the embassy of the Byzantine emperor Theophilus and being much flattered by this acknowledgement of his power, ʿAbd al-Raḥmān II caused the Constantinople ambassador, when he returned to his country, to be accompanied by two Muslim emissaries: the poet Yaḥyā al-Ghazāl and another Yaḥyā called *ṣāḥib al-munayḳila* ('the man with the little clock'). These two were charged with bearing the amīr of Cordova's reply to Theophilus's letter, in which he had proposed an alliance against the ʿAbbāsids of the East and their vassals the Aghlabids of Ifrīḳiya because of their naval activities in Sicily. After delivering ʿAbd al-Raḥmān II's reply and presents to Theophilus in Constantinople al-Ghazāl caused a stir at the Byzantine court with his talent and sparks of sly wit which he demonstrated brilliantly before the Emperor himself, his wife Theodora, and the crown prince Michael. By his charming manners and notorious cupidity he obtained jewels for his daughters from the Empress, just as he had contrived, before embarking on his mission, that the Cordovan amīr assign them a pension in case he should not return. His witty and sometimes coarse repartee was as famous as his avarice. He was a poet of mordant wit and greatly dreaded for his merciless satires. They were composed in a clear style devoid of rhetorical figures, which placed them within reach of the common people. Besides the personal gifts made to him by the court he brought back from his stay in Constantinople stocks of a variety of fig tree, of which the figs, called *doñegal*, are still known under the variant name *boñigar* given s.v. *higo* in the Dictionary of the Spanish Academy. During his time the musician Ziryāb [*q.v.*] introduced the game of chess to Cordova, where it had a great success. But it was not approved by al-Ghazāl, for in a poem addressed to a nephew of his who was a keen chess-player he declared it to be sinful and an invention of the devil. Al-Ghazāl's unusual diplomatic mission and the memory of Viking incursions gave rise to the legend invented in the 12th or 13th century by the Valencian Ibn Diḥya (*Muṭrib*, Khartoum 1954, 130 f.) according to which ʿAbd al-Raḥmān II, satisfied with the way in which al-Ghazāl and his companion had carried out their mission, entrusted to them in later years another embassy to the North with the aim of dissuading the king of the Vikings from attempting a fresh landing in Andalusia. According to this story the poet and his companion fulfilled their task in northern Europe and returned to Cordova after a dangerous voyage of nine months in Atlantic waters. The falseness of this is obvious at a glance. The more or less marvellous elements of which it is formed are copied for the most part from episodes attributed in the 10th century to al-Ghazāl's journey to the Greek emperor. No doubt the unusual activity of the Byzantine emperor in Cordova and the daring landing of the Vikings on Spanish territory, enriched with romantic details, finally amalgamated in the popular beliefs of Andalusia and so gave rise to a combined legend which little by little distorted the historical reality.

(A. HUICI MIRANDA)

AL-GHAZĀLĪ, ABŪ ḤĀMID MUḤAMMAD B. MUḤAMMAD AL-ṬŪSĪ (450/1058-505/1111), outstanding theologian, jurist, original thinker, mystic and religious reformer. There has been much discussion since ancient times whether his *nisba* should be Ghazālī or Ghazzālī; cf. Brockelmann, S I, 744; the former is to be preferred in accordance with the principle of *difficilior lectio potius*.

1. Life

He was born at Ṭūs in Khurāsān, near the modern Meshhed, in 450/1058. He and his brother Aḥmad were left orphans at an early age. Their education was begun in Ṭūs. Then al-Ghazālī went to Djurdjān and, after a further period in Ṭūs, to Naysābūr, where he was a pupil of al-Djuwaynī Imām al-Ḥaramayn [*q.v.*] until the latter's death in 478/1085. Several other teachers are mentioned, mostly obscure, the best known being Abū ʿAlī al-Fārmadhī. From Naysābūr in 478/1085 al-Ghazālī went to the "camp" of Niẓām al-Mulk [*q.v.*] who had attracted

many scholars, and there he was received with honour and respect. At a date which he does not specify but which cannot be much later than his move to Bag͟hdād and which may have been earlier, al-G͟hazālī passed through a phase of scepticism, and emerged to begin an energetic search for a more satisfying intellectual position and practical way of life. In 484/1091 he was sent by Niẓām al-Mulk to be professor at the *madrasa* he had founded in Bag͟hdād, the Niẓāmiyyā. Al-G͟hazālī was one of the most prominent men in Bag͟hdād, and for four years lectured to an audience of over three hundred students. At the same time he vigorously pursued the study of philosophy by private reading, and wrote several books. In 488/1095, however, he suffered from a nervous illness which made it physically impossible for him to lecture. After some months he left Bag͟hdād on the pretext of making the pilgrimage, but in reality he was abandoning his professorship and his whole career as a jurist and theologian. The motives for this renunciation have been much discussed from the contemporary period until the present day. He himself says he was afraid that he was going to Hell, and he has many criticisms of the corruption of the *ʿulamāʾ* of his time (*e.g.*, *Iḥyāʾ*, i); so it may well be that he felt that the whole organized legal profession in which he was involved was so corrupt that the only way of leading an upright life, as he conceived it, was to leave the profession completely. The recent suggestion (F. Jabre, in *MIDEO*, i (1954), 73-102) that he was chiefly afraid of the Ismāʿīlīs (Assassins) who had murdered Niẓām al-Mulk in 485/1092, and whom he had attacked in his writings, places too much emphasis on what can at most have been one factor. Another suggestion is that of D. B. Macdonald (in *EI*[1]) that contemporary political events may have made al-G͟hazālī apprehensive; shortly before he left Bag͟hdād the Sald͟jūḳid sultan Barkiyārūḳ [*q.v.*] executed his uncle Tutus͟h, who had been supported by the caliph and presumably al-G͟hazālī; and it was soon after the death of Barkiyārūḳ in 498/1105 that al-G͟hazālī returned to teaching.

From al-G͟hazālī's abandonment of his professorship in Bag͟hdād to his return to teaching at Naysābūr in 499/1106 is a period of eleven years, and it is sometimes said, even in early Muslim biographical notices, that al-G͟hazālī spent ten years of this in Syria. Careful reading of his own words in the *Munḳid͟h* (see below), and attention to numerous small details in other sources, makes it certain that he was only "about two years" in Syria. On his departure from Bag͟hdād in D͟hu 'l-Ḳaʿda 488/ November 1095 he spent some time in Damascus, then went by Jerusalem and Hebron to Medina and Mecca to take part in the Pilgrimage of 489/ November-December 1096. He then went back for a short time to Damascus, but his own phrase of "nearly two years there" (*Munḳid͟h*, 130) must be taken loosely. He is reported to have been seen in Bag͟hdād in D͟jumādā II 490/May-June 1097 (Jabre, *op. cit.*, 87; cf. Bouyges, *Chronologie*, 3), but this can only have been a brief stay in the course of his journey to his home, Ṭūs. It is sometimes said that al-G͟hazālī visited Alexandria, but scholars are now inclined to reject this report; if he did go to Egypt it can only have been for a short time.

In this period of retirement at Damascus and Ṭūs al-G͟hazālī lived as a poor ṣūfī, often in solitude, spending his time in meditation and other spiritual exercises. It was at this period that he composed his greatest work, *Iḥyāʾ ʿulūm al-dīn* ("The Revival of the Religious Sciences"), and he may have lectured on its contents to select audiences. By the end of the period he had advanced far along the mystic path, and was convinced that it was the highest way of life for man.

In the course of the year 499/1105-6 Fak͟hr al-Mulk, son of Niẓām al-Mulk and vizier of Sand͟jar, the Sald͟jūḳid ruler of K͟hurāsān, pressed al-G͟hazālī to return to academic work. He yielded to the pressure, partly moved by the belief that he was destined to be the reviver of religion (*mud͟jaddid*) at the beginning of the new century, in accordance with a well-known Tradition. In D͟hu 'l-Ḳaʿda 499/ July-August 1106 he began to lecture at the Niẓāmiyya in Naysābūr and not long afterwards wrote the autobiographical work *al-Munḳid͟h min al-ḍalāl* ("Deliverance from Error"). Before his death, however, in D͟jumādā II 505/December 1111, he had once again abandoned teaching and retired to Ṭūs. Here he had established, probably before he went to Naysābūr, a *k͟hānḳāh* or hermitage, where he trained young disciples in the theory and practice of the *ṣūfī* life. Several names are known of men who were his pupils at Ṭūs (cf. Bouyges, *Chronologie*, 4 n.).

2. Works and doctrines

(a) *Questions of authenticity and esotericism.* A great difficulty in the study of al-G͟hazālī's thought is that, while he undoubtedly wrote many books, some have been attributed to him which he did not write. Bouyges in his *Essai de Chronologie* (composed before 1924 but only published posthumously in 1959 with additional notes on subsequent publications by M. Allard) lists 404 titles. Many of these are taken from lists of his works and no copies are known to exist. In other cases the same book appears under different titles, and a great deal of work has still to be done on manuscripts before scholars know exactly what is extant and what is not. Further, at least from the time of Muḥyi 'l-Dīn b. al-ʿArabī (d. 638/ 1240) allegations have been made that books have been falsely attributed to al-G͟hazālī (cf. Montgomery Watt, *A forgery in al-G͟hazālī's* Mishkāt?, in *JRAS* 1949, 5-22; idem, *The authenticity of the works attributed to al-G͟hazālī*, in *JRAS*, 1952, 24-45). The works whose authenticity has been doubted are mostly works expressing advanced ṣūfistic and philosophical views which are at variance with the teaching of al-G͟hazālī in the works generally accepted as authentic. There are difficulties, owing to the richness of his thought, in establishing conclusively the existence of contradictions. Ibn Ṭufayl (d. 581/1185), however, who called attention to contradictions, also suggested that al-G͟hazālī wrote differently for ordinary men and for the élite, or, in other words. that he had esoteric views which were not divulged to everyone (*Ḥayy b. Yaḳẓān*, Damascus, 1358/1939, 69-72). This complicates the problem of authenticity: but there is no reason for thinking that, even if al-G͟hazālī had different levels of teaching for different audiences, he ever in the "higher" levels directly contradicted what he maintained at the lower levels. An alternative supposition, that he adopted extreme philosophical forms of ṣūfism in his last years, seems to be excluded by the discovery that *Ild͟jām al-ʿawāmm*, in which he holds a position similar to that of the *Iḥyāʾ*, was completed only a few days before his death (Bouyges, *Chronologie*, 80 f.; G. F. Hourani, *The chronology of Ghazālī's writings*, in *JAOS*, lxxix (1959), 225-33). In the present state of scholarship the soundest methodology is to concentrate on the main works

of undoubted authenticity and to accept other works only in so far as the views expressed are not incompatible with those in the former (cf. Montgomery Watt, *The study of al-Ghazālī*, in *Oriens*, xiii-xiv (1961), 121-31.

(b) *Personal.* A year or two before his death al-Ghazālī wrote *al-Munkidh min al-ḍalāl*, an account of the development of his religious opinions, but not exactly an autobiography, since it is arranged schematically not chronologically; *e.g.*, he knew something of ṣūfism before the stage of development at which he describes it in the book. Most of the details about his life given above are derived from the *Munkidh*. He is also concerned to defend himself against the accusations and criticism that had been brought against his conduct and the views he had expressed. A small work answering criticisms of the *Iḥyā'* is the *Imlā'*.

(c) *Legal.* Al-Ghazālī's early training was as a jurist, and it was probably only under al-Djuwaynī that he devoted special attention to *kalām* or dogmatic theology. Some of his earliest writings were in the sphere of *fikh*, notably the *Basīṭ* and the *Wasīṭ*, but he apparently continued to be interested in the subject and to write about it, for a work called the *Wadjīz* is dated 495/1101, while the *Mustaṣfā* was written during his period of teaching at Naysābūr in 503/1109 (Bouyges, *Chronologie*, 49, 73). The latter deals with the sources of law (*uṣūl al-fikh*) in a manner which shows the influence of his earlier philosophical studies but is entirely within the juristic tradition. It is reported in biographical notices that at the time of his death al-Ghazālī was engaged in deepening his knowledge of Tradition.

(d) *Philosophy and logic.* After the period of scepticism described in the *Munkidh*, al-Ghazālī in his quest for certainty made a thorough study of philosophy, a subject to which he had been introduced by al-Djuwaynī. This occupied all the earlier part of the Baghdād period. What he studied was chiefly the Arabic Neoplatonism of al-Fārābī and Ibn Sīnā. Though his final aim was to show in what respects their doctrines were incompatible with Sunnī Islam, he first wrote an exposition of their philosophy without any criticism, *Makāṣid al-falāsifa*, which was much appreciated in Spain and the rest of Europe in the twelfth and thirteenth centuries. This he followed by a criticism of the doctrines entitled *Tahāfut al-falāsifa*, "The incoherence (or inconsistency) of the philosophers"; this was finished at the beginning of 488/1095 (Bouyges, *Chronologie*, 23). In it he noted twenty points on which the philosophers' views were objectionable to Sunnīs or inconsistent with their own claims; in respect of three of these they were to be adjudged unbelievers. In the *Tahāfut* al-Ghazālī concentrates on demonstrating the inconsistencies of the philosophers and does not argue for any positive views of his own. Because of this he has been accused of having remained something of a sceptic. This accusation fails to notice that the *Tahāfut* was written just before the crisis which caused him to leave Baghdād; it is therefore possible that at the time he was somewhat uncertain of his positive beliefs, but a few years later when he was writing the *Iḥyā'* he was in no doubt about what he believed. What impressed al-Ghazālī most of the various branches of philosophical studies was logic, and in particular the Aristotelian syllogism. For the sake of Sunnī jurists and theologians to whom philosophical books were not easily accessible or, because of their technical language, not readily understandable, he wrote two books on Aristotelian logic, *Mi'yār al-'ilm* and *Miḥakk al-naẓar*. A justification of the use of this logic in religious matters is contained in *al-Kisṭās al-mustakīm*, apparently written for some comparatively simple-minded believers who were attracted by Bāṭinī (Ismā'īlī) doctrines. While full of enthusiasm for philosophy al-Ghazālī wrote a work on ethics, *Mīzān al-'amal*, though whether the whole of the extant text is authentic has been questioned (*JRAS*, 1952, 38-40, 45). Since al-Ghazālī does not appear to refer to the *Mīzān* in his later works, and since he became very critical of philosophical ethics (*Munkidh*, 99 ff.), it is possible that, as his enthusiasm waned, he rejected much of what he had written in this work.

(e) *Dogmatic theology.* His chief work of dogmatics is *al-Iktiṣād fi 'l-i'tikād*, probably composed shortly before or shortly after his departure from Baghdād (Bouyges, 34). This book deals with roughly the same topics as the *Irshād* of al-Djuwaynī, but it makes full use of Aristotelian logic, including the syllogism. In this respect Ibn Khaldūn (iii, 41) is correct in making al-Ghazālī the founder of a new tendency in theology, although there is no striking novelty in his dogmatic views. In *Kitāb al-Arba'īn*, (Cairo 1344, 24), written after the *Iḥyā'*, al-Ghazālī says that the *Iktiṣād* is more likely to prepare for the gnosis (*ma'rifa*) of the ṣūfī than the usual works of dogmatics; and this continuing approval strengthens the view that al-Ghazālī never ceased to be an Ash'arī in dogmatics, even though he came to hold that intellectual discussions in religion should range far beyond the limited field of dogmatics, and that detailed discussions in dogmatics had no practical value. To dogmatic theology might also be assigned *Fayṣal al-tafrika bayn al-Islām wa-'l-zandaka*. This is partly directed against the Bāṭiniyya, but is mainly a defence of his own views on the extent to which *ta'wīl* is justified, and on the relative places of *tawātur* and *idjmā'* as sources of religious knowledge. *Ildjām al-'awāmm 'an 'ilm al-kalām*, which appears to be his last work, warns of the dangers in the study of *kalām* for those with little education.

(f) *Polemics.* The *Mustaẓhirī*, edited in abridged form by Goldziher as *Streitschrift des Gazālī gegen die Bāṭinijja-Sekte* (1916), is a searching theological critique of the Nizārī Ismā'īlīs or Assassins. A Persian work, edited by O. Pretzl as *Die Streitschrift des Gazālī gegen die Ibāḥīja* (1933), attacks the antinomianism of certain mystics. The authenticity of a work of anti-Christian polemic, *al-Radd al-djamīl 'alā sarīḥ al-indjīl* (ed. and tr. R. Chidiac, Paris 1939), is doubted by Bouyges (126), but defended by Louis Massignon (in *REI*, 1932, 491-536).

(g) *Ṣūfistic practice.* Al-Ghazālī's greatest work, both in size and in the importance of its contents is *Iḥyā' 'ulūm al-dīn*, "The revival of the religious sciences", in four volumes. This is divided into four "quarters", dealing with *'ibādāt* (cult practices), *'ādāt* (social customs), *muhlikāt* (vices, or faults of character leading to perdition), *mundjiyāt* (virtues, or qualities leading to salvation). Each "quarter" has ten books. The *Iḥyā'* is thus a complete guide for the devout Muslim to every aspect of the religious life—worship and devotional practices, conduct in daily life, the purification of the heart, and advance along the mystic way. The first two books deal with the necessary minimum of intellectual knowledge. This whole stupendous undertaking arises from al-Ghazālī's feeling that in the hands of the *'ulamā'* of his day religious knowledge had become a means of worldly advancement, whereas it was his deep conviction

that it was essentially for the attainment of salvation in the world to come. He therefore, while describing the prescriptions of the Sharīʿa in some detail, tries to show how they contribute to a man's final salvation. *Bidāyat al-hidāya* is a brief statement of a rule of daily life for the devout Muslim, together with counsel on the avoidance of sins. *K. al-Arbaʿīn* is a short summary of the *Iḥyāʾ*, though its forty sections do not altogether correspond to the forty books. *Al-Maḳṣad al-asnā* discusses in what sense men may imitate the names or attributes of God. *Kīmiyāʾ al-saʿāda* is in the main an abridgement in Persian of the *Iḥyāʾ* (also translated in whole or in part into Urdū, Arabic, etc.), but there are some differences which have not been fully investigated.

(h) *Ṣūfistic theory.* It is in this field that most of the cases of false or dubious authenticity occur. *Mishkāt al-anwār* ("The niche for lights", tr. W. H. T. Gairdner, London 1924; cf. idem, in *Isl.*, v (1914), 121-53) is genuine, except possibly the last section (*JRAS*, 1949, 5-22). *Al-Risāla al-laduniyya* deals with the nature of knowledge of divine things, and its authenticity has been doubted because of its closeness to a work of Ibn al-ʿArabī and because of its Neoplatonism (cf. Bouyges, 124 f.). There are numerous other works in the same category, of which the most important is *Minhādj al-ʿābidīn.* These works are of interest to students of mysticism, and their false attribution to al-Ghazālī, if it can be proved, does not destroy their value as illustrations of some branches of ṣūfistic thought during the lifetime of al-Ghazālī and the subsequent half-century.

3. His influence

A balanced account of the influence of al-Ghazālī will probably not be possible until there has been much more study of various religious movements during the subsequent centuries. The following assessments are therefore to some extent provisional.

(a) His criticism of the Bāṭiniyya may have helped to reduce the intellectual attractiveness of the movement, but its comparative failure, after its success in capturing Alamūt, is due to many other factors.

(b) After his criticism of the philosophers there are no further great names in the philosophical movement in the Islamic east, but it is not clear how far the decline of philosophy is due to al-Ghazālī's criticisms and how far to other causes. Its continuance in the Islamic west, where the *Tahāfut* was also known, suggests that the other causes are also important.

(c) Al-Ghazālī's studies in philosophy led to the incorporation of certain aspects of philosophy, notably logic, into Islamic theology. In course of time theologians came to devote much more time and space to the philosophical preliminaries than to the theology proper. On the other hand, his speculations about the nature of man's knowledge of the divine realm and his conviction that the upright and devout man could attain to an intuition (or direct experience —*dhawḳ*) of divine things comparable to that of the worldliness of the *ʿulamāʾ* does not seem to have led to any radical changes.

(d) He undoubtedly performed a great service for devout Muslims of every level of education by presenting obedience to the prescriptions of the Sharīʿa as a meaningful way of life. His *khānḳāh* at Ṭūs, where he and his disciples lived together, was not unlike a Christian monastery; and it may be that he gave an impetus to the movement out of which came the dervish orders (but this requires further investigation).

(e) His example may have encouraged those forms of ṣūfism which were close to Sunnism or entirely Sunnī. Before him, however, there had been much more ṣūfism among Sunnī *ʿulamāʾ* than is commonly realized. His influence on the ṣūfī movement in general, however, requires further careful study.

Montgomery Watt)

AL-GHAZĀLĪ, Aḥmad b. Muḥammad, brother of the more renowned Muḥammad Ghazālī, the Ṣūfī and popular preacher, made his way via Hamadān to Baghdād, and took his brother's place when the latter retired from teaching at the Niẓāmiyya. He died in 520/1126 in Ḳazwīn. He wrote an abridged version of the *K. al-Iḥyāʾ* of his brother, which has not survived; an exposition in sermon form of his confession of faith, *al-Tadjrīd fī kalimat al-tawḥīd* (Turkish translation by M. Fewzī, *el-Tefrīd fī terdjemet el-Tedjrīd*, Istanbul 1285); a discussion of the admissibility of *samāʿ* (Ṣūfī music and dancing), *Bawāriḳ al-ilmāʿ fi 'l-radd ʿalā man yuḥarrimu 'l-samāʿ*, ed. J. Robson in *Tracts on listening to music* (Or. Transl. Fund, NS v), London 1938; a subtle psychology of love, *Sawāniḥ*, ed. H. Ritter (Bibl. Islamica, xv) 1942; (probably) the *Risālat al-Ṭayr*, which was the inspiration for the *Manṭiḳ al-ṭayr* of Farīd al-Dīn ʿAṭṭār (see H. Ritter, *Das Meer der Seele*, 8-10); and other minor writings which have not yet

been investigated. His sermons were very popular in Baghdād, and were collected in two volumes by Ṣā'id b. Fāris al-Labbānī; of these however, only extracts are preserved in Ibn al-Djawzī. In them he undertook the defence of Satan (*al-ta'aṣṣub li-Iblīs*), popular in many Ṣūfī circles since Ḥallādj, which was soon afterwards further developed by 'Aṭṭār (see *Das Meer der Seele*, 536-50), and which presumably gave the so-called Devil worshippers, the Yazīdīs, the justification for their worship of Satan (Aḥmad Taymūr Pāshā, *al-Yazīdiyya*, Cairo 1352, 59-61).

AL-GHAZĀLĪ, DJĀNBIRDĪ, governor of Damascus under Selīm I. Originally a *mamlūk* of Ḳā'it Bāy (873/1468-901/1495), he took his *nisba* from the Egyptian village of Minyat Ghazāl (Sharḳiyya), where he was *shādd* (superintendent). He obtained promotion, ultimately becoming *nā'ib* (governor) of Ḥamā (917/1511). After the battle of Mardj Dābiḳ (24 Radjab 922/23 August 1516), he was nominated governor of Damascus, first by fugitive *amīrs* in that city, then in Cairo, whither he had fled, by Ṭūmān Bāy. He commanded an expedition against the Ottomans in Syria, but was defeated by Sinān Pasha near Baysān (Dhu 'l-Ḳa'da 922/ December 1516). On 18 Muḥarram 923/10 February 1517, after the Ottoman victory at al-Raydāniyya, he submitted to Selīm I, with whom he had secretly been in communication. His atrocities against the Arabs of the Sharḳiyya led to the intervention of the Grand Vizier, Yūnus Pasha. On 5 Ṣafar 924/16 February 1518, Selīm appointed him governor of Damascus with the tax-farm (*taḥadduth*) of southern Syria. He suppressed tribal insubordination, and secured the safe passage of the Pilgrimage caravan. He built up a private army, chiefly of Arabs and Mamlūk refugees from Egypt, which included a corps of musketeers. In Dhu 'l-Ḳa'da 926/October-November 1520, on the accession of Süleymān, Djānbirdī displaced the Ottoman sub-governors in his province, captured the citadel of Damascus, and endeavoured to involve Khā'ir Bey, the viceroy of Egypt, in the revolt. Khā'ir Bey remained loyal, and Djānbirdī, who had assumed the sultanic title of *al-Malik al-Ashraf Abu 'l-Futūḥāt*, marched on Aleppo. In spite of siege and bombardment, Aleppo held out, and, on 9 Muḥarram 927/21 December 1520, Djānbirdī began to retreat, followed by Ottoman forces. At Damascus, he prepared for resistance, but on 26 Ṣafar 927/5 February 1521, his supporters were routed. He was killed, and his head sent to Istanbul.

Gaston Wiet, *Journal d'un bourgeois du Caire*, ii, [Paris] 1960, 369-71, 405-6; Henri Laoust, *Les gouverneurs de Damas sous les Mamlouks et les premiers Ottomans*, Damascus 1952, 151-9, 171-4. (P. M. HOLT)

GHAZĀLĪ, MEḤMED (?-942/1535), Ottoman poet, also known as "Deli Birader". His father's name was Durmush; his teacher, in his youth, Muḥyī al-Dīn 'Adjamī. Ghazālī very soon abandoned an early interest in Ṣūfism and took up teaching in the *medreses*. His first official appointment was as *müderris* at the Bāyezīd Pasha *medrese* in Bursa; shortly afterwards, however, he went off to the court of Prince Ḳorḳud, the son of Bāyezīd II, in Manisa. Ḳorḳud grew in a short time to like both Ghazālī's company and his witticisms and made him his inseparable companion, even taking him with him to Egypt. Although Ḳorḳud became angry with him at one point there and ordered that he be executed, Ghazālī was successful in winning over the *kapîdjî-bashî* and thus saving himself (for details, see the *Tedhkere* of 'Āshiḳ Čelebi).

Ghazālī wrote for Piyāle Bey, who had introduced him to Ḳorḳud, a *risāla* entitled *Dāfi' al-ghumūm wa rāfi' al-humūm* (Istanbul Un. Lib., Turkish MSS nos. 1400, 9659), in imitation of the *Alfiyya wa-shalfiyya* of Ḥakīm Azraḳī, and presented this *risāla* to Ḳorḳud. According to one account, Ḳorḳud was angered by this indecent *risāla* and sent Ghazālī away; but a more reasonable tradition relates that they were not separated until Ḳorḳud was put to death by Selīm I, and that only after Ḳorḳud's death did Ghazālī become *shaykh* at the *tekke* of Geyikli Baba in Bursa. It was at this point that he adopted the *makhlaṣ* "Ghazālī".

Quickly becoming bored with the life of a *shaykh*, he became *müderris* in Sivriḥiṣār. Later he became successively *müderris* in Akshehir with a daily salary of 50 *akče* and then at the Ḥüseyniyye *medrese* in Amasya. Through the good offices of Ḳadrī Efendi, he went from there to become *müftī* in Aghras.

Not happy in any place to which he had been, he finally went to Istanbul with a pension of 1000 *akče* and built in Beshiktash a garden, a bath, a mosque and a *zāwiye*. He began to operate the bath with Āteshīzāde Memi Shāh, but after a very short time complaints were lodged with the Grand Vizier Ibrāhīm Pasha. Ibrāhīm Pasha sent 100 *'adjemī oghlan* and the bath was pulled down, so much to the joy of some that chronograms were written to commemorate the event. Ghazālī wrote a poem of 25 *bayt*, the *Kapludjanāme*, in which he expressed his grief. Following the death of Memi Shah and the execution of Iskender Čelebi, he made his way in 938/1531 to Mecca where he built a garden, a mosque and a *zāwiye* and where he remained until his death. Although there is disagreement about the date of his death, the date 942/1535, which is given in a chronogram, seems acceptable.

His *risāla Dāfi' al-ghumūm wa-rāfi' al-humūm* shows clearly Ghazālī's outlook on life. Although Ghazālī grew ashamed of this *risāla* in his old age and tried to collect the copies of it in order to destroy them, he was not successful in doing so. The work is divided into seven chapters and is filled from beginning to end with indecent stories. Along with this aspect of Ghazālī's nature, however, it is worth noting the sincerity which he showed to those whom he loved. After the executions of Prince Ḳorḳud and Iskender Čelebi, he wrote for each an elegy in which he manifests the grief he felt.

He also wrote a *risāla* entitled *Miftāḥ al-hidāya* concerning precepts relative to the ritual ablution and the prayer. This *risāla* was extracted from the *Bidāya* and the commentary upon it called the *Hidāya* (Istanbul Un. Lib., Turkish MS no. 3273, fol. 3a). His various anecdotes, short poems (*ḳiṭ'a*) and chronograms are very fine. Both Kātib Čelebi

and Bursalī Ṭāhir record that he wrote a history in Persian entitled *Mir'āt-i kā'ināt*, but Bursalī Ṭāhir adds that no copy has yet come to light.

He received the nickname "Deli Birader" because of a *bayt* which he wrote.

G͟HĀZĀN, Maḥmūd, Ilk͟han [*q.v.*] from 694/1295 until 713/1304, was born on 20 Rabīʿ I 670/5 November 1271, being the eldest son of Arg͟hūn [*q.v.*], then only in his thirteenth year. Upon his father's accession G͟hāzān was appointed governor of K͟hurāsān, Māzandarān and Ray, which provinces he continued to administer during the reign of Gayk͟hātū [*q.v.*]. He had been brought up as a Buddhist and, whilst governor, had ordered the construction of Buddhist temples in K͟habūshān (Ḳūčān); but shortly before his accession, during the war with Bāydū [*q.v.*], he had been persuaded by his general Nawrūz to become a Muslim. In his reign Islam was recognized as the state religion, the régime was organized on a basis of Muslim culture, charitable endowments, mosques, theological schools etc., were erected in and around the new capital Tabrīz, descendants of the Prophet were sometimes mentioned in the first place in the state record before princes and princesses of the blood, and lastly the turban was introduced as the court headgear. But G͟hāzān was more a Mongol than a Muslim; as ruler and legislator his activities were entirely free from biassed pietism. Particular attention was devoted to the finances of the country, the currency etc.; G͟hāzān no longer appears on the coins (the inscriptions on which were in Arabic, Mongol and Tibetan), like his predecessors, as representative of the Great K͟hān in Pekin, but as ruler "by the grace of God" (in Mongol *tngri-yin küčündür* "in the power of heaven"). He carried out his plans with ruthless vigour; everyone whom he believed to be dangerous to the peace of the realm or to his autocratic rule was disposed of without compunction; among these was the Amīr Nawrūz himself, to whom he owed his throne. On the other hand G͟hāzān's measures increased the prosperity of the country and in particular protected the peasantry from oppression and extortion. The revenue of the state is said to have risen during his reign, from 1700 to 2100 *tūmāns*. Like other Mongol rulers G͟hāzān particularly esteemed those arts and sciences which might be useful to the State; he himself is said to have been conversant with natural history, medicine, astronomy, chemistry and even several handicrafts; attached to an observatory built by his orders in Tabrīz was a special school for secular sciences (*ḥikmiyyāt*). In addition to his native Mongol G͟hāzān is said to have had some knowledge of the Arabic, Persian, Hindī, Kas͟hmīrī, Tibetan, Chinese and Frankish (*i.e.*, French or Latin) languages. Notwithstanding his conversion to Islam, he took a great interest in the history and traditions of his own people, on which indeed he was an authority. It was at his suggestion that his minister the famous historian Ras͟hīd al-Dīn [*q.v.*] compiled his *D͟jāmiʿ al-tawārīk͟h*, in which his source for much of the information about the Mongols was none other than G͟hāzān himself. Continuing the anti-Mamlūk policy of his predecessors, G͟hāzān twice invaded Syria. In the first campaign (1299-1300) he occupied Aleppo, defeated the Egyptian army before Ḥims and entered Damascus; but upon his return to Persia in D͟jumādā I 699/February 1300 the country was at once re-occupied by the Mamlūks. For the second campaign he sought the alliance of Christian Europe. There has been preserved in the Vatican archives a letter from G͟hāzān to Pope Boniface VIII dated 12 April 1302. "We for our part", says the Īlk͟hān, "are making our preparations. You too should prepare your troops, send word to the rulers of the various nations and not fail to keep the rendezvous. Heaven willing we [*i.e.*, G͟hāzān] shall make the great work [*i.e.*, the war against the Mamlūks] our sole aim." The expedition to which G͟hāzān refers was undertaken in the spring of 702/1303: the Mongols were decisively defeated at S͟hahḳab near Damascus (2 Ramaḍān 702/20 April 1303) and never again attempted the conquest of Syria.

G͟HAZĀT [see G͟hazw].

G͟HĀZĪ, Arabic active participle (pl. *g͟huzāt*) used to indicate those who took part in a razzia [see G͟hazw], later in a *g͟hazwa* [*q.v.*] "raid against the infidels". This name later grew to be a title of honour reserved for those who distinguished themselves in the *g͟hazwa*, and it became part of the title of certain Muslim princes, such as the *amīrs* of Anatolia and more particularly the first Ottoman sultans. Corporations of *g͟hāzīs* are attested in Transoxiana and K͟hurāsān from the Sāmānid period; these were wandering bands who obtained their living chiefly from booty won in the *g͟hazwa*, and who offered their services wherever war was to be waged against unbelievers or heretics. Their leaders often achieved great fame and even an official status. But these soldiers of fortune, for whom war was an economic necessity and who were easily transformed by lack of occupation into brigands, became, in times of peace, a danger to the government which employed them; al-Ṭabarī records, in 205/821 (iii, 1044), a revolt in K͟hurāsān, stirred up by one of these mercenaries; Ibn al-At͟hīr (viii, 155) mentions that these seditious elements took part in the revolt of Buk͟hārā against the Sāmānid Naṣr, about 318/930. However, these groups, referred to by historians as *g͟huzāt*, *fityān*, *ʿayyārūn* [*q.v.*], etc., formed a reserve of troops always available to whoever had need of them: Maḥmūd of G͟hazna drew on them extensively, taking with him to India as many as 20,000 *g͟hāzīs* (ʿUtbī-Manīnī, ii, 262 f.); he was always in need of money to pay his mercenaries, burdening his people with taxes for this before each campaign (*ibid.*, ii, 168). These groups of soldiers of fortune mentioned by the historians in Transoxiana and K͟hurāsān offered at the

same time a refuge for political or religious dissidents and an occupation for adventurers of all races, attracted by the lure of plunder. However, for centuries in these eastern provinces the Turks especially were the reservoir from which Persians and then Arabs recruited their mercenaries; hence, although these groups were originally without any national character, the Turkish element, as constituting the military class *par excellence*, was soon to predominate. Such organizations were not peculiar to the eastern provinces; they existed everywhere where there was fighting to be done, expecially in the regions of the frontier zones. Thus they were also found in the Arab-Byzantine frontier zones where, ever since the Umayyad period, a state of war had existed. In these regions, where, since the reign of the caliph al-Muʿtaṣim (218-27/833-42), the Turkish element formed the majority of the fighting men, the Arab-Byzantine frontier battles were more and more to become Turco-Byzantine wars. In this zone where the *g͟hāzī*s were fighting against the *akritai*, guardians of the Byzantine frontiers who were themselves often recruited from among Turkish mercenaries, there came into existence a population of the marches which to a considerable extent was ethnically the same on both sides of the frontier. We find proof of this state of affairs in the epic literature, both Byzantine and Arabo-Turkish, whether in the Byzantine epic of Digenis Akritas, the Arabic epic story of Delhemma [see D͟HU 'L-HIMMA], or the Turkish story of Sayyid Baṭṭāl [see BAṬṬĀL]. In this area where pilgrimages maintained a continual state of crusade, the defence of both sides of the frontier was organized in the same way: on both sides there was a spontaneous organization, growing up independently of the frontiers and outside the framework of the state, imbued with the same half-military half-religious spirit. In about 595/1200 the caliph al-Nāṣir, seeking to strengthen the caliphate against its enemies, reorganized the corporations which were already linked to the principles of the *futuwwa* [*q.v.*], the code of rules for a virtuous life, according with the tenets of Islamic mysticism and held in common by the artisan, military and religious corporations. In the first place he turned his attention to the military element, which he bound to his own person by new bonds of vassalage. The *g͟hāzī*s, who had at first consisted of a popular movement in which were mingled adventurers and dissidents, were grouped into a corporation which possessed the attributes of a Muslim chivalry and was organized like a religious fraternity, with a ceremony of investiture conferring the title of *g͟hāzī*, the granting of arms and of ritual emblems, and which was joined henceforth by princes and rulers. In the marches of Asia Minor, however, where in the 5th/11th century the *g͟hazī* element was reinforced by the massive immigration of Og͟huz tribes, the movement retained a popular and nomadic character, opposed to the settled and Persianized population of the Sald͟jūḳ towns. It was these turbulent elements of the marches, taking advantage of the slackening of Byzantine defences after the defeat of Mantzikert, impelled by the need to obtain their livelihood from plunder and at the same time inspired by the ideal of the Holy War, who, without the acquiescence of the Sald͟jūḳ government, carried out the conquest of Anatolia. The first Turkish conqueror of Cappadocia was a *g͟hāzī* leader, Emīr Dānis͟hmend; with him *g͟hāzī* makes its appearance among the titles of the emirs of Asia Minor; the term is even given as a personal name to the elder son of the emir; the Greek legend on the coins of Dānis͟hmend's successor reads: Ο ΜΕΓΑС ΑΜΗΡΑС ΑΜΗΡ ΓΑΖΗ (cf. I. Mélikoff, *Geste de Melik Dānis̱mend*, i, Paris 1960, 106). But this first *g͟hāzī* principality of Asia Minor, lacking the elements necessary for the organization and colonization of the conquered countries, could not survive after it had exhausted such resources as were readily to hand, and was forced to fall back before the attacks of the Sald͟jūḳs. The *g͟hāzī*s were forced back towards the frontiers (*ud͟j*) and brought under the control of the central power, which bridled their turbulence by sending them to fight: to the north of Cappadocia, against the Greek empire of Trebizond, to the south, against the Armenians of Cilicia. These elements are known in Turkish sources under the name "Turks of the *Ud͟j*" and their leaders are called "*Ud͟j begi*". However, in the 7th/13th century, the Mongol invasion brought to Anatolia a new migration of Turkish tribes; large numbers of dervishes, fleeing from the invaded Iranian provinces, came to join the fugitives who had taken refuge in the frontier regions. As a result of the disruption of the Sald͟jūḳ state and the weakness of Byzantine resistance, there arose a new ferment in the frontier regions, where the dervishes brought a new access of enthusiasm for the Holy War. This ferment was to result, at the beginning of the 8th/14th century, in the formation of the Turkish emirates in Anatolia. The 14th century sources and the first Ottoman chroniclers have left in their writings testimony to what the *g͟hāzī* spirit was which animated these warlike principalities. "Put on the white cap for the *g͟hazā*!" exclaims the historian ʿĀs͟hïḳpas͟hazāde (ed. Giese, 40), while Eflākī (ed. T. Yazıcı, Ankara 1959-61, i, 485; tr. Huart, ii, 10) tells us that the use of this white cap, the characteristic head-gear of the *g͟hāzī*s, was introduced in the frontier regions in the 7th/13th century by Meḥmed Beg of the *Ud͟j*. This same Eflākī describes the ceremony of initiation of the "sultan of the *g͟hāzī*s", Meḥmed Aydïnog͟hlï, by the *Mawlawī s͟hayk͟h* of Konya, Amīr ʿĀrif: "Meḥmed Beg, taking the club from the Čelebi, placed it on his head and said: 'I shall beat down my passions with this club, and with it I shall strike dead the enemies of the faith' " (cf. Eflākī, ii, 947-8; tr. Huart, ii, 391-2). The poet Aḥmedī gives the following definition of the *g͟hāzī*: "A *g͟hāzī* is the instrument of the religion of God, a servant of God who cleans the earth from the defilement of polytheism; a *g͟hāzī* is the sword of God, he is the protector and the refuge of the Believers; if he becomes a martyr while following the paths of God, do not think him dead, he lives with God as one of the blessed, he has Eternal Life" (cf. P. Wittek, in *Byzantion*, xi, 304). But these *g͟hāzī* principalities, whose aim was conquest and who supported themselves by plunder, who were made up of warlike elements and lacked the social classes necessary to organize the conquered territories, were doomed to grow progressively weaker and to die out. Only one of these principalities was able to survive and develop: this was the Ottoman state. A *g͟hāzī* principality like the others, it was the only one which was able to acquire the elements necessary for the organization of its conquests, thanks to its geographical position and to the proximity of the Byzantine capital, which obliged it to maintain a continual state of war. The first Ottoman sultans, just like the other Anatolian emirs, had included in their titles that of *g͟hāzī*, which is given them by the historians of their dynasty, such as ʿĀs͟hïḳpas͟hazāde, and which figures in their first inscriptions, as is shown in the inscription of 737/1337, concerning the building of the

Bursa mosque, where Orkhān is called "*sulṭān ibn sulṭān al-ghuzāt, ghāzī ibn al-ghāzī, Shudjā' al-Dawla wa 'l-Dīn, marzbān al-āfāḳ, pehlevān-i djihān, Orkhān ibn 'Uthmān*". 'Āshiḳpashazāde also reveals that in the first centuries of the Ottoman empire there were four corporations, the first of which he calls the *ghāziyān-i Rūm*, the others being the *akhiyān-i Rūm*, *abdālān-i Rūm* and *badjiyān-i Rūm*. But when the Ottoman principality grew into an empire and the central power became firmly established, the *ghāzīs*, who had taken an active part in the conquest of Anatolia, were subjected to the authority of the state and the corporations were gradually disbanded. The work of the conquerors was accomplished and they had now to give place to the organizers of the empire.

GHAZĪ, King of 'Irāḳ, son of King Fayṣal I and his cousin Ḥazīma, was born in the Ḥidjāz in 1912, moved to Baghdād in 1921, and spent his childhood there until he was sent to Harrow School in England. He mounted the throne in the autumn of 1933, equipped with excellent social gifts; but he lacked seriousness or any taste for public affairs. He married 'Aliyya, daughter of ex-King 'Alī shortly after his accession, becoming the father of the future Fayṣal II in 1935. His short reign was marked by repeated military interventions in the Government, including the short-lived *coup* of General Bakr Ṣidḳī, 1936-7. He died in a motor accident in the spring of 1939.

GHĀZĪ, SAYF AL-DĪN, Zangid prince of al-Mawṣil from 541/1146 to 544/1149. See AL-MAWṢIL, NŪR AL-DĪN, ZANGIDS.

GHĀZĪ, SAYF AL-DĪN, Zangid prince of al-Mawṣil from 565/1170 to 576/1180. See AL-MAWṢIL, NŪR AL-DĪN, SALĀḤ AL-DĪN, ZANGIDS.

GHĀZĪ ČELEBI, ruler of Sinope (700/1300?-circa 730/1330 ?) known especially for his piratical exploits against the Genoese, and sometimes alliance with and sometimes against the Greeks of Trebizond (it is known that there were actions in 1313-14, 1319, 1324); there are attributed to him in these raids lack of scruples (*e.g.*, taking guests captive), audacity (typified by an attack on Kaffa in the Crimea), and skill (he is said to have been able, by swimming under water, to pierce the hull of enemy ships), all of which testify to his reputation (see the episodes and the sources, Genoese, Byzantine (Panaretos) and Muslim (Abu 'l-Fidā' and Ibn Baṭṭūṭa), in W. Heyd, *Histoire du commerce du Levant*, i, 485 and especially 451, and ii, 98). It is probable that this maritime activity represents the most important feature of his policy—certainly nothing is known of him beyond this; indeed—and this is not without significance—even his identity is in doubt. According to 'Ālī, *Kunh al-akhbār*, v, 22 (following Rūḥī), he was the son of the Saldjūḳid sultan of Rūm, Mas'ūd II, and on the death of the last sultan, 'Alā' al-Din (at the beginning of the 8th/14th century), was granted by the Īlkhān Ghāzān all the northern coastlands of Asia Minor; but this is a late version, perhaps entirely due to the fact that the tombstone of Ghāzī Čelebi (*TOEM*, ii, 422) calls him the son of Mas'ūd Čelebi, or to the fact that the career of Mas'ūd II and of his father Kay-Kā'ūs in the Black Sea was well remembered; more nearly contemporary authors (Ibn Baṭṭūṭa, ii, 350-2, tr. Gibb, ii, 466-7, and, less clearly, Abu 'l-Fidā' *Taḳwīm*, ed. Reinaud-de Slane, 393) make Ghāzī Čelebi a descendant of the famous Mu'īn al-Dīn Sulaymān the Pervāne, whose sons Muḥammad and, more especially, Mas'ūd had retained Sinope, their father's fief, until 1300 (cf. Münedjdjim bashī, iii, 31), and this version, although dubious, is not impossible. Ghāzī Čelebi died, if the inscription on the tombstone has been read correctly, in 722/1322, a date which conflicts with reports of his being active in 1324. In any case when Ibn Baṭṭūṭa passed through Sinope (in 1331 or 1333 ?) he was certainly dead—from an excess of *ḥashīsh* it was said—and the town had been occupied by the Isfandiyārid of Ḳastamūnī, but it is possible that Ghāzī Čelebi had accepted the suzerainty of the latter before his death (it is possible thus to interpret al-'Umarī, ed. Taeschner, 23). It is in any case impossible to deduce—as some authors have done—from the confused data on the Isfandiyārids [*q.v.*] that Ghāzī Čelebi lived until 1356.

GHĀZI 'L-DĪN ḤAYDAR (not Ḥaydar al-Dīn Ghāzī as given in the *Cambridge History of India*, v, 575, 578), the eldest son of Nawwāb Sa'ādat 'Alī Khān, ruler of Awadh (1212-29/1798-1814), was born at Basawlī in Rohīlkhand in 1188/1774. He succeeded his father as the Nawwāb-Wazīr of Awadh in accordance with the rule of primogeniture, in 1229/1814.

Right from the time of his accession he was under the influence of the British Resident, Col. John Bailey, who did not hesitate to interfere in the day-to-day administration of the state. Supported by the Governor-General of British India, Lord Hastings, who wanted to reduce the prestige of the Mughal emperor of Delhi, he declared his independence in 1234/1819 and assumed the royal title of Abu 'l-Muẓaffar Mu'izz al-Dīn Shāh-i Zamān Ghāzi 'l-Dīn Ḥaydar. A huge sum of two crores of rupees (20,000,000) was spent on the manufacture of a throne, made of pure gold and silver and studded with precious stones, and a canopy richly decorated with pearls and gold and silver thread. The same year he struck his own coinage bearing the legend: *sikka zad bar sīm-u zar az faḍl-i rabb-i dhu 'l-minan, Ghāzi al-Dīn Ḥaydar-i 'ālī nasab shāh-i zaman*. The obverse bore a coat of arms with two fishes (the insignia of the House of Burhān al-Mulk [*q.v.*]), supported by two tigers bearing banners. These coins, which replaced the *pahiyyah-dār* rupee of Shāh 'Ālam II, were in circulation from 1235/1819 until 1242/1827.

A fine silver medal, commemorating the commencement of his rule, was also issued during the first year of his reign. This medal carried his full-faced portrait. An unsuccessful ruler, Ghāzi 'l-Dīn Ḥaydar

was a debauchee. He was under the baneful influence of rapacious and unscrupulous ministers like Sayyid Muḥammad Khān, commonly known as Āghā Mīr and entitled Muʿtamad al-Dawla, an upstart who had been one of the pages of Ghāzi 'l-Dīn Ḥaydar before his accession. His maladministration, combined with his extravagance and dishonesty, hastened the decline of the Awadh dynasty.

Ghāzi 'l-Dīn Ḥaydar was benevolent towards the poor and the needy, and provided dowries for innumerable poor girls from the public treasury. Among the notable buildings constructed during his reign are: the Ḳadam Rasūl, where a piece of stone, said to contain the footprint of the Prophet, was enshrined and the Imāmbāṙah Shāh Nadjaf, an imposing building dedicated to mourning for Ḥusayn b. ʿAlī and the martyrs of Karbalāʾ. Ghāzi 'l-Dīn Ḥaydar died in 1243/1827 and was buried in this building.

The Persian dictionary *Haft Ḳulzum*, (publ. Lucknow 1882), a slightly re-arranged version of *Burhān-i ḳāṭiʿ*, which is ascribed to him, is in fact the compilation of Ḳabūl Aḥmad, who fathered it on the king apparently for some monetary consideration (cf. Ethé, in *Gr.I.Ph.*, ii, 265, 348).

GHĀZI 'L-DĪN KHĀN [see shihāb al-dīn, mīr; muḥammad panāh, mīr; ʿimād al-mulk].

GHĀZI EVRENOS BEG [see ewrenos].

GHĀZĪ GIRĀY I, Khān of the Crimea, reigned for about six months in 930/1523-4. He was proclaimed khān in Muḥarram 930/November 1523 after conspiring with the Crimean *begs* to rebel against his father Meḥmed Girāy I [*q.v.*] and procuring his death. The Ottoman Sultan (Süleymān I) refused to recognize him and, in agreement with Memish Beg of the Shīrīn, the leader of the *begs*, appointed as khān Ghāzī Girāy's uncle Saʿādet Girāy (Djumādā II 930/April 1524). Ghāzī Girāy, unable to resist, accepted Memish Beg's proposal that he should be *ḳalghay* ([*q.v.*] 'heir-apparent') to Saʿādet Girāy, but was killed four months later (Shawwāl 930/August 1524).

(Halil Inalcik)

GHĀZĪ GIRĀY II, known as *Bora* ('tempest'), twice Khān of the Crimea (996/1588-1005/1596 and 1005/1596-1016/1607). Born in 961/1554, he first distinguished himself in 986/1578 as general of Crimean forces operating in support of the Ottomans against Persia, and won the regard of Özdemir-oghlu ʿOthmān Pasha [*q.v.*] (ʿĀlī, *Kunh al-akhbār*, MS; idem, *Nuṣret-nāme*, MS Istanbul, Esad Ef. [Süleymaniye] 2433; Āṣafī, *Shedjāʿat-nāme*, MS Istanbul Un. Lib. 6043; Iskandar Munshī, *Taʾrīkh-i ʿālam-ārā-yi ʿAbbāsī*, Tehrān 1314, 191, 197). Taken prisoner by the Persians in 988/1580 and refusing to co-operate with them against the Ottomans, he was imprisoned in the fortress of Alamūt, but escaped in 993/1585 and managed to rejoin ʿOthmān Pasha's army. Upon the death of ʿOthmān Pasha he went to Istanbul and settled at Yanbolu (Yamboli in Bulgaria). His bravery and loyalty prompted the Sultan (Murād III) to appoint him khān and send him with a fleet to the Crimea (Radjab 996/May 1588). The *begs* of the Crimea accepted him, but the Czar was supporting his own candidate, Murād Girāy. Ghāzī Girāy set on foot negotiations for an alliance with Poland and Sweden, and in 999/1591 made an incursion against Moscow. The next year the Crimean begs raided Russia again. When summoned by the Ottoman Sultan to serve in Hungary in the war with Austria, he made peace with Russia (ratified by Ghāzī Girāy in Radjab 1002/April 1594), the Czar undertaking to pay an annual tribute of 10,000 roubles and to send each year various stipulated gifts (*tïyïsh* and *bölek*) (two of his *yarlïgh*s to the King of Poland were published by V. Velyaminov-Zernov and H. Feyizhan, in *Matériaux pour servir à l'histoire du Khanat de Crimée* ...., St. Petersburg 1864, 9-19; cf. I. Novoselskiy, *Borba Moskovskogo gosudarstva s Tatarami v pervoy polovine XVII veka*, Moscow 1948, 118-9).

In Hungary, he took part in the siege of Raab/Yanïḳ (summer of 1002/1594), and in the following year led a brisk campaign to reduce to obedience the rebellious princes of Moldavia and Wallachia. His proposal that Moldavia should be granted to one of the Crimean princes having been rejected by the Porte, he did not appear in person for the campaign of 1005/1596, but sent the *ḳalghay* Fetḥ Girāy. As a consequence he was deposed, but was restored after three months. As the Crimea was now being threatened by the Ḳazaḳs, he began the building of the fortress of Ghāzī-kirman. At the Sultan's insistence, he joined the Ottoman army in Hungary in 1006/1598, and stayed on in winter-quarters at Sonbor/Szombor. His request that the *eyālet* of Silistre be granted him as *arpalïḳ* [*q.v.*] was brusquely rejected, and he refused to stay on in Hungary through the next winter (1008/1599-1600). The Austrians, in the hope of detaching him from the Ottomans, were promising him 10,000 gold pieces a year. Only in 1011/1602, when he saw that his behaviour was endangering his throne again, did he consent to return to Hungary, spending the next winter at Pečüy/Pécs [*q.v.*] and amusing himself with hunting and the writing of poetry. Next spring he returned to the Crimea. His ambassadors met a delegation from the Emperor at Kolozsvár (Klausenburg) to discuss terms of peace, but inconclusively. Throughout the Ottoman-Hapsburg war of 1001/1593-1015/1606 Ghāzī Girāy played a prominent part, both politically and in the military operations.

When peace was signed, he renewed his alliance with Poland against the Czar. The Sultan asked him to send 10,000 men for the operations against the Djelālīs [*q.v.* in Supp.] in Anatolia, but he sent only a small force. Next year (1016/1607) he was ordered

to advance through Shirwān to attack Persia (Ferīdūn, *Munsha'āt al-salāṭīn*², ii, 119), but died soon after of plague (Sha'bān 1016/November 1607). His son and ḳalghay Toḳtamïsh Girāy, whom he had nominated to succeed him, was proclaimed khān by the *begs* of the Crimea, but the Porte refused to recognize him.

Ghāzī Girāy, one of the greatest khāns of the Crimea, managed to steer a course between the Porte, which wished to have the Crimean forces always at its disposal, and the Crimean aristocracy, which was seeking independence of the Porte. During his reign the Khānate co-operated more closely than ever with the Porte, and Ottoman influence, in culture and in administration, greatly increased: the *ḳapu-aghasï* (*eshik-aghasï*, *bash-agha*), appointed from among the Circassian slaves, came to occupy a predominant place in the government comparable with that of the Grand Vizier; and a corps of mounted musketeers (*tüfenkči*), bound to the ruler's person, was formed. Ghāzī Girāy was at the same time a genuine literary artist, occupying a unique place in Crimean literature and in the Ottoman *dīwān* tradition. In a sincere and fluent style, he wrote prose and poetry in Persian, in Arabic, and in Crimean, Čaghatay and Ottoman Turkish (he used as *makhlaṣ* 'Ghazāyī' and 'Khān Ghāzī'), introducing into *dīwān* poetry the new theme—later much imitated—of the valiant sentiments of the soldier. His works include (1) a small *dīwān* (incomplete manuscript published in fascimile by I. H. Ertaylan [see Bibl.]); (2) a *mathnawī* entitled *Gül ü Bülbül*, in Čaghatay Turkish (Ertaylan, 50-3, 62 n. 2, where the suggestion that it is a *naẓīre* to Fuḍūlī's *Nīk u bad* is rejected); (3) a lost 'contention-poem' (*munāẓara*) between Coffee and Wine (see Pečewī, *Ta'rīkh*, ii, 251); and (4) several letters in prose and verse (to be found in various *inshā'* collections, *e.g.*, British Museum MS Or. 6261; see also Abdullah-oğlu Hasan, *Kırım tarihine ait notlar ve vesikalar*, in *Azerbaycan Yurt Bilgisi*, iii (1932), 118-22, iv-v, 159-66, vi-vii, 249-52). He figures prominently in a romantic novel by Nāmïḳ Kemāl [*q.v.*].

(Halil Inalcık)

GHĀZĪ GIRĀY III, Khān of the Crimea from 1116/1704 until 1118/1707. In Radjab 1110/ January 1699 he was appointed *Nuradin* (*Nūr al-Dīn* [*q.v.*]) by his brother Dewlet Girāy II, but rebelled, in collusion wtih the Noghay, and was dismissed. He came to Edirne and was exiled by the Porte to Rhodes. Upon the accession of his father Selīm Girāy [*q.v.*] in 1114/1702, he was recalled and made *ḳalghay* [*q.v.*], and at his death succeeded him as Khān (3 Ramaḍān 1116/30 December 1704). In spite of the Porte's pacific attitude, he himself followed an anti-Russian policy during the Russo-Swedish wars, which provoked Russian protests at Istanbul. For this, and for his resistence to the Porte's efforts to bring the Noghay directly under Ottoman control, he was deposed (Dhu 'l-Ḥidjdja 1118/March 1707) and ordered to reside at Karin-ābād (Karnobat, in Bulgaria), where in Rabī' II 1120/June 1708, aged 36, he died of plague.

GHĀZĪ KHĀN [see Supplement].

GHĀZĪ MIYĀN, popular title of Sipāh Sālār Mas'ūd Ghāzī, one of the earliest and most celebrated of Indo-Muslim saints, who lies buried at Bahrāič, in Uttar Pradesh. According to Ḍiyā al-Dīn Baranī, he was a soldier in the army of Sultan Maḥmūd of Ghazna. Abu 'l Faḍl says that he was a kinsman (*khweshāwand*) of the Sultan. 'Abd al-Ḳādir Badā'ūnī quotes a saint of Khayrabād who once remarked about the Sālār: "He was an Afghān who met his death by martyrdom". No early record of his life exists. Later generations have introduced many mythical and romantic elements in his biography. The *Mir'āt-i Mas'ūdī* of 'Abd al-Raḥmān, written during the reign of Djahāngīr (1014/1605-1037/1627), has consolidated all these later legends, though the author claims to have utilized an early Ghaznawid account of the saint in *Ta'rīkh-i Mullā Muḥammad Ghaznawī*, which is now lost. It is generally held that Sālār Ghāzī passed his youth in the field by the side of his father Sālār Sāhū. At the age of sixteen he started on his invasion of Hindustān. With Satrik (in Bāra Bankī) as his base of operations, he sent out his lieutenants in every direction to conquer and proselytize the country. Sayyid Sayf al-Dīn and Miyān Radjab of his army were sent to Bahrāič but they failed to achieve their objective. Sālār Mas'ūd then marched in person to Bahrāič. He was successful in the beginning but was ultimately overthrown and slain with his followers on 18 Radjab 424/30 June 1033. His servants buried him at a spot he had earlier chosen for his resting-place. The fact that his name and his grave survived through the long years between the Ghaznawid invasion and the Ghūrid occupation of northern India shows that there was some Muslim population to look after the grave and to preserve for posterity the tradition of Sālār's martyrdom (Niẓāmī, *Some aspects of religion and politics in India during the 13th century*, 'Alīgarh 1961, 76-7). Iletmish's son, Nāṣir al-Dīn Maḥmūd, was the first prince of the ruling house of Delhi to live in Bahrāič and during his governorship Muslim colonization began in that region; but there is no reference to Sālār Mas'ūd in Minhādj's account of the prince. According to Führer (*Archaeological survey report*, ii, 292), the first building over his grave was constructed by Nāṣir al-Dīn Maḥmūd. Muḥammad b. Tughluḳ (725/1325-752/1351) was the first sultan of Delhi to visit his grave. Fīrūz Shāh Tughluḳ also made a pilgrimage to Bahrāič in 776/1374 and was so overwhelmed by its spiritual atmosphere that he had his head shaved (*maḥluḳ shud*) in the mystic fashion and adopted an other-worldly attitude ('Afīf, *Ta'rīkh-i Fīrūz Shāhī*, 372). Some buildings, wells, shades and verandas are said to have been constructed by him.

The tomb of Sālār Mas'ūd is one of the most popular centres of pilgrimage in India. Hundreds of thousands of Hindus and Muslims visit it every year. The legend of Ghāzī Miyān—also known as Bālāy Miyān, Bālā Pīr, Hataylā Pīr etc.— occupies a unique place in the cultural life of the people of northern India, particularly in the villages of eastern Uttar Pradesh, Bihar and eastern Bengal. Many tales about him are current amongst the people, and many fairs,

festivals and feasts are held in different towns and villages of Uttar Pradesh (*e.g.* Meerut, Sambhal, Badāʾun) to commemorate different events of his life. There are several towns in northern India where certain old graves are considered to be those of his martyr-companions (*e.g.*, the grave of Mīrān Mulhim in Badāʾun, see Raḍī al-Dīn, *Kanz al-tawārīkh*, Badāʾun 1907, 51). The tradition of Ghāzī Miyān has assumed the form of a popular superstition in the villages of eastern Bengal, where large number of symbolic graves of the saint have been put up and thousands of Hindu and Muslim villagers make offerings to them. As it is believed that he was slain while his nuptial ceremonies were being celebrated —which thus became in a double sense his *ʿurs*—marriage processions in his memory are held at many places with *ʿalams* (banners) on the first Sunday of the month of Djayth (May-June). As this festival led to some immoral practices, Sikandar Lōdī (894/1489-923/1517) banned it, but it was revived later. Once the Emperor Akbar (963/1556-1014/1605) witnessed this festival incognito in the vicinity of Agra. The death of the saint is commemorated on the 12th, 13th and 14th of Radjab every year.

Bibliography: The earliest reference to the saint is found in Amīr Khusraw's *Iʿdjāz-i Khusrawī* (Nawal Kishore ed., ii, 155), wherein the author refers to his country-wide popularity. For other sources, see Ḍiyā al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Indica, 491; Ibn Baṭṭūṭa, *Riḥla*, Cairo 1346/1928, ii, 69-70; ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. GHĀZĪ MUḤAMMAD [see ḲĀḌĪ MUḤAMMAD].

GHĀZĪPUR [see Supplement].

GHĀZIYA (A.) plur. *ghawāzī*, the name for Egyptian public dancing-girls. In the 19th century, according to Lane, they came from a single tribe and married only within it. They gave lascivious performances in the streets and courtyards, and performed privately in the *ḥarīms* for certain celebrations or in special places for audiences of men. Lane regarded them as among the most beautiful women in Egypt and as common prostitutes; he distinguished the *ghāziya* from the *ʿālima* [*q.v.*] or female singer.

Today this distinction is less sharp. In Egyptian cities both the dancing-girl and the singer are now called *ʿalma* (colloquial), while in the villages the dancer is still often called *ghāziya*. The dancers do not come from a distinct tribe but from various sorts of low-income families, usually urban. They are taught the art, after showing some natural ability, by female teachers who are sometimes called *ʿawālim* (plur.) too. Both the *ghāziya* and the *ʿālima* must now be distinguished from the better-paid, better-trained "Oriental" dancer (*rāḳiṣa*) who performs in the modern night clubs and films and at private celebrations.

The *ghawāzī*, according to Lane, preferred to call themselves *Barāmika*. *Ghāziya*, the origin of which is uncertain, is still a derogatory term avoided by the dancer herself. In the villages it connotes a woman outside the pale of respectability. *Ibn ghāziya* is thus a serious insult. See further RAḲṢ.

Bibliography: Lane, *Manners and Customs of the Modern Egyptians*, ch. xix; Dozy, *Suppl.*, s.v.; M. Berger, *The Arab Danse du Ventre*, in *Dance Perspectives*, x (1961). (M. Berger)

GHAZNA, a town in eastern Afghānistān situated 90 miles/145 km. south-west of Kābul in lat. 68° 18′ E. and long. 33° 44′ N. and lying at an altitude of 7,280 feet/2,220 m.

The original form of the name must have been **Ganzak* < *gandja* "treasury", with a later metathesis in eastern Iranian of *-nz-*/*-ndj-* to *-zn-*, and this etymology indicates that Ghazna was already in pre-Islamic times the metropolis of the surrounding region of Zābulistān. The parallel forms *Ghaznī* (in present-day use) and *Ghaznīn* must go back to forms like *Ghaznīk* and *Ghaznēn*; the geographer Muḳaddasī and the anonymous author of the *Ḥudūd al-ʿālam* (end of 4th/10th century) have *Ghaznīn*, and Yāḳūt says that this is the correct, learned form.

The oldest mention of the town seems to be in the second century A.D., when Ptolemy gives Ga(n)zaka in the region of Paropamisadai, locating it 1,100 *stadia* from Kābul, but to the north of that town. It must have been of some significance under the successive waves of military conquerors in this region, such as the Kushans and Ephthalites. The Chinese Buddhist pilgrim Hiuen-Tsang (7th century A.D.) mentions it as Ho(k)-si(k)-na = Ghaznīk, and describes it as the chief town of the independent kingdom of Tsau-kiu-ch'a = Zābulistān. Buddhism was known in the region, for recent excavations at Ghazna have uncovered a Buddhist site and many clay and terracotta buddhas have been found. (It should be noted that A. Bombaci, in *East and West*, vii (1957), 255-6, doubts the accepted identification of Ghazna with the places mentioned by Ptolemy and Hiuen-Tsang.)

The history of Ghazna in the first three Islamic centuries is most obscure. The armies of the Arab governors of Khurāsān and Sīstān penetrated into Zābulistān in ʿAbd al-Malik's reign and fought the local ruler, the Zunbīl, whose summer quarters were in Zābulistān (Balādhurī, *Futūḥ*, 397; Ṭabarī, ii, 488). The population of this area was doubtless basically Iranian, but with a considerable admixture of Turkish and other Central Asian peoples brought in by earlier waves of conquest; as the homeland of Rustum, Zābulistān plays a part in the Iranian national epic as the homeland of heroes. At the end of the 3rd/9th century, the Ṣaffārids Yaʿḳūb and ʿAmr b. Layth reached Ghazna and Kābul, defeating

the Zunbīl of that time, but it is only with the 4th/10th century that the history of Ghazna, by then a theoretical dependency of the Sāmānids, becomes reasonably clear.

In 351/962 a Sāmānid slave commander, Alptigin, came to Ghazna with an army and established himself there, defeating the local ruler Abū ʿAlī Lawīk or Anūk, described as a brother-in-law of the Hindūshāhī Kābul-Shāh. In 366/977 another slave commander, Sebüktigin, rose to power in Ghazna, and under the dynasty which he founded, that of the Ghaznavids, the town enters the two most glorious centuries of its existence. It now became the capital of a vast empire, stretching at Sultan Maḥmūd's death in 421/1030 from western Persia to the Ganges valley, and it shared with Kābul a dominating position on the borderland between the Islamic and Indian worlds; according to Ibn Ḥawḳal[2], 450, Ghazna's Indian trade did not suffer with the coming of Alptigin's army and the temporary severance of political links with India. It was still at this time, and for several decades to come, a frontier fortress town on the edge of the pagan Indian world; in the reign of Masʿūd I of Ghazna (421-32/1030-41) there was still a Sālār or commander of the *ghāzīs* of Ghazna (Bayhaḳī, *Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, Tehrān 1324/1945, 254; cf. the anecdote in the first discourse of Niẓāmī ʿArūḍī's *Čahār maḳāla* describing the attacks in Maḥmūd's reign of the infidels on the nearby town of Lāmghān). The geographers of the later 4th/10th century stress that Ghazna was an entrepôt (*furḍa*) for the trade between Ghazna and India, that it was a resort of merchants and that its inhabitants enjoyed prosperity and ease of life. They expatiate on its freedom from noxious insects and reptiles and its healthy climate. In winter, snow fell there extensively, and the historian Bayhaḳī describes graphically how in the summer of 422/1031 torrential rain caused the stream flowing through the Ghazna suburb of Afghān-Shāl to swell and burst its banks, carrying away the bridge and destroying many caravanserais, markets and houses. Ghazna itself was not in a fertile spot and had few or no gardens, but the surrounding country of Zābulistān was fertile and the town accordingly enjoyed an abundance of provisions. Thaʿālibī lists among the specialities of the Ghazna region *amīrī* apples and rhubarb, and Fakhr-i Mudabbir Mubārakshāh mentions monster pears from there, *pīl-amrūd* "elephant-pears".

Muḳaddasī describes the layout of Ghazna as it was during Sebüktigin's time. It had a citadel, *ḳalʿa*, in the centre of the town (the modern Bālā-Ḥiṣār), with the ruler's palace; a town proper or *madīna*, in which many of the markets were situated, and which had a wall and four gates; and a suburb, *rabaḍ*, containing the rest of the markets and houses. The citadel and *madīna* had been rebuilt by Yaʿḳūb and ʿAmr b. Layth (Bayhaḳī, 261). Recent work by the Italian Archaeological Mission at Ghazna has shown that the houses of the great men lay on the hill slopes to the east of the modern town, on the way to the Rawḍa-yi Sulṭān, where lies Maḥmūd's tomb. In this vicinity are the two decorated brick towers built by Masʿūd III and Bahrām Shāh, which may be the minarets of mosques, and not necessarily towers of victory as early western visitors to Ghazna imagined. The site of a fine palace has also been uncovered here. We learn from Bayhaḳī that Maḥmūd had a palace at Afghān-Shāl, the Ṣad-Hazāra garden and the Fīrūzī palace and garden where he was eventually buried. His son Masʿūd decided in 427/1035-6 to build a splendid new palace to his own design (Bayhaḳī, 499, 539-41). For the erection and decoration of these and other buildings, the spoils of India were used; it seems that objects of precious metals and captured Hindu statues were directly incorporated into the palace fabrics as trophies of war. With the plunder brought back from the expedition of 409/1018 to Kanawdj and Muttra, Maḥmūd decided to build a great new mosque in Ghazna, to be known as the *ʿArūs al-Falak* "Bride of the Heavens"; to this was attached a *madrasa* containing a library of books filched from Khurāsān and the west (ʿUtbī-Manīnī, ii, 290-300). Other constructional works by Maḥmūd included elephant stables (*pīl-khāna*) to house 1,000 beasts, with quarters for their attendants, and various irrigation works in the district; one of his dams, the Band-i Sulṭān, a few miles to the north of the town, has survived to this day. For all these building works, it is probable that the early Ghaznavids imported skilled artisans from Persia and even from India, for Zābulistān had no artistic traditions of its own.

After the Ghaznavids' loss of their western territories, Ghazna and Lahore became their two main centres, and the minting of coins was concentrated on these two towns. In the first half of the 6th/12th century, Ghazna was twice occupied by Saldjūḳ armies (510/1117 and 529/1135), but a much greater disaster occurred in 545/1150-1 when ʿAlāʾ al-Dīn Ḥusayn of Ghūr sacked the town in vengeance for two of his brothers killed by the Ghaznavid Bahrām Shāh; this orgy of destruction earned for him his title of Djihān-sūz "World-incendiary". However, Ghazna seems to have recovered to some extent. It was finally lost to the Ghaznavids in 558/1163, and after an occupation by a group of Ghuzz from Khurāsān, passed into Ghūrid hands, becoming the capital of the Sultan Muʿizz al-Dīn Muḥammad. After the latter's death in 599/1203, it was held briefly by one of the Ghūrids' Turkish slave commanders, Tādj al-Dīn Yïldïz, but in 612/1215-16 came into the possession of the Ghūrids' supplanters, the Khwārizm-Shāhs. But Djalāl al-Dīn Mingburnu's governorship there was short. He was driven into India by Čingiz Khān's Mongols in 618/1221 and the town was then sacked by the latter.

This was really the end of Ghazna's period of glory; coins now cease to be minted there. In Īl-Khānid times, it passed to the Kart ruler of Harāt, Muʿizz al-Dīn Ḥusayn. Tīmūr granted it in 804/1401 to his grandson Pīr Muḥammad b. Djihāngīr, who used it as a base for raids on India. In 910/1504 Bābur appeared at Ghazna and forced its then ruler Muḳīm b. Dhi 'l-Nūn Arghūn to retire to Ḳandahār. Bābur has left a description of the town as it was at this time, a small place where agriculture was difficult, only a few grapes, melons and apples being produced; he marvelled that so insignificant a place should once have been the capital of a mighty empire. Under the Mughals and native Afghān dynasties, Ghazna played no very great rôle. It was besieged in 1059/1649 by a Persian army, but Awrangzīb succeeded in holding on to it, despite his loss of Ḳandahār. Nādir Shāh captured it in 1151/1738 before occupying Kābul and marching on Delhi in the next year, and after his assassination in 1160/1747, Aḥmad Shāh Durrānī used Ghazna and Kābul as springboards for attacks on India. During the First Afghan-British War of 1839-42 Ghazna was twice taken by British forces, and on the second occasion the British commander sent back to India, at the Governor-General Lord Ellenborough's

request, the alleged Gates of Somnāth captured by Maḥmūd of Ghazna eight centuries previously.

Today, Ghazna is a town of some importance; it lies on the Kābul-Ḳandahār road and is the junction for the roads eastward to Gardīz and Mātūn, Urgun and Tōčī. It is the administrative centre of the province (*wilāyat*) of Ghazna. The great majority of the people are Persian-speaking and are Sunnī in religion.

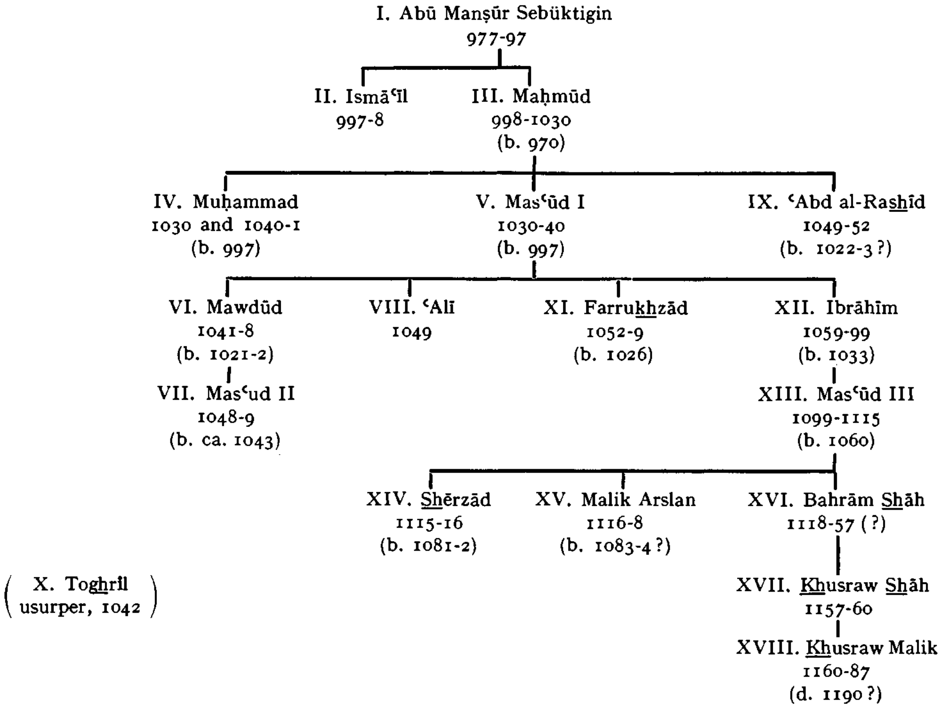
(C. E. Bosworth)

GHAZNAWIDS is the name given to the dynasty of Turkish origin which was founded by Sebüktigin, a General and Governor of the Sāmānids [*q.v.*]. With Ghazna [*q.v.*] for long its capital, the dynasty lasted for more than 200 years, from 367/977-8 to 583/1187, in eastern Īrān and what is now Afghānistān, and finally only in parts of the Pandjāb (with Lahāwur/Lahore as centre). For a long time its rulers held the official title of Amīr, although historians call them Sulṭān from the start; on coins, Ibrāhīm (no. XII below) was the first to bear this title.

From the time when Alptigin established himself in the region of Ghazna in 344/955-6 and made himself to a great extent independent of the Sāmānids, the area surrounding this town remained in the hands of Turkish rulers (for details see GHAZNA). In 367/977-8 (I) Sebüktigin gained power, and continued to rule until his death in 387/997. The new ruler, on the evidence of his coinage, acknowledged the overlordship of the Sāmānids, and gave them help against the Sīmdjūrids [*q.v.*] in 992 and 995. He also turned his attention to the Hindū Empires in the Pandjāb [*q.v.*] and in particular the Shāhū dynasty, whose head, Djaypāl, he defeated in 979 and 988, thereby acquiring the fortresses on the Indian frontier. His empire furthermore included northern Balūčistān, Ghūr, Zābulistān and Bactria (Tukharistān) (on the subject of these and all further geographical references in this article see the entries under individual words). In this way, Sebüktigin, an extraordinarily powerful and ambitious ruler, and a convinced Sunnī, laid the foundations of one of the most lasting empires in the Indo-Afghān border regions.



On this foundation, Sebüktigin's son (III) Maḥmūd, who after quarrelling at one time with his father had become reconciled with him towards the end of the latter's life, was able to embark upon the conquest of the Pandjāb. By so doing, he created for Islam an extensive territory in India, and laid the foundation for the religious division of this area, the latest effect of which has been the creation of the independent state of Pākistān. Maḥmūd swiftly superseded his brother (II) Ismāʿīl, who had been designated by his father as his successor, and by 389/999 had finally made himself secure. There is no doubt that he is the most important ruler of the dynasty. Culturally already strongly inclined towards Īrān and receptive to the developing new Persian literature, he perseveringly encouraged Firdawsī [*q.v.*], although he did not fulfil the exaggerated demands made by the latter since he could not overlook the expenses for his task of spreading Islam in India. Politically Maḥmūd was in a fortunate position, since on his ascending the throne the Sāmānids had lost their influence and he was able to come to an agreement with the victorious Ḳarakhānids [*q.v.*], which in essence laid down that the Oxus should be the frontier between the two kingdoms. A convinced Sunnī like his father, Maḥmūd exchanged the ties which Sebüktigin had had with the Sāmānids for an allegiance to the ʿAbbāsid Caliph al-Ḳādir [*q.v.*], an allegiance which remained purely nominal, since at that time distant Baghdād could not exert any influence so far east, and the Caliphs were in any case dominated by the Shīʿī Būyids [*q.v.*]. The latter had passed the zenith of their power and were several times the target of attacks by Maḥmūd, who thereby also rendered a service to the Caliph. At the same time as his 17 campaigns in the Pandjāb, Maḥmūd was able to push the Būyids back a considerable distance and exert his influence in Khwārizm [*q.v.*]. On his death (23 Rabīʿ II 421/30 April 1030), his empire comprised the Pandjāb and parts of Sind (plus a series of Hindū states in the valley of the Ganges which acknowledged his overlordship), northern Balūčistān (around Ḳuṣdār), Afghānistān including Ghazna, as well as Gharčistān and Ghūr (where native potentates had submitted to his overlordship), Sīstān, Khurāsān, and Persia

generally as far as Djibāl (Media); and finally Tukharistān and some border areas on the Oxus (for all details see MAḤMŪD B. SEBÜKTIGIN).

After Maḥmūd's death his son (IV) Muḥammad at first succeeded him, but was immediately opposed by his brother Masʿūd, who, having been his father's victorious general (governor of Iṣfahān and Rayy), was favoured by the army. An army despatched against him by Muḥammad deserted to him, in Herāt; Muḥammad was blinded and taken captive.

(V) Masʿūd I, a bold warrior, addicted, it is true, to drink, and lacking the diplomatic capabilities of his father, continued Maḥmūd's campaigns in India, and attempted to drive the Būyids further back; but he was able to gain possession of Kirmān [*q.v.*] only for a short time (424/1035). From a military standpoint his position was considerably less favourable than that of his father, who had had no opponent of his own calibre in Persia. Now, however, just at the time when Masʿūd came to the throne, the Saldjūḳs [*q.v.*] began to cross the Oxus and little by little to occupy Khurāsān. Masʿūd's resistance had little success; considerable parts of his army were engaged in the Pandjāb, and his forces were made up of very diverse elements: Iranians of various races, and also Indians; his own fellow Turks were only sparsely represented. On 8 Ramaḍān 431/23 May 1040, on the steppes of Dandān(a)ḳān, Masʿūd was decisively defeated by the Saldjūḳs under Toghrïl [*q.v.*], a defeat which cost him his Persian possessions (cf. B. N. Zakhoder, *Dendanekan* (in Turkish), in *Belleten*, xviii/72 (1954), 581-7). On a march to India Masʿūd was overthrown by a conspiracy and murdered forthwith in prison (433/1041). (For details see MASʿUD B. MAḤMUD).

An attempt to restore the blinded (IV) Muḥammad to the throne was foiled by the swift advance of Masʿūd's son (VI) Mawdūd, who pressed forward to Kābul from Balkh (where his father had left him as commander against the Saldjūḳs). He defeated Muḥammad in 434/1042 at the battle of Nagrahār, and killed him. In other ways too Mawdūd took bloody revenge on the murderers of his father. His brother Madjdūd, who also put forward claims, died even before a battle could be joined, probably of poison. Mawdūd's attempts to halt the advances of the Saldjūḳs into Persia continued fruitlessly for years. In 436-7/1044-6 they advanced beyond Bust into the countryside around Zamīndāwar and threatened Ghazna. Here general Bāsī-tigin was able to repulse them and thereby save the home territory of the Ghaznavids; it was also possible to divide the rebellious Ghūr and force them once more into submission to Mawdūd. In a similar way it was possible on the whole to maintain the power of the dynasty in India, even though some areas were temporarily lost and even Lahāwur was threatened for a time. Mawdūd was about to set forth himself on a campaign against the Saldjūḳs to attempt the recovery of Sīstān, when he died in Ghazna on 20 Radjab 440/18 December 1048 after a short illness.

The numbers in this table correspond with those given in the text of the article

Apart from Persia, now finally lost, Mawdūd had been able to preserve the kernel of his dynasty's territory, but the bloody quarrels which broke out after his death between several claimants to the throne seriously weakened the Ghaznavid position. Through the machinations of generals and viziers who wished to consolidate their own power, the 6-year-old (VII) Masʿūd II (really Muḥammad), Mawdūd's son, succeeded to the throne, followed on 1 Shaʿbān 440/9 Jan. 1049 by Mawdūd's brother (VIII) ʿAlī b. Masʿūd I and on his overthrow, in

May 1049, by (IX) ʿAbd al-Rashīd b. Maḥmūd. Although this ruler lived in peace with his neighbours, he did not succeed in restoring internal stability. The dignitaries took exception to his relations with a certain slave, Tümen, who was forcibly removed as soon as ʿAbd al-Rashīd himself was murdered on 10 Shawwāl 443/14 February 1052. The murderer, a former slave of Masʿūd I and now Commandant of Zarandj, (X) Toghrïl, disposed of other members of the royal house and himself attempted to seize supreme power, but was murdered by followers of the dynasty on 17 Dhu 'l-Kaʿda 443/21 March 1052.

With (XI) Farrukhzād b. Masʿūd I the hereditary ruling family returned to the throne. With the help of General Nūsh-tigin, who had already served ʿAbd al-Rashīd loyally, the new ruler was able to repel the Saldjūks, who in the meantime were making further advances on Baghdād and Anatolia, when they attacked his central territories; on the other hand, Makrān was lost to them. Farrukhzād died at the early age of 34, in Ṣafar 451/March 1059 apparently of cholera.

His brother and successor (XII) Ibrāhīm b. Masʿūd I, signed a treaty of friendship with the Saldjūks, being obliged to cede to them Khuttalān, Čaghāniyān and Kubādiyān. Marriage alliances and later rich presents sealed the settlement thus reached with their long-standing main opponents in the West, who for their part promised to abandon their expansionist policy in the East. In other ways too, the new ruler proved himself an able diplomat and a cautious politician, avoiding dangerous undertakings, but essentially capable of preserving and defending his possessions. Ibrāhīm thus had his hands free for exploits in India (465-8/1072-6). He succeeded in capturing a number of fortresses and in re-establishing the influence of the Ghaznavids in the Pandjāb. Thenceforward Ibrāhīm called himself 'Sulṭān' on his coinage. Finally he delegated the continuation of the campaigns to his son Sayf al-Dawla Maḥmūd, whom he made Governor of Lahāwur, and who succeeded immediately in capturing Agra, and later other strongholds. When he attempted to seize power from his father, he was thrown into prison with his friends (481/1088). Ibrāhīm died on 5 Shawwāl 492/25 August 1099, after a reign of 40 years, the longest recorded in this dynasty.

His son and successor, (XIII) Masʿūd III, immediately embarked on an attack on Kanawdj, whose Hindū rulers were forced to submit and were brought to Ghazna in chains; a later attempted revolt in the town was suppressed. Otherwise, Masʿūd III kept up the ties of friendship and marriage with the Saldjūks and had a peaceful reign, until his death, at the age of 56, in Shawwāl 508/February-March 1115.

As had happened two generations earlier, the death of Masʿud III meant the outbreak of fratricidal war. Three of his sons took their turn as head of state. (XIV) Shērzād was forced after one year (Shawwāl 509/Feb.-March 1116) to flee to Ṭabaristān before his brother (XV) Malik Arslan, and early in 510/middle of 1116 he fell in an attempt to regain control of Ghazna. But Malik Arslan's days were also numbered. Another brother, who had escaped his sword, (XVI) Bahrām Shāh, won the help of Sandjar [*q.v.*], and was able to march into Ghazna in his train on 12 Shawwāl 511/6 February 1118 after two successful battles; Malik Arslan had fled to India.

Bahrām Shāh had to acknowledge the suzerainty of the Saldjūks and pay them high tribute; as a guarantee of this one of their tax controllers remained in Ghazna when Sandjar vacated the town after 40 days, taking with him the State Treasure. Although these conditions were onerous, they also guaranteed Bahrām Shāh Sandjar's solid support. It was only with Saldjūk help that he could fend off an attack by Malik Arslan from India; his brother fell into his hands and was executed in Djumādā II 512/September-October 1118. Bahrām Shāh then established his authority in the Pandjāb in three campaigns (Ramaḍān 512/January 1119, Djumādā II-Shawwāl 514/end of 1120, and 523/1129). Otherwise the first decade and a half of his reign appear to have passed peacefully; at any rate no records of battles have survived. In 1135-6 Bahrām Shāh tried in vain to rid himself of Sandjar's overlordship together with the crushing tribute, of 1000 *dīnār*s per day (so at least according to the sources!). Nevertheless, in spite of his defeat by Sandjar, Bahrām Shāh was confirmed in his hereditary territories just as was the Khwārizm Shāh Atsïz [*q.v.*] after his rebellions. Like the latter, Bahrām Shāh now remained loyal to the Saldjūk Sultan, although he fell out with the rulers of Ghūr, and had one of them—his son-in-law—poisoned whilst visiting Ghazna. A brother of this man, after losing a battle (2 Muḥarram 544/12 March 1149), was publicly hanged on Bahrām Shāh's orders, with many of his advisers. Both these acts were revenged in the most terrible way by a third brother, ʿAlāʾ al-Dīn Ḥusayn, in an attack on Ghazna towards the end of 1150. The complete destruction of the capital and the utterly ruthless murder, rape and deportation of the inhabitants—who were certainly not responsible for the conduct of their ruler—rightly gained for this monster the name of Djahānsūz (Burner of the World), by which he is known to history. Bahrām Shāh had meanwhile fled to India; thence, when ʿAlāʾ al-Dīn had been taken captive by the Saldjūks, he apparently returned to Ghazna and died, it is thought, early in 552/February-March 1157. There is no doubt that by his treacherous murders and the personal cowardice with which he deserted his subjects in a moment of crisis Bahrām Shāh contributed, in a completely personal way, to the distintegration of his ancestors' empire, which now could no longer be checked.

The rule of Bahrām Shāh's second son (XVII) Khusraw Shāh, was restricted to Ghazna, Zābulistān and Kābul—apart from the Pandjāb. Further parts of the empire, Zamīndāwar and Bust, had in the meantime been taken over by the Ghūrids [*q.v.*]; Tiginābād also fell into their hands after a clash with Khusraw Shāh in the middle of 552/summer of 1157. As Sandjar died just at this time, Khusraw Shāh lost his only helper against his ever more powerful enemies in Ghūr. By Radjab 555/July 1160 he was dead.

His son and heir (XVIII) Khusraw Malik, saw his possessions dwindle bit by bit, until the empire of the Ghaznavids ceased to exist. Already at the beginning of 558/1163 he lost Ghazna and all his Afghān lands to the Oghuz ([*q.v.*] see also GHUZZ) to whom Eastern Persia too was exposed after the death of Sandjar. It was not long before the Ghūrids seized power here also; a member of their ruling house, Shihāb al-Dīn, was put in charge of these territories, and used them, as Maḥmūd had done before him, as a jumping-off ground for an advance on the Pandjāb, where Khusraw Malik still retained Lahāwur (his capital), Pēshāwar, Multān and Sind. On the pretext that he was obliged to take action against the

native Ḳarmaṭīs, S̲h̲ihāb al-Dīn took Multān in 571/1175-6; in 575/1179-80 Pēs̲h̲āwar fell into his hands. Finally he forced K̲h̲usraw Malik in Lahāwur to pay him tribute and give up his son, Malik S̲h̲āh, as hostage. Even so it was no easy task for the G̲h̲ūrid prince to dispose of G̲h̲aznavid rule completely, for the Indian tribe of the K̲h̲ok̲h̲ars was collaborating with K̲h̲usraw Malik. Only after Lahāwur had been besieged several times was K̲h̲usraw Malik forced by hunger to yield, in D̲j̲umādā I and II 583/July-August 1187. After some delay he was sent to G̲h̲ūristān, and imprisoned in a castle in G̲h̲arčistān. There he was put to death with his sons, probably at the end of 585/beginning of 1190, when the G̲h̲ūrids found themselves threatened by the K̲h̲ʷārizm S̲h̲āhs.

"Thus Sebüktigin's house came to an end, and nothing was left of these mighty rulers but the historical memory" (Mīrk̲h̲ōnd, Bombay (lithograph) 1849-50, 135), almost at the same time, incidentally, as the last Sald̲j̲ūḳs also disappeared from history before the advance of another new dynasty, the K̲h̲ʷārizm S̲h̲āhs.

In contrast to the Sāmānids and the Sald̲j̲ūḳs, the cultural significance of the G̲h̲aznavids after Maḥmūd's death was slight. As far as can be seen, the dynasty assimilated Persian influence in the realms of language and culture as quickly as did other Turkish ruling houses. But, leaving Firdawsī aside, they were not privileged to have a really important poet at their court. On the other hand, we are indebted to one of their leading officials, Bayhaḳī [*q.v.*], for a uniquely detailed picture of early Islamic-Iranian history; for the period of Sultan Masʿūd I, it is also a mine of information on cultural and diplomatic matters and the technique of government.

The life of the court, with its receptions and parties, and the form of government were in accordance with the customs of other Sunnī empires on Persian territory at this time. It is however worth noting that the principal ministers rarely changed, and therefore must on the whole have worked in harmony with their rulers.

Accession to the throne took place with the customary ceremonial, especially when the succession was peacefully established. The rulers counted among their principal duties a reverent attitude to the Caliphs, and the protection and dissemination of the Sunna—in opposition to the Hindūs as well as the S̲h̲īʿīs and the Ḳarmaṭīs in Multān. The fact that at the same time execution and torture were allowed in the repression of revolts or the "punishment" of defeated enemies was in accordance with the ideas of the time. The financial demands made on their subjects certainly varied according to what was required for waging war, paying tribute, and possibly also supporting an extravagant court, although it would appear that they did not exceed the usual average elsewhere, just as the rulers of the dynasty after Masʿūd I were average personalities. Of the longer-lived members of the dynasty, Bahrām S̲h̲āh can be considered the least conscientious and indeed also the least capable.

ART AND MONUMENTS

Corresponding with the pre-eminence of the G̲h̲aznawid dynasty there was, for about a century, an efflorescence of architecture and craftsmanship promoted by the tastes and opulence of those powerful patrons, and with its geographical centres in the eastern provinces of Iran, which for so long were a meeting-point of Islamic and foreign artistic currents. Quite certainly, this flowering sprang directly from the earlier experiences of the Sāmānid centres in K̲h̲urāsān or Transoxania and, in its last phase, it intermingles with the development of the art commonly denoted by the name Sald̲j̲ūḳid, which was destined to achieve a renown that reached far beyond the limits of the empire of the Great Sald̲j̲ūḳs. But the style developed within the G̲h̲aznawid territories, from the reign of Maḥmūd b. Sebüktigin and under his immediate successors, took an equally significant part in innovation, thus allowing us to emphasize its importance as well as the exemplary character, for the later evolution of Islamic art, of the works of art then executed in the residences, distant though they were, of G̲h̲azna, Bust, Balk̲h̲, Harāt or Nīs̲h̲āpūr.

Too often, we have to deplore the ruin and disappearance in the centuries that followed, of these monumental works, as well as of their furnishings. The sites of the ancient G̲h̲aznawid capitals are today deserted, and the chroniclers' accounts can restore nothing to us save the astonishment of contemporaries at the ornateness of their edifices, the brilliance of the official ceremonies that were performed in them and the collection of objects of value which the conquest of India had made it possible to bring together. This is the point that emerges for example from the unfruitful attempt made earlier by A. U. Pope to evoke G̲h̲aznawid art by starting from the imprecise facts contained in the literary sources (cf. *A survey of Persian Art*, ii, 975-80).

On the other hand, the various archaeological remains which have survived to our own time, our knowledge of which has been considerably increased within recent years, provide an insight,

stimulating in itself, into the art that flourished under the aegis of the Ghaznawids, and it is to be deplored that they have not yet given rise to any general work, pending the coming of the new discoveries which will perhaps one day complete the instruction they have imparted.

In these remains, traces of imposing edifices can be found, from the minarets at Ghazna to the castles in the "royal town" of Bust [*q.v.*], all situated within modern Afghanistan, to which no doubt should be added the half-ruined remains of the so-called mausoleum of Arslān Djādhib at Sangbast, of which we have only a description made some time ago (cf. E. Diez, *Churasanische Baudenkmäler*, Berlin 1918, 52-5).

The minarets had long been known in the field of ruins at Ghazna, where their prism-shaped brick plinths still stand, entirely covered with decorations and inscriptions; but only recently have both been attributed to Ghaznawid sovereigns of the last period, Masʿūd III (d. 508/1114) and Bahrām Shāh (d. 547/1152), after having formerly been incorrectly described, on the strength of ancient travellers, as "victory towers" of the conqueror of India and his son Masʿūd I. Their archaeological significance has thereby been slightly modified, particularly in regard to the date of the appearance in Ghazna of these brick decorations, obtained by the simple use of variety in the bonding, which adorn the silhouette of the last minaret, so long regarded as being a century older.

The ruins of Lashkari Bāzār, on the other hand, on the site of Maḥmūd's "camp" in the suburbs of Bust, which also became a favourite residence of Masʿūd I, constitute an architectural ensemble, the great extent of which has only just been revealed by excavations conducted by the French Archaeological Mission in Afghanistan—and still incompletely, since as yet only a preliminary report has been published. Three palaces built in a line along the bank of the Hilmand, formerly surrounded with enclosures and gardens, as is shown by their high outer walls, testify to the vigour of an architectural tradition directly related to the customary methods of construction in use in palaces of the Caliphs in ʿAbbāsid ʿIrāḳ. But the details of their plans, in which traces of successive alterations do not fail to raise delicate problems of date and attribution, also deserve attention, starting with the cruciform lay-out of the *īwān*s round the central courtyard of the South castle, where we can see the application of a typically Khurāsānian formula and a clear statement of the welcome subsequently accorded in Iran to this kind of concentric composition. At the same time can be seen traces of a surface decoration worthy of comparison with the embellishment of walls in the buildings of Sāmarrā, yet showing true originality in the details of panels of sculptured stucco, both inscribed and anepigraphic, as also in the frescoes with figures which ornamented the walls of the principal audience chamber and which still depict the rows of guards who once surrounded the sovereign's throne. We should note also the existence of a large mosque, standing outside the South castle though opening onto its fore-court, and characterized by the classically Muslim form of its pillared hall of prayer. Moreover, the two rows of booths stretching for more than half a kilometre along the avenue which led to the royal residence and connected it with the neighbouring town of Bust reveal, in their general treatment, a feeling for town-planning that somewhat transcends the narrow limits of palatine architecture and its exclusive concern with the sumptuous.

A second category of archaeological remains is provided by the abundant series of fragments of architectural decoration and ornamental or funerary inscriptions, mainly on marble slabs, which come from the site of Ghazna; some were discovered forty years ago, others as the result of the excavations at present being carried out by an Italian expedition, concerning which our information is still very incomplete. These fragments are almost all remarkable for their fine decorative quality, combined with richness of materials, which together give the arabesques traced on them a supple elegance of line and modelling for which no exact equivalent in Muslim Iran is known. Probably we should recognize here, to some extent, the results of Indian and Central Asian influences, which can also be seen in the choice of certain motifs containing figures (especially persons, or animals such as elephants). But the basic principles of an ornamentation that is both divided into sections and also characterized by a restricted variety of floral stylizations thus remain faithful to the spirit of ʿAbbāsid art, which can also be discerned in the prominence given here to the epigraphic bands with angular or cursive writing. Among the most significant of the fragments, besides sections from the frieze, are the remains of stone *miḥrāb*s, where the niche reveals a lobed profile, and tombs attributed to Sebüktigin and Maḥmūd.

Finally, in the third category are the various products of luxury crafts, of which interesting specimens have been preserved, though without attracting any but the most spasmodic attention, except for ceramics. Here, in fact, the discoveries at Lashkari Bāzār, enriched by the results of digging on the actual site of the town of Bust, have been subjected to a methodical analysis; there is a sufficient range of material for comparison to provide significant fixed points for the hitherto highly confused chronology of certain main categories of Muslim ceramics. The significant features of Ghaznawid pottery, glazed and unglazed, are in any case now precisely defined in its two principal stages, firstly in the 5th/11th century in its relation with Sāmānid pottery, which provided it with its first models, and later at the end of that century and the beginning of the 6th/12th century in relation to Persian Saldjūḳid ceramics, from which it then began to draw inspiration.

One could wish that the Ghaznawid bronze objects, which for the most part are in the museum at Kābul, might be studied in the same way. As for the carved woodwork, of which the doors of Maḥmūd's tomb provide the most famous illustration, it occupied in the art of the period a place which some have already underlined, but which has not yet been defined with the requisite precision or based upon sufficiently detailed analyses.

GHAZW (a.), expedition, usually of limited scope, conducted with the aim of gaining plunder. The noun of unity *ghazwa* (pl. *ghazawāt*) is used particularly of the Prophet's expeditions against the infidels [see maghāzī], but has also special meanings (for which see Dozy, *Suppl.*, s.v.).

In its most common sense, *ghazw* (and the dialectical variants) signifies a raid or incursion, a small expedition set on foot by Bedouins (both in the Sahara and in northern Arabia) with booty as its object, and also the force which carries it out. The term has passed into French in the form *rezzou*, which preserves the original meaning of *ghazw*, whilst it is the synonym *ghāziya* (pl. *ghawāzī*) which has given the English word *razzia*, current also in French (where, however, with the verb *razzier*, it tends to have a pejorative implication). In the Berber dialect of the Touareg of the Ahaggar, *tamagh layt* means a *ghazw* of a few men (see Ch. de Foucauld, *Dict. touareg-français*, Paris 1951-2, iv, 1726) and *igən* a group of more than 15-20 men (*op. cit.*, i, 456), the verb *əḏəg* (*op. cit.*, i, 263) corresponding exactly to the Arabic *ghazā*.

The *ghazw* (colloquial *ghazu*, pl. *ghizwān*) was one of the oldest institutions of the camel-breeding tribes of Northern Arabia and continued, unmoderated by Islam, well into the present century. Unlike the other warlike activities of the Bedouin, namely war for territory (*manākh*) and punitive raids of retaliation (*tha'r*/coll. *thār*), its primary concern was the acquisition of camels. In practice it operated as a fairly effective means of redistributing economic resources in a region where the balance could easily be upset by natural calamities (Sweet, *Camel raiding*).

The *ghazu*, therefore, minimized the effect of localized drought or disaster on the breeding of properly balanced camel herds, the only form of wealth which could give economic security in this society. Since the acquisition of camels was the aim of a *ghazu*, very little blood was ordinarily shed during the course of it, mercy (*manʿ*) being freely granted. Indeed the whole course of a *ghazu* was governed by elaborate protocol.

A raid on a tribal section was usually initiated by a series of petty thefts of camels, disturbing the existing state of truce. These were often carried out by small parties on foot (*ḥanshal*, sing. *ḥanshūlī*: Hess, *Beduinen*, 96). When these thefts had become of sufficient gravity, and presumably the tolerance with which they were viewed varied according to the condition of the herds of the tribal section concerned, the truce was formally severed and mutual raiding could then be expected to ensue (Musil, *Rwala*, 505-6; Dickson, *The Arab of the Desert*, 343). The person chosen to lead a raid (*ʿaḳīd*, colloquial *ʿadzīd*, *ʿagīd*) was usually the *shaykh* of the section, unless incapacited by weakness or age, or a member of his family. The *ʿadzīd* gathered his force (*ḳawm*, colloquial *gōm*), for a small raid mounted on perhaps 20-30 camels (*djaysh*/*djēsh*), or on camels and horses if the section to be raided was not far distant. The objective was kept secret from all but a few until the moment of departure, which would be postponed if necessary till the omens were favourable. Scouts (*ʿuyūn*) were then sent out to reconnoitre the ground over which the raiding party would pass. When these reported that the objective was nearby, an advance-party (*sabr*, pl. *subūr*) made a final estimate of the position and brought back a report (*ʿilm*, pl. *ʿulūm*) and if possible a prisoner. The attack itself, provided the raiders were genealogically and socially close to the section to be raided, was made at sunrise (*ṣabāḥ*) or sunset, or at such times in between as the herds were not scattered (cf. Hess, *Beduinen*, 98). A night-attack (*bayāt*), though it would succeed most easily, was considered dishonourable (*ʿayb*, colloquial *ʿēb*).

The captured herds were driven back to the *ʿadzīd*, and the raiders divided into a rear-guard (*kamīn*/*tsamīn*), to ward off the inevitable counter-attack (*fazʿa*), and a party which drove the captured camels to the raiders' last camp, and then as fast as possible to their home-camp.

Although the community attacked was seldom taken by surprise and counter attacks were often effective (Musil, *Arabia Deserta*, 181), most raids would seem to have been successful.

When the raiders came from further afield the raiding party was likely to be larger, and the concern with protocol and the desire to avoid bloodshed would then appear to have been less, since in these circumstances genealogical ties were more likely to be remote (Doughty, *Travels*, ii, 393). In general the more closely related were the parties involved, the more stringent were the rules governing the actual raid.

In its heyday the institution of the raid permeated the whole of Bedouin society, its social and economic life, and its folk literature. It reinforced the fissiparous and predatory nature of tribal society, and for long prevented the emergence of any political organization more complex than short-lived confederations. However, the rise of a strong central power in Arabia under Ibn Saʿūd marked the end of the traditional mode of life based on the *ghazu*. More recently the rise of the oil industry has further hastened the decline of traditional society by accelerating the trend towards the de-tribalization of the Bedouin and their re-grouping along modern industrial lines.

(T. M. JOHNSTONE)

GHAZZA, a town in southern Palestine which from ancient times had been an agricultural and caravan centre, situated 4 km. from the sea, on the route leading from Palestine to Syria and at the junction of the caravan-routes coming from Arabia. A frontier-town which often changed hands through the course of the centuries, the ancient *ʿAzza*, which had been one of the capitals of the Philistines, later became, under the Greek name *Gaza*, a flourishing Hellenistic city, and afterwards a Roman town belonging to Judaea. In the Byzantine period it formed part of Palestina Prima and was christianized in the 5th century; the seat of a bishopric, it was also renowned for its school of rhetoric and, at the beginning of the 7th century, it was described as a rich city where foreigners were welcomed. Merchants from Mecca visited it regularly, and it was in the course of one of these journeys that the Prophet's great-grandfather Hāshim is said to have died there, so conferring a particular dignity upon Ghazza, "the town of Hāshim". According to tradition, it was also there that ʿUmar b. al-Khaṭṭāb acquired his fortune. Finally, it was in the immediate vicinity of Ghazza, in a place sometimes called Dāthin, sometimes Tādūn, that the Patricius of Ghazza was defeated by Arab troops sent by the first caliph Abū Bakr; but according to the most trustworthy accounts, the town itself was conquered by ʿAmr b. al-ʿĀṣ; although the inhabitants were well treated, the soldiers of the garrison were massacred and henceforth regarded in the Christian world as martyrs.

Between the 1st/7th and 3rd/9th centuries, the town of Ghazza is rarely mentioned in the texts. We know only that at the end of the 2nd/8th century the town had to endure the conflicts between the Arab tribes that had settled in Syria and Palestine, and that in 150/767 the great jurisconsult al-Shāfiʿī was born there. In the 4th/10th century, the period when it came beneath the domination of the Fāṭimids, the geographers described it as an important town possessing a beautiful Great Mosque; extending to the edge of the desert and to within a mile of the sea, it was surrounded by vast orchards and vineyards; its port was Mīmās, the ancient Maioumas mentioned as early as the 3rd century B.C., the site of which corresponds with the modern al-Mīna.

The town of Ghazza was afterwards occupied by the Crusaders, who found it in ruins. They started to rebuild it in 544/1149, and the new citadel was given to the Templars by king Baldwin III of Jerusalem, while around it there began to grow up an unprotected lower town inhabited by peasants and merchants. This stronghold helped the Crusaders in their capture of ʿAskalān [*q.v.*], which took place in 548/1153. Some years later the town was assaulted by Ṣalāḥ al-Din who, in 565/1170, sacked the lower town, though he was unable to capture the citadel. It was finally surrendered to this sovereign by the Grand Master of the Templars after the fall of Jerusalem. Recaptured by Richard Cœur de Lion, it became a stake in the negotiations which started between the Crusaders and the Muslims, and was then restored to the latter under the terms of the treaty of 626/1229. Soon afterwards, in 636/1239 and 642/1244, it was the scene of two serious defeats for the Crusaders, and immediately before the Mongol invasion it was a source of rivalry between the Syrian Ayyūbids and the Egyptians, before being itself occupied by the armies of Hūlāgū, marking the furthest limit of their advance.

In the Mamlūk period, Ghazza became the chief town of a district that for the most part belonged to the province of Damascus, though at times it was independent. The town was then very rich and very extensive, if one is to believe the accounts of contemporary geographers and travellers, all of whom stress its economic prosperity, which derived partly from the richness of the surrounding district, abundantly irrigated by subterranean water, and partly from the energy of its merchants. Its most sought-after products were the grape and the fig, but the abundance of its *sūḳs* was also a source of pride and, according to the Arab authors, it combined three types of social life represented by the merchants, farmers and stock-breeders. The population, belonging to various tribal groups, was very turbulent and always involved in strife. Ghazza eventually possessed numerous public buildings—mosques, *madrasas*, convents, a hospital and caravanserais, some of which still survive. The chief mosque, built on the foundations of the Crusader church of St. John through the efforts of the governor al-Djāwlī at the beginning of the 8th/14th century, remained standing until the 1914-18 war.

The arrival of the Ottomans in 922/1516 brought suffering to Ghazza. The inhabitants, misled by a false report of a Mamlūk victory into thinking that they could massacre the new Turkish garrison, were the victims of severe reprisals and a certain number of them were executed. They seem, however, to have made a good recovery. The Ottoman *tapu* registers [see DAFTAR-I KHĀḲĀNĪ] show an increase in population in the city from under 1000 households in 932/1525-6 to well over 2000 in 955/1548-9; the survey of 963-4/1555-7 shows a slight decline. The population was predominantly Muslim, with Christian and Jewish minorities and a small group of Samaritans—18 households in 963-4. The registers also show a number of retired members of the former *djund al-ḥalḳa* as living in the city. Kurdish and Turcoman quarters are also shown. At the end of the 11th/17th century, in about 1070/1660, Ghazza enjoyed a period of particular prosperity, under the government of a family of pashas, the most celebrated of whom, Ḥusayn Pasha, succeeded in putting a stop to the periodic raids of the Bedouins, while he maintained good relations with the Christians and Europeans. As the Chevalier d'Arvieux put it, the town at that time acted as the capital of Palestine, and Arabic, Turkish and Greek were all spoken there. Among its principal buildings were six mosques, besides the Great Mosque, numerous baths and markets and two churches, one Armenian and the other Greek.

The 18th century, on the other hand, was characterized in Ghazza by various disturbances and by the turbulence of the Bedouins, whom the Ottoman authorities had some difficulty in subduing; it closed with Napoleon's victory in 1799 immediately outside the town. In the 19th century Ghazza shared the fate of Palestine, being for a time attached to Egypt and then made directly subject to Ottoman governors; at the end of the 1914-18 war, it formed part of Palestine under the British mandate.

The period of peace experienced by Ghazza at the end of the 19th and the beginning of the 20th century brought about a marked increase in its population, which rose from 16,000 inhabitants in 1882 to 40,000 in 1906 (of whom 750 were Christians and 160 Jews). By 1932, however, the population had declined to

approximately 17,000, of whom a small minority were Orthodox Greeks, who maintained a church dating from the 12th century with the revered tomb of St. Porphyry, bishop of Ghazza in the 5th century. The Muslims who, since the 1914-18 war, had gathered for prayer in a place near the site of the now destroyed Great Mosque, also venerated a sanctuary dedicated to Nabī Hāshim, which is found mentioned as early as the 6th/12th century. Despite the progressive disappearance of caravans, the town was for a long time to possess a flourishing market with abundant supplies of various commodities, while the costume and mode of life there were close to those of Egypt. But its direct attachment to the latter country after the armistice of 1949 was to mark the decline of its commercial activity, though at the same time reaffirming its former strategic importance.

AL-GHAZZĀLĪ [see AL-GHAZĀLĪ].

GHĪBA [see PANDJĀB].

GHIDHĀ', (A., plur. *aghdhiya*) indicates strictly in Arabic "that which ensures the growth and the good health of the body" (*Ḳāmūs*, s.v.), in other words feeding and food. We shall deal here only with the factors which determined the diet of the principal Muslim peoples in the classical period (though sometimes making modern comparisons), in particular with the laws of the Muslim religion concerning food. The descriptive section will be limited to the pre-Islamic period. The more particularly culinary aspects, *i.e.*, those concerning the preparation of special dishes, will be dealt with in the article ṬABKH. We have omitted for lack of space several aspects of the subject: the variations of food in the contemporary Muslim world, its place in social life (and in particular the question, often dealt with by Muslims, of the *ādāb al-akl*—rules of table manners), the estimated nutritional value in quality and in quantity of the food in the various Islamic countries, etc.

i. — Food of the pre-Islamic Arabs

The food of the inhabitants of the Arabian peninsula (apart from the agricultural and civilized states of the south) was—and in large measure still is today—typical of the diet of a pastoral people in a desert region with scattered cultivated oases. We can get an idea of this food from ancient poetry, the classical texts and the Ḳur'ān (the sources have been examined by G. Jacob, *Altarabisches Beduinenleben*, Berlin 1897, 88-109, 246; M. 'I. Darwaza, *'Aṣr al-Nabī*, Damascus 1365/1946, 80-6; M. Sh. Alūsī, *Bulūgh al-arab fī ma'rifat aḥwāl al-'Arab*[2], i, Cairo 1343/1924, 380-5; M. Kurd 'Alī, *Ma'ākil al-'Arab*, in *al-Muḳtabas*, iii (1908), 569-79). We have examined in addition the *ḥadīth*s, the data of which are acceptable on this matter, since even forgers took great pains to add to the credibility of their work by the archaism of the customs to which they referred.

The essential product from the raising of domestic animals was milk (*laban* rather than *ḥalīb*), one of the two basic foods of the Arabs. The Ḳur'ān (XVI, 68/66) pays an eloquent tribute to this liquid, calling it "sweet to drinkers", and numerous traditions witness how greatly the Bedouin longed for it (*'ayma*) when they were deprived of it (H. Lammens, *Etudes sur le siècle des Omayyades*, Beirut 1930, 325 = *MFOB*, iv (1910), 91 ff.). Mainly camel's milk was drunk, also that of goats and sheep. It could be drunk diluted with water, but sour milk (*ḥāzir*) was despised (G. Jacob, *Altarab. Beduinenleben*, Berlin 1897, 95). Milk-products from it were: *samn* "clarified butter" which was used for cooking and which disgusted the Romans of Aelius Gallus when they found it used instead of oil in the Ḥidjāz (Strabo, xvi, 4, 24; it is probably his βούτυρον); *aḳiṭ* "sour-milk cheese" (al-Bukhārī, lxx, 8, 16; Abū Dāwūd, xxvi, 27; Imru' al-Ḳays, ed. Ahlwardt, *The divans*, London 1870, 162, no. 68, verse 5); *djubn*, cheese of an unknown sort (Abū Dāwūd, xxvi, 38). Camels were slaughtered only in cases of great necessity. In general it was rare for meat to be eaten, but this made it all the more appreciated (Aḥmad b. Ḥanbal, iii, 303, etc.). They seem to have eaten chiefly mutton, sometimes from sheep kept near the house and specially fattened for the table (*dādjin*) (Ibn Ḥanbal, iii, 303, etc.; al-Ṭabarī, i, 1523; cf. Ibn Hishām, 735), of which the Prophet preferred the shoulder and the fore-leg (al-Bukhārī, lxx, 26, 58; Ibn Ḥanbal, vi, 392; cf. Ibn Sa'd, i/2, 108, 109; Abū Dāwūd, xxvi, 20; Ibn Hishām, 764). The Medinans were extremely fond of the fat from its fat tail (*alya*) and of that from the camel's hump, which they cut from the living animal, a practice which Muḥammad forbade (al-Dārimī, vii, 9; references in poetry *apud* G. Jacob, *Altar. Beduinenleben*, 94; the same practice in the eastern Sahara: W. Besnard, *Que mangent-ils?*, Paris 1947, 47 f.). Specially prized parts of the camel were the udder, the liver, the foetus, etc. but the stomach and the tail were the food of slaves (Jacob, *ibid.*). It seems that it was not only in time of famine that they ate blood drawn from the veins of a living camel and allowed to coagulate or put into pieces of gut and cooked (al-Maydānī, ii, 119; *Ḥamāsa*, 645; *Aghānī*, xvi, 107: 20; W. R. Smith, *Lectures on the religion of the Semites*[2], 234). They ate very little beef (*ibid.*; Lammens, *Berceau de l'Islam*, Rome 1914, 132) or goat meat. Pigs and fowls (Jacob, *ibid.*, 84 f.) seem to have been scarcely known, although some *ḥadīth*s relate that the Prophet ate the latter (al-Dārimī, viii, 22).

The agriculture of the oases provided mainly dates, another basic food of the Arabs (Lammens, *Berceau de l'Islam*, 82 f.; idem, *Fāṭima*, 44, n. 2). In the oases they were almost the only food. "When the Prophet died, we were nourished only by the two black things: dates and water" (saying attributed to ʿĀʾis̲h̲a: al-Buk̲h̲ārī, lxx, 6, 41; cf. Lammens, *Berceau*, 105, n. 3; for the inhabitants of the Fertile Crescent, on the other hand, the staple foods, even in the desert, were bread and water: *Genesis*, XXI, 14; *I Kings*, XVIII, 14). A scarcity of dates is the equivalent of famine (al-Dārimī, viii, 26; Abū Dāwūd, xxvi, 41; Muslim, xxxvi, 152, 153; cf. *Ag̲h̲ānī*, ii, 161). They liked to stress their therapeutic qualities and they formed the stock provisions when setting off on an expedition (Abū Dāwūd, xxvi, 46). They were eaten also at festivals, such as the *walīma* in honour of the marriage of Muḥammad with Ṣafiyya (al-Bukhārī, lxx, 8, 16; Abū Dāwūd, xxvi, 2). They were eaten dried (*tamr*), fresh (*ruṭab*)—when they were especially relished (Muḥammad was particularly fond of them eaten with cucumber, *ḳut̲h̲t̲h̲āʾ*, cf. Wensinck, *Index*, s.v.)—or when they were beginning to ripen (*busr*). A special variety called *ʿad̲j̲wa* was particularly sought after (especially those grown in the upper region of Medina) and considered as a sovereign remedy against poisons and sorcery (al-Buk̲h̲ārī, lxx, 48; Muslim, xxxvi, 155-6, etc.).

Bread may not have been such an aristocratic food as has been thought, for barley bread at least was not uncommon among the settled populations. All the same, the Prophet and his family never ate bread made from wheat flour three days running during the period between the Hid̲j̲ra and his death (al-Buk̲h̲ārī, lxx, 23, 27; the *ḥadīt̲h̲* of Abū Hurayra according to which the Prophet never ate barley bread is contradicted by several others). The only one of his wedding feasts at which Muḥammad offered his guests bread was that on the occasion of his marriage with Zaynab (Aḥmad b. Ḥanbal, iii, 172, cf. 99). The flour was not sifted—Muḥammad had never seen a sieve—but simply blown to separate it from any coarse residue of husks (Ibn Saʿd, i/2, 109; al-Buk̲h̲ārī, lxx, 22, 23). Among the nomads, however, bread was very rare (Ammianus, xiv, 4, 6; Lammens, *Berceau*, 141; Nöldeke, *Neue Beiträge zur sem. Sprachwiss.*, Strasbourg 1910, 56 f.). Strabo, following Aelius Gallus, speaks of a region of the Ḥid̲j̲āz where the only cereal is ζειά, perhaps a sort of soft wheat (xvi, 4, 24).

Bread was eaten with a "condiment" (*udm, idām*) which was moreover singularly meagre. Those who were able to season their bread with vinegar or oil were not considered as "living on dry bread" (root *ḳfr*) (Zayd b. ʿAlī, *Corpus iuris*, ed. Griffini, Milan 1919, no. 1011: read *yaḳtafiru*) and Muḥammad pronounced vinegar the best of condiments (cf. Wensinck, *Handbook*, s.v. Food; also Abū Dāwūd, xxvi, 39). We also hear of his being content with a date as flavouring for a loaf of barley bread (Abū Dāwūd, xxvi, 41). According to a *ḥadīt̲h̲* attributed to ʿAlī, the best accompaniment was meat, the worst salt and the middle place was given to *samn* or oil (Zayd b. ʿAlī, no. 450; cf. al-Buk̲h̲ārī, lxiv, 29). But it is possible that some at least of these *ḥadīt̲h̲*s were contaminated by later ascetic trends.

The settled agricultural populations were able to enjoy also some vegetables. Among the *buḳūl*, "herbs", the Prophet preferred *hindibāʾ*, "chicory". He was also fond of beets (*silḳ*; al-Buk̲h̲ārī, lxx, 17) and of some vegetables belonging to the gourd family which are difficult to identify exactly (*dubbāʾ* "a kind of marrow?", *ḳut̲h̲t̲h̲āʾ* "a kind of cucumber", *ḳarʿ* "marrow"). Leeks (*kurrāt̲h̲*) were forbidden, though not *ḥarām* (Ibn Ḥanbal, i, 15, iii, 397), and so were raw garlic and onions. But according to other traditions, Muḥammad merely expressed his personal dislike of them and forbade those who had recently eaten them to come to the place of prayer (references in Wensink, *Handbook*, s.vv. *Garlic, Onion*, and *Concordance*, s.v.; also al-Dārimī, viii, 21). Olives also were eaten (Ḳurʾān, VI, 142/141) and the pith of the palm-tree (*d̲j̲ummār*; al-Buk̲h̲ārī, lxx, 42, etc.). Fruits mentioned are the citron (*utrud̲j̲d̲j̲a*; al-Buk̲h̲ārī, lxx, 30), which is thought to be found also (according to the parallel Jewish text and certain Muslim commentaries) in Ḳurʾān, XII, 31 (under the name of *mitk, matk*, to be read in place of *muttakaʾ*, or disguised by a corruption in the text), the pomegranate (Ḳurʾān, VI, 99, 142/141; lv, 68), the grape (cf. Ḳurʾān, VI, 142/141; cf. Lammens, *Berceau*, 90 f.; the dried raisins of Ṭāʾif were famous). The apple and the fig are scarcely mentioned by the poets (Jacob, *Altar. Bed.*, 230) or in *ḥadīt̲h̲*s (Wensinck, *Concordance*, s.vv.).

The pastoral nomads were able to use also, in addition to the meat and the milk-products provided by their flocks, wild vegetables, game and small desert animals. Among the plants may be mentioned *kabāt̲h̲*, the ripe fruit of the thorn tree *arāk* (*Capparis sedata*; cf. Lammens, *Berceau*, 69; al-Buk̲h̲ārī, lxx, 50; Muslim, xxxvi, 163), desert truffles, which, according to a saying attributed to Muḥammad, came from the manna sent to the Israelites (Muslim, xxxvi, 157-62; cf. Dāwūd al-Anṭākī, *Tad̲h̲kira*, Cairo, 1356/1937, i, 252; Lammens, *Berceau*, 49), etc. The game mentioned in the traditions are the hare (Abū Dāwūd, xxvi, 26; al-Dārimī, vii, 7) and the bustard (*ḥubārā*; Abū Dāwūd, xxvi, 28); in addition they ate the flesh of the large desert lizards, food which is said to have disgusted Muḥammad, as a member of a settled community (Ibn Saʿd, i/2, 112); he is said to have regarded these lizards as the metamorphosis of an Israelite tribe (cf. Wensinck, *Concordance*, s.v. *ḍubb*; Robertson Smith, *Kinship*..., new ed., London 1903, 75, n. 2, 230 f.; Cl. Huart, in *JA*, 10th series, xii (1908), 450, n. 1; *Rev. biblique*, xii (1903), 104; a food of Ḥimyar according to a poet of Hud̲h̲ayl: Wellhausen, *Skizzen und Vorarbeiten*, i, Berlin 1884, no. 147[2], tr. 114); the flesh of hedgehogs (Abū Dāwūd, xxvi, 29b), of grasshoppers (Abū Dāwūd, xxvi, 34; al-Dārimī, vii, 5 ff.; cf. Robertson Smith, *Kinship*[2], 75, n. 2. 288; and art. D̲J̲ARĀD), and even that of mice, lice and vermin (Jacob, *Altar. Bed.*, 95, 247 f.).

The inhabitants of coastal regions could also add fish to their diet (Ḳurʾān, V, 97/96).

Besides milk and water (often muddy and seldom plentiful), the Arabs were familiar with a certain number of fermented drinks prepared from dates, honey, wheat, barley, raisins. But wine made from grapes, which (in spite of the fact that there were vineyards at Ṭāʾif for example) was generally imported, was an expensive luxury. It was drunk in the taverns (*ḥānūt*) which were run by the Jews or the Christians of Ḥīra (*ʿIbādī*) and in which women singers (*ḳayna*) performed (Jacob, *op. cit.*, 96-109, 248-54; I. Goldziher, *Muhammedanische Studien*, i, 1889, 21 ff.; I. Guidi, *L'Arabie antéislamique*, Paris 1921, 53 ff.; and art. K̲H̲AMR).

These various resources, which combined foods of agricultural and pastoral origin but which included no, or very few, products from countries outside

Arabia, were prepared in a very elementary fashion. The meats were roasted (roots sh.w.y, ḥ.n.dh, ṣ.l.y.) or baked (ṭ.b.kh). The meat was cut in slices or in thin strips which were left to dry in the sun (ḳadīd) (*e.g.*, Abū Dāwūd, xxvi, 36a; Abu 'l-Hindī *apud* Alūsī, *Bulūgh*, i, 380; in general on the methods of cooking, see Jacob, *Altar. Beduinenleben*, 90 ff.). A *ḥadīth* is cited according to which the Prophet announced "I am only the son of a woman of the Ḳuraysh who fed on *ḳadīd*" (cited in an epigraph by Bint al-Shāṭiʾ, *Umm al-Nabī*, Cairo 1958, 5). The oven proper seems to have been little known. The only word for oven attested in early Arabic, *tannūr*, is a borrowing from Aramaic (cf. Landberg, *Glossaire datînois*, i, 238 f.) and the purely Arabic word *ṭābūn* seems originally to have meant the cavity in which fire was made to shelter it from the wind (cf. Lane).

The cooking was simple and made use of very few different combinations of food. Two of the dishes mentioned are *tharīd*, associated with the tribal tradition of the Ḳuraysh, consisting of bread crumbled into a broth of meat and vegetables, and *ḥays*, a mixture of dates, butter and milk, both being among the favourite dishes of the Prophet, who said that ʿĀʾisha held among women the place which *tharīd* held among food (Wensinck, *Concordance*, i, 290). They made many kinds of broth (*maraḳ*, *maraḳa*), to which tradition prescribes that plenty of water should be added in order to be able to give some to neighbours (al-Dārimī, viii, 37), especially a broth of marrows (*dubbāʾ*) and of *ḳadīd*. When on expeditions, soldiers took with them *sawīḳ*, a kind of dried barley meal to which was added water, butter or fat from the tails of sheep. Several dishes belong to the broad category of gruels, the usual food of agricultural peoples (*e.g.*, gruels made with milk and with *samn*; al-Bukhārī, lxx, 48; Ibn Ḥanbal, iii, 147, etc.); these include *ḥarīra*, made from flour cooked with milk (al-Bukhāri, lxx, 15), *talbīna*, a similar dish eaten at funeral meals, *khazīr* (or *khazīra*), a gruel generally made from bran and meat cut up into small pieces and cooked in water (al-Bukhārī, lxx, 15, etc.). We notice that the general tendency is a search for fat, for greasy and heavy food, a tendency which still continues in Bedouin cooking and which is probably dictated by physiological needs. There is little tendency mentioned to spiced foods. The Arabs engaged in the transport of spices, but they were too precious a merchandise for them to use themselves at all frequently. We find mentioned, however, camphor and ginger (Ḳurʾān, LXXVI, 5, 17), cloves, pepper, aloes and the sweet wood called lignum aloes (a few references in poetry *apud* Jacob, *op. cit.*, 150, 258).

There seem to have been few prohibitions concerning food, imposed rather by custom (as with us) than by a definite code of laws, and often restricted to one or to several tribes (cf. Wellhausen, *Reste*², 168 ff.). It is, at least in part, against pagan taboos of this sort that the Ḳurʾān seems to inveigh (II, 163/168 ff., VI, 118 ff.); there were often prohibitions concerning specific animals (and not a whole species), not as impure, but as consecrated to the Divinity (Ḳurʾān, V, 102, VI, 139/138, where there is also mentioned a harvest—*ḥarth*—which is taboo; the flesh of newly-born animals was forbidden to women, with the exception of still-born animals: Ḳurʾān, VI, 140/139). Even at Mecca itself, at the time of the *iḥrām*, the *ḥums*, *i.e.*, the holy families serving the local sanctuaries (Lammens, *L'Arabie occidentale avant l'hégire*, Beirut 1928, 130), abstained from meat, from clarified butter, from *aḳiṭ* (and perhaps from all milk-products) as well as from oil [see ḤUMS]. There were various portions of meat which were not eaten: the heart among the Djuʿfī tribe (Ibn Saʿd, i/2, 61 f.), the fat tail of the sheep among the Balī of Ḳuḍāʿa who, not being assimilated with the rest of the Islamic population, still retained this taboo in Andalus (Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, ed. E. Lévi-Provençal, Cairo 1948, 415; cf. H. Pérès, in *Mél. W. Marçais*, Paris 1950, 293 f.), the testicles, at least on feast days (al-Ṭabarī, *Tafsīr*, Cairo 1321/1903, xxx, 166); but there may have been here, as in present-day Arabia (in spite of the religious agitation which appears to have been provoked among the Djuʿfī who were forced by Muḥammad to break the taboo) "rational" motives: in north-western Arabia they do not eat the hearts of birds for fear of becoming as timorous as they are (A. Musil, *The manners and customs of the Rwala Bedouins*, New York 1928, 97; *Arabia Petraea*, iii, Vienna 1908, 150); Hudhalī poets reproach the South-Arabian tribe of Marthad for eating grasshoppers (*Dīwān Hudhayl*, 57, 147), but this was rather a special distaste for this food, or an affectation. A later saying claimed that the Bedouin ate "everything that crawls or walks except the chameleon" (*umm ḥubayn*; Ibn ʿAbd Rabbih, *ʿIḳd*, ed. A. Amīn, etc., iii, Cairo 1942, 485; Ibn al-Ukhuwwa, *Maʿālim al-ḳurbā*, ed. R. Levy, London 1938, 101 f.; cf. Alūsī, *Bulūgh*, i, 380; Kurd ʿAlī, *Maʾākil*, 570). According to Sozomenus (5th century A.D.), the Saracens abstained from pork and observed a number of Jewish ceremonies (*Ecclesiastical history*, vi, 38 = *PG*, lxvii, 1412); it was probably a case of the Arab neighbours of Palestine coming under Jewish-Christian influences. But Pliny had already noted (*Nat Hist.*, viii, 78 = 52, § 212) the absence of pork in Arabia. In case of vital necessity, which often arose in the severe conditions of desert life, all the taboos were relaxed, even the general taboo on human flesh (*Dīwān Hudhayl*, 161 ff.; Procopius, *Bell. Pers.*, I, 19, 4) though it should not therefore be thought that cannibalism was general (J. Henninger, *Kannibalismus in Arabien?*, in *Anthropos*, xxxv-xxxvi (1940-1), 631 ff.), but during battles the heat of passionate hatred, or particular rites, often led men to drink or lick up the blood or the brains, to gnaw the liver of the dead, etc. (Ammianus, xxxi, 16; Ibn Hishām, 581, etc.; cf. Robertson Smith, *Kinship*², 75, n. 2, 295 f.; Nallino, *Raccolta*, iii, 86). Vows were made of temporary abstinence: from *samn*, milk, meat, wine, sometimes even to fast completely [see NADHR]. In some regions wine must have played a religious part. Some rather doubtful texts speak of libations of wine poured on tombs (Jacob, *Altar. Beduinenleben*, 143; Wellhausen, *Reste*², 182 f.; Lammens, *Arabie occid.*, 204). In Liḥyān it is perhaps a case of a large offering of wine to Dhū Ghābat to expiate a murder (W. Caskel, *Lihyan und Lihyanisch*, Cologne-Opladen 1954, no. 82). At Palmyra, wine was ceremonially drunk at the funeral banquets of the *thiasoi* (J. G. Février, *La religion des Palmyréniens*, Paris 1931, 194 f.; R. Dussaud, in *RHR*, xiv (1927), 200 ff.). It is perhaps to this sacred importance that we are to attribute the frequent use in Saphaitic of names such as Shrb (Sharīb? "drinking companion") and Skrn (Sakrān "drunk" "intoxicated"; G. Ryckmans, *Noms propres sud-sémitiques*, Louvain 1934, i, 212, 149, ii, 130, 99). At Mecca, at the moment of deconsecration which concluded the *ḥadjdj*, there was ritually drunk a fermented beverage with a basis of grapes (*sharāb*, *nabīdh*) or of barley and honey

(*sawīḳ*) and this rite was continued under Islam until the 2nd/8th century; a similar rite at the beginning of the ceremonies could explain the name of *yawm al-tarwiya* which is given to the first day (Gaudefroy-Demombynes, *Le pèlerinage à la Mekke*, Paris 1923, 89-101). But, in other regions, in other circumstances or in other cults, there was abstinence. Wine was one of the things which people most often vowed to renounce; in particular those swearing vengeance abstained from it until their vengeance was accomplished (Lammens, *L'Arabie occidentale avant l'hégire*, Beirut 1928, 185; art. NADHR; Alūsī, *Bulūgh*, iii, 24). The Nabataeans did not drink wine (Diodorus, xix, 94, 3) and the Arabs in general had the reputation of being water drinkers (Ammianus, xiv, 4, 6; Spartianus, *Pescennius Niger*, 7). A Nabataean set up at Palmyra in 132 A.D. two altars to his god Shayʿ al-ḳawm who, as he emphasizes, probably with polemic intent, "does not drink (or perhaps: does not allow to drink) wine" (*CIS*, ii, 3973[5]). This is very probably the god known in Greek as Λυκοῦργος (inscr. Waddington 2286a), who was regarded as the opposite of Aʿara Dhu 'l-Sharā, in Greek Δουσάρης and identified with Dionysos [see DHU 'L-SHARĀ], hence the mythical story of the fight between the god of wine and his enemy (Nonnos, *Dionys.*, xx, xxi).

Shortly before the time of the Prophet, those who were attracted to monotheism [see ḤANĪF] would seem to have adopted certain prohibitions in order to conform to the Noachic precepts enjoined upon Jewish proselytes and in general adopted by the Christians (*Acts*, xv, 29). An example is Zayd b. ʿAmr from the ʿAdī clan of the Ḳuraysh, who is said to have abstained from animals which had not been ritually slaughtered, from blood and from meat which had been sacrificed to idols (Ibn Hishām, 144). Others, probably from asceticism, under the influence of the earlier practices mentioned above and of the abstinence which was enjoined by Manicheism, by the Christian ascetics and certain Christian sects, and which was practised by other Semitic peoples (if the fact is indeed true), are said to have abstained from drinking wine—*e.g.*, another Ḳurashī, ʿUthmān b. Maẓʿūn, who was later to embrace Islam (Ibn Saʿd, iii/1, 286). Musaylima forbade wine as well as sexual relations to those who were already fathers (Sayf b. ʿUmar, *apud* al-Ṭabarī, i, 1916; as against Ibn Hishām, 946). It has been possible to compile a list of those who abstained from wine in the Djāhiliyya (critical list in Caetani, *Annali*, i, 586).

The epigraphic sources add hardly anything to this picture for central and northern Arabia. They do, however, illustrate the importance attached there to game and hunting. This importance is also reflected in the rock engravings which accompany the graffiti or are contemporary with them (cf., *e.g.*, E. Littmann, *Thamūd und Ṣafā*, Leipzig 1940, 34 f., 100). They hunted gazelle, ostriches, ibex, perhaps also wild asses etc. A "Thamudean" text mentions the capture of a lizard (*wrl*), perhaps for food (*ibid.*, 60, no. 77 = Eut. 44, but A. van den Branden, *Les inscriptions thamoudéennes*, Louvain 1950, 69 reads *wʿl* "chamois"). The domestic animals mentioned: camels, cattle, sheep, horses, donkeys, were used partly for food (cf., *e.g.*, van den Branden, *op. cit.*, 8). The reference to an abundance of milk (*drr*, *Corpus Inscriptionum Semiticarum*, pars v, vol. i, Paris 1950, no. 362) and the reference to bees (van den Branden, inscr. HU 250) are dubious, as are the references to dates (A. van den Branden, *Les textes thamoudéens de Philby*, i, Louvain 1956, 5). Fish caught in the pools of stagnant water on the edges of the desert were preserved by drying (*CIS*, v, 4902, 4384).

ii. — Pre-Islamic Southern Arabia

Southern Arabia was much more agricultural and thus afforded a much greater variety of vegetable food. The dates (*tmr*) supplied by the many palm groves (*nkhl*) which are often the subject of the inscriptions (*e.g.*, *CIS*, pars iv [cited hereafter as *CIH*], 375, 403, 414, 615, 616, etc.; cf. Ammianus Marcellinus, XXIII, 6, 45-7, Eratosthenes *apud* Strabo, XVI, 4, 24) must have been one of the staple foods. The sweet pith from the centre of the trunk of the palm tree (in Arabic *ḳulb*, *ḳalb*, *lubb*, etc., often confused with *djummār*, palm-cabbage; cf. al-Aṣmaʿī, *K. al-Nakhl wa 'l-karm*, ed. A. Haffner, Beirut 1908, 5, and notes; *Tuḥfat al-aḥbāb*, ed. H. P. J. Renaud and G. S. Colin, Paris 1934, no. 107) seems to us to be the *lbb* which was preserved in a temple (*CIH*, 548[13]; Rodinson, *Comptes Rendus du GLECS*, ix (1960-3), 103 f.). Wheat was produced only in moderate quantities and had to be imported (*Periplus of the Erythrean Sea*, §§ 24, 28, 32). Taxes were paid in flour (*ṭḥn* Gl. 1571[3], cf. N. Rhodokanakis, *Altsab. Texte*, i = *SBAK. Wien*, ccvi/2, 1927, 104-7). Flour (*ṭḥn*, flour in general, *dḳḳ*, the flour of cereals, perhaps *khrṣ*?) was made with wheat (*br*), barley (*shʿr*), dates (*tmr*), *gdhdht*, which was perhaps a kind of wheat (it seems difficult to translate it literally as its Arabic equivalent *djadhīdha* "wheat husked and crushed"), and in addition semolina (*sdl*, cf. Ethiopic *sendālē*; *CIH*, 540: 39-40, 83, 86-8; 541: 120). We may have in *CIH*, 408 a reference to a field (*mʿlṣ(t)*; with the emphatic, *ṣ*!) in which would be grown the variety of wheat called in Arabic *ʿalas*; this inscription seems to refer to it in two aspects *yhr* and *frʿ* (cf. *CIH*, 352: 7, 11; cf. also *dhr'*, in *RES*, 2774: 4). Vegetable gardens (*tbḳlt*, in *RES*, 4636: 6, 7), orchards (*mhgrt*, in *CIH*, 204: 3, 546: 11; *ḳshmt*, in *CIH*, 308: 9), vineyards (*'ʿnb*, in *CIH*, 342: 11-2, 604: 3, *wyn*, in *CIH*, 228: 2, 276: 3, etc.) were numerous. They produced vegetables (*bḳl*, in *SE*, 48[3], translated "broad beans" by Conti-Rossini) and fruit (*ṯhmr*). The country produced sesame oil (Pliny, *Nat. Hist.*, VI, 28 (32), § 161), but not enough for its needs and had to import it via Moscha (*Periplus*, § 32). As a condiment they used capers which they soaked (*kbr wlkh*, in *RES*, 2845; cf. N. Rhodokanakis, *Studien* . . ., i = *SBAK Wien*, 178, 4, 10 f.), and they imported saffron (*Periplus*, § 24) for the same purpose. Cinnamon, also imported in transit, obtained too high prices on the Roman market to be used locally (Pliny, *Nat. Hist.*, XII, 93). The *dbs* which was distributed in large quantities to the workers on the dam of Mārib (*CIH*, 540: 96; cf. also 548: 12 f.) must have been a treacle of grapes or of other fruits, different from the honey which according to Pliny was produced in abundance in the kingdom of Saba (*Nat. Hist.*, VI, 32: 18, § 161). Eratosthenes mentions numerous apiaries (? μελιτουργεῖα) in Southern Arabia (Strabo, XVI, 4: 2, § 768).

The meat (*bshr*, in *CIH*, 563: 3) was in the main that of animals slaughtered (*ṭbkh*, in *CIH*, 541: 122-3, cf. Hebrew *ṭib^{h}ḥāh*) probably according to the usual Semitic rites. For the workers engaged on the repairs to the dam of Mārib they slaughtered thousands of cattle (*bḳr*) and probably also sheep (cf. Dionysios, *Periegesis*, 942 f.), one sort of which had the characteristic name of *dhbyḥ* (Ar. *dhabā'iḥ* "victims") and the other the enigmatic name of *ḳrṣ*, and, on one occasion, 207,000 *ḳṭnt*, which seems to represent

portions rather than head of sheep and goats (cf. Gl. 1142: 9). They were given also 1100 *ʾḏḥ* ("lambs used for sacrifice" to judge from Ar. *aḍāḥi*, pl. of *ḍaḥiyya*) and *ʿḍwd* (perhaps "fat lambs" to judge from Ar. *ʿaḍid*?; *CIH*, 540: 41 ff., 88 ff.; 541: 122 ff.). The sheep were called elsewhere *khrf*, in *RES*, 2959: 2 (Min.), Van Lessen i: 9 (Ḳatab.), and in the Minean colony of the Ḥidjāz *ḍʾn* (in contrast to the goats *mʿzy*, in *JSa*, 19: 11, called in Saba *sfr*, Gl. 1000 A 3). According to Eratosthenes they ate also birds, except for geese and hens (Strabo, XVI, 4, 2 = 768). On the shores of the Indian Ocean, some communities ate mainly fish (*Periplus*, § 27) and the nomads lived on game (Pliny, *Nat. Hist.*, VI, 32: 18 = § 161). These people drank milk (*ibid.*) and the workers of Mārib were supplied with butter (*khmʾt*, Hebrew *ḥèmʾâh*, Akkadian *khimētu*, etc.; *CIH*, 540: 96 f.).

The main drink (*CIH*, 563: 2?) seems to have been palm wine (Strabo, XVI, 4, 25, § 783; Pliny, *Nat. Hist.*, VI, 28 (32), § 161), which was called *mzr*^{m} *dh-tmr*^{m} (*CIH*, 540: 50-1; cf. Ar. *mazar*, *mizr*, the word for various fermented drinks) or *sḳy*^{m} *dh-tmr*^{m}, perhaps with a north Arabic gloss *al-ḥalab* (*CIH*, 541: 129-30, but the hypothesis of J. M. Solá Solé, *Las dos grandes inscripciones sudarábigas del dique de Mârib*, Barcelona-Tübingen 1960, 37, raises some difficulties). However, the numerous vineyards (cf. above, and the popularity of the Dionysiac themes making use of the vine in sculpture) provided grape wine (*Periplus*, § 24) and a certain amount was imported (*ibid.*, §§ 24, 28). The workers on the Mārib dam were provided with more of this than of palm wine. A distinction was made between the fermented beverage (*sḳy*) made with the excellent grapes of Ghirbīb (*ghrbb*, cf. the classical dictionaries) and that prepared from dried raisins (*fṣy*, cf. *fuṣa*^{n}; *CIH*, 540; 46-8, 91-4; 541: 127-8). The *shnn* kept in a temple (*CIH*, 548[12]) is probably the *shanin* "whey or milk diluted with water" known in various Arab countries (cf. the classical dictionaries and Dozy). We do not know whether the thermal springs of therapeutic value, which according to Ammianus (XXIII, 6, 46) were numerous, were used for drinking.

Almost nothing is known about the ritual use of foods. Libations (*msty*, in *CIH*, 563: 2?) were made on special altars (*mslm*, in *RES*, 3512), but we do not know what was the liquid used. Nor is anything known about the prohibitions concerning food. Nevertheless Eratosthenes mentions the absence of pigs among the domestic animals of the region (Strabo, XVI, 4, 2 = 768).

iii. — Regulations concerning food in early Islam

Muḥammad's reforms were made under the influence of a milieu in which each religious community was distinguished by its own regulations concerning food. We have seen how in the pagan milieu the situation was rather chaotic, and there was the influence of the Noachic code, imposed on proselytes by the Jews and coinciding more or less with the original Christian code. The Revelation (texts conveniently brought together by D. Masson, *Le Coran et la Révélation judéo-chrétienne*, Paris 1958, ii, 577-86) in this respect also was to put an end to ignorance and errors and the Prophet was to declare lawful (*ḥalāl*) "good" foods (*al-ṭayyibāt*) and unlawful (*ḥarām*) unclean foods (*al-khabāʾith*; Ḳurʾān, VII, 156/157). But the Ḳurʾān insists above all on the beneficial nature of food in general. Food is one of the greatest of Divine blessings (often in the Meccan *sūras*: LXXX, 24; XVII, 72/70; XVI, 74; XIV, 37/32, etc.; cf. index of Blachère's tr., s.v. nourriture), which, however, must be used with moderation (VII, 29, Medinan) and which must not be rejected except in specific circumstances. The word "eat (*kulū*) ..." occurs nearly thirty times. Muḥammad is said to have obliged two newly converted Djuʿfīs to eat heart, taboo in their tribe, without which their conversion would have been incomplete (Ibn Saʿd, i/2, 62, l. 5 f.). The Ḳurʾān inveighs against men who arbitrarily deprive those who listen to them of certain foods (II, 163 f./168 f.; V, 89 f./87 f.; VI, 118 ff.; VII, 30/32; XVI, 117/116, texts which seem to belong to the beginning of the Prophet's stay at Medina). In some cases it is certain that the adversaries aimed at are pagans observing the prohibitions described above (II, 165; VI, 139-51/138-50; X, 60/59); but at Medina it became important to define Islam as against Judaism.

The mass of Jewish prohibitions concerning food led to the emphasizing of the fact that Allāh does not wish to impose too many burdens on His faithful people (II, 286). It seems that the Ḳurʾān is sometimes criticizing Judaizers or *ḥanīf*s who imposed on themselves excessive restrictions (VI, 118 ff.) and who wanted to influence the Prophet to do the same (VI, 116). The Jewish prohibitions (rather inexactly defined in VI, 147/146) are explained as a Divine punishment of the sins of the Israelites (IV, 158; XVI, 119). This is proved by the fact that they were not imposed on them before the revelation of the Torah, except for a prohibition, not of divine origin, which Isrāʾīl (Jacob) had imposed on himself (III, 87/93), a reference to the prohibition of the sciatic nerve after the struggle of Jacob and the angel (*Gen.*, XXXII, 33). They were moreover partially lifted by Jesus (III, 44/50). "Today" (V, 7) these forbidden foods are therefore permitted. We have here ideas taken from the Christian polemic against the Jews, particularly as exemplified by the Syriac writer of Iran, Aphraates (4th century A.D.); cf. his fifteenth homily (ed. Wright, London 1869, 309 ff.; cf. H. Speyer, *Die biblischen Erzählungen im Coran*, Gräfenheinischen 1931, reprinted Hildesheim 1961, 318 ff.). Only a limited number of prohibitions were retained: blood (and consequently "strangled" meats), *mayta*, *i.e.*, the flesh of a dead animal or one not killed specially for meat, pork, animals consecrated to a pagan divinity (II, 168/173; V, 4/3; VI, 146/145; XVI, 116/115; on the date of these passages, see J. Schacht, in *EI*[1], s.v. maita). In addition, during the Pilgrimage it was forbidden to those in a state of ritual purity to kill or (*a fortiori*) to eat game (V, 1, 95/94 ff.), while fish was permitted (V, 97/96; cf. XVI, 14). It was necessary only to invoke (*dhakara*) the name of Allāh on lawful foods (VI, 118 ff., 139/138; XXII, 35/34). Involuntary infringements of these rules, through force majeure or compulsion, are moreover regarded by Allāh with indulgence (II, 168/173; V, 5/3; VI, 119, 146/145; XVI, 116/115). They defined the Muslim community, but only as a particular category within the wide family of the Possessors of the Scripture, since it is permitted to eat the food of the *ahl al-kitāb* and vice-versa (V, 7/5). In fact, these prohibitions go further in conformity to the Jewish regulations than the Noachic regulations, which the Jews theoretically admitted as sufficient for any strangers allowed to live with them (only not to eat unbled meat, according to *Gen.*, IX, 4; cf. E. Schürer, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi*[4], Leipzig 1901-11, iii, 164 ff., 178, n. 77). There was, in short, a falling into line with the primitive Christian

position (which remained very closely observed in the East) as it is defined by the decree of the Apostles (*Acts*, XV, 29; cf. especially K. Böckenhoff, *Speisesatzungen mosaischer Art in mittelalterlichen Kirchenrechtsquellen des Morgen- und Abendlandes*, Münster i. W. 1907). They went further in demanding also abstention from pork. This abstention, one of the first to be practised by Judaizing pagans (Juvenal, XIV, 98 f.), was also the rule among certain Judaeo-Christians (*Didascalia*, 121, 27 ff.; cf. H. J. Schoeps, *Theologie und Geschichte des Judenchristentums*, Tübingen 1949, 341, n. 2) and it was presumably through this route that it became adopted in Arabia (see above, col. 1059 b); it was also adopted by the Christians of Ethiopia in imitation of the Old Testament (*Confessio fidei Claudii regis Aethiopiae*, ed. J. M. Wansleb, London 1661, 3 and n. 11; E. Ullendorff, in *JSS*, i (1956), 240-3; J. Baeteman, *Dictionnaire amarigna-français*, Dire Dawa 1929, col. 574; cf. M. Rodinson, in *Bibliotheca Orientalis*, xxi (1964), 241). The insistence on the lawfulness of fish arose perhaps from opposition to a Judaeo-Christian and Samaritan practice (Schoeps, *op. cit.*, 189 f.). In addition, an entirely new restriction appears in the Divine revelation: at first it praises the virtues of wine (XVI, 69), which is one of the delights promised to the elect in Paradise (XXXVII, 44/45 ff.; XLVII, 16/15), but later has reservations about it (II, 216/219), and then forbids it (V, 92/90). The commentators and the historians disagree on the causes and the date of this prohibition [see KHAMR]. The association with the prohibition of *maysir* suggests a link between wine and pagan usages (W. Montgomery Watt, *Muhammad at Medina*, Oxford 1956, 298 f.; M. Gaudefroy-Demombynes, *Mahomet*, Paris 1957, 570 f.; cf. above, col. 1059 b) and we have seen above that abstention from wine was a religious practice fairly common in Arabia in various milieus and on various occasions. It does not seem easy to agree with W. Montgomery Watt that it was also partly a case of discouraging the import of an expensive commodity which came from enemy countries. The initial indifference about it and the injunction contained in verse IV, 46/43 seem to indicate that this prohibition was essentially a reaction against the deplorable effects of drunkenness within the Medinan community, one of them perhaps being excessive extravagance. This does not exclude the possibility that the practices of abstention mentioned above contributed to the enactment of the prohibition. In addition to these general prohibitions on the eating of specific foods, Islam decreed a general temporary abstention from food at periodic intervals—the fast of Ramaḍān [see ṢAWM].

iv. — Food in the traditional Muslim world

In the Arab empire, which after 132/750 became the Muslim empire, the food in the various occupied countries naturally continued to be the same as it had been before they were conquered. The Arab conquerors adopted it, after a certain period of adaptation, perhaps adding certain dishes or practices of their own. For the food of each country reference should be made therefore to works describing the diet in the pre-Islamic civilizations. For Egypt, see A. Ruffer, *Food in Egypt*, Cairo 1919 (= *Mémoires présentés à l'Institut d'Egypte*, i); A. Erman and H. Ranke, *Ägypten and ägyptisches Leben im Altertum*, Tübingen 1923, 219-29; A. Wiedemann, *Das alte Ägypten*, Heidelberg 1920, 287-309 and also 250 ff., 259 ff., 271 f., 275 ff. On Syria and Palestine see especially R. A. S. Macalister, art. *Food* in J. Hastings, *Dictionary of the Bible*, ii, Edinburgh 1899, 27-43; A. Bertholet, *Kulturgeschichte Israels*, Göttingen 1919, 130-4; P. Thomsen, art. *Nahrung* in M. Ebert, *Reallexikon der Vorgeschichte*, Berlin 1924-32, viii, 429-31. On Mesopotamia, see B. Meissner, *Babylonien und Assyrien*, Heidelberg 1920-5, i, 413-20. The picture had been somewhat modified by the influence of Greek and Roman customs, on which see especially Orth, art. *Kochkunst* in *Pauly's Realencyclopädie d. class. Altertumswissenschaft*, Neue Bearb., xi/1, Stuttgart 1921, 944-82 and J. André, *L'alimentation et la cuisine à Rome*, Paris 1961 (= *Études et commentaires*, 38). For Sāsānid Iran, see A. Christensen, *L'Iran sous les Sassanides*², Copenhagen-Paris 1944, 477-9.

However, the Muslim conquest created a relatively coherent cultural area which survived the fragmentation of the political unity which had brought it into being. Yet the differences between countries are important. To give a picture of the food and its variations throughout the whole of this area would be a vast and difficult enterprise for which the necessary detailed monographs do not exist. We shall limit ourselves here to indicating the main factors which influence all these diets. References to precise facts have in most cases only the value of examples taken at random.

1. Products consumed. The formation of new cultural frontiers leads to the spread throughout the territory concerned of products which have formerly been known only in one section of it. In the case of products too heavy to transport, this spread can take place only by their being grown or made locally. The most striking phenomenon in the Muslim world was the spread of the growing of rice and of sugar cane.

Rice, originally from India, was already in pre-Islamic times being cultivated in Iran, in ʿIrāḳ and in Syria, but had hardly been used as food in the Roman world (only as a thickening for sauces); it spread as a crop and as food as far as Spain. It became a common item of food and especially of the poor (particularly in the form of bread made from rice flour) in the areas where it was intensively cultivated, but elsewhere it remained relatively a luxury food, used only in recherché dishes. In any case it did not take the place of wheat and did not acquire the importance which it had in India and in the Far East (cf. M. Canard, *Le riz dans le Proche-Orient aux premiers siècles de l'Islam*, in *Arabica*, vi (1959), 113-31, and art. RUZZ).

Sugar, introduced to Iran from India perhaps shortly before the Muslim conquest, spread after this through the whole of the Mediterranean world (cf. N. Deer, *The history of sugar*, i, London 1949, 68 ff., 74 ff.; and art. SUKKAR). It was used in the food of princes and wealthy people, but among the poor was found chiefly as a medicine (a significant text in the *K. al-Ḥarb al-maʿshūḳ* ..., tr. J. Finkel, in *Zeitschrift für Semitistik*, viii (1932), 5). Honey was generally less expensive, and in particular *dibs*, a treacle of grapes, carob etc., was the sugar of poor people (cf. M. Rodinson, *Recherches sur les documents arabes relatifs à la cuisine*, in *REI*, 1949, 147).

Large-scale transport was particularly necessary to bring to the towns from the surrounding countryside food products such as wheat which were consumed in large quantities. Wheat was everywhere a commodity traded on a large scale (cf. for example R. Le Tourneau, *Fès avant le protectorat*, Casablanca 1949, 377 ff., and art. ḲAMḤ).

Certain heavy products regularly consumed were however transported by caravans or by ships (river or sea transport) considerable distances from the specific region in which they were originally grown. Examples are Syrian olive oil coming down the Euphrates, the dates of Lower ʿIrāḳ or of Arabia, etc., and, later, coffee from Arabia [see KAHWA, ZAYTŪN]. A list of Iranian food products exported in this way is found in B. Spuler, *Iran*, 406 f., a picture of the trade in foodstuffs between the various provinces of the Ottoman empire in Gibb-Bowen, i/1, 304. Thus there were great differences in price for the same commodity in the regions in which it was produced and those which were at varying distances from them (*e.g.*, for rice, cf. W. Hinz, in *Die Welt des Orients*, ii (1954-9), 57 ff.), a further factor being the difficulty or otherwise of the transport (the price of rice rose in Istanbul when unfavourable winds delayed the ships from Alexandria, W. Hinz, *op. cit.*, 60).

The products of all the regions of the Muslim world were thus available throughout every part of it to those who could afford the sometimes high prices; but in addition there were available products imported from outside. Thus, in the Middle Ages, the Near East imported from Russia and the Slav countries dried and salted fish, honey and hazel nuts. (G. Jacob, *Welche Handelsartikel bezogen die Araber des Mittelalters aus den nordisch-baltischen Ländern*[2], Berlin 1891, 56 ff., 62 f.). In times of scarcity, Egypt in the 5th/11th century imported wheat from the Byzantine Empire (G. Wiet, *L'Egypte arabe*, Paris 1937, 230). Imports from Europe became numerous from the 6th/12th century onwards. Frederick II sold cereals to Tunisia and Andalusia (A. Schaube, *Handelgeschichte der romanischen Völker des Mittelmeergebiets*, Münich-Berlin 1906, 304, 327), the Pisans exported Tuscan oil to Tunisia (*ibid.*, 298), southern France in the 7th/13th century sent to the Maghrib wine, chestnuts, broad beans, saffron etc. (*ibid.*, 31 f.). Tuscan saffron was on sale in the Maghrib, in Egypt and in Frankish Syria (*ibid.*, 187, 206, 283, 398). Egypt imported cheese from Sicily and from Crete (S. D. Goitein, *Artisans en Méditerranée orientale au haut Moyen-Age*, in *Annales*, xv (1964), 863). In the Middle Ages, Iran imported from India peas, wheat, barley and millet (Spuler, *Iran*, 403). In the 12th/18th century Europe exported to the Levant spices, sugar, coffee etc. (Gibb-Bowen, i/1, 307).

Spices were imported from still more distant places, their lightness for transport and the high prices they commanded justifying the long journeys. From China, the Sunda Isles, India and East Africa came pepper, ginger, cinnamon, cloves, cardamom, mace, betel, musk and nutmeg [see TAWĀBIL].

2. Storage and preservation. The preservation of food is an important problem in all societies. The Muslim civilization had inherited processes from the ancient East and from the classical civilizations. Cereals were stored either in granaries [see AGADIR] or in silos (*maṭmūra* [*q.v.*]) and the agronomists recommended various processes to preserve them from decay, weevils, etc. (Ibn al-ʿAwwām, *K. al-Filāḥa*, ed. J. A. Banqueri, Madrid 1802, i, 678 ff.; tr. J.-J. Clément-Mullet, Paris 1864-7, i, 638 ff.). For fruit, especially grapes, there were handed down various recipes for preserving them from any deterioration and keeping them fresh (*e.g.*, Ibn al-ʿAwwām, i, 660 ff., tr. Clément-Mullet, i, 619 ff., to be compared with processes used by the Romans, J. André, *L'alimentation* ..., 89). Preservation by cold storage was known; melons from Transoxania were transported to Baghdād packed in ice inside lead boxes (al-Thaʿālibī, *Laṭā'if al-maʿārif*, ed. P. De Jong, Leiden 1867, 129). Drying was a less expensive and more widely used process. We have seen that before Islam the Arabs were already familiar with the drying of meat (*ḳadīd*) and of fish. Desert truffles were also dried (*Wuṣla*, ch. viii, § 44), also figs, pistachio nuts, etc. (Ibn al-ʿAwwām, i, 675 ff., tr. Clément-Mullet, i, 634 ff.). Fruits were often preserved in a sealed air-tight container which was sometimes buried in the ground (Ibn al-ʿAwwām, i, 662 f., 664 f., tr. i, 622, 624, etc.). The curing or smoke-drying of meat seems to have been very little known among the Arabs; it is described in the *Wuṣla* (ch. viii, § 45, mss. A, B, D) as being a Greek process. It was, however, one of the processes applied to *sharā'iḥ*, slices of meat, in particular to those known as *miṣriyya*, "Egyptian" (*Wuṣla*, ch. v, § 2a), and known in some places as *mudakhkhana* "smoked" (*ibid.*, § 2d). The crystallizing of fruits in honey or sugar, a process known to ancient Rome and a speciality of modern Damascus, was known there at this time according to A. von Kremer, *Culturgeschichte des Orients unter den Chalifen*, Vienna 1875-7, ii, 333, who however quotes no evidence. *Ḳadīd*, or dried meat, must have been coated with fat (cf. the modern Algerian recipe in J. Desparmet, *Enseignement de l'arabe dialectal moderne*[2], Algiers 1913, ii, 184, tr. H. Pérès and G. H. Bousquet, *Coutumes, institutions et croyances des indigènes de l'Algérie*, i, Algiers 1939, 260). But the chief method of preservation was by means of antiseptic agents, particularly salt and vinegar, often used together and with the addition of many condiments; hence the names of these preserves: *mukhallalāt, mulūḥāt*. In addition to vinegar and salt (steeping in salted water, impregnating with salt), a great deal of honey, or its substitutes sugar and treacle (*dibs*), was used in these preparations, also lemon juice, oil, mustard, walnuts or hazel nuts roasted and crushed, all kinds of herbs and spices, etc. In this way were preserved, for long or short periods according to the preparation used, vegetables, fruits and also (using vinegar, oil, etc.) small fishes and birds (*ʿuṣfūr*). Special preserves were made (often to be kept for a shorter period) to be used, spread on bread or otherwise, as a kind of hors d'œuvre: many condiments and salted herbs, or herbs mixed into salted goat's *laban*. In their preparation, *laban* and *ḳanbarīs* (curds; *Wuṣla*, ch. viii, §§ 1-25) were sometimes used. Spices made possible also the preservation of sausages, of which those considered the best contained only mutton without beef, goat-meat etc., and not too much semolina; their name, *laḳāniḳ, naḳāniḳ*, betrays their Roman origin (*lucanicae*, sausages of Lucania; Ibn al-Ukhuwwa, ed. R. Levy, London 1938, 94 f., 107; Ḥ. Zayyāt, *al-Khizāna al-sharḳiyya*, iv, Beirut 1948, 21, l. 3, 23, l. 6). The principal method of preserving milk was in the form of cheese. The eastern Jews sometimes transported kosher (*ḥalāl*) cheese very great distances (S. D. Goitein, *Jews and Arabs*, New York 1955, 112); the transport of food over medium or long distances enabled the inhabitants of the larger cities to enjoy a rich variety (*e.g.*, for Mamlūk Egypt, list in *K. al-Ḥarb al-maʿshūḳ*, *apud* J. Finkel, *Zeitschrift für Semitistik*, ix (1933-4), 11 f.). Generally speaking, the preservation of food was sometimes done by the producers for home consumption or for sale (*e.g.*, cheeses), sometimes by the wives or the servants in private households or in

palaces (whence the chapters of recipes for preserves in books of cookery like the *Wuṣla*), and sometimes it was the work of specialist craftsmen and prepared to be sold at a later date, sometimes after transport. The manuals of *ḥisba* [*q.v.*] enjoin the *muḥtasib* to make sure for example that any fish left unsold was salted (al-Nabrawī *apud* W. Behrnauer, *Mémoire sur les institutions de police chez les Arabes les Persans et les Turcs*, Paris 1861, 155; Muḥammad b. Abī Muḥammad al-Saḳaṭī, ed. G. S. Colin and E. Lévi-Provençal, *Un manuel hispanique de ḥisba*, i, Paris 1931, 35). But there was very little which resembled the modern food-preserving industry, though one might so classify the sausage-sellers (*naḳāniḳiyyūn*, see above), perhaps those who sold slices of meat (*sharāʾiḥiyyūn*), and the sellers of confectionery (*ḥalwāniyyūn*), traders who themselves preserved food for sale. Among them should also be included the *bawāridiyyūn*, makers and sellers of *bawārid*, cooked green vegetables preserved in vinegar or other acid liquids (cf. M. Rodinson, *Recherches* ..., 142 and the treatises of *ḥisba*).

3. Preparation. Foods often went through varying degrees of preparation before reaching the consumer, thus reducing the work done domestically (cf. S. D. Goitein, in *JESHO*, iv (1961), 193-7). Flour-grinding, work done by the women in country districts, was often in towns done by mills which provided flour ready prepared (*taḥḥān* "miller"). Kneading of dough was generally done at home, but sometimes by bakers (*khabbāzūn*). The Mālikī and Abāḍī schools sometimes stipulated that a wife could not be obliged to grind corn and that her husband, in this case, was to supply her with flour and not grain (ʿAbd al-ʿAzīz al-Muṣʿabī, *K. al-Nil*, tr. E. Zeys, *Droit mozabite, Le Nil, Du Mariage*, i, Algiers 1891, 71; Saḥnūn, *apud* M. Ben Cheneb, in *Revue indigène*, xxxiv (1909), 68). But in most cases dough was taken to the owner of a bakehouse (*farrān*) to be cooked (see, *e.g.*, R. Le Tourneau, *Fès avant le protectorat*, Casablanca 1949, 327 f.). Pastries and sweetmeats were also made by craftsmen, as were the various dishes which were sold ready cooked by the *ṭabbākhūn* "keepers of cook-shops", the *harrāsūn* or *harāʾisiyyūn*, sellers of *harīsa* in its popular form (minced meat and wheat cooked with fat), the *bawāridiyyūn* "sellers of *bawārid*" (see above), etc., to be taken away or eaten in the shop (lively description of a *shawwāʾ*, proprietor of a restaurant where all kinds of food could be eaten, in the *Maḳāma baghdādiyya* of al-Hamadhānī, ed. M. ʿAbduh, Beirut 1889, 57 ff.). European visitors to Cairo in the Middle Ages speak of 10,000 to 12,000 cooks in the streets, the 'Saracens' seldom doing any cooking at home (G. Wiet in *Revue du Caire*, August 1944, 351 f.). Meat was dealt with by specialists who carried out the slaughter (*dhabbāḥ*), the cutting up or the final marketing (*ḳaṣṣāb*, *djazzār* with variations in terminology). More specialized products were prepared by the maker and seller of sausages (*naḳāniḳī*, see above), or of slices of meat (*sharāʾiḥī*, see above), the roaster (*shawwāʾ*), the seller of cooked livers (*kubūdī*), of cooked sheeps' (or other animals') heads (*rawwās*), etc. The manufacture of oil gave rise to a real industry, using presses which were sometimes very costly (P. S. Girard, *apud Description de l'Égypte, État moderne*, ii/1, Paris 1812, 605 ff. = 2nd ed., xvii, Paris 1824, 229 ff.). The industries of wine and other fermented drinks were widespread, for the use of Christians and Jews, although varying numbers of Muslims did not fail to take advantage of them; thus in the Mamlūk period Syria was a wine-growing country while Egypt was not (al-Ḳalḳashandī, *Ṣubḥ*, tr. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, 28). The prohibitions applied to this manufacture were only of fairly limited extent; *e.g.*, under the Ottoman empire in the 11th/17th century it was forbidden to make wine or *rāḳī* (*raḳī*) within Istanbul (A. Refik, *Hicrî on birinci asırda Istanbul hayatı*, Istanbul 1931, 32, no. 63; cf. R. Mantran, *Istanbul dans la seconde moitié du XVIIe siècle*, Paris 1962, 205 ff., 257, 448 f.). The extraction and refining of cane sugar formed an important industry; Ibn Duḳmāḳ mentions 58 factories at Fusṭāṭ (iv, Būlāḳ 1309, 41-6); it is known that it was an important state monopoly under the Mamlūks (M. Sobernheim, *Das Zuckermonopol unter Sultan Barsbai*, in *ZA*, xxvii (1912), 75-84; A. Darrag, *L'Égypte sous le règne de Barsbay*, Damascus 1961, 146-51); later it was at Cairo that sugar was refined for the use of the palace of the Ottoman Sultan (*Ḳānūnnāme*, in Digeon, *Nouveaux contes turcs et arabes*, Paris 1781, ii, 276 f.). Sugar was also refined in Syria (al-Ḳalḳashandī, *ibid.*), in Sicily (M. Amari, *Storia dei Musulmani di Sicilia*, Florence 1854-68, ii, 445, iii, 785 f.), in Iran (Spuler, *Iran*, index), etc. The confectioners used sugar and honey in various ways (see, *e.g.*, a good description of the work of the maker of *kunāfa*, a kind of vermicelli with sugar or honey, etc., in G. Martin, *Les bazars du Caire et les petits métiers arabes*, Cairo-Paris 1910, 60). Fish was dried and salted so that it could be transported long distances (Spuler, *Iran*, 407; Gibb-Bowen, i/1, 299); in Egypt the production of botargo (*baṭrakh*, *baṭrikh*) from mullet roes, an industry known from Pharaonic antiquity, still continued (L. Keimer, in *BIÉ*, xxi (1938-9), 215-43). In the Fayyūm, rose-water was distilled (P. S. Girard, *op. cit.*, 609 = 2nd ed., 236 ff.).

4. Distribution. We have given above some details of the distribution of food when it was done by those who had prepared or preserved it. It should be noted that the handbook on trade by Abu 'l-Faḍl Djaʿfar b. ʿAlī al-Dimishḳī (5th-6th/11th-12th centuries?) classifies grocers as half traders and half craftsmen (see H. Ritter, in *Isl.*, vii (1917), 6). The peasant producers came to sell their produce either in the country, in temporarily set up regional markets (cf. R. Brunschvig, *Coup d'œil sur l'histoire des foires à travers l'Islam*, in *Recueils de la Société Jean Bodin*, v (1953), 43-75; F. Benet, *Weekly suqs and city markets*, in *Research for development in the Mediterranean Basin, a proposal*, ed. C. A. O. van Niewenhuijze, The Hague 1961, 86-97), or in the towns, in markets which were more or less permanent. In the larger towns there were wholesale markets supplying the large markets which served the whole of a large town district and also the small local markets. Private householders bought their provisions from the two latter types (good description by R. Le Tourneau, *Fès avant le protectorat*, Casablanca 1949, 368-97 and R. Mantran, *Istanbul* ..., 185 ff.). These retail markets consisted of specialized little shops: fruit and vegetable sellers, butchers, dried fruit merchants, sellers of spices (*ʿaṭṭār*), grocers who sold various kinds of fats (*baḳḳāl* in Morocco, elsewhere usually *zayyāt*, *sammān*, etc. with many variants, cf. Djamāl al-Dīn al-Ḳāsimī, *Ḳāmūs al-ṣināʿāt al-shāmiyya*, Paris-The Hague 1960, 48), etc. There are found in the works on the corporations extensive lists of these retailers (*e.g.*, L. Massignon, *Enquête sur les corporations musulmanes d'artisans et de commerçants au Maroc*, an offprint from *RMM*, Paris 1925). As we have said, many variations are

to be found in the demarcation and naming of specializations in the different regions. In certain countries at certain times the state played an important part at several stages in the distribution of commodities.

5. Food consumption and its variations. In the sociological study of food, special attention must be paid to how consumption varies with different groups and categories of individuals (R. Firth, *The sociological study of native diet*, in *Africa*, vii (1934), 410 f.). These variations are due either to natural, geographical and economic differences in the food resources available to each group, or to cultural traditions of varying origins. Muslim civilization provides many instances of this phenomenon, which is worthy of more detailed study; here we shall give only some examples.

The geographical variations are obviously due to the variety of the resources available, and thus to natural conditions. But, at the sociological level, based on these conditions and extending beyond them, the establishment of cultural traditions regarding the choice and the preparation of dishes has created regional specialization. Thus, in the Middle Ages, Egyptian cuisine had a high reputation (cf. Ḥ. Zayyāt, *al-Khizāna al-sharḳiyya*, iv, Beirut 1948, 14). In Turkey, the cooks of Bolu were and remain very famous (see BOLU, and Nazim Hikmet, *Les romantiques*, Fr. tr., Paris 1964, 8, 156). Cooks from places which were renowned for their food were employed in far distant regions. Al-Ṭāhir brought to Baghdād a Khurāsānī cook (Ṭayfūr, *apud* Spuler, *Iran*, 510), and Egyptian women-cooks were employed everywhere (even in the household of an orientalized Frankish knight of Antioch, cf. Usāma b. Munḳidh, *K. al-Iʿtibār*, ed. P. K. Hitti, Princeton 1930, 140; tr. P. K. Hitti, New York 1929, 169 f.). This specialization gave rise to the numerous adjectives of geographical origin which accompany or represent the names of many dishes: *e.g.*, there are cakes called *akhmīmiyya*, *asyūṭiyya*, a sweet called *ḥalwā makkiyya*, etc. (cf. M. Rodinson, *Recherches* ..., 150). For the regional specialities of Andalus, see A. Huici Miranda, in *Revista del Instituto de Estudios Islámicos en Madrid*, v (1957), 139; a recent ethnographic survey in Turkey traces the local variations of the same dish, see Z. Koşay and A. Ülkücan, *Anadolu yemekleri ve Türk mutfağı*, Ankara 1961; similarly, on local varieties of *palōv* (Ottoman *pilav*, *pilaf*) in Uzbekistan, see Karim Mahmudov, *Uzbekskie blyuda*, Tashkent 1963, 6, 77 ff., and cf. N. K. Alhazov, etc., *Azerbaydžanskaya kulinariya*, Baku 1963, 65 ff. Regional foods or dishes were made far from their place of origin, the recipes being transmitted orally or in writing. Thus as early as the 7th/13th century we find in the East recipes for Maghribī couscous (*ibid.*, 138; for the longing for couscous felt by Maghribī exiles in the East, see Maḳḳarī, Būlāḳ, iii, 137; cf. H. Pérès, in *Bull. des Études Arabes*, iii (1943), 140; R. Brunschvig, *La Berberie orientale sous les Ḥafṣides*, Paris 1940-7, 271). Food is today one of the channels for patriotic fervour. In literature and films, Egypt's national food (*ṭaʿmiyya*, Egyptian beans—*fūl mudammas miṣrī*, Jew's mallow or *mulūkhiyya*) is contrasted with the cosmopolitan dishes affected by snobs (see, *e.g.*, Maḥmūd Taymūr, *La belle aux lèvres charnues*, Fr. tr., Paris 1952, 87). A school textbook relates how an Egyptian student is delighted to find in Oxford an atmosphere of his native country in a restaurant kept by an Egyptian and serving *fūl mudammas* (Saʿīd al-ʿUryān, A. Duwaydār and M. Zahrān, *Mudammas Uksfūrd*, Cairo 1950). Egyptian emigrants returning home dream of a good hot *ṭaʿmiyya* rissole (Yūsuf Idrīs, *Umm al-dunyā*, in his collection *Arkhaṣ al-layālī*, Cairo 1954, series *al-Kitāb al-dhahabī*, 94).

When massive emigrations take place, the emigrants introduce their traditional dishes into their new habitat. Thus, the great emigrations of Muslims from Spain at the time of the Reconquista brought many Andalusian recipes to the Maghrib (see E. Gobert, in *Cahiers de Tunisie*, iii (1955), 529 ff.), for example the famous *bəsṭêla* (from Span. *pastel*) of Morocco (see L. Brunot, *Textes arabes de Rabat*, ii, Paris 1952, 52; detailed recipe in Z. Guinaudeau, *Fès vu par sa cuisine*, Rabat 1957, 33 ff.).

Variations according to the different religious groups are of more importance ideologically. We shall deal later with the development of the principles laid down in the Ḳurʾān, and it is necessary to mention here only that each group tended to mark itself off distinctly from the others by having its own series of rules concerning food. To eat just like others implied, generally speaking, that a group did not consider itself completely split off from them. In principle one should not eat with the *kāfir* (Goldziher, *Vorlesungen*, 182, Fr. tr. Paris 1920, 152), which gave rise to the vast question of who exactly is to be regarded as *kāfir*. The Ḳurʾān allowed Muslims to eat the food of the *Ahl al-kitāb* and vice versa (V, 7/5, see above). But there is attributed to the Prophet a letter to the Mazdeans of Hadjar according to which Muslims were not to eat meat which they had killed as a sacrifice (Ibn Saʿd, i/2, Leiden 1917, 19, l. 8; al-Balādhurī, *Futūḥ*, 80; cf. Spuler, *Iran*, 184, n. 5). Even in relation to the *Ahl al-kitāb*, the law was more restrictive than the Ḳurʾān, at least concerning animals killed while hunting or by ritual slaughter. It was not forbidden but reprehensible (*makrūh*), according to certain Mālikīs, to eat what a *Kitābī* had slaughtered for himself; according to others, on the contrary, this applied to meat slaughtered by a *Kitābī* for a Muslim. In all cases it was reprehensible to obtain meat from a non-Muslim butcher (Mālikīs). It was advisable to make sure that the name of Allāh had been invoked and not the Cross, or Jesus, etc., though it was permissible to eat, according to all the schools except the Ḥanbalīs, if no name at all had been invoked. However, a *fatwā* of Muḥammad ʿAbduh supporting the same position, issued in about 1903, seems to have provoked heated arguments (M. Rashīd Riḍā, *Taʾrīkh al-ustādh al-imām*, iii, Cairo 1324, 84, 167; see also C. C. Adams, in *Macdonald presentation volume*, Princeton 1933, 13-29). But it was reprehensible to eat anything destined for the synagogues, the churches or the feasts of the *Ahl al-kitāb*. In any case meat obtained from an idolater, a Mazdean, a pagan or an apostate was prohibited. To this list was sometimes added Christian Arabs (prohibited by Shāfiʿīs, and reprehensible according to certain Mālikīs) (ʿAbd al-Raḥmān al-Djazīrī, *K. al-Fiḳh ʿala ʾl-madhāhib al-arbaʿa*, ii/3, Cairo n.d., 21-6, etc.). The application of these principles has remained fairly strict until the present day. In China, many of the Muslim carriers take their own bread with them on journeys in order to avoid eating food prepared by infidels (M. Broomhall, *Islam in China*, London 1910, 230 f.). Usāma chose his food carefully in the house of the orientalized Frankish knight mentioned above. However, it is well known that Jewish food conforms to the Muslim rites and thus may be eaten, unlike

that of Christians, hence a well-known proverb giving the advice to sleep in Christian beds (which are clean). but to eat Jewish food (Freytag, *Arabum proverbia*, iii, 13, no. 73; W. Marçais and A. Guîga, *Textes arabes de Takroûna*, ii, *Glossaire*, vi, Paris 1959, 2932; E. Westermarck, *Ritual and belief in Morocco*, London 1926, ii, 4). However the eastern Christians often tended to conform with the Muslim regulations (Barhebraeus, *Nomocanon* [in Syriac], ed. P. Bedjan, Paris 1898, 463 ff., tr. J. A. Assemani *apud* A. Mai *Scriptorum veterum nova collectio*, x, Rome 1838, 229 ff.; Ibn al-ʿAssāl, *Nomocanon*, ch. 23, ms. Paris, ar. 245, fol. 94 ff., Ethiopic tr. *Fatḥa Nagašt*, ed. I. Guidi, Rome 1897, 147 ff., tr., Rome 1899, 209 ff.), At the same time Christians and Jews very often avoided Muslim food. The Christians of Ethiopia reproached Europeans with eating meat killed by Muslims, which they considered as amounting practically to apostasy (Abba Tékla-Haïmanot, *Abouna Yacob ou le vénérable De Jacobis*, Paris 1914, 14; Mansfield Parkyns, *Life in Abyssinia*, London 1853, ii, 92 f.). The Christians of Nābulus before the 1914-18 war limited themselves to avoiding the meat of animals sacrificed during the Feast of Sacrifices (J.-A. Jaussen, *Naplouse*, Paris 1927, 311), while the Copts in Egypt in the 11th/17th century bought no food of any sort from Muslims during this feast (J. M. Vansleb, *Nouvelle relation ... d'un voyage fait en Égypte*, Paris 1698, 383). But the Jews of Bukhārā in the 12th/18th century had no scruples about eating animals killed by Muslims (J. Wolff, *apud* A. Yaʿarī, *Sh̲ĕlūḥê ʾĕrĕṣ yiśrāʾēl*, Jerusalem 5711/1951, 665). The Afrīdīs of Afg̲h̲ānistān, who claim to be of Jewish origin, eat, therefore, meat cooked by Jews, but, being also Sunnīs, refuse meat prepared by S̲h̲īʿīs (Y. Ben-Zvi, *Niddĕḥê Yiśrāʾēl*², Tel Aviv 5716/1956, 194, Eng. tr. *The exiled and the redeemed*, London 1958, 223). A similar separatism concerning food is to be found therefore among the various sects, but was rather exceptional. In the 4th/10th century a jurist of Ḳayrawān refused to eat sugar which came from Fāṭimid Sicily (*Riyāḍ al-nufūs*, *apud* M. Amari, *Storia* ..., iii, 785 f.; 2nd ed. iii/3, 808 ff.). The question of eating meat which has been sacrificed arises more often. A saying attributed to Ṭalḥa b. Muṣarrif (d. 112 or 113/730 or 731) and used by the Ḥanbalīs extends to the Rāfiḍa the prohibition decreed by Muḥammad concerning the Mazdeans: it was forbidden to marry their women or to eat the animals which they had slaughtered as sacrifices (Ibn Baṭṭa, *apud* H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 38, tr., 64). The Ismāʿīlīs forbade eating the meat of sacrifices offered by *mus̲h̲rikūn* or *ahl al-k̲h̲ilāf*, unless one had witnessed that the name of God had been pronounced over it (Ḳāḍī Nuʿmān, *K. al-Iḳtiṣār*, ed. M. W. Mirza, Damascus 1957, 105). They were thus assimilated to the *Ahl al-kitāb*. The Mālikīs discouraged the eating of meat which came from a *bidʿi*, while for the S̲h̲īʿīs that which came from the enemies of the *ahl al-bayt* was unlawful (ʿAbd al-Raḥmān al-D̲j̲azīrī, *op. cit.*, 22; Abu 'l-Ḳāsim D̲j̲aʿfar b. Muḥ. al-Ḥillī, *S̲h̲arāʾiʿ al-Islām*, Calcutta 1839, 396 top, tr. A. Querry, *Droit musulman*, Paris 1871-2, ii, 214, § 50).

The variations according to way of life are probably the most considerable. The Bedouins differ from the settled populations in their food as well as in other details (see, *e.g.*, al-D̲j̲āḥiẓ, *Buk̲h̲alāʾ*, ed. Ḥād̲j̲irī, Cairo 1948, 164, Fr. tr. Ch. Pellat, Paris 1951, 259). Bedouin women refused to marry town-dwellers because they hated the food of the towns, especially green vegetables (W. R. Smith, *Kinship and marriage in early Arabia*², London 1903, 75, n. 2) and the same repugnance is found also among the nomadic Ḳazaḳs in Central Asia (J. D. Littlepage and D. Bess, *In search of Soviet gold*, New York [1937], 110 f.; cf. *Narodî Sredney Azii i Kazak̲h̲stana*, ii, Moscow 1963, 428). Milk products were a typical food of nomads everywhere in the ancient world (B. Laufer, *Some fundamental ideas of Chinese culture*, in *The Journal of Race Development*, v (1914), 167-70; H. G. Creel, *The birth of China*, London 1936, 80 f., Fr. tr. Paris 1937, 77 f.) and they suffered if they were deprived of them when in settled districts (cf. above, col. 1057 b). The difference between peasants and town-dwellers was also often emphasized. It was the subject in Egypt of literary works such as, in the 9th/15th century, the *K. al-Ḥarb al-maʿs̲h̲ūḳ* ..., and in the 11th/17th century the *Hazz al-ḳuḥūf* of al-S̲h̲irbīnī (cf. Rodinson, *Recherches* ..., 113-5).

There was hardly any difference between the food of men and women, except perhaps that the idle lives of rich women inclined them to greediness, the love of sweet things, etc. (see, *e.g.*, E. de Amicis, *Constantinopoli*⁸, Milan 1877, 333, Eng. tr. *Constantinople*, London 1878, 234 f.). The excursions of groups of women of leisure for picnics etc. were accompanied also by purchases of cakes, fruit, ices, etc. (*ibid.*, 306 f., Eng. tr., 214 f.; L. M. J. Garnett, *Turkish life in town and country*, London n.d., 67). Hence a regulation of the 10th/16th century forbidding women to go into the shops of the *ḳaymaḳčīs* of Eyyūb and laying down that the Christians should avoid them (A. Refik, *On altıncı asırda Istanbul hayatı*², Istanbul 1935, 40, no. 5; cf. R. Mantran, *Istanbul dans la seconde moitié du XVIIème siècle*, Paris 1962, 68). Similarly when in the baths women ate sweetmeats and special dishes (Kulsum Naneh, *Le livre des dames de la Perse*, tr. L. Thonnelier, Paris 1881, 28, 35 f.). In Iran, the offerings to Fāṭima are eaten only by men, at least in one of the first phases of the rite (H. Massé, *Croyances et coutumes persanes*, Paris 1938, ii, 302). Moreover, in some places, customs based on magic forbid certain foods to women (E. Westermarck, *Ritual and belief in Morocco*, London 1916, ii, 363).

Differences in diet according to age depend on theoretical (and even scientific) opinions concerning food. We shall deal with them below. On the other hand a certain number of differences according to social classes can be traced to economic and social factors. Naturally considerations of price alone restricted the food of the poor both in quantity and quality and had the same effect on that of misers, who were voluntarily poor. In some of the literature about misers, particularly in the masterpiece of al-D̲j̲āḥiẓ, the *K. al-Buk̲h̲alāʾ*, much is said about their meagre diet. The food of the poor and of misers was apt to include in particular "filling" dishes which were, at least in appearance, rich in nutritional value while consisting of inexpensive ingredients, like Harpagon's haricot of mutton. Several such dishes are mentioned in the time of al-D̲j̲āḥiẓ: *ṭifs̲h̲ila*, *harīsa*, *fud̲j̲liyya*, *kurunbiyya* (*Buk̲h̲alāʾ*, ed. Ḥād̲j̲irī, 60; tr. Pellat, 99). At the beginning of the 7th/13th century lentils also were mentioned as a dish of poor people (M. Rodinson, *Recherches* ..., 153) and they were again despised as the food of the *fallāḥ* by al-S̲h̲irbīnī. The distinction between the dishes of the poor and those of the rich was clearly understood by the collective consciousness, as expressed in proverbs, popular literature,

etc. Examples of this are found in current proverbs about *burghul* (Turkish *bulgur*) "crushed wheat", a dish of the poor and peasants in Syria-Palestine and Turkey in contrast to rice, the dish of the wealthy town-dwellers (M. Feghali, *Proverbes et dictons syro-libanais*, Paris 1938, 248, no. 1097; cf. X. de Planhol, *De la plaine pamphylienne aux lacs pisidiens*, Paris 1958, 177). The *K. al-Ḥarb al-maʿshūḳ* has precisely as its main theme the contest between the food of the poor and that of the rich (J. Finkel, in *Zeitschrift für Semitistik*, viii (1932), 122-48, ix (1933-4), 1-18; cf. M. Rodinson, *Recherches* . . ., 113 ff.). The food of the rich was distinguished by the variety of the dishes, their complexity, their expensiveness, the length of time needed for their preparation, an ostentatious freedom of choice expressed by eating foods of little nutritional value. There was obviously an effort to improve the quantity and quality of the diet, but still there were applied the rules of "conspicuous consumption" in food (Thorstein Veblen, *The theory of the leisure class*, ch. iv, New York 1934, 73 f.) intended to set apart the élite from the masses. The members of the élite were expected to be familiar with the most esoteric dishes, and they either wrote themselves such treatises on cookery as those produced by people of importance in the ʿAbbāsid period (M. Rodinson, *Recherches* . . ., 99 ff.) or had these books written for them (cf. introduction of the book of Ibn Sayyār al-Warrāḳ in Ḥ. Zayyāt, *al-Khizāna al-sharḳiyya*, iv, Beirut 1948, 20). Those who aspired to refinement in 4th/10th century Baghdād, the *ẓurafāʾ*, had strict rules in this matter (Al-Washshāʾ, *K. al-Muwashshā*, ed. R. E. Brünnow, Leiden 1886, 94 f., 130 ff., etc.; cf. M. F. Ghazi, in *Studia Islamica*, xi (1959), 61). The rulers had huge kitchens for themselves and their court, well stocked and equipped, staffed by numerous cooks and their assistants, under the direction of officers such as the *djashnagīr*, the *shādd al-sharāb-khāna* and the *ustādār al-ṣuḥba* at the court of the Mamlūks (Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, LX f.), the *kilārdjī bashī*, "master of the larder" and his subordinates like the *peshkir bashī*, etc., all supplied with their provisions by the *maṭbakh emini* and his staff at the Ottoman Palace (Gibb-Bowen, i/1, 78, 85, 332 f., 336 f.).

The quest for the exotic, the partial adoption of the cuisine of foreigners, especially when their civilization enjoys a certain prestige, is another means by which the élite may demonstrate its distinction from ordinary folk. Hence, in the Arab world, the vogue for Iranian dishes, which seems to have begun in pre-Islamic times (cf. ʿAbd Allāh b. Djudʿān's introduction of *fālūdhadj* at Mecca, Alūsī, *Bulūgh*², i, 381) and was very pronounced in the ʿAbbāsid period (Rodinson, *Recherches* . . ., 148 ff.), and later the fashion for things Turkish (*ibid.*, 151). European influence began in the period of the Crusades (*ibid.*, 150; Rodinson, in *Comptes Rendus du GLECS*, ix (1960-3), 106 f.), and has naturally been very powerful since the 19th century, as all modern cookery-books demonstrate (see, *e.g.*, H. Stumme, in *Islamica*, ii (1926), 538-49). Deep though its influence has been (see, for example, on the influence of Russian diet in Central Asia, K. Mahmudov, *Uzbekskie blyuda*, Tashkent 1963, 6, with illustrations of how this trend has been resisted by the Muslim 'clergy', who call potatoes 'food of Satan' and tomatoes 'fruits made of human blood'), in all countries the traditional dishes retain their popularity. Conversely, Muslim diet exercised a pronounced influence on Christian Europe in the Middle Ages (see M. Rodinson, in *Romania*, lxxi (1950), 433-49, in *Scritti orientalistici in onore di G. Levi Della Vida*, Rome 1956, ii, 425-35, and in *Études d'orientalisme* . . . . *Lévi-Provençal*, Paris 1962, 733-47).

6. Factors of secular ideology in food. We can class as ideological the recommendations or prescriptions which are based either on a rational deduction from various principles and assumptions, or on the Divine will elucidated in greater or less degree by reasoning. Recommendations and prescriptions of this sort play an important part in food habits. We have seen above how certain of them are connected with differences in diet according to social groups and we shall now deal with some others, beginning with the non-religious ones.

Certain general ideas which are prudent deductions from experience are handed on by popular tradition. Thus we have a list of nourishing foods, and of those which cause wind (cf. Ibn ʿAbd Rabbih, *Al-ʿIḳd al-farīd*, ed. A. Amīn etc., vi, Cairo 1949, 320 ff.). But generalizations of a "magic" type are often found: they can grow up from a basis of real attributes which have been observed (birds are timorous, testicles are connected with sexual activity, honey is sweet, etc.), or be deduced from systems of symbolic connexions (yellow is beneficial, black is ill-omened, etc.; cf. the remarkable and unfortunately unique study by J. Jouin, *Valeur symbolique des aliments et rites alimentaires à Rabat*, in *Hesperis*, xliv (1957), 299-327). But these wide and rash generalizations are based on the magic principles of contagion by propinquity, the law of similarity and of opposites, etc. Thus we have seen that in north-western Arabia it is believed that whoever eats birds' hearts becomes himself timorous (see above, col. 1059 b); similarly medical treatises explain that sheep's liver, heart or kidneys strengthen the liver, heart or kidneys of whoever eats them, while to eat sheep's brains causes loss of memory and stupidity because the sheep is senseless and stupid (Dāwūd al-Anṭākī, *Tadhkira*, Cairo 1356/1937, i, 207; cf. the conversation recorded by Naʿīmā (anno 1063, A.H.) and translated by B. Lewis, *Istanbul and the civilization of the Ottoman Empire*, Norman Okla. 1963, 171-2); in present-day Morocco young boys newly-circumcised are made to drink soup made from sheep's testicles to strengthen them, and it is also the recognized diet for people who are exhausted (J. Jouin, *op. cit.*, 309). *Ḥalwāʾ* made with saffron has been recommended because yellow is a source of gaiety (Niẓāmī, *Haft paykar*, Tehrān 1334, 197², tr. C. E. Wilson, London 1924, i, 156). Honey with its sweetness assuages mental suffering (J. Jouin, *op. cit.*, 315) as does *talbīna*, a dish made with honey (see above, col. 1059 a), hence their consumption at funerals. It is possible that the dictum attributed to the *faḳīh* of Medina, Rabīʿa b. Abī ʿAbd al-Raḥmān (d. 136/753-4), according to which the eating of *khabīṣ* (jelly made with starch) fortifies the brain (Ibn ʿAbd Rabbih, *al-ʿIḳd al-farīd*, vi, Cairo 1949, 293), belongs to this class of popular opinions.

But as well as these there was also the corpus of scholarly opinions, transmitted by books and stemming for the most part from the scientific medicine systematized by the Greeks. It consisted of generalizations based sometimes on systematic research on data which were certainly not self-evident (such as the presence in the human body, besides blood, of the pituitary glands, yellow and black bile), from which the Greeks had drawn up a carefully worked out system, avoiding symbolic

data and open in principle to revision, consisting as it did of hypotheses which could be verified or invalidated. It was based on the theory of humours, from which had been deduced all kinds of conclusions on the nature of each food and its suitability to one or another human temperament. Thus all the books of medicine contain a long chapter enumerating, usually in alphabetical order, the attributes and faults of each food from the point of view of bodily and spiritual well-being. Special works are also devoted to this branch of medicine, dietetics. Some of them were translated into Latin and had a considerable influence on European dietetics (cf. M. Rodinson, *Recherches ...*, 110 f.). The educated classes paid a great deal of attention to dietetic precepts, so that this science was of no small practical importance. To choose one example among scores, there was the book on dietetics written by Maimonides for al-Malik al-Afḍal. Numerous examples of rulers who could not do without dieticians at their table are given in Ḥ. Zayyāt, *al-Khizāna al-sharkiyya*, iv, Beirut 1948, 10 ff., cf. H. R. Idris, *La Berbérie orientale sous les Zīrīdes*, Paris 1962, i, 251. Moreover, these scholarly theories penetrated deeply among the masses, where they became inextricably mixed, sometimes in a debased form, with current ideas coming from other sources. At the same time the learned works came more and more to take account of popular ideas on diet. Thus the famous doctor-philosopher Abū Bakr al-Rāzī (d. 311/923 or 320/932) wrote that fresh dates caused ophthalmia, an idea which re-appears later in Ibn al-Bayṭār in the 7th/13th century. It is probable that this theory, which was unknown to the Greeks and to Ḥunayn b. Isḥāḳ, came from popular ideas in the East (M. Meyerhof, *apud* P. Kraus, in *Orientalia*, iv (1935), 326).

Scholarly ideas on dietetics were influenced by popular ideas, particularly when it came to dealing with diets for special cases. For example the diet of women in child-birth is the subject of only a few general recommendations by the Greek physicians and the first Arab theorists who derived their ideas from them (cf., *e.g.*, Ibn Sīnā, *Ḳānūn*, iii, fann 21, maḳāla 2, faṣl 3). But later the subject was developed under the influence of popular recipes. Thus a 9th/15th century writer recommends, in addition to foods and medicines intended as remedies for stomach pains etc., fresh ripe dates (*ruṭab*) and, if they are not available, ordinary dates also. This is justified by a *ḥadīth* and by the example of the Virgin Mary in Ḳurʾān, XIX, 25 (Ibrāhīm b. ʿAbd al-Raḥmān al-Azraḳ, *K. Tashīl al-manāfiʿ*, Cairo 1356, 140 f.).

7. Post-Ḳurʾānic religious regulations. The pious specialists on religious questions who, in the 2nd/8th century, began to advise on the way of life which best conformed to the Muslim ideal recommended or discouraged the eating of certain foods, in accordance with current practice (see J. Schacht, *Esquisse d'une histoire du droit musulman*, Paris 1953, 22 ff.). Gradually these recommendations became canonized, as they were attributed to earlier and earlier authorities ending with the Prophet himself, at the same time that attempts were made to deduce from them general rules, to systematize them and also to bring them into harmony with the few prescriptions, later more precisely defined and systematized, which are contained in the Ḳurʾān. We cannot here follow the development of this process (on this see, *e.g.*, J. Schacht, *EI*[1], art. MAITA) and we shall deal only with its final results.

The prohibitions concerning food are part of the vast system of Muslim ethics. For this reason there are used for them the usual categories, which include all the degrees, from obligation to prohibition, by way of recommendation, indifferent permission and reprobation. Efforts are made to state the attitude to be taken in every possible case, and even in some very unlikely cases. Procedures are established to settle doubtful cases, all else failing, by ordeal: drawing lots to indicate which animal of a flock has been the object of an act of bestiality and is therefore impure (Abu 'l-Ḳāsim Djaʿfar b. Muḥ. al-Ḥillī, *Sharāʾiʿ al-Islām*, Calcutta 1839, 402, tr. Querry, *Droit musulman*, ii, 231, § 17); in cases of doubt as to the provenance of birds' eggs, which would decide whether they were lawful, to use those whose ends differ in width (*ibid.*, 403 = Querry, ii, 233 f., § 37 [Shīʿīs]).

The categories of the permitted and the forbidden in this field are (apart from some exceptions) identical with those of the clean and the unclean. There follows from this the obligation to apply to these cases the general idea of contagion, of the contaminating power of uncleanliness, which gives rise to a number of delicate problems to determine the limits of this contagion. The milk and the eggs of unclean animals are obviously unclean; but does an animal who has drunk wine or sow's milk, both of them unclean, become by this act unclean itself? (al-Ḥillī, *op. cit.*, 402; tr. Querry, ii, 230 f.). A dog, being unclean, makes unclean any liquid which it has begun to lap or game which it has begun to eat (D. Santillana, *Istituzioni di diritto musulmano malichita*, i, Rome 1926, 321); but there may be another juridical reason for the prohibition in the latter case (cf. al-Ghazālī, *Iḥyāʾ*, Cairo 1352/1933, ii, 91; H. Laoust, *Le précis de droit d'Ibn Qudāma*, Beirut 1950, 230). The question was much discussed as to how far a mouse (or other unclean animal) which had fallen into a food which was clean caused it to be unclean (al-Dārimī, viii, 41; Abū Dāwūd, xxvi, 47; cf. Santillana, *Istituzioni*, i, 321). In general it is admitted that the uncleanliness is transmitted to the whole of any liquid or fluid matter, but only to the parts of any solid matter which are near to the part touched (unless the mouse has remained there for a long time, according to the Mālikī Saḥnūn: Ibn Abī Zayd al-Ḳayrawānī, *Risāla*, ed. and tr. L. Bercher[2], Algiers 1948, 158). The crossing of a clean with an unclean animal makes their progeny unclean (*e.g.*, the mule; see also, *e.g.*, Ibrāhīm b. ʿAlī al-Shīrāzī, *K. al-Tanbīh*, ed. and tr. Bousquet, i, Algiers 1949, 123 [Shāfiʿī]).

It became necessary also to lay down the course to be followed when there arose a conflict between the system of regulations concerning food and other principles and exigencies of social life, and to make general rules also for borderline cases. Thus, suicide being forbidden, man has a duty to keep himself alive and in good health. From this is deduced the prohibition of injurious substances, notably intoxicants (cf. al-Ghazālī, *Iḥyāʾ*, ii, 83, l. 16 f. concerning *bandj* [*q.v.*] "henbane"; in the Mughal Empire, non-Muslims as well as Muslims were, from social and humanitarian motives, forbidden to use it, see Sri Ram Sharma, *The religious policy of the Mughal Emperors*[2], London 1962, 25 f., 93, 109 ff.; but nowadays this prohibition is stressed especially with regard to opium, *ḥashīsh*, cocaine, etc., cf. ʿAbd al-Raḥmān al-Djazīrī, *K. al-Fiḳh ʿala 'l-madhāhib al-arbaʿa*, ii[2], Cairo n.d., 4). But in cases of famine and of extreme necessity, the

principle of keeping one's self alive conflicts with the prohibition of what is unclean, and it is acknowledged that the latter must be sacrificed, at least to the minimum degree necessary to maintain life. But limits are set, and also a graduated table of degrees of uncleanliness is established (cf. al-Ḥillī, 406-8, tr. Querry, *Droit musulman*, ii, 242-6, which is especially detailed). The question arose and still arises particularly in relation to medicines prescribed by doctors. In the same way a compromise is established between the duty to keep alive and the rights of property: in certain conditions and within certain limits it is permissible to seize by force from a reluctant owner the means for sustaining one's life. In some cases the duty of acting humanely towards animals can also have an influence on what food is eaten (*e.g.*, the recommendation not to slaughter a sheep which is suckling, Muslim, xxxvi, 140a).

The *fiḳh* naturally upheld the food prohibitions laid down by the Ḳurʾān, endeavouring only to define their scope. The prohibition of blood, linked with that of the meat of animals which are dead without having been ritually slaughtered, led to many developments. It was necessary to define very precisely the method and conditions of slaughter [see DHABĪḤA], etc. Although "carrion" (*mayta*), an animal simply found dead, remains completely forbidden except in case of absolute necessity [see MAYTA], attempts have been made to mitigate a little the more precise prohibition, given in Ḳurʾān, V, 4/3, of the flesh of animals found strangled or gored, victims of a fall or killed by a blunt instrument. If even a breath of life remains in them they may still be ritually slaughtered and thus rendered lawful to eat. This is the "purification" mentioned in the Ḳurʾān. It was necessary to define in the greatest detail the signs by which the presence of this flicker of life could be recognized or presumed to exist (a good summary of the position of the Sunnī schools in al-Djazīrī, *K. al-Fiḳh*, ii³, 4 and n. 3). More serious difficulties are caused by hunting. In general it is necessary to perform the ritual slaughter of the animal before its death, if this is possible. But where this is impossible, it is conceded that the fact of having killed an animal while formulating the intention of slaughtering it ritually and pronouncing the *tasmiya* ("in the name of God") at the moment of sending off the missile may take the place of this ritual slaughter. Naturally the pilgrim who has entered the state of ritual purity (*muḥrim*) may not take advantage of these privileges (in view of the Ḳurʾānic prohibition mentioned above). However some traditions authorize him to eat a wild ass which has been hunted down (al-Bukhārī, lxx, 20) or, in return for compensation, a hyena (Abū Dāwūd, xxvi, 31; cf. Gaudefroy-Demombynes, *Le pèlerinage à la Mekke*, Paris 1923, 10, n. 2, 11 ff.). On the other hand, efforts were made to specify how far the unlawfulness of the *mayta* extends to its skin, its milk, its eggs or to any foetus which it might contain. An exception from the prohibition of blood is generally made for the liver and the spleen, which are considered as a solid form of blood (*ḥadīth*: two kinds of blood have been made lawful for us, Ibn Mādja, xxix, 31; Aḥmad b. Ḥanbal, ii, 97). Ritual slaughter is not necessary for fish (or any marine animals), nor for locusts (cf. art MAYTA and below). For *khamr*, the same processes of interpretation are applied to the Ḳurʾānic prohibition. We shall limit ourselves here to mentioning that, on the one hand, the idea of *khamr* is defined by the intoxicating power of the liquor concerned (taking advantage of the meaning of *khāmara* "to be mixed together"), and that on the other hand the prohibition makes it, in accordance with the logic of the system, a drink impure in itself, even in a quantity too small to produce drunkenness. The result is a logical contradiction, which is illustrated when al-Ghazālī contrasts the Muslim law with the supposed prohibition of wine by Jesus, based solely on its ability to intoxicate. Ghazālī gets over the difficulty by asserting that the drinking of small quantities leads to that of large quantities and drunkenness (*Iḥyaʾ*, iv, 81, l. 3 f.), which is the line taken in the modern interpretation, which emphasizes the moral, hygienic and social justifications for this prohibition (cf. al-Djazīrī, *K. al-Fiḳh*, ii, 6-9).

Food can sometimes be affected by impurities which have nothing to do with the food itself. Thus the impurity of menstruation (Ḳurʾān, II, 222, and much developed later) leads to the conclusion that the meat of menstruating female animals is impure (*e.g.*, the hare: Abū Dāwūd, xxvi, 26b), just as the impurity of women in this state can be transmitted to the food which they prepare (al-Ḥillī, 406, tr. Querry, *Droit musulman*, ii, 242, § 97 f.; a regulation which was applied at Nābulus according to Jaussen, *Naplouse*, 311). The same applies to food prepared by infidels (including the *ahl al-dhimma*, according to certain authors), perhaps even to that eaten in their company (*ibid.*, 404, 405, tr. Querry, ii, 236, 239, and col. 1065 b above) or, in practice, that prepared in utensils which they have used (a pathetic case cited by M. Broomhall, *Islam in China*, 226).

The Mālikī school endeavoured to limit the prohibitions to foods declared impure by Ḳurʾānic prescription, with only those restrictions set out above: that the food eaten should be neither harmful nor the property of others. But in general the idea of uncleanliness was extended, as we have seen, to other foods. It concerns always animal food, except where it relates to edible earth, which was sometimes discouraged or forbidden, and, among the Shīʿīs, to water from hot springs, which was discouraged. Lists are given of the impure parts of animals, generally faecal matter and urine (the urine of the camel is, however, permitted as a medicament); to these are sometimes added the sexal organs and other parts. Similarly, acts of bestiality make unclean the meat of the animal concerned, also the eating of excrement. This leads to the case of the *djallāla*, "scatophagous animal", mentioned in *ḥadīth* (Abū Dāwūd, xxvi, 24, 33, etc.) and developed in great detail by the *fiḳh*, which specifies in particular the length of time which the animal must be kept in supervised isolation and fed with clean food in order to regain its cleanliness and be eaten lawfully.

But, above all, a certain number of animals are added to the pig, which is the only one actually prohibited as such by the Ḳurʾān. For some of these, such as humans and dogs, it is obvious that all that is being done is to make explicit prohibitions which are implicit in the sayings reported from the Prophet. In the case of certain others, a thorough study would be necessary to determine which are of pre-Islamic Arab origin and which arise from the customs already existing among peoples who have become Islamicized. In general, however, Islamic jurisprudence has developed extensively the chapter on the juridical classification of the various animals, with perceptible divergences among the schools: a summary of the attitudes adopted by the principal juridical schools will be found in the article ḤAYAWĀN—iv.

Over and above the categories elaborated by the schools, on the basis of the Ḳurʾān and Tradition, of foods whose consumption is forbidden or reprehensible, the zealous Muslim may wish to carry the imitation of the Prophet so far as to abstain from foods which, according to Tradition, displeased him personally, but which he did not forbid to others (at least according to most of the texts), although he forbade those smelling of them to enter the mosque: garlic, onion and often leeks (*kurrāth*; cf. references *apud* Wensinck, *A handbook of early Muhammedan tradition*, Leiden 1927, s.vv.; recommendations to which attention is still paid today, cf. J. Jomier, *Le commentaire coranique du Manâr*, Paris 1954, 142), which is probably the reason why according to the commentaries (*ad. loc.*) leeks are excluded from the *buḳūl* laid out on the "spread table" sent from Heaven to Jesus and the apostles (Ḳurʾān, V, 111 ff.). Perhaps the lizard should also be added to this list (see above, col. 1058 b).

In the course of the centuries there have come to be added to this list of prohibited goods new edible products; the fact that they were *bidʿa* reinforced their qualities of being harmful, intoxicating etc., to induce—but in vain—their prohibition. This has been the case with coffee [see ḲAHWA], *ḳāt* [*q.v.*], tobacco [see TÜTÜN], etc.

Each Muslim sect, formulating for itself a complete doctrine on all points of dogma and practice, has had to make its decisions on the problem of prohibitions concerning food. In general the Ḳurʾānic prohibitions have been adhered to, but some have considered them to have only an allegorical significance or that an era was beginning in which there was no further justification for them. The extra-Ḳurʾānic prohibitions have been deliberately criticized in some circles. The consumption of dogs, habitual in the Saharan Maghrib, was regarded with indulgence by some jurists (cf. M. Canard, in *Hespéris*, xxxix (1952), 298, n. 1; H. R. Idris, *La Berbérie orientale* ..., 592, 631). The Ḳarmaṭīs of Baḥrayn allowed the meat of cats, dogs, donkeys, etc. to be sold, dogs to be fattened for the table and, at one time at least, seem to have permitted wine (De Goeje, *Mémoire sur les Carmathes du Bahraïn*[2], Leiden 1886, 174 f.; cf., *e.g.*, M. b. Mālik al-Ḥamādī, *Kashf asrār al-bāṭiniyya*, ed. M. Zāhid Kawtharī, Cairo 1939, 13). But Ismāʿīlī dogma follows the classical pattern of regulations concerning food, forbidding the flesh of carnivorous animals and birds of prey, that of the hyena and the fox, the mule and the donkey, discouraging that of the lizard and the hedgehog, authorizing that of the hare and the horse (on condition that the latter should not be ritually slaughtered unless it is exhausted with fatigue) as well as that of locusts and fish with scales, both to be caught alive; condemning the eating of marrow, spleen, kidneys or the genital organs of animals, etc.; forbidding all fermented drinks and discouraging the use of wine-vinegar (Ḳāḍī Nuʿmān, *K. al-Iḳtiṣār*, ed. M. Wahid Mirza, Damascus 1957, 95-7). Al-Ḥākim forbids in addition to this some plants: *mulūkhiyya* ('Jew's-mallow'), *rashād* (cress or rocket), *mutawakkiliyya* (a dish rather than a plant?), and lupins, because of their name or because they were liked by ʿĀʾisha, Abū Bakr, Mutawakkil, etc. (S. de Sacy, *Exposé de la religion des Druzes*, Paris 1838, i, CCCIX f.). As a further example we may mention the prohibition among the Yazīdīs of the chicken and the gazelle, of cauliflower and lettuce, accompanied by a tolerance towards the use of alcohol (R. Lescot, *Enquête sur les Yezidis de Syrie et du Djebel Sindjār*, Beirut 1938, 76 f.). Among the Nuṣayrīs are found in general at least those Muslim prohibitions which are very widespread (camel, eel, cat-fish), the prohibition of the hare, which is strictly Shīʿī, and, among the *Shamsiyya*, equally widespread prohibitions such as those of crabs and shell-fish, that of the porcupine, which is also unlawful for the Shīʿīs, as well as the more surprising prohibition of the gazelle and of vegetables (pumpkins, gumbo, tomatoes). The prohibition laid by this same group upon female animals is reminiscent rather of the practice of the Christian monks of the East. But there were of course local variations (L. Massignon, in *EI*[1], s.v. Nuṣairī; R. Strothmann, *Die Nuṣairī im heutigen Syrien*, Göttingen 1950 = *Nachrichten der Ak.d. Wiss. in Göttingen*, Phil.-hist. Kl., 1950, no. 4, 55).

It would be useful to make a study of the strictness with which these theoretical regulations are applied in practice in the different Muslim countries. The laxity or strictness of observance varies greatly according to regions, social categories, families, etc. The attitude even of the same group or the same individual may vary, according to whether it is a case of one regulation or another. Broadly speaking, for example, it seems that the prohibition of pork has always been more strictly observed than that of alcoholic drinks. Nevertheless in China, where the Muslims live in an area where pork is very much liked, they not infrequently eat it, with or without the precaution of calling it "mutton" (M. Broomhall, *Islam in China*, London 1910, 225 f., 230 f.). The non-Ḳurʾānic prohibitions are often less strictly observed, advantage sometimes being taken of the variations between the *madhāhib*. Thus, at Maʿān and often among the Bedouin of Arabia, there are eaten crows and eagles, which are forbidden by the majority of the schools (A. Jaussen, *Coutumes des Arabes au pays de Moab*, Paris 1908, 67, n. 1; C. Doughty, *Travels in Arabia Deserta*, Cambridge 1888, i, 604). Rich Ottomans had sent to them by Christians (to celebrate *Bayram*!) mussels, concealed under green cloth (Marie Sevadjian, *L'amira*, Fr. tr. F. Macler, Paris 1927, 38 f.), etc.

In the category of religious prohibitions should be included those which the ascetics imposed on themselves, and which are nowhere prescribed by the Law. Among these is abstinence from meat, which is an ancient practice (Goldziher, *Vorlesungen*, 150, 152, Fr. tr. *Le dogme et la loi de l'Islam*, Paris 1920, 122, 124), probably adopted in order to rival the zeal of Christians, Manicheans, etc. (L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*[2], Paris 1954, 61), and which may have been reinforced by Hindu and Buddhist influence (for Abu 'l-Alā al-Maʿarrī, see H. Laoust, in *BÉO*, x (1943-4), 152). The dervish-orders too propagated various prohibitions, thus provoking the protests of the reformers (J. Jomier, *Le commentaire coranique de Manâr*, Paris 1954, 209).

It would be interesting to study the way in which the *fuḳahāʾ*, the theologians, the mystics and the philosophers have attempted to justify the prohibitions concerning food. We cannot do it here, but would merely mention that there has always existed a tendency to interpret them in a rational way. Thus al-Marghīnānī points out that the aim of the prohibition is to preserve the nobility of the human body by preventing its being sullied through absorbing the substance of base animals (*Hidāya*, ms. Paris ar. 6763, fol. 247v., tr. C. Hamilton, London 1791, iv, 74). This tendency has developed particularly in modern times, when the apologists lay especial

stress on the social advantages and the benefits to health of the prohibition of wine (*e.g.*, J. Jomier, *Le commentaire coranique du Manâr*, Paris 1954, 209 f., and above, col. 1069 b). The mystics favour rather a symbolic exegesis. But the predominant tendency has been to see in these regulations a sign of God's arbitrary will. The expressions of this doctrine often coincide with that of certain contemporary sociologists, who insist on the arbitrary character of the regulations of social life. These regulations are seen as forming a system corresponding to a necessary pattern which is understood only by God: He sets himself against the ignorant anarchy of men, who are not directed by the Revelation but obey only their own psycho-physiological impulses. This is very well expressed in a *ḥadīth* which is said to have been uttered by Ibn ʿAbbās: "The people of the *djāhiliyya* used to eat certain things and abstain from others simply from distaste. But God sent His Prophet and revealed His Book; He allowed that which was lawful and forbade that which was unlawful in His eyes. That which He has permitted is lawful, that which He has forbidden is unlawful and that on which He has kept silent is tolerated (*ʿafw*). Then Ibn Abbās recited the Ḳur'ān, VI, 146/145" (Abū Dāwūd, xxvi, 30; cf. M. Rodinson, in *Trudi dvadtsat' pyatogo meždunarodnogo kongressa vostokovedov*, i, Moscow 1962, 362-6).

8. Aesthetic factors. Certain ideas, attitudes and recommendations concerning food are based neither on the categories of useful or harmful (ideas and recommendations of secular ideology) nor on those of good or evil (religious ideas, recommendations and regulations), but on those of what is agreeable or disagreeable. Several of these ideas and attitudes are in a sense "natural", that is to say linked with a conditioning which is specific (pertaining to the human species in general), ethnic (with variations due in part to geographical conditions) or individual, based on the physiological peculiarities of the species, the group or the individual respectively. But the physiological facts influencing the species or the group leave at the same time a certain margin of choice. Within this margin, each society chooses and inculcates in its members from childhood a system of values in taste (in the widest sense, *i.e.*, including not only the sense of taste but the sense of smell and others), comprising distinctions and preferences. It is moreover still often difficult (given the lack of sufficiently detailed studies) to distinguish within this system between the elements which are "natural" (based on physiology) although transmitted by tradition and those which belong to the arbitrary rules of social conduct. Furthermore, some small groups set up and propagate their own systems of values, generally within the margin left by the social system, but sometimes exceeding this. Finally, individuals are subject to their own physiological and psychological conditioning, also within the system inculcated by the society and the group, but sometimes going beyond it.

We can mention here only some of the features which are connected with this aesthetic approach to food. Among the distinctions made are of course the four specifically gustative flavours: sweet, sour, salt, bitter (Arabic *ḥulw, ḥāmiḍ, malīḥ, murr*) with the various degrees and varieties of insipidity (Ar. *malīkh, masīkh*, "completely insipid"; *tafih* "without either real sweetness, acidity or bitterness", cf. al-Thaʿālibī, *Fiḳh al-lugha*, ed. Cheikho, Beirut 1885, 272); the qualities, perhaps connected with a chemical sensitivity, such as highly-spiced (in Arabic, as in English, called "hot", *ḥārr*, hence a group of seeds called "hot seeds", *abzār ḥārra*; cf. in French the four "semences chaudes": fennel, carraway, cumin, aniseed), piquant (*ḳāriṣ*, not always interchangeable with sour, *ḥāmiḍ*), astringent (*ḳābiḍ*), pungent (*ʿafiṣ*), etc. or those which correspond more closely to the chemical composition of the foods (fat, Ar. *samīn*, *i.e.*, rich in fats, similarly "oily, greasy, λιπαρός", Ar. *dasim*); those connected with smell (cf. Ibn Sīnā, *Psychology*, ed. J. Bakoš, Prague 1956, 76; tr., *ibid.*, 52 f.; cf. Aristotle, *De anima*, II, 10, 422b, and, for the terminology, the Arabic tr. of A. F. El-Ehwany and G. Anawati, 2nd ed., Cairo 1960, 80 with the appended glossaries; Ibn Sīnā addes to the qualities of savour listed by Aristotle, though it is possible to contest this, *bashāʿa*, an unpleasant taste, and *tafah*, insipidity), etc. To these should be added the sensations due to heat and cold, to a brittle or soft consistency, etc. The various preferences are expressed with reference to these distinctions. The taste for fat is readily discernible among both the early and the present-day Bedouin (cf. above, col. 1059 a). Those Muslims of today who are anxious to bring their cooking partly into line with European taste condemn the excessive use of fat meat in their dishes (cf. M. Rodinson, *Recherches* ..., 107). The taste for highly-spiced foods and for sweet things appeared at a more advanced stage of Muslim civilization; it was simply a continuation of the tastes of classical antiquity (against which Sophon and Damoxenos waged a vain campaign in the 4th century B.C.), as were some more specific tastes which have now become disagreeable to us, such as that of rue (*sadhāb*), or that of products which have a very strong smell (cf. J. André, *L'alimentation et la cuisine à Rome*, 223 ff.).

The art of cooking consists in preparing and combining the basic elements in such a way as to produce a pleasant flavour. The combinations take into account the distinction between the sensory qualities, mentioned above, which are attributed to the foods, and the compatability (with a hierarchy of degrees of compatibility) and incompatibility of ingredients, whether used together or eaten following each other. Europeans have often remarked on the use in Muslim cooking of combinations in one dish of foods not in accordance with their own taste, for example that of highly-spiced with sweet and bland ingredients, without a sauce of intermediate flavour to lessen the contrast; there have even been drawn from this deductions, not beyond dispute, on collective psychology (E. F. Gautier, *apud* L. Massignon, in *RMM*, lvii (1924), 151). In fact these combinations are not confined to Muslim cooking; they are found in European and American cooking, and were used in the past even more than today. Much use is made of sauces for combining ingredients, as was done in the Middle Ages. Present-day Turkish cooking seeks to avoid having in one dish the taste of meat (roasted or grilled) and that of cooked vegetables (I. Orga, *Turkish cooking*, London 1958, 14). Vegetables cooked in oil are often eaten cold in the Middle East. As among the Romans, meat in the mediaeval Muslim world was usually boiled before being baked or roasted, and for some meat this was a necessity, either because of tradition or in order to make it tender (cf. J. André, *L'alimentation et la cuisine à Rome*, 223).

At the more elegant levels of society there has developed, following the tradition of the Ancient World, a custom of serving at one meal a succession

of dishes of varying flavours. It was introduced in Cordova in the 3rd/9th century by the Baghdādī Ziryāb (E. Lévi-Provençal, *Hist. Esp. mus.*, i, 271). This arrangement seems to have been less generally adopted in the East than in the West.

It is natural that some preferences and abstentions which have a national or religious origin or are the result of an arbitrary social tradition should sometimes be justified also by aesthetic arguments. The preferring of mutton to beef is perhaps an example of this.

Aesthetic considerations which have nothing to do with taste are also important. Among them is the visual appeal of dishes, to which there are many references in the mediaeval culinary treatises. Great care is always taken over how a dish is served, and saffron, for example, is often used more for its "rich" golden colour than for its flavour. Also with the aim of delighting or surprising the beholder there were evolved an increasing number of the "disguises" (to use a term from ancient cookery) which were so popular also in Europe in the Middle Ages. Hence dishes with such significant names as *muzawwar(a)* "counterfeit", *maṣnūʿ* "artificial", etc., and recipes such as those for "mock brain" or omelette in a bottle (M. Rodinson, *Recherches* . . ., 157 f.), or the dish composed of 5 animals each inside the other which was devised for Abu 'l-ʿUlā, the governor of Ceuta and brother of the Almohad caliph Yūsuf I (A. Huici Miranda, in *Revista del Instituto de Estudios Islámicos en Madrid*, v (1957), 140, 142, n. 3). Nowadays, on the contrary, names of this sort are given rather to economical dishes which are imitations of the more luxurious ones (*e.g.*, Turkish *yalancı dolma*). But attention is always paid to the appearance of a dish, so that even one so common as purée of chick-peas (*ḥummuṣ be-ṭḥīne*), a speciality of Damascus, is always decorated with powdered red pepper, whole chick-peas, etc.

The systematic discrimination of the foods with the pleasantest taste, the drawing up of the rules which govern this according to increasingly subtle criteria, and the search for the most delicious combinations of food, formed the preoccupations not only of head cooks but of a whole distinguished society of gourmets and gastronomes. Gastronomy was especially esteemed in the ʿAbbāsid period, hence the gastronomical gatherings organized by several of the caliphs (cf. Ḥ. Zayyāt, *al-Khizāna al-sharḳiyya*, iv, 4 ff.). Gourmets at the highest level of the social hierarchy took pleasure in preparing and in inventing dishes which were often called by their names (cf. M. Rodinson, *Recherches* . . ., *passim* and, for the Muslim West, A. Huici Miranda, *op. cit.*, 138 ff.). The abundance and the popularity of their writings on this subject were already arousing the anger of Ṣāliḥ b. ʿAbd al-Ḳuddūs (d. 167/783; Goldziher, *Transactions of the 9th International Congress of Orientalists*, London 1893, ii, 104 ff.); they wrote especially many treatises on cookery (*Fihrist*, 317, l. 6-10; cf. M. Rodinson, *Recherches* . . ., 100 ff.) which are now unfortunately lost; poems were composed to celebrate certain dishes (*op. cit.*, 112). The interest in food of the ʿAbbāsid upper classes has left its trace in the names of dishes created by its most eminent members, for example the *ibrāhīmiyya*, which is named after the prince (at one time anti-caliph) Ibrāhīm b. al-Mahdī. Within the Muslim world, gastronomy, although later less widespread and certainly less paraded because of the growth of puritanism, nevertheless always had its adherents and its poets (cf. Rodinson, *op. cit.*, *passim*).

Bibliography: In the article. For the manuscript works on cooking mentioned (especially the *Wuṣla ila 'l-ḥabīb*), see M. Rodinson, *Recherches sur les documents arabes relatifs à la cuisine*, in *REI*, 1949, 95-165. (M. Rodinson)

Banū GHIFĀR b. Mulayk b. Ḍamra b. Bakr b. ʿAbd Manāt b. Kināna, a small Arab tribe, being a subdivision of the Banū Ḍamra b. Bakr, who in their turn formed a branch of the Kināna. The Ghifār lived in the Ḥidjāz between Mecca and Medina; some of their abodes are mentioned by the geographers. Very little is known of their history in pre-Islamic times: one of their members is mentioned (*Aghānī*[1], xix, 74, 5) in the brawls preceding the Fidjār-war [*q.v.*]. A quarrel between the Ghifār and the Banū Thaʿlaba b. Saʿd b. Dhubyān is referred to in a poem quoted by Yāḳūt, *Muʿdjam*, ii, 202 f. A woman of the Ghifār was wife to the poet ʿUrwa b. al-Ward al-ʿAbsī (Ibn Hishām, 653 f.). A confederacy (*ḥilf*) between them and the Banū Mālik of Kināna is mentioned in *Aghānī*[1], xi, 126 ff. Living as they did in the neighbourhood of Medina it was essential to the Prophet that they should not take sides with the Ḳuraysh; he therefore guaranteed them in one of his earliest letters the protection (*dhimma*) of Allāh and His messenger for their lives and goods (Ibn Saʿd, i, 2, 26 f.). In this treaty Muḥammad did not insist on their conversion; but by 8/630 they had embraced Islam and took part in the conquest of Mecca. Some of them had settled at Medina, *e.g.*, Abū Dharr [*q.v.*] and his nephew ʿAbd Allāh b. al-Ṣāmit; Sibāʿ b. ʿUrfuṭa as well as Abū Ruhm are even said to have been left by the Prophet as his representatives in Medina during some of his expeditions (Ibn Hishām 668, 810, 896, 966).

After the Prophet's death the Banū Ghifār did not join in the revolt (*ridda*), nor were their deeds outstanding in the time of the conquests (*futūḥ*). We hear of the quarter (*khiṭṭa*) they had in Fusṭāṭ, when ʿAmr b. al-ʿĀṣ conquered Egypt in 20/641 (Yāḳūt, *Muʿdjam*, ii, 746).

In 45/665 Ḥakam b. ʿAmr, a younger Companion of the Prophet (see Ibn Ḥadjar, *Iṣāba*, s.v.), was appointed to the governorship of Khurāsān; he died at Marw in 51/671. He was called al-Ghifārī, though his ancestor was not Ghifār, but the latter's brother Nuʿayla, whose descendants being few in number had affiliated themselves to the Banū Ghifār (Ṭabarī, ii, 80 f., 84 f., 109-11).

Watt, *Muhammad at Mecca*; idem, *Muhammad at Medina* (indexes). For Ghifār in the tradition see Wensinck, *Concordance*, iv, 529, 42-6.

(J. W. Fück)

GHILZAY [see ghalzay].

GHINĀʾ (a), song, singing. This is the specific meaning of the word, although it stands for music in its generic sense, an interpretation accepted by the Ikhwān al-Ṣafāʾ (4th/10th century) who say (Bombay ed., i, 87): "*mūsīḳī* is *ghināʾ*, and the *mūsīḳār* is the *mughannī*" (see R. Payne-Smith, *Thes. Syr.*, 977, s.v. *hedhrula*). The origin and development of the song must be traced through the folk. From a musical point of view there is no difference between the simple chant of the *faḳīr* and the artless song of the *saḳḳāʾ* (water-carrier), or between the elaborate cantillation of the *muʾadhdhin* (caller to prayer) and the highly festooned vocal work of the professional

mughannī (singer). In some lands *ghināʾ* is classified according to the structure of the music whether classical or popular, whilst in other lands it is grouped according to the class of verse used. In Morocco the song is divided into folk song or popular song called *ḳarīḥa* (natural talent), and the art song called *āla* (classical) or *ṣanʿa* (art work). In Algeria it is grouped under *kalām al-hazl* (profane song) and *kalām al-djidd* (serious song).

The Djāhiliyya. Just as we see the double meaning of the Latin *carmen* (charm, song), so the Arabic *laḥana* and *shaʿara* (from which we derive *laḥn* (melody) and *shiʿr* (poetry)) have, in their pristine significance, the meaning of 'he understood' in the cryptic sense. Perhaps the *ḥudāʾ* (camel driver's song) was, at first, a 'charm' against the *djinn* (genii) of the desert. The *ḥudāʾ/ḥidāʾ* was not confined to the camel driver. The toil or industrial song was to be found on every hand. Indeed we read of the Arabs of old singing at toil for their Assyrian task-masters. That dominating factor of repetition not only relieved the monotony of work but it regulated and disciplined it. Ibn Djinnī (d. 392/1002) has said that the drawer of water will go on working as long as the *radjaz* chant continues. The water carrier, the boatman, the weaver, the gleaner, and even the women of the tent or household sang at work just as they do today. Al-Masʿūdī avers that the *ḥudāʾ* was developed out of the *bikāʾ* (lament) of the women. Out of this came the *nawḥ* (elegy) and the *naṣb* (secular song) which found expression on all occasions of joy, and would include wedding songs, children's songs and lullabies.

We know nothing of the verse or music of these early folk songs, any more than we know the character of those mentioned in *Exodus*, XV, 21 or *Numbers*, XXI, 17, although the names of some singers have been preserved. Al-Djawharī (d. 396/1006) and Ibn Sīda (d. 458/1066) affirm that the *naṣb* was peculiar to the Arabs but was no more than a refined *ḥudāʾ*, and al-Ghazzālī (d. 505/1111) says that its measure (*wazn*) was based on the prosody (*ʿarūḍ*) of the verse. Probably much of pre-Islamic poetry was sung, as Brockelmann suggested. Only by this means could full justice be done to the poetic language. It was not a mere guess which prompted St. Guyard and Landberg to suggest that Arabic prosody was based on musical principles. That verse was originally in the colloquial may be accepted, hence the term *laḥn* came to imply the colloquial. Certainly the folk song is partly responsible for perpetuating corruptions in speech, and both melody and measure are sovereign perpetuators, as we see in the *malḥūn* of Morocco. The melodic framework of folk song is quite simple, a solitary musical phrase being the general rule, and that is repeated with each *bayt* (verse) or even each *miṣrāʿ* (hemistich). The compass is generally tetrachordal or pentachordal, although even two notes might carry the limit of a toil song. Adornments (*taḥsīn*) of the melody by means of grace notes—always the mark of ability in the professional *mughannī* (singer)—is rarely indulged in by the folk. Three types of *ghināʾ* are practised,—the solo, chorus, and antiphon. Both the measured (*mīzān al-shiʿr*) and unmeasured (*ghayr mawzūn*) are in use. The former is called the *nashīd*, *inshād*, *unshūda*, and the latter the *tartīl*.

Needless to say the art song existed with the *ḳaynāt*, *dādjināt*, *mudjināt*, or *ḳarīnāt* (professional singing-girls) of the tribes, wine shops, and private families, the term *musmiʿat*, found in al-Aʿshā Maymūn, being probably post-Islamic. History—or legend—mentions these singing-girls among the old Banū ʿAmālīḳ (see al-Ṭabarī, i, 231; al-Masʿūdī, *Murūdj*, iii, 296), and certainly the *ḳinītu* was known to ancient Assyria. That all played a prominent part in social life is evident from the story of the Prophet Muḥammad himself. Lyall, in his *Mufaḍḍaliyāt* (XXVI, 87), opines that these *ḳaynāt* were 'all foreigners' and that they sang 'probably to foreign airs', but he gives no evidence; whilst the statement of von Kremer that they did not even sing in Arabic is likewise unacceptable. That *some* of them came from Persia, or more likely al-Ḥīra, and even Byzantium, and that *some* of their songs were sung in an alien tongue is quite admissible, but we know that some came from Mecca. Al-Nābigha the poet was corrected by a *ḳayna* for using faulty rhymes (*iḳwāʾ*). That one—at least—was scarcely a foreigner (*Aghānī*, ix, 164; xvi, 15). Most of the great pagan poets were entranced by those singing-girls, and among them Bishr b. ʿAmr, al-Aʿshā Maymūn b. Ḳays, and ʿAbd Yaghūth. Even Ṭarafa, Labīd, and ʿAbd al-Masīḥ were overjoyed to hearken to the *djank* (harp) and *tardjīʿ* (refrain) of the tavern *ḳayna*. Perron says that before Islām, 'music was little else than unpretentious psalming (*tarannum*), varied and embroidered by the singer'. Everyone sang in unison or octave, harmony—in our sense of the term—being unknown. What took its place was what the Arabs called *īḳāʿ* (rhythm) supplied by a *ḳaḍīb* (rhythmic wand), *duff* or *mizhar* (tambourines), or, failing the latter, a *ghirbāl* (a parchment-bottom sieve). Every singer decorated her melody with vocal ornaments (*zawāʾid*). Ṭarafa reveals how the song began on a low note, whilst another describes a singer who 'prolonged the final vowels with a high trill (*tudhrī*)' and clearly enunciated the syllables in the *tartīl* fashion.

Under Islam. At the birth of Islam there was no opposition to singing, since even the Prophet Muḥammad himself had joined in the toil-song at the digging of the trenches at Mecca, yet the four Orthodox Caliphs are reported to have been—more or less—in opposition to any indulgence in listening (*al-samāʿ*) to singing or any music. As a result, the rigid school of religious law in ʿIrāḳ prohibited, and that, more accommodating, of Madina, allowed singing, and a whole library of literature—both for and against—came into existence on *al-samāʿ*. Indeed a legal fiction arose which argued that the cantillation (*taghbīr*) of the Ḳurʾān was not the same as singing, as we read in Ibn Khaldūn. Yet, as Ibn Ḳutayba pointed out, the rule and practice of cantillation and singing were identical, and—as we read in the *ʿIḳd* of Ibn ʿAbd Rabbih—if the artistic song was illegal, so was the chanting of the Ḳurʾān. Human nature, being what it is, could not accept the bigoted ruling of the pious, and so there arose, in addition to the privately owned *ḳayna* or singing-girl, the professional musician (*mughannī*), the first recorded being Ṭuways (10/632-92/711 [*q.v.*]). He, and a *mughanniya* named ʿAzzat al-Maylāʾ [*q.v.*], are said to have introduced a new type of song called the *ghināʾ al-mutḳan* (artistic song) or *ghināʾ al-raḳīḳ* (graceful song). According to Ibn al-Kalbī, 'the *ghināʾ* is of three kinds —(1) the *naṣb*, which was the song of the riders (*ghināʾ al-rukbān*) and the singing-girls (*ḳaynāt*): (2) the *sinād*, which had a slow refrain (*tardjīʿ*), but was full of notes (*naghamāt*): and (3) the *hazadj* which was quick (*khafīf*)'. Yet a new element had arisen called *īḳāʿ* (rhythm), which was distinct from *ʿarūḍ* (metre), and was external because it was supplied by *taṣfīḳ* (handclapping), or

a pulsatile instrument such as the *ḳaḍīb* (wand), *duff*, *mizhar*, or *ghirbāl* (tambourine). All the *aṣwāt* (songs) contained in the *Kitāb al-Aghānī* are in the *ḳaṣīda* (ode) or *ḳiṭʿa* (fragment) forms, and many collections of songs were made by Yūnus al-Kātib (d. *c.* 148/765), Ibn Djāmiʿ (d. *c.* 187/803), Yaḥya al-Makkī (d. *c.* 205/820), Isḥāḳ al-Mawṣilī (d. 236/850), Ḥasan b. Mūsā al-Naṣībī (d. *c.* 246/860), Ibn Bāna [*q.v.*] or Bānata (d. 278/891), and al-Wazīr al-Maghribī (d. 417/1026). Later new popular forms of song appeared such as the *muwashshaḥ*, *zadjal*, *mawwāl*, *billīḳ* and *kānkān*. Indeed the first named was lifted into a premier place in Muslim Spain. Alas! not a note has been preserved. All that we know of the songs in the *Kitāb al-Aghānī* of al-Iṣfahānī, is the name of the tonal mode (*aṣbaʿ*) and rhythmic mode (*ḍarb*) in which they were sung. It is not until the time of Ṣafī al-Dīn ʿAbd al-Muʾmin (d. 693/1294) that we get a notation—or rather a tablature—of a song in Arabic books on music, whilst ʿAbd al-Ḳādir b. Ghaybī (d. 838/1435) is the earliest of the Persians to use a notation or tablature for a song. In the 8th/14th-9th/15th centuries three definite types of vocal music were recognized,—the *nashīd*, the *basīṭ*, and what was contained in the *nawba*, the latter being a vocal and instrumental *suite des pièces*. The *nashīd* comprised two parts, the first being an unrhythmical setting of two verses called the *nashr al-naghamāt*, the second being a rhythmic setting called the *naẓm al-naghamāt*. The *basīṭ* was a *ḳiṭʿa* set in one of the *thaḳīl* rhythms.

All singing in the Islamic East is basically homophonic, *i.e.*, purely melodic. Harmony, in our connotation of the term, is unknown. The greater part of the Islamic East conceives music horizontally, whereas Europe views it vertically. All melody is modal. In the days of the *Kitāb al-Aghānī* there were but eight modes, but with the later impingement of Iranian culture there were eighteen or more. These were originally called *asābiʿ* (fingers), but later were named *naghamāt* (notes), *maḳāmāt* (places), or *ṭibāʿ* (natures), the latter term revealing the belief in the innate character of a particular mode. Then there are and were motives or patterns in the melody, some being hoary with antiquity. As every verse of a song is complete in itself, *i.e.*, it contains a compact thought, it originally consisted of the same melodic phrase, but from the time of Ibn Muḥriz (d. *c.* 96/715) the second verse was set to a different melody. These factors do not imply monotony, because the singer varies her or his rendition of the melody differently by means of ornaments (*zawāʾid*, *taḥāsin* or *zuwwāḳ*). For vocalizing these latter, special syllables are introduced such as *ah*, *yā* and *lā*, when the more conventional *yā laylī* or *tirī ṭār* do not suffice. These occur in various places, viz., in the bosom of a word, and the end of a phrase, or the close of a hemistich, verse, or song, and in the last position it is called *shughl* (work). Of course in the folk or toil songs none of the above artistries occur, although some chants of the pearl fishers off the Bahrain coast reveal something of the sort. It is highly probable that the metric melodies (*naghamāt al-buḥūr*), which are still used in North Africa to probe the scansion of verse, may be survivals of many of the old types of songs, even as far back as the days of early Islam.

(Henry G. Farmer)

GHIRBĪB b. ʿABD ALLĀH, minor poet of Toledan origin who played a political rôle in his native town soon after the succession of the *amīr* al-Ḥakam I (180/796) by supporting the agitation stirred up by one ʿUbayd Allāh b. Khamīr (variant names). Ghirbīb, who exercised great influence at Toledo, had conceived a grudge against al-Ḥakam and, having fled from Cordova, set to work to foster an atmosphere of hostility to the Umayyad *amīr* at Toledo by means of his mordant verses. The latter finally entrusted the task of restoring order to the *muwallad* ʿAmrūs, who put down the revolt savagely and decimated the Tôledan bourgeoisie on the "Day of the Ditch" (*waḳʿat al-ḥufra*). E. Lévi-Provençal has established that this event took place in 181/797 (and not in 191/807 as is generally accepted); and as, according to tradition, al-Ḥakam feared Ghirbīb too much to embark on an expedition against Toledo as long as the poet was alive, there is reason to think that he died in 181/797. Nothing remains of his poetical output except a few lines of no great value.

(Ed.)

GHIRSH [see sikka].

GHIYĀR (Arabic: distinguishing, distinction, cognizance) is a term denoting the compulsory distinctive mark in the garb of *dhimmī* [*q.v.*] subjects under Muslim rule. It is considered probable that the *ghiyār* became the prototype of the Jewish badge in Christian Europe.

In Islamic lands it was part and parcel of the dispositions concerning the status of the *dhimmīs* which can be traced back to the time of Mutawakkil's enactments (233/849), but had been known even earlier; thus under Hārūn al-Rashīd they were discussed in Abū Yūsuf's *K. al-Kharādj* (72 f.) where they are ascribed to ʿUmar. From time to time when a recrudescence of anti-*dhimmī* restrictions occurred the re-introduction of the *ghiyār* figures in the reports.

It is described as a piece of cloth, a patch of a stipulated colour (red, blue, yellow) placed over the shoulder. The *Tādj* mentions that some considered it the badge of the Jew. On the other hand, in various sources the word denotes any kind of garb distinction imposed upon *dhimmīs*, and indeed the garment which bears the mark. Both the wider connotation and the narrower seem well attested. Thus the *zunnār* (a special belt) of the Christians often comes under this heading. The colours changed in the course of time for each infidel community. The *muḥtasib* [*q.v.*] was supposed to see to it that the statutes concerning the *dhimmīs* in general were enforced, and the wearing of the *ghiyār*, in particular, observed.

In the Maghrib the name *shakla* occurs for the *ghiyār*.

GHIYĀTH AL-DĪN [see DIHLĪ SULTANATE, KAY-KHUSRAW, MUḤAMMAD].

GHIYĀTH AL-DĪN NAĶĶĀSH, Tīmūrid courtier. If he was an artist, as the name indicates (*naķķāsh* = painter, etc.), his speciality is unknown. He was a protégé of Bāysonghor [*q.v.*], the gifted son of Shāh Rukh, and was attached by his patron to the Tīmūrid embassy to China in 823/1420-825/1422, with the special duty of drawing up a day-to-day descriptive account of the embassy. This report of the journey from Harāt to Khānbāligh (Pekin) and back, giving first-hand information about China which is not to be found elsewhere, at one time existed in writing, and has been incorporated into the *Zubdat al-tawārikh* of Ḥāfiẓ Abrū, the *Maṭlaʿ al-saʿdayn* of ʿAbd al-Razzāķ al-Samarķandī, etc. On the 18th century Turkish translation, called *ʿAdjāʾib al-laṭāʾif*, by Küčük Čelebizāde, see Babinger 293-4.

GHIYĀTH AL-DĪN TUGHLUĶ I (GHĀZĪ MALIK), founder of the Tughluķ dynasty and ruler of India from 720/1320 to 725/1325, was by origin a Ķarawna Turk and an immigrant from Khurāsān, who took service under the Khaldjīs. In 705/1305 he was appointed governor of Dīpālpūr in the Pandjāb, and as warden of the marches he held the Mongols at bay for fifteen years, conducting annual raids against them in the Kābul and Ghazna areas.

The prestige thus gained was his main asset when he rose against Khusraw Khān, a Khaldjī general of low-caste Hindu Parwārī origin, who had massacred the last Khaldjī ruler, Ķutb al-Dīn Mubārak (716/1316-720/1320) and all the Khaldjī princes, seized the throne, apostatized from Islam and begun a reign of terror in Dihlī. Most of the Muslim governors had accepted Khusraw Khān's rule passively, probably owing to the lack of reliable intelligence from Dihlī. Ghāzī Malik addressed his *daʿwa* of *djihād* to only six governors of western India, of whom one joined him, two who refused to join were murdered by their own troops, while another who promised to help was restored to authority by his formerly rebellious troops. The Tughluķ revolution was therefore the work of the rank and file of the Muslim army, rather than of the Muslim ruling élite. Three decisive victories ending in the capture and execution of Khusraw Khān left Ghāzī Malik the undisputed master of the Sultanate. Despite his refusal, he was raised to the throne by the *idjmāʿ* of the nobles, as the defender and restorer of Islamic power in India against the double challenge of Mongol threat and Hindu subversion. He assumed the title Ghiyāth al-Dīn.

Contemporary Muslim historiography eulogises him as the saviour of Islam in India, and Baranī presents him as the ideal sultan who combined a heroic rôle with personal virtues of continence, chastity and piety. The hagiographical tradition is much less complimentary owing to the Sultan's differences with the Čishtī mystic Niẓām al-Dīn Awliyā on two points: acceptance by the latter of a large gift of money from Khusraw Khān, which he was unable to restore to the treasury when called upon; and the practice of the Čishtiyya [*q.v.*] to listen to music (*samāʿ*). To settle the second point the Sultan convened a great congress of *ʿulamāʾ* and Ṣūfīs, and finally imposed some restriction on the *samāʿ* of the heterodox Ṣūfīs, without interfering with the practices of the Čishtī leader. Anecdotes of subsequent bitterness seem to be later apocryphal legends connected with the death of Ghiyāth al-Dīn which found their way from later hagiographical writings like those of Djamālī into the serious historical works of Firishta and others; they are not traceable either in contemporary chronicles or near-contemporary hagiographies like Ḥamīd Ķalandar's *Khayr al-madjālis*.

Administratively Ghiyāth al-Dīn's first problem was to restore the economy of the state after its upheaval and thorough fiscal chaos under Khusraw Khān. He had to resort to a policy of confiscation of *djāgīrs* granted by his reckless predecessors, and to the more unpopular measures of appropriating older land-grants and army pensions (ʿIsāmī, 389-91). His taxation policy, which affected mainly the Hindu agricultural and land-owning classes, was to strike a *via media*, denying them opportunities of accumulation of wealth which might lead to rebellion, but granting them security of subsistence to enable them to pursue their husbandry. Between 722/1322 and 723/1323, consolidation and expansion of the Sultanate was effected by this son Djawnā Khān (also known as Ulugh Khān, later Sultan Muḥammad b. Tughluķ [*q.v.*]), who re-subjugated the rebellious Kakātīya radja Pratāparuraveda II of Warangal after an initial reverse; annexed the Pāṇḍya Hindu kingdom of Madura (Maʿbar); invaded Djādjnagar and made incursions into the independent Hindu principality of Orissa. Ghiyāth al-Dīn personally led an expedition intervening in the civil war in Bengal, which was partly annexed to the sultanate and partly placed under a vassal ruler Nāṣir al-Dīn. During his five years' rule Ghiyāth al-Dīn had thus consolidated the sultanate and extended its borders considerably beyond the Khaldjī frontiers.

On his way back from Bengal in 725/1325 Ghiyāth al-Dīn was crushed to death under the roof of a wooden pavilion constructed hastily upon the orders of his son Djawnā Khān, which collapsed during an elephant parade after a banquet. Djawnā has been accused of parricide by two near-contemporary chroniclers, Ibn Baṭṭūṭa and ʿIṣāmī, both with strong prejudices against him. Other historians of the age, Baranī and Yaḥyā b. Aḥmad Sarhindī, make no such accusation. Sir Wolseley Haig's theory of the involvement of Niẓām al-Dīn Awliyā in this alleged intrigue seems to be far-fetched.

(AZIZ AHMAD)

GHIYĀTH AL-DĪN TUGHLUĶ SHĀH II IBN FATḤ KHĀN IBN SULṬĀN FĪRŪZ SHĀH TUGHLUĶ [*q.v.*] (790/1388-791/1389) succeded to his grandfather's throne according to his will, superseding a number of relatives. This led to the internecine dynastic wars which led to the decline, and finally the overthrow of the Tughluķ dynasty. The Sultan's inexperience, his love of pleasure and his tactlessness in imprisoning his own brother Sālār Khān led to the revolt of his nephew Abū Bakr son of Ẓafar Khān, who defeated and killed him with the aid of the *wazīr* Rukn al-Dīn Čanda. The reign of Ghiyāth al-Dīn Tughluķ II marks the acceleration of chaos and civil strife in which the Delhi Sultanate rapidly disintegrated: a process which also marks the provincialization of Muslim culture in India during the 9th/15th century.

(AZIZ AHMAD)

GHUBĀR [see ḤISĀB, KHAṬṬ].

GHUBRĪNĪ, *nisba* of the B. Ghubrīn, a branch of the Zawāwa Berbers who formerly inhabited the eastern end of Great Kabylia in Algeria (Ibn Khaldūn, *Berbères*, Index s.v. Ghobrîn) and who are still represented in the same area by the Ait Ghobri (Brunschvig, *Berbérie orientale*, i, 286). Two Ghubrīnīs played a rôle in Ḥafṣid history:

(1) Abu 'l-ʿAbbās Aḥmad b. ʿAbd Allāh, b. 644/1246 at Bidjāya (Bougie) where he spent all his life and attained the rank of *ķāḍi 'l-ķuḍāt*. In 704/1304 he was sent by the Ḥafṣid ruler of Bougie, Abu 'l-Baķāʾ Khālid, as an emissary to establish friendly relations with the rival Ḥafṣid at Tunis, Abū ʿAbd Allāh. On his return he was accused of treason and of having been implicated in the death of Abū Isḥāķ Ibrāhīm (who had been captured in Ghubrīnī territory 22 years previously) and was put to death.

He wrote a collection of biographies of Bougiotes entitled *ʿUnwān al-dirāya* ... which was edited by Muḥammad b. Abī Shanab (Mohammed Ben Cheneb) and published at Algiers in 1910.

Bibliography: Ibn Farḥūn, *Dībādj*, Cairo 1351/1932, 80 (correct the date to 704); Nubāhī, *Taʾrīkh ķuḍāt al-Andalus*, 132; Ibn Khaldūn, *Berbères*, ii, 394, 418; Ben Cheneb, *Idjâza*, no. 354.

(2) Abū Mahdī ʿĪsā, who became *ķāḍi 'l-djamāʿa* at Tunis in 787/1385 and died there about 813/1410.

(J. F. P. HOPKINS)

GHUDJDUWĀN (today Gižduvan), a large village in the northeastern part of the oasis of Bukhārā, on the tributary of the Zarafshān River at present called Pirmast, formerly the Kharķān Rūd.

The origin of the village and etymology of the name are unknown. It is mentioned as a village of the town of Rāmitīn by al-Muķaddasī (267c), but no notices are found in other geographies. Al-Samʿānī (406b) says the village was six farsakhs from Bukhārā, and was an important commercial centre. It is mentioned several times in Islamic texts as the home of several learned men. A lieutenant of the heretic al-Muķannaʿ came from there according to Narshakhī (see below). Bābur in 918/1512 was defeated here by the Özbeks. Thereafter little is heard of the village although the citadel was the scene of fighting several times. At present the village is sixteen kilometres/10 miles from the railroad station of Kyzyl-Tepe and ca. 50 km/30 m. from Bukhārā.

(R. N. FRYE)

GHUDJDUWĀNĪ, KHWĀDJA ʿABD AL-KHĀLIĶ B. ʿABD AL-DJAMĪL, famous ṣūfī *shaykh*, born in Ghudjdawān (according to al-Samʿānī) or Ghadjduwān (according to Yāķūt). His father, whose name has sometimes been corrupted into ʿAbd al-Djalīl, lived at Malātya (Melitene); he migrated from there to the vicinity of Bukhārā, where his son received his education. Certain writers trace his

ancestry to a royal dynasty of Rūm (Asia Minor); others consider him to be a descendant of the *imām* Mālik b. Anas and another source traces him back through ten generations to Abu 'l-Ḥasan Kharaḳānī, a famous ṣūfī *shaykh* who died in 424/1033; this seems inadmissible, since only 193 years separate the date of the death of Kharaḳānī from that of the death of Ghudjduwānī (which appears the more exact) and during that time ten generations cannot be admitted; moreover Kharaḳānī lived in Khurāsān and the ancestors of Ghudjduwānī seem always to have been in Asia Minor. The only information we possess on his life tells us that he studied at Bukhārā where, at the age of 22, he met his *shaykh* Abū Yaʿḳūb Yūsuf Hamadānī, who died on Thursday 8 Muḥarram 535/24 August 1140 (in reality a Saturday). Thanks to the latter he entered the sect of Ṣūfīs then called *Tarīḳat-i Khʷādjegān*, later known as the Naḳshbandiyya from the time of Bahāʾ al-Dīn Naḳshband. Most of his biographers place his death in 575/1179, while another version gives the date 617/1220, which seems more correct because he twice mentions the date 600/1204 in his *Risāla-i Ṣāḥibiyya*; what is more, his successor in the *ṭarīḳa*, Khʷādja Aḥmad Ṣiddīḳ, died in 657/1259, so that if Ghudjduwānī had died in 575 his successor would have disappeared 80 or 82 years after him, which is hardly likely. He was buried in Ghudjduwān.

He has left a work in Persian comprising: several quatrains, the *Risāla-i ṭarīḳat*, the *Waṣiyyat-nāma* or *Waṣāyā* (which was the subject of a commentary composed by Faḍl Allāh b. Rūzbihān Iṣfahānī, known under the title of Khʷādja Mawlānā, died after 921/1515), the *Risāla-i Ṣāḥibiyya*, eulogies of his master Yūsuf Hamadānī, a *Dhikr-i Khʷādja ʿAbd al-Khāliḳ*, mentioned by Storey (mss. of Leyden, of the British Museum and of the India Office). The *Risāla-i Ṣāḥibiyya* has been published with a commentary by the author of this article. We possess another anonymous *risāla* in Persian eulogizing him and his successor Khʷādja ʿĀrif-i Riv-Gari, also published by the author of this article.

Bibliography: *Risāla-i Ṣāḥibiyya*, in *Farhang-i Īrān Zamīn*, i/1 (1332), 70-110; *Maḳāmāt-i ʿAbd al-Khāliḳ-i Ghudjdawānī wa ʿĀrif-i Riv-Gari*, *ibid.*, ii/1 (1333), 1-18; Samʿānī, *Ansāb*, fol. 406b; Khʷādja Muḥammad Pārsā, *Faṣl al-Khiṭāb*, Tashkent 1331, 518-20; *The Nafaḥāt al-Ons min Hadharāt al-qods by Mawlānā Noor al-dīn Abd al-Raḥmān Jāmi*, Calcutta 1859, 431-3; Fakhr al-Dīn ʿAlī al-Ṣāfī, *Rashaḥāt-i ʿAyn al-ḥayāt*, Tashkent 1329, 18-28, Cawnpore 1912, 18-27; Muḥammad Murād b. ʿAbd Allāh Ḳāzānī, *Tardjamat-i ʿAyn al-ḥayāt*, Mecca 1307, 25-23; Dārā Shukūh, *Ṣafīnat al-awliyā*, Lucknow 1872, 76; Amīn Aḥmad Rāzī, *Haft iḳlīm*, Tehrān, iii, 425-7; Riḍā Ḳulī Khān, Hidāyat, *Madjmaʿ al-fuṣaḥāʾ*, i, Tehrān 1295, 338; idem, *Riyāḍ al-ʿārifīn*, Tehrān 1305, 105, ²Tehrān 1316, 172; Muḥammad Muẓaffar Ḥusayn Ṣabā, *Rūz-i rawshan*, Bhopal 1295, 433-4; Ghulām Sarwar Lahorī, *Khazīnat al-aṣfiyā*, Cawnpore 1914, i, 532-4; C. A. Storey, i/2, 1055; Said Naficy, *Taʾrīkh-i naẓm wa nathr dar Īrān wa dar zabān-i fārsī*, Tehrān 1342/1963, 110-1, 220, 252. (S. Naficy)

GHUFRĀN, *maṣdar* of *ghafara*, to forgive; refers to the two Ḳurʾānic Divine Names, *al-ghafūr* and *al-ghaffār*, the Forgiver and He who unceasingly forgives. Thus: act of man forgiving an offence, but essentially: act of God forgiving sins. The term *ghufrān* belongs to the vocabulary of *ʿilm al-kalām*, e.g. treatise on the "Last Things" (*al-waʿd wa 'l-waʿīd*) and chapter on *tawba*; and to the vocabulary of *taṣawwuf*, e.g. "dwelling-place" (*maḳām*) of repentance (*tawba*). Frequent synonym: *al-ʿafw*, which places the emphasis on forgiveness conceived as (total) annulment of the sinful act.—The conditions and methods of Divine forgiveness are analysed in the article TAWBA. (L. Gardet)

GHŪL (A., pl. *ghīlān* or *aghwāl*), fabulous being believed by the ancient Arabs to inhabit desert places and, assuming different forms, to lead travellers astray (sometimes, like the Bedouins, lighting fires on the hills the more easily to attract them), to fall upon them unawares and devour them; certain isolated sources (cf. al-Masʿūdī, *Murūdj*, iii, 315) affirm however that it fled as soon as it was challenged; according to al-Djāḥiẓ (*Ḥayawān*, i, 309), it rode on hares, dogs and ostriches; men could kill it, but only by giving it one single blow, for a second restored it to life, and this is why it always asked anyone courageous enough to resist it to strike it again. The root of the word *ghūl* seems to contain two different ideas: on the one hand the ability to assume different forms and on the other the treacherous attack. Indeed the *ghūl* is considered as apt to change its form continually and to appear to travellers under the most attractive guises, its ass's hooves alone remaining unchangeable. The word denotes also any misfortune which happens unexpectedly to a human being (cf. al-Djurdjānī, *Taʿrīfāt*, s.v.; Horten, *Theol. des Islams*, 335); it is also used, notably by Kaʿb b. Zuhayr in verse 8 of his *Burda* (cf. R. Basset, *Bânat Soʿâd*, 102) to indicate fickleness, the ability of the *ghūl* to change its shape and colour having become proverbial; in the same sense it is also sometimes given the name of *khaytaʿūr* (see *LA*, s.v.).

Early sources, while observing that *ghūl* denotes a male as well as a female being, make it clear that the Arabs tended to regard it as a female; later sources however make it into a diabolical *djinn* and certain of them prefer to apply the word *ghūl* to the male, of whom the female is called *siʿlāt* (pl. *saʿālī*), while others consider the *ḳuṭrub* as the male of the latter (see al-Damīrī, s.v. *ḳuṭrub*); indeed these authors are not far from thinking that *ghūl* and *siʿlāt* are the same thing, while al-Djāḥiẓ (*Ḥayawān*, vi, 159), followed by al-Ḳazwīnī (*ʿAdjāʾib*, following the *Ḥayāt al-ḥayawān* of al-Damīrī, Cairo 1956, 214), states that the *siʿlāt* was distinguished from the *ghūl* by the fact that she did not change her form; she was considered among the *djinns*, as a kind of witch (*sāḥira*). However, although grammatical agreement with the word *ghūl* is in the feminine, those who regard *siʿlāt* as the feminine of *ghūl* can point to the fact that popular usage has formed a feminine *ghūla*, and that, in a certain number of traditions, we find men having fruitful sexual relations with *saʿālī* but rarely with *ghīlān*. Attached to this group is the *ʿudār*, an equally fabulous animal, a male whose habit was to make men submit to assaults, which proved mortal if worms developed in the anus of the victim; there is moreover a proverb: *alwaṭ min ʿudār*; it survives in the Yemen, in the Tihāma and even in Upper Egypt (al-Djāḥiẓ, *Ḥayawān*, vii, 178; al-Masʿūdī, *Murūdj*, iii, 319).

The Ḳurʾān contains none of the above terms, but the Prophet was aware of popular beliefs on the subject of the *ghīlān*; according to one *ḥadīth* he denied their existence, but some commentators consider that he denied only their ability to change shape, all the more because, according to another *ḥadīth*, he advised the repetition of the call to prayer

as a way of escaping their evil deeds (cf. *LA*, s.v.; al-Damīrī, s.v.). Hence it is not surprising that this belief survived in Islam to the point that al-Ḳazwīnī, followed by al-Damīrī, does not hesitate to state that these beings are not uncommon in the thickets and reedy marshes and that if they can seize a man they play with him "like a cat with a mouse".

However, the Muʿtazila, in the first place al-Djāḥiẓ, but also for example al-Zamakhsharī (commenting on Ḳurʾān, XXXVII, 46), set out to demonstrate that this fabulous being did not exist. Al-Djāḥiẓ considers that the poets, in their vanity, have bolstered up the legend, for the interpretations, in which the imagination of the *ruwāt* has had a free rein, are based to a great extent on verses such as those of Taʾabbaṭa Sharr^{an} who boasts of his familiarity with the *saʿālī* or the *ghīlān* which he met in the desert (cf. *Aghānī*, xviii, 209 ff.). Al-Masʿūdī (*Murūdj*, iii, 314-22) devotes to the *ghīlān* a whole chapter in which he tries to bring the discussion on to a higher level; unable to deny their existence, for ʿUmar b. al-Khaṭṭāb himself is said to have seen and killed one (and other Companions too, see al-Ḳazwīnī and al-Damīrī, s.v.), he reports a philosophical opinion—taken up later by al-Ḳazwīnī—according to which the *ghūl* is a freak animal, naturally defective, which has strayed from all other animals to take refuge in inaccessible deserts; he suggests also that these beings are the offspring of the constellation Perseus (*Ḥāmil raʾs al-ghūl*) which, on rising, begets shapes and objects which are to be seen in deserts and even in inhabited regions.

In Berber lands, belief in ogres and other fabulous creatures is of great antiquity and manifests itself in a great many stories, where, however, they tend to be islamized (see Westermarck, *Ritual and belief in Morocco*, ii; E. Laoust, *Des noms berbères de l'ogre et de l'ogresse*, in *Hespéris*, xxxiv (1947), 253-65; idem, *Contes berbères du Maroc*, Paris 1949, ii, 125 ff.). For belief in the *ghūl* in Persia, see H. Massé, *Croyances et coutumes persans*, ii, 351 ff.; for Egypt, see especially C. E. Padwick, *Notes on the Jinn and the Ghoul in the peasant mind of Lower Egypt*, in *BSOAS*, iii (1923-5), 421-46.

In popular language *ghūl* (*ghūla*, *ḳuṭrub*, etc.) is frequently used to indicate a cannibal, man or demon, and this ogre is often invoked as a threat to naughty children; it also appears in many stories and has even passed into French and English, where *goule* (fem.) and *ghoul* respectively correspond to the old Arabic original and indicate in addition a kind of vampire which digs up bodies at night to devour them (cf. Lane, *Modern Egyptians*, ch. x).

(D. B. MACDONALD-[CH. PELLAT])

GHULĀM (A., pl. *ghilmān*), word meaning in Arabic a young man or boy (the word is used for example of the ʿAbbāsid princes al-Muʿtazz and al-Muʾayyad, sons of al-Mutawakkil, at the time when their brother, the caliph al-Muntaṣir, attempted to make them renounce their rights to the succession (al-Ṭabarī, iii, 1485), while the son of al-Wāthiḳ, whom they hesitated to proclaim caliph because of his youth, is described as *ghulām amrad* "beardless" (al-Ṭabarī, iii, 1368)); then, by extension, either a servant, sometimes elderly (cf. Ch. Pellat, *Milieu*, Paris 1953, 69) and very often, but not necessarily, a slave servant (on this use see ʿABD); or a bodyguard, slave or freedman, bound to his master by personal ties; or finally sometimes an artisan working in the workshop of a master whose name he used along with his own in his signature (cf. D. S. Rice, in *BSOAS*, xv (1963), 67, and Mayer, *Metalworkers*, 14).

Every person of a certain rank in Arab Muslim society of the first centuries had in his service, sometimes in addition to free *ghilmān*, a number of *ghilmān* of servile status whose exact origin is not usually indicated and who are usually distinguished from the eunuchs, *khadam* [see KHĀDIM] (as for example in the description of the household of the vizier al-Ḳāsim under al-Muktafī, preserved in the *Nishwār* of al-Tanūkhī, ii, 159). Rulers owned an often impressive number of slave *ghilmān* who served as attendants or guards and could rise to fairly high office in the hierarchy of the palace service, as well as others who formed a component of varying importance in the armed forces. It is with these latter *ghilmān* and the role which they played in the running of various eastern and western Muslim states that this article is chiefly concerned.

i.—The Caliphate

We find hardly any mention of *ghilmān* at the court or in the palace of the Umayyad caliphs, but Slavs and Berbers who were or had been slaves are already found in the entourages of certain princes or in their armies (T. Lewicki, in *Folia Orientalia*, iv (1962), 319 ff.). Certainly from the time of the foundation of the "Round City" of Baghdād, there is mention of the presence of *ghilmān* in quarters inside the wall of the main fortification. But it is only under al-Muʿtaṣim that the *ghilmān* proper took their place in the history of the Muslim world, after the slave element, notably in the person of the famous eunuch Masrūr, had begun to play a rôle in the processes of government under Hārūn al-Rashīd.

At the end of the reign of al-Maʾmūn, his brother, the future al-Muʿtaṣim, had caused to be bought at Samarḳand about three thousand Turkish slaves who were to form the nucleus of the new guard of the caliph and of the new army. The constitution of this guard is said to have been the cause of the transfer of the capital to Sāmarrā in 221/836, although there must also have been other causes, connected with the policy followed by the caliph at that time. To the Turks recruited in Transoxania were added various slaves, also Turkish, who were in the service of certain dignitaries of Baghdād and who, according to al-Yaʿḳūbī, were bought by the caliph. The new militia thus grew rapidly and, at Sāmarrā, the Turkish *ghilmān* were housed in special quarters, away from the Arab or Arabicized population, and obliged to take for wives young slaves of the same origin as themselves from whom they were never allowed to separate. They were divided into several groups under the command of leaders such as Ashnās, Waṣīf and Afshīn who were themselves

freedmen, and whose duty it was to lead their troops when on campaign.

What was the reason for the establishment of this force of armed slaves, which was to supplant not only the earlier Arab contingents but also the Khurāsānī troops who had appeared with the ʿAbbāsid dynasty and who, not long before, had effectively supported al-Maʾmūn? It was almost certainly the anxiety of the new caliphs to avoid the repetition of a civil war such as had broken out between al-Maʾmūn and al-Amīn, and to strengthen the central power by enabling it to rely on forces free from all local attachments. In fact, these *ghilmān*, whose numbers grew rapidly to several tens of thousands (20,000 or 70,000 according to the estimates of Arabic writers), did not remain aloof from partisan struggles; their appearance, though it caused profound changes in the functioning of the political régime, did not make the caliphate any more stable.

It was not long before their commanders, usually freedmen, who enjoyed the unconditional loyalty of their troops, began to occupy important positions, either as governors in the provinces, or at the court where they ended by interfering in affairs of government and in the problems of the succession to the caliphate. It was some of these officers who assassinated the caliph al-Mutawakkil in 247/861 and, during the following years, their disputes were the basic cause of the dynastic troubles which constantly recurred until the regent al-Muwaffaḳ and then his son al-Muʿtaḍid succeeded in imposing their authority on the soldiery. Meanwhile there were numerous quarrels between these Turkish officers and the representatives of the secretarial class which they tried to dominate.

Although the situation appears calmer during the reign of al-Muʿtaḍid (279-89/892-902), the military chiefs still belonged to the new aristocracy formed by the descendants of the first *ghilmān*; thus Badr, who was the caliph's supreme general and was often given the title of *ghulām*—in the broadest sense—of the Caliph, was the son of a freedman of al-Mutawakkil. The regiments of *ghilmān*, whose importance had grown during the war against the Zandj, were at this time very numerous. Each regiment bore the name of the leader who commanded it or who had formed it (thus the *Bughāʾiyya* was no doubt called after the name of an officer of al-Mutawakkil, Bughā al-Sharābī [*q.v.*] and the *Nāṣiriyya* after that of the regent al-Muwaffaḳ al-Nāṣir li-dīn Allāh), though this name did not indicate with any certainty in whose service they actually were. Among these *ghilmān* of the army of the caliph, those of which we know most, thanks to the list of the court expenses preserved by Hilāl al-Ṣābiʾ (*K. al-Wuzarāʾ*, 11-18), are the ones who formed the various detachments of the guard. There was first of all a group of former slaves of varying origins, white such as Daylamīs and Berbers, or black such as Nubians and former Zandj prisoners taken by al-Muwaffaḳ during the preceding reign, who were employed to form a line of troops (*maṣāff*) in the reception rooms and who were probably the origin of the corps of the *Maṣāffiyya* mentioned below. There were also others bought especially by al-Muʿtaḍid to be on duty in the "halls" (*ḥudjar*) of the Palace, from which they took their name (*al-Ḥudjariyya*), and placed under the command of eunuchs called *ustādhs*; to these were later added an élite of soldiers chosen from among the various detachments. In addition to these the personal guard of the caliph was made up of freedmen of al-Muwaffaḳ, called *al-ghilmān al-khāṣṣa*.

During the reign of al-Muḳtadir (295-320/908-32), these corps of *ghilmān*, the respective size and importance of which it is difficult to assess (we know only that the *Maṣāffiyya*, who were under the command of the Chamberlain, numbered 10,000 men), commanded by leaders who were often rivals, once again influenced political events and the palace intrigues. Thus in the two abortive coups d'état of 296/908 and 317/929 against the caliph, the guards played a decisive rôle and, in 317/929, it was the *Maṣāffiyya* who forced al-Ḳāhir to flee. In addition, the demands of the *ghilmān*, on whom in large measure the fate of the caliphate depended (in the capital as well as in the provinces where they were often sent as reinforcements), gave rise to financial difficulties and several times they procured the removal from the vizierate of figures such as ʿAlī b. ʿĪsā, who tried to restore financial order by making cuts in this expenditure. The interference of the *ghilmān* in political affairs led to the elimination of one regiment after another. The *Maṣāffiyya* were massacred in 318/930, then the *Sādjiyya* (on the origin of the name, see M. Canard, tr. of al-Ṣūlī, *Akhbâr ar-Râḍî*, i, 49 n. 3) were imprisoned in 324/936 by the *amīr al-umarāʾ* Ibn Rāʾiḳ, who shortly afterwards had the *Ḥudjariyya* exterminated in order to deprive the caliph of all power.

By this time the caliph had lost practically all control over the regiments of *ghilmān*. At Baghdād their commanders no longer respected his authority. Furthermore, persons such as the viziers were in a position to form in due course for themselves personal bodyguards capable eventually of repulsing the troops of the caliph. The provincial governors, who more and more often combined military and fiscal functions, for their part maintained troops who were completely loyal to them. Thus certain governors went so far, with the aid of their own regiments, as to seize effective power for themselves, and a number of them forced the caliph to recognize them as *amīr al-umarāʾ*; after several years they were replaced by the famous Buwayhid *amīrs*, whose Daylamī guards were from then on installed in the palace of the *amīr* side by side with the Turkish *ghilmān* who were still used.

In the western provinces the same development had already given rise to local attempts to attain autonomy from the second half of the 3rd/9th century onwards. Thus Aḥmad b. Ṭūlūn [*q.v.*], who in Egypt achieved a large measure of independence from the central government and managed to establish a short-lived dynasty there, was the son of a slave bought at Bukhārā under al-Maʾmūn. Similarly al-Ikhshīd [*q.v.*], who was later to repeat this success in the same country, was the descendant of a Turk who came to Sāmarrā under al-Muʿtaṣim. The ephemeral dynasties thus founded themselves formed slave armies. The army of Ibn Ṭūlūn is said to have included 24,000 Turkish and 42,000 black slaves in addition to the smaller number of free soldiers; al-Ikhshīd also had a large slave army, and had as minister, as regent for his sons and ultimately as successor, the famous black slave Kāfūr [*q.v.*].

The tradition continued in Fāṭimid Egypt. There were at the Palace, as retainers holding more or less honorific offices and as guards, black or white slaves, some eunuchs and some not, most of the former originating from the Sudan and the latter from the Slav countries. The rôles of Djawhar [*q.v.*], who was a freedman of Slav origin, and of the eunuch freedman Djawdhar [*q.v.*], also a Slav, who was the right hand man of the caliph al-Muʿizz, are well

known. Later Turkish and Daylamī units were added. (On the rivalries between the different ethnic groups see FĀṬIMIDS, 858.)

A little later, the Saldjūḳids, who were not of slave origin and who had installed themselves in the eastern provinces of the ʿAbbāsid empire with the aid of the Turcomans, were nevertheless soon forced also to have recourse to a professional army and to recruit Turkish *ghilmān* (see below) as both soldiers and assistants. Thus the *atābaks* [*q.v.*] were in general former slaves. The *atābaks* of Syria themselves employed slaves of various origins for their personal bodyguard (such as those who assassinated Zangī [*q.v.*]), but their army does not seem to have been based on the recruitment of slaves. On the other hand, their successors the Ayyūbids, who were the descendants of a Kurdish officer, recruited Turkish slaves along with the Kurdish contingents, and the last ruler of this dynasty, al-Malik al-Ṣāliḥ, tried to save his threatened throne by installing in Cairo an important troop of Turkish slaves. It was these slaves who were finally to found the first regime in which the power was officially wielded by the slave militia, that of the Mamlūks [*q.v.*].

In Muslim Spain, the slave element of European origin had also played an important rôle both in the army and in the palace service. The freedmen, usually called *fityān* [see FATĀ], but also *ghilmān* as in the East, came to control the main governmental offices and even to found, as the Umayyad state disappeared, small local dynasties [see AL-ANDALUS, 495].

In the Maghrib the name *ghulām* does not seem to have been in current use for the slave mercenaries, and although the rulers of the Maghrib had almost all had, since the Aghlabid period, black bodyguards (the members of which are generally called *ʿabīd*) and employed, in proportions which varied and which are difficult to ascertain, slave mercenaries of diverse origins, often Europeans, the slave militias never had in this region the importance which they had in the East. See further DJAYSH, MAMLŪK.

(D. SOURDEL)

ii.—PERSIA

The institution of military slavery in the Persian world is post-Islamic. Whilst slavery was known under the Achaemenids, Seleucids, Arsacids and Sāsānids, it was essentially for temple service, for state purposes like building or for domestic duties. At no time in the pre-Islamic period does slavery seem to have been as widespread in the Persian world as in other parts of the Middle East (R. N. Frye, *The heritage of Persia*, London 1963, 152-3). Military organization under all the historic pre-Islamic dynasties of Persia was based on the classes of greater nobility and lesser nobility or gentry (*vuzurgān* and *āzādhān* in Sāsānid terminology), and the free cavalryman was the backbone of the army. Within the army there was usually an élite body surrounding the Emperor, the Achaemenid "corps of immortals" or the Sāsānid *gyān-avspar* "those who sacrifice their lives", but there is no indication that these were anything but freemen and probably they were sons of the nobility (cf. Christensen, *L'Iran sous les Sassanides*², 206 ff., 368). Any slaves in these armies can only have been employed in the little-regarded infantry rump, which was basically a rabble of conscripted peasants.

The carrying of Arab arms beyond the borders of Armenia and Persia opened up vast reservoirs of slave labour from the South Russian, Central Asian and northern Indian worlds. In particular, the Turks early acquired the reputation of being fierce fighters, skilled riders and archers, who because of their nomadic life in the harsh and extreme conditions of the Eurasian steppes were inured to danger and discomfort (cf. Djāḥiẓ, *Risāla fī manāḳib al-Turk*, tr. C. T. Harley-Walker, *JRAS*, 1915, 631-97, analysed by F. Gabrieli, *RSO*, xxxii (1957), 477-83). Turkish prisoners-of-war began to fall into the hands of the Arab governors of Armenia and Khurāsān, and it is with the military use of these captives—a writer of the 5th/11th century, Ibn Ḥassūl, emphasizes that the Turks are too proud a race to make good domestic slaves—that the institution of the *ghulām* in Persia begins. The Ṭāhirid governors of Khurāsān forwarded to the ʿAbbāsids in Baghdād Turkish slaves for use in the Caliphal palace guard. Whilst details of the Ṭāhirids' own use of *ghulāms* are lacking, their example here must have been decisive for succeeding dynasties in Persia.

The spread of military slavery in Persia also reflects the growing economic and commercial prosperity of the land during the 3rd/9th and 4th/10th centuries, for this enabled rulers to pay professional, slave armies rather than to rely on the Arab elements settled in the garrison towns or on local Persian troops. The advantage of slave troops lay in their lack of loyalties to anyone but their master and the fact that they had no material stake in the country of their adoption. Such ties were deliberately avoided

by the most strictly professional of slave commanders: the Sāmānid *ghulām* general Ḳaratigin Isfīdjābī (d. 317/929) laid down that "a soldier must be able to take with him everything which he possesses, wherever he may go, and nothing must hold him back" (Ibn al-Athīr, viii, 157).

Juridically, the slave soldier belonged to his master and was heritable property like any other chattel. In practice, personal loyalties and attachments were usually taken into account. When in the middle of the 4th/10th century the Ṣaffārid Amīr of Sīstān, Abū Aḥmad Ḥusayn b. Ṭāhir, died, his *ghulāms* should have passed to his successor Khalaf b. Aḥmad, but the latter gave them the choice of entering his own service or of seeking independent careers; in fact, they elected to stay with Khalaf, and he assigned them houses, estates and concubines (*Ta'rīkh-i Sīstān*, 341). One of Masʿūd I of Ghazna's old and trusted *ghulām* commanders was manumitted before his death and the Sultan respected his last wishes concerning the disposal of his personal *ghulāms* (Bayhaḳī, cited by C. E. Bosworth, *Ghaznevid military organisation*, in *Isl.*, xxxvi/1-2 (1960), 49-50). It was clearly in the interest of the master to treat his slaves well, for the particular concern of the *ghulāms* was normally to act as a dependable élite force within the wider body of the army and as a personal bodyguard. Under such dynasties as the Ghaznavids and Saldjūḳs, *ghulāms* filled such important household and palace offices as Keeper of the Stables, Keeper of the Wardrobe, Keeper of the Sulṭān's Armour and Weapons, Bearer of the Ceremonial Parasol or *čatr* and Keeper of the Washing Vessels (cf. Bosworth, *op. cit.*, 47-8; İ. H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, 35-41; İ. Kafesoğlu, *Sultan Melikşah devrinde Büyük Selçuklu imparatorluğu*, Istanbul 1953, 143-5). This last office of *ṭasht-dār* was held during the reign of the Saldjūḳ Malik Shāh by the *ghulām* Anūshtigin Gharča'ī; it was the stepping-stone to his appointment as governor of Khwārizm and the consolidation there in the 6th/12th century of his descendants as Khwārizm-Shāhs. When a ruler or commander lost the loyalty of his *ghulāms*, his position could become very insecure. The Ziyārid Mardāwīdj b. Ziyār was murdered in 323/935 because he had ill-treated his Turkish *ghulāms*, putting reins and saddles on them as if they were horses and leading them into stables (Masʿūdī, *Murūdj*, ix, 29-30; Miskawayh, *Eclipse of the ʿAbbāsid Caliphate*, i, 162-3, 312-15, tr. iv, 182-4, 353-6; Ibn al-Athīr, viii, 222-3). The *ghulāms* of the Sāmānid Amīr Aḥmad b. Ismāʿīl killed him in 301/914 allegedly because he had become alienated from them through his excessive frequenting of the *ʿulamā'* (Barthold, *Turkestan*, 240).

In considering the personal relationship between master and slave, the sexual aspect should certainly not be neglected; the ethical climate of Persia in this period condoned homosexual liaisons (cf. Kay Kā'ūs, *Ḳābūs-nāma*, ch. xv, and for more recent times, Olearius, *Voyages and travels ... to the Great Duke of Muscovy and the King of Persia*, Eng. tr. London 1669, i, 238: "Sodomy not punish'd in Persia"), and the master of youthful slaves was well-placed for indulging unnatural and sadistic tastes. Resentments aroused by practices of this kind seem to have been behind the murder in 541/1146 of Zangī b. Aḳ Sonḳur. Zangī's personal guard was drawn from the sons of the great men of the Turks, Greeks and Armenians, whose fathers he had killed or banished; he had then kept the sons after castrating them to preserve their boyish and beardless appearance. These *ghulāms* had long sought an opportunity for revenge, and eventually assassinated him (Bundārī, 208-9). Eunuch *ghulāms* from the Byzantine, Armenian and Khazar regions may have been castrated within their homelands, but this operation was also done within the borders of Islam, especially in the case of Turks. Emasculation was often accepted voluntarily as a recognized way to preferment (cf. *Murūdj*, viii, 148-9); thus one of the most highly-honoured of the Saldjūḳ *ghulām* generals under Alp Arslan and Malik Shāh, ʿImād al-Dawla Sāwtigin, had castrated himself (Ḥusaynī, *Akhbār al-dawla al-Saldjūḳiyya*, 30-1).

The Ṣaffārids, successors to the Ṭāhirid heritage in Khurāsān, are the first Persian dynasty about whose employment of *ghulāms* we have detailed information. Yaʿḳūb b. Layth's known skill as a military organizer makes it unlikely that he would pass over the adoption of an institution so useful for buttressing a despotic ruler's power. Both Masʿūdī, *Murūdj*, viii, 49-54, and the *Ta'rīkh-i Sīstān*, 222, say that he had a corps of 2000 *ghulāms* who on ceremonial occasions paraded on either side of his throne, richly clothed and armed with golden and silver shields, swords and maces, all captured from the treasury of Muḥammad b. Ṭāhir at Nīshāpūr. Masʿūdī adds that there was within this general body the Amīr's personal bodyguard, the *ghulāms* of the *khawāṣṣ*, who slept round his tent and executed his personal orders. The equipment and functions of these Ṣaffārid *ghulāms* bear a remarkable resemblance to those of the Ghaznavid *ghulāms* of 150 years later as depicted on the walls of Lashkar-i Bāzār (see below).

Contemporaneously with the Ṣaffārids, the Sāmānids in Transoxania and later in Khurāsān were making a slave guard the nucleus of their army. Naṣr b. Aḥmad (d. 331/943) is said to have had as many as 10,000 *ghulāms*. The Amīrs hoped that these Turkish troops, with their personal bond of fealty to the ruler, would counterbalance the military influence of the indigenous Iranian *dihḳān* class, which was hostile to the dynasty's centralizing policy, but the rôle of the *ghulāms* in various palace revolutions and assassinations shows that this hope was not always realised. However, the geographer Iṣṭakhrī praises the Sāmānid slave army for its discipline and boldness in battle. It was, of course, from the slave guard of the Sāmānids that Alptigin, the conqueror of Ghazna, and Sebüktigin, founder of the Ghaznavid dynasty in Afghanistan and northern India, arose.

In the course of the 4th/10th century, the use of military slaves spread throughout the Persian world to such Daylamī dynasties as the Ziyārids and Būyids and to Arab ones like the Ḥamdānids. The Turkish cavalry of the Būyid armies soon grew more numerous than the free Daylamī infantrymen, and under Muʿizz al-Dawla (d. 356/967) were preferred above the Daylamīs in pay and the granting of *iḳṭāʿ*s (Miskawayh, ii, 99-100, 163-4, 166, 173-4, 234, tr. v, 104-5, 175-6, 178, 186-8, 248; Ibn al-Athīr, viii, 343). Amongst the Persian dynasties of Ādharbaydjān and the eastern Caucasus, as amongst the Christian principalities of Georgia and Armenia, slave troops were drawn from the Khazar and Russian lands to the north. The Yazīdī Sharwān-Shāhs had personal guards of *ghulāms*, and the Hāshimī ruler of Darband, Maymūn b. Aḥmad, had Rūs *ghulāms* who were still pagan, although these may have been adventurers of Slav-Scandinavian origin rather than slaves (cf. Minorsky, *A history of Sharvān and Darband in the*

10th-11th centuries, Cambridge 1958, tr. 28-9, 45-6, 51, 113-15, 121, 123, 127).

The Ghaznavids, themselves of servile origin, built their multi-racial army around a slave core, mainly of Turks but also including some Indians. In the reign of Masʿūd b. Maḥmud (d. 432/1041), the *ghulām*s numbered between 4,000 and 6,000. Headed by their own general, the *Sālār-i Ghulāmān*, they were used in battle as a crack force, and on ceremonial occasions they had rich uniforms and bejewelled weapons; the depiction of these *ghulām*s in the recently-discovered murals of the palace of Lashkar-i Bāzār at Bust accords well with the descriptions of them in the written sources. We also see at work at this time, as under the later Sāmānids, the process whereby provincial governors and commanders themselves collected extensive slave guards (cf. Bosworth, *Ghaznevid military organisation*, 40-50).

The Turkish dynasties who in the 5th/11th century irrupted into the Persian world from the Central Asian steppes soon adopted slave troops as a more reliable fighting instrument than the tribal bands who were their original following. As early as 398/1008 the Ḳarākhānid Ilig Khān Naṣr had a body of Turkish *ghulām* archers which he used against Maḥmūd of Ghazna (ʿUtbī-Manīnī, *Yamīnī*, ii, 85), and in the next century, the Ḳarākhānid *ghulām*s numbered several thousands (Bundārī, 264). In particular, the Great Saldjūḳs found that a paid, professional army was necessary to extend and protect their empire, since their original supporters, the Turkmens, were an anarchic and uncontrollable force. Within this professional army, the Saldjūḳ *ghulām*s were prominent; their commanders were active on *ghazw* in the Caucasus and Armenia and against the Arab dynasties of the west. They usually remained loyal to their masters the Sultans even when the fidelity of other Turkish and Turkmen troops wavered, *e.g.*, in Malik Shāh's battle of 465/1073 with his uncle Ḳāwurd and in the battle of 526/1132 of Dāʾūd b. Maḥmūd and Aḳ Sonḳur Aḥmadīlī against Ṭoghrīl b. Muḥammad (Bundārī, 48, 160-1). As well as Turks, the *ghulām*s of the Saldjūḳs included Greeks, Armenians and even negroes (*al-khuddām al-ḥubūsh*), whose *amīr*s are described as being especially influential under Masʿūd b. Muḥammad (*ibid.*, 193, cf. Rāwandī, 243). The great Vizier Niẓām al-Mulk collected around himself a corps of *ghulām*s of regal dimensions, and after his death this body, the *Niẓāmiyya*, still acted as a cohesive body in politics. In the 6th/12th century we see the seizure of power by *ghulām* commanders of the increasingly ineffective Saldjūḳ Sultans, nominally as Atabaks or tutors for young Saldjūḳ princes. Hereditary lines of slave Atabaks tended to form in such parts of Persia as Ādharbaydjān, Fārs, Khūzistān and Khurāsān, and in this latter province the *ghulām*s of Sandjar claimed to carry on the administrative traditions of their old master before they were swept away by the rising tide of the Ghūrids and Khwārizm-Shāhs.

Both the Ghūrids and the Khwārizm-Shāhs relied heavily on slave troops. Djalāl al-Dīn Mingburnu's *ghulām*s were armed with the traditional weapon of such troops, the mace (Nasawī, 232, tr. 386: *čumāḳdāriyya*). The Turkish *ghulām*s of the Ghūrids did not always act harmoniously with the native Ghūrī troops (cf. Djuwaynī-Boyle, 461), but the troops of Muʿizz al-Dīn or Shihāb al-Dīn Muḥammad, the *Muʿizziyya*, continued to revere that Sultan's name and in the 7th/13th century the principalities which they founded in northern India were ostensibly constituted in his name.

The invasions of the Mongols brought into Persia an entirely new set of military traditions. The Mongol commanders used the captured populations of towns as auxiliaries and as pioneers and sappers (cf. Spuler, *Mongolen*², 402, 416-19), but *ghulām*s in the older sense of professional slave soldiers did not reappear until the Mongols and their successors had been assimilated to Persian ways. The institution may be discernible in the 9th/15th century amongst the Turkmen Aḳ Ḳoyunlu in western Persia and eastern Anatolia. In an *ʿArḍ-nāma* dating from the time of Uzun Ḥasan (d. 883/1478) are mentioned 3,900 *ḳullughčis* "servants" in the total of some 10,000 for the Right Wing of the army; it is unclear whether these were mounted or went on foot (W. Hinz, *Irans Aufsteig zum Nationalstaat in fünfzehnten Jahrhundert*, Berlin-Leipzig 1936, 107-8; Minorsky, *A civil and military review in Fārs in 881/1476*, in *BSOS*, x (1939-42), 155, 164).

The military basis of the Ṣafawid state was originally the Ḳīzīl-bāsh tribal divisions, but Shāh ʿAbbās I (995-1037/1587-1628) invited men of all tribes and nations to enroll in a new salaried body of troops, the Shāh-sewans, who would be entirely devoted to the sovereign and free from tribal ties (cf. Minorsky, *EI*¹, s.v.). Also notable in this reign was the increased rôle in the Ṣafawid state of Georgians, Armenians and Circassians, many of whom were captured in the wars in the Caucasus and entered the Ṣafawid service as slave converts to Islam. In 994/1586 a Georgian was *lala* or tutor to the Ṣafawid prince Ṭahmāsp b. ʿAbbās, this office corresponding in many ways to the old one of Atabak (R. M. Savory in *BSOAS*, xxiv (1961), 84-5). With such soldiers and officials as these, the institution of the *ghulām* takes on a new lease of life as an important component of the new troops. The Ṣafawid "slaves" (*ḳullar* or *ghulāmān-i khāṣṣa-yi sharīfa*) were mainly slaves or sons of slaves. The military *ghulām*s were numbered by Chardin at 10,000 and by Tavernier at 18,000 (a substantial proportion of the whole body of *ghulām*s was used for court and administrative service; in the *Tadhkirat al-mulūk*, tr. Minorsky, 56-7, 127-8, the term *ghulām* is also used for the young eunuchs and pages of the Shāh's private household). The *ghulām* body in general was headed by the extremely influential *Ḳullar Āghāsī*, and there was for it a special Vizier and *Mustawfī* of the Department of the *Ghulām*s (*Tadhkirat al-mulūk*, tr. 46-7, 73). Tavernier noted that the *ghulām*s very rarely rebelled, "For being all Slaves, and of different Nations, there are no ties of Affection or Kindred between them: And if the King has an occasion to punish any of them, the chief of their Body is to execute his orders" (*Travels*, Eng. tr. London 1684, i, 224-5).

In the reign of the Ḳādjār Fatḥ ʿAlī Shāh (1211-50/1797-1834), the term *ghulām* was still applied to the royal bodyguard, and Georgians were still prominent here (Sir Harford Jones Brydges, *An account of the transactions of His Majesty's mission to the court of Persia in the years 1807-11*, London 1834, i, 325, 331, 382); but in the course of the 19th century, as western influences grew in Persia and personal slavery disappeared, *ghulām* simply came to denote a runner or messenger employed by a foreign diplomatic or consular agency.

The term is still in current use in Persian Balūčistān, where until recently the *ghulām*s were slave retainers of the local Balūč chiefs or *sardār*s; although now legally free, they are still regarded as a socially inferior class (see B. J. Spooner, *Kūch u Balūch and*

Ichthyophagi, in *Iran, J. of the British Inst. of Persian Studies*, ii (1964), 61-2).

Bibliography: given in the article. There are no special studies, but surveys of the institution in the Persian world up to and including the Ghaznavids are given by C. E. Bosworth, *Ghaznevid military organisation*, in *Isl.*, xxxvi/1-2 (1960), 40-50, and idem, *The Ghaznavids: their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 98-106. (C. E. Bosworth)

iii. — India.

The Muslim conquest and occupation of Hindūstān at the end of the 7th/13th century, although initiated and directed by the free chiefs of the Ghūrid dynasty, was mainly the achievement of Turkish *ghulāms* (more frequently referred to as *bandagān* in the Indo-Persian histories). In the frequent absences of Muʿizz al-Dīn Muḥammad ibn Sām, his slave Ḳuṭb al-Dīn Aybak, who began in India as military commander (*sipah-sālār*) of Kuhrām, led the Ghūrid forces against Rādjput strongholds. On the death of Muʿizz al-Dīn in 602/1206, Ḳuṭb al-Dīn assumed power in Lahore, at that time probably without having been manumitted. The so-called *Taʾrīkh-i Fakhr al-Dīn Mubārak Shāh*, ed. E. Denison Ross, London, 1927, 35-6, intended for Ḳuṭb al-Dīn, has a remarkable eulogy of Turkish slaves for their fidelity and for their capacity to win advancement to the rank of *amīr* and *sipahsālār*, without regretting their former free life in Turkistān.

Hindūstān was not, however, conquered exclusively by slave agents of the Ghūrids whether as commanders or as troopers. Lakhnawtī was conquered by the free Khaldjī Muḥammad Bakhtiyār; Khaldjīs also formed part of the Ghūrid armies.

Until the reign of Djalāl al-Dīn Khaldjī (689-95/1290-6) the sultans of Dihlī were all either military slaves or their descendants. Iletmish was not manumitted until after appointment as *amīr* of Gwāliyār, *malik* of Badāʾūn and after holding the *iḳṭāʿ* of the *ḳaṣba* of Baran (Minhādj al-Sirādj, *Ṭabaḳāt-i Nāṣirī*, Calcutta 1864, 169-70). Balban had presumably been freed before his marriage to the daughter of Sultan Nāṣir al-Dīn Maḥmūd. Under Iletmish (and there is no reason to conclude that his successors changed the practice) Turkish slaves rose to provincial military command through service in the royal household as Keeper of the Stables, Keeper of the Washing Vessels, Keeper of the Leopards or royal bodyguard (*Ṭabaḳāt-i Nāṣirī*, 229-324, *passim*). Slaves did not, however, enjoy a monopoly of office; Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Calcutta 1862, 26, speaks of the Turkish slaves ousting the free officers (*mulūk-i aḥrār*) in the reigns of Iletmish's children. Some of these officers were fugitives from the Mongols. Antagonism appears to have been evinced by Turkish slaves towards certain non-Turkish slaves, the *ḥabshī* Djamāl al-Dīn Yāḳūt and the Hindu eunuch Imād al-Dīn Rayḥān. Minhādj (*Ṭabaḳāt*, 300) specifically states that Turkish and Tādjīk slaves resented Rayḥān because he was of the tribes of Hindūstān (*az ḳabāʾil-i Hindūstān*).

Under the Khaldjī and Tughluḳ sultans, slaves continued to become high officers and to form an important component of the sultan's army. The Turkish element among the slaves appears to have been diluted somewhat and the rise to power of Hindū slaves is noteworthy in this period. How far the historian Baranī's hostility to their elevation was shared by his contemporaries is a moot point. The Hindū Khusraw Khān Barwarī, recipient of the homosexually-inspired favours of Sultan Mubārak Shāh Khaldjī, murdered his master (720/1320) and assumed the throne before being deposed by the free *malik*, Ghiyāth al-Dīn Tughluḳ. The Telingana Brahmin, Khān-i Djahān Maḳbūl, became *wazīr* to Fīrūz Shāh Tughluḳ. Slaves were apt to resent a former member of their number usurping the position of the ruling family. Slave commanders of fifty and a hundred, raised by Sultan ʿAlāʾ al-Dīn Khaldjī, successfully plotted the overthrow of the famous eunuch, Malik Kāfūr, conqueror of the Deccan, when he began to kill off the sultan's family after ʿAlā al-Dīn's death (Baranī, *Taʾrīkh-i Fīrūz Shāhī*, 376).

Sources for the Khaldjī and Tughluḳ periods give figures for the number of slaves in service. The army of Muḥammad ibn Tughluḳ was reputed to have 20,000 Turki *ghulāms*, 10,000 eunuchs as well as large numbers of slave bodyguards always accompanying him (al-ʿUmarī, *Masālik al-abṣār fī mamālik al-amṣār*, edited text and Urdū translation by Khūrshīd Aḥmad Fārūḳī, Delhi 1962?, 25). ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, Calcutta 1891, 267-73, gives the most elaborate account available of the slave establishment in the sultanate period. Fīrūz Shāh is said to have encouraged the provincial *muḳtaʿ*s to collect slaves to present them to the sultan, receiving in return an allowance from the revenue to be remitted to headquarters equal to the value of the slaves. Such slaves were stationed in the principal fortress towns (*e.g.*, Multān, Dīpalpur, Sāmānā) and were paid both in cash and by the grant of revenue from villages. ʿAfīf says that Fīrūz Shāh had 180,000 slaves in the capital and in the provinces. A *dīwān* separate from the *dīwān-i wizārat* existed to manage the slaves. They were to be found not only in such familiar household offices as Keeper of the Washing Vessels, Keeper of the sultan's armour and weapons, Bearer of the Ceremonial Parasol, but also employed in the *dīwān-i wizārat* and the *dīwān-i arḍ*, and as *muḳtaʿ*s, *parganadār*s and *shaḥnagān* (market overseers), becoming *amīr*s and *malik*s. Under the Sayyid sultans too, slaves are found as *muḳtaʿ*s and *parganadār*s. Under the Lodīs, the sources yield the impression that the majority of officers were free Afghans.

The rôle of military slaves in the provincial Muslim kingdoms did not differ substantially from that in the Dihlī sultanate. Indeed, Ahmad Niẓām Shāh, founder of the independent sultanate of Aḥmadnagar, Yūsuf ʿĀdil Shāh of Bīdjāpūr, Ḳulī Ḳuṭb Shāh of Golkonda and Malik Sarwar of Djawnpur had all been *ghulāms*. *Ḥabshī* [*q.v.*] slaves were prominent in the politics of Gudjarāt, Aḥmadnagar, Bīdjāpūr and Bengal. In Bīdjāpūr, *ḥabshī*s took over the regency (*niyābat*) in the last phase of the sultanate, while in Bengal the former *ḥabshī* slaves Shāhzāda and Sidī Badr seized the throne at the end of the 9th/15th century. The latter had 5,000 *ḥabshī*s in his service. Under the Fārūḳids [*q.v.*] of Khāndesh, *ḥabshī* slaves were employed to guard the junior members of the ruling family in enforced seclusion (cf. C. F. Beckingham, *Amba Gešen and Asirgarh*, in *JSS*, ii/2 (1957), 182-8).

Under the Mughals, slaves played a very minor part in administration and in the army, though not in the household. Mughal rule was established by free Mughal, Turkish and Persian officers and the Mughal army was commanded by *manṣabdār*s, the vast majority of whom were free in origin. A test-sample of 225 of the 730 biographies of Mughal dignitaries in Ṣamṣām al-Dawla Shāh-nawāz Khān, *Maʾāthir al-umarāʾ*, Calcutta 1888-91 (*pānṣadī*s and

upwards under Akbar, *sih-hazārīs* and upwards thereafter to the middle of Aurangzīb's reign and then *pandj-hazārīs* or *haft-hazārīs*) shows that only one, Baḳī Khān Čela Ḳalmāḳ, a slave of Shāh Djahān, had been a slave. One, Fīrūz Khān a eunuch, and two, Ātish Khān and Ḥabsh Khān, were *ḥabshīs* who had entered Mughal service from the Deccan sultanates. The *Maʾāthir al-umarā*'s list is, however, not exhaustive; a number of slaves, including three of Bābur's and Humāyūn's, were given *manṣabs* and *djāgīrs* under Akbar and one, Iʿtibār Khān, was appointed governor of Dihlī (see *Āʾīn-i Akbarī*, tr.², Calcutta 1927-39, 442, 444, 483, 485, 488, 491). Such promotions, however, form a very small proportion of Akbar's appointments.

Mughal *manṣabdārs* did on occasion, however, employ slaves as their own subordinate commanders. Mīrzā Nathan, *Bahāristān-i Ghaybī*, a history of Bengal in Djahāngīr's time (trans. M. I. Borah, two vols., Gauhati 1936) shows a slave, Islām Ḳūlī Ghulām thus employed as *Mīr Baḥr* (Commander of the fleet of boats). Examples of slaves holding minor military commands may be met with in the *Bahāristān-i ghaybī* under the names (see index) Ṣaʿadat Khān Khʷādja, Khʷādja Lal Beg, and Shīr Maydān.

Akbar employed a contingent of slave foot soldiers, described as *čelas* in the *Āʾīn-i Akbarī*, Calcutta 1872, 190. An interesting account of the use of *čelas* by a provincial governor in the period of the decline of the Mughal empire under Farrukh-siyar and Muḥammad Shāh is given in W. Irvine, *The Bangash Nawābs of Farrukhābād — a chronicle (1173-1857)*, in *JASB*, 1878, 340-7. Muḥammad Khān, the Bangash Nawwāb of Farrukhābād, encouraged his local military and revenue officers to obtain Hindū boys, the sons of Brahmins and Radjputs, some by consent, some by payment and some in default of revenue. 500 were trained as matchlockmen and others found employment not only in the Nawwāb's household, but also in his army and revenue service. By the end of Muḥammad Khān's rule, he had 4,000 such slaves. For the recruitment of slaves through the pressure of famine and inability to meet the revenue demands of the Mughal government, see the references given in Irfan Habib, *The agrarian system of Mughal India (1556-1707)*, London 1963, 110, 322-4, *passim*.

The explanation of the continuing existence of military slavery in India and the acquiescence of the slaves themselves in the system must be hypothetical. Deracinated, the Turkish *ghulāms* of the period of the Ghūrid conquest found membership of the conquering élite the only satisfying rôle possible in a compartmented society from which they were divided by religion and the attitudes of caste. The rewards of loyal and efficient service were great and, as the fate of Iletmish's children suggests, it was in the sultan's interest to treat his slaves generously. The Hindū slave, converted to Islām and cut off from his former caste fellows with no hope of reintegration into his old environment had every incentive to make the best of his new, forced, situation. The economic position of a slave was often preferable to that of many free men and those in special favour could hope for manumission. The homosexual aspect of the relationship between master and slave, to which Dr. Bosworth draws attention above (col. 1082 a), was important also in India, as the careers of Malik Kāfūr and Khusraw Khān Barwarī bear witness. The continuing existence of a large free element in the military and bureaucratic service of the Dihlī sultans probably prevented the slaves from acting successfully as a Pretorian guard or as Ottoman janissaries. An attempt by the Hindū *payks* immediately responsible for killing Malik Kāfūr in 716/1316 to assume airs of grandeur was soon suppressed by the new sultan, Ḳuṭb al-Dīn Mubārak Shāh Khaldjī (Baranī, *Taʾrīkh-i Fīrūz Shāhī*, 376-7).

(P. Hardy)

iv.—Ottoman Empire

Besides *ghulām*, the terms used in the Ottoman Empire for a young slave subjected to a special training to equip him to serve the Sultan, a member of the military class or an ordinary individual were (A.) *ghilmān* (pl. of *ghulām* used as sing.), (P.) *djuwān*, or (T.) *oghlan* and (rarely) *čeleb*. A Palace page of the *Enderūn* [*q.v.*], of slave origin or recruited through the *devshirme* [*q.v.*], who had not yet been promoted to any post, was known as *oghlan* or *ič-oghlanī* [*q.v.*]; these were known collectively as *ič-khalḳī* or *ghilmānān-i Enderūn*.

The Ottoman administration was based upon the *ghulām* system. This principle of training young slaves for the Palace service and the service of the state had certainly been inherited by the Ottomans from the Seldjūḳ Sultanate of Rūm (see I. H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, 85-94, 108-22; M. F. Köprülü, *Bizans müesseselerinin Osmanlı müesseselerine tesiri*..., in *THITM*, i (1931), 208-21, 242-6; idem, *Osmanlı Imparatorluğunun etnik menşeʾi meseleleri*, in *Belleten*, vii/28 (1943), 275); the names of various prominent commanders of *ghulām* origin in the service of this Seldjūḳ Sultanate are known, *e.g.*, Sharaf al-Dīn Ghulām, Khāṣṣ Balaban and the brothers Ḳaratay (see *Taʾrīkh-i Āl-i Selčūk*, facsimile of Paris, Bibl. Nat. MS supp. pers. 1553, publ. F. Uzluk, Ankara 1952, 52, 57, 66, 71). These *ghulāms* were used only for military duties; when Kaykāʾūs II granted important posts as *amīr* to various of his *ghulāms*, the other *amīrs* opposed him (*ibid.*, 52-3). ʿOthmān Ghāzī appointed 'his *ḳul* Balabandjiḳ Bahādīr' to supervise the investment of Bursa (Neshrī, *Ğihānnümā*, ed. Fr. Taeschner, i, Leipzig 1951, 35). Baraḳ Baba, who was flourishing at this time (ca. 725/1325), advises in his *Kelimāt* that on the *ghazā* the leaders of the Christians should be flung into the sea and their '*ushaḳs*', *i.e.*, the young men following them, should be taken into the army. In documents surviving from the reign of Orkhān there are indications that the training of slaves as Palace and administrative officers existed under the first Ottoman rulers (*e.g.*, the names Evrenkush Khādim and Shahin b. ʿAbd Allāh, in Orkhān's

wakfiyye of Shaʿbān 761/June 1360, publ. I. H. Uzunçarşılı in *Belleten*, xxvii/107 (1963), 442, pl. 16; the name *ṭawāshī* Mukbil, in a *temlīknāme* of Orkhān, *Belleten*, v/19 (1941), 280). Under Murād I the corps of *yeñi-čeri* [*q.v.*] was constituted from the prisoners of war who fell to the sultan as the fifth of the booty legally due to him (see ʿĀshīk Pasha-zāde, ed. Fr. Giese, Leipzig 1928, 50); this represents an extension of a *ghulām* system already in existence. The *devshirme*, [*q.v.*] a most important innovation which the Ottomans introduced into the *ghulām* system, may have developed from the practice of taking into Palace service or into the army the young sons of members of the local military class in newly-conquered regions. It is natural that in the Ottoman Empire and in Ottoman society, an *udj* state always in contact with the *dār al-ḥarb*, slaves gained a more important place than in other Muslim societies.

Under Bāyezīd I [*q.v.*], who endeavoured to found a centralized Empire, the *ghulām* system came to full development. Notes in *taḥrīr*-registers of the 9th/15th century which refer to conditions in his reign show that in all parts of the Empire he granted to *kuls* trained by the *ghulām* system not only important military and administrative posts but also *tīmārs*. Reactions to this radical innovation are to be detected in the anonymous *Tewārīkh-i Āl-i ʿOthmān* (ed. Fr. Giese, Breslau 1922, 31), which reflect the sentiments of *ghāzī* circles; and these reactions made a weighty contribution to his fall. Ducas (ed. Grecu, 87; Turkish tr. by V. Mirmiroğlu, Istanbul 1956, 34) speaks of the existence in Bāyezīd's palace of 'selected children' belonging to various nations; the *Chronique du Religieux de Saint-Denis*, of 1396, says (i, 427): 'Ils enlèvent les enfants pour les instruire dans leurs impures croyances'; Bāyezīd built a slave-market beside his *ʿimāret* at Edirne; in 836/1432 Bertrandon de la Broquière (*Voyage d'Outremer*, ed. Ch. Schefer, Paris 1892, 128) found that Messire Barnabo, who, like John Schiltberger (see *The bondage and travels* . . . , tr. J. B. Telfer, London 1879, 5-8), had been taken prisoner at the battle of Nicopolis (798/1396), was a highly-influential Ottoman officer.

For the reign of Murād II we possess abundant information about the system, not only from contemporary chronicles (*e.g.*, Ducas, ed. Grecu, 179, 187, 191, Turkish tr., 83, 88, 90; Chalcocondyles, book 5, Fr. tr. by Blaise de Vigenère, *Histoire de la décadence* . . . , Paris 1620, 108 f.), but also in official archive documents (*e.g.*, *Hicrî 835 tarihli Sûret-i defter-i sancak-i Arvanid*, ed. H. Inalcık, Ankara 1954; an *idjmāl defteri* for Sofia in the Sofia National Library belongs to the same year, 835/1431; a deed of manumission of Murād II, dated 848/1444, is also relevant to our subject, see H. Inalcik, *Fatih devri* . . . , i, Ankara 1954, 215 ff.). Mūsā Čelebi's *kapî oghlanî* numbered 7,000 (Neshrī, 135, 140), Murād II's 4-5,000 (B. de la Broquière, 182-3). The *defter* for Arvanid shows that in 835/1431, at every level of the military organization, most of the *tīmār*-holding *sipāhīs* there were *kuls* of the Sultan or of a *beg*. Among them are bearers of the titles: *shahindjibashî*, *emīr-akhūr*, *silāhdār*, *čāshnigīr*, *kapîdjî*, *pashmak-oghlanî*, *solak*, *zaghardjî*, *ashdjî*; these had passed out from the Palace. Most of the *sandjak-begis* of Albania between the years 835/1431 and 859/1455 were of *ghulām* origin; some of them—Kavala Shahin, Zaghanuz, Kāsim—rose to be *beglerbegi* or vizier. The sons of the local nobility in regions occupied by the Ottomans during the 9th/15th century were by preference taken into the Palace, where they received privileged treatment, and on 'passing-out' (Turkish *čîkma*, see KHARDJ, and below) were appointed, with the title of *beg*, to the most important posts. Thus at this period many members of the Greek, Bulgarian, Serbian and Albanian aristocracies served the Ottoman state in high posts. Nevertheless, as it had been under the Seldjūks of Rūm, only military posts were granted to these products of the *ghulām* system; the post of Grand Vizier and the posts of head of the financial department and of the chancery were usually reserved to Muslim-born Turks of the *ʿilmiyye* career. It is clear that the Muslim-born always felt jealousy and hostility for those of slave origin (cf. Ducas, 143; tr., 63); according to the Venetian M. Zane (987/1579), the Turks fretted at the power enjoyed by slaves (A. H. Lybyer, *The government of the Ottoman Empire* . . . , Cambridge Mass. 1913, 43). Although Ḥüseyn Ḥusām al-Dīn (*Amasya taʾrīkhi*, iii, Istanbul 1927, 191, 201-3, 210, 214) exaggerates the degree of rivalry between native-born Turkish statesmen and the converts, it is indisputable that such a rivalry was an important element in the early centuries (see H. Inalcık, *Fatih devri* . . . , 69-136).

In pursuit of his policy of establishing an absolutist and centralized empire, Meḥemmed II expanded the *ghulām* system (in 880/1475 the *kapî-kullari* numbered 12,800) and entrusted nearly all influential posts, the Grand Vizierate included, to *kuls* (see H. Inalcık, art. *Mehmed II*, in *IA*, fasc. 75, 512): the *ʿulamāʾ* of the period regarded the vizierate as a post reserved to those of slave origin (see Tashköprüzāde, *al-Shakāʾik al-nuʿmāniyya*, Arabic text, i, 144, Turkish version by Medjdī, Istanbul 1269, 104). According to Angiolello, most of the military commanders and other holders of important offices were, during the reign of Meḥemmed II, persons trained by the *ghulām* system. Literary sources and archive documents enable us to visualize in detail the system as it prevailed in this period (for Western descriptions, see Donado da Lezze [G.-M. Angiolello], *Historia Turchesca*, ed. J. Ursu, Bucharest 1909; Fr. Babinger, *Die Aufzeichnungen des Genuesen Iacopo de Promontorio-de Campis* . . . , *SBBayer. Ak.*, Jg. 1956, Heft 8, Munich 1957, 30-48; for Ottoman descriptions, Idrīs Bidlisī, *Hasht bihisht*, MS Nuruosmaniye 3209, fols. 359, 362; of the available archive material only a little has been published: A. Refīk, *Fātiḥ devrine ʿāʾid wethīkalar*, in *TOEM*, ix-x/49, 1-58; an important source for the *kānūns* of Meḥemmed II is *Kānūnnāme-i Āl-i ʿOthmān*, ed. M. ʿĀrif, *TOEM*, supp., Istanbul 1330; R. Anhegger and H. Inalcık, *Kānūn-nāme-i Sulṭānī ber mūceb-i ʿörf-i ʿOsmānī*, Ankara 1956; cf. N. Beldiceanu, *Les actes des premiers Sultans* . . , Paris-The Hague 1960). The generally accepted view (cautiously considered by B. Miller, *The Palace School of Muhammed the Conqueror*, Cambridge Mass. 1941, 10 ff) that the Palace training system and the organization of *odas* was established by Meḥemmed II under the influence of Byzantine models after he had taken Constantinople is immediately disproved by the references given above for the reign of Murād II. Meḥemmed II did, it is true, build a 'New Palace' (the present Topkapı Sarayı) in Istanbul, but its organization was modelled on that of the Palace at Edirne (see R. Osman, *Edirne Sarayı*, Ankara 1957). In his *kānūn-nāme* he merely brought together, with a few additions and changes, the rules and principles in force before his time.

The explicit statements of contemporary Western and Ottoman writers show that this system was

applied and expanded with a conscious appreciation of the advantages it offered. In the reign of Murād II Yazîdjî-oghlu ʿAlī wrote (*Selčūḳnāme*, Istanbul Topkapı Sarayı, MS Revan Köşkü 1390, fol. 566) that it was through the possession of slaves that a sultan could exercise power (cf. Machiavelli, *The Prince*, chap. iv); according to Kemāl Pasha-zāde (Istanbul, Millet Lib., MS 25, fols. 11-12), because all the *ghilmān* were equal at the Porte of the Sultan, none tried to rise above his fellows or dreamed of laying claim to the throne; in the 11th/17th century Paul Rycaut noted (*The present state* ..., London 1686, chaps. iii-iv) that the system arose from the necessity that the Sultan should delegate his authority to persons inseparably bound to himself. It became a principle in the Ottoman state that the sultan's executive power, the *ʿörf-i sulṭānī* [see ʿURF], should be delegated only to his own slaves. In the 10th/16th century the term *ehl-i ʿörf* means slaves with the authority to carry out the Sultan's orders. The *ḳapî-ḳullarî* were a powerful factor in establishing the Sultan's central authority against the powerful *udj-begleri* of the early period; in the 11th/17th century, Ḳoči Beg stated (*Risāle*, ed. A. K. Aksüt, Istanbul 1939, 51) that the *ḳapî-ḳulu* provided a counterpoise to the provincial troops.

The *ghulām* system reached its fullest development under Süleymān I and his first two successors. The close interest which the Ottoman administrative system aroused in Europe in this period led to the writing of numerous detailed descriptions (for a fairly complete bibliography see K. Göllner, *Turcica*, i, Bucharest and Berlin 1961; for the Venetian *relazioni*, see Lybyer, 305-22). These descriptions, especially the memoirs of persons who, like G. A. Menavino (*Trattato de costumi et vita de Turchi*, Florence 1548), had served as *ič-oghlanî* in the Palace, are of great value for filling out the rich but bare data of the Ottoman archives (for the principal collections relating to the Palace see M. Sertoğlu, *Muhteva bakımından Başvekâlet Arşivi*, Ankara 1955, 31, 70, 73-4; these are still unexploited).

In the early days the principal source for *ghulām*s was the *pendjik* [*q.v.*], supplemented by prisoners presented to or bought for the Palace. Hostages too were raised as *ghulām*s in the *Enderūn*. In the chief cities, the Imperial superintendents (*khāṣṣa khardj emīnleri*) would buy the best slaves at the slave-market for the Sultan. As early se the reign of Bāyezīd I (see S. Vryonis, *Isidore Glabas and the Turkish Devshirme*, in *Speculum*, xxxi (1956), 433-43), these sources were supplemented by children recruited by the *devshirme*. B. Miller (*op. cit.*, 79) calculates that in the 10th/16th century the total of slaves collected annually from all sources was 7-8,000, some 3,000 of them, on an average, being from the *devshirme*. When the *devshirme* boys reached Istanbul, those whose physique and character were best were selected (the sultan sometimes assisting when the selection was made) and sent, as *ʿadjamī oghlans* [*q.v.*], to the palaces of Ghalaṭa-sarāyî [*q.v.*] and of Ibrāhīm Pasha in Istanbul and to the palaces at Edirne and Manisa (I. H. Uzunçarsılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 297-305). Most of the rest were sent, under the name *Türk oghlanlarî*, to stay with Turkish farmers in Anatolia, to be called up later into the ranks of the *yeñi čeri*; a few were made *bostandjî* [*q.v.*] and worked in the palace gardens. The children of noble families in the conquered regions were also sent to the palace (Critoboulos, ed. Grecu, 287, Eng. tr. C. Riggs, Princeton 1954, 175). At the beginning of the 10th/16th century, there were 300 *ič-oghlanlarî* in Ghalaṭa-sarāyî and 300 in the palace at Edirne (T. C. Spandugino, *Petit traicté de l'origine des Turcqz*, (1510), ed. C. Schefer, Paris 1896, 63; according to Ramberti (1534), *apud* Lybyer, 254, there were 400 in Ghalaṭa-sarāyî and 300 at Edirne). After being educated, under strict discipline, in these palaces for from two to eight years, they were put through a second process of selection (known as *čîḳma*), and the best were taken into two departments of the palace in which the Sultan actually resided (Yeñi-Sarāy, later Topkapı Sarayı), the *Büyük Oda* (or *Khāne-i kebīr* or *Eski Oda*) and the *Küčük Oda* (or *Khāne-i ṣaghīr* or *Yeñi Oda*) (Angiolello mentions only one *oda* as existing at the end of the reign of Meḥemmed II; the first to mention a *Küčük Oda*, in addition to the *Büyük Oda*, is Navagero, in 960/1553 (apud B. Miller, 41); ʿAṭā (*Taʾrikh-i ʿAṭā*, i, 153) is probably mistaken in speaking of the *Küčük Oda* as existing in the time of Meḥemmed II). The *Büyük Oda* was to the right, and the *Küčük Oda* to the left of the *Bāb al-Saʿāda* (*Babüssaade*) (see Bobovi's plan of 1086/1675, apud B. Miller, 52-3). Those not selected for the Yeñi Sarāy were appointed to the *bölük*s of the *ʿUlūfedji*s [*q.v.*] and the *Gharīb*s see GHURABĀʾ], four of the six cavalry regiments of the Porte. According to I. de Promontorio (39-43) there were 400 *ič-oghlanlarî*, aged between 15 and 22, in all the *oda*s (80 of them were in the *Khazīne* (Treasury), the *Kilār* (Pantry) and the *Khāṣṣ-oda* (Privy Chamber), for which see below). According to Angiolello, there were 340 in the *Oda*. According to Yunis Beg (*apud* Lybyer, 263), in 944/1537 there were 700 *ič-oghlanlarî*, aged between 8 and 20, in the Sultan's palace (but Ramberti speaks of only 500 in 940/1534). An official account of expenditure, dated 900/1494, mentions 3 *agha*s of the *Enderūn* and only 178 *ghilmān-i enderūnî* (Ö. L. Barkan, in *Iktisat Fakültesi Mecmuası*, xv (1953-4), 308), but the numbers grew to about 400 in the *Büyük Oda* and 250 in the *Küčük Oda* (Miller, 129-30; Uzunçarşılı, 310-1); at the beginning of the 11th/17th century, ʿAyn-i ʿAlī notes 709 persons, *agha*s and *ghilmān* together (*Ḳawānīn-i Āl-i ʿOthmān*, Istanbul 1280, 97).

The lads in these two *Oda*s spent all their time at lessons and physical training. Their teachers were the Palace *muʿallim*s (*muʿallimān-i Enderūn*) and *ʿulamāʾ* and *dānishmend*s who visited the Palace at set times to give lessons; 12 of the lads were appointed *khalīfe*, 'tutor'. All had to begin by learning reading and writing, the principles of the Muslim faith, and the Ḳurʾān; after that each could 'specialize' according to his own capabilities and inclinations (ʿAṭā, i, 155). As they advanced, they learned the Muslim sciences, and the *ṣarf*, *naḥw* and literature of Arabic, Persian and Turkish. Bāyezīd II used to take a personal interest in the boys' education (Menavino, *apud* Miller, 83). Those who made great progress in the religious sciences were allowed to pursue the *ʿilmiyye* career (ʿAṭā, i, 75; Bobovi, *apud* Miller, 109). All kinds of skills were also taught in the *Oda*s: calligraphy, *inshāʾ*, arithmetic and *siyāḳat*, music; those who excelled at these would become *kātib*s. One point stressed both by Ottoman and European writers is the emphasis given to physical training, and to horsemanship and the management of arms (the *Hasht bihisht* dwells on this). The chief sports were weight-lifting and putting the weight, wrestling, archery, riding, throwing the lance, and the games of *tomaḳ* and *djerīd* [*q.v.*] (ʿAṭā, i, 177-82; Miller, 119); on feast-days competitions would be held in the Djerīd-Meydānî in the Palace garden and at the

Oḳ-Meydānï and the Sultan would award prizes. Literary works with such names as *Silāḥshor-nāme*, *Bāz-nāme*, *Ḳaws-nāme* were composed mainly for the use of these boys. Furthermore, each lad had to become skilled in one type of personal service or a craft; many masters of miniature-painting, drawing, book-binding and calligraphy were trained in the *Enderūn* (ʿĀlī, *Menāḳib-i hünerverān*, ed. Ibnülemin M. Kemāl, Istanbul 1926). But over and above this practical education, the main aim of the Palace training was to inculcate absolute loyalty and obedience in the service of the Sultan. The lads were subjected to a very strict discipline, having no contact with the outside world or with their families and, so long as they remained in the palace, leading a monastic life completely cut off from women. Eunuchs watched over all their actions by day and night and slept among them in the dormitories. Menavino (*apud* B. Miller, *Beyond the Sublime Porte*, New Haven 1931, 63) describes the aim of this training as being to produce 'gentlemen', thoronghly islamized, who knew how to speak and behave politely, were conversant with literature, and were chaste and self-controlled. The overall supervision of the *oda*s was exercised by the *Ḳapï-oghlanï ketkhudāsï*, who had under him eunuchs (between 16 and 30 in number).

The White Eunuchs (*Aḳ Aghalar*) constituted the permanent staff of the palace; these were slaves who had been castrated to make them eligible for this service. It was they who maintained discipline and were responsible for the lads' behaviour. Under Meḥemmed II they were 20 in number (Angiolello), under Selīm I, 40 (ʿAṭā, i, 164). Their chief, and the general overseer of the palace, was the *Ḳapï-aghasï* or *Bāb al-saʿāda aghasï*. Beneath him were three *oda-bashï*, in the order of precedence: *Khāṣṣ-oda bashï*, *Khazīnedār-bashï* (or *Ser-khāzinīn*), *Kilārdjï-bashï*. The *Khāṣṣ-oda bashï* might be an *ič-oghlanï*. These eunuchs were responsible for the protection of the sultan's person and personal attendance on him; they accompanied him wherever he went, and guarded him as he slept. Some of them enjoyed the right to make a submission (*ʿarḍ*) directly to the Sultan: according to the *Ḳānūnnāme* of Meḥemmed II (*TOEM*, supp., 13-4) those so privileged were the *Ḳapï-aghasï*, the *Oda-bashï*, the *Khazīnedār-bashï*, the *Kilārdjï-bashï* and the *Sarāy-aghasï* (this last being the superintendent of the cleaning and repair of the palace). The number of these '*ʿarḍ-aghalarï*' was later increased (ʿAṭā, i, 162). The five next in rank after them were later known as *köshe-bashï* (ʿAṭā, i, 164). The *Ḳapï-aghasï* exercised absolute authority in the palace, in the name of the Sultan (see I. de Promontorio, 41; Spandugino, 63; Ramberti, 244; Uzunçarşılı, 354-7; *Sadrazam Kemankeş Kara Mustafa Paşa lâyihası*, in *Tarih Vesikaları*, i/6 (1942), 473; according to Angiolello he was chief over everyone in the palace except the Sultan); the Sultan consulted him not only on palace matters but on state affairs (the *ḳapï-aghasï* Ghaḍanfer Agha wielded enormous influence under Selīm II and Murād III). In 995/1587, however, Ḥabeshī Meḥmed Agha (a Black Eunuch) removed the harem from the control of the *Ḳapï-aghasï* (Uzunçarşılı, 354-5). The *Khazīnedār-bashï* was eligible for promotion to *Ḳapï-aghasï*. After Aḥmed III appointed Silāḥdār ʿAlī (later Grand Vizier) as general supervisor of the palace, the *Ḳapï-aghasï* sank to second place. The *Ḳapï-aghasï* was by tradition eligible to pass out from the palace as *beglerbegi*, and later (in the 10th/16th century) as governor of Egypt with the rank of vizier.

The *Khāṣṣ-oda bashï*, the *Khazīnedār-bashï* and the *Kilārdjï-bashï* were in charge of three higher *oda*s (or *ḳoghush*) which were responsible for the personal service of the Sultan. The *ič-oghlanlarï*, after completing the course of training (usually lasting four years) in the *Büyük Oda* and the *Küčük Oda*, were once more put through a process of selection. Those found most fitting at this *čïḳma* were taken into the *oda*s of the *Khazīne* and the *Kilār*; the rest were placed in the *bölük*s of the *Sipāhi-oghlanlarï* and the *Silāḥdārlar*, the other two of the six cavalry regiments of the Porte (*Kemankeş lâyihası*, in *Tarih Vesikaları*, i/6, 474). From the clothes which they wore, the *ič-oghlanlarï* in the *Büyük Oda* and the *Küčük Oda* were called *dolamalï*, those in the higher *oda*s *ḳaftanlï*. Of these higher *oda*s, the first in rank was the *Khāṣṣ-oda*; from the time of Selīm I onwards the chief duty of its members was to care for the *Khïrḳa-i sherīfe* room where the relics of the Prophet were kept (ʿAṭā, i, 189). According to the *Ḳānūnnāme* of Meḥemmed II (24), it comprised 32 *oda-oghlanï* and one *silāḥdār* (who looked after the Sultan's weapons), one *rikābdār* (in charge of his footwear), one *čoḳadār* (in charge of his outer clothing) and one *dülbend-oghlanï* (who looked after his turbans and underclothes); to them was later added a *miftāḥ-* (or *anakhtar-*) *ghulāmï* (or *aghasï*). These five *agha*s were also called the *zülüflü aghalar*. The numbers in the *Khāṣṣ-oda* were increased to 40 under Selīm I. In 880/1475 these three higher *oda*s together numbered 80 pages (I. de Promontorio, 40). In 1090/1679 the *Khāṣṣ-oda* comprised, besides the *Oda-bashï*, 6 *agha*s, 12 *eski* (i.e. senior) pages and 22 *ʿadjemī*s (juniors). Later still, there was more specialization in the duties carried out and new ranks were introduced (for details, see ʿAṭā, i, 187-97).

Early in the 11th/17th century, a fourth *oda*, known as *Seferli odasï*, was created from among the attendants with various duties in the *Büyük Oda* (according to ʿAṭā, i, 153, it was created under Aḥmed I, cf. *Kemankeş lâyihası*, 472; according to Uzunçarşılı, 311, in 1045/1635). Its head was the *Sarāy aghasï*. It comprised first those who washed the Sultan's clothes, and included later the bath attendants, the clowns, the mutes, the teachers, the musicians and the singers; the total numbers were in 1090/1679 134 and in 1186/1772 149. The bandsmen (*Enderūn mehterkhānesi*) also belonged to this *oda*.

All matters relating to the pages—promotions, transfers, etc.—were settled by a *khaṭṭ-i humāyūn* of the Sultan in response to a proposal (*ʿarḍ*) made by the *Ḳapï-aghasï* or the *Khāṣṣ-oda bashï* (Uzunçarşılı, 304, 324). From time to time the Sultan would visit the *oda*s, attend competitions, and encourage the pages by awarding prizes. Each *oda* had a fixed complement, known as *gedik*. Appointments and promotions went usually by seniority (known as *odjaḳ yoliyle*); even the Sultan was obliged to respect this principle (*Kemankeş lâyihası*, 473), but exceptions were made in promotion to posts which required special aptitude, e.g. the position of *imām*, clerk (*yazïdjï*), bandmaster (*mehterbashï*). Each *oda* has its own bath, *imām* and *müʾedhdhin*. There were special libraries in the palace for the use of the pages (M. Refīḳ, in *TOEM*, vii/40, 236; I. Baykal, in *Tarih Vesikaları*, ii/9, 188). Messages were carried by *ḳolluḳčïlar*. Food for the pages and their clothes were provided by the Sultan. Each received, according to his rank, a stipend (*ʿulūfe*), an issue of clothes, and the occasional bonus (*Kemankeş lâyihası*, 472-4). All promotions and awards were made according to efficiency and seniority.

When the Sultan went out on campaign, the *Enderūn khalḳi* were provided with horses and weapons and accompanied him, only the *Sarāy aghasi* remaining behind to guard the palace.

Besides the 'Inner Service', the *Enderūn*, which we have considered above, there was a second complex of departments in the palace known as the *Bīrūn*, the 'Outer Service'. The *Enderūn* was the milieu in which the Sultan spent his private life, and at the same time a school where the *ghulāms* were educated and trained. The *Bīrūn* was the section composed of the services concerned with the Sultan's relations with the outside world. According to the *Ḳānūnnāme* of Meḥemmed II, the heads of departments of the *Bīrūn* were, in order of precedence: the *Yeñi-čeri aghasi*, the *Mīr-ʿalem*, the *Ḳapidji-bashi*, the *Mīr-akhūr*, the *Čaḳirdji-bashi*, the *Ḳapidjilar-ketkhudāsi*, the *Djebedji-bashi*, and the *Topči-bashi* (in 933/1527 the order was: *Yeñi-čeri aghasi, Mīr-ʿalem, Ḳapidji-bashi, Mir-akhūr, Čāshnigīr-bashi, Süwāri bölükleri aghalari, Čaḳirdji-bashi, Shahindji-bashi, Čawush-bashi, Čadir mehterleri bashi, Ḳapidjilar-ketkhudāsi*, see Ö. L. Barkan, in *Iktisat Fak. Mecm.*, xv (1953-4), 308). Since (with the exception of the *Ḳapidjilar-ketkhudāsi* and the *Djebedji-bashi*) these officers were entitled to ride beside the Sultan, they were known as *özengi-aghalari* or *rikāb-aghalari* ('*Aghas* of the Stirrup'). In addition to the bodies of men under these officers, the *Bīrūn* included also the *müteferriḳalar* [see MUTAFARRIḲA] under the *Müteferriḳa-bashi*, the *Čawushes* [see ČĀʾŪSH] under the Čawush-bashi, the *baltadjis* [*q.v.*] under the *Dār al-saʿāda aghasi*, and the *bostandjis* [*q.v.*] under the *Bostandji-bashi* [*q.v.*] (for details on these and other groups belonging to the *Bīrūn* see Uzunçarşılı, 388-464). All these bodies belonged to the *ghulām* organization of the Ottoman Empire.

An idea of the relative importance of the various groups comprising the *Bīrūn* can be obtained by comparing the data of an official list of 933/1527 (published by Ö. L. Barkan, in *Iktisat Fakültesi Mecmuası*, xv (1953-4), 300) with the data for 1018/1609 given by ʿAyn-i ʿAlī (82-99): the table shows that in less than a century the number of the *ḳapi-ḳullari* of *ghulām* origin increased well over three times.

	numbers in 933/1527	annual pay in *aḳčes*	numbers in 1018/1609
mushāhere-khōrān (*i.e.*, those with a monthly stipend, *čawushes*, *čāshnīgīrs*, poets, physicians, etc.)	424	4,381,458	1200-1300
Janissaries	7,886	15,423,426	37,627
Sipāhīs of the Porte (the *Alti Bölük*)	5,088	30,957,300	20,869
Ḳapidjilar, Teberdārlar	319	758,622	2,451
Djebedjiler	524	1,016,688	5,730
Topčilar	695	975,624	1,552
Tailors	301	641,094	319
Cooks	277	654,900	1,129
ʿAlem mehterleri	185	466,570	228
Čadir mehterleri and *Dīwān sāḳileri*	277	562,860	871
Craftsmen (jewellers, swordmakers, etc.)	585	1,422,726	947
Top ʿarabadjilari	943	985,890	684
Falconers	259	509,760	592
Employed in the Imperial stables	2,830	5,133,000	4,322
Adjemī oghlanlar and *Bostāndjis* in Istanbul	3,553	1,993,020	9,406
Totals	24,146	65,882,938	87,927

The institution which ensured that these *ghulām* groups and the provincial administration should function together as a harmonious whole was the *čiḳma*, that is, the promotions and transfers which were made at intervals (of from two to eight years) and at each accession (according to *Taʾrīkh-i Ghilmānī*, *TOEM*, supp., 99, every 7 or 8 years; according to Miller, 128, every 2 or 3 years in the *Büyük* and *Küčük Odas*; cf. Uzunçarşılı, 336-9). At the *Čiḳma*, the most senior (*eski*) of the pages in the *Büyük* and *Küčük Odas* were promoted to higher *odas*, i.e. (in ascending order) the *Seferli*, the *Kilār* and the *Khazīne*; the rest were transferred to the *bölüks* of the *Sipāhī oghlanlari* and the *Silāḥdārlar*, according to their pay. Satisfactory *eskis* in the three higher *odas* were promoted to the *Khāṣṣ-oda* (for the ceremonies of transfer in the later period see ʿAṭā, i, 187-8). The satisfactory 'juniors' (*ʿadjemī*) in the four higher *odas* became 'senior' (*eski*); the rest were transferred to the corps of *müteferriḳalar* or the *čāshnigīrs*, in the *Bīrūn*. In each of the four higher *odas* there were 12 *eskis*; as they were allowed to carry daggers, they were known as *bičaḳli*. The 12 *khalīfes* in the *Büyük* and *Küčük Odas* used to teach the *ʿadjemīs*. The *aghas* of the three upper *odas* were selected from members of the *Khāṣṣ-oda*, but the actual head of each *oda* was a White Eunuch (*Aḳ agha*). The *Khazīnedār-bashi*, if promoted, became *Ḳapi-aghasi* (there is documentary evidence, however, that in the time of Murād II the *Khazīnedār-bashi* was not a eunuch and that he was promoted to the post of *sandjaḳ-begi*, see *Defter-i Arvanid*, p. 1 and n. 5). According to the *Ḳānūnnāme* of Meḥemmed II (23), the *silāhdār* and the *rikābdār* were promoted from the *Khāṣṣ-oda* to be *müteferriḳa* at 50 *aḳčes* or *agha* of one of the cavalry *bölüks* or *Čāshnīgīr-bashi*; as a special mark of favour he might be made *ḳapidji-bashi*. The *aghas* of the *odas* were promoted to the post of *sandjaḳ-begi*. As time went on, the *aghas* of the *Enderūn* passed out to even more important posts: in the 10th/16th century it became the practice that the *Khāṣṣ-oda bashi* should pass out as *beglerbegi*. In general an *agha* of the *Enderūn* became *sandjaḳ-begi* or an *agha* in the *Bīrūn*; an ordinary member joined one of the *bölüks* or *djemāʿats* of the *Bīrūn*.

At the time of a *čiḳma* each group in the *Enderūn* and in the *Bīrūn* was on the move. The *Özengi Aghalari* of the *Bīrūn* moved to the command of a *sandjaḳ* or a *beglerbegilik*; ordinary members were granted *zeʿāmets* in the provinces. But after the 10th/16th century they too, like the *aghas* of the *Enderūn*, began to receive appointments as *beglerbegi* and vizier; in fact an *Agha* of the Janissaries might be appointed directly Grand Vizier. *Čashnīgīrs* and *müteferriḳas* and *sipāhīs* from the *bölüks* were given *zeʿāmets*; *čawushes*, *ḳapidjis* and senior Janissaries were generally given *tīmārs*; thus they passed into the ranks of the 'feudal' *sipāhīs* in the provinces. The best of the *bostandjis* and the *ashčis* entered the cavalry *bölüks* or became *ḳapidjis*, the rest passed into the Janissaries. Thus the highest position which most of the *ḳapi-ḳullari* in the *Enderūn* and the *Bīrūn* could reach was a *tīmār* in the provinces. We

have seen that so early as the first half of the 9th/15th century *kuls* of the Sultan and of *begs* were granted not only posts as *sandjak-begi* and *beglerbegi*, but also *zeʿāmets* and *tīmārs*; the view that the timariots were composed only of Turkish-born Muslim *gönüllü* [*q.v.*] or *akîndjîs* [*q.v.*] is erroneous.

In the classical period (up to the 11th/17th century), an important place in the ranks of the timariots—and thus in the basic military and administrative organization of the Empire—was occupied by the '*beg kullarî*' (or '*ghulāmlarî*'). Each *beglerbegi*, *sandjak-begi* and *su-bashî* had to have his own force of *kapî-kullarî*, their numbers being regulated by *kānūn*. To own slaves was regarded as a necessary qualification for the exercise of executive power. Even the timariot had a small 'Porte', composed of *djebelüs* and *ghulāms* (*oghlans*), its strength determined by the value of his *tīmār* (the proportions are given in the *Kānūnnāme* of Süleymān I, but the text published by M. ʿĀrif, *TOEM*, supp., contains many errors; cf. *Sûret-i Defter-i sancak-i Arvanid*); thus in 835/1431 the *ghulām-i mīr Yörgüč* held a *tīmār* of 6089 *akčes*, and hence had to put in the field one *djebelü* and one *ghulām* (*Arvanid*, 34). *Pashas* and *begs* endeavoured to support more *djebelüs* and *ghulāms* than the *kānūn* obliged them to (when Rüstem Pasha died he left 1700 slaves). *Djebelüs*, *ghulāms* and *nökers*, in origin prisoners of war or purchased slaves, were, like their masters, subject to the regulations that applied to the *ʿaskerī* class (see H. İnalcık, *15. asır Türkiye iktisadî ve içtimaî tarihi kaynakları*, in *Iktisat Fak. Mecm.*, xv (1953-4), 53), and thus their status in society differed from that of the ordinary *ʿabd*; all the same, the *sharīʿa* rules relating to the *ʿabd*, to *ʿitk* and to *walāʾ* [*qq.v.*] applied to the relations between the *ghulām* of the military class and his master.

Some of the boys levied by the *devshirme* were placed in the mansions of prominent men. *Begs* and *pashas*, after training their *ghulāms* in various duties in their *konaks*, each a microcosm of the Sultan's palace, could procure that they passed directly into the military class; by presenting their meritorious *ghulāms* to the Sultan, they could obtain for them *tīmārs*, especially in newly-conquered territories. The *kānūnnāmes* provide for the allocation of *tīmārs* not only to the sons of *begs* and *pashas* but also to their *ghulāms*, in amounts proportionate to the *khāṣṣ* or *tīmār* of the holder [see TĪMĀR]. *Djebelüs* were slaves who rendered military service, while *ghulāms* (*oghlans*) were in the personal service of the *sipāhī*. It was possible for a *ghulām* to become a *djebelü*, and a *djebelü* a timariot. In the first half of the 9th/15th century, the *udj begleri* were able to present *tīmārs* in their *sandjaks* to their own *ghulāms* and *nökers* (see H. İnalcık, *Fatih devri* . . . , i, 149-50) and thus maintain a quasi-independent status vis-à-vis the central authority. The *ghulāms* of executed *pashas*, like their other possessions, became the property of the Sultan, and were sometimes taken straight into the palace (Ewliyā Čelebi, *Seyāḥatnāme*, ii, 472). Thus the *ghulām* system was in force at every level of the military-administrative organization.

In the classical period of the Empire, this system was not merely the source for recruitment to the administrative class; it was also, from the very beginning, of great importance in the social and economic structure of society, especially in the great cities. Examination of the registers kept by the *kāḍīs* of Ottoman cities in the 9th/15th and 10th/16th centuries (see H. İnalcık, *15. asır Türkiye iktisadî* . . . , in *Iktisat Fak. Mecm.*, xv (1953-4), 52-61) shows that one of the most profitable investments which a wealthy man could make was to buy slaves. Slave-merchants accompanied the armies, and at the end of a battle set up their markets (see for example C. D. Cobham, *Excerpta Cypria*, Cambridge 1908, 142). In the 11th/17th century the records of the Istanbul customs alone show an importation of 20,000 slaves (Miller, 81). In the second half of the 9th/15th century, the average price of a slave was 40-50 Venetian ducats. The use of slaves ensured various legal and economic advantages. The manufacturers of velvet and brocade at Bursa used slave-labour, usually on the *mukāṭaba* [*q.v.*] system. It was profitable for merchants to use slaves and *ʿatīks* (freedmen) as commercial agents (see H. İnalcık, *Bursa*, in *Belleten*, xxiv/93 (1960), 91-3). One factor encouraging this was the legal principle of *walāʾ* [*q.v.*]. The *sharīʿa* was supplemented by detailed *ʿurfī* regulations relating to slaves (see Ö. L. Barkan, *Kanunlar*, i, Istanbul 1943, index s.vv. *kul*, *esir*). The Ottomans did, in practice, extend the benefits which the *sharīʿa* ensured to the *ʿabd*. Slaves, whether in the service of the state or in private ownership, were not regarded as composing a base class in society: indeed in certain circumstances the name of *kul* procured influence and esteem. The *kāḍīs*' registers reveal that *ʿatīks*, who had grown up in an active world of business and enriched themselves, without encountering any social obstacles, were surprisingly numerous in the upper classes of Ottoman society.

Right from the time of Orkhān Ghāzī, prisoners of war had also been used by the state as slave-labourers, being settled on agricultural land and in villages with the name *ortakčī-kul* [*q.v.*] (see Ö. L. Barkan, *Kulluklar ve Ortakçı kullar*, in *Iktisat Fak. Mecm.*, i (1939), 29-74, 198-245, 397-447). There is no resemblance at all between these and the *ghulāms* belonging to the military class.

The classical Ottoman administrative system, based on the use of *ghulāms*, developed greatly in the second half of the 10th/16th century, the number of the *kapî-kullarî* passing 80,000. With the decline in the authority of the Sultan at the end of this period, the *kapî-kullarî* acquired absolute control of the palace, the government and the provincial administration, and endeavoured to monopolize the military fiefs and the other sources of state-revenue. Their power became such that they could depose, appoint, and even murder (ʿOthmān II) the Sultan. Although the *ghulāms* of the palace sometimes made common cause with them, in general it was to their advantage to support the authority of the Sultan. Thus the palace attempted to pit the cavalry regiments against the Janissaries. Ottoman historians and writers on government in dealing with this period (Kātib Čelebi, Ḥasan Beg-zāde, Naʿīmā, Kočī Beg [*qq.v.*]) attribute the anarchy in the first place to the disruption of the *ghulām* system.

The revolt of Abaza Meḥmed Pasha (see ABAZA—i, and H. İnalcık, art. Husrev Paşa, in *IA*, fasc. 49, 606-9) is to be explained as a violent manifestation of the reaction which this domination of the *kuls* provoked in Anatolia. Later attempts on the part of the palace and the government to reduce the numbers of the *kapî-kulu* troops and bring them under discipline were fruitless; only when Köprülü Meḥmed Pasha [*q.v.*] assumed dictatorial powers was it possible to make some resistance to them. The lack of discipline among the *kapî-kullarî* was reflected in the *Enderūn*: when the *čîkma* due at the accession of Meḥemmed IV was delayed, the *ič-*

oghlanlarī mutinied (Naʿīmā, iv, 349-50); and finally in 1086/1675 the organizations of the *Büyük* and *Küčük Oda*s and of the palaces of Ghalaṭa-sarāyī [*q.v.*] and of Ibrāhīm Pasha were abolished (Uzunçarşılı, 304). After the wars which lasted from 1094/1683 until 1111/1699 the system of *ḳapī-ḳullarī* and *ghulām*s lost its former significance and importance in the state and took on a new character.

As reasons for the collapse of the system, there come to mind, besides its losing its former function, such explanations as the reduction in the supply of slaves and the contraction of the financial resources of the state. But the basic reasons are to be sought among those which produced the decline of the Empire and compelled a change in its structure and institutions. In the provinces, individuals who had not passed through the system began to enter the service of the *pasha*s and thus occupy an increasingly prominent place in the administration and in the army. The state was obliged to recognize these military groups who, under various names (*sarudja sekbān, gönüllü, levend*), came into existence in the service of the various *pasha*s. This meant the abandonment of the principle that the Sultan's executive authority was exercised only by the *ḳapī-ḳullarī*. Again, from the 11th/17th century onwards the application of the *devshirme* among the Christian *dhimmī*s became increasingly difficult, so that a *devshirme* in this century could produce only 2000 boys (Miller, *Palace School*, 75). Finally, former members of the *Enderūn* and men of influence were able to introduce their own children, instead of *devshirme* boys, into the schools of the palace and the *oda*s of the *Enderūn* (ʿAṭā, i, 113). When in the 12th/18th century persons trained in the Government offices began more and more to pass into executive positions and provincial posts (see H. İnalcık, art. Reîs-ül-Küttâb, in *IA*, fasc. 98, 671) and the *aʿyān* [*q.v.*] rose to control the provincial administration, the *ghulām* system no longer had any significance or importance. The purge of the *Enderūn* under Aḥmed III and the changes introduced by Čorlulu ʿAlī Pasha (ʿAṭā, i, 162-5) are, to some degree, the expression of new tendencies. In the *oda*s at this period greater stress was laid upon education. The *odjaḳ yolī* (*i.e.*, the principle that promotion was possible only after passing through a series of duties) was abolished, and the principle that a qualified person could take a short cut into the *Khāṣṣ-oda* was accepted. Ghalaṭa-sarāyī was re-opened as a school training pages for introduction directly into the *oda*s of the *Khazīne* and the *Kilār* in the Topḳapī Sarāyī. The last great representative of the *ghulām* system is Khusrew Pasha [*q.v.*]. In his own *ḳonaḳ* he had many slaves, whom he had bought, educated and trained by private teachers, and appointed them to important posts in the services of the state; many of them rose to the rank of *pasha* (M. Thüreyyā, *Nukhbat al-waḳāʾiʿ*, Istanbul 1290, 269). Maḥmūd II, imitating the palace organization of Western courts, made fundamental changes in the Ottoman palace organization; the *Enderūn Naẓāreti* was established in 1831, the *Mābeyn Müshīriyyeti* in 1832 (M. Thüreyyā, *Sidjill-i ʿOthmānī*, iv, 729), and in 1833 the *odalar* were completely abolished (Luṭfī, *Taʾrīkh*, iv, 112).

GHULĀM AḤMAD ḲĀDĪYĀNĪ [see AḤMADIYYA].

GHULĀM ʿALĪ [see ĀZĀD BILGRĀMĪ].

Sayyid **GHULĀM ḤUSAYN KHĀN ṬABĀṬABĀʾĪ** AL-ḤASANĪ b. Bakhshī al-Mulk Naṣīr al-Dawla S. HIDĀYAT ʿALĪ KHĀN "Ḍamīr", *Bakhshī* to Shāh ʿĀlam (reigned 1173/1759-1221/1806), b. S. ʿAlīm Allāh b. S. Fayḍ Allāh Ṭabāṭabāʾī, was born at Delhi (Shāhdjahānābād) in 1140/1727-8 in a poor family. When he was five years old the family migrated to Murshidābād [*q.v.*], where Allāh Wirdī Khān Mahābat Djang, a kinsman of his mother, was then living in the service of Shudjāʿ al-Dawla, the *Nāẓim* of Bengal. Soon afterwards, when Allāh Wirdī Khān was appointed the *Nāẓim* of ʿAẓīmābād (Paṭna), S. Hidāyat ʿAlī Khān went with him and settled there. Gradually he acquired extensive property and eventually became the *Nāʾib* of the province of ʿAẓīmābād under Zayn al-Dīn Aḥmad Khān Haybat Djang. In 1156/1743 his father lost his post and returned to Delhi with his family. Early in 1158/1745 Ghulām Ḥusayn Khān went to ʿAẓīmābād, married a daughter of his maternal uncle ʿAbd al-ʿAlī Khān, who was employed in the army of Haybat Djang, and took part in the defence of the town against Muṣṭafā Khān. In 1161/1748 Ghulām Ḥusayn entered the service of Saʿīd Aḥmad Khān Ṣawlat Djang, son-in-law of Allāh Wirdī Khān, who was then at Monghyr. Soon afterwards he went to Pūrniya where Ṣawlat Djang had been appointed *fawdjdār* [*q.v.*]. On the death of his patron in 1169/1754 Ghulām Ḥusayn refused to serve under his son and successor Shawkat Djang, but was prevailed upon to change his mind. In 1170/1756, when Shawkat Djang revolted against Sirādj al-Dawla [*q.v.*], the independent ruler of Bengal, and was defeated and slain in battle, Ghulām Ḥusayn, fearing reprisals at the hands of the victor, fled to Benares and took refuge with his relations living there, who had earlier been banished by Sirādj al-Dawla.

In 1170/1757, on Mīr Djaʿfar's assumption of power as the *de facto* governor of Bengal, Ghulām Ḥusayn returned to ʿAẓīmābād and through the intercession of Rādjā Rām Narāyan, the local governor, recovered some of his family estates and was allowed to live in the town. He soon found favour with Rām Narāyan, but when prince ʿĀlī Guhar (Shāh ʿĀlam II) attacked Bengal in 1172/1759 he threw in his lot with the invaders. The attack having failed, he again went to Benares but soon sought the pardon of Rām Narāyan and returned to ʿAẓīmābād. Thereafter he involved himself in Bengal politics, siding now with Mīr Ḳāsim [*q.v.*] and now with the British, gaining favours from both sides. In 1176/1762 Mīr Ḳāsim gave him a cash present of Rs. 5000 and also ordered the payment of the arrears of his salary with a view to retaining his allegiance, for he was intimate with the British and Mīr Ḳāsim entertained strong suspicions of his loyalty (cf. *Siyar al-mutaʾakhkhirīn*, Eng. transl. 1926, ii, 436). His subsequent rôle as an intermediary between the various contending groups is a very dubious one (cf. *Siyar* . . . , Eng. transl. 1926, ii 458, 513, 517, 524-5, 532, 535-7, 553). It was through his efforts that the *ḳalʿa-dār* of Rōhtās arranged to surrender the fortress to the British. In 1187/1773-4 he was in Calcutta making preparations for a pilgrimage to Mecca but having been suddenly impoverished, gave up the intention. Some four years later he tried to ingratiate himself with Warren Hastings, the British Governor-General, but without success. In 1194/1780 he again approached the British but with the same negative results. The exact date of his death is not known, but according

to the Bānkīpur MS. (No. 282) he was alive till 1230/1815. According to *Nuzhat al-khawāṭir* (vi, 200) he died at Ḥusaynābād, a village founded by his father near Monghyr. His descendants are still living in Patna.

An Iranian by extraction, he was thoroughly conversant with the art of Persian letter-writing. He was a *munshī* by profession and his letters and writings drew praise from, among others, Warren Hastings (*Misṭar Hashting ... muḥarrarāt-i faḳīr-rā mī-sitāyad, Siyar ...*, ii, 674). Among all his activities as a *Mīr Munshī*, a political negotiator, a soldier and an intermediary, he found time for literary activities, undaunted by periods of penury and vicissitudes of fortune. His fame rests chiefly on the *Siyar al-mutaʾakhkhirīn*, his *magnum opus*, a detailed history of India from Awrangzīb's death in 1118/1707 to 1195/1781, begun in Ṣafar 1194/ February 1780 and completed in Ramaḍān 1195/ August 1781. An autograph copy of this work is preserved in the Oriental Public Library, Bānkīpur (vii, 582). Editions: Calcutta 1248/1836; Lucknow 1282-3/1866, 1314/1897; Eng. transl. by Ḥājjī Muṣṭafā, originally Raymond, Calcutta 1789 (most of this edition was lost at sea); reprint Calcutta 1902-3, another reprint with index, Calcutta 1926. Urdu translations: (i) *Iḳbāl-nāma* by S. Bakhshish ʿAlī, Delhi n.d.; (ii) *Mirʾāt al-salāṭīn* by Gōkul Praśād, Lucknow 1874. There are also several partial translations into English and one Persian abridgement: *Mulakhkhaṣ al-tawārīkh* (ed. Calcutta 1243/ 1827, Agra 1247/1831). His other works include (i) *Bishārat al-imāma*, a *mathnawī* on the lives of his ancestors, especially the miracles of his grandfather S. ʿAlīm Allāh Ṭabāṭabāʾī (d. 1156/1743) and his great-grandfather S. Fayḍ Allāh (MS. Bānkīpur Suppt., i, no. 1991); (ii) a theological work on the prerogatives of ʿAlī and his descendants, being a commentary of certain *ḥadīth*s quoted in the *Fawātiḥ* of Mīr Ḥusayn al-Maybudhī (defective MS. of unknown title, Bānkīpur, xiv, no. 1319); (iii) a *tafsīr* of the Ḳurʾān in 'idiomatic' Arabic (*tafsīr dar tāzī-i bā-muḥāwara*); (iv) a commentary on the *Mathnawī* of Djalāl al-Dīn Rūmī; (v) a *dīwān* of poems; and (vi) other theological works. No MSS. of nos. (iii) to (vi) are known to exist. A historical work of doubtful authenticity entitled *Sharaf-nāma*, written in 1221/ 1806-7 (MS. Āṣafiyya, iii, no. 1314), is also attributed to him.

Bibliography: *Siyar al-mutaʾakhkhirīn*, Lucknow 1866, ii (iii), 948-52; an abridged Eng. transl. of the above appeared in *The Asiatic Annual Register ... for the year 1801*, London 1802, *Characters*, 28-32; Dhu'l Faḳār ʿAlī Khān "Mast", *Riyāḍ al-wifāḳ* (MS.); Elliot and Dowson, *History of India as told by its own historians*, viii, 194-7; Buckland, *Dictionary of Indian biography*, 164; Storey, i/I, 625-640 (the most detailed account), 1027; ʿAbd al-Ḥayy Lakhnawī, *Nuzhat al-khawāṭir*, Ḥaydarābād 1376/1957, vi, 199-200.

GHULĀM ḤUSAYN "SALĪM" Zaydpurī, one of the earliest Muslim historians of Bengal, migrated from his home-town Zaydpur, near Bāra Baṅkī in Awadh, to English Bāzār or New Mālda (Bengal), also called Aṅgrēzābād, and became *Ḍāk Munshī*, or Postmaster, there under George Udny (Udney), the Commercial Resident of the East India Company's factory at that place. Apparently a well-educated man, he undertook to write, at the request of Udny, a history of Bengal, which he named *Riyāḍ al-salāṭīn* (chronogram of 1207/1787-8, the date of completion). This work is divided into a *muḳaddima* and four *rawḍās* (1) the viceroys of the Sultans of Delhi, (2) the independent kings, (3) the *Nāẓim*s (governors) under the Tīmūrids and (4) the British. Edition: *The Riyázu-s-Salátin ... edited by Maulavi Abdul Hak Abid*, Calcutta 1890-1; Eng. transl., *The Riyazu-s-Salatin ... translated ... with notes* by Maulavi Abdus Salam, Calcutta 1902-4.

A man of considerable learning, he devoted his spare time to teaching. One of the pupils of a pupil of his, S. Ilāhī Bakhsh b. ʿAlī Bakhsh al-Ḥusaynī Aṅgrēzābādī wrote *Khʷurshīd-i djahān-numā*, a general history of the world, which also contains a brief account of Ghulām Ḥusayn, his teacher's teacher (cf. H. Beveridge, *JASB*, lxiv/1 (1895), 196, 198). Other references are to be found in *Riyāḍ al-salāṭīn*, Engl. transl., 2-5; ʿAbd al-Ḥayy Lakhnawī, *Nuzhat al-khawāṭir*, Ḥaydarābād, 1378/1958, vii, 352. He died in 1233/1817. See also Storey, i, 178.

(A. S. Bazmee Ansari)

GHULĀM ḲĀDIR ROHILLA b. Ḍābiṭa Khān b. Amīr al-Umarāʾ Nadjīb al-Dawla [*q.v.*], founder of the town of Nadjībābād, remembered chiefly for his cruel treatment of the Mughal emperor Shāh ʿĀlam (*reg.* 1173-1221/1759-1806), and his family. While still young Ghulām Ḳādir Khān was left at the Imperial court as his father's representative, most probably as a hostage. He escaped from custody, however, in 1190/1776 on the defeat of the imperial forces by Ḍābiṭa Khān, and joined his father at the fort of Ghawthgaṙh, the family headquarters near Thāna Bhawan, the birth place of Ashraf ʿAlī Thānawī [*q.v.*]. The very next year Ḍābiṭa Khān was defeated by the Marāthās and Ghulām Ḳādir was taken prisoner and brought to Delhi. There he was lodged in the palace (Red Fort) and, to the amusement of the courtiers, was obliged to appear before the emperor clad in women's attire. All this seems to have been done to humiliate his father, the Rohilla chief Ḍābiṭa Khān. A handsome lad, he attracted the attention of the ladies of the harem, but was punished by castration. On the death of his father in 1199/1785 Ghulām Ḳādir succeeded to the family estates but did not pay the customary succession fee to the emperor. In 1202/1787, the Marāthā leader, Sindhiyā (Scindia), entered into a pact with Ghulām Ḳādir for controlling the Sikhs who were giving trouble in the Doāb. Instead of observing the pact Ghulām Ḳādir began to drive out the Marāthā collectors of revenue and seize imperial territory, enjoying all the time the patronage of the eunuch Ḥāfiẓ Manẓūr ʿAlī Khān, who had a strong hold over the emperor and wanted to throw off Marāthā control. In August of the same year Ghulām Ḳādir succeeded in defeating the Marātha forces at Shāhdara, near Delhi. He laid claim to the post of *Mīr Bakhshī* and the control of the imperial administration. The next month he occupied the capital and forced Shāh ʿĀlam to appoint him *Mīr Bakhshī* and *Amīr al-Umarāʾ*, offices once held by his father and grandfather. He then began his depredations in the Doāb and even usurped the crownlands reserved for the privy purse of the emperor (*ṣarf-i khāṣṣ maḥāll*). In Shawwāl 1202/July 1788 he again appeared before Delhi and through the treachery and intrigue of his friend, the eunuch Manẓūr ʿAlī, superintendent of the royal household, was able to have an audience with the unwilling but helpless emperor. This audience proved to be the beginning of a period of great troubles for the imperial family—the House of Tīmūr. Shāh ʿĀlam was taken prisoner and deposed on 26 Shawwāl /30 July, and

ten days later he was blinded. In a moving Persian poem Shāh ʿĀlam laments the loss of his eyes (cf. Ṣabāh al-Dīn ʿAbd al-Raḥmān, *Bazm-i Tīmūriyya*, Aʿẓamgaṙh 1367/1948, 317-8). Children and women of the harem were starved to death, princes flogged and the *bēgam*s dishonoured. For days together every conceivable cruelty was perpetrated on the royal family in vengeance for the act of castration to which the Rohilla chief had been subjected during his boyhood. Retribution, however, soon overtook him. In Djumādā I 1203/February 1789 he was captured by the Marāthā leader, Mahāddjī Sindhiyā, and after a short imprisonment was put to death; his body was dismembered and hung from a tree.

Bibliography: Khayr al-Dīn Muḥammad Ilāhābādī, *ʿIbrat-nāma*, I.O. MS. 3908-10 (gives the fullest account of Ghulām Ḳādir's career); extracts in Elliot and Dowson, *History of India* ..., viii, 237-54; Amīn al-Dīn Ḥusayn Khān, *Pādāsh-i Kirdār*, I.O. MS. 3979; ʿAlī Bakht Gurgānī 'Aẓfarī', *Wāḳiʿāt-i Aẓfarī*, Urdu transl., Madras 1937; *Ferishta's History of Dekkan* ..., *by Jonathan Scott*, London 1794, ii, 285-306; W. Francklin, *The history of the reign of Shah-Aulum*, London 1798 (mostly based on Ghulām ʿAlī Khān's *Shāh ʿĀlam-nāma*, fasc. i, Calcutta 1912, fasc. ii, Calcutta 1914); *Nādirāt-i Shāhī*, ed. (A. S. Bazmee Ansari)

GHULĀM al-KHALLĀL, usual appellative of Abū Bakr ʿAbd al-ʿAzīz b. Djaʿfar b. Aḥmad, a highly-esteemed Ḥanbalī traditionist and jurisconsult (d. 363/974). He owes his by-name to the fact that he was the principal disciple of Abū Bakr al-Khallāl (d. 311/923 [*q.v.*]). He transmitted his master's *Kitāb al-Djāmiʿ*, the first great *corpus juris* of Ḥanbalism; he completed it on a number of points by the *Zād al-musāfir* which, though of lesser importance than the first compilation, was also to become a much consulted work; the *Zād al-musāfir* was considered as presenting fairly numerous divergences not only from the *Kitāb al-Djāmiʿ* but also from the *Mukhtaṣar* of al-Khiraḳī. Other works of *fiḳh* are also attributed to him, in particular a treatise on the differences of opinion between al-Shāfiʿī and Aḥmad b. Ḥanbal. Abū Bakr ʿAbd al-ʿAzīz also transmitted the *Kitāb al-Amr* of Ibn Ḥanbal; a manuscript of this work is preserved in the Ẓāhiriyya at Damascus; to the purely doctrinal interest of this treatise is added an interest of a social and political nature, for it contains a criticism of the life of luxury and pleasure which was led by the caliphs and their entourage, and one can detect in it the beginnings of a veiled hostility to the Turkish elements of the caliphate.

Bibliography: Abu 'l-Ḥusayn b. al-Farrāʾ, *Ṭabaḳāt al-Ḥanābila*, Cairo ed., ii, 75-127 (gives the list of the divergences from the *Mukhtaṣar* of al-Khiraḳī); Ibn Kathīr, *Bidāya*, xi, 278; Ibn al-ʿImād, *Shadharāt*, iii, 45-6; Djamīl al-Shaṭṭī, *Mukhtaṣar ṭabaḳāt al-Ḥanābila*, Damascus n.d., 26; Brockelmann, S I, 311. (H. Laoust)

GHULĀM THAʿLAB, nickname of an Arab philologist named Muḥammad b. ʿAbd al-Wāḥid b. Abī Hishām (Hāshim), Abū ʿUmar al-Zāhid al-Muṭarriz al-Bārūdī. A native of Abīward Khurāsān, he was born in 261/875 and died at Baghdād on 13 Dhu 'l-Ḳaʿda 345/16 February 957. He owes his nickname to his relations with Thaʿlab [*q.v.*] whose zealous disciple and successor he was; he himself had many pupils, and famous people did not scorn to attend his lectures. He made his living as an embroiderer (*muṭarriz*), but certainly received also subsidies from several patrons, as appears from an anecdote quoted by almost all his biographers.

Although he transmitted some *ḥadīth*s and the traditionists regard him generally as reliable, his fame rests principally on his extraordinary erudition in matters of Arabic vocabulary; in this field he is considered as the most learned of all the philologists, and tradition has it that he dictated from memory 60,000 pages; the very extent of his learning caused him often to be accused of forgery and dishonesty, but, to judge from some anecdotes, his detractors seem to have been wasting their time; this was notably the case with Ibn Durayd [*q.v.*], who was one day shown up in public by Ghulām Thaʿlab and until his death never spoke to him again. He had an answer for everything and was even able to find a meaning, from the old Bedouin vocabulary, for words which mischievous pupils invented as a joke.

Politically, it is particularly interesting to note that he belonged to the party which, so late as the 4th/10th century, still revered the memory of Muʿāwiya (see Ch. Pellat, in *St. Isl.*, vi (1956), 56); he even wrote a little work (*djuzʾ*) on the merits of the Umayyad caliph, which he insisted on his pupils reading before he allowed them to attend his lectures; al-ʿAsḳalānī himself (*Lisān al-mīzān*, v, 268) passes a rather severe judgement on this work because it contained apocryphal data, but he places the responsibility for these on other transmitters. It is precisely because of his hostility towards ʿAlī and the Shīʿa that Ibn al-Nadīm is by no means favourable towards him; all the same he devotes to him a long notice (*Fihrist*, Cairo ed., 113-4), which includes a page of exceptional interest on the way in which at that time a dictated text gradually acquired the form of a finished work, thanks to the care of the listeners and the final intervention of the master. Ibn al-Nadīm and the other biographers list a total of more than 25 works among which the *Kitāb al-Yāḳūt* (or *al-Yawāḳīt*) *fi 'l-lugha* seems to be the most important. In this list he draws particular attention to a commentary (*sharḥ*) and a supplement (*fāʾit*) to the *Faṣīḥ* of Thaʿlab, a "very good" *Gharīb al-ḥadīth* based on the *Musnad* of Aḥmad b. Ḥanbal, a supplement to the *Kitāb al-ʿAyn* of al-Khalīl b. Aḥmad, a critism of Abū ʿUbayda (*mā ankarahu 'l-Aʿrāb ʿalā Abī ʿUbayda fīmā rawāh*) and a critical supplement to the *Djamhara* of Ibn Durayd.

Bibliography: apart from the works quoted: Khaṭīb Baghdādī, *Taʾrīkh Baghdād*, ii, 356-9; Ibn al-Anbārī, *Nuzha*, 345; Yāḳūt, *Udabāʾ*, xviii, 226-34; Ibn Khallikān, s.v.; Suyūṭī, *Bughya*, s.v.; F. Bustānī, *Dāʾirat al-maʿārif*, iv, 477-9; for further bibliography and extant MSS see Brockelmann, S I, 183. (Ch. Pellat)

GHULĀT (singular, Ghālī), "extremists", a term of disapproval for individuals accused of exaggeration (*ghulū*) in religion. By heresiographers it was applied particularly to those Shīʿīs [*q.v.*] whose doctrines Ithnaʿasharī Imāmī orthodoxy has regarded as exaggerated in reverence for the *imām*s or in other ways. In practice, the term has covered all early speculative Shīʿīs except those later accepted by Ithnaʿasharī tradition, as well as all later Shīʿī

groups except Zaydīs, orthodox Ithnaʿasharīs, and sometimes Ismāʿīlīs. During the early period, what are called the *Ghulāt* offered a distinctive speculative tendency within the general Shīʿī political orientation; their speculations continued to influence most later Shīʿī (and even some Sunnī) thought, and formed a reservoir of ideas from which many later Shīʿī movements drew their main inspiration. Accordingly, the term *Ghulāt*, if understood as a proper name without *parti pris*, may be made to serve for a heterogeneous but interconnected group of Shīʿī religious leaders and for the later tradition which went back to them.

Traditionally, the first of the *Ghulāt* was ʿAbd Allāh b. Sabaʾ [*q.v.*], whose *ghulū* may have consisted in denying that ʿAlī had died, and predicting his return (*radjʿa*), as the later Imāmīs did that of the Twelfth Imām. In any case, the notion of the absence (*ghayba*) of an *imām* who is due to return and establish justice as *mahdī* [*q.v.*] or *ḳāʾim* seems to have appeared first among the *Ghulāt*. Other positions which seem to have been labelled *ghulū* by early writers were the (public) condemnation (*sabb*) of Abū Bakr and ʿUmar as usurpers of ʿAlī's right, and the notion that the true *imāms* were divinely protected (*maʿṣūm*) against any sort of error. The *Ghulāt* were especially concerned to define the nature of the *imām*'s person and were ascribed varying positions on this: that the *imām* was the *waṣī*, executor, of the Prophet; that he possessed a prophetic authority (*nubuwwa*) himself, though one secondary to Muḥammad's; that he (as well as Muḥammad) possessed a spark of the divine light (*nūr ilāhī*) inherited from Adam through a line of prophets; or that he represented divinity itself, perhaps as a lesser god in the earth, or by infusion (*ḥulūl*) of the divine spirit in him.

They were almost equally concerned to define the nature of the true believer. Some seem to have expected all the truly faithful to receive some degree of prophetic inspiration. At least by the time of Djaʿfar al-Ṣādiḳ's friend Abu 'l-Khaṭṭāb [*q.v.*], a leading Ghālī, many thought of the soul in purely spiritual terms, essentially independent of any body; thus some expected a purely spiritual resurrection, and many seem to have adopted the principle of reincarnation (*tanāsukh*) and even that of transmigration (*maskh*) into sub-human bodies. In conformity with their depreciation of the body, many seem to have regarded the ritual law as not binding on those who had come to a deeper truth, that is, those who knew the *imām*. They were commonly accused of regarding all rules of conventional morality as inapplicable (*ibāḥa*); at the same time, some of them were blamed for introducing new rules, such as vegetarianism. Some of the *Ghulāt*, notably al-Mughīra b. Saʿīd and Abū Manṣūr al-ʿIdjlī, speculated on the nature of God himself, commonly in strongly anthropomorphic terms inspired by Ḳurʾānic passages, often with symbolic cosmological implications.

Much of this thought can be traced to the impulse of Islam itself and the experience of the Ḳurʾān. The expectation of continuing prophecy and the hope for a human leader who, under divine guidance, would order the world justly, represented an interpretation of Islam alternative to that of the leadership at Mecca and Medina. Some details, however, reflected pre-Islamic Arabian conceptions, for many of the early *Ghulāt* leaders seem to have been tribal Arabs. A form of divination used in the circle of Mukhtār and some conceptions of the *radjʿa* of heroes may have had old-Arabian origins. Finally, many of the later *Ghulāt* leaders were Mawālī, of Christian, Jewish, Gnostic, and Zoroastrian background, and they brought ancestral conceptions with them; probably the bulk of their speculations on the soul derive from such earlier Middle Eastern traditions (cf. I. Goldziher, *Neuplatonische und gnostische Elemente im Ḥadīt*, in *ZA*, xxii, 1909).

In the first generations, the *Ghulāt* seem to have been just especially intensely religious elements in the various Shīʿī movements. But by the second century, some of them probably initiated independent political activity against the régime (but in such "risings" as that of Bayān b. Samʿān [*q.v.*], it may have been the government which took the initiative in an attempt at suppression); while their ideas also helped justify the formation of certain inherited lines of imāmate, in which it was believed that a given claimant was *imām* whether he attempted to gain rule of the Islamic community or not. Both the lines of Muḥammad b. al-Ḥanafiyya and that of Muḥammad Bāḳir and Djaʿfar al-Ṣādiḳ were more or less willingly surrounded by *Ghulāt* thinkers (cf. Fr. Buhl, *Alidernes stilling til de Shiʿitiske Bevaegelser under Umajjaderne*, in *Kgl. Danske Viden. Selsk., Forhandling*, 1910, no. 5). Imāmī tradition automatically places all supporters of any claimants from Muḥammad b. al-Ḥanafiyya as *Ghulāt*, under the collective name of Kaysāniyya [*q.v.*]. Some of these Kaysānīs continued to support the ʿAbbāsids as *imāms* with supernatural authority for some generations. It seems that some of the *Ghulāt* allowed the imāmate to pass not only out of the ʿAlid but even out of the Hāshimid family, when some other man appeared to have the divine leading. *Ghulāt* Shīʿī ideas, finally, seem to have affected certain Zoroastrian sectarian movements, especially through reverence for Abū Muslim (cf. Gholam Hossein Sadighi, *Les Mouvements religieux iraniens*, Paris 1938).

By the 3rd/9th century, at latest, there developed, among the *Ghulāt*, *bāṭinī* [*q.v.*] systems of symbolical Ḳurʾān interpretation. These seem to have been influenced by philosophy of the Greek tradition. *Ghulāt* differed according as they asserted the supremacy of one or another principle, among those agreed to be embodied in certain religious offices and persons. The Mīmiyya exalted the *mīm*, or Muḥammad, embodying as prophet the principle of declared truth and outer reality; the ʿAyniyya exalted the *ʿayn*, or ʿAlī, embodying as *imām* the principle of inward meaning; a third principle was represented by the *sīn*, or Salmān Fārisī, the Gate through whom men came to the truth. Several of these groups played something of a rôle in the declining years of the ʿAbbāsid caliphate, when an enthusiast like Shalmaghānī held high political position.

Much of the *Ghulāt* heritage was absorbed into the Imāmī and Ismāʿīlī movements and disciplined by the exclusion especially of notions implying any compromise of the unity of God; thus the term *ḥulūl* seems to be rejected by surviving authors, along with the idea that the *imām* could be a god or a prophet. But even such ideas continued present within Imāmī and Ismāʿīlī circles and in sects like the Nuṣayriyya [*q.v.*]; in later centuries, numerous apocalyptic movements developed in which various of the ideas of the *Ghulāt* were used, and which often resulted in more or less long-lasting sects, those of the Nizārīs and Druzes from the Ismāʿīlī fold, and the ʿAlī-Ilāhīs or Ahl al-Ḥaḳḳ, who saw ʿAlī as God. The first Ṣafawīs likewise interpreted Shīʿism in a

manner which orthodox Imāmism must term *ghulū*. Transformed into complex symbolic lore, as at the hands of the Ḥurūfīs, much entered the broad stream of Ṣūfism.

Bibliography: Julius Wellhausen, *Die religiös-politische Oppositionsparteien*, *Abh. G. W. Gött.*, phil.-hist. Kl., n.f. V, no. 2, 1901; Gerlof van Vloten, *Recherches sur la domination arabe, le chiitisme, et les croyances messianiques*, Amsterdam 1894; van Vloten, *Worgers in Iraq*, in *Feestbundel Veth*, 57 ff.; Sabatino Moscati, *Per una storia dell' antica šiʿa*, in *RSO*, xxx, 1955; Marshall G. S. Hodgson, *How did the early Shīʿa become sectarian?*, in *JAOS*, lxxv, 1955; Louis Massignon, *Les origines chiites des . . . Banū 'l-Furāt*, *Mélanges Gaudefroye-Demombynes*, Cairo 1935; idem, *Recherches sur les chiites extrémistes à Baghdad à la fin du troisième siècle*, in *ZDMG*, xcii (1938), 378 ff. See also the articles on sects and men above mentioned. Our chief sources of information on the early *Ghulāt* are of four types: (*a*) Chroniclers, when rebellion or violent suppression occurred; these were inimical and superficial; (*b*) Traces in later Shīʿī writings, both Imāmī and especially texts from various sorts of Ismāʿīlīs (*e.g.*, the *Umm al-Kitāb*, ed. W. Ivanow, *Isl.*, xxiii, 1936), Druze, Nuṣayrī, and also Ḥurūfī and Ahl al-Ḥaḳḳ; (*c*) Imāmī Shīʿī *ridjāl* books such as Kashshī, *Akhbār al-ridjāl*; (*d*) Heresiographers. These have been discussed by Helmuth Ritter, *Philologika III*, in *Isl.*, xviii, 1929, and R. Strothmann, *History of Islamic heresiography*, in *IC*, 1938; lists of heresiographers and of sect names are to be found in ʿAbbās Iḳbāl, *Khānadān-i Nawbakhtī*, Tehrān, 1311 s. The heresiographers are hostile; later writers tend to derive their lists of sects from the earlier, adding little on their own times. They commonly force their names into a traditional number of seventy-three, and use the term *firḳa* indiscriminately for an independent sect, for a school of thought, and for a minor doctrinal position perhaps shared among otherwise unrelated thinkers. Too often they attribute to a system supposed consequences of a given position alien to the system itself; perhaps many charges of immorality derive from this. Of the most prominent, al-Ashʿarī (*Maḳālāt al-Islāmiyyīn*, ed. H. Ritter, Istanbul 1929) takes up under *Imāmiyya* some of the same groups as he takes up under *Ghulāt*, but on different issues; Malaṭī (*K. al-Tanbīh wa 'l-radd*, ed. Sven Dedering, Istanbul 1936) has some very old material but can be grossly misinformed; Nawbakhtī (*Firaḳ al-Shīʿa*, ed. H. Ritter, Istanbul 1931) is relatively fair-minded, but sees all groups in Imāmī terms; Ibn Ḥazm is very thin on the Shīʿa, forcing the *Ghulāt* into a procrustean scheme, but the translation of him by Israel Friedländer (*Heterodoxies of the Shiites*, New Haven 1909, corrected from *JAOS*, xxviii and xxix) has useful notes; al-Baghdādī, *al-Farḳ bayn al-firaḳ*, is virulently unfair, but sometimes well-read in *Ghulāt* writings; al-Shahrastānī is late, relatively well-balanced, and has some early material from original sources.

(M. G. S. Hodgson)

GHUMĀRA (Gumera of Leo Africanus), Berber tribe of the western Maghrib. Ibn Khaldūn groups them among the Maṣmūda tribes and attributes to them as ancestor Ghumār son of Maṣmūd or, according to another tradition, son of Mesṭāf, son of Melīl, son of Maṣmūd. The Ghumāra were divided into a large number of clans—B. Ḥumayd, Mattīwa, Ighṣawa (= Ghẓāwa), Madjkasa, etc.—whose names are still borne by certain tribes of the Rīf. It is rather difficult to determine precisely the territory occupied by the Ghumāra. According to Ibn Khaldūn it was five days long, from the region of the "plains of the Maghrib" to Tangier, by as many broad, from Ḳaṣr Kutāma to the river Wargha. It was bounded by the Atlantic between Aṣīla and Anfā and was adjacent on this side to the territory of the Barghwāṭa. Al-Bakrī excludes the regions of Tangier and Ceuta from it and gives as its limits Nakūr on the east and Karūshat on the west.

The Ghumāra had been long established in this part of the Maghrib when Islam was introduced. When conquered by Mūsā b. Nuṣayr they became converted to the new religion but in the 2nd/8th century adopted Khāridjī doctrines and took part in the revolt of Maysara. Even after the defeat of the Khāridjīs they showed an inclination towards heresy: "Their countrified customs and rustic habits", says Ibn Khaldūn, "prevented them from recognizing the true principles of religion". Thus they gathered in multitudes around the false prophet Ḥā-Mīm [*q.v.*]. Later another prophet appeared, by name ʿĀṣim b. Djamīl al-Yazdadjūmī; in 625/1228 a revolt broke out at the instigation of one Abu 'l-Ṭawādjin, who claimed to be a prophet and magician. A taste for magic was also one of the characteristics of the Ghumāra. Al-Bakrī provides various items of information on this point and Ibn Khaldūn remarks that it was especially the young women who practised the art.

From the political point of view the Ghumāra suffered various vicissitudes. From the 2nd/8th to the 4th/10th century the eastern part of their clans was included in the kingdom of Nakūr. Sogguen, one of their chiefs, tried, it is true, to put himself in the place of the Banū Ṣāliḥ, the descendants of the founder of this state, but his attempt failed (144/761). At the partition of the Idrīsid empire the eastern clans fell to ʿUmar b. Idrīs and were governed by his descendants. They remained faithful to these princes even after the Idrīsids had been expelled from Fez by the Fāṭimids and supported them to the end in their struggles against the Umayyads of Spain. After the downfall of the Idrīsids (264/877) the Ghumāra recognized the authority of the Umayyads, then that of the Ḥammādids of Ceuta until the Almoravid invasion. On the approach of the Almohads the Ghumāra hastened to adopt the new doctrine and even helped ʿAbd al-Muʾmin to take Ceuta (541/1146). But this faithfulness, which had won them the caliph's favour, did not last long. Abū Yaʿḳūb was obliged to come in person to put down the revolt of a Ghumāran chief named Sabaʿ b. Managhfād (562/1166-7) and after the defeat of the rebel entrusted the government of Ceuta to his brother with the task of keeping a watch on the Rīf.

The Marīnids also had great difficulty in checking the turbulence of the Ghumāra and managed to subdue them only by taking advantage of the quarrels between *ṣaffs* which divided them. Even so their subjection was rather precarious. "In our days", writes Ibn Khaldūn, "the Ghumāra have become powerful and numerous, but recognize nevertheless the authority of the Marīnid government and pay taxes to it so long as it has the means to compel their respect. But if ever it shows weakness . . . it is forced to send troops from the capital to make them submit again. Protected by their inaccessible mountains, they do not fear to offer asylum to princes of the royal family and other

rebels who ask for their protection". From the 9th/15th century onwards we lack exact information about the Ghumāra. Their name, still mentioned by Leo Africanus in the 10th/16th century, is borne today by a powerful tribe of the Djabāla.

GHUMDĀN (epigr. GHNDN, *CIH* 429), the castle of Ṣanʿāʾ (Azāl) in the Yaman, famous for its antiquity, its size, and its splendour. Arabian geographers give detailed descriptions of it (v. infra), esp. Hamdānī (in *Iklīl*, viii), who attributes its building to the king Ilsharaḥ Yaḥḍib (about 25 B.C.), probably correctly (cf. *CIH* 429). The castle was situated between the twin mountains Nuḳum and ʿAybān. It is said to have been destroyed by the Abyssinian conquerors in 525 A.D., but was rebuilt and served as the residence of Sayf b. Dhū Yazan after the Persian occupation in 570. It was finally demolished in connexion with the Muslim conquest of the Yaman, allegedly by Farwa b. Musayk or the Caliph ʿUthmān. Legend attributes the foundation of 'Ghumdān to Sām b. Nūḥ, more seldom to Solomon or al-Zabbāʾ. The castle is said to have had twenty storeys, each of them 10 cubits high; its lower part was made of freestone, its upper part, including the splendid terrace with four lions of bronze, was built of polished marble. Hamdānī locates its ruins opposite to the first and second doors of the chief mosque, which probably contains much material from the old castle. South Arabian poets, such as Umayya b. Abu 'l-Ṣalt and ʿAlḳama b. Dhū Djadan, celebrate Ghumdān as the residence of the Ḥimyarite kings. The poems quoted may, as Hamdānī remarks, partly refer to another castle, the homograph ʿUmdān in Mārib.

GHUNDJĀR, a nickname given, allegedly because of his ruddy cheeks, to an early Persian *ḥadīth* scholar, Abū Aḥmad ʿĪsā b. Mūsā al-Taymī al-Bukhārī, who died at the end of the year 186/802. The Arabo-Persian word does mean "rouged", but it is, of course, highly doubtful whether this is the origin of the name.

The nickname was transferred to a later scholar who spent much effort upon collecting ʿĪsā's traditions and who is known as the author of a *History of Bukhārā*. His name was Abū ʿAbd Allāh Muḥammad b. Aḥmad b. Muḥammad b. Sulaymān al-Bukhārī, known as (al-)Ghundjār. He flourished in the second half of the 4th/10th century and worked in the book trade. Of the dates given for his death (410, 412, 422), 412/1021-22 is the most likely one; 422/1031 would seem too late, since he states himself that he said the funeral prayers for a scholar deceased in 350/961 (*Taʾrīkh Baghdād*, i, 296). Only brief citations from the *History of Bukhārā* have so far come to light. An abridgment of the work was made by al-Silafī, and additions were contributed by a certain Aḥmad al-Māmānī (b. Māmā ?) (d. 436/1045). A certain Muḥammad b. Aḥmad b. Sulaymān al-Bukhārī, said to have died a hundred years earlier, in 312/924 (Ḥādjdjī Khalīfa, ii, 116 f.), and to have been the author of a *History of Bukhārā*, seems to be, in fact, identical with this Ghundjār.

Wüstenfeld, *Geschichtsschreiber*, 98; Brockelmann (1st ed.), I, 138 (also I, 167, corrected in S I, 310); Frye, *op. cit.*, xvii.

(F. Rosenthal)

GHŪR, the mountainous territory in Afghanistan about the headwaters of the Farah Rud, Hari Rud, and Murghab, from which is named the mediaeval dynasty of the Ghūrids [*q.v.*]. The establishment of Islam came late in Ghūr, and raids by Arab generals continued until the 4th/10th century. A tradition of the existence of Jewish settlements finds confirmation in the discovery of a Judaeo-Persian inscription of A.D. 752-3 at Tang-i Azao, near Čisht. In 372/982 the *Ḥudūd al-ʿālam* claims that most of the inhabitants had accepted Islam. Originally the chief place was Mandaysh, in a district called Sanga near the mountain Zār-i Margh. These localities were placed by Maricq near Ahangarān—the name, still extant, of the fortress where Muḥammad b. Sūrī of Ghūr was besieged by Maḥmūd of Ghazna in 401/1010. The founding in the district of Warshāda of a new capital, Fīrūzkūh [*q.v.*], was the work of Ḳuṭb al-Dīn Muḥammad (killed by Bahrām Shāh of Ghazna ca. 544/1149). His successor, Bahāʾ al-Dīn Sām, established frontier fortresses at Kadjūrān, to the south, Shersang towards Herāt and Bindār and Fivār to the north-west. The rediscovery by Maricq in 1957 of the minaret and citadel of Fīrūzkūh was a triumph of modern exploration. Ghūr was noted for its export of armour, weapons, guard-dogs and slaves. Its historical role came to an end with the sack of Fīrūzkūh by the armies of Čingiz Khān.

Bosworth, *The early Islamic history of Ghūr*, in *Central Asiatic Journal*, vi/2 (1961), 116-33; *Ḥudūd al-ʿālam*, 342-4; Minhādj-i Sirādj, *Ṭabaḳāt-i Nāṣirī*.

(A. D. H. Bivar)

GHURĀB, (A.) "crow". In view of the diversity of their meanings the Arabic words formed from the three consonants *gh*, *r* and *b* cannot be traced to a single root, and it is probable that in the course of the history of the language there came about a convergence of terms with different origins; thus, *ghurāb* is too reminiscent of the Latin *corvus* for us to consider it a mere coincidence; moreover, early Arab philologists considered *ghurāb* to be independ-

ent, since they made to derive from it such words as *ghurba*, *ightirāb*, etc. which imply an idea of estrangement, of separation; later authors go so far as to regard the root *gh. r. b.* as being made up from the consonants *gh*, *r*, *b* which appear initially in words meaning a misfortune or something unpleasant.

Such theories are explained firstly by the place which the crow occupies in the literary tradition of the Arabs, secondly by its place in ornithomancy, where it is pre-eminently the bird of ill omen.

In poetry, although its black colour may symbolize the night (*ghurāb al-layl*) and be the object of favourable judgements, the crow is fundamentally synonymous with separation, with an unhappy event, and the poets make a sometimes immoderate use of the stereotyped expression *ghurāb al-bayn*, which strictly means the carrion crow, but which owes its origin to the fact that crows are led by instinct to encampments which their occupants are preparing to leave, and announce by their croaking the imminent departure (*bayn*) of the tribe—more particularly of the beloved—before swooping down on the deserted places, where the poet, arriving too late, is struck with grief on seeing them.

The mere sight of a crow is in itself unpleasant, and one can readily understand, without feeling the need to postulate a borrowing, that the early Arabs should have made it into a bird of ill omen and in addition applied themselves to observing and interpreting its flight and its croaking, in the context of what is called *ṭīra* [*q.v.*]. Examples from literature of these predictions, which were deduced more or less spontaneously, cannot be quoted here; but it is worth mentioning that they are the sign of a fairly rudimentary ornithomancy which only at a relatively late date was perfected and systematized, although the *Fihrist* (Cairo ed., 436) already refers to Arabic treatises of ornithomancy, one of which is the work of al-Madāʾinī. T. Fahd has studied a treatise attributed to al-Djāḥiẓ, comparing it in a very illuminating fashion with two Assyro-Babylonian texts; in spite of differences of detail, it does not seem that the Arabic text is the result of an enquiry carried out among the Bedouins: rather one has the impression that it is an attempt, made probably at a late date, to give some order to elements of diverse provenance. Nevertheless, it is strange that al-Djāḥiẓ, who is one of the few authors to have considered that the belief in the malicious influence of the crow and in the possibility of drawing omens from its flight and its cry is only a superstition based on verbal similarities (*Ḥayawān*, iii, 444), should have been later credited with two treatises of divination: the text studied by T. Fahd (found in al-Nuwayrī, *Nihāya*, iii, 130-2) and the *Bāb al-ʿIrāfa wa 'l-zadjr wa 'l-firāsa ʿalā madhhab al-Furs* (published and translated into Russian by K. Inostrantsev, in *Materials from Arabic sources for the history of the culture of Sassanid Persia*, St. Petersburg 1907, text, 3-27, tr. and comm., 28-120).

In the context of Islam the word *ghurāb* is used in the Ḳurʾān (v, 34/31) with reference to the crow sent by God to show Cain how to bury his brother Abel whom he had just killed; although rationalists see in this a manifestation of divine favour towards the bird considered to be of ill omen, they do not succeed in stifling the prejudices made still stronger by the legend of the crow (*ghurāb Nūḥ*) which Noah sent out to reconnoitre, but which, having found a carcass, did not return.

The malevolent character of this bird explains the considerable number of nicknames which it has in Arabic; but it is proverbial also for sharpness of vision, its suspicion, its pride and the blackness of its plumage, and the word *ghurāb* appears in a number of expressions such as "that will only happen when the crow turns white" (*ḥattā yashīb al-ghurāb*).

The Arabs knew several varieties of crow, including one which can learn to speak, and had observed their hostile relations with cattle, donkeys and owls; their habit of perching on camels to plunge their beaks into the pustules which form on their backs tended to increase the Bedouins' dislike for this bird, about which in any case they knew little, since some maintained that it reproduced itself by pecking the female with its beak.

The crow is among the animals that must be killed, and its flesh is forbidden; it possesses however certain medicinal properties, the dried blood in particular being a specific for haemorrhoids. A crow's beak carried on the person gives protection against the evil eye, but to see the bird in a dream is of course a sinister portent.

GHURĀB, type of boat [see safīna].

al-**GHURĀB** [see nudjūm].

GHURABĀʾ (in Turkish *Ghurebā*), pl. of A. *gharīb*, Ottoman term for the two lowest of the six cavalry regiments (*Altī Bölük*) of the *Ḳapī-ḳullarī*. The regiment riding on the Sultan's right was known as *Ghurebāʾ-i yemīn* (*Sagh gharībler*, *Sagh gharīb-yigitler*), that riding on his left as *Ghurebāʾ-i yesār* (*Sol gharībler*, *Sol gharīb-yigitler*). The oldest terms used for them are *gharīb-yigitler* and *gharīb-oghlanlar* (see F. Babinger, *Die Aufzeichnungen des Genuesen Iacopo de Promontorio . . .*, *SBBayer. Ak.*, Jg. 1956, Heft 8, Munich 1957, 30; *Ordo Portae*, ed. Ş. Baştav, Budapest 1947, 7; Donado da Lezze [G.-M. Angiolello], *Historia Turchesca*, ed. J. Ursu, Bucharest 1909, 139); here *gharīb* means 'away from his native land', and *yigit* 'bold, impetuous man'. From the earliest days there were in the Ottoman principality Muslim warriors who had come from other principalities of Anatolia or other Muslim lands to take part in the *ghazā* under the banner of the Ottomans. An official document of 835/1431 (see *Sûret-i Defter-i sancak-i Arvanid*, ed. H. İnalcık, Ankara 1954, p. 42, *tīmār* no. 94) mentions a *gharīb-yigit* who had come from Karaman and received a *tīmār* on the Albanian *udj* (cf. also p. 81, *tīmār* no. 227, and p. 115, *tīmār* no. 320).

Of the six cavalry regiments of the *Ḳapı-ḳullari*, the *Sagh ʿUlūfedjiler*, *Sol ʿUlūfedjiler*, *Sagh Gharībler* and *Sol Gharībler* were known collectively as the *Dört Bölük* (or *Bölükat-i Erbaʿa*, the 'Four Divisions'); they were regarded as *Ashaghī Bölükler* ('Inferior Divisions') in relation to the remaining two *Yuḳarī Bölükler* ('Superior Divisions'), namely the *Sipāhī Oghlanlarī* and the *Silāḥdārlar*. It has been suggested (Djewdet, *Taʾrīkh*, i, 35, 37; I. H. Uzunçarşılı, *Kapıkulu ocakları*, ii, Ankara 1947, 137) that the 'Inferior Divisions' were established in the first half of the 9th/15th century (whereas the 'Superior Divisions' date from the reign of Murād I). The *Sagh Gharībler* were regarded as slightly superior to the *Sol Gharībler*.

In the 10th/16th century, the men of these two regiments were recruited from three sources: (1) from *ʿadjemī oghlanlar* selected at a *čīḳma* at Gha-

laṭa-sarāyi̊, the Palace of Ibrāhīm Pasha, or the palace at Edirne [see GHULĀM]; (2) from suitable sons of members of the *Altı̊ Bölük*; (3) from young Muslims from other Muslim lands who had come to fight the *ghazā* in the Ottoman army and distinguished themselves (according to Idrīs Bidlīsī, *Hasht bihisht*, MS Nuriosmaniye 3209, they were "ʿArab, ʿAdjem and Kurd'; according to Angiolello they came from Persia, the land of the Tatars, Cappadocia, the land of the Turcomans and Egypt). The name shows that the original source of recruits for these *bölük*s was the last (the only case where Muslims were taken into the ranks of the *Ḳapı̊-ḳulları̊* [see GHULĀM]).

In about 880/1475 (I. de Promontorio, 30) the two *bölük*s numbered 1000 men (but *Ordo Portae*, of about the same date, mentions only 400; Angiolello speaks of 500-1000). In the 10th/16th century they numbered 1000 each, 2000 together (*Hasht bihisht*; Ramberti, *apud* A. H. Lybyer, *The government of the Ottoman Empire...*, Cambridge 1913, 251: about 2000 together; in a document of 976/1568, see Uzunçarşılı, *op. cit.*, 196, the *Sagh Gharībler* are recorded as 1000 men, the *Sol Gharībler* as 1539); at the beginning of the 11th/17th century (ʿAyn-i ʿAlī, *Ḳawānīn*, Istanbul 1280, 9), the *Djemāʿat-i Ghurebāʾ-i yemīn* numbered 928, the *Djemāʿat-i Ghurebāʾ-i yesār* numbered 975.

Their organization was the same as that of the other *bölük*s of *ḳapı̊-ḳulları̊*. In each *bölük* there was an *agha* in command, a *ketkhudā* (*kahya*; according to Angiolello and Ramberti his pay was 30 *aḳčes* a day), a *kātib* or *khalīfe* to attend to the paper work (with 20 *aḳčes*, according to Angiolello; according to Ramberti, half a century later, he received 25), and a *čawush* or *bash-čawush* responsible for discipline (for the organization see *Sadrazam Kemankeş Kara Mustafa Paşa lâyihası*, ed. F. R. Unat, in *Tarih Vesikaları*, i/6 (1942), 457). In the 10th/16th century the *agha* of the *Sol Gharībler* was appointed from among the *čāshnīgīr*s. At a *čı̊ḳma*, the *agha* of the *Sol Gharībler* was promoted *agha* of the *Sagh Gharībler*, and the latter *agha* of the *Sol ʿUlūfedjiler*. Sometimes by exception, and contrary to the *ḳānūn*, towards the end of this century the *agha* of the *Sagh Gharībler* was promoted directly *agha* of the *Silāḥdārlar*, or *sandjaḳ-begi*, and even *beglerbegi* (see documents *apud* Uzunçarşılı, 172). Whereas each of the *aghas* had in the times of Meḥemmed II and Süleymān I received an *ʿulūfe* of 80 *aḳčes* (see Angiolello and Ramberti), at the end of the 10th/16th century they received 100; in addition they held *zeʿāmet*s.

The two divisions were sub-divided into 260 *bölük*s, each with its *bölük-bashı̊* (*Kemankeş lâyihası*, 457).

Since their horses needed grazing land, the majority of them were scattered in the outskirts of Istanbul, Edirne, Bursa, Kütahya and Konya; an officer appointed jointly by the *aghas* of the six regiments, with the title *ketkhudā-yeri*, was in command of each of these scattered groups of members of the six regiments and maintained discipline. The *ʿulūfe* of the men varied between 6 and 20 *aḳčes* (*Ordo Portae*, p. 9; Angiolello: 10-20 *aḳčes*; I. de Promontorio: 12 *aḳčes*; Ramberti: 7-14 *aḳčes*). At each promotion the *ʿulūfe* was increased by 3 *aḳčes*. Their sons, if they showed themselves fit, could be appointed to the *Ghurebā* regiments. Their weapons were bow and arrow, shield, scimitar (*pala*), dagger, lance and axe. Though some carried muskets, firearms were not popular with them. They had assistants known as *oghlan* (Ramberti, 251). Each of the two *bölük*s had a flag (*bayraḳ*) and a *tugh*; the flag of the *Sagh Gharībler* was white and that of the *Sol Gharībler* of two colours, white and red or white and green.

Duties. Like all the *ḳapı̊-ḳulları̊*, at first they served in the field only when the Sultan himself went on campaign, but in the 10th/16th century it became the practice for them to serve also under a *serdār-i ekrem*, *i.e.*, a commander with the rank of vizier. The *Gharīb-yigitler* had a reputation for valour, and so in the course of the fighting were sometimes entrusted with difficult tasks like penetrating the ranks of the enemy (*Hasht bihisht*). Their principal duty on campaign was to guard the Sultan's standards (*Hasht bihisht*) and later the *sandjaḳ-i sherīf* [*q.v.*]; they took their station as the rearmost of the cavalry regiments guarding the Sultan's tent and protected the rear (*Ordo Portae*, 9). These two *bölük*s formed the rearguard of the *ḳapı̊-ḳulları̊*, stationed in the centre, and guarded the tents and baggage. From the end of the 10th/16th century onwards, when, during a siege, a battle developed it was their dangerous duty to guard the entrenchments.

With the general decay of the *ghulām* system, the order and discipline of these *bölük*s too began to break up. Already in the 10th/16th century, the places of *ḳapı̊-ḳulları̊* in their ranks were in time of war increasingly filled by 'outsiders' known as *serdengečdi*; at the same time the principle was abandoned of enregistering *mülāzim*, candidates for future vacancies in the *bölük*s.

When in the 11th/17th century these *bölük*s began to take part in the mutinies and revolts, steps were taken to reduce the importance of the *bölükāt-i erbaʿa*. In 1071/1660, under Köprülü Meḥmed Pasha the numbers of the *Sagh Gharībler* were reduced to 410, those of the *Sol Gharībler* to 312. Later still, the *Sagh Gharībler Aghası̊* was made subordinate to the *Sipāhī oghlanları̊ Aghası̊*, and the *Sol Gharībler Aghası̊* to the *Silāḥdārlar Aghası̊*. In a list of 1123/1711, the *Sagh Gharībler* are shown as numbering only 180 men and the *Sol Gharībler* 162. On campaigns, however, these two *bölük*s maintained their entity as guardians of the *sandjaḳ-i sherīf*. In Ṣafar 1242/September 1826, very shortly after the abolition of the Janissaries, all six of the *Altı̊ Bölük* were disbanded (for the text of the firman, see Uzunçarşılı, 210-2).

The so-called *ghurbet ṭāʾifesi*, groups of men who, from the 10th/16th century onwards, left their homes and sometime roamed the country as brigands, are quite unconnected with the *Ghurebā*.

(HALIL İNALCIK)

GHURĀBIYYA, a branch of the Shīʿī "exaggerators" (*ghulāt* [*q.v.*]). Its adherents believed that ʿAlī and Muḥammad were so like in physical features as to be confused, as like "as one crow (*ghurāb*) is to another" (a proverbial expression for great similarity, cf. *Zeitschr. f. Assyr.*, xvii, 53), so that the Angel Gabriel when commissioned by God to bring the revelation to ʿAlī gave it in mistake to Muḥammad. ʿAlī was, they say, appointed by God to be a Prophet and Muḥammad only became one through a mistake. According to Ibn Ḥazm, some believed that Gabriel erred in good faith; others held he went astray deliberately, and cursed him as an apostate. According to al-Baghdādī, the sectaries greeted one another by cursing Gabriel. According to the *Bayān al-adyān*, the Ghurābiyya were so called because they believed that ʿAlī was in heaven in the form of a crow. Ibn Ḳutayba (*Maʿārif*, ed. Wüstenfeld, 300) remarks that this

is one of the few sects the origin of which is not attributed to an individual.

It is related that in the 4th/10th century the followers of this sect in Ḳumm raised a serious revolt against the decision of the judge Abū Saʿīd al-Iṣṭakhrī (died 328/940) when he divided an inheritance equally between two claimants, one of whom was the daughter and the other the uncle of the deceased. The Ghurābiyya demanded that the whole estate should go to the daughter and the uncle be quite excluded; as our source rightly observes, this was the result of their political creed, according to which the succession to Muḥammad was legitimate only in the line of his only daughter Fāṭima and not in that of his uncle (ʿAbbās) (Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, ii, 194). Cf. the regulations made by the Caliph al-Muʿizz regarding the inheritance of daughters in Ibn Ḥadjar, *Rafʿ al-Iṣr*, ed. Guest (in the appendix to al-Kindī, *Governors and Judges of Egypt*, Gibb-Memorial, xix), 587, l. 3 from end. Ibn Djubayr, who visited Damascus in 580/1184, mentions the Ghurābiyya among the minor sects to be found in Syria.

(I. Goldziher*)

GHŪRĪ [see DILĀWAR KHĀN and MĀLWĀ].

GHŪRIDS, the name of an eastern Iranian dynasty which flourished as an independent power in the 6th/12th century and the early years of the 7th/13th century and which was based on the region of Ghūr [*q.v.*] in what is now central Afghānistān with its capital at Fīrūzkūh [*q.v.*].

1. Origins and early history. The family name of the Ghūrid Sultans was Shanasb/Shansab (< MP Gushnasp; cf. Justi, *Iranisches Namenbuch*, 282, and Marquart, *Das Reich Zābul*, in *Festschrift E. Sachau*, 289, n. 3), and in the time of their florescence, attempts were made to attach their genealogy to the ancient Iranian epic past. The 7th/13th century historian of the Ghūrids, Djūzdjānī, quotes a metrical version of the genealogy of the family composed by Fakhr al-Dīn Mubārakshāh Marwarrūdhī and completed in the reign of Sultan Ghiyāth al-Dīn Muḥammad (*scil.* in the last third of the 6th/12th century). In this, the family is traced back to the tyrant of Iranian mythology, Azhd Dahāk, whose descendants were supposed to have settled in Ghūr after Farīdūn's overthrowing of Dahāk's thousand-year dominion. Within this genealogy, Shansab himself is placed in the first century of Islam, and the family now brought within the ambit of the new faith. Shansab is said to have been converted by the Caliph ʿAlī, who formally invested him with the rulership of Ghūr; his son Fūlād later espoused the cause of Abū Muslim in Khurāsān and in this way assisted the ʿAbbāsids. A further alleged episode can be directly connected with the political position in Ghūr in later times. According to this, the Caliph Hārūn al-Rashīd received at his court the Amīr Bandjī b. Nahārān Shansabānī and a rival chieftain from Ghūr, Shīth b. Bahrām. Bandjī was awarded the insignia of political sovereignty (*imārat*) over Ghūr, together with the title *Ḳasīm Amīr al-Muʾminīn*, whilst Shīth was awarded the military command (*pahlawānī*) of the forces of Ghūr, "an arrangement", says Djūzdjānī, "which has continued thus till the present time" (see further, below).

All these fabrications clearly aim at giving some lustre to a dynasty which had arisen from very obscure and localized origins, or as in the latter episode, they attempt to project into the past an explanation for the political situation of later times (cf. C. E. Bosworth, *The early Islamic history of Ghūr*, in *Central Asiatic Journal*, vi (1961), 125-7). Ethnically, we can only assume that the Shansabānīs were, like the rest of the Ghūrīs, of eastern Iranian Tādjīk stock. We are equally in the dark about the language which they spoke, except that in the early 5th/11th century it differed considerably from the Persian of the Ghaznavid court. It is possible that the earliest Ghūrids spoke some south-east Iranian language, one of the group which has been all but eliminated in modern times by the spread of Persian and Pashto (communication from G. Morgenstierne). There is nothing to confirm the recent surmise that the Ghūrids were Pashto-speaking.

We know nothing really definite about the Shansabānīs until Ghaznavid times, *i.e.*, the 5th/11th century; it was only in the early part of this century that Ghūr, and presumably the Shansabānīs, began to adopt Islam. The *Ḥudūd al-ʿālam* (372/982-3) mentions a Ghūr-Shāh who was tributary to the Farīghūnid Amīrs of Gūzgān to the north of Ghūr [*qq.v.*], but there is nothing to show that this ruler was necessarily a Shansabānī. Within the empire of Sultan Maḥmūd of Ghazna (338-421/998-1030), Ghūr remained an unabsorbed enclave; hence during his reign, at least three expeditions were sent by him to Ghūr. In 401/1011 a force attacked the Shansabānī chief Muḥammad b. Sūrī, capturing him at his stronghold of Āhangarān. He was now deposed, his pro-Ghaznavid son Abū ʿAlī set up as the Sultan's vassal and teachers left to instruct the people in the precepts of Islam (cf. ʿUtbī and Djūzdjānī in M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 70-2, and Bosworth, *op. cit.*, 122-3, 127-8). From this, and from other information in Djūzdjānī, we can firmly identify the Shansabānīs as petty rulers of the region of Mandēsh on the south bank of the upper Herī Rūd, with its centre at Āhangarān, the place still known today by that name. According to Djūzdjānī, the stronghold of the Shansabānīs of Mandēsh lay at the foot of the Zar-i Margh, one of the five great mountain massifs of Ghūr, and believed by the Ghūrīs to be the mountain where the Sīmurgh nurtured Rustam's father Zāl. At this time, the term "Ghūr" seems to have had a restricted meaning and to have been synonymous with Mandēsh, *i.e.*, the north-eastern corner of the Ghūr of the early Islamic geographers.

The existence of several other chieftains of Ghūr (in the larger sense of the term) is known in the 5th/11th century. Of at least equal importance with the Shansabānīs were the lords of the region further down the Herī Rūd, around the later Ghūrid capital of Fīrūzkūh and the modern Khwādja-Čisht; this district seems to have been distinguished from Ghūr (in the narrow sense) and called *Bilād al-Djibāl*. Bayhaḳī, ed. Ghanī and Fayyāḍ, 114-20, gives a detailed

account of the Ghaznavid expedition of 411/1020 under Masʿūd b. Maḥmūd, which marched up the Herī Rūd from Herāt, captured the fortress of Djurwas and made the local chieftain Warmēsh-Pat submit. The occurrence at a later date of this name in the Shīthānī family (see above) points to the fact that this district of Djurwas in the north-western corner of Ghūr was the centre of the Shansabānīs' rivals, the Shīthānīs. Bayhaḳī mentions the names of other chieftains in Ghūr, and it is clear that, despite Djūzdjānī's attempts to inflate the early Shansabānīs' sphere of authority, these last were only one lot of petty chiefs amongst several in this inaccessible region. Moreover, it seems that the primacy of the Shansabānīs at a later date was only achieved after much jostling for power and local warfare, although explicit information on this process is meagre.

2. The period of vassalage to the Ghaznavids and Saldjūḳs. Maḥmūd of Ghazna's nominee Abū ʿAlī b. Muḥammad is praised for his beneficent rule and his encouragement of the newly-introduced Islamic religion; he built mosques and *madrasas* and endowed them with *awḳāf*. But during the reign of Masʿūd of Ghazna (421-32/1030-41) an internal revolution took place in Mandēsh, and Abū ʿAlī was deposed by his nephew ʿAbbās b. Shīth. ʿAbbās devoted his efforts to fortifying and rebuilding the castles and strongholds which were such a feature of the landscape of Ghūr, but his tyranny provoked an appeal of dissident Ghūrī chiefs to Sultan Ibrāhīm b. Masʿūd. Ibrāhīm therefore marched into Ghūr, deposed ʿAbbās and set up the latter's son Muḥammad. Muḥammad was succeeded by his own son Ḳuṭb al-Dīn Ḥasan (the first Shansabānī known to have a *laḳab* or honorific). Within this period, *scil.* the second half of the 5th/11th century, the Shansabānīs were trying to extend their authority beyond Mandēsh and over the lands of rival chieftains. Djūzdjānī speaks of the feuding and turbulence which went on within Ghūr both at this time and until much later; and it was during the suppression of a rebellion in Wadjīristān, the district to the west of Ghazna, that Ḳuṭb al-Dīn Ḥasan was killed.

With the accession of his son, ʿIzz al-Dīn Ḥusayn (493-540/1100-46), our knowledge of the dynasty becomes fuller. Since four of his many sons eventually became rulers, Djūzdjānī calls him *Abu 'l-Salāṭīn*, "Father of Sultans". By now, Ghūr had become a buffer region between the truncated Ghaznavid empire, reduced after the middle years of the 5th/11th century to southern and eastern Afghānistān and northern India, and the powerful empire of the Saldjūḳs. In particular, Saldjūḳ Khurāsān was after 490/1097 under the rule of the forceful Sandjar b. Malik Shāh. With the relative decline of the Ghaznavids after Ibrāhīm's death in 492/1099, Ghūr was drawn towards the Saldjūḳ sphere of influence. ʿIzz al-Dīn Ḥusayn was initially confirmed in power by Masʿūd III b. Ibrāhīm of Ghazna, but in 501/1107-8 Sandjar led a raid into Ghūr and captured ʿIzz al-Dīn, and thereafter the Ghūrid maintained close relations with the Saldjūḳ, sending him as tribute the specialities of Ghūr, including armour, coats of mail and the local breed of fierce dogs.

On ʿIzz al-Dīn's death, his son Sayf al-Dīn Sūrī succeeded as chief in Ghūr and overlord of the Shansabānī family. He now made a general division of territories amongst his brothers, an indication that political feeling amongst the Ghūrids was still tribal and patrimonial in nature, and unaffected by the administrative sophistication of their Ghaznavid neighbours, with their unitary state under one Sultan. Sayf al-Dīn retained the fortress of Istiya as his capital; Ḳuṭb al-Dīn Muḥammad was allotted Warshād or Warshār, where he now founded the town and fortress of Fīrūzkūh and assumed the title of *Malik al-Djibāl*; Nāṣir al-Dīn Muḥammad took Mādīn; ʿAlāʾ al-Dīn Ḥusayn took Wadjīristān; Bahāʾ al-Dīn Sām took Sanga, the chief place of Mandēsh; and Fakhr al-Dīn Masʿūd took Kashī on the headwaters of the Herī Rūd. It was soon apparent that the Shansabānīs' sense of family solidarity was not developed enough to allow this division to work, and fratricidal strife broke out. Ḳuṭb al-Dīn quarrelled with his brothers, fled to Bahrām Shāh's court at Ghazna, but was there poisoned. From this deed there arose, says Djūzdjānī, the deep hatred and enmity between the Ghūrid and Ghaznavid families. In retaliation, Sayf al-Dīn Sūrī marched on Ghazna and temporarily expelled the Sultan, but in the face of popular sympathy for the Ghaznavids was unable to hold the city; and in a battle which took place when Bahrām Shāh returned, Sayf al-Dīn was captured and ignominiously executed.

Bahāʾ al-Dīn succeeded in Ghūr in 544/1149, and after finishing the fortifying of Fīrūzkūh, set out with an army for Ghazna, but died en route in that same year. ʿAlāʾ al-Dīn Ḥusayn had been left behind by his brother to rule Ghūr, and he now took over supreme power there. His pressing tasks were to avenge his dead brothers and, if possible, to reduce Ghaznavid power in Afghānistān, for the hold which they had on the routes through eastern Afghānistān from Kābul to Ghazna and Bust blocked any potential Ghūrid expansion there. Bahrām Shāh massed his troops in the region of Tigīnābād (*i.e.*, the modern region of Ḳandahār). ʿAlāʾ al-Dīn moved into Zamīn-Dāwar and a great battle took place, in which the tactics of the Ghūrī infantry, with their walls of protective shields, overcame the Ghaznavids' elephants. Bahrām Shāh was pursued to Ghazna and again defeated, retiring now to India. ʿAlāʾ al-Dīn entered the city, and a frightful orgy of devastation and plundering followed, earning the Ghūrid his title of *Djihān-Sūz* "World Incendiary" (545/1150-1). The corpses of all but three of the Ghaznavid Sultans were exhumed and burnt, and on the way back to Ghūr, the other great Ghaznavid centre of Bust was sacked in an equally savage manner. ʿAlāʾ al-Dīn thus made no attempt at this moment permanently to annex the Ghaznavid territories in eastern Afghānistān, but he does seem to have aspired to a more ambitious position than that of a mere chieftain of Ghūr. According to Ibn al-Athīr, he now copied Saldjūḳ and Ghaznavid practice, calling himself *al-Sulṭān al-Muʿaẓẓam* and adopting the *čatr* or ceremonial parasol; previously, the Ghūrids had been content to style themselves *Malik* or *Amīr*. It was natural that his success at Ghazna should embolden ʿAlāʾ al-Dīn to throw off Saldjūḳ control. In 547/1152 he stopped paying tribute to Sandjar and endeavoured to support an anti-Saldjūḳ rising in Herāt. His army advanced from Fīrūzkūh down the Herī Rūd, but was met at Nāb by Sandjar's forces and crushingly defeated after the Turkish, Oghuz and Khaladj troops in the Ghūrid army had gone over to their co-nationals in Sandjar's army. ʿAlāʾ al-Dīn was personally captured and spent some time as a prisoner in Khurāsān. The last years of his life, until his death in 556/1161, were spent firstly in consolidating his throne in Ghūr against rival members of his family, and secondly in making conquests in Gharčistān and the upper

Murghāb valley, in the Bāmiyān and Ṭukhāristān regions and in the Zamīn-Dāwar and Bust regions.

3. The Ghūrids as an imperial power. The expansionist policy of ʿAlāʾ al-Dīn's last years meant that the Ghūrids were now breaking out beyond their mountain fastnesses in Ghūr and would soon become a major power in the eastern Islamic world. There was, indeed, something of a vacuum of power there at this time: the Ghaznavid empire was in decay, and Sandjar's capture by the Ghuzz and the consequent anarchy in Khurāsān facilitated Ghūrid expansion in the west. ʿAlāʾ al-Dīn's annexations gave the impetus towards a tripartite division of the Ghūrid empire, each under a separate branch of the Shansabānī family, and this division remained characteristic until the final fall of the Ghūrids.

The senior branch ruled over Ghūr from Fīrūzkūh and was concerned with expansion westwards into Khurāsān. When Ghazna was finally taken in 569/1173-4, another branch was established there and used Ghazna as a base for expansion into India. Finally, ʿAlāʾ al-Dīn installed in the newly-conquered town of Bāmiyān his brother Fakhr al-Dīn Masʿūd, and the latter ruled over Ṭukhāristān, Badakhshān and Shughnān, up to the Oxus bank. After Fakhr al-Dīn's death in 558/1163, he was followed by his son Shams al-Dīn Muḥammad. The latter is said to have extended his power over the Oxus into Čaghāniyān and Wakhsh; he also received from Ghiyāth al-Dīn Muḥammad in Fīrūzkūh the title of "Sulṭān" and the privilege of having a *čatr*.

ʿAlāʾ al-Dīn Ḥusayn was succeeded at Fīrūzkūh by his son Sayf al-Dīn Muḥammad, who took repressive measures against the Ismāʿīlīs who had infiltrated into Ghūr and had spread their propaganda there, but who only reigned for two years (556-8/1161-3). During his reign, there arose a feud between the Shansabānīs and their rivals in Ghūr, the Shīthānīs. The Sultan treacherously murdered his Commander-in-Chief Warmēsh b. Shīth, and in revenge, Warmēsh's brother, now succeeded to the office of *Sipah-Sālār*, murdered Sayf al-Dīn on the battlefield. It is to explain these tribal disputes that Djūzdjānī projects back the rivalry of the two families into ʿAbbāsid times (see above).

Under Shams al-Dīn (later Ghiyāth al-Dīn) Muḥammad of Ghūr (558-99/1163-1203) and Shihāb al-Dīn (later Muʿizz al-Dīn) Muḥammad of Ghazna (569-602/1173-1206), the Ghūrid empire reached its apogee. These two brothers maintained a partnership and amity rare for their age. Broadly speaking, the first was concerned with expansion westwards and the checking of the Khʷārizm-Shāhs' ambitions in Khurāsān, whilst the second carried on the *ghāzī*-tradition of the Ghaznavids in northern India. The Ghūrids thus challenged the Khʷārizm-Shāhs for supremacy in the eastern Islamic world, and initially seemed to have an advantage in that they were completely free agents, whereas the Shāhs were vassals of the Ḳarā-Khiṭāy. Moreover, the Ghūrids skilfully utilized the fears roused in the west by the Shāhs' imperialist ambitions. Ghiyāth al-Dīn kept up cordial relations with the ʿAbbāsid Caliphs, and embassies were frequently exchanged between Fīrūzkūh and Baghdād; Djūzdjānī's father took part in one of these. The Sultan was received into al-Nāṣir's *Futuwwa* order, and the Caliph more than once urged the Ghūrids to stem the advance of the Khāʷrizm-Shāhs in Persia.

Ghiyāth al-Dīn was joined at Fīrūzkūh by Muʿizz al-Dīn, who had been at Bāmiyān. The two of them then fought off a coalition of Fakhr al-Dīn of Bāmiyān, himself covetous of the power in Ghūr, and the Turkish governors of Herāt, Tādj al-Dīn Yildiz, and of Balkh, ʿAlāʾ al-Dīn Ḳamāč, defeating them at Rāgh-i Zar in the Herī Rūd valley. After this, Ghiyāth al-Dīn campaigned in Zamīn-Dāwar, Bādghīs and Gharčistān, securing these regions for his empire. The Ṣaffārid *amīr* of Sīstān, Tādj al-Dīn Ḥarb, acknowledged him as suzerain, and even the Ghuzz in Kirmān, who had taken over the province after the overthrowing of the Saldjūḳs of Kirmān, sent envoys to Fīrūzkūh. After the last Ghaznavid, Khusraw Malik, had abandoned Ghazna for Lahore, his former capital was occupied for twelve years by Ghuzz adventurers, until in 569/1173-4 Ghiyāth al-Dīn ejected them and installed Muʿizz al-Dīn in Ghazna with the title of "Sulṭān". Herāt was captured in 571/1175-6 from its Turkish governor Bahāʾ al-Dīn Ṭoghrīl and held for a time.

Internal disputes within the dynasty of the Khʷārizm-Shāhs now favoured the Ghūrids. Ousted from Khʷārizm in 568/1172-3 by his brother ʿAlāʾ al-Dīn Tekish, Sulṭān Shāh had secured help from the Ḳarā Khiṭāy and had carved out for himself a principality in Khurāsān. He now clashed with the Ghūrids over possession of Herāt and Bādghīs, but Ghiyāth al-Dīn summoned troops from Bāmiyān and Sīstān and from Muʿizz al-Dīn in Ghazna, and in 586/1190 he defeated Sulṭān Shāh near Marw. Sulṭān Shāh was captured, and most of his Khurāsānian territories fell to the Ghūrids. In northern Afghānistān, the Bāmiyān Ghūrid Bahāʾ al-Dīn Sām occupied Balkh in 594/1198 after its Turkish governor, a vassal of the Ḳarā Khiṭāy, had died. In the same year, a general war broke out in Khurāsān between the Ghūrids on one side, urged on by the Baghdād Caliph, who was now threatened by the Khʷārizmian advance into western Persia, and on the other side the Khʷārizm-Shāh and his Ḳarā Khiṭāy suzerains. The Ḳarā Khiṭāy invaded Gūzgān and Tekish threatened Herāt, but both were decisively defeated by the Ghūrids. When in 596/1200 Tekish died, Ghiyāth al-Dīn took over most of the towns of Khurāsān, penetrating as far west as Bisṭām in Ḳūmis and installing in Nīshāpūr as governor of Khurāsān a Ghūrid prince, Ḍiyāʾ al-Dīn Muḥammad. Ghiyāth al-Dīn died at Herāt in 599/1202-3; latterly he had been ill and incapacitated, and Muʿizz al-Dīn had had to leave his Indian campaigns and attend to the west.

After his brother's death, Muʿizz al-Dīn followed the usual practice within the Shansabānī family of allocating the various provinces of the empire as appanages for Ghūrid Maliks; thus whilst retaining Ghazna as his own capital, he installed Ḍiyāʾ al-Dīn at Fīrūzkūh. Meanwhile, the new Khʷārizm-Shāh ʿAlāʾ al-Dīn Muḥammad was preparing to recover Khurāsān, where Ghūrid rule was proving unpopular; according to Djuwaynī, Muʿizz al-Dīn confiscated for his army grain which had been committed for protection to the *Imām* al-Riḍā's shrine at Ṭūs. In 601/1204 Muʿizz al-Dīn repulsed the Shāh from Herāt and pursued him back into Khʷārizm. However, the flooding of the Khʷārizmian countryside halted his troops, and the Khʷārizmians' allies, the Ḳarā Khiṭāy, routed Muʿizz al-Dīn's army at Andkhūy on the Oxus. The Sultan himself escaped, but all Khurāsān except Herāt was lost and in the next year he was assassinated in the Indus valley, allegedly by an Ismāʿīlī emissary, whilst returning from a punitive expedition against the Khōkars of the Pandjāb.

Mu'izz al-Dīn's death, the Ghūrid empire fell apart, passing for a brief while into the hands of the Khwārizm-Shāhs before the coming of the Mongols enveloped the eastern Islamic world in a common catastrophe. The Ghūrid armies comprised both native Ghūrī and Afghān troops, primarily infantrymen, and also Turkish *ghulāms*, who supplied the cavalry element. Mu'izz al-Dīn's skill had kept these groups together, but dissensions occurred after his death. The Ghūrī troops supported for the succession to the Sultanate the Bāmiyān line, first Bahā' al-Dīn Sām and then after his death in 602/1205, his two sons 'Alā' al-Dīn and Djalāl al-Dīn. The Turks, however, favoured Mu'izz al-Dīn's nephew Ghiyāth al-Dīn Maḥmūd, who in the end prevailed over the governor of Ghūr, Ḍiyā' al-Dīn, candidate of the local adherents of the Karrāmiyya sect [*q.v.*]. In the eastern parts of the empire, the Turkish commander Tādj al-Dīn Yïldïz seized Ghazna and held it against the Bāmiyān Ghūrids. Ghiyāth al-Dīn Maḥmūd did not dare to leave Fīrūzkūh and move against Yïldïz, and was in 603/1206-7 reduced to calling in the Khwārizm-Shāh to expel Yïldïz and enforce his rights in Ghazna. The dynasty's end was now near, and the last Sultans at Fīrūzkūh, first Ghiyāth al-Dīn Maḥmūd and then after 609/1212 successively Bahā' al-Dīn Sām, 'Alā' al-Dīn Atsïz and 'Alā' al-Dīn Muḥammad (the former Ḍiyā' al-Dīn), were puppets of the Shāh. Finally, in 612/1215, the Shāh deposed the last of the Sultans in Fīrūzkūh; the Bāmiyān line was also extinguished and Yïldïz driven from Ghazna. All the Ghūrid possessions except for those in India were now placed under Khwārizmian governors.

In this way, there ended what may be termed the "Ghūrid interlude" in eastern Islamic history, a remarkable if transient achievement for the chieftains of a backward mountain region. With the aid of their local Ghūrī troops combined with Turkish *ghulāms*, the Ghūrids made Ghūr for the first and last time in its history the centre of a great empire. That this was not more durable may perhaps be explained by the over-straining of Ghūrid military resources on the two fronts of Khurāsān and India, and also by the political and military skill of their rivals, the Khwārizm-Shāhs, in taking advantage of conditions in Persia after the fall of the Saldjūḳs.

There was, nevertheless, a durable Ghūrid legacy in India through Mu'izz al-Dīn's campaigns there, which formed a basis for later consolidation by such of his Turkish commanders as Ḳuṭb al-Dīn Aybak, Ikhtiyār al-Dīn Muḥammad Khaldjī and Nāṣir al-Dīn Ḳabāč (for the Ghūrid campaigns in northern India see DIHLĪ SULTANATE). Ghiyāth al-Dīn Maḥmūd sent Ḳuṭb al-Dīn a *čatr* and the title of "Sulṭān", and Ḳuṭb al-Dīn was accordingly installed in Lahore with this title. These *ghulām* generals continued in India the Ghūrid court and military traditions and added the word *Mu'izzī* to their own titles, keeping Mu'izz al-Dīn's name on their own coins for many years after his death.

5. Ghūrid culture. The ethos of the Ghūrid empire was strongly Sunnī. Sayf al-Dīn Muḥammad persecuted Ismā'īlī adherents in Ghūr. Ghiyāth al-Dīn Muḥammad cultivated the moral support of the 'Abbāsid Caliphs, as did the Ghūrids' epigoni in northern India. They thus secured an advantage over the Khwārizm-Shāhs, who suffered in the eyes of Sunnī orthodoxy for their anti-Caliphal policy and, in the case of 'Alā' al-Dīn Muḥammad at least, for their pro-Shī'ī sympathies. In the earlier Ghūrid period, the doctrines of the literalist Karrāmiyya sect were dominant in Ghūr, but Ghiyāth al-Dīn Muḥammad and Mu'izz al-Dīn Muḥammad adhered latterly to the Shāfi'ī law school (see Bosworth, *The early Islamic history of Ghūr*, 129-33).

The Ghūrids followed the example of the Ghaznavids in being generous patrons of art and literature. In his section of the *Lubāb al-albāb* on royal poets, 'Awfī cites 'Alā' al-Dīn Ḥusayn, and states that after the Sultan's death, his *dīwān* circulated widely in northern India and Zābulistān; it is well-known that during the sack of Ghazna, 'Alā' al-Dīn was careful to preserve for his own library the works of the great Ghaznavid poets. The *tadhkiras* of 'Awfī and Dawlat-Shāh preserve the names of a large number of Ghūrid poets, and Niẓāmī 'Arūḍī cites as immortalizers of the Sultans Abu 'l-Ḳāsim Rafī'ī, Abū Bakr Djawharī, 'Alī Ṣūfī and himself. In contrast to the Ghaznavid period, from which we have several fairly complete *dīwāns*, the great bulk of Ghūrid poetry has regrettably been lost. Fortunately, some of the work of Fakhr al-Dīn Mubārakshāh or Fakhr-i Mudabbir has survived, cf. Storey, i, 1164-7. All this literature was in Persian; the recently-discovered Pashto anthology, the *Pəṭa khazāna* "Treasury of secrets", claims to include Pashto poetry from the Ghūrid period, but the significance of this work has not yet been evaluated [see AFGHĀN (iii) Pashto literature].

As in literature, the artistic and architectural traditions of the Ghaznavid period were kept up by the Ghūrids, so far as we can ascertain from the paucity of surviving material. Ghazna rose again after the Ghūrid sacking and flourished under Mu'izz al-Dīn, benefiting from the influx of Indian plunder; it is to the period of his rule there that U. Scerrato ascribes a unique type of glazed tile found at Ghazna (*Islamic glazed tiles with moulded decoration from Ghazni*, in *East and West*, N.S. xiii/4 (Rome 1962), 263-87). Ghiyāth al-Dīn Muḥammad was a great builder and patron of the arts, constructing mosques, madrasas and caravanserais in Khurāsān. Above all, we now have the minaret of Djām/Fīrūzkūh as a monument of Ghūrid architecture, to add to the other surviving examples at Herāt, Čisht and Lashkar-i Bāzār [see Plates xxxi, xxxii]; J. Sourdel-Thomine thinks it possible to speak of a distinctive Ghūrid architecture (*L'art ġūride d'Afghanistan à propos d'un livre récent*, in *Arabica*, vii (1960), 273-80).

Bibliography. The chief primary source is Djūzdjānī's *Ṭabaḳāt-i Nāṣirī* (new edn. by 'Abd al-Ḥayy Ḥabībī, 2 vols., Kabul 1342-3/1963-4), in form a world history but in fact a special history of the Ghūrid dynasty. This can be supplemented by Ibn al-Athīr and Djuwaynī. Of local histories, Mu'īn al-Dīn Isfizārī's *Rawḍāt al-djannāt fī awṣāf madīnat Harāt* (ed. Muḥ. Kāẓim Imām, 2 vols., Tehran 1338-9/1959-60) contains material on Herāt under Ghūrid rule. Amongst *adab* works, there are historical anecdotes and other material in Niẓāmī 'Arūḍī Samarḳandī's *Čahār maḳāla*, 'Awfī's *Djawāmi' al-ḥikāyāt* and Fakhr-i Mudabbir's *Ādāb al-mulūk*.

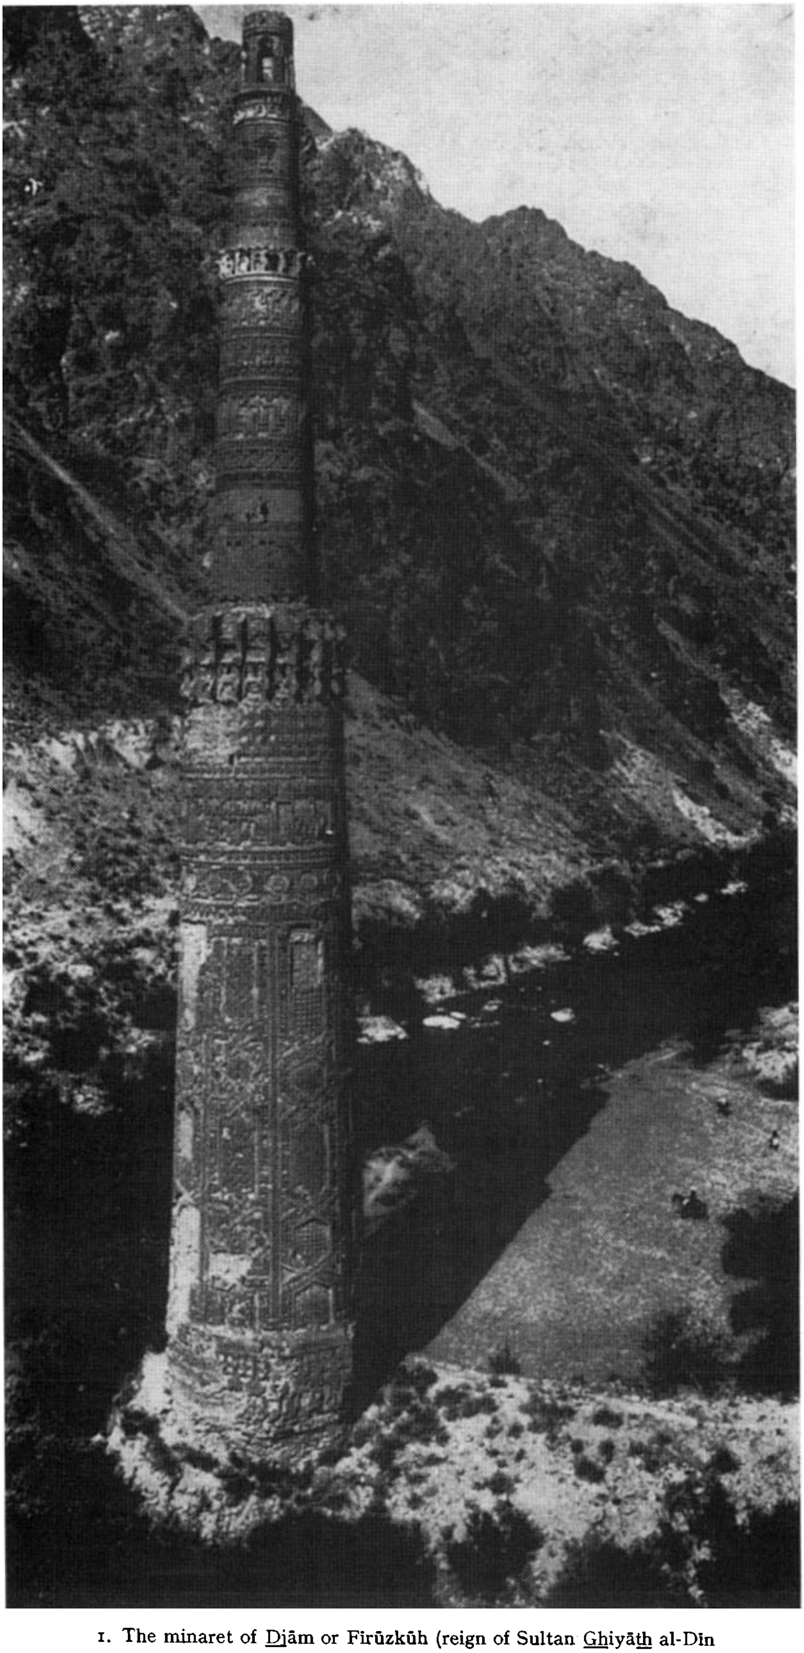
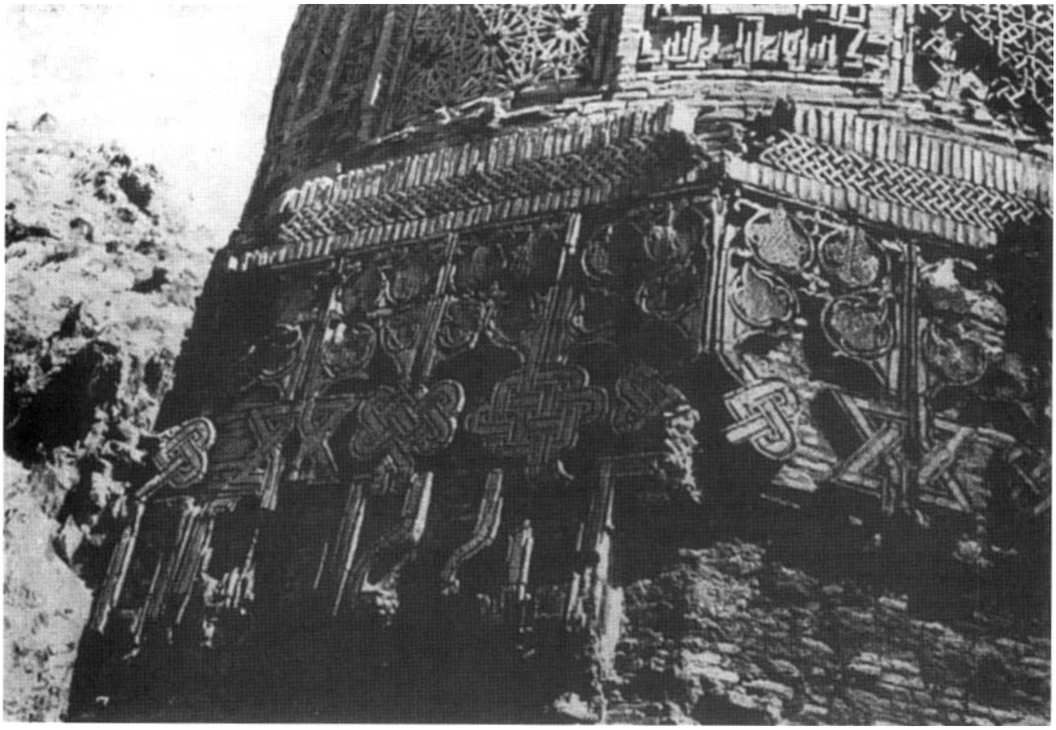
GHURŪSH [see SIKKA].

GHUSL, general ablution, uninterrupted washing, in ritually pure water, of the whole of the human body, including the hair, performed after declaring the intention (*niyya*) so to do. For the living it is a fairly simple process, though it applies also to the washing of the corpse of a Muslim (see below). For the living, the essential *ghusl* is that which is obligatory before performing the ritual daily prayers; this *ghusl* becomes necessary as a purification following acts of a sexual nature which produce *djanāba* [*q.v.*]: intimate relations, normal or not, emission of sperm and of feminine *manī* (except in cases of illness when only the ordinary ablution, *wuḍū'* is required). *Ghusl* is also required after menstruation and lochia (other losses of blood do not demand the *ghusl* for purification). Whoever is thus in a state of major impurity is subject to the same taboos as those incurred by minor impurity (*ḥadath* [*q.v.*]); in addition, he may not recite the Ḳur'ān nor attend the mosque; women who are menstruating or who are in childbirth may recite the Ḳur'ān, but their fast and their ritual prayers are not recognized, and it is forbidden to have sexual relations with them before they have performed the *ghusl*. The general rules of the *ghusl* are more or less the same in the various schools, orthodox or not (with the Ḥanafīs, however, the intention is not an obligatory requirement), if we disregard any trifling casuistical details (*e.g.*, what if a person, after having sexual relations, proceeds with his *ghusl*, but does not ejaculate until afterwards?). Moreover, and this is much more important, the four orthodox schools agree in the fact that, if it is not possible to use water, the Believer may, for the *ghusl* as for the *wuḍū'*, have recourse to cleaning with dust (*tayammum* [*q.v.*]); however, there has been much discussion over this question.



Besides this obligatory *ghusl*, *fiḳh* recognizes others which are only *sunna* and the list and the number of which vary according to the schools (*e.g.*, 12 among the Shāfi'īs); among the most important and the most generally recognized are the *ghusl* recommended for the Friday prayer and that of the Two Feasts, as well as that on the occasion of the *ḥadjdj*. Among the Shī'īs, there are not less than 28, several of which are connected with the history of Shī'ism (as a curiosity of folklore, it is interesting to note that, according to certain Shī'ī doctors, the *ghusl* is obligatory if one has voluntarily looked at a hanged person or if one has touched a newly-born child).

The rules for the washing of the dead are of course different from those of the *ghusl* mentioned above. We give here a brief account of them. There is some disagreement (particularly among the Mālikīs) over whether this *ghusl* is obligatory or *sunna*; although in fact this washing is most often done by specialists, *fiḳh* gives detailed regulations concerning the principles of the devolution of this duty on the spouse of the deceased, then on his or her relatives; in all cases the legal nakedness of the dead person (*'awra*) must be covered during the operation; if the corpse of a man is washed by a woman who, being his wife, is not forbidden to see him, the point is disputed as to whether the corpse need be completely covered (and vice versa for the body of a woman). In the absence of water, here also recourse may be had to *tayammum*, as in some other hypothetical situations. The corpse of a martyr (*shahīd* [*q.v.*]) who has fallen in the Holy War is not washed.



As well as these legal dispositions, it is necessary, with this as with all other institutions, to examine what happens in practice in the Muslim world. In our view, the *ghusl* of the dead is generally practised, and the *ghusl*s which are only *sunna* are practised rather seldom. Concerning the *ghusl* for *djanāba*, it has not until now been sufficiently noticed that the existence of the *ḥammām* is connected with the purification from *djanāba*. As in other matters, the effective practice is sometimes much more lax than the theory: where the ritual prayer is neglected (this is very often the case for example in North Africa, particularly among women), the *ghusl* will naturally also be neglected; but sometimes the demands of practice are more rigorous than those of *fiḳh*. Thus, it has been noted that, in certain regions of Morocco, whoever has relations with a Jewess must wash seven times with water coming from seven different streams. Throughout Islam, however, for every minority very much preoccupied with observing the prescriptions of the law, we find a majority who often neglect them, although, in particular cases, they have a curiously inadequate idea of what they are: detailed systematic studies would thus show a discrepancy between the regulations of the *ghusl* and the practice.

Bibliography: For the sociological theory of the whole subject of purifications etc. in human societies, V. Pareto, *Trattato di sociologia generale*, i; Fr. tr., *Traité* ..., i, 649 ff.; Eng. tr. *The mind and society*, 1935, ii, 736 ff.; G.-H. Bousquet, *La pureté rituelle en Islam*, in *RHR*, cxxxviii (1950), 53-71 (with detailed references for what has been said above). The books of *fiḳh* begin with a chapter on ritual purity, where *ghusl* is dealt with, *e.g.*, Khalīl, *Mukhtaṣar*, excellent Italian tr. by Guidi, i, 28 ff., 141 ff., and Fr. tr. by Bousquet, i, 32 ff., 95 ff.; similarly the books of *ikhtilāf* (*e.g.*, the modern work of Muḥammad al-Djazīrī, *K. al-Fiḳh 'ala 'l-madhāhib al-arba'a*, i, 78 ff., Cairo 1355: much detail and very lucid). (G. H. Bousquet)

GHŪṬA, name given in Syria to abundantly irrigated areas of intense cultivation surrounded by arid land. A *ghūṭa* is produced by the co-operative activity of a rural community settled near to one or several perennial springs, whose water is used in a system of canalization to irrigate several dozen or several hundred acres. Each *ghūṭa* has its own particular system of irrigation based on cycles of varying length. The soil in a *ghūṭa* is usually laid out in platforms which form terraces of watered zones, the level sections of which are supported by stone walls two to six feet high. In them is carried out a closed agricultural economy, which provides an assured subsistence for men and animals. Near the source of the water there is an area in which vegetables and fruit are intensively grown, then the extent to which the land is exploited decreases in proportion to the time it takes for the water to reach

1. The minaret of Djām or Fīrūzkūh (reign of Sultan Ghiyāth al-Dīn Muḥammad, 558-99/1163-1203).

2. Detail of the minaret.

3. Surviving remains of the *madrasa* and mosque at Čis͟ht in the Harī-Rūd valley, also from the reign of G͟hiyāt͟h al-Dīn Muḥammad.

it. While birch-trees and poplars grow in the damp of the central area, as the distance from the spring increases, trees become sparser, unsheltered fields spread out and areas planted with vines or cereals are reached; beyond this there will be the region which is flooded in winter, and further still some temporary fields. This is a schematic picture of the *g̲h̲ūṭa*s of D̲j̲arūd, Nabak, Yabrūd and Dimas̲h̲ḳ (see R. Thoumin, *Géographie humaine de la Syrie Centrale*, Tours 1936, 115-120; J. Weulersse, *Paysans de Syrie et du Proche Orient*, Paris 1946, 283-91).

The *G̲h̲ūṭa* of Dimas̲h̲ḳ [*q.v.*] is the area of gardens and orchards which surrounds the former Umayyad capital below the gorges of Rabwa and which is made fertile by a close network of irrigation trenches fed by the Baradā [*q.v.*]. The *G̲h̲ūṭa* extends from the eastern slopes of Mount Ḳāsiyūn [*q.v.*] as far as the streams and the water brought in from the Baradā allow bushes to be grown. Beyond this, to the east, is the *Mard̲j̲*, a region of pasture and wide stretches of arable land. These grass-lands, which are green from December to June and dried up from July onwards, end at the lagoon of ʿUtayba [*q.v.*], or "Lake of Damascus". Still further to the east is the scorched land of the steppe, which man's strenuous labour has pushed back to about 20 km/12 miles from Mount Ḳāsiyūn.

The charms of this place, which is considered by Muslim tradition to be one of the four earthly paradises, have been celebrated by many Arab poets (see Kurd ʿAlī, *G̲h̲ūṭa*, 68-107) and described by more than one western traveller.

Consisting of a half of a basaltic basin filled with fertile limestone alluvions and facing eastwards, the *G̲h̲ūṭa* is intersected by the Baradā, which flows down a slight natural slope split up into artificially constructed levels from Rabwa (699 metres/2,300 ft) to the point where it leaves Dimas̲h̲ḳ (650 metres/2,130 ft) and then to the *Mard̲j̲* (600 metres/1,970 ft). It is dominated by a screen of mountains 500 metres/1,640 ft. above the plain and is subject to the violent contrasts which are typical of a semi-desert climate. It has a rainfall of only about 250 mm/10 inches, most of which falls in December, January and February, with some autumn and spring rain. This is supplemented by the Baradā.

The structure of the *G̲h̲ūṭa* is formed by six major diversions of the Baradā which fan out into the plain at Rabwa. The most important diversions, the Nahr T̲h̲awrā, which in fact forms the northern limit of the *G̲h̲ūṭa*, has allowed the formation of an irrigation basin which includes the northern outskirts from Rabwa to D̲j̲awbar and is about 15 km/10 miles in width. The Nahr Yazīd, which runs alongside the district of al-Ṣāliḥiyya, swings round the basin of the Nahr T̲h̲awrā and turns towards Ḳābūn and Ḥarastā, driving mills and irrigating vegetable gardens and orchards. The Bānās and the Ḳanawāt supply the town of Dimas̲h̲ḳ with water, receive its drainage and sewage and go on to irrigate the southern section of the *G̲h̲ūṭa*. In the western region the pure waters of the Nahr Mizzāwī and the Nahr Dārānī allow flowers and early vegetables to be grown. On leaving Damascus, the Baradā and the Nahr ʿAḳrabānī flow to the south-east, and supply an extensive network of channels (including the Daʿiyānī and the Mlīhī) which have allowed a wooded region, the *Zawr*, to be established in the lowest part of the *G̲h̲ūṭa*. The absence of geographical features allows many channels to be drawn off and a series of basins without very precise limits to be formed, each one merging with the next. The Nahr Mnīn, coming down from Mount Ḳalamūn, comes in below Birza to complete the irrigation of the olive groves. Beyond Dūmā and ʿAd̲h̲rā, in the *Mard̲j̲*, use is made of the subterranean pools of water by installing hoists above the wells. In the south, a canal about 30 km/20 miles in length brings water from the Nahr al-Aʿwad̲j̲ to irrigate the sectors for which the Nahr Darānī cannot produce enough water.

The improvement and the exploitation of the land of the *G̲h̲ūṭa* is dependent upon the harnessing and distribution of the water from the rivers. Skilful irrigation offsets the insufficient rainfall and permits regular agricultural work. This irrigation takes place at intervals, at fixed hours and days, and is effected without mechanical means of opening or closing. The distribution of the separate sections of water is carried out according to a conventional rotation which is called the *ʿaddān*. On the maintenance and supervision of the canals, on the measures which regulate the flow, and on the method of distribution of the water, see R. Tresse in *REI*, 1929, 473-90.

The crops grown in the *G̲h̲ūṭa* are determined by the conditions created by the irrigation and the nature of the soil and the climate. Those that can be grown most intensely and are most remunerative are preferred. The agriculture of the *G̲h̲ūṭa* can be divided into winter crops (*s̲h̲itī*): cereals, leguminous crops for food and for animal fodder, and summer crops (*ṣayfī*): market vegetables, mainly gourds, and industrial crops such as aniseed, hemp and sesame. Crops are grown in zones, some of which produce two crops, the most productive being the region between Mount Ḳāsiyūn and Dimas̲h̲ḳ with its great variety of fruit and vegetables, which already in the 10th/16th century consisted mainly of cucumbers, onions, aubergines, cauliflowers, carrots, *lūbiyāʾ*, melons and water-melons. The trees grown are those of temperate countries. Long before the arrival of the Ottomans the apricot had been the most important tree of the *G̲h̲ūṭa* and from that time there are found also almond, cherry, fig, pomegranate, hazel-nut, walnut, peach, pear and plum trees. In the second zone, in the shade of the fruit trees, cereals (barley, wheat, maize) replace the vegetables. In the third zone, the cycle of irrigation becomes more widely spaced and olive trees take the place of the fruit trees. Finally there is a fourth zone of single cultivation, where vines replace the olive-trees, but where cereals still grow, though with a yield which decreases progressively until the steppe is reached.

There are crops peculiar to certain villages: thus the 14th century traveller Frescobaldi mentioned the flowers of Mizza and its rose-water industry, to which could be added that of violet oil. From Dārāyā and Dūmā raisins were exported to the West in the 10th/16th century. Olive trees are cultivated in two regions, one in the north including Birza, Ḳābūn, Ḥarastā and Dūmā, the other in the south including Mizza, Kafr Sūs, Babīlā, and Ḥūs̲h̲ Rīḥāniyya. Finally hemp (*ḳunnab*) is harvested in the autumn in the humid zone of the *Zawr*. This wooded district, which has no well-defined limits, includes the regions of D̲j̲isrīn, al-Aftarīs, Kafr Baṭnā, ʿAyn Tarmā, Zibdīn and D̲j̲aramānā, and in its many *g̲h̲ayḍa* (pl. *g̲h̲iyāḍ*) many beech trees and black and white poplars flourish.

The *G̲h̲ūṭa* has always been thickly populated, its inhabitants living in settlements built along the edges of the irrigated zones where groups of small-holdings tend to develop. Throughout the centuries, the number of villages has varied greatly; each

writer gives a different list of them, and that of Ibn Ṭūlūn al-Ṣāliḥī (10th/16th century) has only a certain number of names and sites in common with that of the present-day writer Kurd ʿAlī (*Ghūṭa*, 218 ff.). To the names already given can be added those of some villages which have become places of pilgrimage by reason of legends connected with them, such as Birza in the north-east where, according to a legend which stems from the Samaritans, the birthplace of Abraham (the *Maḳām Ibrāhīm*) is to be found; Bayt Lahyā in the north, also connected with the legend of Abraham; the hill of Rabwa in the west, a legendary stopping place of ʿĪsā and his mother; and finally the village of al-Rāwiya, in the south-south-east, where there is the tomb of one Zaynab Umm Kulthūm (who has nothing in common with either the daughter of the Prophet or the daughter of ʿAlī and Fāṭima). There are also villages where the tomb of a Companion of the Prophet is revered; among these are Ḥadjīra, where Mudrik b. Ziyād is buried, al-Manīḥa, where Saʿd b. ʿUbāda is buried, and Mizza where Diḥya al-Kalbī is buried.

The history of the Ghūṭa is bound up with that of Dimashḳ [*q.v.*]. The excavations of Tell al-Ṣāliḥiyya provide evidence that the first human settlements in this oasis go back to the fourth millennium B.C. Greek and Roman remains are found at various places. In the Byzantine period there existed a great number of churches and monasteries such as Dayr Murrān, Dayr Bāwanna and Dayr Buṭrus of which the combined effects of time and man have removed every trace; others are perpetuated in present day place-names, such as Dayr Ṣalībā (now Dayr Khālid) and Dayr al-ʿAṣāfīr. It was in the *Ghūṭa*, at Mardj Rāhiṭ [*q.v.*], that Marwān, with his Yemenīs, gave battle to the Ḳaysīs in 64/683. Under the Umayyads, the *Ghūṭa* formed one of the districts of the province of Dimashḳ, and had an autonomous administration with a separate *dīwān* whose chief activity was the collecting of the *kharādj*. Many of the attacks on Dimashḳ were made less effective by having to get past the orchards with their network of paths edged by low walls on either side, and Crusaders and Zangids were able to appreciate their defensive value. At the end of the 6th/12th century, and even more in the 7th/13th century, under the Ayyūbid [*q.v.*] princes many monuments were built; *madrasas* and mausolea arose in peaceful surroundings among the orchards between the Nahr Thawrā and the Nahr Yazīd. From west to east could be seen the double cupola of the mausoleum of Kitbughā (8th/14th century), the Māridāniyya *madrasa* (7th/13th century) at Djisr al-Abyaḍ, the Shibliyya *madrasa* which formed part of a complex of buildings including the mausoleum of Shibl al-Dawla Kāfūr, a *khānḳāh* and a public fountain; the ribbed cupola of the Turbat al-Badrī, built in the time of Nūr al-Dīn [*q.v.*], rises not far from the *madrasa* of Sitti Ḥāfiẓa (7th/13th century). Finally, below al-Ṣāliḥiyya, the Rukniyya *madrasa* (7th/13th century) overlooked the gardens. Vegetable gardens and orchards survived to the north of Dimashḳ until about 1950, since when they have been gradually supplanted by new housing estates.

Bibliography: The essential work is Kurd ʿAlī, *Ghūṭat Dimashḳ*, in *MMIA* (2nd ed. 1952, 358 and map), which includes a good bibliography of the Arabic sources; Rubaʿī, *K. (N. Elisséeff)

al-GHUZŪLĪ,, ʿAlāʾ al-Dīn ʿAlī b. ʿAbd Allāh al-Bahāʾī al-Dimashḳī, an Arabic writer of Berber origin (d. 815/1412) who composed, under the title *Maṭāliʿ al-budūr fī manāzil al-surūr*, an anthology on the model of the *adab* books but which, as the author justly boasts in the preface, is in its content favourably distinguished from the great mass of these writings. He deals with the house and its different sections, all the pleasures of life and sport and the accessories required for their realization; he illustrates these subjects with anecdotes and verses taken from later poetry but, at the same time he presents a very great wealth of material—still far from being exhausted—relating to the history of the civilization of the Muslim peoples. The book was printed in Cairo, in two volumes, in 1299-1300.

(C. Brockelmann)

GHUZZ, form generally used by Arabic authors for the name of the Turkish Oghuz people. The origin of the Oghuz, which for long was obscure because of the diversity of the transcriptions of the names of peoples in the Chinese, Arabic, Byzantine and other sources, seems to have been clarified by J. Hamilton, *Toguz Oghuz et On-Uyghur*, in *JA*, ccl/1 (1962), 23-64. At the beginning of the 7th century A.D. there was formed, among the eastern Turkish T'ie-lo tribes, a confederation of Nine Clans = Toḳuz Oghuz (a form known to the Arabic authors), who revolted against the empire of the western Turks and helped to form the empire of the most important tribe among them, whose name is the earliest attested, namely the Uyghurs. During the period of the extension of this empire (3rd/9th century) some groups of these peoples spread towards the west, losing their links with the structure of the Nine Clans and acquiring, in new countries and in their contacts with new peoples, distinctive characteristics: these are the people called by the western writers of that time, with no more reference to the "Nine", Oghuz (Arabic: Ghuzz; Byzantine: Ouzoi). The different deductions often drawn from the later legend of Oghuz-Khān (see below), or from rash linguistic assimilations, are to be rejected.

i.—Muslim East

We shall not deal at length here with the period of the history of the Oghuz/Ghuzz before they came in contact with Islam. It should however be mentioned briefly because, owing to their new habitat and the period during which they moved there, all that we know of them, admittedly very elementary and uncertain, is now based mainly on the Arabic (or Persian) authors. We shall ignore what these authors have said on the eastern Toḳuz-Oghuz (see V. Minorsky in his commentary and his translation of the *Ḥudūd al-ʿālam*, 1937, 268 f.) in order to concern ourselves here only with the western Oghuz/Ghuzz.

The earliest reference to the presence of Oghuz/Ghuzz (without the Toḳuz) in Central Asia is found in al-Balādhurī (431), writing of events belonging to the end of the reign of al-Maʾmūn, although Ibn al-Athīr, writing much later, reports the opinions of authors who consider those Turks who, under the caliphate of al-Mahdī, had supported the movement of al-Muḳannaʿ, as already then belonging to the Oghuz. In contrast to this, from the middle of the 3rd/9th century, nearly all the Arab geographers mention them. In the 4th/10th century they occupied a territory roughly bounded to the south by the Aral Sea and the lower course of the Sīr-Daryā, to the west by the River Ural or the lower Volga and the Caspian Sea, to the north-east by the upper course of the Irtysh. They then had other Turkish peoples as neighbours: to the north the Kīmāk, a branch of the Ḳïpčaḳ, to the east the Kharlukh (Ḳarluḳ), to the west the Pečeneg and above all the semi-Turkish state of the Khazar, and they were in constant communication with the Bulgars of the middle Volga who were also for the most part Turks; finally, to the south, and particularly along the Sīr-Daryā, they bordered on the Muslim world. For the most part they were nomads, herding camels (with one hump and resistant to cold though not to excessive heat), sheep, horses etc., and each tribe branded its animals with a special sign—a *tughra, tamgha* [*qq.v.*]. All the same, it should not be thought that they were exclusively nomadic, for both among the remains of the former populations and among the Oghuz themselves there were settled groups occupied with agriculture in the oases, and also, particularly on the boundaries of the Muslim world and along the routes leading to the Bulgars or the Khazars, markets which had often become small fortified towns where their chiefs and leading men came to barter, against the products of the civilized world to the south, animals, prisoners sold as slaves, and furs brought from the northern forests; and in the principal one of these little towns, Yänikänt, probably the ancient Nau-Kärdä of the pre-Turkish Indo-European inhabitants, the chief of the Oghuz/Ghuzz chose to live in the winter, though he may have stayed further upstream, at Djand (near to the modern Perovsk): the recent archaeological investigations which have located the sites and the ruins of these towns along the former course of the lower Sīr-Daryā confirm that they were certainly urban settlements and not the camps of nomads. It is difficult to state precisely what the Oghuz were ethnically, but, however important the Turkish element was (and the Russian chroniclers know the Oghuz only by the name of Turks/Torki), there is little doubt that there had been on the one hand inter-marriage with the remains of the earlier populations, and on the other hand an integration into the Oghuz/Ghuzz of non-Turkish groups, incorporated just as they were and later Turkicized: it has even been suggested that the name of the Oghuz/Ghuzz tribe of the Döger [*q.v.*] preserves the ancient name of the Tokharians; the result being that the Oghuz/Ghuzz of the west were no longer ethnically the same as the other Turks and particularly those of the east.

So far, then, as we can speak at all of a geopolitical configuration of Central Asia, it would seem possible to postulate, in the 4th/10th century, certain political and other interests in common between Khʷārizm, the semi-autonomous outpost of Muslim civilization to the south of the Caspian Sea, and the state of the Khazars, to the west of the Caspian Sea and the lower Volga, and that there was, in opposition to them, some form of alliance of the Oghuz/Ghuzz with the Bulgars (and at one time, with the "Russians" of Kiev). This is particularly the impression given by the account which has been preserved of the embassy to the Bulgars at the beginning of the century of the caliph's envoy, Ibn Faḍlān, who passed through Khʷārizm. Moreover, although the Oghuz/Ghuzz formed only a very loosely-joined confederation of tribes, they nevertheless recognized, within the framework of a western Turkish world which maintained a certain feeling of uniformity, the supremacy of a Yabghu [*q.v.*] of the left, to whom corresponded the Ḳarluḳ Yabghu of the right: a title and idea inherited from the ancient Turkish empire of the 6th century A.D. and from the early Central Asiatic states. The Yabghu of the Oghuz/Ghuzz normally lived at Yänikänt; he had a lieutenant (*Küdhärkin*) and a head of the tribal army (*subashï*).

Even if, as Ibn al-Athīr believes, the Turks (whoever they may have been) who had helped al-Muḳannaʿ had already embraced Islam, according to him Islam did not reach the western Turks, and in particular the Oghuz/Ghuzz, until the 4th/10th century and it was not until the end of that century that it became general among them. Before this the Oghuz/Ghuzz, like all the inhabitants of Central Asia, must have been influenced to some extent by Buddhism, Manichaeism, Nestorian Christianity and Khazar-Judaism, and the influence of the latter perhaps explains the later presence among the Saldjūḳs of characteristically Biblical names; but there are no grounds for believing that they abandoned completely their vague ancestral Shamanism. The Oghuz/Ghuzz came into contact with Islam in various ways: first through the raids and counter-raids which they exchanged on the southern frontiers of their territory with the Muslim *ghāzīs* of the state of the Sāmānids [*q.v.*], and the prisoners which were taken by both sides; then through some of the activities of the Ṣūfīs of the frontiers; and finally, and probably most of all, through the merchants whom they met in the markets, or "protected" as they travelled along the roads leading across Oghuz territory towards that of the Bulgars, the Khazars and the Chinese. Political or other reasons had caused Islam to spread among the Bulgars, and probably among the lower classes of the Khazar population, from the first half of the 4th/10th century. The Ḳarluḳ and the Oghuz/Ghuzz were not converted until the second half of the century, the former shortly after the middle and the latter at the end of the century, though it has of course still to be ascertained what form of Islam had been taught to them and how much of it they did in fact absorb at first. Moreover Islam did not reach all the Oghuz/Ghuzz, and those in the extreme west escaped the Muslim propaganda: the remnants of

them were later, when incorporated in the Byzantine army, to receive Christian baptism.

The conversion to Islam, whatever form it may have taken, and the drive towards the south of those of the Og͟huz/G͟huzz who were not already too much engaged in the west are related phenomena. The drive towards the territories of the Muslim Mā warāʾ al-Nahr, although these lands themselves were an attraction, may have been due also to pressure behind the Og͟huz/G͟huzz from their other Turkish neighbours, for it is known that later the Ḳîpčaḳ were to occupy the territories left vacant by the migration of the Og͟huz/G͟huzz. But another result of their conversion to Islam was that it prevented the *g͟hāzī*s from fighting against them as pagans and allowed the Muslim princes to enlist them under their banners; it could even make them into *g͟hāzī*s themselves to fight against the other Turks who were still pagan, and the part which the *g͟hāzī* formations were to play in the pattern of later Turkish history is indisputable even when, transferred to other fronts, they were directed against other adversaries. It is possible that there took place, between the supporters and the enemies of Islam, battles memories of which may be preserved in the (admittedly highly embellished) accounts concerning the origin of the Sald̲jūḳids; but S̲h̲āh-Malik, the Yabg͟hu against whom the Sald̲juks fought, was nevertheless himself a Muslim, and we should not exclude, merely for lack of evidence, the idea that the Og͟huz/G͟huzz chiefs were attracted to Islam, as were those of the Ḳarluḳ (the Ḳarak͟hānids) and as has so often happened with peoples in a tribal stage of development, by the principle of authority which Islam conferred on them over the organization of the tribes, apart from the fact that they would soon be able to intervene in the conflicts of the traditional Muslim world itself.

As has just been said, the Og͟huz/G͟huzz expansion towards the south took place mainly from the last years of the 4th/10th century, then especially in the fourth decade of the 5th/11th century, under the leadership of a family, the Sald̲jūḳids, which was to found a vast empire. This is discussed in other articles, so that we are not concerned to relate here the history of this expansion—contemporary with that of the "Ouzoi" towards southern Russia, the lower Danube and Byzantium—, but only to show its place in the history of the Og͟huz/G͟huzz. The first migrations of the groups which followed the Sald̲jūḳids occurred as they took advantage of the appeals for help addressed to them in turn by the Sāmānids and various rival princes of the Ḳarak͟hānid family who had succeeded the Sāmānids in Mā warāʾ al-Nahr. In the official tradition of the dynasty, the ancestor Sald̲jūḳ is presented as having been the head of the army of a "K͟hazar" prince: presumably of a territory or a group recognizing K͟hazar suzerainty between the Aral Sea and the Volga. On the other hand, however, in the various political struggles of the first half of the 5th/11th century, the descendants of this Sald̲jūḳ were fighting against the Yabg͟hu of the Og͟huz, S̲h̲āh Malik, the ally of the G͟haznavids, and it is not impossible that they went so far as to lay claim to the position of Yabg͟hu and that they were in fact recognized as such by a large section of their people. The details of the episodes of which little is known but which can lead to this conclusion have been the subject of a discussion between O. Pritsak and the present author which cannot be regarded as closed. (See O. Pritsak, *Der Untergang des Reiches des Oghusischen Reiches*, in *Mélanges Köprülü/Köprülü armağanı*, 1953; discussion by Cl. Cahen, in *JA*, 1954, 271-5 and Pritsak's reply in his communication to the Congress of Orientalists at Munich in 1957).

Thus the Sald̲jūḳid expansion drew into the old territories of Islam a substantial portion of the Og͟huz/G͟huzz people; it is difficult to specify them more precisely, for the few names of tribes which are attested at that time do not distinguish them for us from the others, and also the fact that some elements of these tribes accompanied the Sald̲jūḳids does not preclude that others may have remained behind in their former habitat. Those who left it we find divided into two groups: one following Arslan-Isrāʾīl b. Sald̲jūḳ [*q.v.*] in the region of Buk͟hārā, and then established by Maḥmūd of G͟hazna in 416/1025 in K͟hurāsān, the other, which was to take the place of the first group there in 426/1035, under the leadership of the nephews of Arslan, Tog͟hrîl and Čag͟hrî [*qq.v.*]. The members of the first group, left without a leader by the disappearance of Arslan, proved themselves incapable of being assimilated to the administrative rules and the social structure of an old-established Iranian state: harried by the G͟haznavid troops, they succeeded, after detours across Iran, in reaching the frontiers of Armenia from which they returned when, on the death of Maḥmūd, the G͟haznavid family was split by quarrels, then, disturbed at the advance of the second Sald̲jūḳid group, escaped again towards the west, crossed the mountains of Kurdistan, and ended by being exterminated in Upper Mesopotamia in about 437/1045 by an alliance of Bedouins and Kurds. The Og͟huz/G͟huzz of Tog͟hrîl and Čag͟hrî, after several years of war, defeated Masʿūd of G͟hazna at Dandānḳān in 431/1040, and conquered for their masters the greater part of Iran, and also ʿIrāḳ, etc.; most of them were concentrated in Ād̲h̲arbayd̲jān, a country whose population is today still mainly Turkish; from there a section of them was to spread, in the second half of the 5th/11th century, into Byzantine Asia Minor, which they soon converted into what from then on was known as Turkey.

From the end of the 4th/10th century, however, there appears a new name (first attested in al-Muḳaddasī in about 375/985), that of Türkmen/Turcoman, applied to a large section of the Og͟huz/G͟huzz peoples and sometimes also to the Ḳarluḳ, though it is impossible to state precisely in which contexts the term Og͟huz/G͟huzz continued in use and in which Türkmen/Turcoman was preferred. Certainly it seems that at first the latter name was used exclusively of the Muslim Og͟huz/G͟huzz in contrast to those who had not become Muslim and who continued to be called by their earlier name. But we find the name Og͟huz/G͟huzz used later of those who had become Muslim. Broadly speaking it can be said that the name Türkmen/Turcoman is used by writers of the territories comprising the Sald̲jūḳid empire and its successor states to indicate those of the Og͟huz/G͟huzz who were the descendants of the groups which followed the Sald̲jūḳids (even although they later abandoned them to go, for example, into Byzantine Asia Minor); these writers applied the name Og͟huz/G͟huzz to all the others, even later, when some of them in their turn were to come and settle in the Sald̲jūḳid territory (but without really being incorporated in the state). Foreign writers, on the other hand, or those who were hostile to the Sald̲jūḳids and their successors, used the name G͟huzz universally, with pejorative intent, of all the Turks on whose military strength these régimes depended; this was the case with the writers of Fāṭimid Egypt,

and even with those who, in the Yemen, wrote of the conquest (albeit half Kurdish) of the country by the Ayyūbids, or with those in the Maghrib writing of the Ayyūbid drive towards Tripoli and Ifrīḳiya. We cannot pursue all these branches here and for details of the later history of the Oghuz/Ghuzz who proceeded in the 11th century to Iran and beyond, the reader is referred to the articles SALDJŪḲIDS and TÜRKMEN.

There remained, however, in Central Asia a certain number of them who, from 538/1143, were driven back by the conquest of the Ḳarakhānid territories (including Mā warā᾽ al-Nahr) by the non-Muslim Ḳara-Khitay. The majority of them settled, with the more or less willing agreement of the Saldjūḳid authorities, in the eastern part of Khurāsān, in the region of Balkh. But, as was the case earlier when the first Turcomans settled in Ghaznavid territory, this new group of Oghuz/Ghuzz (thus called in contemporary sources) proved impossible to assimilate into an organized state. Sultan Sandjar tried to subdue them by force and, like the Ghaznavid Mas῾ūd, a century earlier, was himself heavily defeated by them (548/1153). But whereas the Turcomans, led by the Saldjūḳids, had founded an empire, the Oghuz/Ghuzz of this period merely helped to spread anarchy throughout Khurāsān. Finally they were decimated and subdued by the Khwārizmshāhs, although one of them, Malik Dīnār [*q.v.*], ousting other Saldjūḳids, proceeded to make himself master for several years of their principality of Kirmān. The difference arises in part certainly from the fact that the Saldjūḳids had been able to lead their Turcomans on to other conquests, while the absence of a great leader and the general political conditions of the 6th/12th century allowed the Oghuz/Ghuzz of Khurāsān no prospect beyond that of converting Khurāsān into a region of grazing lands for their convenience.

The above episode is the last in which we find the Oghuz/Ghuzz in action under this name; beyond the frontiers of Islam their place had been taken by the Ḳïpčaḳ, many of whom moreover in their turn began to swell the army of the ruler of Khwārizm. The foundation of the Mongol empire, in the 7th/13th century, led of course to the incorporation or to the expulsion of many Turcomans who were descended from the former Oghuz/Ghuzz, but henceforward the name is no longer found used of a group of people which still exists, whereas that of Türkmen has survived until the present day in Central Asia.

It was at this time, however, that among these descendants of the Oghuz/Ghuzz, confronted with the Mongols, there developed, in an atmosphere of veneration of the past and of their ancestors, the legend known as that of Oghuz-Khān, the vast spread and possibly also the relative antiquity of which are attested by versions extending from Central Asia (in Uyghur) to Asia Minor (in particular the popular Turkish story of Dede Ḳorḳut [*q.v.*], composed under the Aḳ-Ḳoyunlu in the 9th/15th century). It represents the descendants of Oghuz Khān as being divided into 24 tribes, and of these it is certain that 22 were already known, by name and by their *tamghas*, to Maḥmūd Kāshgharī, the Muslim Turk of the second half of the 5th/11th century whose dictionary provides such noteworthy information about his fellow-Turks; a certain number of these tribes are attested in historical events, but only the Ḳïnïḳ (and then solely as the tribe of the Saldjūḳids), the Yïva, Salghur, Avshar and the Döger appear before the Mongol period. The Saldjūḳid conquest had taken place over their heads and broken them up. It was Rashīd al-Dīn, the great historian of the Mongols, who gave to the Muslim world the first written account of the legend, and it is from him that it was borrowed by the later authors who related it for educated Turks, writers such as Yazïdjï-oghlu, the 9th/15th century adapter of Ibn Bībī in Asia Minor, or the famous prince Abu 'l-Ghāzī in Central Asia in the following century. But although the legend reflects after its fashion the regions in which it grew up, there would seem to be no justification for using it as a basis for a reconstruction of the authentic history of the early Oghuz/Ghuzz, though a future scholar may find a way of making some use of it in this respect.

Bibliography: The Oghuz/Ghuzz are known in varying degree to nearly all the geographers from Ibn Khurradādhbih. The main information, much of which is collected in Russian translation in V. I. Belayev, *Arabskie istočniki po istorii Turkmen i Turkmenii*, i, Moscow-Leningrad 1939, is found in the following: Iṣṭakhrī, 9 and 217-22, completed by Ibn Ḥawḳal, ed. Kramers, 389, 512 and Muḳaddasī, 274; works based on Djayhānī: *Ḥudūd al-῾ālam*, 100-1 and 122, Marwazī 29 (both ed. Minorsky), and Gardīzī; Ibn al-Faḳīh al-Hamadhānī in the Mashhad MS described by A. Zeki Velidi in *Izv. Ak. Nauk. SSSR*, 1924, 237-48; Mas῾ūdī, *Murūdj*, i, 212-3 and ii, 18-9 (pagination reproduced in Pellat's trans., in progress); Bīrūnī, and even, later still, Idrīsī and Yāḳūt. Of particular interest, at the beginning of the 4th/10th century, is the account of the journey of Ibn Faḍlān, ed. Zeki Velidi, 1939, A. P. Kovalevsky, 1956, and Sāmī Dahān, 1959, Fr. tr. M. Canard in *AIEO Alger*, xvi (1958). The principal historians to be considered are those of the Ghaznavids and the Saldjūḳids, especially Bayhaḳī and Ibn al-Athīr, but also the *Akhbār al-dawla al-Saldjūḳiyya*, ed. Moh. Iqbal, the *Saldjūḳnāma* of Ẓāhir al-Dīn Nīshāpūrī, ed. Gelāleh Khāvar (better than the adaptation of him by Rāwandī), the *Mudjmal al-tawārīkh*, ed. Bahār, 102-3 and 421, the anonymous *Ta᾽rīkh-i Sīstān*, Gardīzī already mentioned, ed. Moh. Iqbal, etc. See also Khwārizmī, *Mafātīḥ al-῾ulūm*, 120. For the events of the 6th/12th century see the historians of the Saldjūḳids (reign of Sandjar); Ibn al-Athīr again; Djuwaynī, *Ta᾽rīkh-i Djahān-gushā*, ii. A special place is occupied by the *Dīwān lughāt al-Turk* of Maḥmūd Kāshgharī, a work not only of lexicography, but of remarkable and unique general information, ed. Kilisli Rif῾at (1917) and in facsimile with Turkish tr. by Besim Atalay (1939). For the legend of Oghuz Khān the principal texts have been cited in the article; the *Kitāb-i Dede Ḳorḳut* should be consulted in the ed. with a very full preface by E. Rossi. For the Chinese sources (on the Toḳuz-Oghuz only), see J. Hamilton, art. cited; for the Byzantine sources, J. Moravcsik, *Byzantino-Turcica*², 1960, s.v. *Ouzoi*.

It is impossible to enumerate here all the studies which in one way or another refer to the Oghuz (a fair number of them are listed in Pearson's *Index Islamicus*); a good brief restatement of many of the questions has appeared in ch. vii of C. E. Bosworth, *The Ghaznevids ...*, Edinburgh 1963; and in spite of their date the contributions of Barthold to *EI*¹ [GHUZZ and TURKS] remain generally useful, also his general survey in the *Histoire des Turcs d'Asie Centrale* (Fr. tr. of his

Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens, lectures delivered in 1926), and his developments in his *Turkestan down to the Mongol Invasion*, Engl. tr. 1928; see also the commentaries of V. Minorsky in his editions of the *Ḥudūd al-ʿālam* and of Marwazī cited above, and the anonymous *Istoriya Turkmenii*, Tashkent 1940. Among the special works, for the origins we limit ourselves to referring to Hamilton cited above; for the history of the Oghuz/Ghuzz in Central Asia in the 4th/10th and the 5th/11th centuries, Houtsma, *Die Ghuzenstämme*, in *WZKM*, ii (1888); J. Marquart, *Ueber das Volkstum der Komanen*, *Abh. d. K. Ges. d. Wiss. Göttingen*, N.F. xiii (1914); M. F. Köprülü[zāde], *Oghuz etnolozhisine dāʾir taʾrikhī notlar*, in *Türkiyāt Medjmūʿasī*, i (1925), 185-211; A. J. Yakubovskiy, *Seldjukskoe dviženie i Turkmenī v XI vekov*, in *Izv. Ak. Nauk SSSR*, 1936; S. P. Tolstov, *Goroda Guzov*, in *Sovetskaya Etnografiya*, 1947, and especially *Po sledam drevnekhorezmiyskoy tsivilizatsii* (German trans. *Auf den Spuren der altchoresmischen Kultur*), 1953, a basic synthesis of the results of the archaeological investigations carried out by the author and others up to that date, with significant historical implications; O. Pritsak, *Der Untergang des Ogusischen Jabgu* (see above in the art.); Cl. Cahen, *Les tribus turques d'Asie occidentale pendant la période seldjukide*, in *WZKM*, li (1948-52), and *Le Maliknameh et l'histoire des origines seldjukides*, in *Oriens*, ii (1949); Ibr. ii.—Muslim West

In the Middle Ages al-Ghuzz (or al-Aghzāz, or al-Ghuzziyyūn) indicated the Turkish or Turcoman mercenaries who twice penetrated North Africa by way of Egypt. The first Aghzāz appeared, in the middle of the 6th/12th century, in the army which the Almohad ʿAbd al-Muʾmin sent to conquer Ifrīḳiya (553/1158). A group of them was introduced into Ifrīḳiya by Ḳarāḳūsh al-Ghuzzī [*q.v.*], an adventurer of Armenian descent, the freedman of a brother of Saladin, and Ibrāhīm b. Ḳarātakīn, who were sent by the ruler of Egypt and Syria to conquer the eastern Maghrib. Ḳarāḳūsh had appeared in 568/1172-3 in Tripoli. After several adventures, including imprisonment in Cairo, he was again in Tripolitania in 573/1177-8 to fight beside the Banū Ghāriya [*q.v.*]. But Ibn Ḳarātakīn was killed and the family of Ḳarāḳūsh, his sons, his possessions and some of his mercenaries fell into the power of the Almohad caliph Abū Yūsuf Yaʿḳūb al-Manṣūr, after the fall of Gabès (10 Shaʿbān 583/15 October 1187) and of Gafsa, three months later. These Ghuzz, of proved courage, having given proofs also of their submission, were then transferred to Marrākush and formed into a corps d'élite, regularly paid, which the caliph put at the service of the régime. Armed with a bow which was named after them (*al-ghuzzī*), they fought in all the battles and were very much in favour, but without being absorbed into the population (they had their own cemetery).

About 660/1261, there appeared in North Africa a new wave of Ghuzz, but the name this time refers to Kurds, fleeing before the conquests of Hūlāgū [*q.v.*]. When the Almohad dynasty fell, some took service with the ʿAbd al-Wādids of Tlemcen, others with the Ḥafṣids of Tunis, others finally settled at Marrākush where they passed into the service of the Marīnid dynasty who made much use of them in their expeditions of the Holy War in Spain where, with the archers of Ceuta, they formed the front line; they constituted also the personal bodyguard of the sultan. With time and with the appearance of portable fire-arms the Moroccan Ghuzz lost some of their importance. In the middle of the 16th century they are no longer referred to as Ghuzz but as Turks, whether they were mercenaries or not; in the 17th century their name, retained in Portuguese (*algoz*) with the meaning of hangman, is applied only to public executioners.

The Ghuzz used by the Almohads in their expeditions of the Holy War are mentioned by many of the mediaeval European historians.

iii.—Sudan

In the Sudan the term Ghuzz was used of the hereditary *kāshif*s of Lower Nubia (between the First and Third Cataracts of the Nile) during the Ottoman period; more generally, the tribe formed by their kin. The name, as in Egyptian usage, was equivalent to *Mamlūk*s, and the Ghuzz should therefore be distinguished from the hereditary garrison-troops (*ḳalʿedji*s) of Bosniak origin in Aswān, Ibrīm and Sāy, who were called *ʿOthmānlī*s. The founder of the tribe is called by Burckhardt, Ḥasan "Coosy" (probably *Ḳuzzī* for *Ghuzzī*), and his coming, as commander of the Bosniaks, is placed in the reign of Sultan Selīm I: this may be too early. The hereditary *kāshiflik*, which had its headquarters at al-Dirr, and was virtually autonomous, survived until the time of Muḥammad ʿAlī Pasha. At the time of the Turco-Egyptian invasion of the Sudan (1820-1), Ismāʿīl Kāmil Pasha

appointed a member of the tribe, Ḥasan, to administer the territory between Aswān and Wādī Ḥalfā. The vestiges of the traditional authority of the Ghuzz tribal chiefs vanished some sixty years later, when the area was placed under military government at the time of the Mahdia.

GIAOUR [see GABR and KĀFIR].

GIBRALTAR [see DJABAL ṬĀRIḲ].

GĪLĀN, a historic region around the delta of the river Safīd-rūd [*q.v.*], was the homeland of the Gēl people (Gelae, Γῆλαι; = Καδούσιοι) in antiquity. The present Persian inhabitants, who speak a special dialect (cf. G. Melgunoff, *Essai sur les dialectes ... du Ghîlân ...*, in *ZDMG*, xvii (1868), 195-224, and the article IRAN: Languages) bear the name Gīlak (at an earlier period also Gīl). The derivation of the name from *gil* "clay", in allusion to the marshes of the region, is a piece of folk etymology.

In the middle ages Gīlān first extended as far as the Čālūs in the south east; later it ran parallel on its eastern side with the Pulu-rūd and included Čābūksār. In the north east Gīlān verged on the region of Tālīsh [*q.v.*] which was sometimes counted as part of it. After Tālīsh was ceded to Russia by the Peace of Gulistan of 1813, this frontier was replaced by the river Astāra. For some 225 km. Gīlān is bounded by the Caspian Sea; towards the interior the frontier is the mountain-chain forming the northern limit of the high plateau of Iran, and in this direction Gīlān is between 25 and 105 km. wide. In the 10th-11th centuries the mountainous areas in the south of the region bore the name of Daylam [*q.v.*]; their inhabitants were often the enemies of the real natives of Gīlān. As the inhabitants see it, the area is divided by the Safīd-rud into two regions; "beyond the river and before the river"—Biya Pīsh in the east (land of the early Amardoi) and Biya Pas in the west (land of the Gelae). In the 19th century the area was divided into first four and then five regions. In 1938 the population was estimated at 450,000, mostly Shīʿī Persians (Gīlak and Tālīsh, particularly in the mountains) but also Jews, Armenians, and gypsies, who occupied an area of some 14,000 square km. In the middle ages the first capital was Dūlāb (= Gaskar (?) according to Muḳaddasī), then Fūman [*q.v.*] and Lāhīdjān [*q.v.*] according to Mustawfī Ḳazwīnī, and finally, after Gīlān was incorporated in the Ṣafawī empire, Rasht [*q.v.*], which remained the capital under Nādir [*q.v.*] and to the present day. Since 1938 Gīlān has formed the administrative district of Rasht in the first canton (Ostān) of the empire of Īrān, linking the country with areas further south (see IRAN, with statistics and map).

Gīlān has a warm, damp, often tiring climate. Even in the middle ages, accordingly, its people were often to be seen dressed in only short trousers or "almost naked" (Ibn al-Athīr, Būlāḳ ed., viii, 77). The luxuriant forest provided (and still provides) the materials for the wooden houses with verandas (Iṣṭakhrī, 205, 211; Yāḳūt, i, 183) characteristic of Gīlān and Māzandarān [*q.v.*]. In the middle ages agriculture (which was a profitable pursuit) was left mainly to the women (*Ḥudūd*, 136 f.) and consisted chiefly of rice-growing and silkworm-breeding, which had been introduced by the Genoese; its products were exported to the Mediterranean area via Tana on the northern shores of the Black Sea as early as the 14th century (W. Heyd in *Zeitschrift für Staatswissenschaften*, xviii (1862), 692). In modern times tobacco has come to be grown. Fishing made an important contribution to the inhabitants' food supplies; admittedly in the middle ages most journeys across the Caspian Sea began from Ābaskūn [*q.v.*] and not from Gīlān as in modern times (cf. B. N. Zakhoder, *Povolž'e i Yu. V. Kaspiya* [*The Volga Basin and the south-eastern part of the Caspian Sea*], in *Folia Orientalia*, i/2, Warsaw 1959, 231-50). As for mineral resources, Gīlān possesses a certain amount of copper and lead.

As with all the area along the southern shore of the Caspian Sea, the northern mountain-chain of the Iranian plateau and its climate have protected Gīlān from inland invaders (Arabs as well as Turks and Mongols) throughout the whole of its history. However, in 301/913-4 the Vikings (Rūs) made a successful attack from the sea (Masʿūdī, ii, 20-4; B. Dorn, *Caspia*, St. Petersburg 1875 (*Mem. Imp. Ac. of Sciences*, 7th Series, xxiii/1); idem, in *Quellen*, iv, p. IV f., 18) and in 1638 and 1667 the Cossacks followed their example in Rasht. The inhabitants of the country, particularly the Daylamīs [see DAYLAM], had a great influence (above all in the 10th century) on the history of their neighbours and even on the Caliphate (cf. BUWAYHIDS/BŪYIDS). Since Gīlān with her clans and her local rulers was nearly always independent, from the period of the Achaemenids and the Sasanians, the Zoroastrian faith and some Nestorian colonies could survive there for a long time (Thomas of Marga, *Book of the governors*, ed. E. A. W. Budge, London 1893, ii, 480; Jean Dauvillier, in *Mélanges Cavallera*, Toulouse 1948, 279, with bibliography). The doctrines of the Shīʿī Zaydīs penetrated into Gīlān from the neighbouring countries of Ṭabaristān [*q.v.*] and Māzandarān [*q.v.*] and brought the Nāṣirwand dynasty into the country (on the literary productions of the Zaydīs there see R. Strothmann, in *Isl.*, ii (1911), 60-3). Little more is known as to the details of the history of Gīlān in these centuries. The country came under the nominal rule of the states of the Ziyārids [*q.v.*], the Būyids and the Kākūids [*q.v.*] as well as the Great Saldjūḳs [*q.v.*]; on this see Ann K. S. Lambton, *Landlord and peasant in Persia*, London 1953, 60. Hence Gīlān paid tribute, at least for a time (for details see Spuler, *Iran*, 469). In connexion with this development Sunnī Islam found general favour and even occasional helpers in some of the many dynasties which shared the country until the end of the 16th century. Christianity and Zoroastrianism faded away. (L. Rabino di Borgomale, *Les dynasties locales du Gîlân et du Daylam* in *JA*, ccxxxvii (1949), 301-50, gives a full account of these dynasties, which is too detailed to be reproduced here). In 706/1307 the Ilkhān Öldjeytü [*q.v.*] succeeded in forcing the country to acknowledge his overlordship, but its native dynasty remained. In the western part of the country at that time the *madhhab*s of the Ḥanbalīs and the less numerous Shāfiʿīs preponderated as did the now extinct *madhhab* of the historian and Ḳurʾān commentator al-Ṭabarī (who indeed came from this region). In the east the Zaydīs had remained (cf. Ḳāshānī, *Taʾrikh*, Paris, Bibl. Nat., supp. persan, ms. 1419, fol. 38r to 49v; this manuscript is to be published by Professor Horký of Prague). From 762/1361 the Kār-Kiyā dynasty managed to seize the dominant position in Lāhīdjān and lost it only when Shāh ʿAbbās I incorporated Gīlān in the Ṣafawid state in 1000/1592. In 1060/1650

it was put under the direct rule of the central power (cf. Lambton, *op. cit.*, 108). Since then Gīlān has belonged to Persia, apart from the years between 1136/1724 and 1146/1734 when it was annexed by the Russians who, however, finally left it on account of its climate. From 1917 to 1921 the Bolsheviks tried to impose their rule on it; in the end they succeeded with the help of intermediaries in founding a Soviet republic of Gīlān (cf. Kurt Geyer, *Die Sowjetunion und Iran*, Tübingen 1955, 13-8, especially 14, note, sources and bibliography). All these attempts were finally brought to an end when Riḍa Shāh [*q.v.*] took over the government and, later on, the throne.

GIRĀY, cognomen borne by the members of the dynasty which ruled in the Crimea from the beginning of the 9th/15th century until 1197/1783. The family was descended from Togha Temür, a younger son of Čingiz Khān's son Djoči. Möngke Temür, the Khān of the Golden Horde (665/1267-679/1280), had granted the Crimea and Kafa as *nuntukh* (appanage) to his son Urang Temür (Öreng Timur) (Abu 'l-Ghāzī Bahādur Khān, *Shedjere-i Türk*, St. Petersburg 1871, 173). During the civil wars which from 760/1359 onwards convulsed the domains of the Golden Horde, the descendants of Togha Temür joined in the struggle and laid claim to the Khānate; they finally succeeded in establishing a state in the Crimea, independent of the other khāns ruling at Ulugh Yurt, the centre of the Golden Horde. There survives a coin of 796/1393-4 issued by Tash-Temür in the Crimea in his own name, and another of 797/1394-5 with Tash-Temür's name on one face and the name of Tokhtamïsh Khān [*q.v.*] on the other (A. K. Markov, *Inventarnïy Katalog musulmanskikh monetʾ Imperatorskago Ermitaža*, St. Petersburg 1896, p. 491, nos. 1239-40; Lane-Poole, *Cat.*, vi, p. 184, no. 558). In Tokhtamïsh's struggles against Tīmūr and later against Edigü, the descendants of Togha Temür were always on the side of Tokhtamïsh, and were from time to time forced to relinquish control of the Crimea to khāns supported by Edigü (for coins struck in the Crimea by Temür-Ḳutluḳ Khān between 802/1399 and 810/1407 and by Pūlād Khān in 811/1408 see Spuler, *Horde*, 140-1, notes 25, 32). Upon the death of Edigü in 822/1419, Tash-Temür's son Ghiyāth al-Dīn gained control of the Crimea, where we find his brother Dewlet-Birdi ruling in 830/1427 (when he sent an embassy to the Mamlūk sultan Bārsbāy: ʿAynī, *ʿIḳd al-djumān*, Bayazıd Public Lib., Istanbul, MS Veliyüddin 2369, *s.a.*). Henceforward the dynasty's efforts were concentrated on maintaining their hold on the Crimean peninsula and, when opportunity offered, on seizing Sarāy and thus acquiring the khānate of the Golden Horde.

According to local tradition in the Crimea (*al-Sabʿ al-sayyār* [see Bibl.], 72), Ghiyāth al-Dīn, in accordance with the customs of the Golden Horde (see *ʿUmdat al-tawārīkh*, 204), was brought up by his *atalïḳ* [*q.v.*], who belonged to the Kerey tribe, and later, out of respect for his *atalïḳ*, gave his first son the name Ḥādjdjī Kerey; thereafter the members of this family bore the cognomen (*laḳab*) Kerey/Girāy.

According to G. Németh (*A Honfoglaló Magyarság Kialakulása*, Budapest 1930, 265-8), the name is composed of *ker*, 'giant', with the diminutive suffix *-ey*. As a name borne by various sections of the tribe, it is found among the Ḳazaḳs, the Türkmen, the Bashdjïrt, the Buriats and the Mongols, with various pronunciations: Kerey, Kirey, Kiray, plural: Kereit. When Čingiz Khān defeated the powerful Kereit ruler Ong Khān, some of the Kereit fled to the West, the rest being scattered among the Mongol tribes (*Secret history*, § 186; Turkish tr. by Ahmet Temir, Ankara 1948, 109; German tr. by E. Haenisch, Leipzig 1948, 74). Thus the Kereit, either fleeing before the Mongols or coming with them, were spread over a very wide area, as far west as the Crimea. Until recent times the Taraḳlï branch of the Uvak-Kirey led a nomad existence among the Ḳazaḳs in the valleys of the Irtish, the Sarı Su and the Chu (H. H. Howorth, *Hist. of the Mongols*, ii, London 1876, 6, 11). The *tamgha* of the Khāns of the Crimea (for its shape see the coins of Mengli Girāy in *Müze-i Hümāyūn*: *meskūkât ḳataloghu*, 3rd section, Istanbul 1318/1900, 211, and *IA*, iv, 784b) was called *taraḳ tamgha*.

The Kerey were one of the four main tribes (*keshik*) upon which the Khānate of the Golden Horde depended. The Kerey, dwelling east of the Don and in the northern Caucasus, gave their support to Ḥādjdjī Girāy. Only one of his sons, Mengli, used the cognomen Girāy, but it was borne by all Mengli's sons and descendants, and was assumed also by some of the begs of the Shirin who married into the ruling family (*ʿUmdat al-tawārīkh*, 200).

Ḥādjdjī Girāy made an alliance with the Ottoman Sultan Meḥemmed II in 858/1454 [see ḤĀDJDJĪ GIRĀY], and this alliance was maintained by his successors. In 880/1475, called in by Eminek Mīrzā to assist him against the Genoese, who were stirring up internal troubles, the Ottomans responded immediately and occupied the Genoese fortresses in the southern Crimea; Mengli Girāy [*q.v.*], released from prison, was placed on the throne as a client of the Ottoman Sultan (H. İnalcık, *Yeni vesikalara göre Kırım Hanlığının Osmanlı tâbiliğine girmesi*, in *Belleten*, viii/30 (1944), 185-229).

At first, the Girāy rulers were in alliance with the Grand Dukes of Moscow, against the Khāns of the

Golden Horde (ruling at Sarāy and hoping to recover control of the Crimea), and against the Jagiellos of Poland. But after 926/1520, the khāns of the Crimea laid claim, as being the rightful heirs, to the patrimony of the Golden Horde, and when the Russians began to threaten Ḳazan embarked on an unrelenting struggle against them, which bore the character of a religious enterprise (*ghazā*). In 927/1521 Ṣāḥib Girāy [*q.v.*] became Khān of Ḳazan; three years later he went to Istanbul, being succeeded, until spring 938/1532, by Ṣafā Girāy (Hādī Aṭlāsī, *Ḳazan Khānlighi*, Kazan 1913, 125-35). When in Rabīʿ I 939/October 1532 Ṣāḥib Girāy returned as Khān of the Crimea, he attacked the Russians, and after a long struggle the Girāy house were obliged to cede the Volga basin and the old capital of the Golden Horde, Takht-ili (Ulugh Yurt); Ḳazan was lost in 959/1552, Astrakhan in 961/1554. It is from this period onwards that the Girāy house, who had heretofore claimed to follow an independent policy, adopted Ottoman protection against the Russian threat, acting in ever closer cooperation with the Ottomans in the wars in Central Europe and against Persia [see ḲIRĪM]. The first joint military enterprise had been the Moldavian campaign of 881/1476, the second was Süleymān I's Moldavian campaign of 945/1538.

The Ottomans recognized the Girāy house as their intermediaries in their political relations with northern powers: ambassadors of Poland and Russia would first present themselves at the court of the Khān and then proceed to the Porte.

Domains. The capital is referred to in Ḥādjdjī Girāy's *yarlīḳ* of 857/1453 as "Orda-i muʿaẓẓam Ḳīrḳ-yirde Sarāy" (see A. N. Kurat, *Altınordu, Kırım ve Türkistan Hanlarına ait yarlık ve bitikler*, Istanbul 1940, 62-80, plate 173-84). His coin of 845/1441 was struck at "Beldet-i Ḳīrīm", that of 847/1443 at "Ḳīrḳ-yir" (for these towns see V. D. Smirnov, *Krimskoye khanstvo pod verkhovenstvom ottomanskoy Porti do načala XVIII. veka*, Odessa 1887, 102-22). Under Mengli Girāy the palace was moved from the strong citadel at Ḳīrḳ-yir into the valley, to the site now called Baghčesāray (Simferopol). In the *yarlīḳ* Ḥādjdjī Girāy claims sovereignty over Taman, the Ḳīpčaḳ and Kabartay. In their *yarlīḳ*s the Girāy rulers give themselves the title '*Ulugh orda we Ulugh yurtnīñ we Desht-i Ḳīpčaḳnīñ ve Takht-i Ḳīrīmnīñ .... Čerkesnīñ ve Tat bile Tavghačnīñ Ulugh Pādishāhī we hem Ulugh Khānī*'. In the attempt to establish their sovereignty over the Desht-i Ḳīpčaḳ (the steppeland to the north of the Black Sea) and Circassia the Khāns had to engage in long struggles, achieving partial success particularly under Ṣāḥib Girāy I [*q.v.*]. Sultans of the Girāy family, with the title *Ser-ʿasker Sulṭān*, were sent to govern the Khānate's territories in Ḳuban, Budjaḳ and Yedisan. Like the khāns of the Golden Horde before them, the Khāns exacted an annual tribute of money and furs (known as *tīyīsh* and *bölek*) from the rulers of Russia and Poland. Since the Khāns always claimed sovereignty over the ports on the southern coast of the Crimea (Tat-ili), from 889/1484 onwards the Ottomans made them a yearly grant (*sāliyāne*) from the customs revenues of Kefe [*q.v.*] (a million and a half *akče*s annually). Meḥemmed Girāy I, and some later Khāns, attempted to establish direct control over these ports.

The dynasty first openly acknowledged the sovereignty of the Ottoman Sultan in Mengli Girāy's letter of Rabīʿ I 880/July 1475 (see H. İnalcık, *op. cit.*). Although the new relationship resulting from the strengthening of this sovereignty was later presented as arising from a special agreement, the texts adduced are clearly fabrications.

From Mengli Girāy onwards, the Khāns each had a *ḳalghay* [*q.v.*] (also *ḳaghalghay*) as *walī ʿahd*, 'heir apparent', and from 992/1584 also a second *walī ʿahd* known as *Nūr al-Dīn* (*Nuradin*). According to the *Ḳānūn-i Djengizī* (*türe, yasa*), the *ḳalghay* should be the Khan's brother; when the throne fell vacant, the *ḳalghay* became Khān and the *Nūr al-Dīn* became *ḳalghay*. The attempts of some khāns to appoint their sons to these posts caused disturbances and civil war. When the tribal aristocracy of the Crimea [see ḲIRĪM], following the *türe* and without reference to the Porte, appointed a *ḳalghay* as the new khān (as in the cases of Ghāzī Girāy I and Toḳtamīsh Girāy), the Ottoman Sultan withheld his recognition and fierce conflicts resulted, but in general the Porte was influenced in its choice by the claims of the existing *ḳalghay*. Of the forty khāns, 24 had been the *ḳalghay*, and five the *Nūr al-Dīn*.

From the time of Saʿādet Girāy (930/1524-938/1532) onwards, it became customary that one of the Khān's brothers should be sent to Istanbul as a hostage (Ferīdūn Beg, *Munshaʾāt al-salāṭīn*[1], ii, 167; Münedjdjim-bashī, *Ṣaḥāʾif al-akhbār*, ii, 699). Two of these hostages (Islām Girāy II and Bahādīr Girāy I) were sent to the Crimea as Khān. The Khān chosen received his diploma direct from the hand of the Ottoman Sultan and was presented with the *khānlīḳ teshrīfātī* (a sword, a banner, a *ḳalpaḳ* with a jewelled *sorghuč* and a sable robe) (see *Silāḥdār taʾrīkhi*, ii, 131, 683). When there was a campaign, the Sultan sent the Khān a gift of 40,000 gold pieces, known as *čizme-bahā*, which was distributed to the Khān's household troops and to the *mīrzā*s. The Sultan could depose, imprison or exile the Khān; occasionally the Khān was executed. When a Khān had to be appointed, the Porte usually came to an agreement with the Shirin Begi, the leader of the Crimean tribal aristocracy. When a Khān succeeded to the throne, the hostage, together with other members of the dynasty who found themselves in danger, entered the Ottoman domains and were installed in *čiftlik*s in various parts of Rūmeli (Islimye, Yanbolu, Tekirdaghī, Čataldja). When the succession to the Ottoman throne was threatened, the Girāy family was regarded as having a claim to it (*e.g.*, in the revolution of 1098/1687, see *Silāḥdār taʾrīkhi*, ii, 630).

The branch of the family known as Čoban Girāylar arose at the end of the 10th/16th century. The *ḳalghay* Fetḥ Girāy, in return for ransom, sent back to her country the daughter of a Polish boyar who had been captured; on the way, the girl gave birth to a son, but Fetḥ Girāy refused to acknowledge the child as his and tried to have it killed. A certain Ḥādjdjī Aḥmed, who was travelling with the girl, hid the child in Moldavia and, when Fetḥ Girāy was killed in 1004/1596, brought him to the Crimea. He was appointed *Nūr al-Dīn*, with the name Dewlet Girāy; his descendants were called (pejoratively) 'Čoban Girāylar'. Although one of this line, ʿĀdil Girāy, was appointed Khān (1075/1665-1081/1670), the later Khāns denied that this branch was of royal blood and gave no further offices to its members.

By article 3 of the Ottoman-Russian treaty of Küčük Kaynardja (8 Djumādā I 1188/17 July 1774), each signatory recognized the independence of the Girāy house, but on 20 Shaʿbān 1197/21 July 1783 the Russians occupied and annexed the Crimea. In 1199/1785 the Ottomans considered appointing a member of the house as Khān over the Tatar

tribes in Budjaḳ (Djewdet, Taʾrīkh, iii, 142); in 1201/1787, when war was declared on Russia, this plan was put into effect and Shahbāz Girāy, with the title of Khān, and later Bakht Girāy fought in the Ottoman ranks at the head of the Tatars of Budjaḳ. By article 6 of the treaty of Jassy (Yash), in 1206/1792, the Ottomans recognized the Russian annexation of the Crimea.

İnalcık, article Giray, in *IA*, with a complete genealogical tree. (Halil Inalcik)

GIRESUN, a town on the Black Sea coast of Anatolia about 110 miles west of Trabzon, the principal town of a *vilayet*, with a population (1960) of 19,902. It is the Kerasos of antiquity (for the classical names and their possible permutations see A. D. Mordtmann, *Anatolien*, Hanover 1923, 405); threatened by the Turks from the 8th/14th century onwards, it came under Ottoman control with the Empire of Trebizond. The town has a favourable site on a peninsula of basaltic lava (tombolo) on which is built the acropolis, sheltering a small natural harbour, with an island nearby, the Ares of antiquity, now Giresun adası. The fortress was however of no great strength, and the town which spread out below it was exposed in the 17th century to the raids of the Cossacks (Ewliyā Čelebi, *Seyāḥatnāme*, ii, 70). Kerasos is said to have given its name to the cherry, introduced to Rome by Lucullus after his victory over Mithridates, but the cherry trees, which were still numerous in the region until the 19th century (W. J. Hamilton, *Researches in Asia Minor*, London 1842, i, 265) have been replaced by hazel-nut trees whose fruit is more easily stored and transported and for which Giresun is today the most important centre of preparation, trade and export, a position confirmed in 1961 by the completion of an artificial harbour enabling ships to come alongside the quay (trade about 1 million tons).

Bibliography: apart from the works cited, see *İA*, s.v. (B. Darkot); on the hazel-nut region of Giresun, X. de Planhol, *A travers les chaînes pontiques, plantations côtières et vie montagnarde*, in *Bulletin de l'Association de Géographes Français*, 1963, 2-11. (X. de Planhol)

GIRGĀ, (Djirdjā; an obsolete form Dadjirdjā is also found), a town and province of Upper Egypt. The name is said to be derived from a monastery of St. George (V. Denon, tr. A. Aikin, *Travels in Upper and Lower Egypt*, London 1803, ii, 25). The town originated in the late 8th/14th century as the tribal centre of Hawwāra [*q.v.*], who dominated Upper Egypt for the following two centuries. About 983/1576, the power of this tribe was broken, and Girgā became the seat of the governor of Upper Egypt, who was also *kāshif* of the Girgā district. The governors, who are variously referred to as *ḥākim al-Ṣaʿīd*, *amīr al-Ṣaʿīd*, and *bak Djirdjā*, belonged to the neo-Mamlūk élite, and frequently intervened in the factional struggles in Cairo. The *kāshiflik* of Girgā is represented today by the *mudīriyya* of the same name, although for some time after 1239/1823-4, in consequence of Muḥammad ʿAlī Pasha's administrative experiments, it was absorbed in a larger territorial unit. In 1859, Sōhāg (Sūhādj) took the place of Girgā as the provincial capital.

Rivlin, *The agricultural policy of Muḥammad ʿAlī in Egypt*, Cambridge, Mass. 1961, 87-8, 323-4. (P. M. Holt)

GIRGENTI [see djirdjent].

GIRISHK, a town of ca. 10,000 inhabitants, altitude 865 metres/2830 ft, on the Helmand River in present Afghanistan.

Girishk is not mentioned in sources before the time of Nādir Shāh, when he captured the citadel in 1737, but a fort probably had guarded the passage of the river at this site for a long time before this date. In the 19th century Girishk was the centre of the Barakzai Afghans, and as such assumed a new importance. The site was of strategic importance and Girishk played a role several times during the troubles of the 19th century.

At present the town is an important centre for the irrigation of the Helmand basin.

GIRIT [see iḳrītish].

GĪSŪ DARĀZ, Sayyid Muḥammad Gīsū Darāz, a celebrated Čishtī saint of the Deccan, was born at Delhi on 4 Radjab 721/30 July 1321. His ancestors originally came from Harāt, from where they migrated to India and settled at Delhi. His father, Sayyid Yūsuf Ḥusaynī *alias* Sayyid Rādjā, was a disciple of Shaykh Niẓām al-Dīn Awliyāʾ [*q.v.*]. Gīsū Darāz was a small child when Sultan Muḥammad b. Tughluḳ (725/1325-752/1351) embarked upon his Deccan experiment and forced the *ʿulamāʾ* and *mashāʾikh* of Delhi to migrate to Dawlatābād. Sayyid Rādjā left Delhi under duress and settled at Dawlatābād, where he died in 731/1330. In 735/1335-6 Gīsū Darāz left Dawlatābād with his widowed mother and returned to Delhi. He completed his study of the external sciences (*ʿulūm-i ẓāhir*) under Sayyid Sharaf al-Dīn Kaythalī, Mawlānā Tādj al-Dīn Bahādur and Ḳāḍī ʿAbd al-Muḳtadir. His search for a spiritual master brought him to Shaykh Naṣīr al-Dīn Čirāgh [*q.v.*], whom he served for years with single-minded devotion, and from whom he received the *khilāfa* and the title of Gīsū Darāz ('one possessing long locks of hair').

When Timur turned towards India (800/1398), Gīsū Darāz hastened to quit Delhi. He stayed for some time in Gwāliyār and then left for Gudjarāt where he was the guest of Khʷādja Rukn al-Dīn Kān-i Shakar. Later he migrated to Gulbargā and finally settled there. Fīrūz Shāh Bahmanī (800/1397-

825/1421) accorded him a warm welcome (no. 39 in the collection of his letters is addressed to the Sultan), but he could not enjoy the saint's confidence for long. According to Ghulām ʿAlī Āzād Bilgrāmī, it was his association with philosophers and the philosophic bent of his mind which alienated the saint from him. His successor, Sultan Aḥmad Shāh Bahmanī (825/1421-838/1435), however, succeeded in winning the golden opinion of Gīsū Darāz. According to the *Burhān-i maʾāthir*, the saint exercised a profound influence on his life. Gīsū Darāz died at Gulbargā on 16 Dhu 'l-Ḳaʿda 825/1 November 1422. Aḥmad Shāh Bahmanī built a magnificent tomb over his grave. Hundreds of thousands of people gather there on the occasion of his *ʿurs* celebrations. The *dargāh* management now runs a publishing house, a monthly journal, a library and several schools and *madrasas*, including one for girls.

Gīsū Darāz was a profound scholar and a prolific writer. He was well-versed in the studies of the Ḳurʾān, *ḥadīth*, *fiḳh* and *taṣawwuf*, and knew several languages, including Arabic, Persian, Sanskrit and Hindi. He was fully conversant with Hindū folklore and mythology and used to discuss religious problems with the Hindu *yogīs* and scholars (*Djawāmiʿ al-kalim*, 118-9). He had correspondence and contact with eminent contemporary saints, such as Sayyid Muḥammad Ashraf Djahāngīr Samnānī and Masʿūd Bakk. He expounded the Čishtī mystic principles in the Deccan and produced a large number of works on different branches of the religious sciences. It is said that the number of his writings corresponds with the number of years he lived (*i.e.*, 105). No Indo-Muslim Čishtī saint has so many literary works to his credit.

Of the works produced by Gīsū Darāz, the following are particularly noteworthy: (A) Exegesis: (i) a mystical commentary on the Ḳurʾān (MS with Sayyid Muḥammad Ḥusaynī, *sadjdjāda nashīn*, Gulbarga); (ii) another incomplete commentary on the lines of the *Kashshāf*. (B) *Ḥadīth*: (iii) a commentary on the *Mashariḳ al-anwār*; (iv) Persian translation of the *Mashāriḳ*. (C) *Fiḳh*: (v) *Sharḥ al-Fiḳh al-akbar*, edited by ʿAṭā Ḥusayn, Ḥaydarābād 1367. (D) *Taṣawwuf*: (vi) *Maʿārif*, an Arabic commentary on the *ʿAwārif al-maʿārif* of Shaykh Shihāb al-Dīn Suhrawardī (MS in three volumes with the *sadjdjāda nashīn*, Gulbarga); (vii) Commentary on *ʿAwārif al-maʿārif* in Persian (MS in two volumes with the *sadjdjāda nashīn*, Gulbarga); (viii) *Sharḥ Taʿarruf*, commentary on the *Taʿarruf* of Shaykh Abū Bakr Muḥammad b. Ibrāhīm Bukhārī; (ix) *Sharḥ Ādāb al-murīdīn*, Arabic commentary on the *Ādāb al-murīdīn* of Shaykh Ḍiyāʾ al-Dīn Abu 'l-Nadjīb ʿAbd al-Ḳāhir Suhrawardī; (x) Persian translation of *Ādāb al-murīdīn*; (xi) Commentary on the *Fuṣūs al-ḥikam* (this work is not extant, but from references to Ibn al-ʿArabī found in *Maktūbāt* (p. 22), *Khātima* (pp. 18-9) and *Djawāmiʿ al-kalim* (p. 99) it appears that he did not agree with his views); (xii) *Sharḥ Tamhīdāt*, a Persian commentary on the *Tamhīdāt* of ʿAyn al-Ḳuḍāt Hamadānī, edited by S. ʿAṭā Ḥusayn, Ḥaydarābād 1364; (xiii) *Sharḥ Risāla-i Ḳushayriyya*, Persian commentary on the *Risāla* of Ḳushayrī, ed. S. ʿAṭā Ḥusayn, Ḥaydarābād 1361; (xiv) *Sharḥ Risāla-i Ḳushayriyya*, in Arabic; (xv) *Ḥaẓāʾir al-Ḳuds* or *ʿIshḳ-nāma*, edited by S. ʿAṭā Ḥusayn, Ḥaydarābād; (xvi) *Asmār al-Asrār*, edited by S. ʿAṭā Ḥusayn, Ḥaydarābād 1350 (commentary on a section of this work by Shāh Rafīʿ al-Dīn son of Shāh Walī Allāh Dihlawī in *Madjmūʿ Tisʿ Rasāʾil*, Delhi 1314); (xvii) *Khātima*, edited by S. ʿAṭā Ḥusayn, Ḥaydarābād 1356; (xviii) *Maktūbāt*, edited by ʿAṭā Ḥusayn, Ḥaydarābād 1362 (contains 66 letters; the As. Soc. of Bengal MS 1232 contains 61 only); (xix) *Madjmūʿa-i Yāzda Rasāʾil*, edited by S. ʿAṭā Ḥusayn, Ḥaydarābād 1360 (*risāla* 5 in this collection has been wrongly attributed to Gīsū Darāz; it was written by Imām Muẓaffar Balkhī); (xx) *Djawāhir-i ʿushshāḳ*, commentary on a *risāla* of Shaykh ʿAbd al-Ḳādir Gīlānī, edited by S. ʿAṭā Ḥusayn, Ḥaydarābād 1362; (xxi) *Anīs al-ʿushshāḳ*, collection of poems, ed. S. ʿAṭā Ḥusayn, Ḥaydarābād 1360.

Two early works—(I) *Miʿrādj al-ʿashiḳīn*, (editions prepared by (i) Dr. M. ʿAbd al-Ḥaḳḳ, Delhi, (ii) Dr. Gopī Čand Nārang, Delhi, (iii) Khalīḳ Andjum, Delhī, (iv) Taḥsīn Sarwarī, (v) Dr. Nadhīr Aḥmad, ʿAlīgarh (typescript)) and (II) *Shikār nāma* (editions: (i) Mubāriz al-Dīn Rafʿat, Ḥaydarābād, (ii) Thamīna Shawkat, Ḥaydarābād)—are also attributed to Gīsū Darāz but no convincing internal or external evidence has so far been put forward to establish the attribution.

Though these works are mostly in the nature of commentaries and summaries of earlier mystic classics, they are not wholly devoid of originality. Gīsū Darāz did not always conform to the traditional approach; in fact he had, as Shaykh ʿAbd al-Ḥaḳḳ Muḥaddith of Delhi has remarked, a peculiar *mashrab* of his own. He was critical of both Ibn al-ʿArabī and ʿAyn al-Ḳuḍāt Hamadānī. He did not agree with the author of the *Taʿarruf* that a mystic cannot have the vision of God (*ruʾyat*) here in this world. He did not permit his disciples to adopt indiscriminately the practices of the *yogīs*. He was particularly fond of the *Ādāb al-murīdīn* and the *ʿAwārif al-maʿārif*, since they were of great value for one who wanted to organize *khānḳāh* life in lands without any deep mystic tradition. There is a desire in his works to bridge the gulf between *sharīʿa* and *ṭarīḳa*, which he considered complementary rather than contradictory to each other. He explained some of the much-criticized practices of the Čishtīs (*e.g.*, prostration before the *pīr* and audition parties) in such a way that orthodox opposition to them was toned down. Great as an organizer, erudite as a scholar, Gīsū Darāz did not, however, succeed in maintaining the pan-Indian character of the Čishtī *sadjdjāda* which he occupied. The era of the great Čishtī *Shaykhs* of the first cycle ended with his master, Shaykh Naṣīr al-Dīn Čirāgh of Delhi.

Bibliography: ʿAbd al-ʿAzīz b. Shīr Malik Wāʿiẓī, *Taʾrikh Ḥabībī wa-tadhkirat Murshidī*, a biography of Gīsū Darāz, completed in 849/1445-6 (MS As. Soc. of Bengal 246); Urdu translation of the above published from Rawḍatayn, Gulbargā; Sayyid Muḥammad Husaynī, *Djawāmiʿ al-kalim*, Kānpur 1356; Muḥammad ʿAlī Samānī, *Siyar-i Muḥammadī*, Allahabad; Niẓām Yamanī, *Laṭāʾif-i Ashrafī*, Delhi 1295; Shaykh ʿAbd al-Ḥaḳḳ, *Akhbār al-akhyār*, Delhi 1309, 129-134; ʿAbd al-Raḥmān Čishtī, *Mirʾāt al-asrār*, MS in personal collection, 734-42; Sayyid ʿAlī Ṭabāṭabā, *Burhān-i maʾāthir*, Ḥaydarābād 1355/1936, 43-4; Firishta, *Taʾrīkh-i Firishta*, Nawal Kishore, i, 316, ii, 399; Ghulām Muʿīn al-Dīn ʿAbd Allāh, *Maʿāridj al-walāyat*, MS in personal collection, i, 366-438; Āzād Bilgrāmī, *Rawḍat al-awliyāʾ*, Awrangābād 1892, 18-25; Muḥammad Ghawthī Shaṭṭārī, *Gulzār-i abrār*, MS As. GIZA, GIZEH [see al-ḳāhira].

GLASS [see zudjādj].

GLĀWA, Arabicized form of the Berber Igliwa (sing. *glāwī*). Berber tribe of Morocco, belonging to the linguistic group of the *tashalḥit*. Population (1940) about 25,000 including 1600 Jews. Their territory, which straddles the centre of the High Atlas chain, is crossed by the ancient road which, at an altitude of 2260 metres/7400 feet, passes over the Tishka col, and which, from earliest antiquity, has provided communication between southern Morocco and the great palm-groves of the Wādī Darʿa. Although the tribe considers itself to be of Maṣmūdī origin, its native chiefs trace their origin to the marabout Abū Muḥammad Ṣāliḥ, the patron saint of the Moroccan town of Safi. With heads uncovered but with a black band round their foreheads, the Glāwā formerly wore the *akhnif*, a short burnous of black wool, woven in one piece, with a large red or orange medallion on the back. The Glāwā do not weave carpets; it is thus in error that their name has been given to the greatly prized products of the large neighbouring confederation of the Ayt-Wawzgit (Djabal Sirwā). The tribe achieved notoriety in the 19th century through the association of its chiefs with the penetration of the Sharīfī *makhzan* in the Atlas. Two personalities should be mentioned; the second of them became internationally known.

(1) Glāwī Madanī, born about 1863, was the son of the *amghar* [*q.v.*] Muḥammad Ibibat, whom he succeeded in 1886. The skilful way in which, in November 1893, he welcomed in his *ḳaṣaba* of Telwet (Tīwat) the old ruler Mawlāy al-Ḥasan, whose army was in difficulties in the Atlas because of cold, was the beginning of his success; he received as reward the title of *Khalīfa* for the Tafilalet and was given rifles and a cannon. He was to put these arms to good use for his policy of conquering the neighbouring tribes, and to become one of the great *ḳā'id*s of the Atlas. In 1902 he was nominated leader of the *djīsh* of Taza and was wounded and defeated by the agitator Bū Ḥmāra [*q.v.*]; he had to seek refuge in Algeria, whence the French procured his repatriation and that of his followers to Tangiers. His success was confirmed when, after having supported the claims of Mawlāy al-Ḥāfiẓ against his brother Mawlāy ʿAbd al-ʿAzīz, he succeeded, after his protégé had become sultan, in getting himself appointed as grand vizier of the Sharīfī government (14 June 1908). He used his power to impose his authority over vast territories, situated between Wādī Tensift and Wādī Darʿa. He fell from favour on 26 May 1911, played an active part during the temporary occupation of Marrākush by the "Blue Sultan" al-Hiba in 1912, and managed with difficulty to join the French. In 1913, with the accession of Mawlāy Yūsuf, he was restored to his high office and built an imposing palace at Marrākush where he died suddenly on 13 August 1918.

(2) Glāwī Tihāmī, the younger brother of Glāwī Madanī, who appointed him pasha of the town of Marrākush by a *ẓahīr* of 8 July 1909. He shared in his brother's disgrace in 1911 but was restored to office at the time of the French occupation of Marrākush, in September 1912. When his brother died he succeeded him in his high office and, with the help of his son, held the double appointment until his death. A courageous and experienced warrior and a devout Muslim (he twice performed the Pilgrimage), this harsh ruler kept the tribes and the town which he governed in fear and in poverty, but also in peace. Settled at Marrākush, in the triple palace which he had built for himself, he loved to offer extravagant hospitality to illustrious guests from all parts of the world, who would then proclaim afar his power, his generosity and his political acumen, thus contributing to the rise of tourism in Morocco. During the war of 1939-45 he was unshakeably faithful to the Allied cause and one of his sons, an officer in the French army, was killed in Italy. In 1953 he led a conspiracy of Berbers and Marabouts which resulted in the expulsion of the sultan Sayyidī Muḥammad. When the latter returned, in November 1956, he obtained *amān*, and died in his palace on Monday 23 January 1957.

GOG AND MAGOG [see yādjūdj wa-mādjūdj].

GOGO [see gao].

GÖK TEPE (Turkish "blue hill"), transcribed in Russian "Geok Tepe", a fort in the oasis of the Akhal-Teke [*q.v.*] Turkmen, on the Sasīk su (Sasīk Āb), situated about 45 km. west of ʿAshkābād, today in the Soviet Republic of Turkmenistān. It consists

of a series of isolated places, one of which, Dengil Tepe ($4^1/_2$ km. in circumference), was defended from 1 until 24 Jan. 1881 (new style) by about 12,000 Akhal-Teke Turkmen [see TEKE] against the Russians under General Mikhaïl Dmitrievič Skobelev (about 8,000 Caucasians and Turkestanis). Both sides suffered heavy losses, and after the capture of the fort, the majority of the Turkmen defenders were slain during four days of looting, or as they fled. Later, the Russians set up a new fort in a similar oasis, near Dengil Tepe; since 1883 the Trans-Caspian Railway has also reached this place in which a museum commemorates the battle.

(B. SPULER)

GÖKALP, ZIYA, Turkish thinker, born Meḥmed Ḍiyā' (Ziya) at Diyārbakr in 1875 or 1876 and known by his pen name after 1911. Ziya became acquainted with the Young Ottoman ideas of patriotism and constitutionalism through his father, who died having entered him in the modern high school to learn modern sciences and French. From his uncle he learned Arabic, Persian, and the traditional Muslim sciences and became acquainted with the works of the Muslim theologians, philosophers, and mystics. The clash of orthodoxy, mysticism and modern science in his mind, heightened by the uncle's opposition to his aspirations for a higher education in Istanbul, led Ziya to attempt suicide from which he was saved by his elder fellow-townsman Dr. ʿAbd Allāh Djewdet [*q.v.*]. His subsequent career was an intellectual sublimation of his struggles between the three influences, and may be separated into three phases.

His liberal and revolutionary phase began with his coming to Istanbul to attend the school of veterinary medicine, and entrance into the secret Society of Union and Progress. He was arrested in 1897, sentenced to one year of imprisonment, and exiled back to Diyārbakr.

Following the Revolution of 1908, Ziya became the leading Ottomanist liberal writer and lecturer in Diyārbakr. His change into an idealist populist and nationalist, marking the second phase of his career, occurred in Salonika where he went in 1909 as a delegate to the convention of the Union and Progress and remained, having been elected to its central committee. He became associated with a group of young writers connected with the periodicals *Genč Ḳalemler* (Young Pens) and *Yeni Felsefe Medjmūʿasi* (New Philosophical Review) who were interested in the democratization of the language and literature, and in the development of a new ideology to serve as a guide in the social transformation believed to have been begun by the Revolution of 1908. The group crystallized two tendencies, one materialistic and socialistic and the other idealistic and nationalistic. Gökalp became the leader of the second while the first soon disappeared.

From 1912 to 1919, Gökalp lived in Istanbul, this being the most influential phase of his career. His acquaintance with émigré intellectiuals from Kazan, the Crimea, and Azerbaijan gave a more pan-Turkist colouring to his nationalism, though he did not subscribe to their racist tendencies. He remained primarily the nationalist ideologist of the Turks of the Ottoman Empire, who he believed had to cultivate national consciousness in face of the challenges of the non-Turkish nationalities of the dissolving empire. His key concept was that of "culture" as distinct from "civilization", and defined as the values and institutions distinguishing one nation from others comprised in a common civilization. The Turkish nation would emerge by a transference from the orbit of Eastern to that of Western civilization. In that transformation those elements of Islam that had become part and parcel of the Turkish culture would remain as a living spiritual force. The Turkish nation would be Westernized in so far as it succeeded in harmonizing modern civilization with its own culture and faith. In a series of articles and through his lectures as professor of sociology at the University of Istanbul he elaborated his approach, to demonstrate its application to the reforms needed in education, language, family, law, economy, and religion.

Following the end of World War I, Gökalp was exiled by the British to Malta together with several Turkish statesmen and intellectuals. Upon his release in 1921 he joined the national movement led by Mustafa Kemal. Though he fully supported the Kemalist reforms, he did not attain the position of foremost ideologist of the more radical Kemalist régime. He died in 1924, while a member of the Grand National Assembly.

Gökalp wrote poetry, but was primarily an essayist. His only book, *Türk medeniyeti ta'rikhi* (The History of Turkish Civilization) which he began shortly before his death, remained unfinished; one volume, covering the pre-Islamic period, was published posthumously (Istanbul 1341). He attained nationwide fame as a thinker, but some of his ideas were overshadowed by the Kemalist reforms, some were distorted by the anti-Kemalist Pan-Turkists, while others were rejected after his death. The establishment of modern Turkey as a secular nation-state is greatly indebted to the orientation prepared by Gökalp's ideas. One of his inadvertent influences has been outside Turkey: Sāṭiʿ al-Huṣrī, who was one of his liberal opponents until he left Turkey in 1919 to join the Arab national movement, seems to have appropriated Gökalp's theory of nationalism, his social philosophy, his secularism, and his concept of national education.

(NIYAZI BERKES)

GÖKČAY [see GÖKČE].

GÖKČE-TENGIZ, GÖKČE-GÖL or GÖKČE-DENIZ; otherwise Sevan, from Armenian *Sew-vank*, 'Black monastery'; a great lake in the Armenian Soviet Socialist Republic, approx. 40° 20° N and 45′ 30′ E. Triangular in shape, Lake Gökče lies 6,000 feet/1830 metres above sea level and is surrounded by barren mountains; its area was formerly reckoned at 540 sq. miles and maximum depth 67 fathoms, but the level of the lake is being systematically lowered in connexion with the important system of hydro-electric stations on the river Zanga, which flows from the lake into the river Aras, and supplies a large part of the energy requirements of Soviet Armenia. A lava island (now peninsula) at the north-west corner is surmounted by two ancient Armenian monasteries, the monks of which were much persecuted following the Arab conquest in the 1st/7th century (cf. J. Muyldermans, *La domination arabe en Arménie*, Louvain 1927, 95). Lake Gökče is scarcely mentioned in Islamic sources prior to Ḥamd Allāh Mustawfī Ḳazwīnī [*q.v.*], but subsequently features in the accounts of Ottoman-Persian conflicts in this area, as well as during the Russian conquest of Transcaucasia early in the 19th century. The lake is famous for its succulent fish, particularly a trout called *ishkhan*, which form the basis of an important industry. Lake Gökče is not to be confused with several rivers called Gökčay ('Blue stream'), *e.g.*, one in Shīrwān, another in Anatolia between Sivas and Kayseri.

Bibliography: H. F. B. Lynch, *Armenia. Travels and studies*, 2 vols., London 1901; Le Strange, 183; *BSE*, 2nd ed., tom 38, 294-95, art. 'Sevan'. (W. BARTHOLD-[D. M. LANG])

GÖKLÄN, a Turkmen tribe mainly inhabiting the country round Bojnurd in northern Persia, but with some elements in the Turkmen SSR and the Kara-Kalpak ASSR of the Soviet Union. The number in Persia is difficult to determine but is probably about 60,000. Soviet sources now tend to avoid tribal distinctions, but according to the 1926 census there were 17,000 Göklän in the Kara-Kala district of the Turkmen SSR (South of Kizyl-Arvat) and some 38,000 in the area lying between Il'yaly (S. of Khodzheyli) and Turtkul' in the Kara-Kalpak SSR. The tribe was formerly divided into a number of clans (Čakur, Kirik, Bayandïr, Ḳayi, Yangak, Saghrï, Ḳara-Balkan, Ay-Derwīsh, Erkekli, Sheykh Khodja) only traces of which now remain. The Göklän appear never to have been nomads, being occupied mainly with silk and more recently with cotton growing. Those in the Kara-Kala district are mostly market gardeners. They were in the past traditional enemies of the large Yomud and Teke tribes and were wont to side with the Russians during the latter's campaigns in the Turkmen country in the last quarter of the 19th century. They are nominally Muslim by religion.

GÖKSU, literally 'blue water', name given by the Turks to numerous rivers or streams, notably (1) one of the two small rivers flowing into the Bosphorus, by the confluence of which were the pleasure gardens between Kandilli and Anadolu hisarı called 'The Sweet Waters of Asia', a place particularly frequented in the 19th century by Ottoman and Levantine society; (2) the great river (168 miles/270 km long, drainage basin of 4000 square miles/10,350 sq. km) of Cilicia Trachea, the ancient Kalykadnos, the course of which occupies the axis of a large sedimentary marine miocene basin, corresponding to a saddle in the arc of the central Taurus. The regime, pluvio-nival, is that of Mediterranean regions, slightly modified by the retention of water in the Karst. In antiquity it was used for navigation (Ammianus Marcellinus, XIV, 2, 15; 8, 1); it has always been used for floating timber, and recently for the irrigation of the delta plain of Silifke (Saysulak barrage) and for hydro-electric power (two barrages on the upper left branch producing 18 million KW per hour).

GOLKONḌĀ, renamed Muḥammadnagar by Sulṭān Ḳulī Ḳuṭb al-Mulk, the founder of the Ḳuṭb Shāhī [*q.v.*] dynasty, a hill fort about five miles west of Ḥaydarābād (Deccan) [*q.v.*], is situated in 17° 23′ N., 78° 24′ E. The hill rises majestically in a vast boulderstrewn plain. The site is a natural one for the construction of fortifications, as the summit,

called Bālā Ḥiṣār or acropolis, is about four hundred feet above ground level and commands the whole countryside. The name, Golkonḍā, is derived from two Telugu words, *golla* (shepherd) and *konḍa* (hill). There is no doubt that part of the fortifications go back to pre-Muslim times, for certain constructions, such as a wall by the side of the Fatḥ Darwāza, are built of huge granite blocks piled one upon the other, which is characteristic of pre-Muslim citadels of Āndhra Pradesh such as parts of the historic fort of Konḍāpallī. Golkonḍā was ceded to Muḥammad Shāh Bahmanī by the Rādjā of Warangal in 764/1363, but did not become the capital of the *ṭaraf* or province (later, kingdom) of Tilang-Āndhra till the governorship of Sulṭān Ḳulī Ḳuṭb al-Mulk in 900/1494-5. Golkonḍā's glories were rivalled by the foundation of Ḥaydarābād [*q.v.*] in 1000/1591-2. In the heyday of its history Golkonḍā was the centre of trade and commerce where travellers, architects, calligraphers, learned men and men of the world thronged, and this inevitably resulted in a vast increase in the population of the walled city which led to the foundation of the new "City of Ḥaydar". Golkonḍā, however, remained the emporium and centre of the diamond trade of the Orient.

The fortifications of the city and the Bālā Ḥisār are threefold. The outermost circumvallation, which protects the whole city, is about 8,000 yards in circumference, enclosing a vast area, more or less oval in shape, with the rectangular *nayā-ḳilʿa*, "new fort", constructed in 1624, jutting out rather abruptly to the north-east. This wall, which is crenellated throughout, rises to an average of 55 feet, with 8 strong gates and 87 bastions, each with its own name. Four gates are still open: the Fatḥ Darwāza or "Victory gate" (through which the conquering army of Awrangzīb entered the city), the Makkī Darwāza, "Mecca gate", completed 967/1590, the Bandjāra Darwāza leading to the Ḳuṭb Shāhī tombs (which form a majestic sky-line in the neighbourhood), and the Mōtī Darwāza, "pearl gate". A very interesting bastion is the Naw Burdjī, "nine-lobed", which juts out of the defensive wall of the *nayā ḳilʿa* in a corrugated form, perhaps intended to provide a greater field for defence in all directions (but see Burton-Page in *BSOAS*, xxiii/3 (1960), 520). For other bastions see BURDJ, iii.

About 900 yds. above the Fatḥ Darwāza is the Bālā Ḥisār Darwāza, "acropolis gate", the entrance to the second line of defending walls. A short distance to the north of this gate is the Djāmiʿ Masdjid, erected by Sulṭān Ḳulī Ḳuṭb al-Mulk in 924/1518, in which he was assassinated some 25 years later. From this gate the road upwards is very steep, with hundreds of steps with recesses for resting. Half-way up the hill run the double walls which constitute the third line of defence. On the left are palaces, women's apartments, mosques, arsenals, offices, granaries, magazines, and on the right, open ground, parks and groves, wherever a space could be found for them. Before the Bālā Ḥiṣār proper is a well-preserved mosque reputedly erected by Ibrāhīm Ḳuṭb Shāh, and within a few yards of the Throne Room and the acropolis proper is an ancient Hindū temple which was renovated by the Brāhmin ministers of the last Ḳuṭb Shāhī king. There is another very steep path, also served by a number of irregular steps, connecting the lower palaces with the Bālā Ḥiṣār, and by the side of this can be seen the system of raising water from the ground level to the topmost citadel. There is a series of tanks, at different levels; the water was raised by teams of oxen at each level pulling huge leather buckets by rope and pulley and pouring it into the higher cistern. The waste water was brought down through earthen pipes which still exist.

The Bālā Ḥiṣār Darwāza is remarkable not merely for its mantlet but also for the figures and emblems of Hindū mythology which are worked in stucco between the arch and the lintel. Perhaps an even more remarkable structure is a small gateway piercing the penultimate fortification. It is a pillar and lintel gate surmounted by a fairly flat arch. In the centre of the broad stone lintel is a beautiful circular medallion with the lotus motif flanked by mythical figures of Yālī, half dog and half lion, and swans with snake-like worms in their beaks. Above the lintel is a simple pointed alcove surrounded by representations of lion-cubs, peacocks and parrots. The whole composition symbolizes the synthesized Indo-Muslim culture of the Ḳuṭb Shāhī period.

The Golkonḍā tombs, standing outside the fort to the north-west, are a group of some twenty buildings seven of which are tombs of the kings. Their appearance is uniform: typically a square building with an arcaded lower storey, supported on a massive plinth which may itself be arcaded; the lower storey bears a crenellated parapet with a small *mīnār* at each corner, and centrally a tall drum, which may be arcaded and balustraded, supporting a single dome arising from a band of petal-like foliations as in the Bīdjāpur [*q.v.*] domes. The grey granite is usually covered with stucco and with encaustic tiles. The projecting cornices are elaborately worked with plaster designs; this, and the addition of miniature decorative arcaded galleries encircling the *mīnār*s, are characteristic of the Ḳuṭb Shāhī buildings here and at Ḥaydarābād. An important early building in the group is the mortuary where the bodies were washed, the arches of which continue the Bahmanī [*q.v.*] style. For illustrations of these buildings see HIND, Architecture.

The city of Golkonḍā was the most important mart for diamonds in Asia, as described by, *e.g.*, Marco Polo in 1292, Nicolo Conti in 1420, Tavernier in 1651, and it was here that diamonds were cut, polished and shaped and then exported to all parts of the world.

GOMBROON, GOMBRUN [see BANDAR ʿABBĀS].

GONDAR [see ḤABASH].

GONDĒSHĀPŪR, (Arabic form Djundaysābūr) a town in Khūzistān founded by the Sāsānid Shāpūr I (whence the name *wandēw Shāpūr* "acquired by Shāpūr", cf. Nöldeke, *Geschichte der*

Perser, 41, n. 2), who settled it with Greek prisoners. It is the town known as Bēth-Lāpāt in Syriac, corrupted to Bēl-Ābādh, now almost unrecognizable in the form *nīlāb* and *nīlāṭ*; the site is marked at the present day by the ruins of Shāhābād (cf. Rawlinson in the *Journ. of the Royal Geogr. Soc.*, ix, 72; de Bode, *Travels in Luristan*, ii, 167). The town was taken by the Muslims in the caliphate of ʿUmar by Abū Mūsā al-Ashʿarī in 17/738, after the occupation of Tustar; it was surrendered on terms (Balādhurī, 328). Sayf b. ʿUmar's story in Ṭabarī, i, 2567, and Ibn al-Athīr, ii, 432, according to which the fall of the town was the result of a forgery made by the slave Mukthif, seems to be a romantic fiction. The skin of Mani [*q.v.*] was hung on a gate of the city. Gondēshāpūr was the capital of Yaʿḳūb b. Layth al-Ṣaffār (262-3/875-7), who died there in 265/878. In Yāḳūt's time only a few ruins marked the site of the town (ii, 130).

Bibliography: Al-Bīrūnī, *Chronology*, 191; Barbier de Meynard, *Diction. géogr. de la Perse*, Paris 1861, 169 f.; Nöldeke, *Gesch. d. Perser u. Araber*, 40-2; Brockelmann, I, 201; Ṭabarī, i, 2567; Ibn al-Athīr, vii, 201, 213, 231; Wüstenfeld, *Jacut's Reise*, in *ZDMG*, xviii, 425.

(CL. HUART)

Gondēshāpūr's main title to fame lies in its importance as a cultural centre which influenced the rise of scientific and intellectual activity in Islam. Its importance was enhanced by its having been closely associated with a secular field of learning, namely medicine, and by its having been the foremost representative of Greek medicine.

There was a hospital at Gondēshāpūr where, unlike the Greek *asclepieia* and the Byzantine *nosocomia*, treatment seems to have been based solely on scientific medicine. At any rate, this was a characteristic of the hospitals of Islam, for which the hospital at Gondēshāpūr may have served as model. The fourth Islamic hospital founded in Islam (by Hārūn al-Rashīd) was in fact built and run by Gondēshāpūr physicians.

There was a medical school at Gondēshāpūr which was probably in close association with the hospital there. There is also evidence of its ties with the Gondēshāpūr school for religious instruction. Systematic Gondēshāpūr influence on Islamic medicine seems to have started during the reign of Hārūn al-Rashīd, when Gondēshāpūr physicians began to take up their residence in Baghdād. Ḥārith b. Kalada, the Arab doctor contemporary with the Prophet, is said to have studied medicine at Gondēshāpūr. This story presents certain chronological difficulties in its details, however, and is, very likely, of a legendary character.

Arabic sources contain stories which trace back the medical interest of the district of Gondēshāpūr to a physician who had come from India. These stories imply that this initial Indian influence found a fertile ground for development in the Byzantine settlers of Gondēshāpūr which included a group of doctors and that this medical knowledge was further enriched in time through cumulative experience in treatment and through contact with local medical traditions. It is difficult to determine the factual value of such reports. The transformation of Gondēshāpūr into an important medical centre was undoubtedly the work of the Nestorians. But this may not have effectively taken place before the reign of Khusraw I Anūshīrawān (531-579 A.D.).

It is likely that the Gondēshāpūr medical teaching was modelled upon that of Alexandria and Antioch but that it became more specialized and efficient in its new Persian home. Apart from its influence as a medical centre, Gondēshāpūr may, more generally, be looked upon as a place through which the Nestorian heritage of Greek learning of Edessa and Nisibis passed to Baghdād.

(AYDIN SAYILI)

GÖNÜLLÜ, Turkish word meaning 'volunteer', in the Ottoman Empire used as a term (sometimes with the pseudo-Persian plural *gönüllüyān*, in Arabic sources usually rendered *djamulyān* or *kamulyān*) for three related institutions:

1. From the earliest times of the Ottoman state, volunteers coming to take part in the fighting were known as *gönüllü*; their connexion with the *mutaṭawwiʿa*, *ghāzīs* [*qq.v.*], of earlier Muslim states is evident (see M. F. Köprülü, *Les origines de l'Empire Ottoman*, Paris 1936, 102-3; İ. H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1942, 59). A high proportion of the *ghāzīs* and *aḳindjis* [*q.v.*] on the *udj* (the march-lands) of the Ottoman state were such *gönüllüs*. With the promise of the grant of *tīmārs* and *ʿulūfe* [*qq.v.*] the State encouraged men to join the army, especially when a major campaign was in prospect; the text of a firman, issued before the Moldavian campaign of 889/1484, by which the Sultan ordered such a proclamation to be cried in public, survives (in the registers of the *ḳāḍīs* of Bursa, A. 4/4), and it is recorded that a group of *gönüllü* came from Antalya to join the Ottoman army attacking Cyprus (978/1570). Such volunteers are found throughout Ottoman history, and this was the principal means by which native Muslims could become timariots or enter the ranks of the *Ḳapï-ḳullarï* [see GHULĀM], for volunteers who distinguished themselves were granted *tīmārs* or *zeʿāmets* [*qq.v.*] or admitted to the *Ghurabāʾ* [*q.v.*] regiments; the rest were appointed to the bodies of *gönüllüyān* who performed garrison duties in the fortresses of the Empire, being supported by *ʿulūfe*. In the 11th/17th and 12th/18th centuries, with the ever-increasing need for men, the *gönüllü bayraghï* was unfurled and *gönüllü* troops, serving for pay, were recruited; this must have been a continuation of the old tradition.

2. In the 10th/16th century we find an organized body known as *gönüllüyān* in most of the fortresses of the Empire, in Europe, Asia and Egypt. It resembled the bodies of *müstaḥfiẓlar* and *beshlüyān*; its characteristics were that its members performed garrison duties, served for pay (*ʿulūfe*), and had for the most part begun as volunteers. It was organized, like the *Ḳapï-ḳullarï*, into *djemāʿats* and *bölüks*. Reference is found to two main groups, the *Sagh Gönüllüler* (or *Gönüllüyān-i yemīn*, 'of the right') and the *Sol Gönüllüler* (or *Gönüllüyān-i yesār*, 'of the left'). In the main fortresses they formed two *djemāʿats*, *süwārī* (cavalry) and *piyāde* (infantry). Each *djemāʿat*

was commanded by an *agha*, and each was divided into *bölük*s of 10-30 men each. The first *bölük* of the cavalry was called *Agha bölüğü*, and the second *Ketkhudā* (*Kahya*) *bölüğü*; the first *bölük* of the infantry was the *Ketkhudā bölüğü*. Every *bölük* had a *Bölük-bashi* (or *Ser-bölük*). In 1025/1616 the daily pay of the *Agha* was 50 *akčes*, of the Clerk (*Kātib*) 20-25, and of the *Ketkhudā* 20-25; each *Ser-bölük* received 10-20 (for details see *Defter-i esāmī-i gönüllüyān-i süwārī we piyādegān we müstahfizān-i kalʿa-i Ḥaleb*, Istanbul, Başvekâlet Arşivi, maliye 2/6467). In 963/1556 the *gönüllü*s of Cairo received between 10 and 16 *akčes*, in 1130/1718 those of the fortress of Nish received 14 *akčes* a day. The establishment (known as *gedük* or *gedik*) of each *djemāʿat* was fixed. In the 10th/16th century, when there were vacancies, in response to a *tedhkire* [*q.v.*] from the *beg* or the *defterdār* of the *eyālet*, a *berāt* [*q.v.*] of the Sultan would be issued granting these vacancies to volunteers who had distinguished themselves on the frontiers, so-called *yarar yiğitler* and *yoldashlar*, the sons of *gönüllü*s, and Janissaries. There were in the fortresses separate *djemāʿat*s of pensioners (*mütekāʿid*) and *kul-oghullari* [see YEÑIČERI] connected with the *gönüllüyān*.

The *gönüllü*s in the fortresses might be called out to serve on a campaign or take part in frontier-fighting. Those that distinguished themselves might be granted *tīmār*s; in the 11th/17th century it could happen that distinguished *agha*s of the *gönüllü*s were appointed *sandjak-begi*.

3. In the 11th/17th century a body known as *gönüllüyān* is mentioned also among the paid auxiliaries who, under various names, were recruited in the provinces to serve on a campaign. In 1131/1718 a formation of auxiliaries called *sekbān* was abolished, and it was ordered that their place should be taken by the raising of *dīwānegān* (*deliler*), *fārisān*, *ʿazebān* and *gönüllüyān*; but the dismissed *sekbān*s re-enlisted in the new formations and continued their misdeeds. These groups, the *gönüllüyān* included, frequently cast off all obedience and discipline and plagued the provinces with their depredations.

GŌRĀN [see GŪRĀN].

GÖRDES, a small town in eastern Anatolia (38° 55′ N., 28° 17′ E.) at an altitude of about 1,500 ft on the banks of the Kum Çay. The town, with a small local market, has now lost all importance but it was famous until the beginning of the 19th century as an important centre for the making of prayer rugs. The population in 1960 was 5,071.

GUARDAFUI, the cape at the north-east tip of the Horn of Africa, in Somalia, known also as Raʾs ʿAsīr, and, according to ʿAlī Čelebī, as Raʾs al-aḥmar. It was the Ἀρωμάτων ἀκρωτήριον of the *Periplus* and Ptolemy and the νότον κέρας of Strabo. The origin of the name is uncertain; the present form is one of several variants occurring in the Portuguese writers. It may be connected with Masʿūdī's Djafūnā and it appears as Dj.rd.fūn in the rutters of Ibn Mādjid and in ʿAlī Čelebī. Many absurd etymologies have been proposed. It may include the name Ḥafūn, given to a prominent cape further to the south. Guillain states that the local inhabitants gave the name Djardafūn not to Guardafui but to a small promontory a few miles away. It belongs to the area in which the Somali are first found and was once populated by Dir, later expelled by Dārod (Madjērtēn). There is a small group of Mahrī descent who have intermarried and speak Somali.

(C. F. BECKINGHAM)

GUDĀLA, small Berber tribe belonging to the great ethnic group of the desert Ṣanhādja (the Berber phoneme *g* is usually rendered in Arabic script by a *djīm* but Ibn Khaldūn, in his system of transcription, writes it as a *kāf* which, in the original manuscript, presumably had a diacritical point placed above or below). They lived in the southern part of what is now Mauritania, to the north of the Senegal and in contact with the ocean. To the south their territory bordered the land of the Negroes; to the north, in the present Ādrār of Mauritania, lived their Ṣanhādja "brothers", the Lamtūna and the Massūfa.

Like the other desert Ṣanhādja, the Gudāla were essentially nomadic camel-drivers, and possessed fast dromedaries (*nadjīb*, pl. *nudjub*). Nevertheless they possessed a town, Naghīrā (reading uncertain), at a distance of about six stages from the river Senegal, and so probably in what is now Tāgānt.

Along the shores of the Atlantic they collected quantities of ambergris and caught enormous sea turtles the flesh of which they ate. There too they possessed, on the island of Āwlīl, not far from the mainland, a famous salt-pan. As al-Idrīsī places this island at about one *madjrā* (at most 150 kilometres/100 miles) from the mouth of the Senegal, it cannot have been, as was suggested, either Arguin or Tidra. With greater probability, it has been suggested that Āwlīl was the present Īn-Wolalan, between Nwākshōṭ and Saint-Louis.

At the beginning of the 5th/11th century the supremacy over the Ṣanhādja of the desert was held by the chiefs of the Lamtūna. Towards 425/1034 it was the Gudāla chief Yaḥyā b. Ibrāhīm who held it. On returning from a pilgrimage to Mecca he brought back with him from Sūs, to convert the Ṣanhādja to Islam, the famous ʿAbd Allāh b. Yā-Sīn al-Djazūlī,

who was to launch the Almoravid movement. After the death of Yaḥyā b. Ibrāhīm the supremacy returned to the Lamtūna, in the person of Yaḥyā b. ʿUmar, and then of his brother Abū Bakr. From then on the Gudāla no longer made common cause with the Almoravid movement, in which mainly the Lamtūna and the Massūfa took part. After the expedition against Sidjilmāsa they retired to their territory in the Sahara, where they fought sometimes with the Negroes, sometimes with those of the Lamtūna who had remained on the spot.

They undoubtedly ended by wiping out the latter. In the second half of the 8th/14th century Ibn Khaldūn places them immediately to the south of al-Sāḳiya al-Ḥamrāʾ, in contact with the Dhawū-Ḥassān, nomadic Arabs of the Maʿḳil group. Later on the latter were to advance towards the south and occupy present-day Mauritania. At this point the Gudāla disappear from history. Their name is now attested only by two very small fractions of Gdāla, one in the north, in Tīrīs, the other in the south, among the Brākna.

GŪDJAR (Gudjdjar, Gurdjdjar), name of an ancient tribe, wide-spread in many parts of the Indo-Pakistan subcontinent, akin to the Rādjpūts, the Djāts [*q.v.*], and the Ahīrs, who are claimed by Gudjdjar historians as off-shoots of the main stock. Both Western and native writers agree that the tribe migrated to the plains of Hindustan from Central Asia sometime in the middle of the 5th century A.D. Tall, handsome, wirily-built, and of a fair complexion, they are believed to be descendants of either the Scythians or the White Huns. The view of a minority of Gudjdjar historians, that they are of indigenous origin, finds little support. Largely agriculturalists, they also herd cattle and sell milk and other dairy products, but with the spread of education and a desire for bettering their economic condition they have taken to other occupations, mainly in the undivided Pandjāb and the Uttar Pradesh (India), and adopted a settled way of life.

The word Gurdjdjara first occurs in Bāna's *Harśačritra* where Harsha Vardhana's father Prabhākaravardhana is described as "the one who kept Gurdjdjara awake" (cf. K. M. Munshi, *Glory that was Gurjara-Deśa*, Bombay 1955, i, 3). Here Gurdjdjara stands for the "king of Gūdjars", the *malik al-djuzar* of the Arab historians (cf. al-Sīrāfī, *Silsilat al-tawārīkh*, Paris 1881, 126-7; al-Balādhurī, *Futūḥ*, 446; Ibn Rusta, *al-Aʿlāḳ al-nafīsa*, Leiden 1892, vii, 137; Ibn Khurradādhbih, 16, 66; al-Masʿūdī, *Murūdj*, i, 383-4), who ruled over Gudjarātra, whose boundaries it is difficult to fix precisely but which extended not only to the Narmda but also included parts of modern Saurāshṭhra and Rādjasthān, with its capital at Bhīlamāla or Bhinamāla (Bīlamān of the Arab historians, perhaps representing the colloquial pronunciation) near the present Mount Abu. This was a famous centre of swordmaking. Swords made here were highly prized, and there are several references in Arabic literature to the sword of Bīlamān (cf., *e.g.*, al-Kindī, *al-Suyūf wa adjnāsuhā*, ed. ʿAbd al-Raḥmān Zakī, Cairo 1952, 9-10, where it has been corrupted into *Sulaymāniyya*). In all probability this was the sword described by Arabic lexicographers as *al-muhannad* (cf. *Lisān*, s.v., *TA* under *HND*).

In course of time four ruling families of the Gurdjdjars emerged as empire-builders. These were: (1) The Paramāras or Paṅwāras, (2) the Pratīhāras or Parīhāras, (3) the Čāhamānas or Čawhānas and (4) the Solankīs or Čawlūkiyas known to the Arabs as the *Ṣalūḳiyya* (cf. Ibn Rusta, 135; al-Djāḥiẓ, *Ḥayawān*, Cairo 1945, i, 184, ii, 198, where *Ṣalūḳiyya* dogs are mentioned). Of these Mihir Bhodja the Great (836-890 A.D.), a Pratīhāra king, with his capital at Ḳannawdj, has been described as a mighty ruler. He had a well-equipped and strong army (Gurdjdjar-Bālā), and his military exploits made him a popular hero. Among the Čawhānas Prithvirādja of Delhi was the last notable ruler; he suffered defeat at the hands of Muʿizz al-Dīn Muḥammad b. Sām in 588/1192 at Tarāʾoṛi (Tarāʾin, near Karnāl). This victory paved the way for the foundation of a Muslim empire in India.

It has also been established that the Sultans of Gudjarāt, of whom Maḥmūd Begara (863/1458-917/1511) and Bahādur Shāh (932/1526-943/1536) (see Gudjarāt) deserve mention, were of Gudjdjar origin, belonging to the Tāṅk branch of the Pramāras (cf. ʿAbd al-Mālik, *Shāhān-i Gūdjar*, Aʿẓamgaṛh, 1353/1934, 333 ff.); Ibn Khurradādhbih (16) also refers to the *malik al-Ṭāniḳ*, along with the *malik al-djuzar*. *Ṭāniḳ*, is obviously the Arabicized form of Tāṅk (variants Tāk, Tak, Taksh); this identification eluded both the historians of India and Arabists.

The Gudjdjars seem to have spread all over the country and founded many towns and places, some of them still bearing their name, as Gūdj(a)rānwāla, Gūdjarkhān, Gudjrāt, Godjara, and Gūdjargadh.

They were quite numerous in the Sahāranpur district of India and the neighbouring territory, which was known until 1857 as Gudjarātta or Gūdjaradeśa. A headstrong and prosperous tribe they were a source of great trouble to Bābur [*q.v.*] and Shēr Shāh Sūr [*q.v.*]. Notorious for their habit of plundering, they harried the British and the local people during the military uprising of 1857. Consequently they suffered heavily, losing their leaders and many of the *djāgīrs* that they had held during the Moghul period. The Gūdjars of Delhi and the neighbourhood harried and plundered refugees who fled from the city when it fell to the British in 1857. Even the members of the ex-royal family were not spared. (Cf. *Taʾrīkh-i Gurdjdjar*, ii, 415-6; Percival Spear, *Twilight of the Moghuls*, Cambridge 1951, 202, 207, 211; Ḥasan Niẓāmī, *Ghadr-i Dihlī ke Afsāney*: *Dihlī ki Biptā* (in Urdu), Delhi n.d., 34, 52, 59).

In Hazāra (Pakistan), Djammū, Kāṅgṛa (India) and some parts of Kashmīr there exist small pockets of Gūdjars who still lead a nomadic life. They move from place to place, in single families or in small groups, and pitch their tents or erect their ramshackle huts where they find grass and fodder for their animals. They speak a dialect known as Gūdjarī or Godjarī, which Grierson characterizes as a corrupt form of the Mēwātī dialect of eastern Rādjpūtāna.

It was the emperor Akbar [*q.v.*] who forced the Gūdjars to adopt a settled life. Thus many towns in the Pandjāb with the prefix Gūdjar, peopled mainly by this tribe, came into existence (Gudjrāt [*q.v.*], however, was founded by Alkhān, a Paṅwāra Gūdjar and commander-in-chief of the army of Mihir Bhodja). When they adopted Islam is not known; even to this day both Muslim and Hindu Gūdjars are found living as close neighbours. Many of the ceremonies and customs prevailing among them are of purely Hindu origin, for many of the Muslim Gūdjars take pride in being converts from Hinduism. They regard as their national

heroes Djaypāla, the Hindu-Shāhiyya ruler of Lahore, whom Maḥmūd Ghaznawī defeated, Mihir Bhodja Pratīhāra, whose grandfather Nāga Bhaṭṭ II (792-825 A.D.) has been described as the inveterate enemy of the Arabs, Rādja Dāhir of Alōr, defeated and killed by Muḥammad b. Ḳāsim, Rāna Sāṅga and Rāna Pratāp of Mēwāṛ, and look upon their Muslim conquerors as despoilers and enemies of the Gurdjdjaras, because they destroyed their kingdoms, raided and looted their territories and subjected them to all sorts of indignities (cf. ʿAlī Ḥasan Čawhān Gurdjdjar, *Taʾrīkh-i Gurdjdjar*, Karachi 1960, iii, especially ch. iii and iv, which are full of the bitterest invective against the Muslim conquerors and invaders).

Bibliography: Ḥ. ʿAbd al-Ḥaḳḳ, *Tawārīkh-i Gūdjarāṅ maʿa ansāb-i Gūdjarāṅ*, Lahore 1931, wherein he refers to two Persian MSS on the history of the Gūdjars — (1) *Mirʾāt-i Gūdjarān* by Shaykh Djamāl Gūdjar and (2) *Muraḳḳaʿ-i Gūdjarān* by Čawdharī Fayḍ Muḥammad, but no copies of these works seem to be extant; Abu ʾl-Barakāt Muḥammad ʿAbd al-Mālik, *Shāhān-i Gūdjar*, Aʿẓamgaṛh 1353/1934; Rāna Muḥammad Akbar Khān, *Gudjdjar-Gūṅdj*, Lahore 1955; K. (A. S. Bazmee Ansari)

GUDJARĀT, a province of India on the north-west of its coastline, lying east of the Raṇ of Kačč̣h [*q.v.*] and broadly divided into Mainland Gudjarāt and Peninsular Gudjarāt (Kāṭhīāwāṛ, the ancient Sawrāshṭra, modern Sōraṭh). Mainland Gudjarāt is approximately the area of the plains in the lower reaches of the rivers Sābarmatī, Mahī, Narbadā and Tāptī, bounded north by the Mārwāṛ desert, east by the line of hills running south-east from Ābū to the Vindhyas. It takes its name (Sanskrit *Gurjarātra*) from the widespread Gūdjar (Skt. *Gurjara*) tribe, who, it has been suggested, entered India with the White Huns at the end of the 5th century A.D., and who in many ways closely resemble the Djāṭs [*q.v.*]; the name was even applied to the country north of Adjmēr in the 9th century A.D., but by the 11th-13th centuries, just before the coming of Islam, Gudjarāt referred particularly to the domains of the Solankī kings of Aṇahilwāḍā whose boundaries were much as described above.

(a) The ancient history of Gudjarāt covers a period of some 15 centuries before the advent of Islam at the end of the 7th/13th century: the Mawrya dominions extended to Sawrāshṭra in the 4th century B.C. (inscription of Aśoka at Djunāgaṛh [*q.v.*]); the region was under the Śaka satraps until the 4th century A.D. when it passed to the Guptas; after their overthrow by the Huns there followed the Valabhīs (perhaps overthrown by the Arabs from Manṣūra [*q.v.*] in Sindh, cf. the numismatic evidence adduced by G. P. Taylor in *Gujarat College Magazine*, January 1919), Čāwaḍās, and the Solankīs or Čawlukyas. The last-named dynasty were worshippers of the Hindū divinity Shiva, whose splendid temple at Somnāth in Sawrāshṭra was plundered by Maḥmūd of Ghaznī in Dhu ʾl-Ḳaʿda 416/January 1026, in the reign of Bhīma I the fourth Čawlukya dynast (Ibn al-Athīr, ix, 242; so also al-Bīrūnī, ed. Sachau, ii, 9; Gardīzī, ed. Nazim, 86-7; Haig in *Cambridge history of India*, iii, 23 ff., gives an incorrect date, presumably following Firishta); gold and jewels worth two million *dīnār*s, the sandalwood gates of the temple, and the stone phallic emblem of the god were transported to Ghaznī. The rebuilding soon commenced, this time in the fine stone for which the reign of Bhīma I was distinguished—a genre which was to become very significant for the derivative architecture of the Gudjarāt sultanate. The sixth dynast, the great Siddharādja, who ruled for over 50 years in the 12th and 13th centuries A.D., extended the dominions and built the famous temple at Siddhpur later converted into a mosque by Aḥmad I; under his patronage the Djayn [*q.v.*] religion was firmly established in Gudjarāt. The ninth ruler, Mūlarādja II, sent a large army which in 574/1178 vanquished the army of Muʿizz al-Dīn Muḥammad b. Sām which was exhausted by its long march through Uč̣č̣h, Multān and the Mārwāṛ desert (Muslim historians show Bhīma II as the victorious ruler; but the Sanskrit *Kīrtikaumudī* and *Sukṛtasaṅkīrtana*, and contemporary grants, leave no doubt that the invasion occurred in Mūlarādja's short reign). The defeat was avenged in 593/1197 when Muʿizz al-Dīn's general Ḳuṭb al-Dīn Aybak [*q.v.*] plundered Anahilwāda, the capital, forcing Bhīma II to take refuge in a remote part of Gudjarāt, and returned to Dihlī laden with booty. Mūlarādja and his brother Bhīma both came to the throne as minors; the central authority thereby became weak, and the kingdom was virtually divided among the nobles and provincial chiefs. The most powerful of these, the Vāghelās ruling at Dholkā, gradually usurped the royal power and transferred their capital to Anahilwāḍa; this was the regnant dynasty at the time of the Muslim conquest, and it continued to hold pockets of territory in north Gudjarāt for some time thereafter.

Pre-Muslim Gudjarāt seems to have been well known to the Muslim, particularly the Arab, world, for it is frequently referred to by travellers and geographers from the merchant Sulaymān onwards. Al-Balādhurī, 3rd/9th century, notices the pirates of the Sawrāshṭra coast, and mentions the great ports of Bharōč and Sindān [*qq.v.*]; al-Masʿūdī describes the strength of the kingdom and the power of its ruler, and mentions the gold and silver mines; Iṣṭakhrī, 4th/10th century, and Ibn Ḥawḳal, 4th/10th century, give itineraries and describe the topography; al-Bīrūnī, 5th/11th century, gives fuller details with greater exactness, as does Idrīsī at the

end of that century; these two are the only geographers to describe the rivers of Gudjarāt. Most of these authors are especially interested in the ports of Gudjarāt, Bharōč, Khambāyat and Sindān, in the capital Anahilwāḍa (Āmhal, Nahlwāra, Nahrwāla, etc.), and in its trade and natural resources (gold, silver, pearls; horses and camels; teak, bamboos, aloewood, betelnut); they describe local Hindū and Djayn practices in some detail, and are impressed by the religious toleration shown in the region.

A most significant event in this period was the arrival of the Zoroastrian fugitives from Īrān. The 'traditional' date for their first landing, now challenged by many scholars, is 716 A.D.; but the exodus was spread over many generations, and refugees were still arriving at the Gudjarāt ports in the two succeeding centuries. They later became generally known in India as the Pārsīs, and while they are now to be found all over the Indian subcontinent their concentration has always been highest in Gudjarāt and the Marāṭhā country to its south, specially Bombay. For a general account of the Zoroastrians see MADJŪS; for this Indian branch see PĀRSĪ, in addition to later references in this article.

(b) Gudjarāt under the Dihlī sultanate. Gudjarāt fell to the Muslims in one decisive battle when Karṇa, the last Vāghela ruler, was defeated in 697/1298 (some textual confusion; cf. Hodīvālā, *Studies in Indo-Muslim history*, i, Bombay 1939, 248-9) by the armies of the Dihlī sultan ʿAlāʾ al-Dīn Khaldjī under the generals Ulugh Khān and Nuṣrat Khān; Anahilwāḍa was sacked, the rebuilt Somnāth temple was despoiled, and local garrisons were established. Nuṣrat Khān moved on to the sack of Khambāyat, where in addition to enormous booty he secured the slave Kāfūr, nicknamed Hazārdīnārī "bought for a thousand dīnārs" [see KĀFŪR; DIHLĪ SULTANATE]. Asāwal, Dholkā, Randēr, Mahuwā, Dīw and Djunāgaṛh were also overrun, and the invaders extended even to Kaččh. Karṇa's queen Kawlādevī was sent to ʿAlāʾ al-Dīn, but Karṇa escaped with his daughter the celebrated Devaldevī to Devagiri [see ELURĀ, KHIḌR KHĀN].

In 700/1300 ʿAlāʾ al-Dīn appointed his brother-in-law Malik Sandjar, entitled Alp Khān, as *nāẓim* of Gudjarāt; the old Hindū capital Anahilwāḍa became the seat of the provincial governor, but was now more commonly known as Pāṭan. Alp Khān administered the province capably for sixteen years until he was recalled to Dihlī and murdered at the instigation of the now powerful Kāfūr. On his departure disturbances broke out in Gudjarāt; Kamāl al-Dīn Gurg, the victor of Djālor [*q.v.*], sent to restore order, was taken prisoner and put to death, and sedition spread. The lawlessness increased on the death of ʿAlāʾ al-Dīn. His successor Mubārak Shāh appointed the general ʿAyn al-Mulk to suppress the revolt, and sent his father-in-law Malik Dīnār, entitled Ẓafar Khān, as *nāẓim*. The latter, a competent administrator, restored order throughout the province, but was recalled and executed in 719/1319 when Ḥusām al-Dīn, the half-brother of the royal favourite Khusraw Khān, was appointed in his place. Ḥusām rebelled against the Dihlī authority and was replaced by Waḥīd al-Dīn Ḳurayshī, under whom Gudjarāt remained quiet.

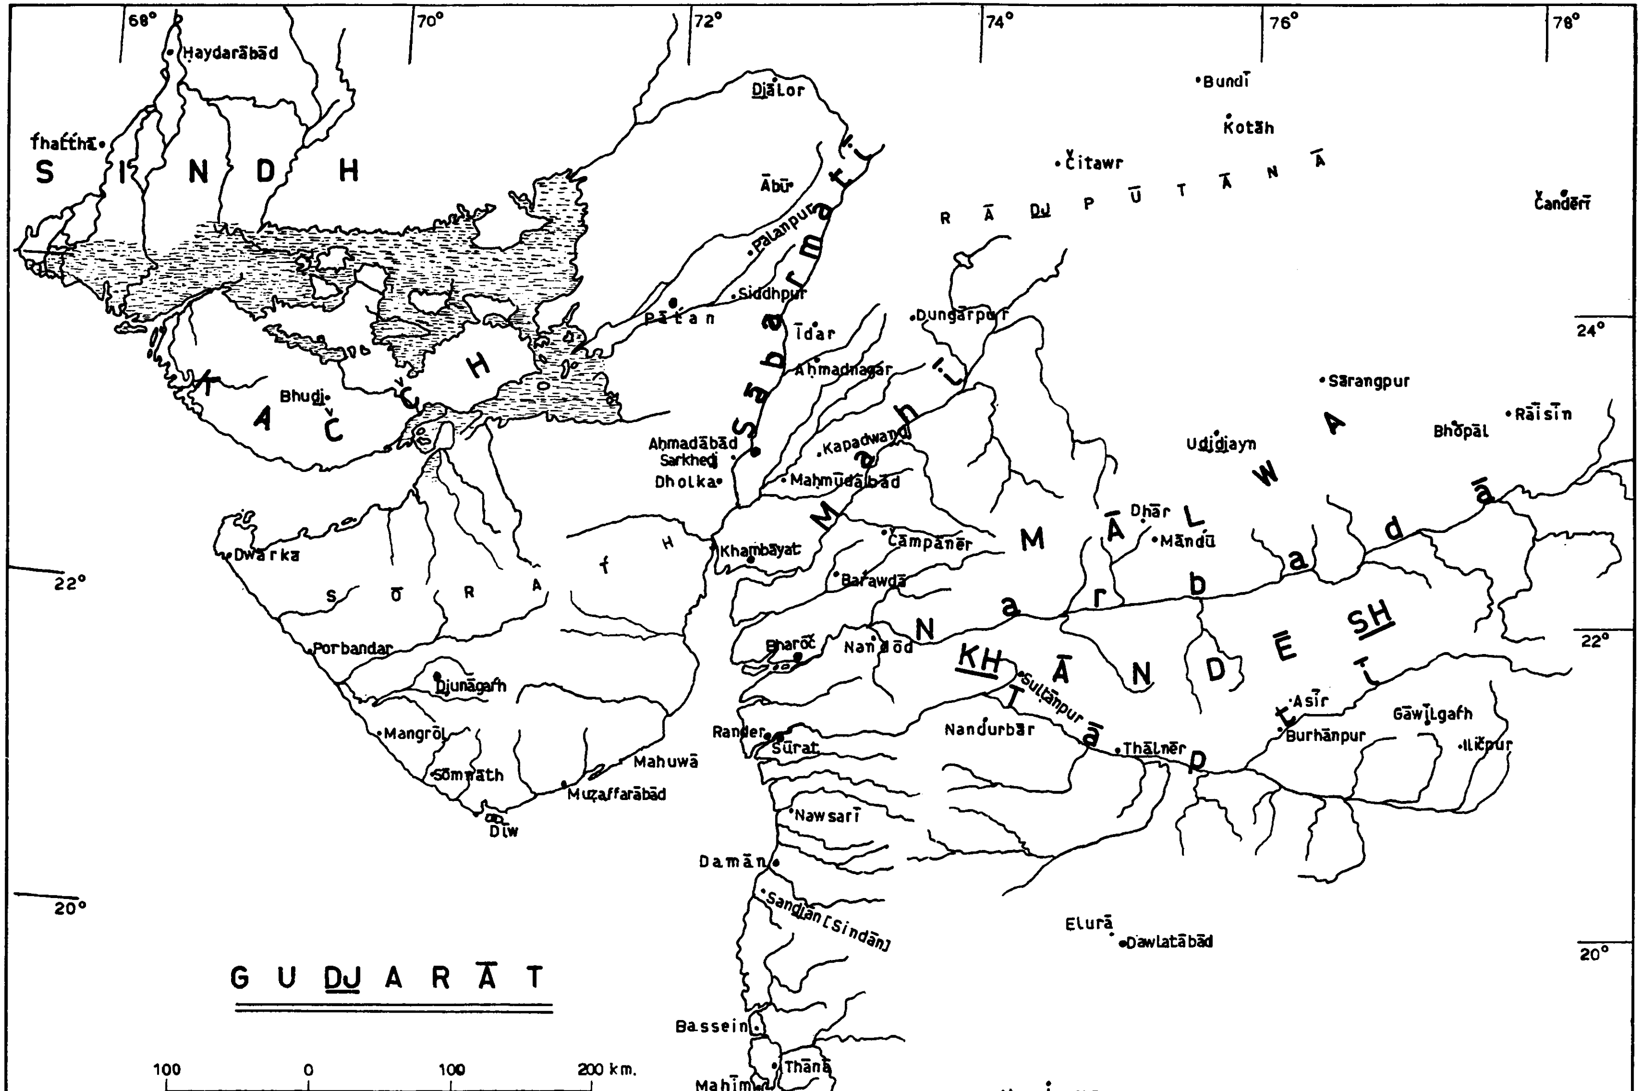
Some twenty years later bands of Afghān and New Muslim adventurers, under disaffected *amīrān-i ṣada*, constituted a menace to the country; the massacre of *amīrān-i ṣada* at Dhār [*q.v.*] led to a general rising of the *amīrān-i ṣada* of Gudjarāt in 745/1344, who seized the state revenues as they were being taken to Dihlī. Accordingly, in Ramaḍān of that year/February 1345, the sultan Muḥammad b. Tughluḳ [*q.v.*] set out in person to bring the province to order. This he did with characteristic savagery, executing disaffected and loyal *amīr*s indiscriminately. He made his headquarters in Bharōč, and, discovering that its revenues and those of Khambāyat and other towns were several years in arrears, appointed agents who exacted an extortionate rate from the people. Many rebel *amīrān-i ṣada* fled to Dawlatābād [*q.v.*]; on being summoned back to Bharōč they suspected Muḥammad's treacherous intentions, killed the Dawlatābād officials, proclaimed Ismāʿīl Mukh as their king, and took control of much of the Marāṭhā country. The sultan therefore left Bharōč to quell the rebellion, and during his absence another revolt broke out in Gudjarāt under the leadership of a former slave named Ṭaghī, who was supported by many *amīr*s, some Hindū chieftains, and a large proportion of the population. Muḥammad b. Tughluḳ returned to suppress the main revolt, and spent much time and effort in pursuit of the brilliant Ṭaghī; during Muḥammad's preoccupation with Gudjarāt affairs the rebel king Ismāʿīl Mukh abdicated in favour of another *amīr-i ṣada*, Ḥasan entitled Ẓafar Khān, who was shortly afterwards (748/1347) proclaimed as ʿAlāʾ al-Dīn Ḥasan Bahman Shāh [see BAHMANĪS]. Ṭaghī withdrew to Soraṭh and thence to Ṭhaṭṭhā, but through Muḥammad b. Tughluḳ's energetic pursuit of him the whole of Gudjarāt was subdued as never before. The sultan pursued Ṭaghī to Ṭhaṭṭhā where he had taken refuge with the Djām, but died in camp there in 752/1351, his nephew Fīrūz Shāh Tughluḳ travelling to the camp for his enthronement. Fīrūz made a difficult retreat to Dihlī, and local events in Gudjarāt did not concern the historians until some fifteen years later when he marched against the Djām in 767/1366 (for the date see Hodīvālā, *op. cit.*, 322); the campaign was disastrous and he lost most of his army in the Ran of Kaččh. On finally gaining Gudjarāt he dismissed the governor for failing to send him supplies and guides, and spent much time there in recruiting a new army, appointing as governor Ẓafar Khān the son-in-law of Fakhr al-Dīn Mubārak [*q.v.*]. This efficient *nāẓim* was supplanted in 778/1376 by one Shams al-Dīn Dāmghānī, who had promised a greatly increased revenue from the province; in spite of severe extortion Dāmghānī was unable to fulfil his promise, and the oppressed population rose against him. The sultan then appointed Malik Mufarraḥ Sulṭānī entitled Farḥat al-Mulk, who remained governor for fifteen years.

The imperial control of the provinces slackened during the struggles for the Tughluḳ succession, and by early 793/1391 Farḥat al-Mulk was known to be supporting Hindū practices to gain the confidence of the Rādjpūts before attempting to establish his independence; the *ʿulamāʾ* protested to Dihlī, and Muḥammad II Tughluḳ sent Ẓafar Khān the son of Wadjīh al-Mulk as governor, with the title of Muẓaffar Khān. Farḥat al-Mulk defied the new governor, and the armies of both met in the decisive battle of Kamboī, 30 km. west of Pāṭan, on 7 Ṣafar 794/4 January 1392, when Farḥat al-Mulk was killed. Muẓaffar Khān proceeded to Pāṭan and diligently began restoring order and prosperity in the province, and quashed all tendencies to the toleration of Hindū idolatry. He several times besieged the fortress of the Rādjā of Īdar [*q.v.*] for withholding tribute, and destroyed the temple of

Somnāth in 797/1395 and 804/1402; on the latter occasion he followed the Somnāth Hindūs to Dīw where he established Islam.

When Muẓaffar Khān was appointed governor his son Tātār Khān had been retained in Dihlī by Muḥammad II Tughluḳ as his *wazīr*. On the death of the sultan, Tātār Khān was prominent in the intrigues for power, and in 800/1398 he came to Gudjarāt to raise an army in order to march on Dihlī. The invasion of Tīmūr prevented this immediately, and indeed Maḥmūd Shāh, the last Tughluḳ, took refuge for a time at Pāṭan with Muẓaffar Khān. In 805/1403 Tātār Khān endeavoured to persuade his father to march on Dihlī, but the latter, now aged over 60, refused and attempted to dissuade his son. Tātār Khān then imprisoned his father, proclaimed himself sultan of Gudjarāt in Rabīʿ II 806/November 1403 with the title of Muḥammad Shāh, and marched on Dihlī; but Muẓaffar Khān's brother Shams Khān caused Tātār Khān to be poisoned and released his brother from prison. Muẓaffar returned to Pāṭan and carried on the administration for several years before finally assuming the royal title.

(c) The sultanate of Gudjarāt. Muẓaffar Khān was persuaded by the nobles to assume the insignia of royalty in 810/1407, as the Tughluḳ dynasty was virtually extinguished, and no coin had been struck by the Dihlī sultan for six years; he thus acceded as Muẓaffar Shāh. Shortly after his accession he invaded Mālwa [*q.v.*] and imprisoned sultan Hūshang at Dhār on suspicion of his having murdered his father Dilāwar Khān [*q.v.*]; however, he restored him soon afterwards. Muẓaffar died in 813/1410 and was succeeded by his grandson Aḥmad the son of Tātār Khān—not without the suspicion of having been poisoned by him.



The reign of Aḥmad I, which did much to consolidate the new sultanate, lasted 33 years, much of which was occupied in warfare against neighbouring Rādjpūt princes and the contiguous Muslim rulers of Mālwa, Khāndesh [*q.v.*] and the Deccan: in 817/1414-5 against Djunāgaṛh, compelling the payment of tribute; and from this time the power of the sultanate was extended into the central regions of Soraṭh beyond the coastal towns already in its control; in 819/1416 a confederacy of Rādjpūts in the north-west, with the partial support of Hūshang of Mālwa, was defeated, and two years later Aḥmad marched against Čāmpānēr and levied tribute; in 820/1417 the army of Naṣīr Khān of Khāndesh, supported by the Mālwa army, invaded the eastern border of Gudjarāt and invested the fort of Sulṭānpur, but was repulsed by Aḥmad Shāh who followed up and besieged Naṣīr Khān in his fort of Asīrgaṛh; Naṣīr swore fealty to Aḥmad Shāh and his claim to Khāndesh was in turn recognized by Aḥmad. The instigator of the Khāndesh attack having been found to be Hūshang of Mālwa, Aḥmad next attacked that kingdom in 822/1419 and 823/1420, effecting little but the plunder of outlying districts; in 825/1422, during Hūshang's absence from Mālwa on his notorious expedition to Uṛīsā [*q.v.*], Aḥmad again attacked, besieging the capital Māndū [*q.v.*] for some months without effect; the Gudjarāt and Mālwa armies confronted each other later that year in Sārangpur without a major engagement, and Aḥmad returned to Aḥmadābād and undertook no further military action for two years.

From 829-31/1425-8 there were continued hostilities against Pundja the ruler of Īdar. Aḥmad built the walled city of Aḥmadnagar (renamed Himatnagar in the 20th century) some 30 km. from Īdar as a base of operations. In 831/1428 Pundja was killed by a fall and his son sought peace and promised tribute; nevertheless he and his successors maintained intermittent warfare with the Gudjarāt sultanate for generations thereafter. In 832/1429 a Hindū prince of the house of Djālāwar (some doubt; his name does not occur in the dynastic lists), objecting to Aḥmad's discriminatory measures against the Hindūs, attacked Nandurbār with the help of a Bahmanī army, later reinforced by one from Khāndesh also; the attackers were utterly defeated by Aḥmad's superior skill. Two years later the Bahmanī ruler Aḥmad Shāh Walī sent an army to capture the island of Mahīm (now a part of Bombay), which was held under general Gudjarāt suzerainty by a semi-independent Muslim prince; but the generals of the Gudjarāt force first invested Thāna, the most important town of the northern Konkan coast and in Bahmanī territory, by land and sea, and after its capitulation drove the invader from Mahīm.

In 836/1432-3 Aḥmad in his last major campaign against his Hindū neighbours overcame the ruler of Pāwāgaṛh, sacked Nandōd, and forced tribute from the rulers of the distant Dungārpur, Koṭāh and Bundī; although Aḥmad had apparently been defeated on a previous occasion (see *Epigraphia Indica*, ii, 417; *ibid.*, xxiii, 239. The defeat is not recorded by the Muslim historians).

Aḥmad died in Rabīʿ II 846/August 1442 after a reign devoted to consolidating Islam in his dominions by relentless iconoclasm and oppression of the Hindūs. His justice was strict but impartial, and he was known for his piety and as a disciple of the great religious teachers Shaykh Aḥmad Khattū of Sarkhedj and Burhān al-Dīn Ḳuṭb al-ʿĀlam of Baṭwā. In 813/1411 he had founded his capital city of Aḥmadābād on the left bank of the Sābarmatī, with a citadel and spacious streets (Aḥmad Rāḍī, *Haft iḳlīm*, Bibl. Ind., 86-7), and struck coin there and at Aḥmadnagar. His soldiers were paid half in coin from the imperial treasury and half by grants of land (*djāgīr*); for the *wanta* system of land revenue applicable to Hindūs, originating in his reign, see TENURE OF LAND.

Aḥmad's eldest son succeeded him with the title Muḥammad Shāh, a mild and generous ruler. He followed his father's policy in a further attack on Īdar in 850/1446, the ruler buying peace by giving Muḥammad his daughter in marriage, and in 853/1449 against Čāmpānēr, from which, however, he withdrew after the *rādjā* had invoked the aid of Maḥmūd I of Mālwa; on the return journey he fell ill and died at the capital in Muḥarram 855/February 1451. His eldest son Djalāl Khān succeeded him with the title Ḳuṭb al-Dīn Aḥmad Shāh II and reigned for less than nine years. He won an early victory in the battle of Kapadwandj against a Mālwa invading force; and in 861/1457 formed a Muslim alliance with Maḥmūd I of Mālwa against the Hindū *rānā* of Čitawr, who had earlier defeated his forces (Sanskrit inscription on *kīrtistambha* of Čitawr; the defeat is not recorded by the Muslim historians). Otherwise his reign was occupied in building, and in attempts to secure the person of his young half-brother Fatḥ Khān who was under the protection of the Baṭwā shaykh Shāh ʿĀlam. Ḳuṭb al-Dīn Aḥmad died suddenly in Radjab 862/May 1458, and is said to have been poisoned by his wife in order that her father, Shams Khān of Nāgawr, might succeed to the Gudjarāt throne. The nobles first raised to the throne Dāwūd Khān, a younger son of Aḥmad I, but he was deposed after a reign of seven days of moronic

incompetence, and Fatḥ K̲h̲ān, then thirteen years old, succeeded as Maḥmūd S̲h̲āh. Within months he showed the courage and judgement that were to characterize the 54 years of his reign when he thwarted a conspiracy to remove him; and he was early involved in clashes with Mālwa when he intervened to prevent a Mālwa attempt on the dominions of the infant Bahmanī king Niẓām S̲h̲āh.

In 865/1461 Maḥmūd supported ʿUt̲h̲mān K̲h̲ān of D̲j̲ālor in his struggle for the succession there, secured the extension of his domains—important for Gud̲j̲arāt as Islam was thereby securely established in south Rād̲j̲pūtānā—and conferred on him the title of Zubdat al-Mulk. The extension of Islam in the south of the Gud̲j̲arāt dominion was furthered in 869/1465 when an army was sent to take the hill forts of Bahrōt and Parnerā and the port of Damān from the hands of their Hindū *rād̲j̲ā*s; and at this time the old Pārsī settlement of Sand̲j̲ān was destroyed. The years 871-4/1467-70 saw Maḥmūd gradually overcoming the strong Rād̲j̲pūt power at D̲j̲unāgaṙh and its citadel-fort of Girnār. The defeated *rād̲j̲ā* embraced Islam, and Maḥmūd remained some time at D̲j̲unāgaṙh, improving its beauty and its defences to make it a centre from which Islam could be propagated throughout the Soraṫh peninsula. He accordingly renamed it Muṣṭafābād and settled *sayyid*s and other divines there, and set it up as a mint town and as the headquarters of the *thānādār* or local administrator. To combat the laxity of the administration reported from Aḥmadābād while the sultan was on his Soraṫh campaign he appointed one D̲j̲amāl al-Dīn as *fawd̲j̲dār*, with the title of Muḥāfiẓ K̲h̲ān. From his new headquarters of Muṣṭafābād Maḥmūd made expeditions in 875/1472 into Sindh and Kaččh, subduing the predatory tribes and sending their leaders to Muṣṭafābād for instruction in Islam; on his return he marched against the sacred Hindū town and temple of Dwārkā [*q.v.*] where pirates had been harassing Muslim pilgrims, and sacked the town and the neighbouring island of Beṫ (see J. Burton-Page, "*ʿAzīz" and the sack of Dwārkā* ..., in *BSOAS*, xx (1957), 145-57). He returned to Aḥmadābād in 878/1473 and undertook no major military operations for the next nine years; in this time he built the new city of Maḥmūdābād 30 km. south-east of Aḥmadābād.

In Ramaḍān 885/November 1480, when Maḥmūd was making his yearly visit to Muṣṭafābād, an attempt to dethrone him and place his eldest son Aḥmad on the throne was frustrated by the *wazīr* and Muḥāfiẓ K̲h̲ān; Aḥmad seems to have been involved in the conspiracy, as he was passed over for the succession and Maḥmūd's youngest son K̲h̲alīl became heir-apparent. In S̲h̲awwāl 887/December 1482 Maḥmūd started his second great war against the Hindū princes, this time against the powerful *rād̲j̲ā* of Čāmpānēr and his stronghold of Pāwāgaṙh, which fell after an investment of twenty months; for further details of this interesting siege see ḤIṢĀR. The *rād̲j̲ā* publicly rejected Islam and was executed, but a son was brought up in the family of an Aḥmadābād noble and later attained distinction. Maḥmūd was captivated by the beauty and climate of Čāmpānēr, which he fortified and laid out as a new capital with the name Muḥammadābād; a mint was established (S̲h̲ahr-i mukarram). Čāmpānēr remained the political capital, and the favourite residence of Maḥmūd, until the end of his reign.

In the years 896-9/1491-4 the activities of Bahādūr Gīlānī, a renegade from the Bahmanī court who committed repeated acts of piracy from Dābhōl in the south Konkan coast and had even ravaged Khambāyat and Mahīm, caused Maḥmūd to attack him by sea and call for Bahmanī cooperation by land; eventually Gīlānī was killed and full reparation was made to Gud̲j̲arāt.

In the early 10th/16th century Gud̲j̲arāt was one of the powers to intervene in the dynastic rivalries which arose in K̲h̲āndēs̲h̲ on the death of ʿĀdil K̲h̲ān II, finally resolved in 914/1509 with the acceptance of the Gud̲j̲arāt candidate, a kinsman of Maḥmūd's, as ʿĀdil K̲h̲ān III (for a detailed account see FĀRŪḲIDS).

Since the arrival of Vasco da Gama in Calicut in 1498 the Portuguese had extended their maritime influence over much of the Indian ocean and the Red Sea, to the great detriment of the lucrative trade which passed through the Gud̲j̲arāt ports, especially Khambāyat, and depriving Egypt of the revenues of much of her Eastern trade. Their first opposition in these regions came from the joint force of the fleet despatched by the Egyptian Mamlūk sultan Ḳānṣawh al-G̲h̲awrī, under the command of Amīr Ḥusayn, and that of Gud̲j̲arāt commanded by Malik Ayāz the governor of D̲j̲unāgaṙh, who won the first victory in Ramaḍān 913/January 1508 when Dom Lorenzo, son of Francisco d'Almeida the Portuguese viceroy, was killed in a battle off Čawl; but the combined Muslim fleets were defeated by d'Almeida in a battle outside Dīw harbour in S̲h̲awwāl 914/February 1509 (E. Denison Ross, *The Portuguese in India and Arabia between 1507-1517*, in *JRAS*, 1921, 545-62). Maḥmūd then attempted to establish diplomatic relations with the Portuguese (see W. de G. Birch (ed.), *The commentaries of the great Afonso Dalboquerque*, Hakluyt Socy., especially ii, 210 ff.); but after Albuquerque's capture and orgiastic sack and massacre of Ṣindābur (Goa), the port of the ʿĀdil S̲h̲āhī sultanate of Bīd̲j̲āpur, Maḥmūd realized the impracticability of maintaining any alliance with such an intransigent enemy of Islam and, to avoid provocation, broke the Egyptian alliance and liberated his Portuguese prisoners.

Maḥmūd died at Aḥmadābād on 2 Ramaḍān 917/23 November 1511 and was buried at Sarkhed̲j̲. In his reign the prosperity of the Gud̲j̲arāt reached perhaps its greatest height; certainly it knew its greatest internal security in the towns and in the ports. The army was efficient and well equipped, and Maḥmūd was solicitous for the welfare of his troops, including the families of those killed in battle, who were provided for by continuance to them of the assets of the late soldier's *d̲j̲āgīr*, and consoled the next-of-kin of the dead in person after his battles. He was a great builder, and also laid out many gardens and orchards, and is credited with the introduction of many kinds of fruit trees into Gud̲j̲arāt. He was a tall man with a prodigious appetite and a moustache which he could tie behind his head, and was said to have been inoculated against poison by consuming it in gradually increasing doses "so that if a fly settled on his hand it fell dead". His sobriquet of "Begṙā" has given rise to some speculation as to its true meaning: one etymology seeks to derive it from the "two forts (*gaṙh*)" of Čāmpānēr and D̲j̲unāgaṙh which he captured; but the word is not written in Gud̲j̲arātī with *ṙh*; another derives it from Gud̲j̲arātī *vegaṙo*, a bullock with sweeping horns, in allusion to his moustaches; Dr. P. B. Pandit (personal communication) has suggested that it is the word

Beg with the Gudjarātī diminutive suffix *ṛā*, *-ḍā*, "the little Beg"; the form Bayḳarā, used in the article FĀRŪḲIDS, seems to be a false Mughalization. Valuable accounts of Maḥmūd and Gudjarāt in his reign are given in the works of the Portuguese traveller Duarte Barbosa and the Italian Varthema.

Khalīl Khān succeeded his father as Muẓaffar Shāh II, a mild and cultured ruler whose clemency bordered on weakness. Early in his reign he was involved in the affairs of the neighbouring state of Mālwa: in 916/1510 Maḥmūd II Khaldjī had usurped the Mālwa throne from his elder brother Ṣāḥib Khān, who had been proclaimed as Muḥammad II by the rebel *wazīr* and asked for Muẓaffar's assistance in coming to his throne. His claim was favourably reported on by the Gudjarāt agents in Mālwa, and Muẓaffar had agreed to attack Mālwa in his support after the rains. Muẓaffar was at the time entertaining an ambassador from Shāh Ismāʿīl I of Persia, whose mission was apparently to induce Gudjarāt to accept the Shīʿa faith, and who had become acquainted with Ṣāḥib Khān; one evening after a dinner party the ambassador in a moment of pederastic enthusiasm assaulted Ṣāḥib Khān, who fled in shame first to Khāndesh and then to Berār; the ambassador was sent back to Persia after a scarcely cordial reception. Ṣāḥib Khān's claim was quietly forgotten, and shortly afterwards Muẓaffar was called on to intervene on behalf of Maḥmūd II who found himself no more than a puppet in the hands of his minister Mēdinī Rāī and his Rādjpūt army. Muẓaffar accordingly marched on the capital Māndū with a strong Gudjarāt force which was joined by the Khāndesh army, hearing of which Mēdinī Rāī sought help from the powerful Mahārānā Sāngrām of Čitawr; the fort was taken by escalade in Ṣafar 924/February 1518, the Rādjpūt garrison massacred, and Maḥmūd restored to his throne. The text of a letter from Muẓaffar to the Ottoman Sultan Selīm I, congratulating the latter on his victory over Persia and announcing the capture of Māndū, is given by Ferīdūn (*Munshaʾāt*[1], i, 395-7).

Muẓaffar had been delayed in his actions in Mālwa by several skirmishes in and around Īdar, where a usurper had been established on the throne of this feudatory Hindū state by Sāngrām of Čitawr; this interference was ill received in Gudjarāt, and armies were sent to restore the rightful heir; the usurper continued, however, to harass the northern districts of Gudjarāt until Muẓaffar's return from Mālwa. Sāngrām, incensed by insults to his name offered by the Gudjarāt commander at Īdar, raided Īdar, Aḥmadnagar and other towns in 925/1519; Muẓaffar retaliated with a large force early in 927/1521, and compelled the Rānā to pay tribute and send a son to the Gudjarāt court as a hostage.

In Muẓaffar II's reign there was considerable diplomatic intercourse with the Portuguese at Goa, friendly at first. A mission sent to Gudjarāt in 918/1512-3 sought permission to build a fort at Dīw, which the sultan, on the advice of Malik Ayāz [*q.v.*], governor of Djunagárh and Dīw, did not grant. The Portuguese cause was pressed by one Malik Gōpī at the Gudjarāt court, but Malik Ayāz's wiser counsels prevailed and the defences of Dīw were strengthened. Two attempts by the Portuguese to take Dīw by force, in 926/1520 and 927/1521, were thwarted, and an attempt to take Muẓaffarābād, 30 km. east of Dīw, and establish a fort there, was foiled when some Muslim captives blew up a munitions ship in which they were travelling.

Muẓaffar II died in Djumādā II 932/April 1526. His eldest son Sikandar succeeded him but was murdered after six weeks and an infant son of Muẓaffar II was placed on the throne as Maḥmūd II; but the loyal nobles sent for Bahādur, the second son of Muẓaffar II, who was formally installed as sultan in the Ramaḍān/July following, the infant Maḥmūd II and other princes of the royal blood being quietly disposed of, except for his younger brother Čānd Khān who had taken refuge with Maḥmūd II of Mālwa.

The principal events of Bahādur's reign—the attack on the Niẓām Shāhīs of Aḥmadnagar in 935/1528 to settle a territorial dispute with Khāndesh, his conquest of Mālwa in 937/1531, the capture of the Rādjpūt strongholds Udjdjayn, Bhīlsā and Rāīsīn in 938/1532-3 and Čitawr in 941/1535, the defeat of the Portuguese at Dīw in 937/1531 but the loss to them of Bassein in 941/1534 and the grant of permission to build a fort at Dīw in 942/1535, the long war with the Mughal Humāyūn from 941/1534 in which Bahādur lost Mālwa and was dispossessed of most of his dominions until Humāyūn returned to face the threat of Sher Khān in 942/1536, and his death through Portuguese treachery—have been discussed above in the article BAHĀDUR SHĀH GUDJARĀTĪ: see also HUMĀYŪN, MĀLWA, MUGHALS; and add to the Bibliography of BAHĀDUR SHĀH GUDJARĀTĪ: Philip Baldaeus, *Description of the East India coasts* ... in Churchill's *Collection of voyages and travels*, London 1732, iii, 530 ff.

Bahādur's murder by the Portuguese took place at sea outside Dīw in Ramaḍān 943/February 1537, and with his death the greatness of the Gudjarāt sultanate ended. The Portuguese seized Dīw with the palace and treasury, and it thenceforth passed out of Muslim hands. Bahādur left no heir, and in the first confusion after his death Muḥammad Zamān Mīrzā, Humāyūn's brother-in-law whose refuge with Bahādur had provoked the war with the Mughals, aspired to the throne, entered into a treaty with the Portuguese whereby he granted them Mangrōḷ and Damān and a strip of coastal land in exchange for their support, and the *khuṭba* was read in his name in the mosque at Dīw; but the nobles of Bahādur's court sent an army against him, and he was defeated and fled to Dihlī. Bahādur had in his lifetime indicated that his sister's son Mīrān Muḥammad Shāh, who since 926/1520 had been the ruler of Khāndesh, should succeed him, and the nobles sent for him; but within weeks he died of grief for the uncle to whom he had been a constant and loyal companion for the previous ten years, and the eleven years old Maḥmūd Khān, son of Bahādur's renegade brother Laṭīf Khān, was then enthroned as Maḥmūd Shāh III.

Maḥmūd and his two successors were all minors, and the history of the sultanate after 943/1537 is mostly one of puppet monarchies and factious and suspicious nobles plotting for power against each other and against the best interests of the state. In 944/1538 the Ottoman sultan Süleymān I, apprehensive at the growing Portuguese threat because of Bahādur's death, sent a fleet from Suez to attack them at Dīw; the Gudjarāt land forces, fearing that the presence of the Turks at Dīw would be no more comfortable than that of the Portuguese, failed to give full cooperation, and on receipt of a fabricated letter announcing that the Portuguese main fleet was arriving from Goa, the Ottoman fleet raised the siege and sailed away; the Gudjarāt generals negotiated a peace treaty with the Portuguese, and built a wall separating the fort from the town of Dīw (see further KHĀDIM SÜLEYMĀN PASHA).

In 950/1543 Maḥmūd III escaped from his custody at the hands of the powerful regent Daryā Khān and fled to the protection of ʿĀlam Khān Lodī the fief-holder of Dhandūkā 100 km. south-west of Aḥmadābād; in the following battle Daryā Khān was defeated and fled to Māndū, but Maḥmūd found that he had exchanged one master for another, for ʿĀlam Khān placed him under guard in the citadel of Aḥmadābād and assumed direction of the kingdom. Two years later Maḥmūd persuaded a disaffected noble to attack ʿĀlam Khān, and assumed personal rule. He turned his attention first to the Portuguese, established a fort at Sūrat [*q.v.*], and in 953/1546 attacked Dīw with a large force; after a siege of eight months, in which the brilliant Gudjarātī commander Khʷādja Safar was killed, the Portuguese received reinforcements from Goa, and on 17 Ramaḍān/11 November the governor João de Castro "conquered like a Christian and triumphed like a heathen": all Muslim prisoners and the inhabitants of the city were mercilessly butchered. A year later the Portuguese sacked and burnt Bharōč and massacred the inhabitants.

In 953/1546 Maḥmūd removed his residence to Maḥmūdābād where he laid out his famous deer-park. In 955/1548 he sent for Āṣaf Khān from Mecca where he had gone with the late sultan Bahādur's treasures and *ḥaram*; he was made absolute regent, and raised for the sultan a personal bodyguard of 12,000 foreign mercenaries. In Rabīʿ I 962/February 1554 Maḥmūd was murdered in his palace by a resentful attendant, and with him ten of the chief nobles including Āṣaf Khān. His assassin attempted to accede to the throne but was defeated in the first attack of the remaining nobles. Maḥmūd III left no heir, and the nobles sought out a boy called Raḍī al-Mulk, a great-great-grandson of Aḥmad I, whom they installed as Aḥmad Shāh III; the kingdom was virtually divided among the nobles, and the reign is a dreary chronicle of civil war, one Iʿtimād Khān, a converted Hindū, being prominent as regent. Almost the only event of external interest is the cession of the port of Damān to the Portuguese on condition that they drove out the Ḥabshī governor who neither paid taxes nor acknowledged the central government; the Portuguese prepared to attack Damān in Rabīʿ II 966/February 1559, but the Ḥabshī garrison abandoned the fort without a battle. Several members of the Ḥabshī community rose to prominence at about this time and further weakened the power of the government. In 968/1561 Aḥmad III, who was beginning to resent his confinement, was murdered on Iʿtimād Khān's orders.

Again the problem of finding an heir presented itself. Iʿtimād Khān produced a child of unknown parentage as the child of Maḥmūd III by a concubine, who was duly proclaimed sultan as Muẓaffar III. The kingdom continued to be split up amongst the various nobles, who were now joined in their depredations by adventurers from the north of India. Prominent among these a little later were the so-called Mīrzās, descendants of Tīmūr and hence kinsmen of the Mughal emperor Akbar. Eventually in desperation Iʿtimād Khān invited Akbar to invade Gudjarāt.

Akbar left Fatḥpur Sīkrī in Ṣafar 980/July 1572 and arrived at Pāṭan early in Radjab/November of the same year, receiving the submission of the Gudjarāt nobles in what was more of a triumphal procession than a campaign at Pāṭan and Aḥmadābād; he proceeded to Khambāyat, when there was some attempt at rebellion in Aḥmadābād on the part of some nobles who were having second thoughts but who were soon brought to submission. As he proceeded further south, however, he encountered some resistance: his kinsmen the Mīrzās [*q.v.*] had made themselves masters of Sūrat, Baṛōdā, Bharōč and Čāmpānēr, and together with the rebellious Ḥabshīs formed a considerable opposition; they were defeated by the imperial forces at the battle of Sarnāl on 17 Shaʿbān 980/23 December 1572, and after the long siege of Sūrat which ended on 23 Shawwāl 980/26 February 1573. Akbar returned to Fatḥpur Sīkrī in Dhu 'l-Ḥidjdja 980/April 1573, and Gudjarāt became a *ṣūba* of the Mughal empire of sixteen *sarkārs*—there having been twenty-five *sarkārs* in the dominions of the Gudjarāt sultanate at its greatest extent. Within three months of Akbar's departure the Mīrzās again revolted and with the rebel Ḥabshīs besieged the Mughal governor in Aḥmadābād; Akbar returned to Gudjarāt in nine days by forced marches and finally suppressed the Mīrzās' revolt in the battle of Aḥmadābād in Djumādā I 981/September 1573. A minor outbreak of disturbances under one of the Mīrzās in 985/1577 was put down by the Mughal expeditionary force from Khāndesh.

The last Gudjarāt sultan, Muẓaffar III, had been taken prisoner by Akbar's forces on his first invasion. In 986/1578 he escaped and made his way to Gudjarāt and rose in rebellion in 991/1583, actually assuming the sultanate for a period of about six months; he evaded capture by the Mughal forces, and continued to offer resistance as a fugitive for the next ten years until his suicide after capture in 1001/1593 (for the final pursuit and capture of Muẓaffar see Burton-Page, *op. cit.*, 151 ff.).

For the largely peaceful history of Gudjarāt under the Mughals see MUGHAL. The importance of the province to the Mughals was largely commercial. The region was famous for its silk weaving and, especially at Aḥmadābād and Sūrat, the production of velvets (although sericulture never seems to have been practised in the region; the silk was imported from Bengal and from China); fine cotton cloth (*bafta*) was produced at the coastal towns, Bharōč in particular producing fine bleached calico; Sarkhedj was the principal centre for indigo production in the Mughal empire; saltpetre was refined at Aḥmadābād and Sūrat; and salt was prepared by evaporation from many districts bordering on the Raṇ of Kačč̣h. The conquest of Gudjarāt also gave ports to the Mughal empire, where apart from the commercial traffic there was a busy pilgrim traffic to the Holy Cities. The trade suffered a great loss in the Satyāsīō Kāḷ, the "famine of eighty-seven" (the Vikram year 1687, 1040-1/1630-1), and took at least ten years to recover; an interesting account of Mughal famine relief is given by ʿAbd al-Ḥamīd, *Bādshāh-nāma* (text, Engl. trans., and comment in P. Saran, *Provincial government of the Mughals*, Allahabad 1941, 432-3).

The peace and prosperity of Gudjarāt under Mughal rule gave way to disorder after the death of Awrangzīb at the beginning of the 12th/18th century. Previously there had been sporadic raids on Gudjarāt territory, especially Sūrat in 1074/1664 and 1081/1670, by the Marāṭhā chieftain Shivādjī; now the Gāikwāṛ family rose to prominence in Gudjarāt affairs and wielded more power than the Mughal *sūbadār*; by 1137/1725 they had started a reign of terror. Villages and towns were plundered, and in the next ten years the Marāṭhās had overrun almost all the province; eventually, with the fall of Aḥmadābād in 1171/1758, Mughal rule was extinguished. For the history of the

Marāṭhā wars and their rule of Gudjarāt see MARĀṬHĀS. Some tracts of the province were not, however, under the Marāṭhā rule of the Gāikwāṛ or the Peshwa, but remained under the authority of independent Muslim nobles, the Nawwābs of Bharōč, Khambāyat, Rādhanpur, and Sūrat [*qq.v.*] among others, in addition to the large district of Djunāgaṛh [*q.v.*]. After the defeat of the Marāṭhās in the third battle of Pānīpat [*q.v.*] an imperial *farmān* was sent to Muʾmin Khān the Nawwāb of Khambāyat in 1174/1761 for the recovery of Gudjarāt. Muʾmin Khān prepared for battle but in the absence of imperial support was unable to take effective action, and Marāṭhā rule continued until Gudjarāt was ceded to the British by the Gāikwāṛ in 1817.

For the ethnology of Gudjarāt see HIND, Ethnology. For religious developments see DJAYN, PĀRSĪ; for Islamic sects see BOHORĀS, KHŌDJAS, IMĀM SHĀH, ISMĀʿĪLIYYA, MUʾMIN, SĀTPANTHĪ.

For the coinage of Gudjarāt see SIKKA. For the monuments, see HIND, also AḤMADĀBĀD, BHARŌČ, ČAMPĀNĒR, DJŪNĀGAṚH, KHAMBĀYAT, MAḤMŪDĀBĀD, SŪRAT.

Bibliography: Sources for Gudjarāt history under the Dihlī sultanate have been given in the bibliography to DIHLĪ SULTANATE; especially important for Gudjarāt are Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*; ʿIsāmī, *Futūḥ al-salāṭīn*; Amīr Khusraw, *Khazāʾin al-futūḥ*; ʿAbd al-Karīm Hamdānī, *Taʾrīkh-i Maḥmūd Shāhī*; ʿAlī b. Maḥmūd al-Mirmānī, *Maʾāthir-i Maḥmūd Shāhī*, Bodl. Elliot 237.

For the Gudjarāt sultanate: there is no purely local early work, but many lost histories are quoted in Shaykh Sikandar b. Muḥammad Mandjhū, *Mirʾāt-i Sikandarī*, a history from the Muslim conquest to 1020/1611, ed. S. C. Misra and M. L. Rahman, Baroda 1960, Eng. trans., incomplete and inaccurate, E. C. Bayley, as *Local Muhammadan dynasties: History of Gujarat*, London 1886; ʿAbd Allāh Muḥammad b. ʿUmar al-Makkī, known as Ḥādjdjī al-Dabīr, *Ẓafar al-wālih bi Muẓaffar wa-ālih*, ed. E. Denison Ross as *An Arabic history of Gujarat*, 3 vols, London 1921-8; Abū Turāb Walī, *Taʾrīkh-i Gudjarāt*, ed. E. Denison Ross, Bibl. Ind. Calcutta 1909; Muḥammad Ḳāsim Firishta, *Gulshan-i Ibrāhīmī*; ʿAlī b. ʿAzīz Allāh Ṭabāṭabā, *Burhān-i maʾāthir*; Niẓam al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, ed. Bibl. Ind. Calcutta 1927-35, Eng. tr. Bibl. Ind. 1913-40; especially for the Mughal conquest and subsequent Mughal administration: Abu 'l-Faḍl ʿAllāmī, *Akbar-nāma*, Bibl. Ind. Calcutta 1873-87; idem, *Āʾīn-i Akbarī*, Bibl. Ind. 1867-77, Eng. tr. Bibl. Ind. 1894-1949. The foremost authority for the Mughal period is ʿAlī Muḥammad Khān, *Mirʾāt-i Aḥmadī*, 2 vols., with a very valuable *khātima* which is virtually a statistical gazetteer of Gudjarāt in the 10th/16th and 11th/17th centuries, ed. S. Nawab Ali, Baroda 1926-30; Eng. tr. as *The political and statistical history of Gujarat*, by J. Bird, London 1835; Eng. tr. of *khātima* only, by Nawab Ali and C. N. Seddon, Baroda 1928.

European travellers: especially M. L. Dames (ed. and tr.), *The book of Duarte Barbosa*, Hakluyt Society 1918; *The travels of Pietro della Valle in India 1623-6*, Hakluyt Society 1891; J. Albert de Mandelslo, *Voyages ... into the East Indies*, Eng. tr. J. Davies, London 1662; *The travels of Peter Mundy ...*, ed. Temple, Hakluyt Society 1907-36; J. Ovington, *A voyage to Suratt in the year 1689*, ed. Rawlinson, Oxford 1929; *The embassy of Sir Thomas Roe ...*, ed. Foster, Hakluyt Society 1899; *Travels of Ludovico de Varthema*, Hakluyt Society 1863; Albuquerque, *Commentaries*, Eng. tr. W. de G. Birch, Hakluyt Society 1875-84; Gaspar Correa, *Lendas da India*, Lisbon 1858-64; *Vida da Dom João de Castro*, Eng. tr. Wyche, London 1664.

Modern works: M.S. Commissariat, *History of Gujarat*, i, London 1938; ii, Bombay 1957; well documented with much cultural information. A research project of the history of Gudjarāt under the Muslims is currently being undertaken at the M.S. University of Baroda, from which there has appeared S. C. Misra, *The rise of Muslim power in Gujarat*, London 1963, which covers the years 697/1298 to 845/1442; idem, *Muslim Communities in Gujarat: preliminary studies in their history and social organization*, New York 1964; both these with extensive bibliography. Pearson, 20164-80. Much general information in *Bombay Gazetteer*, i-ix, xiii, xiv; *Baroda state gazetteer*, 2 vols., Bombay 1923. On the coins of the Gudjarāt sultanate, especially G. P. Taylor, *The coins of the Gujarāt salṭanat*, in *JBBRAS*, xxi (1903) 278-338; and Pearson, 10482-97. (J. BURTON-PAGE)

GUDJARĀTĪ, language spoken in the state of Gudjarāt (population 20,623,474) and in the communities of Gudjarātīs which have settled in various parts of India; it has always been the first language of the many Gudjarātī Muslims, in preference to Urdū, and shows some Muslim influence in its literary forms, notably in the introduction of the *ghazal*. Outside India, large communities of Gudjarātī speakers are settled in Asia and Africa.

Gudjarātī belongs to the Indo-Aryan branch of the Indo-Iranian subgroup of the Indo-European language family. The earliest inscriptional evidence of Aryan speech in Gudjarāt goes back to the Ashōkan edicts at Girnar (Sawrāshtra) of 250 B.C. Gudjarāt had a strong tradition of Sanskritic and Prākritic learning. A literary standard prevalent in the region bounded by Djaysalmēr to the north, Mālwa to the east and Sawrāshtra and Gudjarāt to the west and south became a direct predecessor of modern Gudjarātī. Some of the dated documents of the 12th century and secondary copies of compositions of the 10th century mark the beginning of old Gudjarātī literature. Modern Gudjarātī literature is rich in belles-lettres as well as in serious prose. The Gudjarātī script is a cursive form of Devanāgarī; the syllabary is Sanskritic. The Perso-Arabic script has never been in regular use for Gudjarātī.

Southern, Central and Northern Gudjarāt and peninsular Sawrāshtra form the major dialect regions of Gudjarātī. The dialects of Sawrāshṭra are archaic and have preserved some older features. Notable among the occupational jargons are the speech of fishermen in Sawrāshṭra and along the southern Gudjarāt coast, the bardic and pastoral communities of Sawrāshṭra, the Ismāʿīlī Khodjas of Sawrāshṭra and the Pārsīs of South Gudjarāt. On the whole, central and northern Gudjarāt are innovating dialects, and modern standard Gudjarātī is based on the speech of the educated upper caste population.

Bibliography: G. A. Grierson, *Linguistic survey of India*, ix/2, Calcutta 1908, 323-477. (P. B. PANDIT)

GŪDJRĀNWĀLA, an industrial town of West Pakistan and headquarters of the district of the same name, situated in 32° 9′ N. and 74° 11′ E., on the main railway line between Lahore and Peshawar [*qq.v.*]; population (1961) 196,154. The town, a mere village till the middle of the 19th

century, owes its origin to a tribe of the Gūdjars [*q.v.*] who were expelled by Sānsī Djāts from Amritsar [*q.v.*]. On changing hands the village was renamed Khānpur, after the head-man of the Sānsīs. But this name never gained popularity.

It was of little importance during Mughal days and consequently finds no mention in the *Āʾīn-i Akbarī*. Early in the 19th century it was captured by Čarat Singh Djāt, grandfather of the Sikh ruler Randjīt Singh, who made it his headquarters. Randjīt Singh himself was born here and it continued to be the capital of the rising Sikh power until 1799, when the seat of government was shifted to Lahore. The Sikh general Harī Singh Nalwa, who led many punitive expeditions against the Afghāns of the Khyber, was also a native of this place. His house, in a narrow street of the town, is still preserved. The father and grandfather of Randjīt Singh both have their *Samādhs*, last resting places, in this town. The former was cremated in a corner of the gardens named after him, but now called Jinnah Bagh, while the latter has his mausoleum in a quarter of the old city. A lofty cupola covering a portion of the ashes of Randjīt Singh, who has his tomb in Lahore and a *bāradarī*, a fine example of Sikh architecture, form a part of the complex. An old mosque, said to date from the times of Shēr Shāh Sūr [*q.v.*], with the typical onion-shaped dome, is also preserved.

The town remained quiet during the military uprising of 1857 but was badly disturbed during the Non-Cooperation and *Khilāfat* movements of 1921-22, when rioters uprooted the railroad track, burnt down the railway station and indulged in widespread arson and looting. By way of punishment the new railroad station was built at a considerable distance from the town. It is now used as a halting station for good trains while the passengers alight at the site of the destroyed station, which was rebuilt by the British Government. Politically unimportant, the town is a flourishing centre of iron, steel, copper and hand-loom industries and is rapidly expanding.

Bibliography: *Imperial Gazetteer of India*, Oxford 1908, xii, 355-6, 363; *District Census Report*, *Gujranwala*, Karachi 1961, 1.15, 4.1 - 4.12; Waḥīd Ḳurayshī (Waheed Qureshi), *Gujranwala*: *Past and Present*, in *OCM*, Lahore, February 1958.

(A. S. Bazmee Ansari)

GUDJRĀT, a town, *taḥṣīl* and district in the northern plains of the Pākistān Pandjāb lying between the rivers Djehlam and Čanāb. The district is thought to have once formed part of the ancient Gurdjara kingdom; but it is not specifically referred to in Islamic historical writing until the time of Bahlōl Lodī (855-94/1451-89) when the town of Bahlōlpur, 36 km. north-east of Gudjrāt town, was founded; the settlement of the district was continued by Shīr Shāh in the middle of the 10th/16th century, and completed by Akbar with the refounding of Gudjrāt town.

There seem to have been at least two succesive cities on the site of what is now Gudjrāt. One tradition gives the early name of the town as Udanāgarī and a foundation by Rādjpūt kings in the 5th century B.C.; a king Alākhāna is cited by the Sanskrit *Rājataranginī* as the defender of the town against Śankaravarman of Kashmīr between 883 and 902 A.D., and is perhaps the origin of the 'ʿAlī Khān' reported as a re-founder in a popular local Muslim tradition; one city seems to have been destroyed c. 703/1303 by the Mongols. The modern foundation dates from Akbar, who in 995 or 997/1587 or 1589 persuaded some of the local Gūdjars to restore Gudjrāt and made it the headquarters of a large district; the local population is predominantly Djāt [*q.v.*], but the fort (Gudjrāt-Akbarābād) was garrisoned by Gūdjars.

The town and district remained under efficient Mughal control until the death of Awrangzēb, records of the period having been preserved by the hereditary *ḳānūngōs* of the region. In 1151/1738 it was ravaged by Nādir Shāh [*q.v.*]; the Gakkhars of Rāwalpindī, under Sultan Muḳarrab Khān, established themselves there in 1154/1741, but the country was an open prey from 1161/1748 to 1175/1761 to the marauding armies of Aḥmad Shāh Durrānī [*q.v.*] on whose route it lay. Muḳarrab Khān was confirmed in his possessions by the Durrānī ruler, and nominally administered them on his behalf; but "nothing was left to the people but the food and drink in their mouths; the rest was Aḥmad Shāh's". This nominal rule lasted until 1179/1765, when Gudjrāt fell to the Sikhs. The district came under British rule in 1846.

The district is largely agricultural, and produces some timber. Gudjrāt town has some reputation as a centre for fine furniture making, and had previously some renown as a centre of iron damascening. The shrine still exists of the *pīr* Shāh Dawla [b. 975/1567, d. 1125/1713 according to the local tradition], a saint whose intercessions were said to remove the curse of barrenness if the first-born were dedicated to his service. These children attached to the shrine are invariably freaks, of low intelligence and with absurdly pointed heads—deliberate distortion of the heads in infancy has been suspected; they are known as Čūhā-i Shāh Dawla, "Shāh Dawla's rats".

The name Gudjrāt used here reflects the conventional spelling Gujrat, adopted to distinguish this district and town from Gujarat (Gudjarāt [*q.v.*]); the two names are really identical. For the etymology see GUDJARĀT.

Wilson Johnston in *Indian Medical Gazette*, May 1866; abstract from settlement reports in *Indian Antiquary*, 1879, 176; letter in *JRAS*, 1896, 574-5, 793; M. Longworth Dames, *Shah Daulah's Rats*, in *Man*, xv (1915), 88-9. (J. Burton-Page)

GUERSIF [see GARSĪF].

GUILD(S) [see FUTUWWA, ṢINF].

GUINEA, an independent republic on the West coast of Africa (246,000 sq. km), bounded on the north by Portuguese Guinea, Senegal and Mali, on the east by the Ivory Coast, and on the south by Liberia and Sierra Leone. Within these limits, between 7° and 13° N., and between 7° and 17° E., every type of terrain and climate is to be found, starting with Lower Guinea which has a width of from 40 to 90 km, and where extensive deltas have been formed by the neighbouring rivers, often lined with mud-flats or strewn with islands; Central Guinea corresponds with the Fūta Djallon, dominated by residual high ground from 1200 to 1500 m. and distinguished by the *bowal*, a cap of laterite isolated by erosion, and where the introduction of cultivation has increased the sterility. Upper Guinea corresponds with the upper basin of the Niger, where the climate becomes continental; further south, in the Guinea forests, lies the mountain barrier containing Mount Nimba.

Guinea probably derives its name from the Berber *ignawən*, pl. of *agnaw*, which means "mute" and does not imply any notion of colour (see G. S.

Colin in *GLECS*, vii, 93-5), contrary to the view expressed by M. Delafosse (*Haut-Sénégal-Niger*, ii, 277).

The population of Guinea numbers about 3 million. There are still some centres of population that are either indigenous or were established in very early times, Coniagui and Bassari in the north, Kissi and Guerze in the south.

The Baga, Landuman, Mani or Mendenyi, and Nalu have been driven back from the Fūta towards the coast by Mande, Sarakole, Malinke and Sussu elements, and by the conquering Fulani. The history of these settlements corresponds in general outline with the history of Islamization.

This process was accomplished only slowly, under the pressure of political and military events in the Nigerian Sudan, first with Malinke elements, and then through the Fulani who, as soon as they believed themselves to be sufficiently strong, were to proclaim a holy war and to maintain their ascendancy over the Fūta until the French conquest.

It was in 422/1050 that Baramendana Keita, the sovereign of Mali, was converted to Islam. From the end of the 5th/11th century the first Diola to be Islamized by the Sarakole penetrated into Guinea and began to spread Islam into the Fūta and along the kola-nut routes leading to the coast. In the 6th/12th century, the Soninke Morikubala Dore introduced Islam into the Konian, Awrodugu and Kossadugu. In 658/1260 Amari Sonko, one of the commanders of Mansa Ule, king of Mali. conquered and converted the Kangaran. In the first half of the 10th/16th century came the Pouli from Macina and Tichitt, commanded by Bambi Diade. These first Fulani invaders were Ḳādiriyya Bakkāya (of the Kunta of Timbuctu). They set about converting or expelling the refractory elements. Koli Tenguela or Koli Pouli, great-grandson of Bambi Diade, created the first kingdom of Fūta.

Attracted by the mountain pasturages, the Fulani came in ever increasing numbers from Macina at the end of the 11th/17th century, and Islamization became more marked. However, the Muslim Mandingos, coming from Diafonu in particular, founded Kankan and the villages of Bate, Kuafodie and Tintiule. In 1105/1694 a powerful force of Fulani arrived from Macina, led by a certain Seri or Sidi. In about 1111/1700 leadership passed to Muhammadu Saïdi and then to Kikala, a man renowned for his piety. On the death of his son Sambigu, his grandsons Nuhu and Malik Si disputed the succession (1132-8/1720-6).

The Muslim penetration was, at that date, on so extensive a scale that it was tempting to make use of the religious pretext to evict the proprietors of the land. It was Ibrahima Mussu, still known as Karamoko Alfa, a man of immense piety, who was called on to fight against the pagans. He inaugurated the permanent state of holy war which was one of the constant and fundamental policies of Fūta. The first victories fell to the aggressive Fulani, but the pagans recovered and their chief, Pouli Garme, occupied Timbo when Karamoko became insane and died. In his place was chosen Ibrahima Sori ("the Wakeful"), known as *mawdo* (= the Great), who in practice was to be the great war leader of Fūta, defeating the Wassulonke and the Sulima in succession. He compelled the Fulani chief of Labe to recognize his authority over the Mandingo province of Niokolo in Upper Gambia, and forced Maka, king of Bundu, to become Muslim and take the title of *almami*. In face of these triumphs, the council of elders became perturbed and their head, the *Modi Maka*, with the support of the Alfaya had Abdullahi Ba Demba, a descendant of Karamoko Alfa, nominated as *almami*. But under the threat of perils from without, they recalled Ibrahima Sori who, in about 1194/1780, moved the capital of Fukumba to Timbo. On the death of Ibrahima Sori (in about 1784), the kingdom of Fūta, divided into two rival branches, the Alfaya and the Soria, was apportioned to each of the branches alternately every two years. During the reigns of Karamoko Alfa and Ibrahima Sori Mawdo, the Islamization of central Guinea (Kindia region) was continued. Some Kankan families broke away and founded Beyla (corruption of *billāh*).

These alternating reigns did not pass without serious difficulties. The Islamization of the Dialonke proceeded with increased momentum as a result of the founding in 1821 of the *madrasa* of Tuba, an important Ḳādirī centre, by al-Ḥādjdj Salimu, better known under the name Karamba. In 1830, Alfa Mamadu introduced Islam into the Rio Nuñez. The 19th century was dominated by the reign of the Almami ʿUmar (1837-72), who overcame his rival Ibrahima at Timbo (1851) and succeeded in conquering the fanatical Muslims who had revolted in the Fitaba at the instigation of a *marabout*, Mamadu Djue. These rebels were called Hubbu from the phrase *ḥubbu rasūl Allāh* (= the love of God's Messenger). Mamadu Djue having died, his son Abal ("the Wild") continued the struggle and contrived to kill the Almami Sori Dara at Boketto, the capital of the Fitaba, in 1872.

Treaties of friendship were signed in the reign of Ibrahima Sori Donhol Fella (1872-89) and Amadu Dara (1873-96) with representatives of England and France. In 1887-8, Aimé Olivier, Comte (?) de Sanderval, caused himself to be proclaimed a citizen of Fūta Djallon by the Alamai, and to be given the highlands of Kahel and the right of coinage. Sanderval thereafter played a decisive part in the vassals' struggle against the Almami Bokar Biro, who was defeated at Bentiguel-Tokosere by the chief of Labe. Restored to the throne by the French administration, he agreed to sign a protectorate treaty, but in place of his name he wrote Bissimilaï (*bi-'smi 'llāh*). Captain Müller then marched on Timbo. Bokar Biro and his 1500 warriors were defeated at Poredaka. It was the end of the independence of the Fūta Djallon.

The progress of Islamization was thus advanced notably; in 1850 al-Ḥādjdj ʿUmar had established the Dinguiraye (cattle-park) before carrying out his conquests in the north, and his adherents had penetrated the frontier zone of the present northern Guinea. From 1870 a former Mandingo pedlar, Samory Toure, set up the empire of Onassubu, the capital of which, Bissandugu, was his place of refuge after expeditions to what later became Ghana and the Ivory Coast.

Samory's invasions produced a renewed Islamic infiltration. By the treaties of Kenieba-Koura (March 1886) and Bissandugu (1887), Samory made himself secure from the direction of the French Sudan and, to protect himself from the British, he requested a French protectorate. Operations started again from 1891. In 1898 Samory, captured by the Gourand force, was deported to Gabon where he died two years later.

French Guinea was established by a decree of 17 December 1891, and its boundaries were fixed in 1899 with the neighbouring states, French Sudan (now Mali) and the Ivory Coast. Being included in 1904 in the Federation of West Africa, it became a

'Territoire d'Outre-Mer' and gained its independence on 28 September 1958 by voting *non* in the referendum under the guidance of the present President Sekou Touré.

The Islamization of Guinea was continued throughout the whole French period with the frequent help of the administration. On the other hand, since independence a strict neutrality has been imposed by the President, although himself a Muslim.

In conclusion, we may say that in Guinea as a whole, according to the judgement of the geographer J. R. Molard, "the Fulani are Muslim born, the Mandingos are adopting Islam, while the forest peoples (Kissi, Toma, Guerzé) have remained hostile."

(R. Cornevin)

GUL (Pers., 'rose, flower'). In eastern Islamic literatures the (red) rose plays a very important part. The image of the rose (or the bud: *ghunča*) recurs in all manner of similes, metaphors and other figures of speech, in set phrases, idioms and puns. *Gul-āb* (rose-water) is considered one of the finest ingredients for sweets and drinks. With the nightingale (*bulbul* [*q.v.*]) the rose constitutes an old established pair of lovers, naturally not restricted to its actual meaning. The mention of either term of the binomial *gul - bulbul* evokes in the language of poetry the image of the other. *Gul* and its compounds are used as personal names (for example, *Gul-andām* and *Gul-shāh*) as well as place names (*Gulkhandān*, *Gulistān* and *Gulgasht*). As rival claimant (*raḳīb* [*q.v.*]) for the rose, and occasionally its protector, the thorn is used. As symbol of the challenge to a match or contest the rose appears (similar to the glove in the West) in the expressions *gul-i djang*, *gul-i hangāma* and *gul-i kushtī*, the last-named being also the title of a *mathnawī* by ʿAbd al-ʿĀlī Nadjāt (d. ca. 1126/1714; see J. Rypka, *Iranische Literaturgeschichte*, Leipzig 1959, 286). The word, with separate derivations and numerous combinations, appears alone (even as a personal name) and combined (*gul-dasta, gulistān, gulshan* and *gulzār*) with other personifications of things or with persons frequently in the titles of Persian, Turkish and Indian books. *Gul u bulbul* is the title of both Persian and Indian *mathnawī*s (see H. Ethé, *Neupers. Lit.*, in *Gr. I. Ph.*, ii, 250 ff.). Well known is Faḍlī's Turkish *mathnawī Gül ve bülbül* (*Gül ü Bülbül, Rose und Nachtigall von Fasli, ein romantisches Gedicht*, Turkish edition and German translation by Joseph von Hammer, Pest and Leipzig 1834; see Gibb, *Ottoman Poetry*, iii, 110 ff.), which is, next to that composed in Čaghatay by Luṭfī in 814/1411 (see A. Bombaci, *Storia della letteratura turca*, Milan 1956, 129), the best of all the epics of the same name (such as those of Baḳāʾī, Ghāzī Girāy II and others) in the Turkish languages. But the rose was combined with yet other partners. See for example the indexes in *Gr. I. Ph.*; Gibb, *op. cit.*; Browne, ii, iv. Further material might be provided by catalogues of oriental and western manuscripts, further Edwards, *Cat. of the Printed Books in the British Museum*, London 1922; A. J. Arberry, *Persian Books* (*Cat. of the Library of the India Office*, ii/6), London 1937, and similar works. From Persian poetry might be mentioned *Gul u Khusraw* or *Khusraw u Gul* (usually *Khusraw-nāma*) by Farīd al-Dīn Muḥammad ʿAṭṭār (d. 627/1230?) (see *EI*[2], i, 753; H. Ethé, *op. cit.*, 286; in more detail H. Ritter, *Philologika*, x, *Isl.*, xxv (1938), 160-72); *Gul u mul* ("Rose and Wine"; see *IA*, ii, 734); *Gul u Naw-rūz* by Djalāl al-Dīn Aḥmad Ṭabīb in 734/1334, and the same title by Khʷādjū Kirmānī in 742/1341-2 (see H. Ethé, *op. cit.*, 249); *Gul u Ṣanawbar* "Rose and Spruce", in prose and several times translated into Urdū (see H. Ethé, *op. cit.*, 321 and 323); Garcin de Tassy, *Histoire de la Littérature Hindouie et Hindoustanie*[2], Paris 1870, i, 157 ff.; and translated by him in *Revue orient. et amér.*, vii, 69-130). From Ottoman poetry, *Gül ü Khusrev* by Āhī (d. 923/1517; Gibb, *op. cit.*, ii, 291); *Gül u Ṣabā*, "Rose and Zephyr", by Nedjātī (d. 914/1509; see Gibb, *op. cit.*, ii, 101); *Münāẓara-i Gül ü Khusrev*, "Contest between (the) Rose and Khusrev", also by Nedjātī (see Gibb, *op. cit.*, ii, 100), and *Gül ü Nev-rūz* by Muʿīdī (16th century; see Gibb, *op. cit.*, iii, 160).

Bibliography: In addition to that mentioned above, Charles Joret, *La Rose dans l'Antiquité et au Moyen-Age*, Paris 1892; Shiblī Nuʿmānī, *Shiʿr al-ʿAdjam*[2] (Pers. tr.), iv, Tehrān 1336 s., 165-9; Annemarie Schimmel, *Rose und Nachtigall*, in *Numen*, v/2 (1958), 85-109. (J. Rypka)

GÜLBABA, a Turkish title, with the sense of head of a Muslim cloister (*tekke*) of the Bektāshī Order; the name of a *tekke* at Buda and of another *tekke* in the neighbourhood of Edirne; the name of a legendary personality.

The name Gülbaba, in connexion with the *tekke* and the *türbe* so designated at Buda, appears in Turkish documents of 974/1566 with the form كل بابا (Vienna, Flügel 1294); on a manuscript sketch-map of 1684 (E. Veres, *Marsigli jelentése és térképei Budavár 1684., 1686. évi ostromairól* [Report and maps of Marsigli on the sieges of the fortress of Buda in the years 1684 and 1686], in *Budapest régiségei* [Antiquities of Budapest], ix, 142) it occurs four times in the same form, though in each case without vocalization. Written in the same manner, it is found in several Turkish authors, *e.g.*, in Pečewī (ii, 141), Ewliyā Čelebi (vi, 244) and Naʿīmā (i, 289); and in Silāḥdār it occurs a number of times in the form كول بابا (ii, 401, 799, 801). In the writings of European authors the name is encountered as Julpapa in G. Wernher and E. Brown, as Gyulpapa in the superscription—from a European hand—on the above-mentioned manuscript sketch-map, and as Ghiul Baba in the text of L. Marsigli; about 1830, after the rendering of a dervish from India, it was written down as Tiulbaba. The forms given in the Latin script leave no doubt that the name, in its first syllable, has to be pronounced Gülbaba, with the vowel ü. A man with the name Gülbaba is known from the time of Meḥemmed II (Babinger, *GOW*, 213) and a locality near Edirne is also called Gülbaba. The word *gül*, as a component of personal names, is known, too, in other instances, *e.g.*, Gül Toḳmaḳ Khān, Gül Rüstem Khān.

The expression *gül*, in names of this kind, has not

the meaning of rose (*i.e.*, the flower), but a mystical sense, in that it alludes symbolically to fiery zeal on behalf of the (Muslim) faith. This meaning underlies, moreover, the compounds *gül-tesbīḥ*, *gül-benk*. In the life of the dervish, *gül* has the sense of "glowing iron rose", "particular ornament on the top of a dervish cap, especially in the case of the Ḳādirī order"; it is the mark which distinguishes the head of a house of the order and which is to be worn on the cap (*tādj*). M. d'Ohsson writes (*Tableau général de l'Empire Ottoman*, ii, 534) that the red-hot iron is called *gül*, which the Rifāʿī dervishes grasp, kiss and bite in the ecstasy of their religious dances. Th. Menzel observes (*Beiträge zur Kenntnis des Dervisch-tāğ*, in *Festschrift G. Jacob*, Leipzig 1932, 179 n.) that one of the objects in use amongst the dervishes is named "*zenğīrli šiš = gül, charb* (Nadelspitze mit Kugel und Kettchen)", that part of the dervish cap is called *gül*, and this is regarded as the *damgha* of the *erens* (*ibid.*, 191); and that, furthermore, *gül* in various contexts is the badge of different dervish orders and of distinct grades within the orders.

In elucidating the name Gülbaba we have therefore to set out from this mystical sense of the word *gül*, with the result that *gülbaba* means "a zealous dervish, a rose on the branch of his order", *i.e.*, a man who, at the ceremonies held in common, leads and intones the prayers, one who knows how to take hold of the red-hot iron as of a rose breaking into bloom—the iron whose touch is as pleasing as the fragrance of roses, one who keeps and handles this iron, a man who bears the mark of a religious head (*gül*) on his cap fashioned from wedge-shaped pieces of cloth, etc. Ewliyā Čelebi (vi, 244) alludes to this sense of the word, when he addresses Gülbaba, in verses composed in his honour, as *güllü baba*, *i.e.*, as little father of the roses, as the *baba* recognizable by the rose. This meaning is also to be found in E. Brown, who notes that the head of the Buda *tekke* was "called *Julpapa*, or Father of the *Rose*" (Edward Brown, *A brief account* . . ., London 1673, 34, quoted in *Budapest régiségei* [Antiquities of Budapest], ix, 115), and in L. Marsigli, who remarks that the Turks, by Gülbaba, understand a "Padre Rosa", in much the same manner as the Christians use an expression like "Padre Giazinto".

Other explanations of the word are: that it comes from *Kel baba*, "bald father" (I. Kunos, in *Pallas Lexikon*, Budapest 1894, viii, 365); also that it derives from the verbal stem *gül-* (after the analogy of Gäl-bäri, see Gy. Németh, in *KCsA*, ii, 379).

Gülbaba is therefore a Turkish title. It is only on the evidence of Ewliyā Čelebi that Gülbaba would seem to be a personal name, referring to a historical personage. Ewliyā Čelebi remarks (vi, 225) that Gülbaba died at the Ottoman conquest of Buda and that Sultan Süleymān had his corpse laid to rest and commended the fortress of Buda to his protection. Of such an important event no trace is to be found in other sources. It is mentioned neither by Pečewī (the reference to Pečewī given by Cl. Huart in *EI*[1], s.v. Gül-Bābā, is the result of an error), nor by Djalāl-zāde, the official historian of the campaign. We have therefore to accept that there was never a person with the name Gülbaba in the time of the Turks, and in particular no historical personage of this name, but that on the other hand there existed at all times one or more *gülbaba* in charge of a *tekke*.

The *tekke* and *türbe* called Gülbaba at Buda were built by Meḥemmed Pasha before 958/1551. The *türbe* is still standing today. The hill on which these two buildings stood (it is now called Rózsadomb, *i.e.*, Hill of Roses) has been given the name Miḥnet tepesi in the historical literature as the result of an erroneous statement by von Hammer (*GOR*[2], iii, 706); it used in fact to be called Gülbaba bayrī, Tekke bayrī ("Gülbaba Hill, Tekke Hill").

GULBADAN BĒGAM, the talented and accomplished daughter of the emperor Bābur [*q.v.*] by one of his wives, Dildār Bēgam, who was a lineal descendant of the Central Asian *ṣūfī* Aḥmadi-Djām *Zinda-Pīl*, was born c. 929/1523 in Khurāsān (Kabul?), two years before her father set out from Kabul on his last but historic expedition across the Indus in 932/1525, which won him the empire of India. That very year she was adopted by Māham Bēgam, mother of Humāyūn [*q.v.*] and the senior wife of Bābur, to rear and educate. In 936/1529 she left for Āgra [*q.v.*], the seat of Bābur's government, under the care of her foster-mother to join her father there. She remained in India till 947/1540 when Humāyūn suffered a crushing defeat at the hands of Shēr Shāh Sūr [*q.v.*]. She along with other royal ladies was sent back to Kabul where the fugitive emperor Humāyūn joined her in 952/1545. In about 946/1539 she married Khiḍr Khʷādja Čaghatāy, second son of Bābur's full sister Khānzāda Bēgam. An otherwise undistinguished man, he rose to the rank of *Amīr al-Umarāʾ* under Humāyūn (cf. *Āʾīn-i Akbarī*, Eng. transl. by Blochmann, 365 *n.*). She bore him many children but none attained greatness. In 982/1574 she left on a pilgrimage to Mecca, stayed in the Ḥidjāz for three and a half years and performed the *ḥadjdj* four times. She returned to India in 990/1582 after a perilous voyage involving a shipwreck off Aden, where she had to stay for a whole year. It was after her return home that she was asked by Akbar [*q.v.*] to write her personal memoirs, the *Humāyūn-nāma* or *Aḥwāl-i Humāyūn Pādshāh*, as material for Abu 'l Faḍl's *Akbar-nāma*. Only one incomplete copy, recording the events up to 960/1553, of this work survives; it is in the British Museum. It was published with a lengthy introduction and English translation by Annette S. Beveridge (London 1902). Another, but inferior edition containing only the Persian text, was published at Lucknow in 1925 under the title *Humāyūn-nāma-i Gulbadan Bēgam*. She died at Āgra on 6 Dhu 'l-Ḥidjdja, 1011/7 May, 1603 at the age of 82 lunar years. Akbar himself accompanied and shouldered her bier a little distance.

She was well-versed in both Turkī and Persian and was good at calligraphy and the art of *inshāʾ*. She used to compose in Persian and two lines of hers

have been quoted by Mahdī Shīrāzī in the *Tadhkirat al-Khawātīn* (not seen by me).

(A. S. Bazmee Ansari)

GULBĀNG, a Persian word meaning the song of the nightingale, and hence by extension fame, repute, and loud cries of various kinds. In Turkish usage it is applied more particularly to the call of the muezzin [see ADHĀN] and to the Muslim war-cry (*Allāhu Akbar* and *Allāh Allāh*). In the Ottoman Empire it was used of certain ceremonial and public prayers and acclamations, more specifically those of the corps of Janissaries [see YEÑI ČERI]. Such prayers were recited at pay parades and similar occasions, at the beginning of a campaign, when they were accompanied by three volleys of musketry fired in the air, and at the accession of a Sultan. They were led by an officer standing with crossed arms on the '*gülbāng* stone' which was to be found in Janissary barracks. The term *gülbāng* was also used in the rituals of the Bektāshī and Mewlewī orders.

GULBARGĀ, a town and district in the north of Mysore state in India on the western borders of what is known as "the Deccan" (Dakkhan [*q.v.*]); the town is situated at 17° 21′ N., 76° 51′ E. Of some antiquity in the Hindū period, it formed part of the domains of the Kākatīyas of Warangal before the Islamic conquest. It was annexed for the Dihlī sultanate by Ulugh Khān, the future Muḥammad b. Tughluḳ, early in the 8th/14th century, to pass first to the Bahmanī dynasty on its establishment in 848/1347, whose first capital it became under the name Aḥsanābād. It fell to the ʿĀdil Shāhīs of Bīdjāpur in 909/1504, and although it was recovered by Amīr Barīd ten years later it was soon retaken by the ʿĀdil Shāhīs; they held it until 1067/1657, when Mīr Djumla besieged it and captured it for the Mughals.

The majority of the monuments of Gulbargā belong to the period when it was the Bahmanī capital, and have already been described in the article BAHMANIDS. Of the monuments not mentioned there the following are of some importance: Ḳalandhar Khān's mosque (see *Report of Archaeological Department, Hyderabad, 1335F.:/1925-6*, 7 ff., Plates IIa, Xb), built by a Bahmanī governor after the transfer of the capital to Bīdar; the mosque of Afḍal Khān, an ʿĀdil Shāhī general of the late 10th/16th century (Mīrzā Ibrāhīm, *Basātīn-i Salāṭīn*, 130 ff.), which stands in the court of the *dargāh* of Gēsū Darāz, in the later stone Bīdjāpur style [see BĪDJĀPUR, Monuments] similar to the mosque of Malika Djahān, with hanging stone chains below the cornice (*Report ... 1335F./1925-6*, 8, Plates IIb, XIa); the Langar mosque, early Bahmanī or possibly pre-Bahmanī, with a vaulted arch-shaped ceiling with wooden ribs recalling the style of the Buddhist cave-temples (*Report ... 1346F./1936-7*, 7 ff., Plate VIa); a group of 5 mausolea at Holkonda, once a suburb of Gulbargā on the Homnābād road, similar to those of the Haft Gunbadh (*Report ... 1344F./1934-5*, 1); the mosque and *dargāh* of Ḥaḍrat Kamāl Mudjarrad (*ibid.* 5-6 and Plates IIIa and b); the tomb of Čānd Bībī, of Niẓām Shāhī style (*ibid.*, 6, Plates IVa and b).

Bibliography: in the article; and see Bibliography to the article BAHMANIDS. (J. Burton-Page)

GÜLEK BOGHAZ, Turkish name for the Cilician Gates, for which see CILICIA, col. 35a.

GULISTĀN [see SAʿDĪ].

GULISTĀN, the name of a place in the Caucasus where, on 12 October 1813, a peace treaty was signed between Russia and Persia. In 1800 the Russians had annexed Georgia, and the Persians, in an effort to check their further advance southward, had suffered two defeats in 1812, at Aslandūz and Lankurān, and had been forced to sue for peace.

The terms of the Treaty of Gulistān, which was negotiated through the mediation of the British ambassador Sir Gore Ouseley, were disastrous for Persia. The regions of Georgia, Ḳarābāgh, Shakkī, Shīrwān, Darband, Bākū, Dāghistān, Gandja, Muḳān, and part of Ṭālish, were ceded to Russia, and Article 5 stipulated that only Russian naval vessels had the right to navigate on the Caspian Sea. The ambiguous nature of the Article relating to the territorial settlement led to disputes and to the renewed outbreak of war in 1826.

Bibliography: A. Waḥīd Māzandarānī, *Rāhnamā-yi ʿuhūd*, Tehran 1341s./1962, 294, 306. For an English translation of the Treaty, and additional bibliography, see J. C. Hurewitz, *Diplomacy in the Near and Middle East*, i, 1956, 84 ff. (R. M. Savory)

GÜLKHĀNE, (modern Turkish Gülhane) the "House of roses", or Gülkhāne Meydānî, is the name of a part of the gardens which lie along the Sea of Marmora on the east side of the Topkapî Sarāyî in Istanbul [*q.v.*]; the name is derived from the fact that in olden days the building, in which the rose sweetmeats for the use of the court were prepared, stood there. The place is famous in history because the celebrated firman of Sultan ʿAbd al-Madjīd, the so-called *Khaṭṭ-i sherīf* promulgating the reforms, was publicly proclaimed there on Sunday 26 Shaʿbān 1255/3 November 1839; cf. the description in G. Rosen, *Geschichte der Turkei*, ii, 14 ff.; Luṭfī, *Taʾrīkh*, vi, 59 ff.; B. Lewis, *The emergence of modern Turkey*², London 1965, 104 ff., and article TANẒĪMĀT; on the place itself cf. White, *Three years in Constantinople*, i, 110, and *TOEM*, i, 291 ff.; it is now a park. (J. H. Mordtmann*)

GULPĀYAGĀN, district and town in the fifth *Ustān* (Luristān). The central chain of the Zagros range traverses the district; the highest peak is Ḥādjdjī Ḳārā (3650 m.). The district lies partly in the cold region and partly in the temperate one. The chief town, Gulpāyagān, which is situated in Long. 50° 18′ W. and Lat. 33° 26′ N., is 1924 m. above sea level and therefore has a cold climate in winter. It is an ancient town containing some buildings dating from the Saldjūḳ era. In 1951 the population of the town and the surrounding villages amounted to 22,000. The Arab geographers gave the name of the town as Djarbādhakān, *i.e.*, Gurbādhakān. It is only in comparatively recent times that frequent mention of the town occurs. The Arab geographers referred to it merely as a stage or station on the

route uniting Iṣfahān with Hamadān. The chief industry of the town and its surroundings is agriculture.

Stack, *Six months in Persia*, London 1882, ii, 114; Razmārā and Nawtās͟h, *Farhang-i Dj̲ug̲h̲rāfiyā-yi Īrān*, v, 316; for a discussion of the etymology of the name, see Aḥmad Kasravī, *Nāmhā-yi s̲h̲ahrhā u dihhā-yi Īrān*, Tehrān 1335/1956, 68. (L. Lockhart)

GULS̲H̲ANĪ (Turkish: Güls̲h̲enī), Ibrāhīm b. Muḥammad b. Ibrāhīm b. S̲h̲ihāb al-Dīn (?-940/1534), Turkish mystic, a successor of Dj̲alāl al-Dīn Rūmī and a prolific poet. He came of a family settled in Diyārbakr, where his father Muḥammad al-Āmidī's *türbe* and a prayer-hall said to have been built by him still stand some 500 yards outside the Mardin gate (see ʿAlī Emīrī, *Diyārbekirli baʿd-i d̲h̲ewātīn terdj̲eme-i ḥālleri*, 16; for the report that he came from Barda in Ād̲h̲arbaydj̲ān, see M. ʿAlī Tarbiyat, *Dānis̲h̲mandān-i Ād̲h̲arbaydj̲ān*, 318). Muḥyī-i Güls̲h̲enī, whose *Menāḳib-i Ibrāhīm Güls̲h̲enī* [see *Bibl.*] is the richest source on Ibrāhīm Guls̲h̲anī's life and circle, continues the genealogy given above with four more names: b. Aydog̲h̲mus̲h̲ b. Gündog̲h̲mus̲h̲ b. Ḳutludog̲h̲mus̲h̲ b. Og̲h̲uz, thus making him a descendant of Og̲h̲uz Ata, but gives no information on his ancestors beyond his father and his grandfathers. His father Muḥammad al-Āmidī was the author of works on *fiḳh*, *kalām* and *manṭiḳ*; his paternal grandfather Ibrāhīm wrote a *s̲h̲arḥ* on the *Farāʾiḍ*, completed the *Fakk al-mug̲h̲laḳ* (on the solution of various problems in *fiḳh*), composed much-esteemed works on *taṣawwuf*, and was for a time *ḳāḍī* of Diyārbakr (Muḥyī, *Menāḳib*, fol. 6r); his maternal grandfather S̲h̲araf al-Dīn was descended from a certain Ḳāḍī ʿĪsā and was a *mudarris* at ʿAyntāb (*Menāḳib*, fol. 6v).

The date of Guls̲h̲anī's birth is not exactly known. Muḥyī's statement (*Menāḳib*, 159v.) that when he died in 940/1534 he was 114 years old implies that he was born in 826/1422-3; but elsewhere he states that he was two years old when his father died and that his father had survived into the reign of the Aḳ-Ḳoyunlu sultan Ḥamza (838-48/1434-44), so that the date 826 must be advanced by at least ten years; another statement (see below) that he joined Uzun Ḥasan at Tabrīz at the age of 15 implies that he was born in 859 or 860/1455 or 1456, but for reasons which will appear this statement on his age is unacceptable. Most probably he was born between 838 and 840/1434-7. His father dying when he was two, he was brought up by his paternal uncle Sayyidī ʿAlī, who, according to the *Menāḳib* (7r.), had more than 200 *murīds*. While still a child, Guls̲h̲anī began to learn the Ḳurʾān and to read Turkish books of *tafsīr* and *ḥadīt̲h̲*. Concerning his later education the *Menāḳib* gives only vague and confused information: it relates that he set out alone to study in Mā warāʾ al-nahr, but when he reached Tabrīz he was adopted by Uzun Ḥasan's *ḳāḍīʿaskar*, who told him that all the *ʿulamāʾ* of Uzun Ḥasan's realm would obey his guidance, and appointed him *tawḳīʿī*. The stipend he received enabled him to help his uncle at Diyārbakr and, probably at this time, to bring his sister to Tabrīz (*Menāḳib*, 9v., 73r.). (That he was given the post of *tawḳīʿī* and still more important posts and was recognized already as a famous *s̲h̲ayk̲h̲* shows that the statement, also in the *Menāḳib*, that he was only 15 when he went to Tabrīz must be rejected). Elsewhere (13r.-v.) it is stated that he travelled to Harāt to resolve a dispute between Uzun Ḥasan and Ḥusayn Bayḳara, and, on a similar mission, visited S̲h̲īrāz, where he met Dj̲alāl al-Dīn Dawānī [see al-dawānī]. He gives the impression to have been at this period a government official with an inclination to *taṣawwuf*, who enjoyed special inward experiences and was searching for a suitable *murs̲h̲id*; soon afterwards at Ḳarabāg̲h̲, by the good offices of Uzun Ḥasan's brother Uways, he was introduced to and became the *murīd* of Dede ʿUmar Rūs̲h̲anī ([*q.v.*], d. 892/1486) of Aydìn, who was the *k̲h̲alīfa* of Sayyid Yaḥyā-i S̲h̲īrwānī, the *pīr-i t̲h̲ānī* ('second *pīr*, *i.e.*, founder') of the K̲h̲alwatī order [see khalwatiyya].

Thenceforth Guls̲h̲anī devoted himself to *d̲h̲ikr* and to ascetic practices: he would walk in the streets with a wine-cup in his hand to demonstrate his attachment to *malāmī* doctrine and wore a sheepskin *tādj̲* (*Menāḳib*, 28r.). After Uzun Ḥasan's death (882/1478), his successor K̲h̲alīl had little esteem for Guls̲h̲anī, but the respect and fame which he enjoyed during the reign of Yaʿḳūb (883-96/1478-90) are demonstrated by a poem of Idrīs Bidlisī [see bidlisī], quoted in the *Menāḳib* (30v.-31r.); this respect was increased by the reverence in which Yaʿḳūb's *ḳāḍīʿaskar* ʿĪsā held him. Guls̲h̲anī assiduously attended the sermons of ʿUmar Rūs̲h̲anī, who had come from Ḳarabāg̲h̲ to settle at Tabrīz (*Menāḳib*, 26v.); he was present when Sultan Yaʿḳūb besieged Ak̲h̲iska, settled various disputes within the royal family, and witnessed the rise of S̲h̲ayk̲h̲ Ḥaydar. When ʿUmar Rūs̲h̲anī died (892/1486), he succeeded him (not without opposition) as *post-nis̲h̲īn* [*q.v.*] and began to teach his disciples in the Muẓaffariyya mosque at Tabrīz. This period of *d̲h̲ikr* and *samāʿ* did not last long: Yaʿḳūb's successors had little respect for him and even persecuted him. In 900/1495 he performed the Pilgrimage together with a numerous company of disciples and adherents. At Mecca he met some *ʿulamāʾ* of Egypt and wished to visit Egypt on his homeward journey, but gave up the plan out of consideration for his family waiting for him at Tabrīz (*Menāḳib*, 78v.-79r., 83r.). The Ṣafawī occupation of Tabrīz, consequent persecutions, and Alwand Beg's defeat by S̲h̲āh Ismāʿīl (907/1502) obliged him to hasten from Tabrīz with his family. He came to Diyārbakr, then governed by Ḳāsim Beg; but when, after Alwand's death (910/1504-5), Diyārbakr too fell to the Ṣafawīs (912/1507), he was obliged to flee again, first to Jerusalem (where he carried out a forty day retreat [see khalwa]) and then to Egypt, where he settled at Birkat al-ḥadj̲dj̲ near Cairo. Timurtas̲h̲, a K̲h̲alwatī *s̲h̲ayk̲h̲* who had earlier come from S̲h̲īrwān to settle there, procured for him the possession of Ḳubbat al-Muṣṭafā; while living there he met Sultan Ḳānṣawh al-G̲h̲awrī while he was out hunting, and the Sultan granted him living-quarters at the Muʾayyadiyya mosque by Bāb Zuwayla. Though deprived by the Ottoman invasion under Selīm I of the patronage first of Ḳānṣawh al-G̲h̲awrī and then of his successor Tuman Beg, Guls̲h̲anī was held in great honour by the Ottoman troops (S̲h̲aʿrānī, *Ṭabaḳat*, ii, 163), many of whom, encouraged perhaps by Guls̲h̲anī's old acquaintance Idrīs Bidlisī, became his *murīds*; indeed his quarters at the Muʾayyadiyya mosque could no longer accommodate his followers, which gave rise to complaints from Arab *s̲h̲ayk̲h̲s* also lodged there. This enormous popularity was the cause of anxiety to the successive Ottoman governors, who feared a rising; and indeed when Ibrāhīm Pas̲h̲a came to Egypt to investigate the situation after the rebellion of Aḥmed Pas̲h̲a (K̲h̲āʾin [*q.v.*]) his adverse report to Sultan Süleymān prompted the Sultan to summon Guls̲h̲anī in 934/

1527-8 to Istanbul (see ʿĀlī, *Kunh al-akhbār*, Istanbul Un. Lib. MS T 2359, ii, fol. 24v.). The Sultán interviewed him, and his work *Maʿnawī* was sent to Kemāl Pasha-zāde [*q.v.*] for a *fatwā* on whether it contained ideas contrary to the *sharīʿa*. The Sultan was impressed by *Gulshanī* and the *fatwā* (text in *Menāḳib*, 120v.) was favourable; so after staying six months (through the winter) in Istanbul, Gulshanī returned to Egypt. (This incident forms the subject of the first play in Turkish literature, see İ. H. Danişmend, *Türk tiyatrosunun ilk piyesi*, in *Türklük*, ii (1939), 73-91.) Five or six years after his return to Egypt, Gulshanī died during an epidemic of plague on 9 Shawwāl 940/24 April 1534; he was buried in a *türbe* at his convent, which still stands. Of his two sons Aḥmed Khayālī and Meḥmed, the former, a poet whose Turkish *Dīwān* contains many pleasing poems, succeeded him.

Works. Ibrāhīm Gulshanī was a poet so prolific that he is said to have dictated poems in three languages (Persian, Turkish and Arabic) to three scribes at once. A. His works in Persian are (i) *Maʿnawī*: written in imitation of the *Mathnawī* of Djalāl al-Dīn Rūmī, this work of 40,000 couplets was begun at Diyārbakr and finished in 10 months; like the *Mathnawī*, it contains many stories, and many couplets from the *Mathnawī* are quoted in it verbatim. There are many fine manuscripts with gold-inlaid bindings in the libraries of Istanbul (Ayasofya 2080 [copied in 927], Umumî 3588 [copied 928], Süleymaniye-Halet Ef. 272 [copied 927), Süleymaniye-Esad Ef. 2908 [copied 936]). A *sharḥ* of the first 500 couplets (which are written in a very complex style) was composed by Laʿlī Meḥmed Fenāʾī and has been printed (*Sharḥ-i Maʿnawī*, Istanbul 1289). (ii) *Dīwān*: in this collection of 17,000 couplets (almost as long as Djalāl al-Dīn's *Dīwān-i kabīr*) the influence of Djalāl al-Dīn, Ḥāfiẓ, and sometimes Yūnus Emre is to be detected; it has not been printed or thoroughly studied. MSS in Turkey: Istanbul, Fatih 3866 (copied 931); Millet, farsça manzum 418 (? 10th/16th century); Ankara, Dil ve Tarih-Coğrafya Fakültesi library (unnumbered, ? 19th century). (iii) *Kanz al-djawāhir*, a work of about 7,500 quatrains, some in *rubāʿī*, some in *tuyugh* form, written in fairly simple language, on the themes of Divine Love, *fanāʾ* and *baḳāʾ*, and the author's devotion to his *murshid*, ʿUmar Rūshanī. Only one MS is known: Istanbul Un. Lib. F 1233 (according to the *Menāḳib*, 167, Gulshanī's *rubāʿī*s in Turkish, Persian and Arabic, amounted to 12,000 couplets). (iv) *Sīmurg-nāma*, a work of 30,000 couplets, known only from references in the *Menāḳib* (83v., 167r.). B. His works in Turkish comprise only a *Dīwān* of about the same length (17,000 couplets) as his Persian *Dīwān*. In some of his Turkish poems, Gulshanī is clearly under the influence of Yūnus Emre and Nesīmī [*qq.v.*]. The work deserves study, both for its literary and for its linguistic interest. The best and fullest MS known is in the Library of the Dil ve Tarih-Coğ. Fak. (Üniversite kütüphanesi kitapları 982). Selected poems from the *Dīwān* are found in various libraries, *e.g.*: Dil ve Tarih-Coğ. Fak. (Mustafa Çon 289); Istanbul Millet (Carullah 1661 and manzum 379); Istanbul Un. Lib. (T 890). Some of his *ghazal*s were translated into Persian with a commentary by Idrīs Bidlisī (*Menāḳib*, 30r.). C. The Arab *ʿulamāʾ* and poets of his day regarded Gulshanī as '*ummī*', and perhaps he did not speak Arabic well (Shaʿrānī, *Ṭabaḳāt*, ii, 163). His Arabic poems formed only a small *Dīwān* of 5,000 couplets (*Menāḳib*, 167r.). In form and content they are influenced by his Persian poems. The only known MS (of selections) is in the Library of the Dil ve Tarih-Coğ. Fak. (Üniversite kütüphanesi collection).

In his poetical works, especially in the final couplets of his *ghazal*s, Gulshanī mentions, together with his own *makhlaṣ* or *nisba*, that of his *murshid* ʿUmar Rūshanī, whose thought so strongly influenced him. Gulshanī did not escape criticism, any more than his *murshid*, who, under the influence of the works of Muḥyī al-Dīn al-ʿArabī, adopted an extreme doctrine of *waḥdat-i wudjūd* and, for his efforts to spread in Ḳarabāgh and its neighbourhood the ideas of the *Fuṣūṣ al-ḥikam*, was condemned and persecuted as a 'Fuṣūṣī'. Condemnatory *fatwā*s were issued concerning Gulshanī and his *murīd*s and successors, who preached the same extreme *waḥdat-i wudjūd* (see *Fatāwā-yi Abū Suʿūd*, Istanbul, Millet Lib., MS şer'iye 80, fol. 267r.-v.).

Gulshanī's *ṭarīḳa*. The Gulshaniyya *ṭarīḳa*, which took its name from his *nisba*, was a branch of the Khalwatiyya. It assumed its characteristic form only after Gulshanī had settled in Egypt and built his famous convent there. It diverges from the Khalwatiyya, based on the principles of *khalwa* and *dhikr*, especially in its rules of behaviour (*ādāb*). The Gulshaniyya *ṭarīḳa*, which at first adopted *samāʿ* and other practices of the Mawlawiyya (Ṣāliḥ, *Manāḳib-i awliyā-yi Miṣr*, Būlāḳ 1262, 143), later absorbed practices from the Baktashiyya and other orders, and was thus regarded as having placed itself outside the *sharīʿa* (Ḳaraḳash-zāde ʿÖmer, *Nūr al-hudā li-man ihtadā*, Istanbul 1286, 7). The rules of daily life in Gulshanī's convent in Cairo, the weekly ceremonies held there and the practices of the *ṭarīḳa* as a whole present peculiarities which deserve study (see Shemleli-zāde, *Shīwe-i ṭarīḳat-i Gulshaniyye*, Millet Lib., MS şer'iye 888; for the convent and its buildings, see ʿAlī Bāshā Mubārak, *al-Khiṭaṭ al-djadīda*, *djuzʾ* vi, 54).

L. Devonshire, *Rambles in Cairo*, 332.

(Tahsin Yazici)

GULSHANĪ (Gülshenī) Ṣarūkhānī, Ottoman poet who flourished in the reign of Meḥemmed II, was born in Ṣarūkhān, and lived a life of religious seclusion and devotion. His *Maḳālāt* (variously entitled in the MSS *Rāz-nāme*, *Pend-nāme*, *Esrār-nāme*) is written in seven chapters in the *mathnawī* form, containing 950 couplets; completed in 864/1459, it consists of homilies, stories and parables. After each homily or admonition, Gülshenī includes stories to illustrate his point.

He is the author of a Persian *dīwān*: the text of the *ḳāṣīde*s addressed to Meḥemmed II and Bāyezīd

II is reproduced from the unique MS (Istanbul, Bayezid Um. Küt. 5280) by Tahsin Yazıcı (see Bibl.). He wrote also a poem celebrating the Prophet's birthday (*mawlūd*).

(Günay Alpay)

GÜLSHEHRĪ, a Turkish poet of the beginning of the 8th/14th century. Hitherto, his personal name was taken to be Aḥmed, on the evidence of a single entry in a manuscript of his poem *Manṭiḳ al-ṭayr*. Recently, on the strength of several points in the same work, he has been identified with a certain Sheykh Süleymān, whose *türbe* is in Kïrshehir. It can be easily supposed that this town from which as a poet he took his name Gülshehrī was his home. The date of the poet's death is unknown, but it must have been after 717/1317, the year when his work *Manṭiḳ al-ṭayr* was completed.

Gülshehrī wrote two great didactic *ṣūfī* poems, *methnewī*s in *remel* metre, one in Persian entitled *Falak-nāma* (completed 701/1301-2), of about 4,000 distichs (*bayts*), of which the so far unique manuscript is now in the Public Library (Genel Kitaplık), Ankara, as no. 817. The other work is written in Turkish and is entitled *Manṭiḳ al-ṭayr*; this likewise consists of about 4,000 distichs, and now exists in a facsimile edition with introduction by Agâh Sırrı Levend (Ankara 1957). A dissertation on this work, by Müjgan Cunbur, has not yet appeared in print. Gülshehrī's *Manṭiḳ al-ṭayr* ("Speech of the birds") is a free adaptation in verse of the poem of the same name also in the *remel* metre, by the Persian poet Farīd al-Dīn ʿAṭṭār [*q.v.*], and not really a translation. The ideas and construction of the work are the same as with ʿAṭṭār; it is an allegory of *ṣūfī* monism (*waḥdet-i wudjūd*), in the form of a story of a journey by the birds under their leader, the hoopoe (*hüdhüd*), to their queen, the Sīmurgh [*q.v.*], whose eyrie was far off on Mount Ḳāf, and their arrival there, after the hardships of the journey only thirty of them attaining their goal, where they were finally compelled to recognize themselves to be the "Sī murgh" —"thirty birds". In matters of detail, however, Gülshehrī often goes his own way.

In one place in his work *Manṭiḳ al-ṭayr* (text, ed. A. S. Levend, 297, l. 14), the poet names the *Gülshannāme*, as a work written by himself; it is, however, probable that the *Manṭiḳ al-ṭayr* itself is meant. Another small *methnewī* is also in existence, probably by Gülshehrī, consisting of 167 distichs and also in *remel* metre, on Akhī Ewrān/Evren (*Kerāmāt-i Akhī Ewrān ṭāba tharāhu*), which is very closely linked with the *Manṭiḳ al-ṭayr* since they have whole verses in common. There is some difference of opinion as to whether this short *methnewī* on Akhī Evren derives from Gülshehrī himself, or whether it was composed by another poet who may have been a follower of Akhī Evren and who made use of lines from the *Manṭiḳ al-ṭayr* and misappropriated the then famous name of Gülshehrī. It is a striking fact both that in the *methnewī* on Akhī Evren the *Falak-nāma* is in fact named (verse 159b), but not the *Manṭiḳ al-ṭayr*, and also that the name of Akhī Evren does not figure in the latter work [see AKHĪ EWRĀN].— In another place in the *Manṭiḳ al-ṭayr* (text, A. S. Levend, 296 l. 12) Gülshehrī also speaks of a verse translation of a work by the poet Kudūrī in Turkish as his own work. A manuscript of a further work of Gülshehrī, *ʿArūḍ risālesi*, is in Istanbul (Millet Kitaplığı, Ali Emiri, Farsça yazmalar, no. 517).— Finally, from various manuscripts now dispersed there still survive some *ghazal*s by Gülshehrī. These have been collected together by Fr. Taeschner in his article *Zwei Gazels von Gülşehri*, in *Fuad Köprülü Armağanı* (*Mélanges Fuad Köprülü*), Istanbul 1953, 479-85.

(Fr. Taeschner)

GUM, GUM ARABIC [see ṢAMGH].

GŪM (Arabic *ḳawm*; French *goum*), the usual form and pronunciation, in the Arab countries of North Africa, of the name given to a group of armed horsemen or fighting men from a tribe. The derivative *gūma* signifies "a levy of *gūm*s, troops, a plundering foray", "sedition", "revolt".

It was the Turks who, in the former Regencies of Algiers and Tunis, gave the *gūm*s an official existence by making them the basis of their system of occupation of the country. All the tribes had been divided by them into *makhzen* or auxiliaries, who were exempt from most taxes, and *raʿiyya*, who were liable to all taxes. The latter were the more numerous. When one or more of the latter tribes refused to pay a tax or revolted for some reason, the Turkish army rapidly advanced to the insurgents' territory. Though small in size, this army was reinforced by the exceedingly mobile cavalry groups of the *gūms*.

Soon after their occupation of the Algiers Regency, the French learnt how to make best use of the *gūms*. But once the country had been pacified, the *makhzen* tribes disappeared. The system of *gūm*s was then extended to all tribes, without exception. Under the command of the chiefs, *ḳāʾid*s or *agha*s, appointed by the French authorities, the *gūms* had to co-operate with the military police in the maintenance of peace in the country, and in protecting the migrations of the nomadic tribes and the safety of caravans.

In territory under military administration, the number of "goumiers", *i.e.*, members of the *gūm* of a tribe, varied according to regional needs. The goumiers received a monthly wage and encamped on certain State lands whose revenues went to them, but they were obliged to equip and mount themselves at their own expense. On active service they were also entitled to the *muʾna*, a special allowance for food.

In civil territory, the goumiers equipped and mounted themselves at their own expense. They did not draw any pay but, when called up, they received the special allowance for food. In civil territory *gūms* were called up only in the event of insurrection or European war. They were, in fact, a territorial militia under the command of the tribal chiefs and subject to the orders of the administratuon. The *gūm* from each mixed commune consisted of 120 horsemen. The goumiers had the right to carry arms. Their distinctive badge was a green and red cord fixed round the turban. The goumiers' horses were not subject to any tax charges, and the goumier himself was exempt from the tax on livestock.

After the inauguration of the French Protectorate in Morocco, a similar organization was created, and the Moroccan goumiers particularly distinguished themselves during the second world war, in Italy and the south of France [see also MAKHZEN].

GÜMRÜK [see MAKS].

GÜMÜLDJINA [see Supplement].

GÜMÜSH-KHĀNE (modern spelling Gümüşhane), literally "the house of silver, the town of silver", mining centre and town of Asia Minor, principal town of a *vilâyet*, on the road from Trabzon to Erzurum. The evolution of the town went through two distinct phases. (1) As a mining centre. It is probably Gümüsh-khane to which Marco Polo refers when he writes (xxii) of silver mines in the region of Bayburt. In any case the town was known by this name (Kumish) in the time of Ibn Baṭṭūṭa (tr. Gibb, Cambridge 1962, ii, 436). Situated at an altitude of about 5,000 ft., built in an amphitheatre on the steep slopes of the Musalla deresi (a left tributary of the Harşit çay), the ancient town, which during the whole of the Ottoman period was a busy centre for the mining of argentiferous lead, under a system of state encouragement and supervision (see N. Çağatay, in *AÜDTCD*, ii (1943), 124), was "important and lively" in the 17th century (Ḥādjdjī Khalīfa, *Djihānnümā*, 622, 623). But by the beginning of the 19th century the mines were in complete decline; in 1836, they employed no more than 50 or 60 workers and it was no longer profitable to work them. They were therefore closed, particularly because of the lack of fuel due to the deafforestation of the area, in the middle of the 19th century; then, after a last attempt to work them in 1883, closed finally a few years later. (2) As a town on a main route. The main centre of the town then gradually moved towards the Harşit valley 2½ miles away, along which at first were scattered country houses surrounded by gardens and orchards, which provided at the end of the 19th century an important export of dried and preserved fruit (pears, plums, apricots, etc.). Gradually a commercial, and then an administrative, centre arose there along the main route from Trabzon to Erzurum. The decline of the old town was completed by the Russian occupation in 1916-18, which left it half in ruins, and by the exodus of the important Greek and Armenian minority (even so late as the beginning of the 20th century, the Greeks formed half of the 3,000 inhabitants). Today all the commerce and administration is concentrated in the new town. Pop., 1960, 5,312.

Gümüsh-khāne, situated on the main route from Trabzon to Iran, was visited and described in the 19th century by many European travellers; see especially W. J. Hamilton, *Researches in Asia Minor*, London 1842, i, 168-9, ii, 234-8 (detailed analysis of the position of the mines before they were closed); Th. Deyrolle, *Voyage dans le Lazistan et l'Arménie*, in *Le tour du monde*, Paris 1875 (xxix), 22-4 for the period of the growth of the new town and the trade in fruit in 1869. (X. DE PLANHOL)

GÜMÜSHTEGIN, name of various Turkish chiefs, particularly the Dānishmendid prince known also as Amīr Ghāzī [see DĀNISHMENDIDS] and the atabeg of Aleppo [see ZANGIDS]. (ED.)

GUNBADH [see ḲUBBA].

GUNBADH-I ḲĀBŪS, the second town of Gurgān province, Iran, 110 km by road north-east of the provincial headquarters at Gurgān [*q.v.*], with an estimated population of 10,000 in 1956. Five km west of Gunbad (as it is popularly called) lie the ruins of the mediaeval city of Djurdjān, near the shrine said to be that of the ʿAlid Yaḥyā b. Zayd. The modern town is named from the mausoleum of the Ziyārid Ḳābūs b. Washmgīr, still standing at the northern end of the main street. It is a cylindrical brick tower 167 feet high, placed on an artificial mound 32 feet above the plain. Angular buttresses divide the sides into ten panels, the exterior diameter being 48 feet. Above the door a band of Arabic inscriptions in simple Kufic philosophically name the structure as the *ḳaṣr* ('palace') of Ḳābūs, ordered during his lifetime in 397/1006-7, or 375 by solar reckoning (*i.e.*, the Era of Yazdagird III commencing A.D. 632). The monument is nowadays much admired for its structural strength and simplicity.

Bibliography: A. Godard in A.U. Pope (ed.), *A survey of Persian art*, ii, 970-4; *RCEA*, vi, 62 (No. 2118); E. Diez, *Churasanische Baudenkmäler*, i, 39-43, 100-6; B. Dorn, *Caspia*, 91. (A. D. H. BIVAR)

GUNS, GUNNERY [see BĀRŪD].

GÜNTEKIN, REŞAT NURI [see RESHĀD NŪRĪ GÜNTEKIN].

GŪRĀN, an Iranian people, now reduced to between 4,000 and 5,000 houses, inhabiting an area north of the main road from Kirmānshāh to the Persian frontier near Ḳaṣr-i Shīrīn and comprising the slopes of the Kūh-i Shāhān—Dālāhū mountain. The Gūrān 'capital' is Gahwāra, lying 60 km. due west of Kirmānshāh in the valley of the Zimkān, a southern tributary of the Sīrwān. An isolated community occupies the village of Kandūla, 40 km. north-east of Kirmānshāh, near the site of Dīnawar. Other, more numerous branches are formed by the Bādjalān and the tribes of the Hawrāmān [*qq.v.*].

An older form of the name was certainly Gōrān (< *Gāwrān-), as it is so preserved in Kurdish dialects, while Gūrānī itself has undergone the sound-change *ō*, *ū* > *ū*, *ü* respectively (*v. infra*). It is thus difficult to reconcile the name with that of the Γουράνιοι, mentioned by Strabo, xi, 14, 14, as neighbours of the Medes. The origin of the name is more probably to be sought in a form **gāw-bāra-kān* 'ox-riders' (*v.* Minorsky, *op. cit. infra*). This name is connected with the Caspian provinces, as also is the place-name Gīlān, which is of frequent occurrence among the Gūrān. The inference that their original home lay near the Caspian is further supported by the evidence of their language. Just as the closely related Zāzā [*q.v.*], or Dimlī, people moved west into classical Armenia, so the proto-Gūrān appear to have migrated south and peopled the whole southern Zagros area. Later they were largely submerged by an expansion of the Kurds, also from the north, but their language has left its mark on the ('Central') Kurdish of their conquerors.

Ibn Khurradādhbih, 14, preserves the older form

of the name as Djābārᵃḳa, and similar forms are used by Ibn Faḳīh and al-Masʿūdī, always in close connexion with Kurds. Ibn al-Athīr, ix, describing the rise of the Ḥasanōyid principality (ca. 350-420/960-1030), which stretched from northern Luristān to Shārazūr, frequently mentions the exploits of the *Djawraḳān, while for this name the author of the *Mudjmal al-tawārīkh* regularly substitutes Gūrānān. Shihāb al-Dīn al-ʿUmarī, *Masālik al-abṣār* (ca. 744/1343), mentions 'Kurds called al-Kūrāniya' in the mountains of Hamadān and Shārazūr, and Sharaf Khān, in the *Sharaf-nāma* (1005/1596), still uses the term Gūrān as if referring to the populace of Ardalān and Kirmānshāh as a whole, although he distinguishes their various rulers. The absorption of all but the surviving Gūrān population by Kurdish tribes thus appears to have proceeded slowly, the present equilibrium having been achieved little more than a century ago.

The Gūrān are mainly sedentary cultivators, yet they have long been renowned for their military qualities. In the last century they provided a standing regiment of between 1,000 and 2,000 men for the Persian army. Those subjected to Kurdish tribal overlordship, however, have completely surrendered their identity. The name Gōrān, synonymous with *miskēn*, is now used among the Kurds of Shārazūr as an appellation for the serf-like, Kurdish-speaking peasantry.

It is noteworthy that the name Gōrān is also borne by a small group of Kurds inhabiting the area north of the Great Zāb river above the confluence of the Khāzir. These 'Seven tribes', as they are also called, speak Kurdish dialects of the Southern group, unlike their neighbours, and have evidently been transported from the Kirmānshāh—Khānaḳīn region.

Language.

The Gūrānī dialects belong to the North-West Iranian group. Of those recorded Hawrāmī is consistently the most archaic. Characteristic of the phonology are (*a*) the preservation of initial *y*- and *w*-: H(awrāmī) *yáwa*, B(ādjalānī) *yaw*, K(andūlaī) *yaya* 'barley', H, B *wā*, K *vā* 'wind', H, K *winī* 'blood', (*b*) initial *w*- < *hw*-: all *wārd*- 'eat', H, K *war* 'sun', *warm* 'sleep', (*c*) initial *h*- < *x*-: H, K *har* 'donkey', *hāna* 'spring', (*d*) -*rd*- > -*l*-, in words unmistakably NWIr.: H *wilī* 'flower', K *zil* 'heart'. In general H and B have preserved the *madjhūl* vowels *ē*, *ō*, lost in the other Gūrānī dialects: H *hēla*, K *hīla* 'egg', H, B *gōsh*, K *gūsh* 'ear', where *ū* generally becomes *ü*: K *dür* 'far', *zü* 'quick'.

In the nominal system masculine and feminine gender, and direct and oblique case, are normally distinguished. Most dialects have a defining suffix -*aká*, F. -*aké* (-*akī*). The indefinite suffix, generally -*ī*, is -*ēw*, F. -*ēwa*, in Hawrāmī. H also preserves a genitive Iḍāfa form *ū*: *das-ū wēm* 'my own hand', beside the epithetic *ī*: *yānēw-ī kōn* 'an old house'.

The copula is characterized by the presence of an -*n*-, thus Sg. 1 -*anā*(*n*), 2 -*anī*, 3 -*an*, etc. With the present tense the durative prefix is generally *m*(*a*)-: B *makarō*, K *makarü*, but H *karō* 'he does', B, K *māčān*, H *māčā* 'they say (*wāč*-)'. H has, in addition, a proper imperfect tense formed from the present stem: *karēnē* 'I was doing', *wāčē* 'he was saying'. The majority of dialects have preserved the inverse formation of the past tenses of transitive verbs: H, B *čēsh-it wāt* 'what did you say?', K *āwirdan-ish* 'he has brought it'. Passive stems are formed in -*ya*-: H *wāčyō* 'it is said', K *kiryān* 'it has been made'.

Gūrānī has attained literary status in the form of a κοινή which, besides being the vehicle of a number of Ahl-i Ḥaḳḳ writings, was cultivated at the court of the Wālīs of Ardalān. A sketch of the grammar of this literary language has been given by Rieu, *Cat. Pers. MSS.*, ii, 728 ff. Poets of name range from Yūsuf Yāska (fl. 1010/1600) to Mawlawī (d. 1300/1882). All Gūrānī verse, epic, lyric and religious alike, is in a simple decasyllabic metre. Its former popularity is reflected in the fact that *gōrānī* is the common word for 'song' in the neighbouring Kurdish.

Bibliography: V. Minorsky, *The Gūrān*, in *BSOAS*, xi (1943), 75-103; Benedictsen/Christensen, *Les dialectes d'Awromān et de Pāwä*, Copenhagen 1921; K. Hadank, *Mundarten der Gūrān*, (Oskar Mann) bearbeitet von . . ., Berlin 1930; M. Mokri, *Cinquante-deux versets . . . en dialecte Gūrāni*, in *JA*, 1956, 391-422. (D. N. MacKenzie)

GŪRĀNĪ, Sharaf (or Shihāb or Shams) al-Dīn Aḥmad b. Ismāʿīl b. ʿOthmān, known as Mollā Gūrānī, 9th/15th century Ottoman scholar and *shaykh al-islām*. [Sakhāwī sometimes found his name given as Aḥmad b. Yūsuf b. Ismāʿīl *etc.*; and in one place (ii, 1486) Ḥādjdjī Khalīfa mentions him with the *kunya* Abu 'l-ʿAbbās.] While noting that Maḳrīzī gives another date and place (the latter obviously a copyist's distortion), Sakhāwī has him born in 813/1410-11 in the Gūrān district of the Shahrizōr province of upper ʿIrāḳ, and it is probably only by inference from the ethnic character of this region that F. Babinger makes him a Kurd (*Mehmed der Eroberer und seine Zeit*, Munich 1953, 518). After having studied under local teachers, he pursued his further education in Ḥiṣn Kayfā, Baghdād, Damascus (where he arrived in 830/1426-27), Jerusalem and, finally, Cairo (835/1431-2). Here he studied under such famous scholars as Ibn Ḥadjar and Ḳalḳashandī, and he gained a reputation for learning which led to the patronage of important men and a teaching appointment at Barḳūḳiyya *madrasa*. Because of an unseemly quarrel with another scholar, he was dismissed his post and exiled to Syria in 844/1440-41 whence, in despair of his future in Mamlūk territories, he went over to the Ottomans and changed his *madhhab* from Shāfiʿī to Ḥanafī. His first appointment was to the Ḳaplīdja *madrasa* in Bursa, and in 854/1450-51 he succeeded Ḳaradja Aḥmad Efendi as professor at the Yïldïrïm in the same city (Belīgh, 283). Later he was made tutor to Prince Meḥemmed in Maghnīsa, and when the latter ascended the throne in 855/1451 he received the post of *ḳāḍī 'l-ʿaskar*. He was present at the conquest of Constantinople (ʿĀlī, *Kunh al-akhbār*, v, Istanbul 1277, 257) and composed in elegant Arabic a letter to the Sultan of Egypt announcing this great victory (Ferīdūn Beg, *Munshaʾāt al-salāṭīn*, Istanbul 1274, 235). His intractable independence of attitude proving an annoyance to the new Sultan and his statesmen, he was removed from the centre of affairs by appointment to the *ḳāḍī*-ship of Bursa, but here, too, he acted in defiance of the royal will and was finally dismissed from office. He left Ottoman territory for a while, but returned in 861/1457 after having performed the Pilgrimage and was once again appointed *ḳāḍī* of Bursa with lavish monthly supplements to his salary from the Sultan. In 867/1462-63 he succeeded Mollā Khusraw as *ḳāḍī* of Istanbul (Belīgh, 260; but cf. Tashköprüzāde-Medjdī, 149 margin, where it is said that Khʷādja-zāde succeeded Mollā Khusraw in this office in 872/1467-68). In 885/1480-81 he was elevated to *shaykh al-islām*, and he remained

in this office until his death in the latter part of Radjab 983/1488. He is buried in the mosque he built in the quarter of Istanbul which still bears his name.

The independence of mind which he exhibited in his public life is also to be found in his works. Thus, in his commentary on the Ḳur'ān entitled *Ghāyat al-amānī*, etc. (completed in 867/1463) he often takes issue with Zamakhsharī and Bayḍāwī (Brockelmann, II, 228, S II, 319; Ḥādjdjī Khalīfa, ii, 1190), and in his commentary on the *Ṣaḥīḥ* of Bukhārī entitled *al-Kawthar al-djārī*, etc. (completed in Edirne in 874/1469) he even refutes his former master Ibn Ḥadjar (Brockelmann, I, 159, S I, 262, S II, 319; Ḥādjdjī Khalīfa, i, 553). Several of his works are on Ḳur'ānic readings (*ḳirā'a*): under the title of *al-ʿAbḳarī* he compiled his notes on the *Kanz al-maʿānī* of al-Djaʿbarī, the famous commentary on al-Shāṭibī's *Ḥirz al-amānī* (Brockelmann, S I, 725; Ḥādjdjī Khalīfa, i, 646); his *Kashf al-asrār*, etc. (not completed in 890/1485 as Ḥādjdjī Khalīfa, ii, 1487, says, for a ms. of it in the Süleymaniye, No. 47/2, is dated 874/1469-70) is a commentary on al-Djazarī's *al-Durra al-muḍī'a*, etc. (Brockelmann, II, 202); the same Süleymaniye ms. also contains another work by him on this subject, the *Lawāmiʿ al-ghurar fī sharḥ fawā'id al-Durar* which, from its title, may be a commentary on the *Durar al-afkār*, a work by al-Djaʿbarī not recorded in Brockelmann (Ḥādjdjī Khalīfa, ii, 1319). On *fiḳh* he wrote a commentary to al-Subkī's *Djamʿ al-djawāmiʿ* entitled *al-Durar* (or *al-Budūr*) *al-lawāmiʿ* which Ḥādjdjī Khalīfa (i, 596) implies is a spiteful attack on the *al-Badr al-ṭāliʿ*, also a commentary on the *Djamʿ* by al-Maḥallī, his successor at the Barḳūḳiyya (Brockelmann, S II, 106, 319). A few other minor works are also attributed to him.

Bibliography. The two basic sources for his biography are al-Sakhāwī, *al-Ḍaw' al-lāmiʿ*, Cairo 1353, i, 241-3 and Ṭashköprüzāde, *al-Shaḳā'iḳ al-nuʿmāniyya*, Arabic text in the margins of Ibn Khallikān, *Wafayāt al-aʿyān*, Būlāḳ 1299, i, 143-51; Turkish version by Medjdī, Istanbul 1269, 102-11; German translation from the Arabic by O. Rescher, Istanbul 1927, 48-53 (see also 114). Despite his fame and importance, he is scarcely mentioned in the historical works of the period: see the bibliography to the article by Ahmed Ateş in *IA*, viii, 406-8, and add: Belīgh Efendi, *Güldeste-i riyāḍ-i ʿirfān*, Bursa 1302. For his buildings in Istanbul and elsewhere, see Ḥusayn Aywānsarāyī, *Ḥadīḳat al-djawāmiʿ*, Istanbul 1281, i, 187, 207, and Ekrem Hakkı Ayverdi, *Fâtih devri mimarîsi*, Istanbul 1953, Nos. 73, 85, 90, 171, 199, 244, 384 and 486. He figures in a miniature among the illustrations to Sâmiha Ayverdi, *Edebî ve Manevî Dünyası içinde Fatih*, Istanbul 1953, 10.

(J. R. Walsh)

GURČĀNĪ [see Supplement]

GURDJISTĀN [see KURDJ].

GURGĀN, Old Persian VRKĀNA, Arabic DJURDJĀN, the ancient Hyrcania, at the South-east corner of the Caspian Sea.

The province, which was practically equivalent to the modern Persian province of Astarābādh [*q.v.*] (now part of *Ustān* II) forms both in physical features and climate a connecting link between sub-tropical Māzandarān with its damp heat and the steppes of Dihistān in the north. The rivers Atrak [*q.v.*] and Gurgān, to which the country owes its fertility and prosperity, are not an unmixed blessing on account of their inundations and the danger of fever which results.

Gurgān played an important part in the Sāsānid period, being the frontier province against the nomads pressing in from the north. The fortresses of Shahristān-i Yazdgird and Shahr-i Pērōz (see Marquart, *Ērānšahr*, 51, 56) were built as a defence against the nomads of the Dihistān steppes; a long wall was built along the northern frontier to defend the lands.

Saʿīd b. al-ʿĀṣ is said to have levied tribute from the "Malik" of Gurgān as early as the year 30/650-1; but the real conquest of the country was the work of Yazīd b. al-Muhallab (98/716-7). At that time the ruler of Gurgān was a Marzbān but the real power seems to have been in the hands of the Turkish chief Ṣūl.

After punishing the unruly population of the valley of the navigable Andarhāz, the modern Gurgān river, Yazīd founded the town of Gurgān, which henceforth was the capital of the province. It must have been a very prosperous place in the 3rd/9th and 4th/10th centuries. The gardens around it, irrigated by the waters of the river, were famous; its chief product was silk. Gurgān was also a station on the caravan route to Russia. The town was divided in two by the river, which was crossed by a bridge of boats; on the eastern side was the town proper or Shahristān, whose nine gates are detailed by Muḳaddasī, and on the western, the suburb of Bakrābādh (called after a settlement of the Arab tribe?). The prosperity of the town seems to have been early threatened by internal dissensions. ʿAlid propaganda had found a congenial soil in the lands along the Caspian, and the ʿAlid dynasty of Ṭabaristān included Gurgān in its sphere of influence. In Gurgān itself the tomb of Muḥammad b. Djaʿfar al-Ṣādiḳ, commonly known as Gūr-i Surkh (the Red Tomb) was an object of great reverence. The constant unrest in these lands enabled Mardāvīdj b. Ziyār in 316/928 to found a kingdom of his own in Gurgān with the help of the Daylamites: it survived for over a hundred years, although nominally dependent on the Sāmānids and later the Ghaznawids [see ZIYĀRIDS]. The dome-shaped tomb (Gunbadh-i Ḳābūs [*q.v.*]) of the ruler Ḳābūs b. Washmgīr (366/976-7 - 403/1012-3) still exists as a memorial of this period.

The population was massacred at the time of the Mongol invasion and Mustawfī (transl. Le Strange, 156) writing in the 8th/14th century describes the town as a heap of ruins. Tīmūr is said to have built a palace in 795/1392-3 on the bank of the river, but Gurgān never again attained its former prosperity. Ḥādjdjī Khalīfa (*Djihān-numā*, Istanbul 1145/1732, 339), however, mentions Gurgān, which had been rebuilt since the Mongol period, as inhabited by fanatical Shīʿīs.

The position of Gurgān in the angle formed by the confluence of the Gurgān River and the Khurmā-rūd is marked only by extensive mounds, which have not yet been investigated. The very name of the town has recently been transferred to Astarābādh. Only the Gunbadh-i Ḳābūs, about 2 miles to the north-east and about a mile away from the river, has withstood the ravages of time.

Bibliography: As in the article ASTARĀBĀDH.

(R. Hartmann [- J. A. Boyle])

GURGANDJ, called by the Arabs Djurdjāniyya, and also in the period about 600/1200 described as Khwārizm (like the country round), the economic centre of the Khwārizm [*q.v.*] area and for a long period also the political capital of the territory, lay to the west of the lowest reaches of the Oxus (Āmū

Daryā). The town, whose age is unknown, was captured by the Arabs in 93/712. They attempted to deprive Gurgandj of its importance by founding a city, Fīl (Fīr), on the further bank of the Oxus; but the new settlement was gradually inundated by the river (for details see KĀTH). In order to maintain their domination over Khwārizm, which was an area at that time on the outer fringe of the world of Islam, the Arabs divided the territory; the native dynasty, the Āfrīghids, who bore the title of Khwārizm-Shāh, were allowed to retain the northern part, with Kāth as their capital; Gurgandj became the residence of an Arab *amīr*, who had power over the south-west (*Ḥudūd al-ʿālam*, 122, § 25, and 371; Gardīzī, ed. M. Nāẓim, 1930, p. 57). This state of affairs lasted for over 250 years, until 385/995 (for details see KHWĀRIZM). Then the Arab *amīr* of the time, Maʾmūn b. Muḥammad, was able to expel the old dynasty and unite the whole of Khwārizm under his own rule. From that time he took over the ancient title of the rulers of that country, Khwārizm-Shāh. Thereafter Gurgandj ranked after Kāth as the second principal city, but after the overthrow of Maʾmūn's successors by the Saldjūḳs in 434/1043, it exceeded Kāth in importance and became once more the real centre of the territory as well as the intermediary for commerce with the Oghuz and other northern Turkish tribes (Gardīzī, 95; Iṣṭakhrī, 299 f., 341; Ibn Ḥawḳal, 350 f., 477 f.). At this time the town had four gates and a large palace near the Bāb al-Ḥudjdjādj, on the edge of a huge market place, and consisted of an outer and an inner city (*Ḥudūd*, 122). According to Muḳaddasī, 288, in the 4th/10th century the town grew rapidly; in 600/1204 it was besieged by the Ghūrids [*q.v.*] (Djuwaynī, ii, 55; Barthold, *Turkestan*[1], 349 f.) and at the beginning of the 7th/13th century it was included among the most prosperous cities of the Islamic Empire (an account dating from the period 613-6/1216-9 is given in Yāḳūt, ii, 54, 486; iii, 933; iv, 260 f.). Immediately thereafter, in 618/1221, Gurgandj was attacked by the Mongols and after a siege of many months was razed to the ground (there is a lengthy account in Djuwaynī, i, 98 f.; thorough discussion of details in Fritz Meier, *Die Fawāʾiḥ ... des ... Kubrā*, Wiesbaden 1957, 53-60, with presentation of all source material; cf. also Barthold, *Turkestan*[1], 433-7). The Mongols also flooded the town by diverting the Oxus; nevertheless a few remains of pre-Mongol buildings have been found (for instance an inscription of 401/1010-1: *Zapiski Vost. Otd. Imp. Russk. Arkheol. Obshčestva*, xiv, 015 f.; cf. also Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, ed. Raverty, 281, 1100). The question of how far the diversion of the Oxus at that time led to a displacement of the river bed is discussed in the article ĀMŪ DARYĀ. Gurgandj lay waste from that time forth. The new capital of the province, Urgenč, founded in 628/1231, was on a different site and presumably corresponds to the earlier so-called "Little Gurgandj", three parasangs from Gurgandj. For the history of this town see URGENČ.

GURGĀNĪ, FAKHR AL-DĪN ASʿAD, author of the first known courtly romance in Persian: *Wīs and Rāmīn*. In the opinion of Z. Safa (ii, 361) his achievement is to have introduced a literary genre which is now represented by a series of works, several of which are worthy of note. What is known of his life is limited to the little that he reveals in his poem. The accounts given by his biographers are negligible but agree in attributing to him the authorship of the poem (with the exception of Dawlat Shāh, who erroneously attributes it to one of the Niẓāmīs). ʿAwfī has preserved three of his lyrical poems (texts: Maḥdjūb, introd., 14), the others being lost. Shams-i Kays (*Muʿdjam*, ed. Mīrzā Muḥammad and E. G. Browne, 80) writes: "The poetic metre *baḥr-i hazadj-i musaddas-i mahdhūf* is that of Niẓāmī's *Khusraw and Shīrīn* and of Fakhrī Gurgānī's *Wīs and Rāmīn*"; later (140) he refers to him simply as Fakhrī, which was perhaps his *takhalluṣ*. In the last verse of his poem, Gurgānī refers to himself as young; in addition he inserts (ed. Minovi, 468, v. 72; ed. Maḥdjūb, 350, v. 72; tr. Massé, 431 bottom) this confidence (which partly explains his skill in depicting the passions of love): "How many days did I sample love! But it did not make me happy for one single day". He had certainly studied the Arab and Iranian philosophers (see the introd. to the poem, on the subject of a non-material God and His creation) and astronomy (description of the night: ed. Minovi, 80; ed. Maḥdjūb, 60; tr., 72). In this same introduction he sings the praises of Ṭoghrīl Beg, of his vizier and of ʿAmīd Abu 'l-Fatḥ Muẓaffar, who was appointed governor of Isfahan after the capture of this town by the sultan (441/1050); this governor was the patron of the poet and appointed him to various offices. In the course of conversation with him, as Gurgānī relates in detail (Minovi, 25-7; Maḥdjūb, 18-21; tr., 6-7), the subject arose of the love story of Wīs and Rāmīn, preserved in a Pahlavi manuscript: "a continuous narrative, but containing all manner of strange words", lacking in ideas and maxims—that is to say a prose narrative without any poetic ornament (perhaps like the Georgian translation of the poem). The governor having invited him to translate this story into Persian, "to embellish it as one adorns a flower-bed in April", Gurgānī set to work, and finished, in 447/1055 or shortly after, this verse romance which consists of 8905 *bayt* in *hazadj*, the metre most often adopted later by those who composed romances in the same genre.

The question arises whether Gurgānī knew Pahlavi. It is impossible summarily to deny this after having read his account, imprecise though it is, of the conversation with the governor, and it is possible to conclude from one of the verses of the poem that he had some, though not a complete, knowledge of the language ("For one who knows Pahlavi, Khurāsān signifies the place from which we receive light", ed. Minovi and Maḥdjūb, ch. 48, v. 4); in the course of this conversation, however, he refers to the prolixity and the strange (*i.e.*, archaic) words of the Pahlavi text. For the question whether he worked directly from it or through a Persian translation, see Maḥdjūb,

introd., 20. The important thing is that he gave new life to an original which otherwise would no doubt have disappeared like so many other Pahlavi texts.

In his poem the influence of ancient Iran appears particularly in the frequent allusions to the divine or the evil powers, to the sacred fires (mentioned by their names) and to their maintenance, to the ancient months and feast days, and to legendary features; there is in it a case of trial by ordeal, and one of those consanguineous marriages which were characteristic of the royal families of ancient Iran. The subject of the poem is fatal love: from the time of the appearance of the first edition of the Persian text the similarities between the poem and the story of Tristan and Iseult were recognized—there is thus no need to give an analysis of it here (cf. Massé, 9 ff.). The romance may be based on a historical fact: V. Minorsky has sought to demonstrate that it probably relates the adventures of a descendant of the Arsacid family and of a princess of one of the seven noble families of the Parthian period.

In Gurgānī's poetry there are realistic features contributing to knowledge of customs and folklore. At times his style is affected and precious (tr., 20-1), especially when, like other Persian poets, he is describing feminine beauty in conventional terms (*e.g.*, ch. 37; tr., 90). Maḥdjūb has noted a series of images and of ancient proverbs (introd., 55-8), archaism sometimes used with a special meaning (*ibid.*, 34) and some words which are close to the Pahlavi forms (*ibid.*, 43). The poem had a lasting influence. Maḥdjūb points out similarities between some verses of Gurgānī and those of later poets, and even some borrowings (introd., 98 ff.). The ten passionate letters written by Wīs to Rāmīn (Minovi, 347-83; Maḥdjūb, 259-86; tr. 318-51) were imitated by the poets Awḥadī, Ibn ʿImād, ʿĀrifī, ʿImād Faḳīh (ten letters), Amīr Ḥusaynī, Kātibī and Salmān-i Sāwidjī (thirty letters). Of more significance is the similarity evident in the plan of Niẓāmī's verse romance *Khusraw u Shīrīn*, which was probably inspired by Gurgānī, though as regards style it may be suggested that Niẓāmī intended that his learned and highly artificial style should form a contrast to the generally simple and sober style of Gurgānī.

GURGĀNĪ [see DJURDJĀNĪ].

GŪRKHĀN, the title borne by the (non-Muslim) rulers of Ḳarakhitāy [*q.v.*] (Chinese Hsi Liao = Western Liao) who governed central Asia between 522-5/1128-31 and 608/1212 (or, with Güčlük, till 615/1218). The first ruler was Yeh-lü Ta-shih (d. 537/1143), a prince from the north Chinese dynasty of Liao, of the Kʿi-tan (Khitāy) people. He overthrew the regime of the Ḳarakhānids [*q.v.*] or Ilig-khāns and in 535/1141 defeated the Saldjūḳid sultan Sandjar [*q.v.*] decisively in the Ḳaṭwān plain, north of Samarḳand: the victory of a non-Muslim ruler from the East over one of the most powerful rulers of Islam probably provided the foundation for the legend of Prester John [*q.v.*] (Gūrkhān > Johannes).

The title Gūrkhān is probably taken from the Turkish words *kür/gür* (Mongol *kür*) ("broad", "wide", "general": cf. Maḥmūd al-Kāshgharī, *Dīwān*, ed. C. Brockelmann, Budapest 1928, 117; Radloff, *Versuch eines Wörterbuches* ...,[2] 1960, ii, 1447, 1637; *Manghol un Niuca Tobcaʾan* (*Geheime Geschichte der Mongolen*), ed. E. Haenisch, Leipzig 1937, 65 and ed. Kozin, Moscow/Leningrad 1941, 278); P. Doerfer in *OLZ*, 1960, col. 635 f. The Muslims also refer to Gūrkhān as "Khān-i Khānān".

GUWĀKHARZ [see BĀKHARZ].

GÜZEL ḤIṢĀR [see AYDÎN].

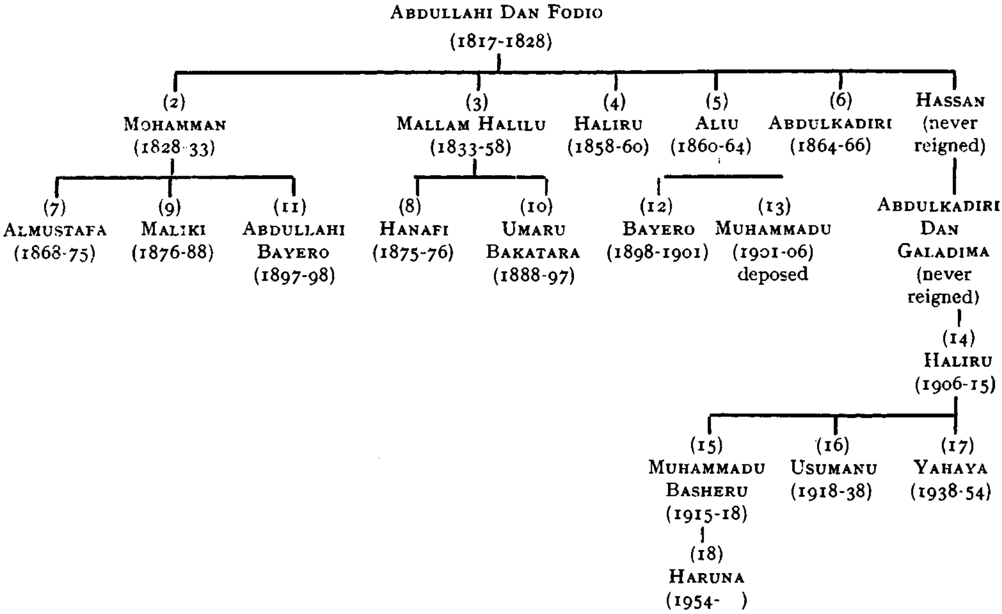
GŪZGĀN [see DJUZDJĀN].

GWĀLIYĀR, formerly capital of the Sindhia state of Gwāliyār, now a town in Madhya Pradesh. "Tradition assigns the foundation of the city to one Sūradj Sen who was cured of leprosy by an ascetic named Gwālipa. The latter inhabited the hill on which the fort now stands, and this was called Gwāliyār after him". The early history of Gwāliyār is, however, shrouded in myth and romance. The Hūna adventurers, Toramana and his son Mihirkula, who partially overthrew the Gupta power in the 6th century A.D., are considered to be the first historical holders of this place. Later Rādjā Bhodj of Kanawdj, the Kačhwāha Rādjpūts and the Parīhars respectively held sway over it.

In 413/1022 when Sultan Maḥmūd of Ghazna marched against Ganda, the ruler of Kālindjar, he passed the fort of Gwāliyār. Since the Rādjā of Gwāliyār was a feudatory of Ganda, the Sultan stormed the fort. The Rādjā, despite his successful resistance, was so alarmed that he sued for peace (*Zayn al-akhbār*, 79). In 592/1196 Ḳuṭb al-Dīn Aybak took the fort from the Parīhars (*Ṭabaḳāt-i Nāṣirī*, 145; Eng. tr., Raverty, i, 545-6, with note on other versions). Iletmish's first territorial appointment was as the *amīr* of Gwāliyār (*Ṭabaḳāt-i Nāṣirī*, 169; Eng. tr. i, 604). It appears to have been lost to the Turks because in 629/1231 Iletmish is reported to have reconquered it and made appointments of the *amīr-i dād*, the *kotwāl* and the *ḳāḍī*. But the history of the Muslim occupation of Gwāliyār is a chequered one. Early in her reign Raḍiyya (634-7/1236-40) had to send an expedition towards Gwāliyār under Tamur Khān, but the position became untenable and the fort had to be abandoned to Čahardeva. In 649/1251 Balban led a full-scale expedition against Gwāliyār, but does not seem to have achieved any permanent success, for the numismatic evidence shows that

Gwāliyār was independent up to at least 657/1259.

In the disturbances caused by Timur's invasion (800/1398) it was seized by the Tonwar Rādjpūts. In 894/1488 Sultan Bahlūl Lōdī marched against Gwāliyār and forced the Rādjā, Mān Singh, to submit. When Sikandar Lōdī (894-923/1489-1517) shifted his capital to Āgra he considered the annexation of Gwāliyār necessary for the consolidation of his power, but he could not achieve his objective. Though subjected to frequent attacks by the rulers of Mālwa, Djawnpur and Delhi, the Tonwars managed to retain it till 924/1518, when the fort was surrendered to Ibrāhīm Lodī. When Bābur turned his attention to the Afghān principalities after his victory at Pānīpat, he found Tātār Khān Sarang Khānī occupying the fort along with all its dependencies. It was through the help of Sayyid Muhammad Ghawth, a celebrated Shaṭṭārī saint, that he succeeded in establishing his hold over it. In 934/1528 Bābur visited Gwāliyār and spent some time examining the palaces of Mān Singh and Vikramāditya. He was impressed by their size and splendour although he grumbles a little at their want of taste and elegance. In 949/1542 Gwāliyār fell to Shīr Shāh Surī (945-52/1538-45) who forced Afghān tribes to settle there in large numbers (Rukn al-Dīn, *Laṭā'if-i Ḳuddūsī*, Delhi 1311, 85). This attempt at Afghān colonization in Gwāliyār was closely linked up with his policy of consolidation in Rādjpūtānā. Besides, Gwāliyār was also important as one of the principal stages on the great route from the Deccan which passed by Sirondj, Narwar, Gwāliyār and Dholpur to Āgra. His descendants practically made it the capital of their dominions.



In 965/1558 Gwāliyār passed to Akbar. Abu 'l-Faḍl mentions it as a *sarkār* in the province of Āgra and refers to its 'exquisite singers', 'lovely women' and 'iron mine'. Gwāliyār was one of the 28 mint towns of Akbar for copper coins. *Dewriza* rice for Akbar's kitchen was brought from here. There was a quarry of red clay (*gil-i surkh*) in the hills of Gwāliyār.

It was due to Mubāriz Khān, the future Sultan ʿĀdil Shāh, that music received great encouragement in Gwāliyār, and musicians from Mālwa, the Deccan and other parts of the country gathered there. Out of 36 singers and players enumerated in the *Ā'īn-i Akbarī*, 15 had learned in the Gwāliyār school, including the famous Tānsen. The Mughals used it also as a state prison (cf. Tavernier, *Travels*, Eng. tr. Crooke, London 1925, i, 51 ff.; F. Bernier, *Voyages*, Amsterdam 1724, 147 ff.; Eng. tr. Constable, London 1891, 106 ff.). Apart from the large number of political prisoners, princes and nobles, the great Naḳshbandī saint, Shaykh Aḥmad of Sirhind, was interned here by Djahāngīr. It remained in Mughal possession until the 12th/18th century. In the confusion that followed on the battle of Pānīpat in 1174/1761, Lokendra Singh, the Djāt chief of Gohad, obtained possession of the fort but was driven out by Sindhia soon after. There were many vicissitudes, and full Sindhia control could not be established before 1886. Gwāliyār lost its importance as the seat of Sindhia Government when a new town, Lashkar, developed near it.

"The old city of Gwāliyār is now a desolate-looking collection of half-empty, dilapidated, flat-roofed stone houses, deserted mosques and ruined tombs. As it stands, the town is entirely Muhammadan in character, no old Hindu remains being traceable" (*Imperial Gazetteer of India*, 1908 ed.). Of the monuments, besides the fort which is situated on a great table rock of Vindhyan sandstone and is considered to be one of the most impregnable forts of India, there are several mosques—particularly the Djāmiʿ Masdjid, commenced by Djahāngīr, and the mosque of Muʿtamid Khān—several tombs, wells, tanks (on the "never-failing" tanks see Tavernier, *op. cit.*, 51) and *bā'ōlīs* etc. The tombs are noticeable for the excellent carved stone and splendid pierced screen work. The tomb of Sayyid Muḥammad Ghawth Shaṭṭārī (d. 970/1563), built in Mughal times, perpetuates the structural traditions of the Lōdī period, but derives its decorative elements from Gudjarāt. The shrine of Bābā Kapūr (d. 979/1571), another popular saint of Gwāliyār, is situated in a cave, cut in the north-eastern face of the rock on which the Gwāliyār fort stands.

(K. A. NIZAMI)

GWANDU. First mentioned in the *al-Infāḳ al-maysūr* of Muhammmadu Bello (d. 1837) Gwandu was, at the beginning of the 19th century, a village in the prosperous little state of Kebbi (capital: Birnin Kebbi) in the western Sudan. In 1805, in the course of the Fulani *djihād*, Shehu Usumanu dan Fodio (d. 1817) established a temporary headquarters at Kambaza, near Gwandu, but was attacked by a coalition of the Kebbawa, Gobirawa and Tawāriḳ. The Fulani army was defeated and the survivors fell back on Gwandu where they stood siege under daily attacks. Finally the Kebbawa and their allies withdrew but were courageously pursued and ambushed by the Fulani garrison. The Kebbawa force was

routed and put to flight at Gumbai and this was the turning point of the *djihād*. Shehu Usumanu was never again in serious danger and the Fulani forces, despite occasional reverses, proceeded to subdue most of an area in size approximate to (but not co-terminous with) that of the present state of Nigeria. Shehu Usumanu, the leader and inspiration of the *djihād*, fell sick in 1806 and remained in Gwandu, leaving the conduct of his campaigns to his Fulani commanders. His son, Muhammadu Bello, built a wall around the village to strengthen it and for the next two years it served as the capital of the incipient Fulani empire.

In 1808 Alkalawa, the capital of Gobir, was taken and Shehu Usumanu left Gwandu in favour of Sifawa. He then divided the administration of the conquered territories between his brother, Abdullahi dan Fodio, and his son, Muhammadu Bello. Abdullahi became responsible for the western dominions and Muhammadu Bello for the eastern. Gwandu was under Abdullahi's authority but he preferred to build the town of Bodinga, close to Sifawa, for his headquarters so that he might remain near his brother. From Bodinga, however, he led a series of victorious campaigns until, in 1810, he administered most of Kebbi (but which the Fulani were able to subdue entirely) and had exacted allegiance from Nupe, Ilorin, Yauri, Gurma, Arewa and Zabarma.

In 1809 Muhammadu Bello created a township of the hamlet Sokoto, and built a wall around it so that it might serve as the administrative headquarters of the eastern dominions, and it was there that Shehu Usumanu died in 1817. Abdullahi, on hearing of his brother's death, hastened the fourteen miles from Bodinga to Sokoto, but found that Bello had been proclaimed *Sarkin Musulmi* (Commander of the Faithful) and the gates of the town were closed against him. By Fulani custom succession passed to a brother rather than to a son and Abdullahi withdrew to Gwandu aggrieved. On his arrival he found that the nearby town of Kalembena was in revolt, hoping to profit from his weakness after his rejection by Sokoto. His position was desperate but Bello went to his aid. In a celebrated scene, the two met outside the walls of Kalembena; Bello, the warrior and chief architect of the Fulani empire, mounted on a charger, Abdullahi astride the mare which as a mallam (Arabic: *muʿallim*) he always rode. In accordance with Fulani custom, Bello, as the younger man, went to dismount but his uncle waved him back into his saddle, and himself bent forward to salute his nephew as Commander of the Faithful. Together they put down the revolt. Thereafter Abdullahi retained the administration of the western dominions subject to the recognised authority of the Sarkin Musulmi, Bello, of Sokoto. This situation established in effect a dual empire which they bequeathed to their heirs, and led to a close friendship between the *amīrs* of Gwandu and the Sultans of Sokoto which lasted unbroken until the British occupation of Nigeria and which still endures.

Abdullahi, who was born in 1766, was twelve years younger than his illustrious brother Shehu Usumanu and was instructed in the Ḳurʾān and the Mālikī rite by Mallam al-Ḥādjdjī Djibrilla, as was his brother. He was some thirty-eight years of age when, in 1804, he was the first to pay homage to Shehu Usumanu as Sarkin Musulmi. Deeply religious, he nevertheless played a prominent part in the Fulani wars of conquest; in the early campaigns he often served, as did Bello, in a subordinate capacity to other Fulani commanders but distinguished himself by bravery in hand-to-hand fighting. Always of a literary bent, he would celebrate his victories with an Arabic ode and may be said to have been the poet laureate of the *djihād*. After the submission of Kalembena in 1819 he left administrative matters in the hands of his son Mohamman (who was to succeed him) and his nephew Bohari and devoted his last years to study and writing. He did not himself adopt the title of *amīr* but preferred the simple style "mallam" (which he retained until his death in 1828).

All these principal figures of the Fulani *djihād*,

Shehu Usumanu, Abdullahi and Muhammadu Bello, were prolific writers in Arabic but Abdullahi had the most felicitous command of the language. For lists of his works, both those which have survived and those whose titles are known but which may be no longer extant, see the writer's *Field notes on the Arabic literature of the western Sudan (Abdullahi dan Fodio)*, in *JRAS*, 1956, and *A catalogue of the Arabic manuscripts preserved in the University library, Ibadan, Nigeria*, Ibadan 1955-58.

The mosques of Abdullahi in Birnin Kebbi and Gwandu, and his tomb and the tomb of a Shaykh Haliru in Gwandu, are important monuments of Fulānī religious architecture (cf. J. Schacht, in *Travaux de l' Institut de Recherches Sahariennes*, 1954, 13 and pl. v, and in *Studia Islamica*, viii (1957), 136).

After the initial conquests of the Fulanis the various dominions of the dual empire were placed under the direct authority of Fulani *amīr*s; those of the western empire paid tribute to Gwandu, and those of the eastern empire to Sokoto. However, neither empire was for long at peace and revolts were constant, especially among the Kebbawa and Gobiwara, whose total submission was never obtained. By the end of the 19th century the direct authority of both Gwandu and Sokoto extended little beyond the boundaries of their own amīrates and when the British forces occupied the country in 1902 they found the Sarkin Kebbi sturdily maintaining the independence of Argungu, and the Gobirawa from Sabon Birni and Chibiri attacking the eastern and north-eastern districts of Sokoto itself. Argungu, the Kebbawa stronghold, was never occupied by the Fulani despite the fact that it lay between the twin capitals of Sokoto and Gwandu, being fifty miles from the former and less than thirty miles from the latter. The outlying dominions of both empires, however, still recognized the spiritual leadership of the descendents of Shehu Usumanu and a degree of temporal suzerainty pertaining to Sokoto and Gwandu.

The walled town of Gwandu remained the capital of the amīrate, until in 1860, the *amīr* Aliu, the fourth of Abdullahi's sons to succeed to the throne, transferred his headquarters to Ambursa in order to protect the towns along the south bank of the Gulbi against the attacks of the Kebbawa of Argungu. The other princes of the royal house continued to reside in Gwandu.

In 1864 Aliu died and was succeeded by his brother Abdulkadiri, the last of Abdullahi's sons to reign over Gwandu. By this time the power of the Kebbawa had so increased that Gwandu was obliged to seek an end to the constant hostilities and Sarkin Musulmi Ahmadu Rufai, in 1866, negotiated a peace treaty, known as the Lafiyar Toga, between Abdulkadiri and Sarkin Kebbi Toga. The principal terms of the treaty were (*a*) that Argungu should be recognized as an independent state, (*b*) that all towns then held by Argungu should be retained by Argungu, and (*c*) that all slaves hitherto captured in battle should remain the property of their captors.

The peace obtained by the Lafiyar Toga lasted for eight years, when hostilities were resumed which were to continue until Argungu was occupied by British troops in 1902.

In 1876 Maliki, son of Mohamman and grandson of Abdullahi, acceded to the throne and reigned for twelve years, during which he was visited by Mr. Joseph Thomson on behalf of the Royal Niger Company, and was presented with cloth to the value of forty million cowries. The Company's present to the Sarkin Musulmi was cloth to the value of sixty million cowries. After the death of Maliki in 1888, Umaru Bakatara, son of Mallam Halilu (1833-58) and grandson of Abdullahi, came to the throne and was visited by Sir G. Goldie and Mr. Wallace (afterwards Sir W. Wallace) who brought more gifts from the Royal Niger Company. In 1898 Bayero, son of Aliu (1860-64) and also a grandson of Abdullahi, came to the throne. He offered no resistance to the British occupation and died, two months later, in 1903.

To-day, Sokoto Province of the Northern Region of Nigeria is divided into three administrative divisions, Sokoto, Gwandu and Argungu. The headquarters of Gwandu Division is Birnin Kebbi (pop. 10,000) and the Division comprises the emirates of Gwandu itself (area 6,207 sq. miles, pop. 350,000) and Yauri (area 1,306 sq. miles, pop. 57,000). The present Emir of Gwandu, al-Ḥādjdjī Haruna, is President of the House of Chiefs of the Northern Region.
